Course Requirements: PROG: Graduate School of Engineering

BIOENG 2016 - FUNDAMENTAL PRINCIPLES OF BIODEGRADABLE

Minimum Credits: 3

Maximum Credits: 3

Biodegradable metals have emerged as a new class of materials with significant potential for myriad biological applications, in particular, the craniofacial, orthopedics and cardiovascular areas. The latter has already witnessed clinical trials with few patients already being implanted with a biodegradable metallic stent. This course is designed to introduce the principles and various fundamental concepts of this novel class of metallic alloys. These include fundamental principles of metal alloy physics and theory, important concepts of phase diagrams, physical metallurgy concepts, metallic glass theory, processing fundamentals, biocompatibility, and toxicity issues. The effect of microstructure on biocompatibility and corrosion will also be discussed. The course objective is to introduce the student to this new family of bio-functional metals and their biodegradable properties. In doing so, the student will be familiar with these materials and their useful applications. The students are expected to have had courses in thermodynamics and physiology. Introduction to materials science and engineering would be preferred but is not a prerequisite.

Grade Component: Grad HSU Basis

BIOENG 2040 - TRANSPORT PHENOMENA FOR BIOMEDICAL AND CHEMICAL ENGINEERS

Minimum Credits: 4

Maximum Credits: 4

Biomedical and chemical engineering graduate students require a similar comprehensive understanding of the underlying principles of heat transfer, chemical species transfer, and momentum transfer or fluid mechanics. This graduate course provides a unified treatment to heat, mass, and momentum transfer at the graduate level. The first part of the course covers the constitutive relations that describe the diffusive flux of material properties, including thermal energy, chemical species concentration, and momentum. Conservation principles and boundary conditions are covered for these material properties and numerous example paradigm problems of steady-state unidirectional (1-D) transport in biomedical and chemical engineering applications are reviewed. The second part of the course covers more advanced concepts including non-Newtonian rheology, unsteady state and 2-D transport, convective transport processes, turbulence, and creeping flow. The focus throughout is on extensive problem-solving and computer simulation using Comsol multi-physics using both biomedical and chemical engineering examples.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2045 - COMPUTATIONAL CASE STUDIES IN BIOMEDICAL ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Bioengineering 2045 computational case studies in Biomedical Engineering this is an interdisciplinary course that will combine: basic sciences such as electromagnetics and thermodynamics applied sciences such as numerical methods and simulations biomedical research and applications such as magnetic resonance imaging, hypothermia, heat transfer in biological bodies, and cardiac action potential, and mathematical concepts such as optimizations, linear and nonlinear equations. This course will be based on solving computational biomedical engineering problems using simulations. Some of the numerical topics will include: numerical solutions of matrices, finite element and finite-difference methods. These topics will be described with emphasis on their use in solving these problems. The course will cover setting up the mathematical description of the models and solving these problems using advanced computer codes and the supercomputer center at Pittsburgh. There will be 1d, 2d, and 3d modeling projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2067 - MUSCULOSKELETAL BIOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Course work will include the structure, function, and mechanics of the musculoskeletal system. Specific topics will include the kinematics and control of human movement and the mechanics of the musculoskeletal connective tissues, such as ligament, tendon, bone, cartilage, and muscle. Special emphasis will be placed on the relationship between function and material properties of these tissues. A research paper will be required as a term project.

Academic Career: Graduate

Individual study program under guidance of faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

BIOENG 2150 - MEDICAL PRODUCT IDEATION

Minimum Credits: 3

Maximum Credits: 3

A didactic class that explores the principles and use of "ethnography" as a tool to observe and document clinical activity in order to draft a clear statement of a clinical problem in need of solution and methods for concept generation to identify potential solutions. Students will be able to describe and use ethnographical techniques in identifying workplace problems and be able to describe and use concept generation methods to develop potential solutions. Topics covered: ethnography in the workplace; group brainstorming; brain-writing; affinitization; morphological analysis; basic human factors design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2151 - MEDICAL PRODUCT DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

A didactic course that uses principles of system engineering, the stage-gate process for medical product development and engineering and business analysis principles to evaluate the commercial potential proposed medical devices to further develop feasible solutions to a clinical problem identified in BIOENG 2150. Students will demonstrate use of systems engineering techniques to prioritize a set of feasible device and/or system solutions and ability to use intellectual property (IP) tools to determine suitability for further development. Students will demonstrate use of course principles in development of a commercialization plan for a proposed medical product. Design controls required by FDA and international bodies; systems engineering methodologies; intellectual property (IP) and IP search tools; brief market analysis; size by region, growth, competition, barriers to entry, sustainable advantage; reimbursement issues for proposed medical device/system; basic financial analysis ' students will construct spreadsheets typically presented to senior business management. This will include estimates of costs, margins, break-even analysis, NPV, hurdle rates, ROI, IRR; codes, standards, and regulatory processes (FDA, IEC & ISO, UL, ministry of health (Japan), NRC, BRH, notified bodies, obtaining broad indications for use); safety, reliability, product liability considerations, manufacturability considerations (DFM ' design for manufacture, workflows)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOENG 2150; PLAN: Medical Product Innovation or Medical Product Engineering

BIOENG 2154 - WORKSHOP IN DESIGN FOR MANUFACTURABILITY

Minimum Credits: 1

Maximum Credits: 1

Design for Manufacturability (DFM) provides a systematic methodology that can be used to analyze product design for improvements in assembly and manufacturing. Students will use DFM to redesign current products for changes in manufacture that lead to reduction in production cost and improved operability/ customer satisfaction. Students will employ modern software tools that accurately model parts for specific manufacturing operations, model part costs, simplify products, find specific avenues to reduce manufacturing and assembly costs, benchmark products, and quantify improvements. Course Objectives : Students will gain hands-on experience incorporating the DFM concepts in a project. Upon completing the course, the students should be able to describe the utility of DFM in product development and early manufacturing design, be able to quantitatively evaluate the impact of design choices on manufacturing cost, and be able to use modern quality control concepts and approaches.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

BIOENG 2165 - MEDICAL PRODUCT ENTREPRENEURSHIP

Minimum Credits: 3

Maximum Credits: 3

Medical product ideation, prototyping, and development are cornerstones for identifying unmet clinical needs and navigating the complexities of the development process. But how does one translate new medical products into the marketplace? Entrepreneurship is a discipline with established tools and methods that must be properly harnessed in order to translate medical products into a startup or an incumbent company (big or small.) After the completion of this course students will be able to understand and differentiate between 'right sized' entrepreneurial methodologies for both startups and existing companies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Medical Product Engineering or Medical Product Innovation

BIOENG 2166 - MANAGING MEDICAL PRODUCT RESEARCH AND DEVELOPMENT

Minimum Credits: 4

Maximum Credits: 4

This course will provide the student a theoretical and practical knowledge of professional project management for medical product development in industry. Through lectures, workshops, and industry seminars, students will acquire skills in the following areas: 'project engineering, project management, and innovation management. 'Managing product portfolios. Strategic planning and product planning. 'Creating and managing effective project teams. 'Stage gate process and lean methodology. 'Concurrent engineering. 'Project management tools, including: 'systems engineering 'work breakdown structures' budgeting' resource allocation and scheduling 'monitoring and control of product development students will be introduced to project management tools developed by PDMA (product development and management association) and the PMI (project management institute). The course will be taught by industry professionals with long experience in the medical products industry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2167 - MANAGING MEDICAL PRODUCT INNOVATION

Minimum Credits: 3

Maximum Credits: 3

This course will provide the student theoretical and practical knowledge of new product development principles and practices used today in the creation of medical products and services. The course covers the entire innovation process from Idea Discovery through Product Development and into Product Launch. Knowledge is provided through the use of dynamic lectures, videos, case studies, team exercises and guest speakers from industry. Students will acquire skills in the following areas: Team Performance, Project Management, Lean Startup, Ideation, Market Research, Design Thinking, Clinical NPD, Risk Management, Financial Analysis, Product Innovation Management, Strategy, Portfolio Management, Product Innovation Process and How to Pitch Your Idea. Students are introduced to project development and management tools established by the PDMA (Product Development and Management Association) and become certified in the PDMA Body of Knowledge.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Medical Product Innovation or Medical Product Engineering

BIOENG 2170 - CLINICAL BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This graduate level course focuses on the early stages of the innovation process; strategic analysis of complex clinical problem solving through the needs finding, concept generation and refinement. Students, under the mentorship of participating CMI faculty (SSOE, SHS, business, law), interview and observe clinical personnel at the University of Pittsburgh school of medicine performing clinical work in order to rigorously define and document clinical needs in the environment of use. Using principles articulated in BIOENG 2150 (medical product ideation), the students produce a document that clearly defines and communicates one or more clinical problems and prioritized feasible solution paths.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOENG 2150; PLAN: Medical Product Engineering or Medical Product Innovation

BIOENG 2171 - MEDICAL PRODUCT PROTOTYPING

Minimum Credits: 3

Maximum Credits: 3

This graduate level course focuses on the later stages of the innovation process; prototyping, market analysis, strategic planning, intellectual property protection, and business planning. Students, under the mentorship of participating CMI faculty (SSOE, SHS, business, law), will apply the principles and techniques from BIOENG 2151 (medical product development) and prioritize clinical needs identified in BIOENG 2170 (clinical bioengineering) and, using the resources of the swanson innovation center, create a prototype for pre-clinical and clinical evaluation. Students will use basic principles of intellectual property (IP) for engineers and publicly available search tools to determine patentability, freedom to operate, and patent strength. Students will then produce a medical device/product prototype and complete documentation set suitable for technology transfer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOENG 2170; PLAN: Medical Product Engineering or Medical Product Innovation

BIOENG 2173 - MEDICAL DESIGN FOR LOW RESOURCE ENVIRONMENTS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on designing medical products, systems, and solutions for resource-poor settings using creative problem-solving tools in the face of extreme limits. Tools include Human-Centered Design, Frugal Innovation and Design for Extreme Affordability. The course is primarily project-based, where students' projects will focus on a unique and specific challenge identified by a low resource hospital, partner, or the Engineering World Health (EWH) Design Competition. Student teams will work with their partner to implement the design thinking process to define the problem and iteratively ideate, prototype, and test their proposed solution. Student teams will also be partnered with a local domain expert to ensure they have access to the expertise needed to successfully complete the design within the constraints of the course. Throughout the semester, students will also receive hands-on experience and exposure to ongoing efforts to address the problems of medical device accessibility, usability, and feasibility in low resource environments and actively participate in regular classroom projects and discussions about low resource conditions, regulatory concerns, and engineering ethics amongst other topics. During this course, students will rigorously define and document a clinical need in a low resource environment, clearly define and communicate the clinical problem, prioritize feasible solution paths, and create a prototype for pre-clinical and clinical evaluation. After completing this course, students will have a deeper understanding of why empathy is so important to designing solutions that (actually) work for people and the benefits of applying the concepts of Frugal Innovation and Reverse Innovation to all their design and entrepreneurial efforts regardless of the problem or environment (globally or in their own backyard).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Medical Product Engineering or Medical Product Innovation

BIOENG 2175 - HUMAN FACTORS ENGINEERING IN MEDICAL DEVICES

Minimum Credits: 3

Maximum Credits: 3

Human Factors Engineering (HFE) is the application of knowledge about human behavior, abilities and limitations to the design and evaluation of

products and systems. HFE draws upon a number of disciplines, such as biomechanics, anthropometry, design, physiology and psychology to improve performance, reduce human error and enhance safety. The application of HFE to medical devices is critical to their effective and safe use. This is recognized by industry and regulatory agencies. In fact, all medical devices that are used by patients or clinicians are required to have a human factors evaluation in order to be approved by the Food and Drug Administration (FDA). This course focuses on the application of HFE in design, development and evaluation of medical devices. The educational goals are: a) to learn the fundamentals of HFE relevant to medical devices, and b) to understand the HFE process in medical device design and evaluation according to the Food and Drug Administration (FDA). The course will include didactics and hands-on experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2186 - NEURAL ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Neural engineering is an emerging discipline that seeks first, to understand brain function using computational and engineering principles; second, to improve health through nervous system interventions; and third, to discover principles of biological information processing that can improve computing technologies. Students will learn the principles of neuroscience and the computational tools needed for original research in neural engineering. They will develop the ability to critically evaluate scientific evidence. They will design novel experiments and approaches in neuroscience and neural engineering.

Academic Career: Graduate

Course Component: Lecture

BIOENG 2230 - CARDIO ORGAN REPLACEMENT

Minimum Credits: 3

Maximum Credits: 3

A one semester course in which three organ replacement systems will be discussed - vascular prostheses, artificial hearts/ventricular assist devices, and extracorporeal/ intravenous oxygenators.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2241 - SOCTL, POL & ETHCL ISS BIOTEC

Minimum Credits: 3

Maximum Credits: 3

As professionals who will ultimately contribute to research on and design of biomedical processes and devices, students should understand that ethical dilemmas are part of the design process-not separate from it. Students in the course will be presented with a combination of case-based discussion, guest and instructor lectures, small group exercises and a final presentation and paper analyzing a bioengineering focused ethical dilemma. At the end of this course, our goal is that students will be able to identify, analyze, and resolve the ethical dilemmas that arise in a professional bioengineering career. An overarching goal is to enable students to become "comfortable talking about the uncomfortable". Course topics include, but are not limited to research ethics, regulatory considerations of bioengineering projects, stakeholder analysis, ethical approaches, professional standards, and codes of ethics relevant to the profession.

Academic Career: Graduate

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2250 - CARDIO CLINICAL INTERNSHIPS

Minimum Credits: 1

Maximum Credits: 6

Professional application training in cardiovascular medicine and surgery. Students will spend three months each in bioengineering practice training programs within cardiology, cardiothoracic surgery, and vascular surgery.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2265 - BIOMEDICAL FLUID MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Biomedical Fluid Mechanics is an upper-level undergraduate and graduate course designed for students that have already had some undergraduate exposure to fluid mechanics through a biotransport, transport or similar course. The course studies how momentum (i.e. fluid flow) principles arise and are applied to biomedical flow systems. The course is not exhaustive but focuses instead on systems in which 1) the application of fluid mechanics enhances understanding of the underlying biomedical process; and/or 2) the biomedical process itself teaches an important and sometimes novel fluid mechanical principal. The principal means of analyzing biomedical fluid mechanics in this course will be through the application of differential mass and momentum balances. These principles will be applied to take the student from a qualitative understanding to a quantitative understanding of a biomedical flow process. The course will primarily study principles of fluid mechanics in the cardiovascular system, including arterial flow and pressure and microcirculatory flow. Non-Newtonian blood rheology and flow will also be covered. Students also will have the opportunity to propose biomedical flow processes that may be relevant to their research projects (e.g. respiratory, ocular, micro-devices).

Prerequisite: undergraduate fluid mechanics or transport.

Academic Career: Graduate

Course Component: Lecture

BIOENG 2330 - BIOMEDICAL IMAGING

Minimum Credits: 3

Maximum Credits: 3

Biomedical imaging introduces the major imaging modalities (x-ray, cat-scan, MRI, ultrasound) used in clinical medicine and biomedical research, as well as the fundamentals of images, from a signals and systems standpoint.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2340 - INTRODUCTION TO MEDICAL IMAGING AND IMAGE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Introduction to Medical Imaging and Image Analysis presents the physics of image formation as well as methods for tomographic image reconstruction for major medical imaging modalities, including X-ray Computed Tomography (CT) and Magnetic Resonance Imaging (MRI). Also introduced are fundamentals of digital image processing, with particular emphasis on medical applications, including basic techniques to enhance image quality, image de-noising, methods for extracting, classifying, and tracking features of and objects in images, etc. Students will learn how to implement these techniques in MATLAB (The MathWorks Inc., Natick, MA) to solve practical image processing problems. MATLAB exercises will demonstrate to students how filtering operations applied in the image domain or the Fourier domain affect medical images. In addition to these fundamentals, more advanced algorithmic approaches for image segmentation and image as well as point-cloud registration techniques will also be

reviewed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2351 - COMPUTER APPLICATIONS IN BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to develop data acquisition interfaces that include software and hardware to interact with and sample real world phenomena with bioengineering applications. Students will be expected to have basic MATLAB programming experience before joining this course; basic circuits knowledge is also advantageous. Students will build circuits, and will learn to work with several toolboxes and advanced features in Matlab to build graphical user interfaces (GUIs), communicate with data acquisition systems (DAQs) for measuring signals with sensors and/or controlling actuators to interact with the physical world, and perform signal processing and analysis functions to extract meaningful information from electrical and/or biological measurements. Practical applications may include measuring and analyzing bioelectric phenomena related to heart rate or tissue impedance, processing and analyzing neural signals collected from implanted electrodes in the brain, etc. Students will be able to create solutions for real world engineering problems after completing this course successfully.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: PLAN: Bioengineering (MBE, PHD)

BIOENG 2370 - COMPUTATIONAL SIMULATION IN MEDICAL DEVICE DESIGN

Minimum Credits: 3

Maximum Credits: 3

Computational simulation is increasingly utilized as a method to assess the performance of medical devices. The course provides students with a hands on learning experience on how to use computational simulation in the modeling and design of medical devices. The course details the important steps in computational simulations from preprocessing to solution to post-processing and data presentation. Commercially available software programs are introduced and used to simulate a variety of physical phenomena (solid, fluid, transport) pertinent to medical device design. Upon completing the course, the student should be able to simulate the solid, fluid, and transport phenomena that are useful in medical device design. Particular attention will be placed on avoiding common mistakes in the preprocessing and interpretation of computational results. Topics covered: geometry creation; discretization; appropriate assignment of material properties; solver management; error mitigation and debugging; post-processing and data presentation; data interpretation; introduction to design optimization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2383 - BIOMEDICAL OPTICAL MICROSCOPY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to teach the basic principles and applications of optical microscopy and imaging techniques commonly used in biomedical research. The enormous growth of optical microscopy has become an essential tool to investigate biological processes, diagnose diseases and quantitatively measure the biological system at unprecedented cellular and molecular level. It has become increasingly important for biomedical researchers to learn the proper use of optical microscopy, understand the advantages and limitations of each type of optical microscopy and how to apply them for specific biomedical applications. In this course, we will cover the physical principles involved in basic light, basic and advanced optical microscopy techniques. Strong emphasis will be given to biomedical applications for each type of optical microscopy. At the end of the course, a student will have a thorough understanding of basic principles of optical imaging and optical microscopy, learn how to apply optical microscopy to address biological questions and perform basic quantitative image analysis.

Grade Component: Grad Letter Grade

BIOENG 2390 - ARTIFICIAL INTELLIGENCE APPLICATIONS IN BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Artificial Intelligence Applications in Bioengineering is a hands-on exploration of linear to non-linear modeling paradigms for biomedical data. In this course students will learn about aspects of information processing including data pre-processing, visualization, regression, dimensionality reduction (PCA, ICA), feature selection, classification (logistic regression, SVM, neural networks, etc.) and their usage for decision support in the context of healthcare. The course will provide an overview of the basics of scientific computing on local and cloud-based resources (i.e. relevant DevOps and MLOps) and scientific programming fundamentals, in addition to covering machine learning techniques for classification as well as regression modeling from biomedical datasets in tabular forms, including time series data. Students will additionally learn how to address classification and regression modeling tasks starting with 2D/3D medical imaging data. The course is designed to be practical with computer based tutorials and assignments on machine learning in general including popular kernelized models and deep neural networks.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2411 - MATHEMATICAL METHODS IN CHEMICAL ENGINEERING 1

Minimum Credits: 3

Maximum Credits: 3

Application of mathematical techniques to chemical engineering problems requiring the solution of ordinary differential equations and partial differential equations. Series solutions, transform solutions, vector calculus, and quadrature are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2505 - MULTI MODAL BIOMEDICAL IMAGING TECHNOLOGIES: FUNCTIONAL, MOLECULAR AND HYBRID IMAGING TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

In this course some newly evolving multi-modal imaging techniques and analysis methods in biomedical applications will be introduced. The course will briefly cover the fundamental physics, core signal processing, image reconstruction of a variety of current standalone imaging modalities such as X-Ray, computer tomography (CT), magnetic resonance imaging (MRI), nuclear imaging (PET, SPECT), optical imaging (fluorescence, optical diffuse tomography, bioluminescence), and ultrasound. Subsequently, the concept, fundamental physics, and image analysis of some exemplary multi-modal imaging techniques and systems will be introduced. Their applications in Biomedicine in different scales from organ to cellular and molecular level, and from structural to functional imaging will be discussed. The course will also briefly address the issues related to image-based diagnosis, intervention and therapy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2515 - CARDIO SYSTEM DYNAMICS & MODELING

Minimum Credits: 3

Maximum Credits: 3

The mechanical behavior of the cardiovascular system will be explored in a quantitative manner. The goal is to understand the behavior of each component in isolation and the interactions among various components. Mathematical modeling will be used with an emphasis on model development, validation, and application. The function of the intact organ will be correlated with underlying structural and cellular processes, both for normal and pathological states. Student projects will contribute to the existing library of cardio vascular models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2520 - MOLECULAR CELL BIOLOGY

Minimum Credits: 6

Maximum Credits: 6

Topics covered in this course are bio-macromolecules, protein purification and microscopic techniques, genetics (chromatin organization, DNA replication, recombination, transcription, translation and control of gene expression), molecular perturbation, membrane biophysics and bioenergetics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2525 - APPLIED BIostatISTICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide an understanding of basic statistics through application. Descriptive and inferential statistics, encompassing both parametric and non-parametric methods will be taught.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2540 - NEURAL BIOMATERIALS AND TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course is designed to introduce students to an advanced understanding of biomaterials and tissue engineering specialized in neural applications. It will review biomaterials used for neural prosthesis, drug delivery devices, and tissue engineering scaffold. The student will gain a fundamental understanding of the biocompatibility issues relevant to a variety of neural implantable devices and the current strategies to solve these issues. Topics will include basic material science, neural tissue biocompatibility with implant, BBB and CNS drug delivery, tissue engineering and regenerative medicine for PNS, tissue engineering and regenerative medicine for CNS, neural electrode/tissue interface (including both simulating and recording electrodes, both peripheral and cortical neural interface). The student should have some exposure to biomaterials and tissue engineering before taking this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2585 - QUANTITATIVE CELLULAR NEUROSCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed to be a comprehensive introduction to cellular neuroscience for engineers. Modern cellular neuroscience is an interdisciplinary field that seeks to understand the function of single cells and populations in the context of the thinking brain. This course provides a

survey of cellular brain science ranging from molecules to simple neural circuits. In addition to principles and theory this class will also cover basic quantitative concepts and provide opportunity to analyze real-life data from molecular and cellular neural engineering. In the context of each cellular brain function we will also address cellular dysfunction with translational engineering applications to neurological brain disease. Required software is MATLAB. Enrolled students should have a working knowledge of matrix algebra, first order dynamic systems and programming in MATLAB environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2586 - QUANTITATIVE SYSTEMS NEUROSCIENCE

Minimum Credits: 3

Maximum Credits: 3

Systems neuroscience is the field that attempts to explain perception, cognition, and behavior in terms of the activity of populations of neurons. This course examines major scientific results in systems neuroscience, and the computational principles of brain function they illustrate. Neuroscience topics include sensory processing, motor control, and memory. Computational and engineering principles include signals and systems, statistics, machine learning, and control theory. Brain-Computer Interfaces are highlighted as an example of the convergence of basic neuroscience and engineering applications. Course format consists of interactive lectures, student-led discussions of important publications, guided analysis of neuroscience data, and designing an original set of experiments.

Academic Career: Graduate

Course Component: Lecture

BIOENG 2601 - PRINCIPLES AND PROPERTIES OF COMPLEX ENGINEERED MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Complex engineered materials are a new class of systems comprising a variety of inorganic materials. This course is designed to introduce the principles and various functional properties exhibited by inorganic materials at the Nano, Micro and Meso scales. Since inorganic materials comprising metallic and non-metallic systems are a very complicated class of materials that display myriad properties, this course is outlined to discuss the most important properties. Thus, the course will mainly cover optical, electrical, thermal and electrochemical properties of both crystalline and amorphous inorganic complex engineered materials. In each category, the principles underlining each property will be discussed followed by the material class, behavior and applications. The effect of microstructure on each of the properties will also be discussed. The course objective is to introduce the student to these complex engineered materials family and their properties. In doing so, the student should be able to identify a material for a particular application

BIOENG 2620 - INTRODUCTION TO TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to tissue engineering. Tissue engineering is defined as the development and manipulation of laboratory-grown molecules, cells, tissues, or organs to replace and/or support the function of injured body parts. Tissue engineering is highly interdisciplinary and therefore crosses numerous engineering and medical specialties. Upon completing this course, the graduate and undergraduate

students should: understand the basic principles behind human cell and tissue biology and cell. Be familiar with the general types of biomaterials used in tissue engineering. Understand techniques utilized to design, fabricate, and functionally assess tissue engineering systems. Apply the combined knowledge of tissue organization and tissue engineering strategies to design a unique, reasonable tissue engineering solution. This five part course covers cell and tissue biology, biomaterials, drug delivery, engineering methods and design, and clinical implementation.

BIOENG 2632 - BIOMECHANICS 3: BIODYNAMICS OF MOVEMENT

Minimum Credits: 3

Maximum Credits: 3

Biodynamics, the area of focus in biomechanics 3, is the study of large-scale movements in biologic systems. As such, the course focuses on the analysis of human movement, which is used in clinical and research settings to understand how various pathologies impact movement and how interventions can be implemented to aid those affected by movement disorders. We cover the fundamentals of biomechanics of human movement using mechanical modeling techniques. The major focus is kinematic analyses in three dimensions using matrix techniques. Some fundamentals of kinetics are covered as well, 2D and 3D inverse dynamics. Upon completing the course, the student should be able to describe basic methods of kinematic/kinetic analysis used in multi-link systems and be able to implement the methods in the analysis of human movement. Students should also be able to apply the methods to study common human movements, e.g. gait analyses, eye movement analyses, etc. Finally, students should be able to use the computer programming language, matlab, to perform computations on kinematic data.

BIOENG 2633 - BIOMECHANICS 4: BIOMECHANICS OF ORGANS, TISSUES, AND CELLS

Minimum Credits: 3

Maximum Credits: 3

This is the second part of a two semester advanced graduate course that uses the application of bio solid mechanics to describe the mechanical behavior living structures. The course will be separated into the following: 1) fundamental concepts: a. Kinematics, stress, strain b. Balance principles, objectivity c. Hyperelastic materials 2) biological applications a. Mechanical properties of specific tissues, (e.g. Tendon, muscle, heart, vascular) b. Growth and remodeling using mixture theories c. Approaches used to model cells (e.g. Blood cells, myofibroblasts)

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2650 - LEARNING & CONTROL OF MOVEMENT

Minimum Credits: 3

Maximum Credits: 3

The course will blend robotics, probability, and neuroscience to better understand the human motor system, particularly motor learning and control of movement. While motor control will be discussed as a feedback control problem, these theories will be compared during the entire course to what we know about the motor system. We will begin by studying muscle activation and forces, muscle sensory organs, spinal control structures, and inertial dynamics of a multi-joint limb. This will give us a sense of the machinery that the nervous system must control in order to generate coordinated movements. Probability foundations will be used as a framework to model how the nervous system updates estimates of limb position and sensory

feedback during movements. Finally we will consider how disease can inform us about principles of movement control and motor learning. The course material and associated homework will require the students to use matlab to simulate control of biomechanical systems. This will allow students to appreciate the value of models to generate hypothesis and possibly explain biological behaviors.

BIOENG 2671 - IMAGING IN REGENERATIVE MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Imaging is an essential analytical technique widely used in regenerative medicine. Imaging tools range from microscopy to validate by histology that regenerative therapies repaired damaged tissues, but non-invasive modalities, such as magnetic resonance imaging, are also used to define implantation coordinates and monitor tissue restoration in patients. This course will provide an overview of the applications of imaging in regenerative medicine. It will detail the rationale for using specific imaging techniques by contrast their advantages and disadvantages in particular applications. The student will learn to choose appropriate imaging methods for different questions that arise in regenerative medicine.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2675 - FINITE ELASTICITY OF SOFT TISSUES

Minimum Credits: 3

Maximum Credits: 3

This team-taught course is designed as the second course in graduate biomechanics that applies and builds on the concepts of finite elasticity to study the constitutive response of various soft tissues. Course topics will include kinematics of large deformation, concepts of stress, thermodynamic principles, and development of constitutive relationships for hyperelastic materials. Isotropy, transverse isotropy, incompressibility, viscoelasticity as well as isotropic damage will be discussed. Specific application areas will include the mechanics of three general types of primary load-bearing soft tissues: vascular, orthopedic, and reproductive.

Course Requirements: PREQ: BIOENG 2080; PROG: Swanson School of Engineering (PENGR)

BIOENG 2704 - FUNDMS REHAB ENGR AND TECHN 1

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental principles and practices related to multiple areas of assistive technology. The technology area include: seating and wheelchair mobility, augmentative communication, environmental control, computer access, transportation safety, prosthetics, worksite ergonomic and man/machine modeling. In addition, common terminology, disability, ethics and models of service delivery related to assistive technology are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2705 - PRACT REHAB ENGR & ASSISTV TECHN

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to develop the clinical skills needed to apply at and resolutions to help persons with disabilities achieve their goals in the areas of productivity, education, employment, communication, and environmental access. Students will match knowledge of at products gained in BIOENG 2704 to the needs of individuals. This will be taught using a model for assessing the individual, the context, the technology-user interface and an interdisciplinary team approach.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: RT 2101; PROG: Swanson School of Engineering (PENGR)

BIOENG 2724 - ASSISTIVE TECHN FUNDING & POLICY

Minimum Credits: 3

Maximum Credits: 3

Students to develop knowledge and skill in the process and strategies necessary to acquire assistive technology devices and services for people with disabilities. Course content will focus on the process of gathering information, assessment procedures, documentation, and funding sources. Advocacy and procedures for due process will also be reviewed for situations when funding sources are limited.

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2731 - MOLECULAR MECHANISMS OF TISSUE GROWTH AND DIFFERENTIATION

Minimum Credits: 3

Maximum Credits: 3

The course covers the anatomy, embryology, histology, function, and growth regulation (growth factors, receptors, and signaling pathways) of various differentiated tissues (central nervous system, lung, liver, pancreas, urinary and reproductive systems, breast, endocrine system, skin, bone, skeletal muscle, bone marrow). Multidisciplinary lectures are given by the members of the departments of pathology, cell biology and physiology, medicine, and surgery who have ongoing research in these areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2800 - NEUROTECHNOLOGY: CONCEPTS, PATIENTS, AND DEVICES

Minimum Credits: 3

Maximum Credits: 3

This survey course will introduce students to biomedical devices that interface with the nervous system. Course instructors and guest lecturers will discuss fundamental neurostimulation and recording concepts, patients who may benefit from these devices, and both existing and in-development technologies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2810 - BIOMATERIALS & BIOCOMPATIBILITY

Minimum Credits: 3

Maximum Credits: 3

Chemical and physical properties of Orthopaedic and Cardio Vascular Biomaterials, wear and corrosion of implant materials; fracture healing, inflammatory response; fixation and loosening of permanent implants; protein absorption; coagulation cascade, bacterial adhesion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2811 - MICROFABRICATION AND CHARACTERIZATION OF NEURAL INTERFACE DEVICES

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide graduate students an advanced understanding of a) photolithography process for microfabrication of neural devices (with clean room training and hands-on experience), b) the biocompatibility considerations for the materials used for the fabrications and the device configuration, and c) the standard electrochemical and biocompatibility characterization of the microelectrodes for neural applications (including both simulating and recording electrodes, both peripheral and cortical neural interface). The students will learn in detail the fundamentals of lithography processes and MEMS in neurotechnology applications (in parallel with hands on clean room lab experience at the Nano Fabrication and Characterization Facility (NFCF)). Materials science for neural prosthesis (on both insulating and conducting materials) and contemporary and future directions of the nano/micro neural devices will also be reviewed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2820 - SYNTHETIC BIOLOGY-ENGINEERING LIVING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An introduction to the engineering of biological systems with synthetic biology tools. Emphasis on synthetic biological networks and biological control. Design and analysis of computational and experimental tools in synthetic biology including microfluidic systems. Applications of synthetic biology in biomedical, chemical, and environmental engineering problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2821 - MICROPHYSIOLOGICAL SYSTEMS AND TISSUE MIMICRIES

Minimum Credits: 3

Maximum Credits: 3

Microphysiological systems (MPS) are a growing area of focus for bioengineers as well as basic scientists, biopharmaceutical industry and regulatory agencies. They offer enormous potential in accelerating and lowering cost of preclinical drug development, allowing pathophysiological modeling of biological and disease processes in a human-relevant manner, and enabling translational discoveries to benefit the human health and the society. MPS are commonly referred to Organs-on-Chips, but also cover three-dimensional (3D)-Bioprinted Tissue and Organ Mimicries. Organs-on-Chips are biomimetic, microfluidic, cell culture devices created with microchip manufacturing methods that contain continuously perfused hollow microchannels inhabited by living tissue cells arranged to simulate organ-level physiology. By recapitulating the multicellular architectures, tissue-tissue interfaces, chemical gradients, mechanical cues, and vascular perfusion of the natural organ, these devices produce levels of tissue and organ functionality not possible with conventional 2D or 3D culture systems. They also enable high-resolution, real-time imaging and in vitro analysis of biochemical, genetic and metabolic activities of living human cells in a functional human tissue and organ context. 3D-Bioprinting is an additive manufacturing technique that is applied to biological materials and allows creation of cell-free and cell-laden scaffold for a diverse array of applications including regenerative medicine and preclinical pathophysiological modeling. In this course, we will cover advances made over the past two decades on these emerging technologies (Human Organs-on-Chips and 3D-Bioprinting). In addition, we will other methods of cellular, tissue and organ engineering that traditionally do not fall into MPS categories. These include decellularization and recellularization of natural scaffolds (e.g., heart, lung), stem cell-based tissue engineering approaches (e.g., iPSCs-derived tissues, spheroids, and organoids) and precision-cut organ slices (e.g., lung, liver). Moreover, this course includes workshops where trainees would have a chance to fabricate simple microfluidic organ-on-chip devices (to be carried out at Dr. Benam's labs) and 3D-bioprint sample matrices (need to identify available resources in BIOE Department; if none is available, Dr. Benam will use inexpensive 3D bioprinters for training purpose at his labs).

BIOENG 2901 - TECHNICAL WRITING WORKSHOP II: OUTLINE ORGANIZATION, PUBLISHING PAPERS, AND PREPARING FOR PRELIMS

Minimum Credits: 1

Maximum Credits: 1

Communication is the most crucial skill in Science and Engineering and written communication has the potential to be the most far reaching medium of communication. This course will explore the ways that engineering students can develop their own technical writing from an engineering perspective. Lectures will cover the structure modules and technical elements that go into publishing journal articles as well as identifying and writing to your specific audience, including non-experts. Assignments are designed to develop your ability to understand, analyze, summarize, and reformulate hypotheses (scientific methods) or design criteria (engineering method) for journal articles, reports, and manuals. Students will also learn how to apply the philosophy and principles behind technical writing into effective project planning including the prelim exam. Lastly, we will debunk some common myths and misconceptions of technical writing including for the prelim exam.

BIOENG 3780 - HUMAN FACTORS OF AGING

Minimum Credits: 3

Maximum Credits: 3

Research often leads to ideas and findings that can be developed into new medical devices or interventions. One limiting step in the development of these new ideas into action is the incorporation of the human factors components in the design. This is particularly true for devices/interventions meant to be used by older adults. This course provides an introductory understanding of how human factors is used in medical device design with a focus on older adults. The target audience for this course is broad, encompassing anyone that wants to learn how to design, test and evaluate medical devices or interventions used by older adults. This includes investigators (faculty, scientists, post-docs), engineers, and clinicians. The course will be at the graduate level, but general in scope. No pre-requisites are required.

BIOETH 2668 - SUSTAINABILITY IN LATIN AMERICA

Minimum Credits: 3

Maximum Credits: 3

Latin America hosts some of the most biologically diverse and productive ecosystems on Earth, yet economic and social development are frequently at odds with efforts to conserve and use these ecosystems sustainably. This upper-level seminar focuses on the issues surrounding environmental sustainability in Latin America from a holistic, interdisciplinary perspective. The course will start with a general introduction to the three legs of sustainability and sustainable development theory, as well as the ecology and evolution of Neotropical biodiversity. We will use published primary literature to explore the particular complexities of Latin American sustainable development, and analyze case studies of moments through history in which environmental issues were either championed or de-emphasized. The course will feature several guest lectures, optional seminars for extra credit, and discussions of current sustainability news. Students will be responsible for a final research project and presentation.

Academic Career: Graduate

Biomedical Informatics

BIOINF 2011 - FOUNDATIONS OF CLINICAL AND PUBLIC HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

A survey of fundamental concepts and activities on information technology applied to health care. Topics include computer-based medical records, knowledge-based systems, tele health, decision theory, and decision support, human-computer interfaces, system integration, the digital library, and educational applications. Department-specific applications such as pathology, radiology, psychiatry and intensive care are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2014 - BIOMEDICAL INFORMATICS PROJECT COURSE

Minimum Credits: 3

Maximum Credits: 3

The course consists of three main parts. In the first part of the course the projects are conceived. In the middle part, the projects are defined and designed. In the final part, the projects are carried out, analyzed, and reported. In all three phases, students will first have classroom discussions among themselves and the instructor about their ideas for that phase of the project. Next, they will work outside of the classroom on that project phase and write a report. Finally, they will orally present the main ideas of their report to the class. The instructor will provide written and oral feedback on each stage of the project, as it occurs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2016 - FOUNDATIONS OF TRANSLATIONAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

The field of translational bioinformatics emerged because of the recent advances in biotechnology with which several new types of patient and disease specific data are being created for large subpopulations. Computer science methods are being rapidly adapted to process and analyze this data, with the goal of drawing biologically and medically-relevant inferences. By analyzing these different types of data individually or integratively, it is now feasible to attempt deciphering biological root cause of a disease (at least the 'why' of the disease if not 'how'), to identify biomarkers, and to design personalized medicine.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2018 - INTRODUCTION TO R PROGRAMMING FOR SCIENTIFIC RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Science is increasingly inter-disciplinary, and programming has become a valuable skill in many investigations. This course is designed to empower you with the ability to solve scientific problems through writing computer programs. Emphasis is placed on using the R language to solve biology problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2019 - BIOMEDICAL DATA STREAMING

Minimum Credits: 1

Maximum Credits: 3

In this project students and a faculty mentor will explore data streaming technologies to implement scalable and distributed biomedical data ecosystems. In particular, students and a faculty mentor will conduct a project to learn how biomedical data processing can be enhanced with processing power of modern data-streaming infrastructures to enable continuous biomedical data acquisition and analysis. Upon completion of this project students will be able to understand major principles and trade-offs in design and development of a comprehensive biomedical data processing pipeline for data-intensive applications. Students will gain practical skills in selecting, applying, and developing data streaming solutions appropriate for specific data processing and data analysis tasks.

BIOINF 2032 - BIOMEDICAL INFORMATICS JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

This course meets once each week for one hour. The research being presented will be taken from recent journal papers.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

BIOINF 2051 - FOUNDATIONS OF BIOINFORMATICS

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to selected topics of bioinformatics also known as computational biology. In this course, the difficult computational problems involving different types of biological information are identified using case studies from current literature. Emphasis is on genomic aspects of computational biology with some overview of proteomics and structural aspects. The course is structured as a seminar course intending to draw students into participating in discussions related to both problems and existing solutions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2070 - FOUNDATIONS OF BIOMEDICAL INFORMATICS 1

Minimum Credits: 3

Maximum Credits: 3

This course serves as an introduction to core methods and topics in biomedical informatics using the context of the Learning Health System (LHS). A LHS combines data and information managements, discovery, and application of discoveries to clinical and population health. Discussion of the challenges associated with the construction of a LHS will be used to contextualize and motivate content to be covered in the course (people, data and knowledge, and evaluation).

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOINF 2118

BIOINF 2105 - ARTIFICIAL INTELLIGENCE FOR BIOMEDICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course provides the required introduction to artificial intelligence (AI) for all Biomedical Informatics students in the Department of Biomedical Informatics. It is designed to complement the two Foundations of Biomedical Informatics courses by providing a rigorous and practical education on fundamental AI topics. While the lessons are on AI subjects that not specific to the biomedical domain, the course will point the students to problems and applications from biomedicine relevant to each AI subject. The course is practical in the sense that the homework assignments will give students hands-on experience applying the AI methods covered throughout the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2110 - CONCP SOFTWR PROJ ENGR HLTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course examines how health care organizations implement both clinical and financial information systems. The course will study the implementation process and how to integrate systems to create the computerized patient record (CPR). Students will have the opportunity to learn about the industry-wide implementation data standards and how to manage them.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2117 - APPLIED CLINICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide an overview of the field of applied medical informatics. Students will learn about the myriad issues that arise when deploying information technology into clinical environments. Practical, real world solutions to the challenges of hit will be addressed by experts involved in the day-to-day operations of these types of systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2118 - STATISTICAL FOUNDATIONS OF BIOMEDICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory probability and statistics course intended primarily for biomedical informatics students. The first part of the course covers probability, including basic probability, random variables, univariate and multivariate distributions, transformations, expectation, numerical integration, and approximations. The second part of the course covers statistics, including study design, classical parametric inference, hypothesis testing, Bayesian inference, non-parametric methods, classification, ANNOVA, and regression. We will use r for statistical computing and applications. Examples and applications will focus on biomedical informatics and related discipline.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2119 - PROBABILISTIC METHODS IN ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students who do not necessarily have a background in computer science and want to learn and apply methods in artificial intelligence to problems in biomedicine. The course will introduce and provide the foundations artificial intelligence methods in search, probabilistic knowledge representation and reasoning, and machine learning with applications to biomedical informatics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2120 - SYMBOLIC METHODS IN ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students who do not necessarily have a background in computer science and want to learn and apply methods in artificial intelligence to problems in biomedicine. The course will introduce and provide the foundations of artificial intelligence methods in logical knowledge representation and reasoning, biomedical ontologies and terminologies and information retrieval. Prerequisites for this course include introductory mathematics and programming.

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOINF 2012 and 2015

BIOINF 2121 - HUMAN-COMPUTER INTERACTION AND EVALUATION METHODS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide informatics students with the knowledge necessary to take an applied role in the design, implementation and evaluation of healthcare information systems. In this course, students will apply principles of usability and evaluation theory to informatics projects. Topics include: critical success factors, test plan development and user interface design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2122 - CRITL REFLCTN BIOMD INFORMTCS

Minimum Credits: 3

Maximum Credits: 3

This course will showcase presentations from DBMI researchers and invited speakers from across campus and beyond. Session will be videotaped and presented as weekly one-hour recording. The on-site Q/A session afterwards will be substituted by a facilitated asynchronous online discussion in blackboard. Special emphasis will be put on peer- and self-assessment of the contributions to the online discussion which will promote higher-level thinking among the students.

Academic Career: GRAD

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2124 - PRINCIPLES OF GLOBAL HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course explores challenges and opportunities in developing and supporting health information systems in developing-world settings by examining differences, and ways to both integrate and sustain systems in an appropriate way in low-resource settings. The course will review the current "state-of-the-art" in this field by looking at examples of systems currently deployed in the developing world, and explore opportunities for advancing this work through a series of case studies and hands-on exercises based on real-world scenarios.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2125 - INFORMATICS AND INDUSTRY

Minimum Credits: 1

Maximum Credits: 1

The focus of the class is to provide an opportunity for students to interact with leading industry representatives and to learn techniques/tools that would enable them to market their skills in non-academic environments. We will invite speakers from various local, regional, national, and international industry relationships that we have established.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

BIOINF 2129 - INTERNSHIP IN GLOBAL HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

The internship in global health informatics will be expanded to accommodate 5 students from the US. Students will travel to Malawi to study global health informatics in low-resource settings alongside Malawian health and technology professionals. Students will have an opportunity to propose, design and develop a product or intervention relevant to solving a particular problem the group has identified.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2131 - PRACTICUM IN ADV BIOMEDICAL IT

Minimum Credits: 1

Maximum Credits: 6

This course is designed for people who want a practical experience in working with advanced information technology in the center for biomedical informatics.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2132 - SPECIAL TOPIC SEMINAR IN MEDICAL INFORMATICS

Minimum Credits: 1

Maximum Credits: 3

This course is designed for faculty to offer small groups of students a study course on a topic of mutual interest and concern in the faculty member's area of expertise.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2133 - PRACTICUM IN ADVANCED INFECTIOUS DISEASE AND PUBLIC HEALTH SURVEILLANCE (BIOSURVEILLANCE) TECHNOLOGY

Minimum Credits: 1

Maximum Credits: 6

This course is designed for people who want a practical experience in working with advanced bio surveillance technology in the real time outbreak and disease surveillance (rods) laboratory.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2134 - PUBLICATION AND PRESENTATION IN BIOMEDICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course provides a practical overview of how to write a research manuscript and how to give a scientific talk. It is usually taken after completing the project course (BIOINF 2014). Students taking this course must have a completed research project that can be used to complete the course exercises. Each week, we will target a specific section of the manuscript or scientific talk. Didactic sessions describing common problems and approaches will alternate with student presentation and peer critique. The course also covers the details of the publication process. At the end of the course, a special presentation workshop gives students the opportunity to improve their talks using videotaping and debriefing methods. By the end of the course, students will have completed a research paper and a finalized colloquium presentation.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2204 - INT HLTH INFORMTCS TEC DENTY

Minimum Credits: 3

Maximum Credits: 3

An introduction to health information technology (HIT) for dentists, dental team members and others involved in dentistry with three objectives: (1) understand how hit can support the activities and processes of clinical dental care; (2) select and evaluate hit applications; and (3) plan, administer and manage hit implementations. Course covers topics such as dental care workflow and analysis; electronic dental records; dental data and their representation; controlled vocabularies and terminologies; human computer interaction; information design; computer-based decision support; strategic planning; requirements analysis; evaluating technology; managing human resources for it; planning and implementing hit; basics of hardware and software; and privacy, confidentiality and security of patient information.

Biological Sciences

BIOSC 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1
Maximum Credits: 15
Students working on their early research requirement may (but are not required to) register for BIOSC 2000. A grade of Incomplete is automatically given for this course until the Comprehensive exam is passed.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2025 - RESEARCH ROTATION 1

Minimum Credits: 1
Maximum Credits: 6
Students in the graduate programs in the department of biological sciences perform research rotations in the first year. These rotations supplement classroom-based educational opportunities and provide settings for students to interact with faculty, who may serve on their dissertation committees or be their advisor, and to meet the members of different labs. Students present their results at the end of each research rotation as a brief talk. Students in the MCDB Program do three rotations, those in the EE Program do 2 or 3. Each rotation is worth a single credit.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

BIOSC 2026 - RESEARCH ROTATION 2

Minimum Credits: 1

Maximum Credits: 6

Students in the graduate programs in the department of biological sciences perform research rotations in the first year. These rotations supplement classroom-based educational opportunities and provide settings for students to interact with faculty, who may serve on their dissertation committees or be their advisor, and to meet the members of different labs. Students present their results at the end of each research rotation as a brief talk.

Academic Career: Graduate

Course Component: Practicum

BIOSC 2027 - RESEARCH ROTATION 3

Minimum Credits: 1

Maximum Credits: 6

Students in the graduate programs in the department of biological sciences perform research rotations in the first year. These rotations supplement classroom-based educational opportunities and provide settings for students to interact with faculty, who may serve on their dissertation committees or be their advisor, and to meet the members of different labs. Students present their results at the end of each research rotation as a brief talk.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

BIOSC 2050 - STUDENT RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 1

In this course, students present their research to faculty, students and postdocs.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2055 - SCIENCE COMMUNICATION: PREDOCTORAL FELLOWSHIPS & GRANTS

Minimum Credits: 1

Maximum Credits: 1

The goals of this course are to inform students about the tools and background needed to prepare for seminar and poster presentations and submit pre-doctoral fellowships and grants.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2056 - SCIENCE COMMUNICATION: SEMINAR & POSTER PRESENTATIONS

Minimum Credits: 1

Maximum Credits: 1

The goals of this course are to prepare students for oral and written presentation of their work. Topics will include seminar preparation, maintaining linear train of thought, balancing data with context, data presentation as a reinforcement tool, preparing for 15-, 30- and 45-minute talks, preparing for broad and narrow scientific audiences, speaking with the general public, preparation of useful abstracts, assembly of effective posters, effective presentation of posters, tips and tricks for fielding questions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2057 - SCIENCE COMMUNICATION: PAPERS

Minimum Credits: 1

Maximum Credits: 1

This course covers the process of writing scientific papers, including primary data papers, review articles, and general opinion pieces. Topics include strategies for data organization, figure preparation, targeting the introduction for the audience, logic flow in the results, and focusing the discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2058 - ETHICAL PRACTICES IN SCIENTIFIC RESEARCH

Minimum Credits: 1

Maximum Credits: 1

This course familiarizes students with areas of ethical concern in scientific research, including data integrity, intellectual property, plagiarism, collaboration and cooperation, data sharing, treatment of animal and human subjects, and responsibilities to the general public.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2090 - ADVANCED DEVELOPMENTAL BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will examine selected topics in developmental biology at an advanced level. Topics may include pattern formation in insects, cell lineage analysis, cell-cell interactions and the specification of cell fates, cell adhesion molecules, genetic approaches to mammalian embryo genesis and the extracellular matrix in development. Emphasis will be placed on the critical reading of papers and classroom discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2100 - CELLULAR STRUCTURE AND MORPHOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will explore biological processes within eukaryotic cells. Topics include: mechanotransduction/biomechanics; cellular interactions; polarity; cytoskeletal dynamics; cell-matrix interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2105 - CELL SIGNALING

Minimum Credits: 2

Maximum Credits: 2

This course will examine the pathways used to transmit information within and between cells. Topics include: receptors with enzymatic activity; RTK and map kinase; protein scaffolds; BMP-, WNT- and SHH-pathways; g-protein coupled receptors; calcium and camp-dependent signaling; excitation and ion channels; mechanisms of cell death.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2110 - MICROBIAL DIVERSITY

Minimum Credits: 2

Maximum Credits: 2

This course will survey important genetic, genomic, physiological, cell biological and developmental processes that distinguish viral, prokaryotic and unicellular eukaryotic organisms. Topics include: bacteriophages, plants and animal viruses; bacterial intracellular pathogens, parasites and symbionts of plants and animals; eukaryotic pathogens.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

BIOSC 2121 - BIostatISTICS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2130 - GENETICS OF MODEL ORGANISMS

Minimum Credits: 2

Maximum Credits: 2

This course will compare genetic approaches in a variety of model systems. Topics include: genetics screens and selections; linkage mapping; genetic manipulation in haploid and diploid model systems; epigenetics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2140 - GENOMICS

Minimum Credits: 2

Maximum Credits: 2

Advances in molecular biology have enabled the collection of a great deal of sequence data. Genomic studies seek to understand the organization of, and information embedded within, entire genomes. Students will learn a variety of techniques in structural genomics (finding information within genomes), functional genomics (describing gene function and interaction), comparative genomics (assessing how that information changes) and metagenomics (assessing the gene content of multiorganism communities) directed at using genome sequence data to address questions of interest.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2147 - PROTEIN STRUCTURE AND FUNCTION

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the biophysical and biochemical characterization of proteins. Topics include: methods for determining protein structure; protein folding; molecular dynamics and modeling protein movement; linking structure and function; protein-DNA interactions.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOSC 2150 - NUCLEIC ACIDS

Minimum Credits: 2

Maximum Credits: 2

BIOSC 2150 focuses on the molecular biology of DNA and RNA, and how biological information is stored, replicated, recombined, and processed. Topics to be discussed include: DNA replication and its regulation; DNA segregation; homologous, illegitimate and site-specific recombination; DNA repair; structural and functional roles of RNA in the activity and regulation of telomerase; small nuclear RNAs and the spliceosome; processing of ribosomal and transfer RNAs; regulation by micro RNAs and long non-coding RNAs. There will be an emphasis on the primary literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2155 - GENE EXPRESSION

Minimum Credits: 2

Maximum Credits: 2

This course will examine the regulation of gene expression from a variety of standpoints. Topics to be discussed include: transcriptional mechanisms and regulation in prokaryotes and eukaryotes; mRNA splicing; RNA processing; RNAi; chromatin.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2320 - POPULATION BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on ecological and evolutionary processes at the population level. We will learn how to represent ecological and evolutionary dynamics using increasingly realistic mathematical models. We will first explore population ecology including models of single populations, meta-populations, and interactions between species. We then shift to population and evolutionary genetics studying how the mechanisms of evolution interact with each other. Finally, we will study the explicit interaction between ecological and evolutionary processes that can occur over short timescales.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2350 - EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to biological evolution. The first half of the course will address the history of evolutionary theory, inheritance and variation, population genetics, natural selection, speciation, and adaptation. The second part will cover evolutionary history, with an emphasis on the fossil record, phylogenetics, and the origin of evolutionary novelties, including molecular characters. Emphasis throughout will be placed on how the history of life is studied in the context of scientific methodology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2351 - ADVANCED EVOLUTION

Minimum Credits: 2

Maximum Credits: 2

This course explores factors that influence inheritance. Topics include: gene-by-environment interactions; polymorphism and polyphenism; sexual dimorphism; causes and consequences of individual variation; extended phenotypes; nutrition and the phenotype; fitness landscapes; mutation and novelty; trait mapping onto phylogenies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2355 - SPECIES INTERACTIONS

Minimum Credits: 2

Maximum Credits: 2

This course examines the interactions between species in a variety of contexts. Topics include: coevolution, mutualism & parasitism; plant-herbivore coevolution; cospeciation; hybridization and signaling of species identity; predation, predator-avoidance and aposematism; predator-prey interactions; foraging ecology; competition; tri-trophic level interactions; herbivory; context-, condition- and trait-dependent species interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2361 - ADVANCED ECOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course examines the relationship between organisms and their environment. Topics include: colonization strategies; succession; biogeography; climate change; trait-mediated assemblages; spatial models; trophic cascades.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2370 - EVOLUTIONARY GENETICS

Minimum Credits: 2

Maximum Credits: 2

This course will cover a wide variety of traits and model organisms in which genetic and developmental studies of evolution have been performed. Topics and concepts will include phylogenetics, population genetics, the evolution of novelty, host-pathogen interactions, and multicellularity. The course will consist of lectures, journal article discussions, and essays relevant to the lecture topic.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2435 - ENVIRONMENTAL PHYSIOLOGY OF ANIMALS

Minimum Credits: 3

Maximum Credits: 3

This course in ecophysiology is a physiology course taught from an ecological and evolutionary perspective. The organismal, ecological, and evolutionary significance of physiological function will be emphasized along with molecular and cellular mechanisms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2450 - BIOLOGICAL SCIENCES SEMINAR

Minimum Credits: 2

Maximum Credits: 2

Papers to be selected from current periodicals in the biological sciences for presentation. Emphasis will be placed on a critical evaluation of experimental procedures, data, and the interpretation of data.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2500 - CURRENT TOPICS IN ECOLOGY

Minimum Credits: 1

Maximum Credits: 3

This course will cover population ecology, community ecology, and ecosystem ecology. A strong undergraduate background in ecology will be assumed. Some lectures will be included, but most emphasis will be placed on reading and discussing papers from the primary literature, including papers of both historical and current interests.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOSC 2540 - SEMINAR IN ECOLOGY AND EVOLUTION

Minimum Credits: 2

Maximum Credits: 2

Students will participate in the critical review of the current literature relating to a topic in ecology. Specific topic is to be selected later.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

BIOSC 2545 - THE MATHEMATICS OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course uses examples from across biology to illustrate how simple mathematical models can increase our understanding of biological systems. We will focus on several foundational modeling approaches, including systems of difference equations, matrix models, probability, and statistical data analysis. Students will discover how these approaches are used, their strengths and limitations, and how they could be extended to more complex problems. Students should be prepared to use both spreadsheet programs and scripts, written in a language such as Python or R, to explore these models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2570 - ENVIRONMENTAL SCIENCE TEACHER'S WORKSHOP

Minimum Credits: 1

Maximum Credits: 3

Teachers spend five days at Pymatuning Laboratory of Ecology exploring the relationship between land use, water quality and aquatic community structure. Lectures, field work, data analysis, interpretation of results. Includes development of modules for classroom use.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

BIOSC 2810 - MACROMOLECULAR STRUCTURE AND FUNCTION

Minimum Credits: 3

Maximum Credits: 3

Course is concerned primarily with the structure and functions of proteins and nucleic acids. These are large polymers where structure and function are determined by the sequence of monomeric units. Topics will include the physical and chemical properties of the monomer units (amino acids/nucleotides); the determination of the linear sequence of these units; the size, shape and general properties of the biopolymers in aqueous systems; and the relation between structure and function, particularly in transport (hemoglobin) and in catalysis (enzymes).

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOSC 2840 - REGULATION OF MEMBRANE TRAFFIC

Minimum Credits: 2

Maximum Credits: 2

Course analyzes membrane/protein traffic along both the biosynthetic and endocytic pathways. Emphasis placed on how this traffic is regulated. Topics include the role of g proteins (both heterotrimeric and small), coat proteins (coatamer 1 and 2 and adaptors), signal transduction cascades (pkc, pka, ip3, etc), and snare complexes in protein trafficking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2940 - MOLECULAR BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Course will examine the molecular basis of life processes, with a primary emphasis on genes (what they are, what they do, how they determine the properties of an organism). Topics covered will include replication of DNA, transcription of DNA into MA, and translation of RNA into protein. Much of the course will be concerned with how these processes are regulated in response to changes in the environment, and how this regulation relates to the observed properties and behavior of the organism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2950 - SEMINAR JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

Research papers will be discussed prior to departmental seminar.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

BIOSC 2960 - DEPARTMENTAL SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students will attend lectures on selected topics of current research in the biological sciences. The lecturers will primarily be invited scientists from outside the university, with a few lectures by faculty from within the department or other departments in the university.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2970 - TEACHING OF BIOLOGICAL SCIENCES

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

BIOSC 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1

Maximum Credits: 1

This seminar series is designed for Ph.D. students and post-doctorate fellows interested in pursuing an academic career and wish to gain didactic knowledge and skills related to teaching in a science, technology, engineering and mathematics (stem) classroom. Experienced faculty provide topics and discussion based seminars.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BIOSC 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

Designed for graduate students and postdocs preparing for academic careers in the stem disciplines, this course provides an introduction to the scholarship of teaching and learning (SOLT). This is the second course in a series; however, the former course (3001) is not a required prerequisite. The course will utilize material presented in a massive open online course (MOOC) available through coursera.org and sponsored by the center for the integration of research, teaching and learning (CIRTL). Participants will learn about effective teaching strategies and the research that supports them in addition to learning how to collect, analyze, and act upon their own evidence of student teaching. Topics include but are not limited to: 1. Learning through diversity, 2. Cooperative learning/peer instruction, 3. Inquiry-based labs, 4. Problem-based learning, 5. Flipped classroom pedagogy. Further, participants will learn the process for developing a teaching as research plan as well as the role of human subjects consent for classroom based research.

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2027 - COMPREHENSIVE ANALYSIS OF DISEASE

Minimum Credits: 1

Maximum Credits: 1

This course is designed to give the students the opportunity to integrate all the knowledge accumulated during the program in a comprehensive study of disease states. Small groups of students will work collaboratively to develop an in-depth analysis of a specific disease, from the diagnosis to the pathogenesis, the molecular and cellular basis and treatment options currently available. Each group of students will work in a web-based platform under faculty supervision to develop an interactive, knowledge-based teaching/research study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

MSBMS 2028 - COMPREHENSIVE ANALYSIS OF DISEASE 2

Minimum Credits: 2

Maximum Credits: 2

This course is designed to give the students the opportunity to integrate all the knowledge accumulated during the program and in the fall session of CAD in a comprehensive study of disease states. Faculties will present lectures on various diseases with particular emphasis on the physiology and pharmacology. At the end of term there will be Special Topic Session in which students will present short lectures on current and interesting topics. The students will identify the topics and discuss them in advance with the course director. Participation to these sessions is not mandatory but will be considered in the final grade.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

MSBMS 2030 - HISTOLOGY AND CELL FUNCTION IN HEALTH AND DISEASE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Grade Component: Grad HSU Basis
Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2061 - FOUNDATIONS OF SUCCESSFUL BIOMEDICAL CAREER PLANNING AND DEVELOPMENT II

Minimum Credits: 1
Maximum Credits: 1

The course provides foundational training in career planning and professional development. Key skills that students build are: Increasing your capacity for self-directed career development; Fostering life-long career management habits; Maximizing your scholarly training success; Shaping positive career outcomes. Students will engage in experiential learning, small-group discussions, and peer mentoring. These different approaches enable individually relevant and self-constructed understandings of career development, consistent with expectations of independence in scholarly activities. Areas for discussion include: self-assessments, exploration of different career options, how to set goals, career adaptability, and other topics identified by students. A final self-authoring paper will be required.

Students will engage in experiential learning, small-group discussions, and peer mentoring. These different approaches enable individually relevant and self-constructed understandings of career development, consistent with expectations of independence in scholarly activities. Areas for discussion include: self-assessments, exploration of different career options, how to set goals, career adaptability, and other topics identified by students. A final self-authoring paper will be required.

MSBMS 2063 - PROFESSIONALISM AND NON-COGNITIVE AND DEVELOPMENT PART 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSBMS 2065 - PROFESSIONALISM AND NON-COGNITIVE DEVELOPMENT

Minimum Credits: 2

Maximum Credits: 2

Professionalism and Non-Cognitive Development expands upon the concepts and themes that are introduced in Foundations of Successful Biomedical Career Planning and Development. Students will engage in experiential learning, including mindfulness practices and other evidence-based strategies that cultivate emotional agility, self-determination theory derived motivation, stress coping, meaning making, resilience, compassion, and fulfillment. Students will also engage in small-group discussions, peer mentoring, and written exercises. Course lecture and discussion will be based on research findings from coaching, positive psychology, neuroscience, sociology, philosophical concepts, applied practice, and lived experiences. Course topics will have relevance to burnout prevention, sociocultural medicine, interpersonal communication, and professional identity. Our intention is that students will deepen their understanding of their authentic self and leave the course with knowledge, habits, and perspectives to thrive.

MSBMS 2074 - EXPERIENTIAL LEARNING

Minimum Credits: 1

Maximum Credits: 10

The bmp offers experiential learning activities in the areas of community service, patient volunteering, laboratory research and clinical shadowing. For this course, the bmp student and instructor plan onsite experiential learning activities designed to provide goal oriented outcomes for the student. Students are expected to take initiative to find suitable matches and schedule several experiential sessions. Available opportunities are posted on the bmp website and matches are made each term to optimize the experiential benefit for all bmp students. Students are responsible for documenting all experiential dates and hours, along with what was learned in each activity. Students are also responsible for ensuring all activities are approved by the instructor. Students will also provide a five page maximum reflect on the experiences at the end of the term and a laboratory report for any research conducted, both of which are graded. Students are also required to ensure they complete the appropriate onsite requirements for the number of credits they are registered for.

MSBMS 2080 - CELL BIOLOGY PATHWAYS IN TREATMENT OF DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course will explore how basic cell biology and genetic investigations have revealed the theoretical underpinnings of, and revolutionized approaches to the understanding of, the basis of selected diseases and uncover tractable approaches to treatments or cures. A set of major cell pathways will be used to illustrate how new drug targets can be identified and can lead to dramatic advances in medical treatments. The course blends traditional lectures with self-directed student activities to prepare the students for interactive lecture discussions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2090 - CELL SIGNALING AND PHARMACOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course examines the principles of drug action. The course covers the basic principles of pharmacodynamics and pharmacokinetics. Particular emphasis is placed on the concept that the rational use of drugs is based on the understanding of the interactions, signaling mechanisms, and functional outcomes at the modular and cellular level.

Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2102 - BIOMEDICAL MASTERS PROGRAM PROFESSIONAL COMMUNICATION REFLECTION

Minimum Credits: 1

Maximum Credits: 1

The course will explore professional communication skills and strategies for written applications and interviews in the health sciences specifically, and professionalism generally. The object of study will focus on a practical summation of individual student educational and experiential activities in the BMP. Large group lectures, collaborative student think-pair-sharing, and team-based small group and large-group discussion workshops will be used to analyze and evaluate student educational and experiential activities in the context of professional competencies and goals. Faculty and staff mentored, collaborative team-based, and self-directed learning activities will continue to develop student skills and strategies for narrative, analytic and interpretative professional narratives including professional school application experiences and essays, and interviews.

Academic Career: Graduate

MSBMS 2110 - ORGAN SYSTEMS PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course discusses the integrative physiology of all of the major organ systems, including the cardiovascular system, respiratory system, renal system, gastrointestinal system, and reproductive system. The systems will be considered in the context of the function of the body as a whole, and

how they respond during challenges (e.g. exercise) and pathological states. Current research related to the functioning of these systems will be emphasized throughout the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

MSBMS 2200 - CLINICAL PHARMACOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is an elective course in Clinical Pharmacology mostly based on clinical cases. These will include cases in clinical (applied) pharmacokinetics, drug-drug interactions and evidence-based pharmacotherapy. This course uses a combination of pre-class preparation and in-class discussion and analysis of each case.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSBMS 2210 - SYSTEMS NEUROPHYSIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will provide an overview of the neuroanatomy and functions of the major brain systems. Topics covered will include neural mechanisms for motor control, sensory processing and perception, cognition and memory, and higher cerebral functions. Major neurological diseases will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSBMS 2260 - DIVERSITY AWARENESS EXPLORATION IN THE BIOMEDICAL SCIENCES

Minimum Credits: 1

Maximum Credits: 1

This course is designed to foster diversity awareness in the biomedical sciences. Students will explore the relationship between topics such as implicit bias, privilege and the social and structural factors within a biomedical frame. In addition, students will examine how these topics impact health, wellness, and disease. Diversity awareness is cultivated through exploration of oneself (beliefs, actions, patterns), how we see the world around us, and how others both see and experience themselves and the world. Students will engage in introspective reflection, gain knowledge from field experts, and hear first-hand experiences from individuals. Throughout the course, students will expand their capacity to seek, consider and adopt different perspectives while also learning about health disparities. Information gained in this course will prepare students to understand the complexity and nuance of social systems, social difference, health, and health care and how communities and individuals are impacted. Cultivating diversity awareness is a lifelong process. This course will build on existing knowledge and lay the groundwork for further exploration.

Biostatistics

BIOST 2000 - TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course will provide doctoral students with an opportunity to obtain teaching experience. This course is intended for doctoral students during their dissertation stage. Teaching experience will enhance the professional growth of students. Students will further develop oral and written communication skills and an art for explaining material, which is an integral part of a biostatistician's career.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOST 2011 - PRINCIPLES OF STATISTICAL REASONING

Minimum Credits: 3

Maximum Credits: 3

Acquaints students with the concepts of statistical reasoning as applied to the study of public health problems. Students learn the general principles of statistical analysis and acquire the ability to utilize a statistical software package (Minitab) as a tool to facilitate the processing, editing, storing, displaying, analysis and interpretation of health research related data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: Graduate School of Public Health; PLAN: Excluded Plans = Biostatistics(DPH, PHD, MPH, MS, MSH)

Course Attributes: Global Studies

BIOST 2016 - SAMPLING DESIGN AND ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This is an applied statistical methods course designed to provide students with a working knowledge of introductory and intermediate-level sample designs and associated methods of statistical analysis along with a basic understanding of the theoretical underpinnings. Emphasis is placed on sampling human populations in large communities. Students will also learn statistical software used in survey data analysis, including sample selection and survey procedures in the STATA software package. Lecture topics include: simple probability samples, stratified sampling, ratio and regression estimation, cluster sampling, sampling with unequal probabilities, variance estimation and weighting in complex surveys, two-phase sampling, estimating population size and estimation of rare populations and small areas. The course will consist of one weekly 2-hour lecture and one class devoted to student presentations related to a term project assigned at midterm.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2011 or 2039 or 2041; PROG: Graduate Sch of Public Health (PPBHL)

BIOST 2021 - SPECIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

Qualified students may undertake advanced work or research with the approval and under the guidance of a member of the staff.

Grade Component: Grad SN Basis

BIOS T 2036 - INTRODUCTION TO HEALTH DATA SCIENCE

Minimum Credits: 2

Maximum Credits: 2

This course will teach students methods and concepts in data science that are motivated by real life problems in public health. Students will become familiar with data science terms such as data wrangling. Students will learn the concepts of exploratory data analysis, data cleaning, data wrangling, and visualization. Students will learn the necessary skills to tidy, manage, and visualize data and communicate results. This course will mainly use the R programming language but will also teach certain concepts in SQL and Python. The course lectures will cover the following general themes: data structures and representation, data wrangling and processing, computational tools and techniques, and case studies illustrating steps of analysis of real data, including examples from public health.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Biostatistics (MS or PHD)

BIOS T 2037 - FOUNDATIONS OF STATISTICAL THEORY

Minimum Credits: 4

Maximum Credits: 4

The course covers the basic theory of probability and statistical inference with a focus on the appropriate use of standard methods and on the construction of new statistical inference tools. Topics covered in the first half include joint, marginal, and conditional probabilities; random variables and functions thereof; distribution characteristics of random variables; basic asymptotic theory and univariate theorems including Chebyshev's inequality, the law of large numbers, and central limit theorem. Topics covered in the second half include principles and methods of constructing estimators (e.g., MLE, MME, CRLB), confidence intervals, and hypothesis testing (including Neyman-Person and Generalized Likelihood Ratio tests); data reduction principles and techniques, and their relationship to optimal statistical inference (e.g., sufficiency, Rao-Blackwell principle); basic likelihood-based, exact, conditional, and asymptotic statistical inference. The course is taught through weekly series of two lectures and one recitation session clarifying the typical theoretical problems and proving computational examples illustrating theoretical concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOS T 2038 - FOUNDATIONS OF STATISTICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

The course covers basic theory of probability and statistical inference with a focus on appropriate use of standard methods and construction of new statistical inference tools. Topics covered in the first half include joint, marginal, and conditional probabilities; random variables and functions thereof; distribution characteristics of random variables; basic asymptotic theory and univariate theorems including Chebyshev's inequality, law of large numbers, and central limit theorem. Topics covered in the second half include principles and methods of constructing estimators (e.g., MLE, MME, CRLB), confidence intervals, and hypothesis testing (including Neyman-Person and Generalized Likelihood Ratio tests); data reduction

principles and techniques, and their relationship to optimal statistical inference (e.g., sufficiency, Rao-Blackwell principle); basic likelihood-based, exact, conditional, and asymptotic statistical inference.

Academic Career: Graduate

Course Component: Lecture

BIOST 2039 - BIOSTATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

This course is an introductory biostatistics methods course for biostatistics graduate students, other quantitative public health students, and health career professionals who will make use of statistical methods in research projects, interpreting literature and possibly develop new biostatistical methods in the future. This class is intended for students needing a more research-oriented approach than that provided in BIOST 2011 and an approach with a greater emphasis on mathematical foundation than provided in BIOST 2041. Students in BIOST 2039 are expected to have a working knowledge of calculus, including multivariable differentiation and integration. Topics covered in this course include exploratory and descriptive analyses, probability, estimation and hypothesis testing. One and two sample problems will be considered for both continuous and discrete variables. ANOVA, regression, correlation and nonparametric methods will be discussed. R will be used extensively for data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: BIOST-MS, PHD

BIOST 2040 - ELEMENTS OF STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Covers generating functions and convolutions of random variables, the poisson and compound poisson distributions, branching processes, random walk, and the gambler's ruin problem, Markov chains, and simple birth and death processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2043

BIOST 2041 - INTRODUCTION TO STATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Discusses techniques for the application of statistical theory to actual data. Topics include probability theory, estimation of parameters, and tests of hypothesis for both the discrete and continuous case.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BIOST 2042 - INTRODUCTION TO STATISTICAL METHODS 2

Minimum Credits: 3

Maximum Credits: 3

More techniques are given for the application of statistics to actual data with emphasis on distribution-free and multivariate methods. Interpretation of results and concepts will be stressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2041

BIOST 2043 - INTRODUCTION TO STATISTICAL THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Covers joint, marginal, and conditional probabilities; distributions of random variables and functions of random variables; expectations of random variables and moment generating functions; law of large numbers; central limit theorem.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BIOST 2044 - INTRODUCTION TO STATISTICAL THEORY 2

Minimum Credits: 3

Maximum Credits: 3

Covers elements of statistical inference; sampling distributions of estimators; Rao-Cramer's Inequality; problems of testing statistical hypotheses; Neyman-Pearson lemma; likelihood ratio tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2043

BIOST 2046 - ANALYSIS OF COHORT STUDIES

Minimum Credits: 3

Maximum Credits: 3

This introductory applied course in statistical modeling focuses on maximum likelihood and related regression methods for the analysis of cohort data. Topics include generalized linear models, generalized estimating equations, and generalized linear mixed models. The course emphasizes logistic and poisson regression, and discrete survival models with time-dependent covariates. Students analyze several cohort data sets, assess the adequacy of their models, and interpret their results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2042 and 2049

BIOST 2049 - APPLIED REGRESSION ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course in statistical modelling intended for Masters or PhD students in biostatistics or other disciplines who have already had basic training in statistical methods. The course focuses on all types of regression methods with the following learning objectives: To fit and interpret linear regression models with multiple continuous and/or categorical predictors. To fit and interpret generalized linear models (GLMs) with emphasis on logistic and Poisson regression. To justify and apply standard modelling procedures using data, including model interpretation and assessment of model adequacy. To analyze data sets taken from the fields of medicine and public health. To develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 or BIOST 2041

BIOST 2050 - LONGITUDINAL AND CLUSTERED DATA ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This introductory course in statistical modeling is intended for MS students in biostatistics and PhD students in biostatistics or epidemiology in their second year of graduate work. This course may be thought of as the third methods course in Biostatistics following BIOST 2041/2039 and BIOST 2049. The course focuses on regression methods for the analysis of longitudinal or more generally clustered data with emphasis on generalized estimating equation. The course objectives are to introduce generalized estimating equations (GEEs), mixed models, and generalized linear mixed models from an applied perspective to analyze longitudinal and clustered data, to understand the justification and applicability of standard procedures

to standard problems, including model interpretation and assessment of model adequacy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049; PROG: Graduate Sch of Public Health

BIOST 2051 - STATISTICAL ESTIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

Fisher's information; Rao-Cramer Inequality and Sufficient Statistics; Bhattacharyya Bounds; Rao-Blackwell Theorem; Methods of Moments; the Method of Maximum Likelihood; Newton-Raphson Method and Rao's Scoring for Parameters; estimation of several parameters; order statistics and life testing problems; estimation with censored data and survival analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 and 2044; PLAN: Biostatistics (PHD)

BIOST 2052 - MULTIVARIATE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Multivariate normal distribution, estimation of the mean vector and covariance matrix, distributions and uses of simple, partial and multiple correlation coefficients, generalized T2 statistic, distribution of the sample generalized variance, Multivariate Analysis of Variance and the Multivariate Behrens-Fisher problem. Multivariate methods applied to repeated measures analysis, factor analysis, and discriminant analysis. Beginning of the course emphasizes theory; later, applications and computational methods emphasized. Lectures are of current and classical literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044

BIOST 2054 - SURVIVAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Introduces the student to the design considerations and statistical analysis of clinical trials. Covers the theoretical aspects of various models in reliability theory and the proportional hazards model, as well as the more applied problems of interpreting specific data sets and designing large-scale trials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOST 2039 and 2044

BIOST 2056 - STATISTICAL EVALUATION OF BIOMARKERS AND CLASSIFICATION TOOLS

Minimum Credits: 3

Maximum Credits: 3

The course provides an introduction to the concepts and approaches for statistical evaluation of classification markers and tools applied in various detection and prediction tasks. Topics include evaluation of the accuracy of classifiers and diagnostic tests, biomarkers and classification/prognostic models, ROC curves, decision-theoretic approaches, combining multiple markers for improved classification, the accuracy of future event prediction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2038 and 2039; PLAN: Biostatistics (PHD,MS)

BIOST 2058 - SCIENTIFIC COMMUNICATION SKILLS

Minimum Credits: 2

Maximum Credits: 2

This course is meant to help students develop oral, visual and written scientific communication skills and to familiarize students with research resources. Students may use their own research topic, including work on a thesis or dissertation, or help will be provided in selecting one.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 2059 - CONSTRAINED STATISTICAL INFERENCE WITH APPLICATIONS

Minimum Credits: 2

Maximum Credits: 2

This is an applied biostatistics course for biostatistics graduate students, other quantitative public health students, and health career professionals who will make use of statistical methods in research projects and possibly develop new biostatistical methods in the future. While this course is intended to be an application oriented course motivated by real scientific problems, it will rely on some statistical theory. Students are expected to have basic understanding of statistical theory at the level of BIOST 2044 (Introduction to Statistical Theory 2) and have applied analysis skills at the level of BIOST 2049 (Applied Regression Analysis). Additionally, students are expected to have working knowledge of the programming language R. Topics covered in this course include: (a) Brief review of some important concepts from BIOST 2043, BIOST 2044 and BIOST 2049, such as parametric and nonparametric estimation and testing of hypotheses, linear fixed and mixed effects models, best linear unbiased predictor (BLUP) and generalized linear models. (b) Some real world motivating examples of various types of constraints on parameter spaces. Reasons for constrained inference. (c) Estimation of parameters and testing of hypotheses under inequality constraints in a variety of settings - challenges and solutions. Various estimation and testing procedures such as Pool Adjacent Violators Algorithm (PAVA), Restricted Maximum Likelihood Estimation (RMLE), Isotonic Regression, Likelihood Ratio Test (LRT), Williams' test, Dunnett's test, Jonckheere-Terpstra test. Substantial reduction in samples sizes and gain in power when using constrained inference based methods in comparison to standard methods. (e) Resampling methods for constrained inference, why they fail for confidence intervals but are suitable for some testing problems. (f) Nonparametric problems - various notions of orderings of random variables, univariate and multivariate analysis. (g) Applications in clinical trials, toxicology, high dimensional gene expression studies, microbiome, cell-cycle and circadian clock.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044 and BIOST 2049

BIOST 2061 - LIKELIHOOD THEORY AND APPLICATION

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce the student to modern likelihood theory and its applications. The course will cover maximum likelihood theory, profile likelihood theory, pseudo likelihood theory and generalized estimating equations. The course is taught at a doctoral level and much of the theory is illustrated through applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2044

BIOST 2062 - CLINICAL TRIALS: METHODS AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

The course lectures integrate web-based material covering fundamental concepts in the design and conduct of modern clinical trials. Topics include: experimental designs, interim monitoring, analysis methods for comparative clinical trials, ethical, organizational, and practical considerations of design, case studies, and international guidelines for publication of trials in major journals, and meta-analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 and 2093; PLAN: Biostatistics (MS,MPH, or PHD)

BIOST 2063 - BAYESIAN DATA SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This is a course in Bayesian methods for applied statistics and data science whose broad goal is to provide students with the skills needed to be able to select, conduct, report and interpret appropriate Bayesian analyses for a wide variety of applied problems. General topics covered include Bayesian concepts of statistical inference, Markov chain Monte Carlo and other computational methods, linear, hierarchical and generalized linear models, model selection and diagnostics, and Bayesian learning. The course explores the use of the popular and free software packages R, JAGS and Stan for conducting Bayesian analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: (BIOST 2039 or 2041) and BIOST 2049

BIOST 2065 - ANALYSIS OF INCOMPLETE DATA

Minimum Credits: 3

Maximum Credits: 3

This course will present missing-data problems in statistics and discuss naive methods such as complete-case analysis, available-case analysis and imputation; standard likelihood-based methods, theory and application of multiple imputation, data augmentation, Gibbs sampler, and some recently developed methodologies in the missing-data literature and related fields.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049 and 2051 and 2061

BIOST 2066 - APPLIED SURVIVAL ANALYSIS: METHODS AND PRACTICE

Minimum Credits: 2

Maximum Credits: 2

This course covers fundamental concepts and methods important for analysis of datasets where the outcome is the time to an event of interest, such as death, disease occurrence or disease progression. Topics include: basic methods for summarizing and presenting time-to-event data in tabular form and graphically as life tables, non-parametric statistical techniques for testing hypotheses comparing life tables for two or more groups; approaches to fitting the semi-parametric Cox proportional hazard model and other commonly used parametric models that incorporate study co-variables, methods for assessing goodness-of-fit of the models, and sample size considerations. In addition to didactic lectures, there are group projects that involve analysis of datasets and presentation of analytic reports in the classroom.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049; PLAN: Biostatistics (PHD,MS)

BIOST 2068 - INTRODUCTION TO CASUAL INFERENCE

Minimum Credits: 3

Maximum Credits: 3

With the increasing demand for identifying causal effects, causal inference methods have been greatly developed in the last decades. In public health, most studies require more or less causal inference due to the prevalence of confounding and selection bias. This course will introduce 1) the concepts of causal effects, causal assumptions, and causal graphs, 2) widely-used causal inference methods (e.g., propensity score, instrumental variables, and causal mediation analysis), and 3) methods implementation and applications in public health. Students enrolling in this course are expected to have taken an introductory biostatistical course (BIOST 2038, 2039, or 2049) and familiar with programming. The course will be taught through lectures, followed by homework and a final project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 2068 - INTRODUCTION TO CAUSAL INFERENCE

Minimum Credits: 3

Maximum Credits: 3

With the increasing demand for identifying causal effects, causal inference methods have been greatly developed in the last decades. In public health, most studies require more or less causal inference due to the prevalence of confounding and selection bias. This course will introduce 1) the concepts of causal effects, causal assumptions, and causal diagrams, 2) widely-used causal inference methods (e.g., propensity score, instrumental variables, and causal mediation analysis), and 3) methods implementation and applications in public health. Students enrolling in this course are expected to have taken an introductory biostatistical course and be familiar with R programming. The course will be taught through lectures, followed by homework and a final project.

BIOST 2069 - STATISTICAL METHODS FOR OMICS DATA

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is a graduate level course to cover popular statistical and computational methods for high-throughput omics data analysis. With the rapid advances of many omics technologies, the course will focus on the fundamental concepts of various topics (e.g. data preprocessing, association analysis, causal mediation analysis, differential analysis, statistical learning, pathway analysis, etc.) and their specific applications to different omics data types (e.g. microarray, next-generation sequencing, single cell sequencing, mass spectrometry, microbiome, etc.). The major target audience is graduate students (master or PhD students) interested in omics data analysis and related research. Through homework problem sets, computer labs and a final project, students train with hands-on materials to understand the methods, implement the algorithms and interpret results in real omics applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049; and BIOST 2037 and BIOST 2043; PLAN: BIOST-MS or BIOST-PHD Students are required to have basic R programming ability, which is provided through the three prerequisite courses.

BIOST 2069 - STATISTICAL METHODS FOR OMICS DATA

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is a graduate level course to cover popular statistical and computational methods for high-throughput omics data analysis. BIOST 2079 - INTRODUCTORY STATISTICAL LEARNING FOR HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is a graduate level course to introduce basic concept and methods for statistical learning with emphasis on modern health science applications. The syllabus includes linear regression with regularization, supervised machine learning, unsupervised clustering, dimension reduction

and other special topics (e.g. Bayesian network and hidden Markov model). Target audience will be second year Biostatistics master students or early PhD students with interests in statistical learning techniques for health science data. Through homework problem sets, computer labs and a final project, students train with hands-on materials to implement methods and interpret results in real applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2043 and 2049; PLAN: Biostatistics(MS or PHD); Students are expected to have programming experiences in R or in some low-level languages such as C, C++, Java and Fortran.

BIOST 2080 - ADVANCED STATISTICAL LEARNING

Minimum Credits: 2

Maximum Credits: 2

This is a 2-credit course in advanced statistical learning, covering topics related to the statistical interpretation and theory behind machine learning models/methods. Emphases will be given to in-depth derivation of models/algorithms from topics covered in BIOST 2079 (Introductory Statistical Learning for Health Sciences) as well as additional topics on modern statistical learning methodologies, with special focus on methods for health science applications. This course is designed for graduate students in the Department of Biostatistics and other interested graduate students who already have sufficient statistical and programming background. Students are expected to be familiar with R. Experience in C/C++, Python or Matlab may be helpful, but is not required. Programming skills/training shall be demonstrated by previous programming (or programming heavy) courses in R, Python, Matlab, C/C++, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049 and BIOST 2079; Special Instructions: Programming skills/training shall be demonstrated by previous programming (or programming heavy) courses in R, Python, Matlab, C/C++, etc.

BIOST 2080 - ADVANCED STATISTICAL LEARNING

Minimum Credits: 2

Maximum Credits: 2

This is a 2-credit course in advanced statistical learning, covering topics related to the statistical interpretation and theory behind machine learning models/methods. Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 2081 - MATHEMATICAL METHODS FOR STATISTICS

Minimum Credits: 3

Maximum Credits: 3

Differentiation and integration of functions of several variables. Infinite sequences and series. Fundamentals of matrix algebra. Class examples and homework problems will emphasize applications to probability and statistics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biostatistics (PHD, MS, MPH)

BIOST 2083 - LINEAR MODELS

Minimum Credits: 3

Maximum Credits: 3

Acquaints students with linear model techniques for analyzing both balanced and unbalanced data. The topics covered include generalized inverses, orthogonal contrasts with unbalanced data, and analysis of covariance. Analysis with computer packaged programs is discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOST 2044

BIOST 2086 - MIXED MODELS

Minimum Credits: 3

Maximum Credits: 3

This is a PhD level course in Mixed Models. Students are expected to be comfortable and familiar with linear algebra (e.g., matrix notation and computation) and have taken courses in linear/generalized linear models. Using a mixed model allows one to relax the usual independence assumptions from linear/generalized linear models and take into account complicated data structures. This course will cover mainly theoretical aspects of various types of mixed models, together with practical implications of their use. Topics covered will include linear mixed models, generalized linear mixed models, mixed models for categorical data, repeated measures data analysis and cross-over trials with mixed models. Mathematical formulations and statistical assumptions of the fitted models will be covered. Key concepts of the theories and estimation methods behind these mixed models will also be illustrated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2083

BIOST 2087 - BIOSTATISTICS CONSULTING PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

Provides advanced students (second-year masters and doctoral) with exposure and practical experience in consulting on the bio statistical aspects of research problems arising in the biomedical or other allied fields. Students initially under the supervision of a faculty member participate in discussions with investigators leading to the design and/or analysis of a current research problem.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

BIOST 2093 - SAS FOR DATA MANAGEMENT AND ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to provide students with an understanding of the SAS program environment as well as the skills needed to use SAS as a tool to conduct research, prepare data, and perform analyses. Upon completion of the course the student will have an understanding of SAS at the intermediate level. The course covers the utility of SAS as a data management, data manipulation, and data analysis tool. The focus will not be statistical analysis, but rather how to use SAS as a programming tool. Emphasis will be placed on program code writing. Concepts will be illustrated with numerous examples from basic descriptive analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PREQ: BIOST 2039; PROG: Graduate Sch of Public Health

BIOST 2094 - ADVANCED R COMPUTING

Minimum Credits: 2

Maximum Credits: 2

An advanced statistical computing course using R designed for graduate level biostatistics students with programming experience in R or other low-level languages such as C, C++, Java, and/or Fortran. Experience in SAS and/or Stata does not qualify. The course will cover topics, including but not limited to, R in modeling and optimization, advanced R graphics, functional programming, object-oriented field guide, efficient computing in R, GUI for R-shiny, embedding C/C++, R package/documentation, Julia, Github etc. The course will also include real life application for students to

practice the programming techniques learned in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2043; PLAN: Biostatistics

BIOST 2096 - NUMERICAL METHODS BIOSTATISTICS

Minimum Credits: 3

Maximum Credits: 3

The purpose is to familiarize students with a broader range of numerical methods which are useful in bio statistical research. Selected computational techniques used in statistical research will be covered. Background will be provided to facilitate understanding of a few numerical algorithms widely used in statistics. The following are covered: recurrence relations, power series and asymptotic expansions, generating pseudo-random deviates, basic simultaneously methodology, solutions of nonlinear equations, newton's method, vector and matrix norms, linear regression and matrix inversion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044 and 2049

BIOST 2099 - CAPSTONE

Minimum Credits: 2

Maximum Credits: 2

The capstone course is a heavily directed and mentored statistical data analysis project course leading to an ETD formatted thesis and formal oral presentation of the work. This course will be an intense data analysis and writing course with the goal of producing an ETD formatted thesis document containing rigorous analytic methods, appropriately summarized analysis results with logical, statistically and scientifically valid conclusions. The Capstone course will ensure that the written thesis milestone demonstrates the student's competency in biostatistics (and area of concentration if applicable) as well as oral and written communication skills in general.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Biostatistics (MS); Required to have passed MS comprehensive exam.

BIOST 2137 - FOUNDATIONS OF STATISTICAL THEORY

Minimum Credits: 4

Maximum Credits: 4

The course covers the basic theory of probability and statistical inference with a focus on the appropriate use of standard methods and on the construction of new statistical inference tools. Topics covered in the first half include joint, marginal, and conditional probabilities; random variables and functions thereof; distribution characteristics of random variables; basic asymptotic theory and univariate theorems including Chebyshev's inequality, the law of large numbers, and central limit theorem. Topics covered in the second half include principles and methods of constructing estimators (e.g., MLE, MME, CRLB), confidence intervals, and hypothesis testing (including Neyman-Person and Generalized Likelihood Ratio tests); data reduction principles and techniques, and their relationship to optimal statistical inference (e.g., sufficiency, Rao-Blackwell principle); basic likelihood-based, exact, conditional, and asymptotic statistical inference. The course is taught through weekly series of two lectures and one recitation session clarifying the typical theoretical problems and proving computational examples illustrating theoretical concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Business Accounting

BACC 2060 - INDEPENDENT STUDY IN ACCOUNTING

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2100 - MACC INTERNSHIP

Minimum Credits: 1

Maximum Credits: 3

To enroll for an IFC through the MACC program, you must be a MACC student and work for a minimum of 10 hours a week for 10 weeks during the semester you intend to take the internship for credit. You may receive up to six internship credits, but only three per semester, and no more than three credits for an experience. The grade for these credits will be pass/fail (satisfactory/unsatisfactory). The deadline to apply for an internship for credit is the date the add/drop period ends for that given semester. All internship offers must be approved by the MACC office prior to enrollment for that experience. Performance appraisals must be submitted to your faculty advisor and to career services and your employer must complete a midpoint and final performance appraisal.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

BACC 2251 - FORENSIC ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

"Fraud is extremely costly to our society, and the costs seem to be growing. The AICPA recently called forensic accounting one of the seven hot, new, "sizzling" career areas in accounting. It is estimated that there will be a shortage of between 25,000 and 50,000 professionals working in this area in the next few years in the U.S., So there are many opportunities for students knowledgeable in fraud to work in various federal agencies (e.g. FBI), major corporations, and professional service firms. The objectives of the forensics course are to familiarize students with several forms of fraud and the methods that fraud examiners use to prevent and detect it. Students will develop expertise in detecting financial statement fraud from the external auditor perspective, and learn how to use technology to detect fraud. They will acquire a basic understanding of how interviews are conducted in order to detect deception. The class will also provide a historical view of financial statement fraud. The tools used in the class will include interviewing, document examination, and public records searches, which will be helpful to students wanting to become consultants, auditors, tax professionals, managers, etc. The class, of course, includes an ethics component. It will help students to understand the common ethical dilemmas that they might encounter in the business world, and will help prepare them to resist pressure to commit fraud."

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2252 - CORPORATE TAX ACCOUNTING AND PLANNING

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to help students understand how important features of the internal revenue code influence decisions regarding how to organize and structure business operations and select the most appropriate form of doing business. The course begins with a comparison of the issues surrounding the choice of taxable business entity, comparing the regular corporation (c corporation), the small business corporation (s corporation), the partnership, and the sole proprietorship. After this, the course focuses primarily on the c corporation and the s corporation and the underlying principles that determine their respective tax bases and resulting tax obligations. Tax planning is an integral part of the course. Income shifting, tax deductions, tax credits, and income exclusions are discussed in detail. The course uses case studies (including some reflecting an international tax perspective) and tax return preparation to help students to apply the theory and detail of the tax code. Course materials are updated as tax laws change.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BACC 2254 - ADVANCED FINANCIAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course covers topics that are of particular interest to financial report preparers and auditors. Special emphasis is placed on accounting for business combinations and consolidated financial reporting. Other topics include international accounting, accounting for partnerships, and accounting by fiduciaries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Accounting (MS)

BACC 2255 - INTERNAL CONTROLS AND ACCOUNTING DISCLOSURES FOR DERIVATIVES

Minimum Credits: 1.5

Maximum Credits: 1.5

This accounting elective will focus on derivative instruments and their impact on accounting and internal controls. The course will cover various topics tied to derivative instruments including the benefits, hedging, the risks, cash flow implications, internal controls, accounting & reporting requirements, taxation, and regulations. The course will analyze various incidents where internal controls were compromised and the implications. Upon successful completion of this course, the student will have the knowledge and background required to account for, audit, and monitor the use of derivative products. This course will also help those students who plan on sitting for the CPA examination.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BUSACC 1238

BACC 2256 - STRATEGIC COST MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course deals with strategic implications of alternative methods of product cost measurement. The discussions will primarily be case-based and will include cost measurement issues in both conventional and modern manufacturing environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Accounting (MS)

BACC 2258 - STRATEGIC COST MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

The quality, timeliness and credibility of the cost information used in corporate decision-making can have a significant impact on value creation. This is because cost information is important not only in strategy formulation and in the development and implementation of action plans that link strategies to value creation, but also because such data serve as measures of financial performance for products, processes, organizational sub-units and managers. In particular, product and service cost estimates have a major influence on corporate strategic decisions such as pricing, resource allocation, product development, supply chain design and customer focused management. In addition, product costs are informative signals of operational efficiency. Therefore, they constitute financial measures of the success of management actions such as continuous improvement and business process reengineering. Over-aggregate or obsolete cost systems can have a significant adverse impact on cost reduction in particular and overall corporate strategy and competitiveness in general. The objective of this course is to develop an integrated approach to analyzing these issues. In particular, we will study (a) how product cost measurement affects strategy and resource allocation decisions; (b) how to be sophisticated users of cost feedback and how to understand the strategic distortions that are induced by flaws in cost system design; (c) the strategic role of value-driver information and the relationship between process improvement and cost reduction; (d) the use of budgetary control systems and financial measures in

performance evaluation and management and (e) incentive conflicts in organizations and their mitigation through appropriate mechanisms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2401 - FINANCIAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view. This includes what is (and what is not) included in the reports, how and when events affect the statements, and what can be inferred from these reports about the firm's past activities, present position and the future prospects.

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2466 - RISK MANAGEMENT AND COMPLIANCE ISSUES FACING INTERNATIONAL ORGANIZATIONS

Minimum Credits: 2

Maximum Credits: 2

This course will be valuable to MBA and mac students interested in working for global businesses, regardless of their desired career paths. As business organizations continue to seek growth in markets outside the United States and Western Europe, they will face increasingly complex and difficult challenges, including compliance with U.S. And foreign criminal and civil laws in places that are corrupt. Compliance with the U.S. Foreign corrupt practices act, which forbids businesses from providing certain benefits to government officials, is essential for global organizations, as penalties are severe. And to succeed in their careers, auditors will need to understand that businesses in certain geographic areas maintain multiple sets of books and hide bribery and tax fraud schemes. Strategic planners and supply-chain professionals will face cross-border risks, including demands by government customs and tax inspectors for bribe payments. Energy executives will confront violence, corruption and supply-chain problems in many oil and gas-producing areas. Sales professionals will confront demands for kickbacks. The course will cover these issues, and will provide students with the knowledge and compliance tools necessary to advance their professional careers in a global economy.

Academic Career: Graduate

BACC 2510 - INTERMEDIATE FINANCIAL REPORTING AND ANALYSIS 1

Minimum Credits: 2

Maximum Credits: 2

This financial accounting elective is designed for accounting and finance majors who plan to be financial analysts or heavy users of financial reports. Topics covered include accounting procedures for recording and presenting financial information, asset valuations, revenue recognition and financial statement footnote disclosures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Joseph M. Katz Grad Sch Bus

BACC 2511 - INTERMEDIATE FINANCIAL REPORTING AND ANALYSIS 2

Minimum Credits: 1.5

Maximum Credits: 1.5

This financial accounting elective is the second course in the IFR series. It is designed for masters students who plan to be users of financial reports. This course focuses on understanding the disclosures and the mechanics of how a company goes public either through IPO, Direct Listing or SPAC. Periodic reports on Form 8-K as well as disclosures in the annual Def 14A Proxy Statement are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2510; PROG: Joseph M. Katz Grad Sch Bus

BACC 2523 - ACCOUNTING DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Accounting data analytics exposes macc students to the role of big data in accounting and the information technology tools and techniques used by accountants and auditors to produce more timely and accurate reports. Topics include advanced excel, data modeling, statistical sampling and cluster analysis, business intelligence, and xbrl generation and analysis. The course will cover data analytics covering four major themes: financial reporting, performance evaluation, audit analytics, and tax. Each theme will include hands-on instruction using commercial and open source software and requires students to complete a related data analysis project. Accounting data analytics is different from other database and information systems courses in that it will show students how to use specific tools to complete projects and develop an analytical mindset with a specific focus on accounting and auditing processes. This is primarily a project-based course. The students will complete three projects, showing their mastery of the tools, decisions, and the steps they followed to reach their conclusions. The final exam would be used to evaluate general understanding of the concepts discussed throughout the semester. There is potential for additional ebl components including field trips if we can work out logistics. I'm currently developing relationships with the accounting firms to bring in local experts and to work on real-world cases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2524 - INTERNAL AUDIT: RISK & ADVISORY

Minimum Credits: 2

Maximum Credits: 2

Students are introduced to generally accepted auditing standards (GAAS). Internal control is studied in detail with emphasis on how to test for its effectiveness. Audit objectives, planning and sampling techniques are developed as a basis for the audit opinion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2525 - FINANCIAL STATEMENT ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Financial statement analysis focuses on the evaluation of publicly traded company financial statements and related note disclosures as well as the correlation of this historic financial performance to the company's stock prices. This course will assist students' development of a systematic approach to analyzing reported financial data and understanding the underlying risks and possible inconsistencies among comparative companies. Requirements of the course include interim exams and written and oral presentations of analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Accounting (MS)

BACC 2528 - MANAGERIAL ACCOUNTING

Minimum Credits: 1.5

Maximum Credits: 1.5

Students learn how the costs of products and services are determined in cost accounting systems and how this data is used in managerial decisions and in planning and control of business operations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Katz Graduate School of Business

BACC 2533 - ACCELERATED INTERMEDIATE FINANCIAL REPORTING

Minimum Credits: 3

Maximum Credits: 3

Accelerated intermediate financial reporting fulfills the prerequisites of intermediate financial reporting 1 and intermediate financial reporting 2 for students who are entering the MACC program. This course studies the preparation, communication, interpretation and analysis of financial data with emphasis on the information needs of users of financial information prepared under us GAAP. General topics covered in this course include revenue recognition, inventory accounting, long term assets and impairment, investments, current liabilities and contingencies, long term liabilities, capital and retained earnings, leases, pensions and postretirement benefits, income taxes, and preparation of the statement of cash flows. Students are expected to have an accounting background. This course is designed to sit on top of an existing foundation in accounting and will assume students already have taken several financial accounting courses or knowledge obtained through work experience. It is expected that students are fluent with accrual accounting and the accounting cycle and that they have already studied some of the topics in the course in depth. The course will move quickly.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2534 - CONTROLLERSHIP

Minimum Credits: 2

Maximum Credits: 2

This accounting elective is designed for MAcc students seeking a role in corporate accounting and controls. The course will cover the changing role of the controller and the major functions managed by the controller of a typical company. Topics covered include: role of the controller, general accounting, cash management, accounts receivable, accounts payable, payroll, financial planning and budgeting, management reporting and designing well-controlled financial processes and systems. The content will focus not only on the processes managed by the controller, but also the optimization of these processes, policies and procedures and leadership issues. The use of experts from the accounting community will be used as a complement to the theoretical materials presented to illustrate the practical applications and challenges of controllership. Because the course is practical in nature, an experience-based learning group project will be a large part of the curriculum and learning experience offered to students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2537 - TAXES AND MANAGEMENT DECISIONS

Minimum Credits: 2

Maximum Credits: 2

Designed as an introduction to business taxation for majors in areas such as finance or financial planning. Focuses on how managers and analysts can recognize tax problems, consequences and opportunities associated with common business events.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Katz Graduate School of Business

BACC 2542 - ACCOUNTING AND FINANCE LAW

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide macc and mba candidates with advanced legal information that is necessary for effectuating management level responsibilities in the contemporary business environment. This course will enhance a business student's knowledge of the law (past that of the three credit business law elective course that is offered) in a manner that strategically is consistent with the content of the CPA exam.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BSEO 2315 or 2528; PROG: Joseph M. Katz Grad Sch Bus

BACC 2543 - TAX POLICY 1

Minimum Credits: 2

Maximum Credits: 2

Our nation was born from a revolution over taxation without representation. Nearly 250 years later, the debate over tax policy continues to dominate political debates and presidential campaigns. Why the tax system attracts all this attention is no mystery. It is the aspect of government that directly affects more people than any other. This course will explore the history of tax policy in the united states, the tax legislative process in congress, how our tax policies influence people's decisions and behavior, international tax considerations, and ideas for future tax reform. Students will discuss what factors are important in designing a good tax system and survey the social justices and injustices that arise from how the government raises its revenue. Upon completion of this course, students should be able to think critically about our tax system and form opinions grounded in facts and policy. This course is for any student that wants to become a more educated citizen (and voter!) With respect to our nation's ongoing debate over tax reform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2559; PROG: Joseph M. Katz Grad Sch Bus

BACC 2544 - TAX POLICY 2

Minimum Credits: 2

Maximum Credits: 2

This course will build upon tax policy I by taking a more in-depth look at our federal tax system. Students will also be introduced to international tax policies and provisions. Students will continue to discuss what factors are important in designing a good tax system and survey the social justices and injustices that arise from how the government raises its revenue. Upon completion of this course, students should be able to think critically about our tax system and form opinions grounded in facts and policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2549 - STRATEGIC COST ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This course deals with strategic implications of alternative methods of product cost measurement. The discussions will primarily be case-based and will cover cost measurement issues in both conventional and modern manufacturing environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401 and 2528; PROG: Katz Graduate School of Business

BACC 2557 - ACCOUNTING RESEARCH AND WRITING

Minimum Credits: 2

Maximum Credits: 2

This course focuses on improving students' writing, deductive reasoning, and problem-solving skills as they conduct research to make a recommendation on the accounting treatment for transactions for which no direct or clear guidance currently exists. Weekly writing assignments are

evaluated on both content and the quality of the writing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2401; PROG: Joseph M. Katz Grad Sch Bus

BACC 2558 - NON-PROFIT AND GOVERNMENTAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on financial reporting and disclosure for not-for-profit and governmental entities based on the standards and principles promulgated by the financial accounting standards board (FASB) and the governmental accounting standards board (GSAB). Students will learn how such entities prepare their financial reports and how to interpret and use such information. The course covers financial reporting for not-for-profit entities, balancing the focus on internal operations with fiduciary responsibility. In addition, the course examines the objectives of financial reporting for governmental units and the preparation and use of the financial statements for such entities. A sample of specific entities will be reviewed to illustrate the preparation and use of their financial statements. In addition, accounting software for governmental transactions will be introduced.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2559 - TAXES AND DECISION MAKING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on tax return preparation and planning. Students will learn how to calculate the taxes associated with a variety of personal, investment, property, and sole-proprietorship transactions. Concepts will be reinforced through the preparation of actual tax returns that reflect different combinations of such transactions. Students will develop tax decision making skills by considering how various transactions can be restructured to minimize the current or future tax liability.

BACC 2560 - VOLUNTEER INCOME TAX ASSISTANCE

Minimum Credits: 3

Maximum Credits: 3

The course provides training to students related to basic tax return preparation and more complex issues facing this client population, including the availability of government assistance and refundable tax credits. In addition to assisting the local Pittsburgh community, we also assist students and scholars enrolled/employed at the University of Pittsburgh and Carnegie Mellon University. Therefore, student preparers get exposure to international tax return preparation. Significant use of technology and virtual preparation methods are used in the course. Students are trained to use tax preparation software, tax research methods on the Internal Revenue Service website, and virtual document storage using the IRS secured website. Students will work with clients in person as well as virtually, and therefore, must be proficient in all platforms. Students will also guide taxpayers about to how to navigate these methods.

BACC 2901 - ACCOUNTING AND CONTROL FOR HEALTH CARE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

In this course you will develop an understanding of the various roles that accounting information plays in healthcare organizations. We will begin by analyzing the needs of managers, healthcare professionals, healthcare consumers and other parties for financial information concerning a healthcare organization's financial position, current financial performance and cash generating ability. You will learn how standard financial statements (balance sheet, income statement, and statement of cash flows) address these needs, and the strengths and weaknesses of the statements in supplying this information. Financial statement analysis concepts and techniques will be introduced as cost-effective tools that enable healthcare decision makers to draw appropriate inferences from published financial statements. We will also study key issues that arise in accounting for a healthcare organization's operations, investing and financing decisions. The final part of the course will analyze specific uses of accounting information in support of organizational decisions. We will study how accounting systems measure the cost and profitability of healthcare services, the effect of volume on profitability, and the proper use of accounting cost information in supporting decisions such as whether to invest in new equipment and whether or not to expand existing services.

BACC 3001 - INTRODUCTION TO ACCOUNTING RESEARCH

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to provide new accounting doctoral students with an overview of accounting research. The course will discuss the variety of topics and methods addressed by accounting scholars, and will seek to provide insight into the characteristics that distinguish the highest quality research. Analytical research methods and topics, as well as applications in managerial accounting, will receive particular emphasis in the first half of the course. In the second half, we will read and analyze representative accounting research employing capital markets, archival managerial and experimental methods.

Course Component: Independent Study

Grade Component: Grad HSU Basis

BACC 3014 - EXPERIMENTAL RESEARCH IN ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

The course covers recent experimental studies that apply behavioral decision theory, psychology, and economics to address a variety of accounting research questions. The course focuses most heavily on recent work. The goals of this course are to (1) familiarize students with recent experimental research in accounting, (2) help students develop the skills necessary to critically evaluate such research, and (3) generate ideas for future experimental research topics.

Course Requirements: Katz Grad School of Business students only.

BACC 3021 - ARCHIVAL RESEARCH IN MANAGERIAL ACCOUNTING

Minimum Credits: 1.5

Maximum Credits: 1.5

This seminar will focus on studying management control and performance measurement issues largely from an economics perspective using archival methods. Topics discussed will include, but not be limited to, analysis and economic impact of cost systems, use of financial measures for performance evaluation and compensation, impact of incentive systems on organizational performance, non-financial measures and balanced scorecard. The course materials will consist of papers in accounting. Course requirements include active class participation, presentations/discussions/summary reports of papers, replication of earlier studies (where data are available), and a final examination.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BACC 3025 - CAPITAL MARKETS RESEARCH IN ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course provides students with a solid understanding of capital market research in accounting and empirical research training. The class will cover topics such as the relation between stock prices and earnings, stock market anomalies, and analyst and management forecasts. Students will also replicate some classic finance and accounting papers in order to provide them with some hands-on experience working with compustat, crsp, ibes, and sdc data using sas statistical programming. The class will help students to better evaluate research in workshops, develop new ideas and do empirical tests.

Business Administration

BUSADM 3001 - BEHAVIORAL RESEARCH METHODS

Minimum Credits: 3

Maximum Credits: 3

The primary objective of this course is to familiarize you with and develop an appreciation for business research methodology. Research skills will be an important determinant of your success as an academic. The course will introduce you to a variety of research approaches, allow you to develop an understanding to effectively use these approaches in your own research, and prepare you to evaluate research done by others. The course will also provide you with an introduction to causal modeling techniques (lisrel, pls). By the end of the course you should develop a sound appreciation of the research process and a range of research approaches that can be applied to management problems. In addition, you should have an appreciation for what constitutes "good" research so that you can constructively critique and make use of research done by others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BUSADM 3013 - WORK AND ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This seminar is intended for Ph.D. students who wish to develop an understanding of the theoretical underpinnings of research on the management of knowledge and work in organizations. It reviews the major theoretical perspectives, but places a particular emphasis on the current empirical literature related to human resource management. Because of the multi-disciplinary nature of this research space, readings draw on a broad range of material including studies from sociology, organization theory, strategy, economics, and policy. These are used to develop an integrative understanding of the underpinnings of work and employment-related research published in top tier management journals.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

BUSADM 3030 - MANAGING THE TRIPLE BOTTOM LINE

Minimum Credits: 3

Maximum Credits: 3

Issues such as climate change and global warming, human rights, and health and sanitation for all have garnered significant attention in recent years. Leading businesses realize that it is no longer enough to maximize profits and cater to shareholders but as well critical to integrate the wellbeing of the planet and its people into their business models. Such a transformation to managing the triple bottom line of people, planet and profit requires us to look at business and its operations through a new lens. This doctoral seminar will focus on theories, concepts and methodologies that we can use to understand the role of the firm in 21st century society and develop strategies for long run sustainability. The course will be interdisciplinary, drawing on literatures in strategy, marketing, organizational behavior, operations, and finance as well as methods spanning lab experiments to structural equation models to understand the conditions under which creating social and environmental value can drive business value. The course will feature academic guest speakers from the aforementioned disciplines of business to highlight the interdisciplinary nature of sustainability research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BUSADM 3050 - METHODS FOR BEHAVIORAL BUSINESS RESEARCH

Minimum Credits: 2

Maximum Credits: 2

Experienced behavioral business researchers usually fall into a pattern that emphasizes a subset of diverse methods and approaches. But both new and experienced researchers must depend on a vast literature that makes use of a diverse set of methods, many of which are outside of their expertise. Therefore, drawing from a limited set of approaches would disadvantage any researcher who desires to understand, the literature of his or her chosen field. Another by-product of following only a limited set of approaches is a likely narrowed understanding of trade-offs necessary in any choice of research method. Because no single method can answer all questions, it is important to make good decisions about those trade-offs. This course provides a "hands on" survey of research methods, covering phases from developing research ideas, theorizing, collecting data, identifying what to measure, and determining how it should be measured. A rolling writing assignment throughout the course will provide opportunities for feedback at each step of the way. As a result of this course, you should be a better consumer, critic, and provider of research results in your field.

BUSADM 3502 - QUANTITATIVE RESEARCH METHODS 2

Minimum Credits: 3

Maximum Credits: 3

This course is designed to broaden and enrich students' knowledge and understanding of statistical concepts. Multivariate statistical techniques can be used to analyze data in many fields such as Finance, Production and Operations, Accounting, Marketing, Personnel Management, etc. Through over-viewing actual applications in various fields and in-class exercises involving real-world data, students can apply the techniques to topics such as consumer and market research, supply chain analytics, creditworthiness and risk assessment, stress test, and early warning signals outside pre-set limits, and make better business decisions. The second half of this class will dive deeper into the statistical techniques, tools, and processes necessary to solve analytic problems in a multitude of business domains. In this class, we will conduct an overview of data mining techniques, focusing primarily on business-oriented datasets and examples.

BUSADM 3503 - BEHAVIORAL RESEARCH METHODS 1

Minimum Credits: 1.5

Maximum Credits: 1.5

Behavioral Research Methods (Topics: Inquiry Strategies, Measurement, and Sampling) Reviews options for performing quantitative and qualitative research studies in firms that focus on individuals' attitudes, intentions, and behaviors. Firms can investigate research questions concerning employees, customers, and trading partners. For quantitative methods, the course will cover topics such as how to create a behavioral study strategy, formulate research questions based on theory, design questionnaires and surveys, design experiments, carry out the studies, and assess the results. Qualitative topics to be covered include methods for designing and conducting studies involving interviews, focus groups, and archival documents such as filings, news reports, and social network posts. Methods for analyzing unstructured data will be covered, using software such as Dedoose, NVIVO, and/or LIWC. Machine learning concepts will also be discussed. Co/Prerequisite: Quantitative Research Methods I.

Business Finance

BFIN 2015 - SHORT-TERM FINANCING

Minimum Credits: 2
Maximum Credits: 2

Focuses on short-term financial management. Major topics include cash management, investment in money market instruments, banking regulations, liquidity policy, financial statement forecasting and simulation credit policy and credit management, and working capital management.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2030 - VALUATION 1

Minimum Credits: 2
Maximum Credits: 2

This course provides students with the skills and framework for measuring and managing the value of companies. The course begins by describing how firms create value and then develops the tools required to measure value. Students are required to demonstrate their facility with the techniques.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2031 - CREATING VALUE THROUGH RESTRUCTURING

Minimum Credits: 2
Maximum Credits: 2

Building on concepts developed in valuation (BFIN 2030), this course examines how and why different types of corporate restructuring affect firm value. The course uses both case studies and readings from the applied corporate finance literature.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: BFIN 2030; PROG: Katz Graduate School of Business

BFIN 2036 - CORPORATE FINANCE

Minimum Credits: 3
Maximum Credits: 3

This course is an introduction to corporate financial management. The course builds on BFIN 2006 (introduction to financial management) to provide students with the conceptual framework and analytical tools necessary to appreciate, understand, and analyze the problems facing corporate financial managers. The course consists of four main parts. The first part develops the tools necessary to conduct the analysis of corporate finance problems. These tools include the analysis of data reported on financial statements, building pro-forma financial statements, the basics of put and call options, and an introduction to corporate valuation techniques. The second part of the course examines how managers set the two primary corporate financial policies: capital structure and payout policy (e.g. Dividends and share repurchases), and the process of restructuring in financial distress and bankruptcy. The third part of the course analyzes the process of issuing securities in the capital markets, including the role of the investment banker. Finally, the fourth part explores several aspects of mergers and acquisitions, including the motives for these transactions, the structure of the deal, and the role of private equity firms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus (PKATZ)

BFIN 2039 - INVESTMENT MANAGEMENT/CAPITAL MARKETS

Minimum Credits: 3

Maximum Credits: 3

Focuses on security analysis, portfolio analysis, and the fundamentals of investment theory. Topics include bond and stock valuation, determination of interest rates, effects of inflation and taxes on security values.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410 ; PROG: Katz Graduate School of Business

BFIN 2042 - ACQUISITION OF PRIVATELY HELD COMPANIES

Minimum Credits: 2

Maximum Credits: 2

The course will provide an introduction to the acquisition of privately held companies along with strategies for value creation in the acquired business. The course, which is exclusively taught using the case method, takes lessons taught in the valuation courses extending these concepts to the valuation of privately held business, the structuring of the acquisition balance sheet and the execution of the acquisition process. While a discussion of secured financing alternatives will be included, the application of junior capital, both mezzanine debt and equity will be the focus of the course. A risk analysis of the target will be performed and an investment thesis intended to illustrate value creation techniques will be central to each class discussion. Upon completion, students will be better prepared how to assess both operational and financial forms of risk, develop techniques intended to reduce both forms of risk, and consider value creation strategies in marketing, operations, finance and management. Each case will involve a real company acquired over the years by PNC equity partner along with actual selling memorandum, diligence prepared by PNC principals, market research firms, accounting firms and law firms employed by PNC as part of their diligence process.

BFIN 2066 - FINANCE PROJECT COURSE

Minimum Credits: 2

Maximum Credits: 2

Brief description: project will focus is on valuation of potential acquisitions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BFIN 2068 - MARKETS AND TRADING

Minimum Credits: 2

Maximum Credits: 2

This course is designed to give participants a broad understanding of the operations of various financial markets with special focus on liquidity, market structure and trading. With this objective in mind, the course will concentrate on the operations of exchanges, trading systems and broker-dealer intermediaries. Participants will be exposed to a range of issues regarding the formulation of trading decisions and market structure design and regulation. Simulation software will be used to provide hands-on experience with making tactical trading decisions in different market structure environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2069 - FIXED INCOME SECURITIES

Minimum Credits: 2

Maximum Credits: 2

This course examines the concepts that are most frequently encountered in the market for fixed income securities. Specifically, the course describes the most important fixed income securities and markets and develops tools for valuing these securities and managing their interest rate and credit risk. Historically, "fixed-income" refers to securities which promise fixed cash flows over their lives such as a fixed-rate coupon bond. Now, it is generally accepted that a fixed income instrument is one whose value is driven by the level of interest rates and/or the value of a related underlying asset. This classification would include floating rate bonds, callable bonds, bond futures, bond options, caps, floors and collars, interest rate swaps, credit derivatives and asset-backed securities. The analysis of fixed income securities is quantitative in nature. We will focus on the intuition behind the various concepts presented in class but there will be a fair amount of computation involved. Students should be comfortable with linear algebra, calculus, probability distributions, regression analysis and statistical concepts like mean, variance and correlation (covariance). The course will also assume a high level of familiarity with a spreadsheet package like microsoft excel.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2124 - INVESTMENT BANKING AND VENTURE CAPITAL

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will examine financing transactions from the viewpoints of managers of these financial institutions and managers of firms seeking financing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410 ; PROG: Katz Graduate School of Business

BFIN 2129 - ENERGY PROJECT FINANCE

Minimum Credits: 2

Maximum Credits: 2

This course will cover all aspects of infrastructure project finance with a focus on the energy industry. We will look in depth at why project finance exists and who the players are, how deals are structured and investors evaluate opportunities, the unique contractual issues and risks in the transactions and the specialized financial modeling and analysis. This course is designed to provide students who are interested in the energy and other infrastructure-reliant industries (like transportation or real estate development) with a practical understanding of how large-scale projects are financed in today's marketplace.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2409 and BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2130 - VALUATION 2

Minimum Credits: 2

Maximum Credits: 2

This is a continuation of valuation 1.

Academic Career: Graduate

BFIN 2145 - FINANCIAL MODELING

Minimum Credits: 3

Maximum Credits: 3

The course will apply finance theory to solve various problems in financial management and investments. It will take a hands-on approach in building financial spreadsheet models using Microsoft excel. Students will learn to address issues that arise in various areas of financial analyses. These issues include but are not limited to discounted cash flow valuation, cost of capital estimation, asset return calculations, portfolio theory, index models, option pricing models, bond pricing and investment performance analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2150 - RISK MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course examines financial risk management from the perspective of the corporate manager. We will examine three issues. The first is why a corporation should manage risk. To understand this, we need to consider how corporations create value for shareholders and the frictions they face that create wedges between what the corporation produces and what is ultimately passed through to shareholders. The second issue is how a corporation should manage risk. This requires an understanding of certain financial instruments that are generally referred to as derivatives - instruments whose values derive from other more fundamental assets such as commodities, currency exchange rates, stocks (equities) and bonds (interest rates). The building blocks for many of these financial instruments are two basic derivative instruments, forwards/futures and options. The third issue is the cost of risk management. We will start by pricing forwards/futures and options under the assumption that markets are efficient and there is no arbitrage. We will then use Monte Carlo simulation as a tool for pricing more exotic derivatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BFIN 2306 - FINANCIAL MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

An introduction to the tools used in corporate financial decision making. Develops two basic valuation models commonly used in finance--present value models and the capital asset pricing model and focuses on the use of these models in corporate decision making. Examines capital budgeting, corporate structure policy, and corporate dividend policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BFIN 2307 - HEALTHCARE AS AN ASSET CLASS - A PRIVATE EQUITY PERSPECTIVE

Minimum Credits: 1.5

Maximum Credits: 1.5

The course endeavors to create an understanding of the global private equity market, identify stakeholders, assess evaluation techniques of portfolio companies, examine the financing techniques, review how portfolio companies are managed and evaluate exit realization strategies. The discussion focuses on Healthcare as an asset class and its growing importance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BFIN 2409 - FINANCIAL MANAGEMENT 1

Minimum Credits: 1.5

Maximum Credits: 1.5

The main objective of this course is to gain understanding of the theory and practice of financial decision making. This course develops the tools and framework necessary to address the question what investment projects should be undertaken to maximize shareholder wealth? To examine this question, we will learn how to value an uncertain stream of cash flows and apply the concept of the time value of money in valuing bonds and equity. The course covers a number of market-based investment criteria and develops an entity valuation model, based on discounted cash flows (DCF) used for standard capital budgeting decisions. We will conclude with a short introduction to the concept of risk and return, resulting in the cost of capital. We will cover a case discussion on capital budgeting to put our framework in a more realistic environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: BACC 2401 or BQOM 2401; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2410 - FINANCIAL MANAGEMENT 2

Minimum Credits: 2

Maximum Credits: 2

This course builds on financial management i and develops an asset pricing framework used in corporate finance based on the trade-off between risk and return. We use modern portfolio theory to determine a suitable asset pricing model and arrive at determining the relevant discount rate to reflect the risk associated with the cash flow we focused on in financial management i. Finally, we will address how financing and capital structure choices affect project and firm value using the above techniques and methods. The course will conclude with three valuation methods: WACC, APV, and FTE and an extensive case discussion. Financial management i & ii are prerequisite courses for any other finance elective in the curriculum.

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad HSU Basis

BFIN 3018 - MARKET MICROSTRUCTURE

Minimum Credits: 3

Maximum Credits: 3

Analyzes the process and results of trading assets under a set of explicit trading rules. Research in this area examines the structure provided by various market mechanisms to model how rules for price setting evolve in markets. The purpose of this seminar is to provide an introduction to the basic paradigms that are used to explain the behavior of markets and their participants. In addition to discussing the theory underlying market microstructure, we will examine a variety of empirical papers that use tick-by-tick data on bonds, stocks, options and futures.

Business Marketing

BMKT 2031 - MARKETING RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Emphasizes the understanding of research purposes and processes from the viewpoint of a consumer of research. Topics include problem analysis and hypothesis formulation, research design, implementation of research, and analysis of research results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BQOM 2401; CREQ: BMKT 2409; PROG: Joseph M. Katz Grad Sch Bus

BMKT 2032 - APPLIED BEHAVIORAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the theory and application of "behavioral economics," a sub-domain that has gained considerable practical popularity across a range of fields, including marketing, finance, accounting, human resources and public policy. Popularized by books such as "Predictably Irrational" by Dan Ariely and "Nudge" by Cass Sunstein and Richard Thaler, Behavioral Economics focuses on the ways that humans' natural psychological tendencies can be used or overcome in ways that lead to desirable outcomes. Importantly, behavioral economics acknowledges that humans generally do not conform to the assumptions that underlie classical economics and that the ways in which we fail to be rational, self-interested, perfect information processors can be used to our benefit, rather than to our detriment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BMKT 2035 - CONSMR BEHAV THEORY & PRACTICE

Minimum Credits: 3

Maximum Credits: 3

A variety of social and psychological theories and concepts related to consumer behavior as well as their practical application to the field of marketing are examined and discussed. Students have the opportunity to further apply what they learn through case presentations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BMKT 2060 - INDEPENDENT STUDY IN MARKETING

Minimum Credits: 1

Maximum Credits: 6

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2061 - INDEPENDENT STUDY IN MARKETING MANAGEMENT 2

Minimum Credits: 1

Maximum Credits: 9

Self designed elective course in marketing management.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2062 - INDEPENDENT STUDY IN MARKETING MANAGEMENT 3

Minimum Credits: 1

Maximum Credits: 9

Self designed elective course in marketing management.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2306 - MARKETING MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Topics include the role of marketing in a developed society, consumer behavior, competitive behavior, social and technological change, demand analysis and measurement, marketing research and model building, and marketing planning, strategy, and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2409 - MARKETING MANAGEMENT

Minimum Credits: 1.5

Maximum Credits: 1.5

This course examines the role of marketing in creating value for the firm. It helps students answer the central question of marketing strategy, what value to provide and to whom, using the tools of segmentation, targeting, and positioning (STP) of brands. The course shows how central aspects of marketing mix programs, product, place, pricing, and promotion, all follow from an effective STP program, and how marketing support functions such as marketing research, advertising, and new product development can support effective marketing decisions. Emerging trends in digital marketing, competition and globalization are examined. The course emphasizes experience-based learning to develop the necessary marketing knowledge and skills among students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2509 - MARKETING PLANNING & STRATEGY

Minimum Credits: 2

Maximum Credits: 2

Designed to create an understanding of marketing problems and perspectives and the contexts in which they arise. The ability to structure and analyze marketing problems is reviewed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2513 - CONSUMER BEHAVIOR 1

Minimum Credits: 1.5

Maximum Credits: 1.5

Examines a wide variety of social science concepts as they relate to the behavior of consumers. Although consumer research methodology is not a main focus, students will be expected to become familiar with the more common research techniques used to study consumers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: BMKT 2411 or BMKT 2409; PROG: Joseph M. Katz Grad Sch Bus

BMKT 2522 - SALES LEADERSHIP AND MANAGEMENT

Minimum Credits: 1.5

Maximum Credits: 1.5

This course is somewhat unique in that it stresses hiring characteristics that should be sought by the sales manager and various leadership and management techniques that have proven effective. The entire course will provide assistance to the student in sales positions following graduation and will form the basis for sales management decisions in future years.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2526 - PRODUCT DEVELOPMENT & MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course deals with the development of new products. It focuses on the set of decisions that need to be made in the development of new products and tools useful for making these decisions. This course will also introduce the student to a systematic treatment of marketing on a global scale. In addition to examining the problems of performing various market functions in other countries, heavy emphasis will be given to analyzing and understanding the different cultures in which a firm's products might be marketed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2528 - ADVERTISING

Minimum Credits: 2

Maximum Credits: 2

Advertising is a complex phenomenon - at once leading, lagging and reflecting the values of society. The pragmatic, operational and decision-making aspects of advertising are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2530 - SERVICES MKTG:STRATEGIES/TACTICS

Minimum Credits: 2

Maximum Credits: 2

The intention of the course is to provide a managerial frame work of services marketing for managers and students with an interest in the services sector. Its focus is primarily on services businesses but much of it is relevant to services in the manufacturing businesses. The course focus is on problem solving through discussion and analysis of contemporary service marketing cases. The course is appropriate for: 1) any student seeking a follow up course to the basic marketing course and 2) students who plan marketing careers with service firms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2532 - PRICING STRATEGIES AND TACTICS

Minimum Credits: 1.5

Maximum Credits: 1.5

The course focuses on an important element of the marketing mix. While product, promotion and distribution are aspects of the mix that will help create value to consumers, the price creates value to the firm in the form of profits.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2533 - BUSINESS TO BUSINESS

Minimum Credits: 2

Maximum Credits: 2

Most mba graduates will join organizations that market their products and/or services to other businesses, institutions or government agencies. Such marketing is referred to as business-to-business (b2b) marketing. In this class we will look at those management activities that enable a supplier firm to understand, create and deliver value to other businesses, governments and/or institutional customers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2544 - SHOPPER ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

To achieve the objectives of this course, we will be using several methods during the semester, including lectures, guest speakers, readings, and class assignments/presentations. The philosophy underlying this course may be a bit different than you are accustomed to. While lectures will be a component, the general approach will be that of a practicum. That is, you will be exposed to a concept or database, then apply those concepts and databases via a project which is presented to the class. Readings are drawn from both business publications and academic journals. You are strongly encouraged to bring in other relevant materials that you encounter.

Academic Career: Graduate

Course Component: Lecture

Course Requirements: CREQ: BMKT 2411 or BMKT 2409; PROG: KATZ Graduate School of Business

BMKT 2551 - DIGITAL AND SOCIAL MEDIA ANALYTICS

Minimum Credits: 2

Maximum Credits: 2

This course presents a data-driven approach to strategic and tactical marketing decision making in the context of digital and social media. Covering the three main media types of paid, owned, and earned media, students will learn about frameworks and methods that allow them to take data from sources such as google, Facebook, and twitter to be able to generate valuable and actionable managerial insights. The focus is on learning how to use digital and social media activity data to make better decisions, not on statistical methodologies (however, familiarity with excel is needed). The course will involve a combination of lectures, guest speakers, and hands-on workshops. This course is part of the digital marketing certificate and complements the "marketing and social media strategy" course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: BMKT 2515 or 2553

BMKT 2553 - SOCIAL MEDIA STRATEGY

Minimum Credits: 2

Maximum Credits: 2

Social media is changing how business is done around the world in almost every industry. How does social media effect your business? This course provides students with a detailed and up-to-date understanding of social media from a business strategy perspective. Through a series of lectures, case studies, and workshops, students learn how to identify opportunities for using social media in a variety of business areas, including marketing, operations, advertising, services, and human resources. The course takes a broad perspective and considers how social media it can be used successfully for business-to-consumer, business-to-business, and intra-company purposes. A central theme in this course is for students to apply what they learn to their own businesses and industries in order to identify opportunities for strategic, value creating uses of social media in their companies. After taking this course students will see how social media impacts business in many different ways and goes beyond simply using Facebook, twitter, or other popular social platforms for basic marketing purposes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BMKT 2554 - MARKETING DESIGN AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course presents a data-driven approach to strategic and tactical marketing decision making in the context of digital and social media.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BMKT 2569 - BRAND MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course explores the role played by brands in influencing consumers' choices, and investigates how to move effectively manage such brands. The course uses a variety of tools including lectures, cases, simulations, in-class exercises, hands-on, industry visitors and individual projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BMKT 2411 or BMKT 2409; PROG: Katz Graduate School of Business

BMKT 2609 - BUSINESS DISRUPTION SERIES: MARKETING

Minimum Credits: 0.5

Maximum Credits: 1

A business disruption course allows students the opportunity to engage with emerging research, technology, and business innovations that may disrupt and revolutionize established business theories, markets, and products. The experience will take the form of a mini-course, experience, or activity and may be a 0.5-credit or 1-credit course, depending on the nature of the experience and stated outcomes of the course.

BMKT 3014 - MARKETING STRATEGY

Minimum Credits: 3

Maximum Credits: 3

Identifies the foundations of all aspects of marketing including product development and management distribution channel activity, sales force management, sales promotion, pricing, planning and strategy, information systems, and marketing organization and management, among other topics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 3017 - MARKETING MODELS

Minimum Credits: 3

Maximum Credits: 3

Examines applications of management science techniques and methodology to improve marketing decision making. Emphasis will be on the use and interpretation of multivariate statistical methods and/or the application and implementation of operations research rather than their theoretical development. Students develop knowledge of at least one managerially relevant problem area and apply or critique the application/implementation of management science techniques through real data analysis or simulation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

Cardiothoracic Surgery

CTSURG 5461 - PEDIATRIC CARDIOTHORACIC SURGERY

Minimum Credits: 0
Maximum Credits: 0

Four-week elective with clinical experience on pediatric cardiothoracic surgery service. Student will actively participate in care of pediatric cardiac surgery patient and attend weekly med/surg cardiology conference. Covers types of congenital heart disease, physiology and patho-physiology and current methods of operative intervention for palliation or repair. Time can be spent participating in clinical or laboratory research in progress.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5462 - ADULT CARDIAC SURGERY

Minimum Credits: 0
Maximum Credits: 0

Clinical experience on adult cardiac surgical service. Students will participate in preoperative, intraoperative and postoperative care of patients suffering from acquired cardiac diseases. Students will be expected to work in the cardiac ICU and on the wards assisting house staff managing day-to-day patient care issues.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5463 - ADULT THORACIC SURGERY

Minimum Credits: 0
Maximum Credits: 0

Students will be assigned to the thoracic service of UPMC. Participation will be in operative experiences, clinic setting and ward work. Focuses will be on benign and malignant surgical problems of the lungs, esophagus, mediastinum, chest wall and diaphragm. Students will be exposed to minimally invasive approaches including esophagostomy, lobectomy and others.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0
Maximum Credits: 0
Academic Career: Medical School
Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5840 - CARDIOTHORACIC SURGERY RESEARCH

Minimum Credits: 0
Maximum Credits: 0

This elective is available to interested and motivated students. This elective provides opportunities to learn basic research methodology which may include approach to experimental design, protocol development, data analysis and evaluation of results. Student may participate in ongoing research in the lab and on patients.

Academic Career: Medical School
Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5899 - INDEPENDENT STUDY IN CARDIOTHORACIC SURGERY

Minimum Credits: 0
Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School
Course Component: Independent Study
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CTSURG 5900 - EXTRAMURAL CARDIOTHORACIC SURGERY

Minimum Credits: 0
Maximum Credits: 0

A clinical experience in cardiothoracic surgery may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM catalog with all appropriate approvals to be received before the course may be added to the student's schedule for credit.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

Cell Biol & Molecular Physio

MSCBMP 2800 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

MSCBMP 2840 - REGULATION OF MEMBRANE TRAFFIC

Minimum Credits: 2

Maximum Credits: 2

Course analyzes membrane/protein traffic along both the biosynthetic & endocytic pathways. Emphasis placed on how this traffic is regulated. Topics include the role of g-proteins (both heterotrimeric & small), coat proteins (coatamer 1 & 2 & adaptors), signal transduction cascades (pkc, pka, ip3, etc.), & Snare complexes in protein trafficking. Also, we will discuss the role of the cytoskeleton in transporting cargo & signal transduction. Membrane traffic in several specialized cell types will be covered including polarized epithelial cells, cells of the immune system, & neurons.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2852 - RESEARCH SEMINAR IN CELLULAR BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of membrane trafficking.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSCBMP 2853 - RESEARCH SEMINAR IN REPRODUCTIVE PHYSIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of reproductive physiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSCBMP 2855 - RESEARCH SEMINAR IN MOLECULAR PHYSIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of molecular and cellular physiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCBMP 2860 - MULTIPARAMETRIC MICROSCPC IMAGNG

Minimum Credits: 3

Maximum Credits: 3

A lecture/lab course which immerses students in the theory and practical aspects of modern microscopic imaging. The fields will cover the theory and implementation of all types of light and electron microscopy and computer aided imaging. Students will be expected to reach a functional capability in a selected technology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2870 - HISTOLOGY

Minimum Credits: 5

Maximum Credits: 5

The objective of this lecture/lab course is student comprehension of the relationship between cell structure and organ function, and the application of this knowledge to the identification of light and electronmicroscopic images of cells and organs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2875 - EXPERIMENTS AND LOGIC IN CELL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

The purpose of experiments and logic in cell biology (ELCB) is to engage the students of the cell and molecular physiology graduate program in a self-directed seminar structured to stimulate the students' ability to think scientifically and critically as future scientists. The iterative, collaborative and collegial process of ELCB is the same used by teams of collaborating scientists to develop and solve biomedical projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: School of Medicine (PMEDS)

MSCBMP 2880 - CELLULAR BIOLOGY OF NORMAL AND DISEASE STATES

Minimum Credits: 4

Maximum Credits: 4

This one-term course will explore the cellular basis of multiple disease states. The course, which meets twice a week (two hours each session), will be taught through both lecture and in class discussion of primary literature. Each of seven modules will examine normal cell biology and function and then define how defects in these processes lead to the spectrum of pathologies associated with each disease. Discussion of how bench top findings can be translated to treatments in the clinic will be facilitated by a diverse faculty that includes both basic and physician scientists. The seven modules are as follows: the first examines insulin secretion and signaling and how these events are perturbed in diabetes mellitus. The second module focuses on cell-cell adhesion and its role in cancer progression and epithelial barrier function. The third module defines how defects in endocytosis of the low-density lipoprotein receptor leads to hypercholesterolemia. The fourth analyzes the cellular basis of hypertension and how altered internalization of the epithelial sodium channel leads to elevated blood pressure. The fifth module investigates the role of apical membrane recycling and how defects in aquaporin-2 traffic leads to nephrogenic diabetes insipidus. The sixth module appraises the current state of our understanding of cystic fibrosis and how degradation of defective cystic fibrosis transmembrane conductance regulator by the quality control machinery in the endoplasmic reticulum and cell periphery leads to disease. The last module examines cell migration in wound healing and angiogenesis. At the end of the course students will have an increased understanding of normal cellular function and how research in cell biology can lead to a deeper understanding of diseases that impact millions of people each year.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCBMP 2885 - IMAGING CELL BIOLOGY IN LIVING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The focus of this new course will be to study relevant problems in cell biology, immunology, developmental biology and neurobiology and how they have been solved using imaging approaches. For example at the cell level we will investigate how techniques such as TIRF and high speed confocal have addressed basic problems in endocytosis; at the organismal level we will use multiphoton, confocal, fret, and other approaches to understand aspects of cell biology in cell polarity, respiration and organ development in *c. Elegans*, *Drosophila*, Zebra fish and mice. In each case the application will focus on how imaging tools are used to study defined problems in living systems. The course will follow a lecture/demo/journal club format. Lectures will be two part, the first 1/3 will be a description of the technology, how it was developed and how it works (10-15 minutes) followed by description of the scientific problem and how it was solved. This will be followed by lab demonstrations showing the approach in action. Lectures will be interspersed with a journal club discussion of a relevant paper on each technology. Students will prepare the journal club presentations in an alternating fashion. Examination will be a combination of class participation, journal club and written exam.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2890 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in cell biology or physiology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Cell Biol & Molecular Physio (PHD) or Interdis Biomedical (UNK)

MSCBMP 2895 - CELLULAR PHYSIOLOGY OF THE KIDNEY

Minimum Credits: 2

Maximum Credits: 2

This summer course will provide an introduction to the kidney and lower urinary tract, with emphasis on kidney structure and function. The course, which meets once a week (two hours each session), will be taught through both lecture and in class discussion of the primary literature. Discussion of how bench top findings can be translated to treatments in the clinic will be facilitated by a diverse faculty that includes both basic and physician scientists. You will first learn about the specialized cell types that comprise the kidney and lower urinary tract. Subsequently, you will be introduced to renal stem cells and how they lead to kidney development. Next, you will learn the functions of the kidney, including regulation of water and ion balance. This will be followed by a discussion of the lower urinary tract. Finally, you will learn how drugs can be used to treat kidney dysfunction and how kidney transplants can be used to treat those patients with end-stage renal disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 3800 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of forty credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Cell Biol & Molecular Physio (PHD)

MSCBMP 3835 - DNA REPAIR JOURNAL

Minimum Credits: 1

Maximum Credits: 1

The course is a journal club on current topics in DNA repair as it relates to human disease, DNA damage processing, genome stability, telomere biology, cancer and aging. Primarily designed for students in the second year of their graduate program and beyond. Presentations will be held twice per month during the fall and spring semester. In order to receive credit for the course, students must attend a minimum of 80% of the sessions, present once per semester, participate in class discussion and complete anonymous peer-evaluations for each presenter. One week prior to presentation, presenters will identify a recent publication in the field and distribute it to their classmates. Presenters must define the hypothesis of the paper, provide background and significance, describe experimental methods used, interpret the data, conclude whether the data support the authors' conclusions and propose future experiments. Grades will be determined by attendance (10%), class participation (20%) and quality of presentation (70%).

MSCBMP 3840 - REPRODUCTIVE DEVELOPMENT FROM MODEL ORGANISMS TO HUMANS

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the molecular aspects of the transition from gamete to a reproductive organism. The course progresses through the building of

germ cells, fertilization and stem cell participation to sex determination, gonad morphogenesis, puberty, menopause and pregnancy. This course highlights both human and model organisms to bring together diverse aspects of the cell and developmental biology of reproductive tissues and their impact on disease pathology.

Course Requirements: PREQ: INTBP 2000

Cellular & Molecular Pathology

MSCMP 2700 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSCMP 2730 - MOLEC MECHS TIS GROWTH & DIFFRN

Minimum Credits: 3

Maximum Credits: 3

The course covers the anatomy, embryology, histology, function, and growth regulation (growth factors, receptors, and signaling pathways) of various differentiated tissues (central nervous system, lung, liver, pancreas, urinary and reproductive systems, breast, endocrine system, skin, bone, skeletal muscle, bone marrow). Multidisciplinary lectures are given by the members of the departments of pathology, cell biology and physiology, medicine, and surgery who have ongoing research in these areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2740 - MOLECULAR PATHOBIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Some representative of major disease categories (autoimmune, inflammatory, toxic, degenerative, infectious, genetic, and neoplastic) will be examined in terms of patient demographics (who), gross and microscopic morphology (what), and etiology/molecular mechanisms (why).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2750 - RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students present their research, or a recent research article from a broad range of topics selected by the student in consultation with a faculty advisor. The course meets weekly during which the student presents his/her research in progress or an article of his/her choice. Emphasis is placed on a careful analysis and critical evaluation of the manuscript as well as the development of teaching and speaking skills needed for scientific presentation. The student is expected to elucidate issues relevant to the topic and to answer questions from other graduate students and faculty.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCMP 2760 - INTRODUCTION TO TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to tissue engineering. Tissue engineering is defined as the development and manipulation of laboratory-grown molecules, cells, tissues, or organs to replace and/or support the function of injured body parts. Tissue engineering is highly interdisciplinary and therefore crosses numerous engineering and medical specialties. Upon completing this course, the graduate and undergraduate students should: understand the basic principles behind human cell and tissue biology and cell. Be familiar with the general types of biomaterials used in tissue engineering. Understand techniques utilized to design, fabricate, and functionally assess tissue engineering systems. Apply the combined knowledge of tissue organization and tissue engineering strategies to design a unique, reasonable tissue engineering solution. This five-part course covers cell and tissue biology, biomaterials, drug delivery, engineering methods and design, and clinical implementation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCMP 2770 - BIOMATERIALS AND BIOCOMPATIBILITY

Minimum Credits: 3

Maximum Credits: 3

This course serves as an introduction to biomaterials and biocompatibility and assumes some background in organic chemistry and biology. The first half of the course connects biomaterial applications. The second part of the course introduces biocompatibility issues as they follow from protein adsorption, thrombosis, inflammation and infection are primary interest. Throughout the course ties are made between the topic of student and clinically relevant material and device performance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2780 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Students will focus on a selected topic in cellular and molecular pathology and write a paper under the direction of a faculty advisor.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

MSCMP 2790 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in cellular and molecular pathology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Cellular & Molecular Pathology (PHD) or Interdis Biomedical (UNK)

MSCMP 2820 - SYNTHETIC BIOLOGY-ENGINEERING LIVING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An introduction to the engineering of biological systems with synthetic biology tools. Emphasis on synthetic biological networks and biological control. Design and analysis of computational and experimental tools in synthetic biology including microfluidic systems. Applications of synthetic biology in biomedical, chemical, and environmental engineering problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCMP 3700 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of 40 credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSCMP 3710 - CANCER BIOLOGY AND THERAPEUTICS

Minimum Credits: 3

Maximum Credits: 3

This course presents biochemical and clinical aspects of cancer biology and therapy, and is designed for graduate students training in the basic sciences or medicine. The lectures cover: the biology of normal and neoplastic cells, mechanisms of neoplastic transformation, chemical and environmental carcinogenesis, viral oncogenesis, breast and prostate cancer, chemotherapy, radiotherapy, gene therapy, tumor immunology, and nutrition and cancer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3715 - BIOINF CANCER BIOL & THERPUTCS

Minimum Credits: 1

Maximum Credits: 1

Reading and discussion on bioinformatics resources available to enhance research on cancer biology and therapeutics. We will discuss bioinformatics databases and other resources related to: regulatory networks and signal transduction pathways, genes associated with cancer risk and the progression of cancer; cytogenomics, sources of information on the distribution of cancer occurrence and trends in the us population, databases DNA repair genes, their structure & function, models of cancer progression & responses to therapy, biomarkers for cancer detection, treatment & prevention.

Grade Component: Grad LG/SNC Basis

MSCMP 3735 - EXTRACELLULAR MATRIX IN TISSUE BIOLOGY AND BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Extracellular matrix (ECM) is an important structural and signaling component of all tissues. It plays a defining role in how differentiated cells and tissues respond to homeostatic signals, tissue regeneration, response to inflammation, and wound healing. Indeed one can generalize and state that there is no aspect of the biology or function of any given tissue in which ECM does not play an important role. The objective of the proposed course is to bring to students the knowledge of fundamental aspects of ECM, its importance for tissue function and its potential use in bioengineering applications. The course will start by providing information about structure and gene expression regulation of the main protein and glycosaminoglycan components of ECM. This will be followed by lectures describing the mechanisms by which ECM components interact with their receptors (integrins) and the intracellular signaling cascades and multiple protein allosteric interactions mediating the transmission of the signal from integrins to multiple intracellular targets affecting cell proliferation, function and cell-cell communication. TGF-beta is an important regulator of

ECM synthesis and a special lecture will be devoted to gene regulation of ecm components and the role of TGF-beta. Subsequent lectures will focus on histologic techniques for visualization of ECM and specific tissue examples in which ECM changes define a particular biological model. ECM is known to be remodeled early in liver regeneration and re-synthesized at the end of the regenerative process. ECM signaling is defining the regulation of liver size and termination of regeneration. This will provide an example to illustrate the multifaceted aspects of ecm and cell interaction in a well-known model of tissue biology. Specific targeted lectures will also be given on ECM in wound healing, and repair of tissue in central nervous system, bone and cartilage. ECM is important as a potential barrier for cancer invasion. The mechanisms by which cells invade ECM will be examined in the context of cancer and also in the context of organ building and tissue morphogenesis in embryonic development. The cellular approaches utilizing ECM in bioengineering and tissue reconstruction will be also presented. These will include preparation of decellularized organs (a technique currently applied to liver with partial success in cell recolonization); functions of hyaluronic acid in tissue reconstruction and aspects of its signaling; ECM in vascular reconstruction, and biology of joints; ECM in muscle biology and reconstruction. The course is addressed to graduate students of the interdisciplinary biomedical science program of the school of medicine as well as the bioengineering graduate program. We are expecting a roughly equal proportion of students from those two groups in a class of 20 students. Even though both groups of students are highly sophisticated, particular attention will be given to ensure that the differences in backgrounds do not interfere with assimilation of the fundamental concepts imparted from the lectures. It is also anticipated that some of the concepts to will be presented will be summaries of a vast amount material of biomedical literature. To facilitate full development of lectures and topics which chose a format of 1.5 hours per lecture, to give the lecturers the opportunity of covering all relevant issues in proper depth. To our knowledge, there is no comparable course fully dedicated to ECM biology and bioengineering applications in either the school of medicine or the bioengineering curriculum. It should also be noted that the reviewers of the Cater Training grant noticed the absence of such a course and expressed a desire to have one developed. We believe this course will be important in generating an interest and a depth of knowledge in issues related to matrix biology as well as support the mission of the cater training grand.

MSCMP 3740 - STEM CELLS

Minimum Credits: 3

Maximum Credits: 3

The course will provide a comprehensive overview on this intriguing and timely topic. The course will focus on the biology of stem cells and their role in health and disease with emphasis on development, carcinogenesis, and tissue engineering. Lectures on various aspects of stem cells from renowned experts will cover embryonic, adult, and induced pluripotent stem cells. Specific lectures will include stem cells in the blood, placenta, bone, liver, brain, muscle, kidney, pancreas, prostate, lung, gut, skin, breast, and eye. Students will also be educated on therapeutic cloning, bio-ethical issues, synthetic biology, and existing laws governing stem cell research. Please note that this is now a required course for the CATER Program.

Grade Component: Grad LG/SNC Basis

MSCMP 3770 - CELL THERAPY

Minimum Credits: 3

Maximum Credits: 3

This course is meant to be unlike any other graduate course. This course showcases cell therapy from theory to practice, from the bench to the bedside. In each area of cell transplantation lectures are provided by those who have implemented cell transplantation techniques and have moved it to a clinical therapy. Most of the lectures in the course are given by those who actually do the patient transplants. Immunology and pharmacology and cellular engineering&Edition will be addressed as it directly relates to cellular therapy. Stem cell biology will not be addressed individually, but will be raised in the context of specific applications. It is expected that students will be independently exposed to these related areas in other courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3780 - SYSTEMS APPROACH INFLAMMATION

Minimum Credits: 2

Maximum Credits: 2

This course is focused on particular topics of great biologic complexity in critical illness, where modeling has the potential to translate in improved patient care. Lectures are provided by basic (biological and mathematical sciences) and clinical faculty, in conjunction with members of industry and speakers from outside institutions. This information will be communicated within the framework of defined themes that describe the complexity of inflammation in acute and chronic illnesses.

Academic Career: Graduate

MSCMP 3790 - BASICS OF PERSONALIZED MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Personalized medicine is becoming a reality that is being driven by ongoing discoveries in cell biology, genomics, proteomics, and metabolomics. The translational speed of these discoveries, particularly in the diagnostic, prognostic, and theragnostic arenas, is rapid. We believe that in the future personalized medicine diagnostics will involve both physicians and basic scientists. A major obstacle to this approach is the lack of training components for basic scientists in this area. This course aims to close that gap and provide an appreciation for, and understanding of, key principles of clinical development and testing in order to help bridge this gap. The course will be designed to delve into concepts of personalized medicine using focused topic areas. The first week will introduce the principles and overriding concepts of clinical test development, which differ qualitatively from investigational research. Next there will be six 2-week sessions, with each section focusing on a separate testing modality. Topics will include inherited genetic diseases and predispositions, acquired genetic changes (cancer), metabolomic profiles of endocrine diseases, immune networks for transplant and rejection, proteomic profiling in blood disorders, and proteomic detection of shock and organ failure.

CHE 2016 - FUNDAMENTAL PRINCIPLES OF BIODEGRADABLE METALLIC ALLOYS

Minimum Credits: 3

Maximum Credits: 3

Biodegradable metals have emerged as a new class of materials with significant potential for myriad biological applications, in particular, the craniofacial, orthopedics and cardiovascular areas. The latter has already witnessed clinical trials with few patients already being implanted with a biodegradable metallic stent. This course is designed to introduce the principles and various fundamental concepts of this novel class of metallic alloys. These include fundamental principles of metal alloy physics and theory, important concepts of phase diagrams, physical metallurgy concepts, metallic glass theory, processing fundamentals, biocompatibility, and toxicity issues. The effect of microstructure on biocompatibility and corrosion will also be discussed. The course objective is to introduce the student to this new family of bio-functional metals and their biodegradable properties. In doing so, the student will be familiar with these materials and their useful applications. The students are expected to have had courses in thermodynamics and physiology.

Academic Career: Graduate

CHE 2018 - INTRODUCTION TO SURFACE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Surface and interface engineering is critical to many important applications, e.g., coating, composite, biomedical device and membrane. With the fast growth of nanotechnology, understanding the surface properties becomes even more important since nano-sized materials, e.g., graphene, have no bulk phase but surfaces. This course combines elements of physical chemistry and materials of surface and interface in order to serve as the introduction to the surface engineering. The course spans from surface tension, capillary, superwettability to lubrication as well as 2D materials, allowing a comprehensive view to both classic surface science and cutting-edge surface technology. By the end of this class, students will understand both the fundamental principles of surface science and engineering approaches on tailor a given solid surface.

CHE 2475 - STATISTICS AND COMPUTATIONAL METHODS FOR SYS BIO

Minimum Credits: 3

Maximum Credits: 3

Statistics and computational modeling are major drivers of the modern economy and critical tools for discovery in scientific research. These two fields are linked in a common goal: how do we make competent decisions in uncertain, complex, and connected environments? With the rapid expansion of machine learning technologies, it has become incredibly important for engineers and scientists to understand the basic methods underlying these algorithms and to be able to critically assess algorithm performance. This course will cover the basic theory and application of three related areas: statistics, dynamic simulation and machine learning classification. While theory will be discussed, the proper application of these tools and the methods for critically analyzing the results will be the primary focus of the course. The statistical and computational tools to be discussed are agnostic in their application, important to all research areas. However, in the course, the application of these tools will be to problems in biology and medicine. By the end of the course, students will be able to identify the proper statistical tests to be used for various scenarios, be able to develop customized tests for non-standard data types (bootstrapping), understand the computational challenges related to dynamic simulations of nonlinear systems, and be able to apply and evaluate off-the-shelf machine learning algorithms.

CHE 2545 - PROCESS INTENSIFICATION - REACTION ENGINEERING FOR THE 21ST CENTURY

Minimum Credits: 3

Maximum Credits: 3

Process Intensification is an emerging trend in reaction engineering that aims to replace existing large-scale chemical processes with smaller, often modular, units with substantially reduced physical footprint and capital cost, and dramatic reductions in energy intensity, improvements in process efficiency and process safety, and reduction or complete elimination of waste streams. At its heart, PI thus aims not for incremental improvements but rather for a paradigm change in chemicals manufacturing and processing "by rethinking existing operation schemes into ones that are both more precise and efficient than existing operations" (DOE, 2015). While the roots of PI can be traced back half a century into the 1970s, it has taken on new significance in recent years as a critical enabling approach for the design of more sustainable chemical industry in particular in the context of 'decarbonizing' and 'electrifying' the chemical industry. In this course, we will discuss the fundamental engineering concepts underlying process intensification and then proceed to explore novel, "intensified" process equipment and process operation schemes across the chemical industry.

CHE 2600 - PRINCIPLES AND PROPERTIES OF COMPLEX ENGINEERED MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Complex engineered materials are a new class of systems comprising a variety of inorganic materials. This course is designed to introduce the principles and various functional properties exhibited by inorganic materials at the Nano, Micro and Meso scales. Since inorganic materials comprising metallic and non-metallic systems are a very complicated class of materials that display myriad properties, this course is outlined to discuss the most important properties. Thus, the course will mainly cover optical, electrical, thermal and electrochemical properties of both crystalline and amorphous inorganic complex engineered materials. In each category, the principles underlining each property will be discussed followed by the material class, behavior and applications. The effect of microstructure on each of the properties will also be discussed. The course objective is to introduce the student to these complex engineered materials family and their properties. In doing so, the student should be able to identify a material for a particular application.

Minimum Credits: 1
Maximum Credits: 3
Individual study program at Ph.D. Level.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

CHE 3980 - PHD RESEARCH METHODOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course involves the discussion and application of research methodology important for the successful completion of Ph.D. dissertation research.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

CHE 3990 - ADVANCED GRADUATE PROJECTS

Minimum Credits: 1
Maximum Credits: 15
Preliminary work for Ph.D. Dissertation.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

CHE 3999 - PH.D. DISSERTATION

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

Chemistry

CHEM 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1
Maximum Credits: 12
Course designed to be taken by master's degree students who are writing their thesis.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

CHEM 2090 - SEMINAR IN CHEMISTRY

Minimum Credits: 1
Maximum Credits: 1
This course is created for graduate students to register for their thesis seminar when they do not declare a division or do not satisfy divisional requirements. Only students planning to present a seminar should register for this course. Others may attend without registering.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

CHEM 2110 - CHEMICAL SYMMETRY: APPLICATIONS IN SPECTROSCOPY AND BONDING

Minimum Credits: 3
Maximum Credits: 3
Group theory and molecular symmetry, with emphasis on their application to the theoretical aspects of bonding in inorganic and organometallic complexes, as well as to the experimental techniques (electronic, vibrational, and photoelectron spectroscopy) typically used to elucidate the nature of intramolecular interactions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2120 - DESCRIPTIVE INORGANIC AND ORGANOMETALLIC CHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
This course is intended to provide a solid background in modern inorganic chemistry for those doing research in all branches of chemistry. Much of the course material is descriptive, but the objective of the selection and presentation of the material will be to develop an understanding of the principles controlling the structures and reactivity of inorganic materials. Aspects of all areas of inorganic chemistry will be discussed, including main group, transition metal, and organometallic chemistry.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2180 - INORGANIC CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Modern bonding theories are developed to the level that permits some understanding of the effects of structure and bonding on chemical properties. Periodic relationships are discussed and applied to selected families of elements. Emphasis is placed on those aspects of structure, bonding and periodic relationships that are helpful in unifying a large body of chemical knowledge. Selected topics of current interest in inorganic chemistry are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2190 - SEMINAR IN INORGANIC CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2210 - ELECTROANALYTICAL CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Fundamental electrode processes common to all electrochemical cal methods; thermodynamics and kinetics of electrode processes; reaction coordinate diagrams for faradaic currents; exchange current and activation polarization; non-faradaic currents and electric double layer. Mass transfer processes. Linear sweep, cyclic and pulse voltammetric methods and their application to analysis as well as the study of reaction mechanisms and problems in battery technology, electrocatalysis, photovoltaic cells and chemically modified electrodes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2220 - CHEMICAL SEPARATIONS

Minimum Credits: 3

Maximum Credits: 3

A broad thermodynamic and kinetic framework encompassing all chemical separations is used to classify techniques. Concepts such as separation efficiency are generalized. The most powerful and widely used separations techniques are chromatographic, thus solution chemistry will be discussed to provide a chemical framework for chromatography. The use of gas and liquid chromatography will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2230 - ANALYTICAL SPECTROSCOPY

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of optical spectroscopic methods of analysis for determining composition and structure. The course includes analytical applications as well as mechanisms and instrumentation. Recent developments such as Fourier Transform IR Spectroscopy and the use of lasers in spectroscopy are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2240 - MASS SPECTROMETRY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CHEM 2290 - SEMINAR IN ANALYTICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2310 - ADV ORGANIC CHEMISTRY 1

Minimum Credits: 3

Maximum Credits: 3

A qualitative discussion of modern mechanistic interpretations of relations between structure and reactivity. Special emphasis is placed on the roles of reactive intermediates such as Carbonium ions, carbanions, carbenes and radicals. Study of the factors that influence the equilibria and reaction mechanisms of organic molecules.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2320 - ADV ORGANIC CHEMISTRY 2

Minimum Credits: 3

Maximum Credits: 3

A course designed to cover modern synthetic methods for the assembly of complex organic molecules (stereospecific olefin synthesis, cycloaddition reactions, sigmatropic rearrangements, organometallic chemistry, natural product synthesis).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2330 - ORGANOMETALLIC CHEMISTRY

Minimum Credits: 2

Maximum Credits: 2

A single-semester two-credit lecture course focusing on the mechanistic and synthetic aspects of state-of-the-art organometallic chemistry will be offered. Understanding how organometallic structure and electronics influence reactivity patterns will provide students with predictive tools for interpreting and exploiting organometallic reactivity. The course will focus on the thermodynamics, kinetics and stereoselectivity of main group- and transition metal-mediated reactions having applications in organic synthesis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2370 - SYNTHETIC ORGANIC CHEMISTRY

Minimum Credits: 2

Maximum Credits: 2

This early graduate level course builds onto sophomore organic I and II courses by applying the learned principles to the synthesis of FDA-approved

drug molecules. The emphasis of the course will be on analyzing the molecular structures of drugs in a retrosynthetic fashion, followed by developing suitable synthetic routes to these molecules. The reaction mechanisms of key steps of these syntheses will be discussed in detail. Further discussion will include fundamental functional group interconversions, chemoselectivity, and protecting group use, enantioselective synthesis, and organometallic chemistry. Students will learn about the complexities of modern drug molecules, how their structures can be analyzed, and how they are synthesized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2380 - TECHNIQUES OF ORGANIC RESEARCH

Minimum Credits: 2

Maximum Credits: 2

A course which serves as a guide to the interpretation of ultraviolet, infrared, nuclear magnetic resonance and mass spectra of organic compounds.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2390 - SEMINAR IN ORGANIC CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2430 - QUANTUM MECHANICS AND KINETICS

Minimum Credits: 3

Maximum Credits: 3

Basic quantum mechanics, with emphasis on the theory of chemical structure and dynamics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2440 - THERMODYNAMICS & STATISTICAL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Development of equilibrium statistical mechanics and thermo dynamics. Applications to chemical systems. These applications include solutions, phase transitions (Ising Model) and reaction theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2490 - SEMINAR IN PHYSICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2600 - SYNTHESIS & CHARACTERIZATION OF POLYMERS

Minimum Credits: 3

Maximum Credits: 3

Synthesis and characterization of polymers is focus of course. Current methods of polymer synthesis will be surveyed, practical implementation of reactions and kinetic consequences of reaction strategies in homopolymer, copolymer and block copolymer synthesis. Techniques for characterization of polymer molecular weight, chemical composition, and stereochemistry (FT-IR, NMR, other spectroscopic and chemical methods) will be discussed. Brief treatment of polymer solution thermodynamics and selected topics in polymer chemistry will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2620 - ATOMS, MOLECULES AND MATERIALS

Minimum Credits: 3

Maximum Credits: 3

This course will use qualitative molecular orbital theory to understand the design and performance of new materials. A link will be made between "small molecule" intuition and the solid-state perspective on large molecules, clusters and solids.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2700 - GRADUATE RESEARCH SEMINAR

Minimum Credits: 0

Maximum Credits: 0

Seminar given by faculty on graduate research opportunities in chemistry. This course is designed especially to help students in their selection of a research adviser.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CHEM 2710 - CHEMISTRY RESEARCH ROTATION EXPERIENCE

Minimum Credits: 1

Maximum Credits: 1

First year graduate students will spend a term carrying out research in various laboratories in order to make a well informed decision about choosing a PhD research adviser.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SNC Basis

CHEM 2810 - BIOLOGICAL CHEMISTRY 1

Minimum Credits: 3

Maximum Credits: 3

This course considers the chemical properties of amino acids, oligopeptides, and proteins; the biosynthesis of proteins; the physical interactions that determine the proper folds of proteins; the conformational properties of polypeptide chains and biomacromolecules, integral membrane proteins and ion channels; interactions between proteins and other molecules; enzyme kinetics; catalytic antibodies; and biosynthesis of small molecules.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2820 - BIOLOGICAL CHEMISTRY 2

Minimum Credits: 3

Maximum Credits: 3

This course will discuss select biological systems and problems and the chemical tools that are being developed in order to study and address them. In addition to an introduction to cell biology and molecular and cell biological techniques, topics may include: conditional control of gene editing, forward and reverse chemical genetics, sensors of cellular processes, protein bioconjugation, small molecule inhibitors of kinase function, activity-based probes, small molecule dimerizers of proteins, and targeted protein degradation. This will lead to the following expected learning outcomes: basics of cell biology, biological techniques and vocabulary relevant to the field of chemical biology, important research topics and research areas in the field of chemical biology, navigating and critical reading of chemical biology primary articles and review articles, and knowledge of key labs that are major contributors to the field of chemical biology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2830 - SYNTHETIC BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2890 - SEMINAR IN BIOLOGICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2970 - TEACHING OF CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

This course is for graduate students who are teaching assistants/fellows in the department.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

CHEM 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Research credits towards a MS and Ph.D. degree.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CHEM 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

Research credits for the Ph.D. Degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CHEM 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

CHEM 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

This course consists of a MOOC offered by Coursera, jointly developed at Boston University, Vanderbilt, Michigan State and Wisconsin-Madison, combined with in-person class meetings of the local learning community at the University of Pittsburgh. Students will meet with the facilitator for the course, Dr. Mary Besterfield-Sacre, four times during the semester to go over the material in the online sessions, and to relate it to their teaching experiences in labs, discussions, and classrooms. The course will draw on the expertise of experienced stem faculty, educational researchers, and staff from University teaching centers, many of them affiliated with the center for the integration of research, teaching and learning (CIRTL), a network of 22 research universities collaborating in the preparation of stem graduate students and post-docs as future faculty members.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 3380 - ORGANIC GROUP MEETING

Minimum Credits: 1

Maximum Credits: 1

A weekly meeting to discuss the most recent advances in organic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3390 - SYNTHETIC ORGANIC COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

A weekly workshop on current synthetic organic chemistry literature and state of the art research.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad LG/SNC Basis

CHEM 3450 - MOLECULAR MODELING AND GRAPHICS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to computational methods to determine molecular structures and stabilities, Monte Carlo and Molecular Dynamics Simulation Methods, and the use of graphics for displaying structures, charge densities, and other properties. Use will be made of both microcomputers and the Cray XMP at the Pittsburgh Super Computing Center.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3460 - INTRO MODERN COMPUTATIONAL SCI

Minimum Credits: 3

Maximum Credits: 3

This course will emphasize the application of microcomputers and numerical methods for solving problems of importance in chemistry. Methods to be studied include solving systems of linear and differential equations, least squares fitting, eigenvalue problems, solution of nonlinear equations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3700 - SCIENTIFIC PROPOSAL WRITING

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CHEM 3800 - ADVANCED TOPICS BIOLOGICAL CHEMISTRY 1

Minimum Credits: 1

Maximum Credits: 1

Minicourse. Topics vary from term to term but all consider some specific aspect of biological chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

Directed study in a specific area of chemistry to enhance preparation for graduate research.

Chinese

CHIN 2000 - RESEARCH AND THESIS MA DEGREE

Minimum Credits: 1

Maximum Credits: 6

This course recognizes work performed in the course of preparing the thesis.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Attributes: Asian Studies

CHIN 2025 - ASPECTS OF THE CHINESE LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

Aspects of the Chinese language will offer a linguistic introduction to Chinese. No prior knowledge of linguistics is assumed although familiarity with linguistic analysis is a plus. The Chinese language is substantially different from English or other Indo-European languages. It is also distinct from some other East Asian languages. For instance, it has a logographic writing system and is a tonal language. Its word order is more flexible than English and is a topic-prominent language. It does not have rich grammatical inflections but has a limited number of aspectual markers. The course serves the following purposes: (1) introduce the basic facts of the Chinese language including its development, the phonology, morphology, the semantic and syntactic aspects of Mandarin Chinese, and the interactions of the language with Chinese culture and the society; (2) introduce elementary linguistic concepts relevant to Chinese to enable students to use the right tool to describe and critically analyze the features of a language; (3) encourage students to reflect on their language learning experience or knowledge of other languages to conduct reasoning, such as analyzing the sources of difficulty in their studying of Chinese; (4) to inspire interest in a range of topics including differences in modern and classical Chinese, philosophical belief embodied in the language, Chinese culture manifested in the language (such as the notion of politeness, face, etc.), and to lay a foundation for further studies in linguistics as well as in those relevant topics.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

CHIN 2027 - CHINESE AS A SECOND LANGUAGE AND BILINGUALISM

Minimum Credits: 3

Maximum Credits: 3

The course introduces students to research methods and findings on Chinese as a Second Language (CSL) and it familiarizes students with pedagogical and issues of learning in CSL. The course content includes (1) linguistic perspectives of CSL and second language learners' grammatical knowledge development, including how key structures are acquired and typically dealt with in language classroom; (2) psycholinguistic experimental methods and cognitive development of bilingual speakers of Chinese and English, including in character recognition/production, vocabulary acquisition, morphological awareness development, etc.; (3) corpus approaches in CSL and applications; (4) pragmatics in L2 Chinese; (5) other CSL topics such as learner motivation, Chinese as a heritage language, proficiency assessment, and technologies in CSL. The course will use a

combination of lectures, discussions, and presentations. Class will be conducted largely in English, while enrolled students are expected to have an intermediate or above level Chinese proficiency.

CHIN 2045 - THE CHINESE WRITING SYSTEM IN EAST ASIA

Minimum Credits: 3

Maximum Credits: 3

The Chinese script is presumed to be difficult to the untrained eye, but much of the myth lies in misunderstandings or misinformation. The course will introduce students to the Chinese writing system through historical and applied linguistic perspectives, and it will provide opportunities of discussion on how the Chinese script influences topics in anthropology, arts, education, and politics in the East Asian region. Students will gain foundational knowledge regarding the linguistic features of the Chinese writing system, including its historical development, acquire an insight into the cultural aspect of the script, and be challenged to apply such knowledge to make critical inquiries on the relationship between the writing system and literacy development, cognitive science, visual arts, and society.

CHIN 2047 - CHINESE AND WESTERN POETRY

Minimum Credits: 3

Maximum Credits: 3

A comparative study of Chinese and Western lyric poetry. This course explores the world of feeling as expressed in the poetry of two vastly different worlds: china and the West and focuses on the language of feeling in a poetic medium. The purpose of this course is to appreciate how differences between the two poetic traditions is essential to a better understanding of the two cultures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Film Studies

CHIN 2083 - MASTERPIECES OF CHINESE LITERATURE: PREMODERN

Minimum Credits: 3

Maximum Credits: 3

This course is devoted to the study of Chinese literature from ancient times to the end of the 19th century. Lectures and readings include prose (historical, philosophical and literary texts, legends and myths of the remote past, anecdotes, short stories and fantastic tales of ghosts and love) and poetry (from the book of songs to the poetry of the T'ang and Sung periods).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2084 - MASTERPIECES OF CHINESE LITERATURE: MODERN

Minimum Credits: 3

Maximum Credits: 3

A critical analysis of some of the most representative literary works in modern China from a literary and socio-political perspective.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

CHIN 2085 - INTRODUCTION TO EAST ASIAN CINEMA

Minimum Credits: 3

Maximum Credits: 3

This course investigates the ways in which film addresses and treats the major socio-cultural issues in modern society through a critical study of the works of Chinese and Japanese master filmmakers. The course focuses on changes in marriage and family patterns, women's roles and the plight of youth.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

CHIN 2086 - LOVE IN CHINESE AND WESTERN LITERATURE

Minimum Credits: 3

Maximum Credits: 3

The course will explore and compare expressions of love in Chinese and Western literature. The course will examine a succession of theories and ideas of love such as platonic, religious, courtly, romantic and post-romantic from the Western tradition; love in Confucianism, Mohism, Taoism, and Buddhism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's Studies

CHIN 2088 - NEW CHINESE CINEMA

Minimum Credits: 3

Maximum Credits: 3

Students will study Chinese films made by filmmakers of mainland China and Taiwan. They will learn about origins, development, themes, and styles with major directors and important films of new Chinese cinema being studied. Students will have an opportunity to understand contemporary Chinese culture and society.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Civil & Environmental Engineer

CEE 2085 - GRADUATE DEPARTMENTAL SEMINAR

Minimum Credits: 0
Maximum Credits: 0
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

CEE 2105 - ADV CIVIL ENGRNG MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Advanced topics in material behavior - fatigue, creep, fracture, etc. - As applied to high performance civil engineering materials; high strength low alloy steel, high strength concrete, composite materials, laminated timbers, etc., With special emphasis upon infrastructure rehabilitation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Swanson School of Engineering

CEE 2106 - NONCONVENTIONAL ENGINEERING MATERIALS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on materials science topics relevant to the application of nonconventional materials in [civil] engineering structures, infrastructure and products. Increasingly, engineers are looking to [often locally-sourced] nonconventional materials to augment or replace resource-intensive conventional engineered materials, such as steel and concrete. This is especially true in resource-scarce regions of the planet. This course will address a broad range of nonconventional materials falling into three categories: i. advanced reinforced polymer composites (GFRP, CFRP, BFRP, pGFRP) and metals (Al and Ti); ii. traditional and vernacular materials such as earth-based materials and bamboo; iii. historic materials (and the repair and restoration thereof); Course deliverables are partially project driven, allowing students to pursue materials issues of interest to their plan or study or research. This course is open to all Engineering and Architecture students (as a technical elective).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: CEE 1105 or ENGR 0022; CEE and ENGR Undergraduates must have at least 75 credit hours completed and a GPA greater than 3.2.; BS (Architecture) students may take course with permission

CEE 2201 - CONSTRUCTION COST ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course teaches the methodology for estimating construction costs. The course covers all types of costs and all types of construction. The student is introduced to standard reference materials and to computerized estimating systems. The course teaches methods and procedures for developing accurate estimates and the basis for follow-on cost control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2202 - CONSTRUCTION SCHEDULING

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student the theory and practice of planning, scheduling, and controlling the time and cost of construction projects. The course covers various advanced techniques such as cost duration analysis, critical resource analysis, stochastic modeling, and cost control. The course teaches the use of contemporary computerized software systems with hands-on application.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2203 - CONSTRUCT METHODS AND EQUIPMENT

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student how to plan, organize, and execute construction operations. The course includes typical operations in both building construction and engineering construction. The course describes how to properly construct in order to achieve quality and productivity objectives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2204 - CONSTRUCTION LAW AND RISK MGMNT

Minimum Credits: 3

Maximum Credits: 3

This course introduces the student to the legal and risk management issues in construction. The course covers the principles of contract law and various legal areas affecting construction such as environmental regulations, insurance, bonds, tort liability, dispute resolution, and professional services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2205 - CONSTRUCT FINANCE & COST CONTROL

Minimum Credits: 3

Maximum Credits: 3

This course introduces the student to the company level financial and accounting systems which are used in the construction industry, and to project control systems which are used to manage cost and time. The course includes such topics as financial accounting, cost accounting, financial statements, and variance analysis.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Graduate School of Engineering
Course Attributes: Global Studies

CEE 2206 - CONSTRCT & COST OF ELEC SUPPLY

Minimum Credits: 3

Maximum Credits: 3

This course teaches basic construction and cost estimating methodologies for single and three-phase electrical distribution systems that include wiring, power, and controls. The course uses commercial estimating systems and the national electrical code.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2207 - CONSTRCT & COST OF MECHL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student how to plan, organize, and execute mechanical construction operations; and the methodologies for estimating their costs. The course covers mechanical systems such as water (supply and waste), HVAC, fire protection, and their controls.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2213 - CONSTRUCTION SAFETY

Minimum Credits: 3

Maximum Credits: 3

Safety is an integral and essential element of the construction industry. This course will teach students the role all personnel play in establishing an effective safety culture in order to achieve a goal of reducing and eliminating worker injuries and illnesses. Industry standards established by OSHA and ANSI will be highlighted. Additionally, the financial impact that accidents have on a company will be taught.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2230 - BUILDING INFORMATION MODELING

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to introduce the students to building information modeling (BIM) and other new and evolving technologies which are revolutionizing the building and horizontal infrastructure construction industry. Students will learn how BIM and other innovative technologies are being adopted currently by progressive builders to streamline the construction process through enhanced coordination, visualization, logistical planning, cost estimation and analysis. They will also learn how these new tools are enabling (and in some instances requiring) new highly integrated processes that are redefining architecture, engineering, construction and operations (AECO) business relationships and delivery contracts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2320 - ADVANCED MECHANICS OF MATERIALS

Minimum Credits: 3

Maximum Credits: 3

The fundamentals of elasticity are introduced and related to various problems such as beams and bars on elastic foundations, unsymmetrical bending, torsion of thin walled members, curved bars, failure theories, and stability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2321 - ELASTICITY, PLASTICITY AND FRACTURE MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This course provides first-year graduate students with the fundamentals regarding mathematical derivations, mechanical models and numerical analyses in elasticity, plasticity and fracture mechanics. It is aimed at laying the foundations for the students for their future study and research in advanced mechanical problems. The main topics of this course includes: 1) equilibrium and compatibility in elastic domains; 2) complex potential method for elasticity problems; 3) plasticity fundamentals; 4) linear elastic fracture mechanics; 5) stress intensity factors; 6) cohesive crack model and crack band model; 7) size effect and scaling; 8) probabilistic fracture mechanics; and 9) micromechanics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Swanson School of Engineering (PENGR)

CEE 2323 - PRACTICAL DATA SCIENCE AND MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will introduce data science and machine learning concepts to engineering students and professionals with emphasis on practical engineering applications. Key approaches and techniques for working with applied data science and machine learning with many step-by-step engineering examples, illustrations, and exercises will be presented. The course will cover a range of machine learning methods for classification, clustering and regression including k-nearest neighbors, logistic regression, Naive Bayes, support vector machines, decision trees, neural networks, support vector machines, genetic programming, and deep learning.

Academic Career: Graduate

The course will cover a range of machine learning methods for classification, clustering and regression including k-nearest neighbors, logistic regression, Naive Bayes, support vector machines, decision trees, neural networks, support vector machines, genetic programming, and deep learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2330 - ADVANCED STRUCTURAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Theory and application of matrix stiffness and flexibility methods for analysis of framed structures. Computer implementation for the solution of two- and three-dimensional frames, trusses, and grid systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2331 - PLATES AND SHELLS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the theory of plates and shells and the analytical and numerical solutions to problems associated with plates and shells. Topics covered include classical plate and plate buckling theories and solution methods including Navier, Levy, Ritz and the finite difference method. Topics in shell theory will include membrane and bending stresses. Examples will include cylindrical shells, pipes, tanks and pressure vessels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2331 - PLATES AND SHELLS

Minimum Credits: 3

Maximum Credits: 3

Topics covered include classical plate and plate buckling theories and solution methods including Navier, Levy, Ritz and the finite difference method. Topics in shell theory will include membrane and bending stresses. Examples will include cylindrical shells, pipes, tanks and pressure vessels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2333 - INTRODUCTION TO FINITE ELEMENTS

Minimum Credits: 3

Maximum Credits: 3

Introduction to the finite element method and its application to various problems of elastic elements and structures. Both physical and variational approaches are used.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2340 - CONCRETE STRUCTURES 2

Minimum Credits: 3

Maximum Credits: 3

Advanced behavior, strength and design of reinforced concrete structures, including column and frame stability effects, two-way slabs, and serviceability criteria. Introduction to earthquake design concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2341 - DESIGN OF STEEL STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

A course on the design of steel structures based on the load and resistance factor design (LRFD) philosophy. Fundamental topics related to the design of tension members, columns, beams, beam-columns, floor systems, plate girders and steel connections are treated. Issues in stability, fracture and fatigue are also introduced.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2343 - PRESTRESSED CONCRETE

Minimum Credits: 3

Maximum Credits: 3

Design of prestressed concrete beams and slabs, including shear and torsion effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2345 - DESIGN OF TIMBER STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

An introductory course focusing on the design of light-frame timber and 'mass' (or 'heavy') timber structures. Material characterization and properties of wood are addressed including aspects of durability and long-term performance. Fundamental topics related to design of linear (beams and columns) and planar (plates, panels and floors) structural elements are covered. More advanced topics addressed include stability and design of connections. An introduction to fire performance of building structures is included. The course will be focused toward a student-driven design project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2346 - REPAIR AND RETROFIT OF STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Introduction and use of performance-based design concepts. Analysis and modeling techniques for existing and repaired structures. Gravity and lateral load retrofit procedures. Selection, modeling and design of repair and/or retrofit measures for a variety of structures and building materials. Retrofit for blast loads.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2347 - BRIDGE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Introduce concepts of bridge engineering by providing the students with the necessary knowledge and skills to apply the AASHTO IRFD specifications for the analysis and design of highway bridge superstructure components.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2350 - MACHING LEARNING IN INFRASTRUCTURE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course covers theory and practical algorithms in machine learning from a variety of perspectives, with applications to solve problems in civil infrastructure engineering. The topics include linear methods for regression and classification, regularization, kernel smoothing methods, bayesian inference, sampling, decision tree learning, support vector machines, statistical learning methods, unsupervised learning and deep learning, as well as

their field applications. This course is designed to give graduate-level students a thorough grounding in methodologies, technologies and algorithms in machine learning and push field applications in, but not limited to, civil infrastructure engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2360 - DYNAMICS OF STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of free and forced vibration of one and multi degree of freedom structures, including damping. Matrix formulation of multi-degree of freedom structures. Analytical and numerical methods for determining response; deflection and stress evaluation including damping effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2370 - INTRODUCTION TO NONDESTRUCTIVE EVALUATION AND STRUCTURAL HEALTH MONITORING

Minimum Credits: 3

Maximum Credits: 3

The course aims at providing an overview of the different techniques for the nondestructive evaluation (NDE) and the structural health monitoring (SHM) of civil and aerospace structures. Techniques such as electrical resistance strain gauges, fiber optic sensing and ultrasonics will be described within the framework of the NDE. Applications to materials characterization and defect detection will be discussed with emphasis on steel and composite structures. Global and local methods for SHM will be introduced with emphasis on vibration and ultrasonic methods, respectively. The course will also provide the essential tools necessary for the digital signal processing of ultrasonic data. Mat lab and laboratory exercises on recent researches will be investigated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2401 - OPEN CHANNEL HYDRAULICS

Minimum Credits: 3

Maximum Credits: 3

Basic theories and principles of open channel flows (including flows in rivers and streams). Methods of calculating uniform flow, gradually varied flow, rapidly varied flow, and unsteady flow. Design of open channels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2410 - WATER RESOURCES ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course addresses fundamental and practical issues of water resources engineering. The increasing demand for sufficient water quantity and quality that is distributed in time and space forces engineers and policy makers to develop more comprehensive, complex, and ambitious plans for environmental and water systems. This course emphasizes understanding, formulating, and approaches of solving problems of water resources engineering. Quantitative overview of the water resources development, water resources problems, impacts of climate variability and global warming on water resources, and the fundamental principles and basic tools to solve these problems will be covered. Topics to be discussed also include introduction to basic concepts of hydrology, GIS (Geographic Information Systems) applications, theory of unit hydrograph, frequency analysis, flood routing through reservoirs and rivers, introduction to rainfall-runoff analyses, and watershed modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2411 - CURRENT ISSUES AND CHALLENGES IN WATER RESOURCES

Minimum Credits: 3

Maximum Credits: 3

This course covers a wide range of topics related to current issues and challenges related to water resources, especially those associated with climate changes. Through this course, the students are expected to gain in-depth understanding of the fundamentals as well as the up-to-date advances. Students are required to study selected research articles and participate in guided discussions. Topics covered include floods, droughts, winter storms, accurate forecasts of precipitation and streamflow, urban hydrology and its sustainability. Contemporary and new frontiers in modeling and data processing are also part of the curriculum.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2500 - ENVRNMNTL ENGRG MICROBIOL

Minimum Credits: 3

Maximum Credits: 3

Biological fundamentals as applied to the description and evaluation of natural environments and environmental quality control systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2501 - ENVIRONMENTAL ENGINEERING CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Chemical fundamentals as applied to the description and evaluation of natural environments and environmental quality control systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2502 - PHYSICAL-CHEMICAL PRINCIPLES IN ENVIRONMENTAL ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Basic principles and applications of thermodynamics, reaction kinetics, equilibria, diffusion, and mass transfer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2505 - WATER TREATMENT AND DISTRIBUTION SYSTEMS DESIGN

Minimum Credits: 3

Maximum Credits: 3

Stepwise development and process design, equipment selection, economic evaluation, layout, and operating guidelines for water treatment, storage and distribution systems.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Graduate School of Engineering

CEE 2513 - ENVIRONMENTAL IMPACT ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Technical and procedural aspects of environmental impact analysis and assessment with emphasis on regulatory framework, characterization of impacts and their remediation, and the decision process when applied to engineering systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2515 - WASTEWATER COLLECTION AND TREATMENT PLANT DESIGN

Minimum Credits: 3

Maximum Credits: 3

Stepwise development and process design, equipment selection, economic evaluation, layout, and operating guidelines for wastewater collection and treatment systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2531 - AIR POLLUTION AND CONTROL

Minimum Credits: 3

Maximum Credits: 3

This course covers terminology, scientific principles, control options, regulatory requirements, permitting procedures, testing/modeling techniques and current topics associated with air pollution and control. This course requires quantitative understanding and covers design considerations associated with air pollution and control. It also covers environmental issues and requires an appreciation of the non-technical aspects of air quality management.

Academic Career: Graduate

Grade Component: Grad Letter Grade

CEE 2605 - SUSTAINABLE MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Materials are the building block of the natural and built environment. You rely on and interact with materials every day, but have you ever stopped to consider, what is a material? What does it mean to design a material more sustainably? How can you make materials more sustainable and better performing? Answers to these questions, and more, are the foundation for the course. In this course you will learn about sustainable design frameworks (e.g., Green Chemistry, Green Engineering, Cradle-to-Cradle, Biomimicry, Circular Economy) and existing examples of their successful application in markets ranging from consumer electronics, clothing, and personal care products. In addition to these case studies, we will discuss material classes relevant to civil and environmental engineering. The course will be collaborative and highly participatory. In addition, a cornerstone of the class will be a material challenge project. You will work in groups applying what you learn in the course to uncover innovative solutions to currently unsustainable material practices.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2609 - LIFE CYCLE ASSESSMENT METHODS AND TOOLS

Minimum Credits: 3

Maximum Credits: 3

Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2610 - ENGINEERING AND SUSTAINABLE DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course is intended as an introductory interdisciplinary engineering course. Topics include principles of sustainable design in engineering, manufacturing, infrastructure, communications, and community development; overview of environmental issues for engineers; design for the environment; models of environmental processes; introduction to the use of life cycle assessment; and case studies examining the relationship of green design and the field of engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2612 - DESIGN AND ANALYSIS OF EXPERIMENTS

Minimum Credits: 3

Maximum Credits: 3

Principles of designing experiments, analysis of variance techniques for hypothesis testing, simultaneous confidence intervals, robust design and Taguchi methods, block designs, factorial experiments, random effects and mixed models, split plot designs, analysis of covariance, response surface design

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2620 - ADVANCED GREEN BUILDING AND CONSTRUCTION

Minimum Credits: 3

Maximum Credits: 3

This course first provides an overview all of the major aspects of green building design and construction, including sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation, and design process. The course then focuses on energy modeling, indoor environmental quality monitoring, and post-occupancy evaluations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2630 - DESIGN FOR CIRCULAR ECONOMY

Minimum Credits: 3

Maximum Credits: 3

The current linear consumption model of raw material extraction, production, use, and disposal has dominated the global economy for hundreds of years. While an extremely wasteful approach to resource management, the linear model was tractable so long as it was employed by a small fraction of the global population, namely the developed world, so that both raw material acquisition and waste management remained economically viable. Today, we clearly see that this linear model has led to serious unintended global consequences. Circular economy (CE) offers promising solutions. CE principles are based on efficient use of resources and eliminating waste from product life cycles through clever design. Valuable material either moves in loops through the economy, or, if biologically derived, returns to the ecosystem to serve as nutrients; a truly circular economy thus keeps material in continuous use by design. The goal of this course is to provide students a thorough introduction to circular economy, along with integrating design. This course will provide students with skills and knowledge related to CE. Through experiential and project-based learning, the students will develop circular economy affinity groups that will tackle a pressing challenge including design for degradation solutions for ocean plastics and design for reuse of construction materials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2700 - TRAFFIC MGMNT AND OPERATIONS

Minimum Credits: 3

Maximum Credits: 3

Introduction to traffic flow theory and characteristics. Highway capacity analysis. Basic traffic management and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2710 - TRAFFIC CONTROL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

A range of traffic control systems including the analysis and design of traffic signals are discussed along with traffic signal systems. Other topics covered include data collection for traffic control systems, optimization software and models; traffic signal hardware design; traffic signal systems selection (adaptive traffic signal systems versus traditional systems) and design and implementation. Pre-requisite CEE 1703 for 1710 and CEE 2700 for 2710

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: CEE 2700; PROG: Swanson School of Engineering

CEE 2711 - ADVANCED TRANSPORTATION MANAGEMENT STRATEGIES

Minimum Credits: 3

Maximum Credits: 3

This is a management-oriented course that covers key aspects of how government transportation agencies operate their transportation systems. Focus is on the strategies that are used to improve public safety and mobility, including traffic incident management, traffic management, traveler information and pricing. Emphasis is also placed on processes, including planning, performance management and systems engineering, that agencies apply in advancing programs and projects. The course concludes with a look at the future, including the effects that automated vehicles and Smart

City concepts will have on the future of transportation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2713 - DIGITALIZATION IN CIVIL ENGINEERING: FROM CAD TO VIRTUAL REALITY

Minimum Credits: 3

Maximum Credits: 3

Course Description: This course will introduce students to the fundamentals of technical drawing and the modern tools utilized in drafting, modeling, and 3-D visualization for Civil Engineering applications. Topics will include technical drawing and engineering graphics, Computer-Aided Design (CAD), Building Information Modeling (BIM) and modern Virtual Reality (VR) applications in Civil Engineering. More specifically, students will:

1. Gain fundamental knowledge in technical drawing and engineering graphics.
2. Become proficient in modern drafting and modeling software tools for Civil Engineering applications.
3. Gain an understanding of the required workflows for data exchange between 3-D modeling software and immersive Virtual Reality simulations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2714 - PAVEMENT DESIGN AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Concepts and principles in the structural design of pavements for highways and airfields including: traffic loads, climatic factors, soil and material characterization. Application of current pavement design practices and procedures. Economic evaluation of highway and airport pavements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2715 - PAVEMENT MAINTENANCE AND REHAB

Minimum Credits: 3

Maximum Credits: 3

Engineering concepts and information needed to maintain and rehabilitate pavements. Project evaluation, testing and analysis. Design of rigid and flexible overlays, and other methods of rehabilitation. Selection of rehabilitation alternatives. Analysis of the effects of maintenance activities on pavement performance. Initial and life cycle cost analysis of various rehabilitation alternatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2716 - PAVEMENT CONSTRUCTION

Minimum Credits: 3

Maximum Credits: 3

This course teaches the students the theory and practice of constructing highway and airfield pavements and associated construction management responsibilities. The students will learn how pavements are constructed, including earthwork, base and subbase construction, and the paving of the concrete and asphalt surface layers. The course also covers the impact of construction quality on long-term pavement performance and modern methods utilized for construction quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2716 - PAVEMENT CONSTRUCTION

Minimum Credits: 3

Maximum Credits: 3

This course teaches the students the theory and practice of constructing highway and airfield pavements and associated construction management responsibilities. The students will learn how pavements are constructed, including earthwork, base and subbase construction, and the paving of the concrete and asphalt surface layers. The course also covers the impact of construction quality on long-term pavement performance and modern methods utilized for construction quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2717 - COMPONENTS, PROPERTIES AND DESIGN OF PORTLAND CEMENT CONCRETE

Minimum Credits: 3

Maximum Credits: 3

Examines the influence of constituent materials (cements, aggregates and admixtures) on the properties of fresh and hardened concrete, mix design handling and placement of concrete; and behavior of concrete under various types of loading and environment; test methods, designing concrete mixes for specific applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2720 - URBAN TRANSPORTATION PLANNING

Minimum Credits: 3

Maximum Credits: 3

All aspects of the transportation planning process including transportation planning and decision making, transportation modeling, demand and supply analysis, transportation studies, environmental issues and project implementation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CEE 2700; PROG: Swanson School of Engineering

CEE 2725 - PUBLIC TRANSPORTATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to give seniors and graduate students a basic background in the planning, operations and development of public transportation systems within the context of the overall transportation system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering (PENGR)

CEE 2730 - HIGHWAY ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Highway administration, classification, planning and programming. Geometric design of highways. Traffic characteristics and capacity analyses. Traffic operations and control. Highway design project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2750 - PROJECT DEVELOPMENT AND IMPLEMENTATION

Minimum Credits: 3

Maximum Credits: 3

Project development and implementation - 3 credits: this course provides overview of the process used in project programming and planning, design, construction and operation. The course will emphasize the process used for implementation of major projects with emphasis on construction management and how that task interfaces with other aspects of project development. Students will be involved in a team effort to conceptualize the project, plan alternatives, determine the environmental impact, examine design alternatives, prepare the project for construction documents, recommend award of the contract, manage the contract during construction and determine operational needs of the project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2800 - ENGINEERING GEOLOGY

Minimum Credits: 3

Maximum Credits: 3

Review of basic geologic principles with emphasis on the importance and influence of geology and geologic processes on engineering projects such as dam sites, foundations, tunnels, mine subsidence, landslides, highways, groundwater problems, and seismic studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

Course Attributes: Global Studies

CEE 2801 - ADVANCED SOIL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Mathematical and graphical operations on stress and strain, seepage analysis and flow net, consolidation theory, upper and lower bound analysis, earth pressure theory, bearing capacity, and plasticity based soil models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2802 - GEOTECHNICAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of the analytical and numerical methods in geotechnical engineering are explored. Emphasis will be placed upon implementation and verification of various formulations into basic programs. Seepage, stress distribution, settlement, consolidation, sheet piling wall, and beams on elastic foundations are some of the topics covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2805 - EARTHQUAKE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Earthquake hazard assessment, time domain and frequency domain analysis of multi-degrees of freedom systems, response spectrum, material nonlinearity, stochastic response and failure assessment, soil-structure interaction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2809 - HYDRAULIC FRACTURING MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This class will prepare students to wisely and critically design hydraulic fracturing treatments as well as make informed recommendations to employers, governments, and communities about the risks and benefits of hydraulic fracturing methods. Upon completion of this course, students will be equipped to use engineering formulae to estimate hydraulic fracture dimensions, evaluate strengths and weaknesses of various modeling approaches, characterize subsurface conditions from wellbore pressure analysis, make sound recommendations for monitoring, and compare and contrast approaches and risks for a range of application domains.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2814 - SLOPES & EARTH RETAINING STRUCT

Minimum Credits: 3

Maximum Credits: 3

Conventional methods and recent advances in slope stability analyses; classical and modern earth pressure theories; design of rigid and flexible retaining structures; earth dams, their design and stability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

CEE 2996 - SPEC INVSTGTN FOR M.S. STUDENTS

Minimum Credits: 1

Maximum Credits: 9

A special project course in which students may broaden their knowledge by studying approved topics or problems in a specific field within the department under the guidance of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

CEE 2997 - RESEARCH, M.S.

Minimum Credits: 1

Maximum Credits: 15

Non-thesis option research project for the MS Degree under the guidance of a civil engineering faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

CEE 2999 - M.S. THESIS

Minimum Credits: 1

Maximum Credits: 15

Scheduled discussion periods with the student's advisor. Literature survey, selection of thesis topic, development of research methods and procedures, and preparation of thesis under the guidance of a civil engineering faculty member.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CEE 3333 - ADVANCED FINITE ELEMENT METHODS

Minimum Credits: 3

Maximum Credits: 3

This second course in the finite element method focuses on the challenges and solution strategies for nonlinear boundary value problems in mechanics. Topics include nonlinear heat transfer as well as geometric and material nonlinearity in solid mechanics. In addition, an overview is presented of various transient analysis techniques (i.e. time integration) within the finite element method.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Civil & Environmental Engineer (PHD)

CEE 3414 - ADVANCED HYDROLOGY

Minimum Credits: 3

Maximum Credits: 3

Fundamental and advanced theories and processes of hydrology. Topics to cover include processes of water in the atmosphere, over land surface, and within soil; advanced representation of infiltration and evapotranspiration processes; partitions of water and energy budgets at the land surface; snow and snowmelt processes; applications of remote sensing (e.g., Satellite and radar), and flood and drought analysis.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 3501 - ENVRNMTL ENGRG PROCESSES 1

Minimum Credits: 3

Maximum Credits: 3

Theory and applications of physical and chemical principles to water and wastewater treatment and disposal. Mixing, equalization, coagulation, sedimentation, filtration, disinfection and solids handling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 3502 - ENVRNMTL ENGRG PROCESSES 2

Minimum Credits: 3

Maximum Credits: 3

Theory and applications of aerobic, anoxic and anaerobic biological processes in environmental quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering or (PREQ: CEE 1503 or CET 1141; PROG: Undergraduate School of Engineering)

Course Attributes: Global Studies

CEE 3609 - ADVANCED TOPICS IN LIFE CYCLE ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 3714 - ADVANCED PAVEMENT DESIGN & ANAL

Minimum Credits: 3

Maximum Credits: 3

Theoretical models for analysis of pavement systems. Design and analysis of pavements through the use of transfer functions relating pavement response to pavement performance. Evaluation of current pavement design practices and procedures. Economic evaluation of highway and airport pavements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 3805 - ROCK MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Behavior and properties of rock as an engineering material; failure of rock; design and construction of underground structures and slopes in rock; design of rock abutments for dams.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 3996 - SPECIAL INVSTGTN FOR PH.D. STDNT

Minimum Credits: 1

Maximum Credits: 6

A special project course in which advanced students may broaden their knowledge by studying approved topics or problems in a specific field within the department under the guidance of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

CEE 3997 - RESEARCH, PH.D

Minimum Credits: 1

Maximum Credits: 15

Directed research and study for the preparation of the Ph.D. Dissertation proposal.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

CEE 3999 - PH.D. DISSERTATION

Minimum Credits: 1

Maximum Credits: 15

Scheduled discussion periods with the student's advisor. Literature survey, selection of dissertation topic, development of research methods and procedures, and preparation of the dissertation, under the guidance of a civil engineering graduate faculty member.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Classics

CLASS 2019 - GLOBAL ISSUES THROUGH CLASSICS 1

Minimum Credits: 1

Maximum Credits: 1

This course represents the first half of a two-semester graduate proseminar introducing students to global issues through ancient Greek and Roman sources in translation. The course proposes that global issues are not only transnational but in fact transhistorical: that is to say, the processes of connection and disruption, inequality, precarity, and violence, associated with the uneven flows of people and power through space and over time can be found operating around the ancient world as much as in the modern. Consequently, not only can ancient texts, sources, and ideas be used to enrich our understanding of today's global issues, but methods from Global Studies can also be usefully applied to probe these same processes in antiquity. Topics may include: poverty and inequality; war, peace, and diplomacy; citizenship and xenophobia; indigeneity and nationalism; migration and mobility; center versus periphery; terrorism; imperialism; conceptions of race and ethnicity; and the organization of knowledge and circulation of information. Students are expected to complete weekly readings of ancient texts, and to prepare materials for discussions of ancient and contemporary global issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2020 - GLOBAL ISSUES THROUGH CLASSICS 2

Minimum Credits: 2

Maximum Credits: 2

This course is the continuation of a two-semester graduate proseminar investigating contemporary global issues through ancient Greek and Roman sources in translation. The course proposes that global issues are not only transnational but in fact transhistorical: that is to say, the processes of connection and disruption, inequality, precarity, and violence, associated with the uneven flows of people and power through space and over time can be found operating around the ancient world as much as in the modern. Consequently, not only can ancient texts, sources, and ideas be used to enrich our understanding of today's global issues, but methods from Global Studies can also be usefully applied to probe these same processes in antiquity. Topics may include: poverty and inequality; war, peace, and diplomacy; citizenship and xenophobia; indigeneity and nationalism; migration and mobility; center versus periphery; terrorism; imperialism; conceptions of race and ethnicity; and the organization of knowledge and circulation of information. Students are expected to complete weekly readings of ancient texts, to prepare materials for discussions of ancient and contemporary global issues, and to develop an independent research project or paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2090 - TOPICS IN CLASSICS

Minimum Credits: 3

Maximum Credits: 3

Close study of selected topics in classical studies. Course may be repeated for credit provided material covered is different.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

CLASS 2140 - ANCIENT POETRY AND RECEPTION

Minimum Credits: 3

Maximum Credits: 3

Students will read, in translation, a selection of Greek and Roman poets and the reception of their works across varying genres, cultures and timeframes. Particular focus will be placed on the specific literary, cultural and historical contexts, those in which the authors wrote and those in which their works were received.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CLASS 2301 - ANCIENT PHILOSOPHY

Minimum Credits: 3

Maximum Credits: 3

This is a beginning to intermediate level graduate seminar in ancient philosophy, with emphasis on Plato and Aristotle, taken almost exclusively by students in the doctoral program, usually during their first or second year of residence. The exact contents of the course vary from one occasion to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2319 - FROM PHILO TO PHILOPONUS: AN INTRODUCTION TO THE HISTORY OF PHILOSOPHY IN LATE ANTIQUITY

Minimum Credits: 3

Maximum Credits: 3

This course is designed thematically and historically to expand the course offerings of the Departments of Classics and Philosophy. The history of philosophy in Late Antiquity is lamentably neglected by historians of ancient philosophy, even though the thinkers of this period made crucial and formative contributions to the development of Western philosophy, theology, and science. The aim of this course is to provide students with a clear sense of the cultural and social forces that shaped the doctrinal and philosophical debates and concerns of the first six centuries CE, and to familiarize them with the roots of what was to become medieval and Renaissance philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2320 - CLASSICS, PHILOSOPHY, AND ANCIENT SCIENCE GREEK AND LATIN SEMINAR 1

Minimum Credits: 3

Maximum Credits: 3

Bringing together students and faculty members, the aim of this course is to read and discuss a variety of Ancient Greek and Latin authors in their original language. The format of the course is flexible. Each participant translates a portion of text and singles out topics for discussion, whether philological, philosophical or methodological in nature. All members are encouraged to interrupt and participate as the mood strikes. We attempt to cover authors both central and at the margins of the curriculum, depending on students' interest. The course alternates weekly between Greek and Latin authors.

Academic Career: Graduate

Course Component: Seminar

Clinical Nurse Specialist

NURCNS 2161 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

Students elect an area of interest and work with a specific faculty member to meet agreed upon objectives.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

NURCNS 2352 - FAMILY THEORY/THERAPY TECHNIQUES

Minimum Credits: 2

Maximum Credits: 2

This course examines models of community mental health and mental health nursing from a holistic nursing perspective with a focus on family mental health and family functioning. Theories and research about family dynamics and processes are examined as the student develops a conceptual framework to guide clinical practice. Clinical therapeutics focus on the use of interventions for maintaining functional and altering dysfunctional patterns of responses with family systems and in a selected clinically related management role in community mental health services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Nursing students only.

NURCNS 2353 - FAMILY THERAPY ROLE SEMINAR AND CLINICAL PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This clinical practicum is taken concomitantly with NURCNS 2352 and includes clinical experiences as a family therapist. Experiential seminars are held. Knowledge gained from theory course is applied and synthesized into a conceptual framework for advanced nursing practice.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: School of Nursing students only.

NURCNS 2354 - INDIVIDUAL PSYCHOTHERAPY THEORY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the theory relevant to individual psychotherapy. The emphasis is on preparing the student to provide appropriate models of psychotherapy within the managed care and private practice environments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2355; PROG: Graduate School of Nursing

NURCNS 2354D - INDIVIDUAL PSYCHOTHERAPY THEORY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the theory relevant to individual psychotherapy. The emphasis is on preparing the student to provide appropriate models of psychotherapy within the managed care and private practice environments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2355; PROG: Graduate School of Nursing

Course Attributes: Distance Education

NURCNS 2355 - INDIVIDUAL PSYCHOTHERAPY PRACTCM

Minimum Credits: 1

Maximum Credits: 1

The goal of this practicum is to provide the student with an opportunity to gain skills in the practice of individual psychotherapy with patients across

the life span and in different populations. The student will be expected to provide psychotherapy to patients through the beginning, middle, and end phases of treatment, utilizing concepts learned in NURCNS 2354 individual psychotherapy theory.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2354

NURCNS 2361 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

An in-depth study in a particular area of interest by arrangement with a designated faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

NURCNS 2850 - CNS ROLE IMPLEMENTATION

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide a framework for clinical nurse specialist (CNS) practice that is organized around the three spheres of influence (patient, nursing personnel, organization/network) that encompass consumers of CNS services. Students are introduced to unique competencies in each sphere of influence as operationalized in acute care. Emphasis will be placed on acquisition of skills needed to develop population-based programs of care; facilitate systems that promote innovative, cost-effective and comprehensive care; develop and implement evidence-based practice initiatives; and collaborate with health team members to improve health care delivery and patient outcomes. Using model cases and problems derived from their practice, students examine how leadership, consultation and collaboration skills can be used to solve problems for patients/populations, health team members, and organizations/systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

NURCNS 2851 - CNS CLINICAL PRACTICUM 1

Minimum Credits: 4

Maximum Credits: 5

Practicum is the first of two clinical practica designed to provide experience in role development for the clinical nurse specialist (CNS). Emphasis is placed on enhancing competencies within the three spheres of influence of the CNS (patient, nursing personnel, organization/network) and developing characteristics essential to CNS practice.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PREQ: NUR 2850

NURCNS 2852 - CNS CLINICAL PRACTICUM 2

Minimum Credits: 1

Maximum Credits: 4

This practicum is designed to provide experience in role development for the clinical nurse specialist (CNS). Emphasis is placed on further refinement of characteristics essential to CNS practice and competencies

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

NURCNS 2853 - CLINICAL EMPHASIS SPECIALTY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to develop a comprehensive theoretical and practical foundation for advanced nursing care of adult-gerontology patients with dysfunctions/alterations in the selected area of clinical specialization. The course integrates the pathophysiology of dysfunctions/alterations in the selected area with appropriate diagnostic parameters and management strategies. Aspects of health promotion and maintenance appropriate to these patients and families will also be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: NUR 2004; PROG: NURS

NURCNS 3039 - DNP-CNS ROLE PRACTICUM

Minimum Credits: 1

Maximum Credits: 10

This course is designed to provide a culminating practicum experience for the DNP clinical nurse specialist (CNS). Students will focus on promoting evidence based practice as interdisciplinary team members and providing high quality, cost effective care in a dynamic health care environment. Emphasis is placed on further refinement of competencies within the three spheres of influence of the cans (patient, nursing personnel, and systems) and further development of characteristics essential to CNS practice at the doctoral level.

Grade Component: Grad HSU Basis

Clinical Rehab and Mental Health Counseling

COUN 2714 - MEDICAL, PSYCHOSOCIAL, AND ASSISTIVE TECHNOLOGY CONSIDERATIONS IN DISABILITY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to allow counseling professionals to understand, interpret, and apply medical information relevant to the counseling relationship. Students examine major chronic illnesses and disabilities to obtain a theoretical and practical understanding of the implications of these conditions on all areas of functioning and participation, including interpersonal relationships, sexuality, education, employment, and independent living. Technology interventions for major functional areas will be discussed and demonstrated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2716 - MEDICAL & PSYCHOSOCIAL ASPECTS OF DISABILITY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to prepare counseling professionals to become skillful interpreters and users of medical information and terminology. Students examine major chronic illnesses and disabilities in order to obtain a practical and theoretical understanding of the implications of these conditions on all areas of functioning and participation, including interpersonal relationships, sexuality, education, employment, and independent living.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2716 - MEDICAL & PSYCHOSOCIAL ASPECTS OF DISABILITY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to prepare counseling professionals to become skillful interpreters and users of medical information and terminology. Students examine major chronic illnesses and disabilities in order to obtain a practical and theoretical understanding of the implications of these conditions on all areas of functioning and participation, including interpersonal relationships, sexuality, education, employment, and independent living.

Academic Career: Graduate

Course Component: Lecture

COUN 2720 - FOUNDATIONS OF COUNSELING

Minimum Credits: 3

Maximum Credits: 3

The course provides an overview of the professional practice of counseling. The content includes the origins of counseling and rehabilitation, the professions associated with professional counseling through the philosophy, legislative, and clinical history of the disciplines. The goal of studying history and foundations is to gain perspective on the nature and scope of counseling practice. Students are exposed to the requisite knowledge and skills for effective practice. Students understand need for and develop skills for professional and sociopolitical advocacy for the counseling professions and service recipients. The course also provides fundamental knowledge about psychosocial aspects of disability, including models of disability and adjustment to disability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2721 - CULTURAL CONSIDERATIONS IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is designed to increase multicultural awareness, knowledge, and skills in the competencies necessary to effectively work with and relate to ethnically and culturally diverse clients. Students will examine their own culture, attitudes, beliefs and internalized messages. Knowledge and skills in the area of multicultural counseling will be explored and practiced. Application of these skills and knowledge will be evaluated through direct observation in the community. Students will learn about a variety of topics including theories and models of multicultural counseling, intersectionality, social justice and advocacy, implicit bias, cross-cultural communication, microaggressions and generational trauma. Cultural humility will be introduced as a process to help build authentic relationships with clients of different cultural and ethnic backgrounds. The course will also expose students to historic and current cultural events.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2723 - ASSISTIVE TECHNOLOGY TO PROMOTE MENTAL & PHYSICAL FUNCTIONING

Minimum Credits: 2

Maximum Credits: 2

This course will address aspects of assistive technology for use at home, in education and the workplace. Topics will include legislation, computer access, ergonomics, mobility, and adaptations for visual, auditory, motor, cognitive and mental health impairments. Field trips and guest speakers will provide unique experiences and insights.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2724 - CAREER COUNSELING & VOCATIONAL ISSUES

Minimum Credits: 3

Maximum Credits: 3

This course focuses on theory and practice of career and vocational counseling. Module 1 of this course focuses on models of theories of career development and career counseling, with cultural considerations taken into account. Students learn to incorporate theory into career counseling practice. Module 2 emphasizes vocational issues including job placement, pre-placement analysis, client-readiness, job development, job

modification, and employer culture and attitudes. Module 2 content includes sources of occupational data, labor market analysis, job analysis, job seeking skills, and procedures for analyzing transferable work skills. Students learn various employment alternatives including competitive employment, supported employment, self-employment, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Grade Component: Grad Letter Grade

COUN 2725 - FOUNDATIONS OF COUNSELOR ROLES & RESPONSIBILITIES

Minimum Credits: 1

Maximum Credits: 1

This course provides additional instructional material regarding counselor roles and responsibilities. Various practice settings and functions of counselors, as well as organizational structures, standards, and case management, will be highlighted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2725 - FOUNDATIONS OF COUNSELOR ROLES & RESPONSIBILITIES

Minimum Credits: 1

Maximum Credits: 1

This course provides additional instructional material regarding counselor roles and responsibilities. Various practice settings and functions of counselors, as well as organizational structures, standards, and case management, will be highlighted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2726 - SUBSTANCE ABUSE AND ADDICTIONS COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to substance abuse counseling. The expected student outcomes of the course include: develop understanding of substance use disorders; develop evidence-based addiction counseling competencies; and increase competence in providing substance abuse evaluation, education, and treatment services. Students are introduced to the theories of etiology and intervention for alcohol and substance use, abuse, and addiction. Students explore community resources proving substance use intervention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2726 - SUBSTANCE ABUSE AND ADDICTIONS COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to substance abuse counseling. The expected student outcomes of the course include: develop understanding of substance use disorders; develop evidence-based addiction counseling competencies; and increase competence in providing substance abuse evaluation, education, and treatment services. Students are introduced to the theories of etiology and intervention for alcohol and substance use, abuse, and addiction. Students explore community resources providing substance use intervention.

COUN 2729 - HUMAN DEVELOPMENT ACROSS THE LIFESPAN

Minimum Credits: 2

Maximum Credits: 2

The course provides an in-depth study of human development from a disability and multicultural perspective. The content will cover theories of physical, cognitive, social, cultural, and emotional human development from the prenatal period through aging and death. Clinical approaches for each stage of development will be reviewed. Multi-cultural competencies, personal biases, and client preferences will be explored, tested, and applied to clinical work. Students are expected to develop knowledge of human development, disability, and culture that will inform future case conceptualization and treatment as a clinical rehabilitation mental health counselor. Application of these skills and knowledge will be evaluated through direct observation in the community.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2730 - CULTURAL CONSIDERATIONS IN COUNSELING

Minimum Credits: 2

Maximum Credits: 2

This course is designed to increase multicultural awareness, knowledge, and skills in the competencies necessary to effectively work with and relate to ethnically and culturally diverse clients. Students will examine their own culture, attitudes, beliefs and internalized messages. Knowledge and skills in the area of multicultural counseling will be explored and practiced. Application of these skills and knowledge will be evaluated through direct observation in the community. Students will learn about a variety of topics including theories and models of multicultural counseling, intersectionality, social justice and advocacy, implicit bias, cross-cultural communication, microaggressions and generational trauma. Cultural humility will be introduced as a process to help build authentic relationships with clients of different cultural and ethnic backgrounds. The course will also expose students to historic and current cultural events.

COUN 2733 - COUNSELING SKILLS & TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This is an experiential course where students will learn advanced counseling skills and apply them into clinical practice. The class will consist of three themes, including: (1) listening skills, building trust and rapport, and multicultural competencies; (2) development and application of counseling skills; (3) clinical documentation and progress reports. Class time will be utilized for practicing counseling techniques and styles through class activities, demonstrations, and role-plays. This course requires students to conduct, video-record, and document ongoing counseling sessions with a simulated client. Students are expected to effectively conduct 50-minute goal-directed counseling sessions with a cross-theoretical approach by the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2734 - COUNSELING THEORIES AND TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This course provides an in-depth overview of major counseling theories, principles and techniques. Theories and techniques are explored with an emphasis on multicultural considerations. Emphasis is on both theory and practical applications of the various approaches. Students are encouraged to learn the theoretical principles of counseling theories and begin to integrate various theories to develop their own understanding and approach to counseling. Instruction includes experiential learning such as in-class role-plays and recorded counseling sessions with individualized feedback.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2735 - CAREER COUNSELING & VOCATIONAL ISSUES

Minimum Credits: 2

Maximum Credits: 2

This course focuses on theory and practice of career and vocational counseling. Module 1 of this course focuses on models of theories of career development and career counseling, with cultural considerations taken into account. Students learn to incorporate theory into career counseling practice. Module 2 emphasizes vocational issues including job placement, pre-placement analysis, client-readiness, job development, job modification, and employer culture and attitudes. Module 2 content includes sources of occupational data, lab or market analysis, job analysis, job seeking skills, and procedures for analyzing transferable work skills. Students learn various employment alternatives including competitive employment, supported employment, self-employment, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2736 - CRISIS COUNSELING, RISK MANAGEMENT AND DIASTER PREPAREDNESS

Minimum Credits: 2

Maximum Credits: 2

The course provides guidelines and parameters for risk assessment and risk management of harm to self and/or others. Students will demonstrate proficiency in establishing risk assessment/management plans for clinical practice. Students examine research on crisis theory, resolution, and resilience. Students will learn the effects of crises, disasters, and other trauma-causing events on persons of all ages. The course examines diverse crisis situations and the assessment and treatment strategies used by counselors to assist individuals, groups, and organizations in managing and resolving crises. Students learn how people deal with crises, explore personal crisis experiences, and develop crisis intervention competency.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2737 - CLINICAL, DIAGNOSTIC AND FUNCTIONAL ASSESSMENT IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is focused on the psychometric qualities, indications for use, administration and interpretation of various assessment procedures. Procedures include interview and mental status examination, psychological and neuropsychological testing, functional assessment, vocational testing and vocational evaluation, and specialized assessments such as EMA. Professional and ethical standards and the effect of culture and disability on assessment are included. Students learn to apply assessment findings to goal setting and intervention planning through a series of case studies that require interpretation of test data in the context of a client's life (as presented in the case study). Students are required to demonstrate proficiency in written and oral reporting and communicating assessment results to professionals and clients. The course includes a lab where student teams develop, norm administer and interpret naturalistic assessment tool.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2738 - DIAGNOSIS & TREATMENT OF COGNITIVE AND MENTAL HEALTH DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course contains three modules: 1) dsm-5 and differential diagnosis, 2) cognitive rehabilitation, and 3) psychiatric rehabilitation. Students develop skills in diagnostic formulation and clinical intervention planning and implementation. The influence of multicultural identity in diagnosis

and treatment is addressed. In module 1, students learn about the diagnosis of cognitive, behavioral, and mental health disabilities through extensive review of the current edition of the diagnostic and statistical manual and related information. In module 2, students learn specialized counseling techniques for individuals with cognitive impairments and behavioral issues. Students demonstrate use of techniques such as external cognitive aids, metacognitive strategies, and social skills training. In module 3, students learn interventions for mental health disorders such as psychiatric rehabilitation day programming, assertive community treatment and case management, and self-help and peer-delivered services.

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2739 - GROUP COUNSELING

Minimum Credits: 3

Maximum Credits: 3

In this course, students are introduced to group work, including theoretical approaches, personal and professional characteristic of an effective group leader, guidelines for forming a group, and leader and participant tasks and behaviors throughout the stages a group. Group counseling ethical, professional, and legal considerations, as well as multicultural issues are discussed throughout the course. Experiential and interactive learning is supplemented by lecture and video demonstration. Using evidence-based practice techniques, students research and evaluate a group intervention of their choice. Students develop a group proposal and demonstrate proficiency in leading a group of their choice. Participation in a 10-week experiential group is required (lab).

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2740 - CLINICAL APPLICATIONS IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is divided into two modules designed to provide students with basic skills needed for 1) interviewing for intake and assessment purposes and engaging clients in a therapeutic relationship, and 2) application of evidence-based counseling using cognitive behavioral therapy (cbt). The course will employ brief didactic presentations, discussion of readings, video review, and role-play. Students will have the opportunity to conduct a clinical interview and a brief course of cbt with an actor playing the role of the client. These sessions will be video recorded. Evaluation by self, peers, and instructor will occur. Student performance will be evaluated to determine competency for entry-level practice and specific detail for student remediation will be provided if needed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2741 - CASE CONCEPTUALIZATION & TREATMENT PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course presents the process of synthesizing relevant client information including client history, interview, and assessment results, along with contextual information (environmental and demand information) in order to achieve accurate case conceptualization. Students learn and demonstrate proficiency in goal setting, treatment planning, case monitoring, and measurement-based care using individual, evolving client case studies. Students explore and develop a compendium of community resources.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2742 - LEGAL, ETHICAL & PROFESSIONAL ISSUES IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to legal, ethical, and professional issues pertaining to the practice of clinical rehabilitation and mental health counseling. This course will offer an in depth focus on the relevant knowledge, awareness and skills necessary to practice safely and responsibly in counseling. Students will examine a variety of complex legal and ethical issues that confront clinical rehabilitation and mental counselors as they work with clients and colleagues within difference counseling systems. Aca, nbcc, and crcc codes of ethics will be examined, as well as decision making models that will facilitate students informed decision making when faced with ethical and legal issues in the workplace. Clinical rehabilitation and mental health counselor standards of practice will be examined.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2743 - FAMILY AND COUPLES COUNSELING

Minimum Credits: 3

Maximum Credits: 3

In this course, a broad theoretical and practical foundation for counseling couples and families is emphasized. The course includes an introduction to theories of family therapy, counseling strategies and techniques, and research in family counseling and functioning. Using a family systems approach, the course exposes students to the dynamics of contemporary family structures, living patterns, and lifestyles. Students learn the family development framework and common family issues across the family life cycle. Students are challenged to better understand their own family system and to examine some of their beliefs and values about what constitutes a family. Learning methods include readings, didactic presentations, discussions, role-playing, and case reviews.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2744 - EVIDENCE BASED PRACTICE IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course prepares students to be competent counselors that utilize evidence-based practice in their clinical practice. Students will learn to (1) understand the rationale for using evidence-based practice, (2) use guidelines for determining acceptable evidence, (3) effectively locate free access ebp articles, and (4) create program evaluation plans. At the end of the course, students are required to make evidence-based practice recommendations for clinical case studies. Students also must effectively design a program evaluation protocol for a complex counseling intervention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: HRS PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2746 - COUNSELING PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Students participate in a minimum of 100 hours of counseling practicum with at least 40 hours of direct clinical service. Students receive supervision from an assigned on-site clinical supervisor, and clinical supervision from a designated faculty clinical mentor. Practicum students increase their awareness and understanding of the differences in values, beliefs, and behaviors of individuals from diverse populations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2747 - CONCEPTUALIZATION, TREATMENT PLANNING, & CASE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course reflects a paradigm for integration of assessment data, diagnoses, and models of case conceptualization to establish client goals and formulate treatment plans. The course incorporates academic training, experiential learning, and feedback from both peers and instructor in the context of individual work, group projects and simulated treatment team meetings. Students learn and demonstrate proficiency in diagnostic and clinical formulation, contextual and cultural assessment, and goal setting followed by pragmatic construction of treatment plans that incorporate components of case management and caseload management. Course materials and assignments are based on case studies that require consideration of evidence-based practice and measurement-based care. It is expected that students will enhance clinical and diagnostic assessment and problem-solving skills, teamwork, and professional clinical competencies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2748 - EVIDENCE BASED PRACTICE AND RESEARCH METHODS IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course prepares students to be competent counselors that utilize evidence-based practice in their clinical practice. Students will learn to (1) understand the rationale for using evidence-based practice, (2) use guidelines for determining acceptable evidence, (3) effectively locate free access EBP articles, (4) understand the basic statistical and methodological concepts that underlie clinical research; (5) effectively communicate with clients regarding evidence-based practice; and (6) create program evaluation plans. At the end of the course, students are required to make evidence-based practice recommendations for clinical case studies. Students also must effectively design a program evaluation protocol for a complex counseling intervention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2749 - CLINICAL COUNSELING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Students participate in a minimum of 600 hours of counseling internship with at least 240 hours of direct clinical service. Students receive supervision from an assigned on-site clinical supervisor with requisite credentials, and clinical supervision from a faculty clinical mentor with the requisite credential and/or license. Internship students increase their awareness and understanding of the differences in values, beliefs, and behaviors of individuals from diverse populations. The internship reflects the comprehensive work experience of a clinical rehabilitation and mental health professional counselor. This course is the final preceptorship prior to the completion of the degree.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2751 - CLINICAL COUNSELING CAPSTONE EXAM

Minimum Credits: 1

Maximum Credits: 3

The clinical counseling capstone courses serve as the comprehensive examination. The courses focus on student demonstration of knowledge and skills that reflect the competencies of the clinical rehabilitation and mental health counselor as defined by this program. Students will be assessed on their knowledge and skills accumulated through coursework and clinical experiences. The courses require students to synthesize and apply advanced concepts into clinical practice. The courses implement a case study approach. Students are providing real and/or simulated clients to demonstrate their knowledge and skills. Students are expected to analyze and synthesize case materials for case conceptualization and then develop appropriate and realistic intervention plans. Students are expected to apply appropriate counseling techniques included in their intervention plan via role-play simulations. The courses are delivered over two terms with the first 1-credit course (clinical capstone i) focusing on preparation and practice. If students do not demonstrate readiness for competency evaluation, remediation will be prescribed and deficiencies resolved prior to proceeding. The second 2-credit course will serve as their competency evaluation (clinical capstone ii). Successful completion of this comprehensive examination is needed for the student to demonstrate mastery of graduate study in clinical rehabilitation and mental health counseling.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2752 - SPECIAL TOPICS IN COUNSELING

Minimum Credits: 1

Maximum Credits: 1

A special topics course. Content will vary from term to term depending on instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2753 - SPECIAL TOPICS IN COUNSELING 1

Minimum Credits: 1

Maximum Credits: 1

COUN 2766 - INTRODUCTION TO ASSESSMENT AND TREATMENT FOR CHILDREN AND ADOLESCENTS

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to considerations in working with children, including building rapport with children and families and diagnosis and assessment for children and adolescents. Additional emphasis will be placed on skills needed to work with and educate caregiver(s) regarding their child's emotional and behavioral needs to ensure they are equipped to collaborate effectively with the treating clinician. Specific problems/disorders presented by children will be explored, with emphasis placed on evidence-based interventions and non-directive therapies. Factors that influence the helping processes with children, including age, gender, and ethnic differences, and verbal and nonverbal behaviors, will be explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2767 - TRAUMA AND GRIEF COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course introduces the professional counseling student to the field of traumatic stress studies. The history of the field, current trauma theory, and practice, as well as prevalence rates, will be reviewed. Consideration is given to the responses of a variety of traumatic experiences including race-based trauma, childhood trauma, adult sexual assault, combat, domestic violence, homicide, witnessed violence, etc. The psychology of the victim's response to trauma will be explored in detail, as will societal, cultural, and historical influences on our understanding of the impact of trauma. Prominent treatment approaches will be reviewed. This course will also give special attention to grief and loss and the grieving process.

Grade Component: Grad Letter Grade

Clinical Research

CLRES 2005 - COMPUTER METHODS FOR CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

The course provides instruction on the use of computerized methods for clinical research. Dataset manipulation, descriptive statistics, and the graphical presentation of data will be presented using a standard statistical package.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2010 - CLINICAL RESEARCH METHODS

Minimum Credits: 3

Maximum Credits: 3

Clinical research methods provides an overview of the basic research strategies, methods, and goals of clinical research. Topics include study design, data analysis and interpretation, and determination of appropriate methodologies to answer different research questions. Bias and confounding in observational research, the clinical value of diagnostic tests, appropriate use of cross-sectional, case control and cohort study designs, and various statistical modeling used in clinical research will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2011 - ADVANCED OBSERVATIONAL EPIDEMIOLOGICAL METHODS

Minimum Credits: 1

Maximum Credits: 1

This course is designed to introduce students to advanced observational study design and analysis and to provide students with tools and resources to carry out independent research using observational study design. Lectures will focus on case-control, cohort, case-cohort, nested case-control, and case-crossover design and methods. We will discuss recent manuscripts and apply statistical concepts in hands-on computer sessions to aid in the learning of concepts covered in class. The following goals are proposed to teach investigators to: 1. Critically evaluate literature using case-control, cohort, case-cohort, nested case-control and case-crossover design. 2. Understand and address concepts of study design, bias, matching, stratification, propensity score matching, and inverse probability weighting. 3. Identify methods for handling missing data, rare outcomes and count data. 4. Understand modern techniques for addressing confounding, mediation, and effect modification. 5. Conduct and interpret results from appropriate statistics using Stata.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2021, CLRES 2022, CLRES 2023

CLRES 2020 - BIostatISTICS

Minimum Credits: 4

Maximum Credits: 4

This course focuses on basic concepts and statistical methods and their application to problems in the health and biomedical sciences. Topics include data description and summarization, basic probability theory, estimation, and hypothesis testing with emphasis on one- and two-sample comparisons involving continuous and categorical data. Linear regression and analysis of variance will be introduced. Students will develop their analytic skills through the analysis and discussion of large clinical studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: CLRES 2005; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2021 - REGRESSION AND ANOVA

Minimum Credits: 1

Maximum Credits: 1

The course is designed for medical researchers who are not biostatistics majors. Topics covered include multiple linear regression, regression diagnostics, ANOVA, analysis of covariance, confounding, mediation, moderation, and model selection. At the completion of the course, trainees should be able to understand the appropriate uses of ANOVA and linear regression, to assess their appropriateness and adequacy, to analyze simple datasets taken from the fields of medicine and public health, and to summarize results from regression models via written communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2005 and 2020; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2022 - LOGISTIC REGRESSION

Minimum Credits: 1

Maximum Credits: 1

This introductory course in logistic regression modeling is intended for physicians in fellowship training programs and other researchers with a limited background in statistics. The course focuses on regression methods for binary data and on the basics of maximum likelihood inference. At the completion of the course, trainees should be able to understand how logistic regression can be used to address a variety of epidemiologic and clinical questions; to interpret models and assess their appropriateness and adequacy; to develop analytic skills through the analysis of datasets taken from the fields of medicine and public health; and to develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2005 and 2020 and 2021; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2023 - SURVIVAL ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This is an introductory course in regression modeling of time-to-event data. It is intended for physicians in fellowship training programs and other researchers with a limited background in statistics. The course focuses on descriptive methods for survival data, survival analysis, and issues pertaining to time-dependent covariates. At the completion of the course, trainees should be able to recognize when it is necessary to account for time in the analysis of yes/no outcomes and appropriately summarize time-to-event data; be able to interpret the survival analysis model and assess the appropriateness and adequacy of the model; be familiar with issues in the design, analysis, and interpretation of studies involving time-dependent covariates; be able to apply analytic skills to the analysis of datasets taken from the fields of medicine and public health; and be able to develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: (CLRES 2005 and 2020 and 2021 and 2022) or (MEDEDU 2005 and 2020 and CLRES 2021 and 2022); PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2026 - ANALYSIS OF CORRELATED DATA

Minimum Credits: 1

Maximum Credits: 1

CLRES 2026 will provide information on statistical methods for analyzing data arising from multilevel or longitudinal studies. The first half of the course lectures will focus on models for continuous data, including mixed effects models, fixed effects models, and generalized estimating equations. The second half of lectures will extend to analysis in the generalized linear model setting (binary outcomes, count data, etc.) We will show students how to investigate data graphically and descriptively before beginning statistical modeling and will introduce students to topics on missing data, group trajectory modeling, and sample size estimation. We will use homework assignments and articles from multilevel and longitudinal studies to facilitate learning of concepts discussed in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2005 and CLRES 2020 and 2021 and 2022; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2035 - FUNDAMENTALS OF MACHINE LEARNING IN CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

In this introductory-level course we will cover the main concepts of statistical machine learning, including the theoretical aspect of generalization properties where a model is applied to unseen data, and the practical aspect of applying state-of-the-art models to static and dynamic problems in classification, regression or density estimation. Examples of real-life applications in health and biomedical sciences will be used to illustrate the interest in statistical machine learning. The course does not require advanced knowledge in mathematics or programming. All computations will be done in Stata. The lectures will focus on the essential elements of modern data analysis methods with minimum use of mathematical formulas. Real-life applications will be used to illustrate the interest of causal inference in clinical research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CLRES 2036 - INTRODUCTION TO CAUSAL INFERENCE

Minimum Credits: 1

Maximum Credits: 1

The course will present an introduction to the concepts and framework in causal inference. In the lectures, causal models will be depicted using directed acyclic graphs (DAG) and defined with nonparametric structural equation models (NPSEM) while target causal parameters will be defined using counterfactuals, principle stratification, and marginal structural models. We will also introduce propensity score modeling, g-computation estimators, and inverse probability weighted estimators. Students will gain practical experience implementing these estimators and learn how to interpret results through in-class discussions and Stata assignments.

Academic Career: Graduate

CLRES 2040 - MEASUREMENT IN CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

The course focuses on properties of good measurement that are integral to the research process. Specific objectives are to analyze methods for testing psychometric properties (reliability and validity) of psychological instruments and physiological instruments; to evaluate the adequacy of selected scaling methodologies used in research; to apply knowledge of instrumentation to the description of a psychosocial instrument and a physiological instrument for a research proposal; and to synthesize course content with statistical criteria for scale evaluation and make decisions regarding scale revision. The domain sampling model is presented as the major theory of measurement error, with the parallel test model presented as a special case of the domain sampling model. The construct, criterion, and content validity of psychosocial instruments are explored, and methods for evaluating each of these relative to specific instruments are presented. A variety of scaling methodologies, as well as the principles involved in the design and formatting of questionnaires, will be discussed.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2045 - SURVEY DESIGN AND DATA ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

Survey design and data analysis will provide information on the skills and resources needed to design and conduct survey and techniques of analyzing survey data. The skills include identifying and developing specific survey objectives, designing survey studies, sampling respondents, developing reliable and valid self-administered questionnaires, and administering surveys. The techniques of analyzing survey data include both classic methods such as factor analysis and advanced methods such as item response theory. A majority of lectures will focus on survey research, constructing surveys, response set, survey administration methods, questionnaire construction and programming surveys, sampling and power calculation, maximizing response rates, data coding and entry, reliability and validity, survey data analysis, factor analysis and item response theory. The students will be introduced to the internet based survey and the computerized adaptive testing to broaden their scope of the current survey design and collection. I will use manuscripts of survey data and protocols of completed studies to facilitate learning of concepts discussed in class.

CLRES 2050 - ETHICS & RESPONSIBLE CONDUCT OF RESEARCH (ONLINE)

Minimum Credits: 1

Maximum Credits: 1

It's far too easy to relegate egregious ethical violations to the past. We reassure ourselves these could never happen now. After all, we have IRBs and rules and regulations we have to follow when conducting research on human subjects and animals. IRBs, and those rules and regulations, like the Belmont Report and the Declaration of Helsinki, are important, helpful, and a good start, but researchers need more. Many of the problems researchers will face during their careers will not be black and white, and it's really important to learn to navigate through the shades of gray. In this fully online course, we will read important foundational texts and a work of fiction, and we'll engage with case studies. You'll interact with fellow course participants on discussion boards, and submit written answers to questions taken from the readings. This course presents an in-depth examination of ethical issues in the conduct of clinical research. Topics include issues related to privacy, confidentiality, protection of human and animal subjects, informed consent and the role of the IRB in ensuring the responsible conduct of research.

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2071 - ADVANCED GRANT WRITING PART 1

Minimum Credits: 3

Maximum Credits: 3

The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. Mentor must be identified prior to enrollment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2005, 2010, 2020 and 2040; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2072 - ADVANCED GRANT WRITING PART 2

Minimum Credits: 1

Maximum Credits: 1

The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. Course Requirements: CREQ: (CLRES 2005 and 2010 and 2020 and 2040 and 2071) or (MEDEDU 2005 and 2010 and 2020 and CLRES 2040 and 2071); PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2075 - SEMINAR FOR UNDERSTANDING PRINCIPLES AND PRACTICES OF RESEARCH TECHNIQUES (SUPPORT)

Minimum Credits: 0.5

Maximum Credits: 0.5

The SUPPORT Seminar is a mandatory twice-monthly series for medical students in the Clinical Scientist Training Program. The purpose of SUPPORT is to provide a forum for medical students to learn about careers in clinical investigation, to present their research in oral and written form, to explore case studies in the responsible conduct of research and the ethics and regulation of human subjects research, and to consecutively peer review colleagues' research products.

CLRES 2076 - INTRODUCTION TO GRANT WRITING

Minimum Credits: 1

Maximum Credits: 1

Obtaining peer-reviewed grant support is one of the most critical determinants to academic and career success, yet the process is highly challenging. Through select readings and podcasts, the writing of a draft grant application to request funds from one of the many seed programs available to Pitt students and faculty, and class discussions led by a long-time NIH-funded clinical investigator, Introduction to Grant Writing CLRES 2076 will provide CEED trainees, clinical fellows, post-doctoral students, and junior faculty without any prior grant writing experience with useful knowledge, insights, and skills in the grant writing process to improve their chances of later funding and subsequent career success. Please note that this course is NOT INTENDED for Master's Degree students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (ACM or MS) or Clinical Research (ACM or MS) or Clinical and Translational Sci or Graduate Career Development (GCD-ND)

CLRES 2077 - STRATEGIC LEADERSHIP IN ACADEMIC MEDICINE

Minimum Credits: 1

Maximum Credits: 1

Health care professionals regularly occupy leadership roles in research, educational, and clinical arenas, and leadership opportunities abound in academic settings. Yet clinicians have been described as "accidental administrators," lacking training in skills necessary to be an effective leader. Given the current challenges facing healthcare, increasing reliance on interdisciplinary teams to provide care, and greater emphasis on cost control and quality improvement, the need for clinicians to develop effective leadership skills is paramount. This course is designed for clinician-educators and researchers who want to understand the basics of leadership and management. Through selected readings, this course will develop participants' leadership skills across a variety of domains. Topics covered include understanding how academic medical centers function and how to set team culture, run a meeting, manage time, lead across difference, and create/maintain a five year plan. At the completion of the course, trainees will understand the basic principles of leadership and management in the context of academic medicine. *Please note in previous terms, this course was titled "Managing Your Career in Clinical & Translational Science" and "Strategic Leadership".

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2080 - MASTERS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Trainees may register for this course with approval from the mentor and selected faculty of the Degree Granting Programs in Clinical Research Curriculum Committee. The course is designed for trainees who are prepared to undertake their thesis or substantive research project.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2085 - DIRECTED RESEARCH/INDEPENDENT STUDY IN CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 3

For Master of Science and Doctoral Certificate in Clinical and Translational Science students. An independent study project is designed by the student to pursue an area of study within clinical research that is not covered by the established curriculum. It cannot be used to replace required or core courses. The project is designed by the student and requires that an Institute for Clinical Research Education (ICRE) faculty member supervise the project. The student will complete the directed research independent study form, and the faculty preceptor and Director of Academic Programs must approve it. An independent study project may carry 1-3 graduate semester credits, assigned at the faculty member's discretion based on the project proposed. Doctoral CTS students may only register for a maximum of 2 credits.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2086 - CLINICAL RESEARCH TEACHING PRACTICUM

Minimum Credits: 0

Maximum Credits: 3

The objective of this teaching practicum is to provide students the opportunity to design and/or implement a curriculum. This practicum involves curriculum development and implementation (i.e instruction). Each year the course directors will assess whether substantive curriculum development/refinement is necessary prior to instruction.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2095 - PHARMACOEPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to the field of pharmacoepidemiology which uses epidemiologic methods to examine the benefits or risks of medications in the population. In addition to formal lectures, students will be given the opportunity to examine and critique the literature in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CLRES 2107 - COMPARATIVE EFFECTIVENESS RESEARCH AND PCOR

Minimum Credits: 2

Maximum Credits: 2

This course will define Comparative Effectiveness Research (CER) and Patient-centered Outcomes Research (PCOR) and highlight the history and current national efforts in promoting CER/PCOR for drugs, devices and other interventions. The curriculum will include topics on the conceptualization, outcome measurements, engagement of patients and stakeholders, study designs, and analysis methods used in CER/PCOR studies. The course is project based and students learn how to define their own CER/PCOR research question and design a research project to answer the question.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2108 - PATIENT REGISTRIES & ELECTRONIC HEALTH RECORDS IN CER

Minimum Credits: 1

Maximum Credits: 1

This course explores the role of research registries that include electronic health record data in comparative effectiveness research. Students will gain an understanding of different registry models, including establishing a registry, evaluating a registry, using registry data and the strengths and weaknesses of different registry models. We will discuss the use of registries with both identifiable and de-identified data. Ethical issues surrounding the use of these data sources for research will be discussed. We will use case studies to facilitate the learning of concepts discussed in class.

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2120 - COST EFFECTVNS ANAL HLTH CARE

Minimum Credits: 1

Maximum Credits: 1

CLRES 2120 provides an introduction to the methods used in the economic analysis of health care programs. The course will discuss economic principles that serve as the foundation of cost-effectiveness analysis, will describe the various ratios and methodologies used in cost-effectiveness studies, will highlight the current controversies in cost-benefit analysis, and will explore issues regarding the appropriate use of cost-effectiveness in making medical decisions concerning patients and populations. Additional topics include concepts of perspective, utility analysis, discounting, and

the definition of various costs and benefits.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2121 - CLINICAL DECISION ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course presents an overview of the theory of medical decision making. Topics include the incorporation of uncertainty and risk into medical decision making; the use of decision-making techniques in both population and individual patient settings; the design, structure, and evaluation of decision trees generated by software packages; sensitivity analysis and the stability of model outputs; and controversies concerning the perspective of the analysis and the discounting of costs and benefits. The course will help trainees become skilled in structuring and analyzing decision-making problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2122 - COMPUTER METHODS IN DECISION AND COST-EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course expands upon topics introduced in CLRES 2120 (cost effectiveness analysis) and CLRES 2121 (clinical decision analysis) and provides additional guidelines for using decision sciences in larger, more complex applications. Topics include modeling clinical processes and systems; discrete event simulation; advanced sensitivity analysis and confidence limits; controversies surrounding the use of cost-effectiveness analyses; and multi-attribute utility theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2120 and 2121; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2124 - DIRECTED STUDY IN DECISION ANALYSIS AND COST EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 3

There are no formal class meetings. Each student will meet independently with their chosen faculty members; develop a timeline and schedule of meetings and milestones for various components of the particular project, or topic review. It is expected that the trainee and faculty member will meet every one-two weeks during the duration of the course.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CLRES 2120, 2121, and 2122; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2140 - BEST PRACTICE OF CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

CLRES 2140 covers the basic operations of conducting a health services research project, from developing realistic timelines and schedules to building tracking databases, training interviewers and data collectors, monitoring data collection and budgets, reporting, and closing out a study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2141 - SCIENTIFIC WRITING AND PRESENTATION SKILLS (ONLINE)

Minimum Credits: 1

Maximum Credits: 1

Medical educators and researchers must be able to present their work clearly and effectively. However, important educational material and research data are sometimes obscured by poorly delivered presentations or poorly written manuscripts. The main objective of this course is to help students develop excellent medical writing and presentation skills. This objective will be achieved through a combination of videos, readings, individual assignments, and team projects in which students will practice specific skills. Students will craft an abstract, write a discussion section of a manuscript, practice methods of disseminating their science to the lay public, create a poster, construct a table or figure, and develop a PowerPoint presentation and record themselves delivering a 10-minute talk.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2155 - MEDICAL PRODUCT IDEATION

Minimum Credits: 3

Maximum Credits: 3

A didactic class that explores the principles and use of "ethnography" as a tool to observe and document clinical activity in order to draft a clear statement of a clinical problem in need of solution and methods for concept generation to identify potential solutions. Students will be able to describe and use ethnographical techniques in identifying workplace problems and be able to describe and use concept generation methods to develop potential solutions. Topics covered: ethnography in the workplace; group brainstorming; brain-writing; affinitization; morphological analysis; basic human factors design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CLRES 2156 - MEDICAL PRODUCT DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

A didactic course that uses principles of system engineering, the stage-gate process for medical product development and engineering and business analysis principles to evaluate the commercial potential proposed medical devices to further develop feasible solutions to a clinical problem identified in BIOENG 2150. Students will demonstrate use of systems engineering techniques to prioritize a set of feasible device and/or system solutions and ability to use intellectual property (IP) tools to determine suitability for further development. Students will demonstrate use of course principles in development of a commercialization plan for a proposed medical product. Design controls required by FDA and international bodies; systems engineering methodologies; intellectual property (IP) and IP search tools; brief market analysis; size by region, growth, competition, barriers to entry, sustainable advantage; reimbursement issues for proposed medical device/system; basic financial analysis ' students will construct spreadsheets typically presented to senior business management. This will include estimates of costs, margins, break-even analysis, NPV, hurdle rates, ROI, IRR; codes, standards, and regulatory processes (FDA, IEC & ISO, UL, ministry of health (Japan), NRC, BRH, notified bodies, obtaining broad indications for use); safety, reliability, product liability considerations, manufacturability considerations (DFM ' design for manufacture, workflows)

CLRES 2170 - MAKING THE MOST OF MENTORING

Minimum Credits: 1

Maximum Credits: 1

We strongly believe that effective mentoring is the cornerstone of a successful academic career, whether it be in education, research, or clinical work. Good mentors are able to guide mentees as they attempt to navigate through the course of their careers. This course is designed to provide a basis for understanding the mentor-mentee relationship and to provide strategies for making the most out of the experience. Topics will include communication and negotiation, the use of mentoring contracts, providing and accepting feedback, evaluating the mentoring relationship, and solving problems and meeting challenges. Fellows, postdocs, other Institute for Clinical Research Education (ICRE) trainees, and junior faculty will discover useful ways to enhance the mentoring relationship and make it a rewarding experience both for the mentees and the mentors.

CLRES 2200 - INTRODUCTION TO RESEARCH DISPARITIES ON HEALTH CARE

Minimum Credits: 2

Maximum Credits: 2

This course will provide knowledge and skills to understand and apply the basic principles of healthcare disparities research. Students will be introduced to a variety of healthcare disparities that have been identified in the literature. They will learn about a 3-phase conceptual framework for advancing disparities research that involves detecting (phase 1), understanding (phase 2), and reducing/eliminating (phase 3) disparities. They will become familiar with methodological and conceptual issues that pertain to research designed to detect healthcare disparities, understand multi-level factors that contribute to disparities, and reduce or eliminate healthcare disparities. Students will use their knowledge and skills from the course to develop and present a research proposal focused on a healthcare disparities topic of their choice. The course will consist of didactic lectures, interactive discussions, and homework assignments to establish basic knowledge of research on disparities in health care. It will also include guest presentations by faculty with experience conducting research focused on disparities in health care.

CLRES 2215 - FUNDAMENTALS OF IMPLEMENTATION SCIENCE FOR HEALTHCARE PRACTICE AND INNOVATION PART I

Minimum Credits: 1

Maximum Credits: 1

This two-part course presents a survey of the field of Implementation Science with a specific focus on improving health care. In the first part, we focus on terminology, theories, and frameworks. These basic concepts will provide the building blocks for learners to apply theories and frameworks to their own intervention development and implementation work. In this portion of the course, learners will be exposed to short presentations by Implementation Science researchers on campus, to provide an appreciation of real-life applications of the theories as they learn them. This part of the course will emphasize theory, the translational research continuum, and proposal development.

CLRES 2216 - FUNDAMENTALS OF IMPLEMENTATION SCIENCE: BEDSIDES TO HEALTH SYSTEMS PART II

Minimum Credits: 1

Maximum Credits: 1

This is the 2nd installment of a two-part course presenting a survey of the field of implementation science with a specific focus on healthcare practice and innovation. In this second course, we will expand on the content covered in Part 1 but have a greater focus on applied implementation, with lectures on specific implementation science research methods and concepts, such as organizational and systems-level change strategies, community engagement, and hybrid trial designs. An emphasis on mixed (quantitative and qualitative) methods approaches will be featured throughout the course. Guest lecturers will present relevant examples from their own work of research programs in implementation science as well as real-world examples of implementation strategies in the healthcare setting. The course also provides practical guidance on grant writing and advice on how to get implementation science grant applications funded. COURSE GOALS 1. Understand implementation study design. 2. Apply knowledge to evaluate and design implementation science studies in each student's area of interest. 3. In-class guidance with writing an implementation science focused grant application.

CLRES 2220 - APPLYING QUALITY IMPROVEMENT METHODS IN THE CLINICAL CONTEXT

Minimum Credits: 1

Maximum Credits: 1

Over the course of eight 2hr sessions, we aim to build knowledge of basic quality improvement (QI) concepts and apply QI methods to the clinical setting, to facilitate an integration of the front-line perspective into translating research into practice. More specifically, this includes problem definition and contextual inquiry concepts and tools, including process mapping, value stream modeling, selection of measures, Pareto analysis, understanding of variability of quality measures, and design of sustainable interventions. This content will be interwoven with concepts of healthcare workplace culture, leadership, and health system science, such as Just Culture and human factors engineering, which in turn facilitate stakeholder engagement in the improvement process and lead to successful and sustainable interventions.

CLRES 2300 - INTRODUCTION TO SYSTEMIC REVIEWS AND META ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

The course is an overview of the concepts necessary for performing systematic reviews and meta-analyses, covered in sufficient detail to enable students to conduct their own reviews and analyses after completion of the course. Students will learn about the individual steps involved in conducting systematic reviews and meta-analyses, including developing a focused research question, assembling a team to perform the study, designing a study protocol, defining inclusion and exclusion criteria, identifying relevant literature databases (including Cochrane databases and Medline), developing literature search strategies, performing the literature search, creating a data abstraction form, handling data abstraction and management, and using statistical methods for meta-analysis. We will discuss important topics such as criteria for meta-analysis, exploration of heterogeneity, choice of a meta-analytic method, study quality assessment, sensitivity and subgroup analysis, evaluation of potential sources of bias, presentation of results, and application of review results. Each class will have both a didactic component and a hands-on component that allows students to immediately apply the concepts introduced during the session. Students will use concepts learned in this course to evaluate and update a published systematic review and meta-analysis.

CLRES 2320 - CLINICAL TRIALS PRACTICUM

Minimum Credits: 2

Maximum Credits: 3

The purpose of the clinical trials practicum is for trainees (fellows and junior faculty) who are (or want to be) involved with a clinical trial to obtain course credit for their research experience. Each trainee is required to work with an experienced clinical researcher (investigator) who formally agrees to provide the trainee mentorship. The investigator must be planning a clinical trial, conducting a clinical trial, or have conducted a clinical trial. Trainees are expected to become part of the research team and learn how studies or trials are actually designed, implemented, managed, and analyzed. Trainees are expected to provide an outline of readings relevant for the practicum objectives and at the end of the practicum provide summaries of their experiences and reading materials. They may also receive credit by taking a specific question and analyzing a dataset from the trial. They can write up their findings for possible publication under the supervision of the investigators and are expected to provide a written summary of their involvement that is validated by their mentors at the end of the experience. Please see the link below for the NIH's definition of clinical trials: http://grants.nih.gov/grants/peer/tree_glossary.pdf. (Prerequisites: CLRES 2800, CLRES 2810, and CLRES 2820 or instructor permission)

Academic Career: Graduate

CLRES 2400 - QUALITATIVE RESEARCH METHODS I : THEORY & DESIGN

Minimum Credits: 1

Maximum Credits: 1

What are the study designs, data collection methods, analytical approaches, and theoretical frameworks used by qualitative researchers? How should

the quality and rigor of qualitative research be assessed? In this course, we will analyze a range of qualitative studies and discuss principles that should guide the selection of qualitative research strategies (e.g., sampling, data collection methods, analytical approaches, theoretical models). By the end of the course, you will be equipped to review a qualitative manuscript, respond to reviewer comments, and work effectively with qualitative methodologists. This course provides necessary background for students new to qualitative research and prepares students for Qualitative Research Methods II (CLRES 2401), which offers hands-on practice using qualitative methods.

Academic Career: Graduate

CLRES 2401 - QUALITATIVE RESEARCH METHODS II: APPLICATIONS

Minimum Credits: 1

Maximum Credits: 1

In this course, you will develop and hone the skills of a qualitative researcher. You will practice designing qualitative and mixed methods research studies, creating interview guides and focus group protocols, applying different data collection methodologies, developing a codebook, and conducting thematic analysis. Finally, you will write a thorough and compelling methodology section for a grant or manuscript. The focus throughout the course will be applying the tools of qualitative research and reflecting on your experience. Prerequisite: Qualitative Research Methods I: Theory and Design (or equivalent).

CLRES 2430 - INTRODUCTION TO COMMUNITY BASED PARTICIPATORY RESEARCH

Minimum Credits: 1

Maximum Credits: 1

This course is organized around themes central to the conceptualization and implementation of community-based participatory research and practice (CBPRP). The goal of this course is to familiarize students with community-based participatory research and practice. Students will become conversant in seminal community-based participatory research and practice literature. Discussion, interactive learning exercises, and examples of current research will be used to provide an understanding of cbpr and the associated strengths and limitations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education(ACM) or Medical Education(MS) or Clinical Research(ACM) or Clinical Research(MS) or Clinical and Translational Sci(PHD)

CLRES 2431 - TRANSLATING RESEARCH FOR POLICY AND PRACTICE

Minimum Credits: 1

Maximum Credits: 1

This course provides an introduction to concepts and skills in knowledge translation (a coordinated, collaborative approach to ensure that research findings are utilized by key stakeholders) and to the role of research in changing policy and practice at local, regional, and national levels. This module will build on concepts in community-partnered research introduced in module a of this three-part sequence in community based participatory research. This skills-based module will introduce learners to theoretical concepts in knowledge translation (KT), dissemination and implementation science, and apply these concepts to practical exercises to translate research findings for relevance to other key stakeholders, including community partners, program developers, and policy makers. One session will be devoted specifically to skills building in legislative and media advocacy. The goal of this course is to familiarize learners with the critically important steps involved in translating research findings for relevance to stakeholders beyond academia. Discussion, interactive learning exercises, and examples of research dissemination and implementation science will be used to provide a foundation in KT as an aspect of community-partnered research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CLRES 2432 - CONCEPT MAPPING: A PARTICIPATORY RESEARCH METHOD

Minimum Credits: 1

Maximum Credits: 1

This course provides hand-on training in the participatory research method known as concept mapping (CM). CM gives community members and other stakeholders a unique chance to have their own words communicate ideas and concepts. Research participants contribute directly in the processing of this information as it directly relates to their community and intervention needs. The goal of the course is to familiarize students with example applications of the research method and to provide training related to concept mapping data collection and analysis. Discussion, interactive learning exercises, and examples of current research will be used to provide an understanding of CBPR and the associated strengths and limitations.

CLRES 2600 - SOCIAL NETWORKS & HEALTH

Minimum Credits: 1

Maximum Credits: 1

This course is an introduction to the theory, methods, and procedures of network analysis with emphasis on applications to health and social behavior. The goal of the course is to provide a working knowledge of concepts and methods used to describe and analyze social networks so that professionals and researchers can understand the results and implications of this body of research. The course also provides the training necessary for scholars to conduct network analysis in their own research and practice careers.

CLRES 2601 - PRINCIPLES AND PRACTICES OF PALLIATIVE CARE PART 1

Minimum Credits: 1

Maximum Credits: 1

The broad objectives of this course are to provide trainees with an overview of the basic and clinical sciences underlying the professional care of dying patients, and to introduce them to the primary reference sources in the field of palliative medicine. The course will be taught in a small-group, discussion format, with faculty drawn from content-experts throughout the medical center. Discussions will combine analysis of the evidence base for a wide range of palliative care interventions with clinical case discussions. Cases will be drawn from the literature, faculty experience, and current clinical activities of the trainees themselves.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2602 - PRINCIPLES AND PRACTICES OF PALLIATIVE CARE PART 2

Minimum Credits: 1

Maximum Credits: 1

The broad objectives of this course are to provide trainees with an overview of the basic and clinical sciences underlying the professional care of dying patients, and to introduce them to the primary reference sources in the field of palliative medicine. The course will be taught in a small-group, discussion format, with faculty drawn from content-experts throughout the medical center. Discussions will combine analysis of the evidence base for a wide range of palliative care interventions with clinical case discussions. CLRES 2605 - COMPUTER METHODS FOR SOCIAL NETWORKS

Minimum Credits: 1

Maximum Credits: 1

This course provides hands-on training in social network analysis using 3 different software packages: UCINet, R, and Gephi. It is intended for those students who are interested in conducting their own social network studies using the latest available software. It is a time-intensive lab and project course. Topics to be covered include: -How to use UCINet to conduct intermediate and advanced SNA -How to use R to use custom SNA packages - How to use Gephi to conduct basic SNA and generate descriptive network graphs This course consists of in-class examples using SNA software, designing a network analysis plan in consideration of software features, and a final project. Assignments are designed to build components of a full network study, using specific analytic features from available software, visualizing network(s), and culminating in the final project. Individual projects will use data that can be provided or is collected by the student themselves.

Academic Career: Graduate

CLRES 2610 - RESEARCH METHODS IN PALLIATIVE CARE

Minimum Credits: 1

Maximum Credits: 1

This special methods course will provide the critical bridge between the more general research skills and the particular challenges of doing patient-oriented research in palliative care. It consists of the following components: discussion of the use of specific research methods and their strengths and limitations in palliative care and review OIF landmark research articles in palliative care and a critical appraisal of the methodologies. The course is taught in a graduate seminar fashion with an emphasis on discussion and critical analysis. Sessions are often co-moderated by a palliative care physician and a researcher with the particular methodological expertise under discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2700 - FUNDAMENTALS OF BENCH RESEARCH

Minimum Credits: 2

Maximum Credits: 2

The course is designed to teach fellows in training and future clinician scientists the core principles of scientific investigation. The course is organized such that fellows can learn the theory behind most of the common research approaches as well as new and innovative approaches of current scientific endeavors. In addition, participants acquire laboratory technical skills via a "learning by doing" approach in a two-week period.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2725 - TRANSLATIONAL RESEARCH PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The major objective of the Translational Research Practicum is to obtain individualized laboratory-based training and acquire proficiency in scientific methodology, experimental design, data presentation, and analysis tailored to achieve pre-defined goals within the scope of the student's thesis work. The Translational Research Practicum must define a translatable component originating from the laboratory training (i.e., application of laboratory-based methodologies/techniques, gain proficiency with pre-clinical studies) with the ultimate goal of addressing questions pertaining to human studies. This work is usually conducted within the research mentor's laboratory.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2729 - IDEA 2 IMPACT

Minimum Credits: 1

Maximum Credits: 1

This practical course guides academic researchers step by step through the experience of developing an entrepreneurial idea. It is designed for early-career scientists (e.g., MDs, PhDs, fellows, medical students, faculty, post docs) who are new to entrepreneurship and commercialization, but interested in translating research into practical applications. Each week, participants will focus on one discrete stage of the translational process as they identify a problem, analyze stakeholders, define a solution, describe its benefits, research the competition, articulate differentiators, and create an action plan. The course will be taught in a hybrid format, with self-paced, online modules to provide participants with key concepts and information, and class meetings where they present specific deliverables, receive feedback from colleagues, and engage in focused discussion. On the last day of class, participants will present their fully formed idea to an invited audience.

CLRES 2730 - FROM BENCHTOP TO BEDSIDE

Minimum Credits: 3

Maximum Credits: 3

This 12-week course, commonly known as B2B, is offered by the Innovation Institute, which encourages and supports innovation and entrepreneurship across campus to all faculty, staff and students. More information on B2B can be found on the Innovation Institute website. B2B is designed to give research scientists, clinicians, graduate students, and other interested parties the basic information necessary to assess the business potential of basic science research discoveries. The B2B course will help scientists develop additional focused information, including proof of

concept and validation experiments, that increase the value of the technology and reduce the investment risk. B2B will also provide insight into how intellectual property and other differentiators can create a barrier to entry for the competition. The course will cover the fundamentals of investment from the private sector to help finance the climb over regulatory hurdles and meet critical developmental milestones. The course is designed to give graduate students, research scientists, faculty and clinicians the basic information necessary to assess the commercial potential of basic science discoveries.

CLRES 2750 - SEMINAR IN HEALTH SYSTEMS LEADERSHIP

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will consist of a series of case-based examinations of specific managerial and leadership problems and decisions that have faced local health systems leaders in Western Pennsylvania. Health care reimbursement, licensing and accreditation, and measuring health care quality has become both more complicated and more important as pressures to reduce expenses and improve quality increase. Simultaneously, there has been a steady increase in the number of clinicians who have assumed managerial positions, such as medical directors of clinical units, directors of quality measurement and improvement programs, utilization review and many others, as well as the appearance of clinicians in the "C-suite" of many hospitals and health care organizations. Utilizing adjunct faculty who are currently (or very recently have been) executive leaders in health systems, this course will examine a series of collaborations, problems, conflicts and solutions that developed between health system administrators and clinical leadership in health care organizations in the Western PA area. The mechanics of the course will be a series of cases, based on an actual recent issue

in health care management in which the senior adjunct faculty member was involved. Students (individually or in groups) will evaluate the case, prepare a response, and make a short presentation of their "solution" to the problem to the health system executive and clinical leader involved in that case. An interactive discussion will follow.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2800 - FUNDAMENTALS IN CLINICAL TRIALS

Minimum Credits: 1

Maximum Credits: 1

Fundamentals in clinical trials course will provide information on the first three phases (phases i-iii) of drug development and fundamental components of randomized clinical trials. A majority of lectures will focus on aspects of phase iii parallel group designs with discussions on topics including developing research questions and defining endpoints, recruitment, randomization, blinding, data management and quality, monitoring, study closeout, and presentation/interpretation of results. The student will be introduced to the good clinical practice guidelines and the principles of planning and implementing clinical research protocols including: ethical issues and regulatory imperatives designed to protect human subjects in clinical research, adverse event reporting, protocol/proposal development, and publications. We will use manuscripts on clinical trials and protocols of completed studies to facilitate learning of concepts discussed in class. It is highly recommended that you have taken ANOVA and logistic regression courses before taking this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (CLRES 2005 and CLRES 2020) or (MEDEDU 2005 and MEDEDU 2020) and CLRES 2021 and CLRES 2022; PLAN: Medical Education (ACM, MS), Clinical Research (ACM, MS), or Clinical Translational Science (PHD)

CLRES 2810 - STATISTICAL METHODS AND ISSUES IN CLINICAL TRIALS

Minimum Credits: 1

Maximum Credits: 1

The course will provide in-depth information about conducting randomization, planning sample size, analyzing clinical trials (including phase I, II, and III designs), and reporting and interpreting results of studies. We will use manuscripts on clinical trials and protocols of completed studies to facilitate learning of concepts discussed in class. We highly recommend that students take analysis of variance (ANOVA) and logistic regression courses before taking this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: [CLRES 2005 and CLRES 2020 and CLRES 2800] or [MEDEDU 2005 and MEDEDU 2020 and CLRES 2800]; PLAN: Medical Education (ACM, MS), Clinical Research (ACM, MS), or Clinical Translational Science (PHD)

CLRES 2820 - SPECIAL TOPICS IN CLINICAL TRIALS

Minimum Credits: 1

Maximum Credits: 1

The special topics course will provide information on the different types of clinical trials beyond the phase III superiority parallel group design. We will use manuscripts on special types of clinical trials to facilitate learning of concepts discussed in class. We highly recommend that students take analysis of variance (ANOVA) and logistic regression courses before taking this course.

Academic Career: Graduate

CLRES 2981 - EPIDEMIOLOGY OF AGING-METHODS

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the methodological aspects of epidemiologic research in the field of aging and to critically evaluate research in older adults. The course will focus on: demography, study design, sampling, recruitment, retention, measurement of key variables and special populations. Students will write a critical review of a published article and comment on proposed future directions for epidemiologic studies addressing these questions in older populations. Throughout the course, a Problem Solving Learning Method will be applied by prompting the students to solve pragmatic issues. Examples include: How to measure a specific outcome? What type of chronic health conditions may be related to the research question? How to operationalize specific measures of interest (e.g.: how to create a composite score for co-morbidity assessment?). The course has been formulated to provide the students with the building blocks of the epidemiological study of aging. By the end of the course, the students will be able to critically evaluate various components of a study to further address the research questions in aging populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CLRES 3010 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Independent Study provides an opportunity for the student to pursue/research a subject in more depth and in a more independent manner than would be possible in a traditional course. Students completing an Independent Study must identify a sponsor faculty member who will closely work with the student in meeting defined learning objectives and goals

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 3020 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific project in any area of interest in clinical and translational science.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Clinical and Translational Sci

CLRES 3040 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

Dissertation research credits towards Ph.D. in clinical and translational science.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Clinical and Translational Sci

CLRES 3140 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic

development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

Academic Career: Graduate

CLRES 3780 - HUMAN FACTORS OF AGING

Minimum Credits: 3

Maximum Credits: 3

Research often leads to ideas and findings that can be developed into new medical devices or interventions. One limiting step in the development of these new ideas into action is the incorporation of the human factors components in the design. This is particularly true for devices/interventions meant to be used by older adults. This course provides an introductory understanding of how human factors is used in medical device design with a focus on older adults. The target audience for this course is broad, encompassing anyone that wants to learn how to design, test and evaluate medical devices or interventions used by older adults. This includes investigators (faculty, scientists, post-docs), engineers, and clinicians. The course will be at the graduate level, but general in scope. No pre-requisites are required. The course introduces the concept of human factors as applied to medical devices and interventions. Special emphasis will be on the specific issues associated with older adults. Characteristics of older adults relevant to usability of devices and capabilities in interventions are developed in detail, with numerous examples (successful and unsuccessful) provided. The course considers FDA approval requirements and evaluation methods for specific populations (in this case older adults). Topics relevant to design include within the course include: i. Principles of ethnography and anthropometry ii. Characteristics of older adult users considered in design (e.g. functional abilities, sensory/perception changes with age, cognition, diversity in the older population, cultural and ethnic interactions with age) iii. Ergonomics and aging (strength changes across the body with age, mobility and dexterity in design for older adults) iv. Aging and cognitive change (e.g. Alzheimer's disease and dementia) v. Human factors design principles such as user interface design, visual displays, training and instructions, and environmental considerations. vi. Usability testing methods to improve design (task analysis, formative evaluation methods, summative methods, subject choices) vii Regulatory requirements, such as FDA and EU human factors requirements.

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2028 - AUTISM

Minimum Credits: 1

Maximum Credits: 1

This course focuses on evidence-based assessment and intervention strategies for individuals with autism spectrum disorder (ASD). Major emphasis will be placed on the diagnostic criteria for ASD and core communication (speech and language) and behavioral characteristics of individuals with ASD. Guidelines for the assessment and intervention of communication across the lifespan will be addressed with focus on functional assessments, meaningful intervention, and transactional supports to provide effective learning and multi-disciplinary teaming that includes the family.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD) and Course CSD 2064 must be passed with a grade C or higher.

CSD 2029 - IMPLANTABLES IN CLINICAL PRACTICE

Minimum Credits: 1

Maximum Credits: 1

This course will provide students with hands on opportunities to select, fit, map/program, and assess implantable devices in a lab setting. Cases will be used to promote critical thinking related to decisions related to test selection, signal procession selection, feature selection, mapping and programming, counseling, and auditory training. Students will be able to identify appropriate candidates for implantable technology and have a basic understanding of the components of selection, fitting, and delivering these technologies in a patient-centered manner.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2036 - EVALUATION AND TREATMENT OF TINNITUS AND SOUND INTOLERANCE

Minimum Credits: 1

Maximum Credits: 1

This course will provide the evidence-based standard of practice in the evaluation of tinnitus and sound intolerance conditions including hyperacusis and misophonia. Treatment approaches for these conditions will be presented in light of current research and clinical protocols will be presented to prepare students for clinical activity.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CSD 2039 - MOTOR SPEECH DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course will provide the student with an understanding of the nature of dysarthria and apraxia of speech. Material will include anatomy and pathophysiology, common neurologic diseases, structure and function of the speech production mechanism, instrumental assessment, diagnosis and prognosis, and development of treatment goals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher.

CSD 2040 - AUDIOLOGICAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Basic orientation to audiology for speech pathology majors. Introduction to audiological concepts and audiometry including pure-tone audiometry, speech audiometry, impedance and hearing screening.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2041 - MANAGEMENT OF HEARING LOSS

Minimum Credits: 3

Maximum Credits: 3

Audiologists and Speech-Language Pathologists provide therapeutic, consultative, and referral services for adults with hearing loss. This course provides students with the foundation and technical skills to offer these services. Specifically, the areas of hearing assistance technology, evidence based auditory rehabilitation and related legislation will be covered, in the context of patient and family centered care.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2042 - AUDIOLOGICAL ASSESSMENT LAB

Minimum Credits: 1

Maximum Credits: 1

Lab for Audiological Assessment.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2043 - FUNDAMENTALS OF SPEECH-LANGUAGE PATHOLOGY FOR AUDIOLOGISTS

Minimum Credits: 1

Maximum Credits: 1

The purpose of this course is to provide audiology students with an understanding of the nature of speech, language, cognition and swallowing disorders across the lifespan. Students will acquire a basic understanding of the diagnosis and treatment of these disorders by speech-language pathologists, and the role of audiologists in early identification and referral. Students also will develop the resources and skills necessary to more effectively evaluate and adapt their communication strategies during audiological assessment, treatment and counseling, in order to ensure the highest quality of service delivery for patients and their families.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2044 - DIFFERENTIAL DIAGNOSIS

Minimum Credits: 4

Maximum Credits: 4

Introduction to immittance audiometry, traditional special tests for diagnosing cochlear and retrocochlear site of lesion, non-organic hearing loss, and

evaluation of central auditory disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2045 - PHYSIOLOGICAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Study of auditory evoked potentials with emphasis on the auditory brainstem responses (ABR). Use of ABR in audio logic and neurologic diagnosis.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2046 - PEDIATRIC EVALUATION

Minimum Credits: 3

Maximum Credits: 3

The mission of this course is to familiarize students with factors associated with heavy loss in infants and children as well as the application of audiology diagnostic procedures with this population.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2047 - AMPLIFICATION 1

Minimum Credits: 3

Maximum Credits: 3

This course provides an initial look at hearing aid evaluation, selection, validation, and orientation. Students will discuss historic as well as current topics in hearing aid selection and validation techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2049 - AGING AUDITORY SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The development of the auditory system across the lifespan will be investigated. Changes due to aging will be discussed in terms of their impact on diagnostic and rehabilitative audiology. This course takes a seminar format.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2051 - CLINICAL PROCEDURES LAB 1-2

Minimum Credits: 1

Maximum Credits: 1

Laboratory experience covering clinical procedures addressed in concurrent academic classes. Students will be given the opportunity for hands-on practice across the breadth of clinical audiology procedures.

Academic Career: Graduate

Course Component: Clinical
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2052 - CLINICAL PROCEDURES LAB 2-3

Minimum Credits: 1

Maximum Credits: 6

University supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience will be obtained within the speech and hearing clinic network of the department of communication disorders.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2057 - AUDIOLOGY PRACTICUM OUTPLACEMENT

Minimum Credits: 1

Maximum Credits: 6

Supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience may be obtained within the university speech and hearing clinic network or in community clinic facilities associated with the department.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Communication Science and Disorders MA, Communication Science and Disorders MS, Audiology

CSD 2059 - AUDIOLOGY PRACTICUM NETWORK - SLP

Minimum Credits: 1

Maximum Credits: 6

University supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience will be obtained within the speech and hearing clinic network of the department of communication disorders.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2060 - PROSEMINAR - MA

Minimum Credits: 0

Maximum Credits: 0

Variable content. Speakers from the communication department, other areas of the university and the general professional community present issues of concern to speech pathologists and audiologists.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2062 - INTRODUCTION TO CLINICIAN-CLIENT COMMUNICATIONS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Audiology (AUD) or Speech-Language Pathology (CSD) or SBPLAN: Audiology (Comm Science and Disorders-MA, or MS) or Speech-Language Pathology (Comm Science and Disorders-MA or MS)

CSD 2063 - DEVELOPING CLINICIAN-CLIENT COMMUNICATIONS

Minimum Credits: 1

Maximum Credits: 1

This course builds upon CSD 2062 and is designed to develop the graduate student's knowledge and skills in clinician-client communications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2064 - INTRO CLINICAL DECISION-MAKING

Minimum Credits: 3

Maximum Credits: 3

This course prepares students for their first clinical practicum, by orienting them to the principles and procedures underlying assessment, remediation and documentation activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2065 - SLP NETWORK PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

Student clinicians assess clients presented with various communication disorders, under supervision of certified speech-language pathologists in the university speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2066 - SLP OUTPLACEMENT PRACTICUM

Minimum Credits: 1

Maximum Credits: 9

Student clinicians provide intervention to communicatively impaired clients, under supervision of certified speech language pathologists, in the university speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PREQ: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD) and Course CSD 2064 must be passed with a C grade or higher.

CSD 2067 - SLP SCHOOL PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Student clinicians provide clinical services to communicatively impaired children in school settings, under supervision of certified speech-language pathologists.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PREQ: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD) and Course CSD 2064 must be passed with a C grade or higher.

CSD 2068 - SPEECH PRACTICUM NETWORK - AUD

Minimum Credits: 1

Maximum Credits: 3

Student clinicians assess clients presented with various communication disorders, under supervision of certified speech-language pathologists in the University speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2069 - SLP SUMMATIVE ASSESSMENT PROJECT

Minimum Credits: 1

Maximum Credits: 1

Successful completion of this course is a fundamental component of the MA-SLP degree program. The purpose of the experience is to ensure that graduates are able to accurately review a clinical case and evaluate the relevant literature that supports their clinical decisions. This course will help you successfully fulfill the requirements by giving you the opportunity to prepare your case study and analysis, practice giving a succinct and clear oral presentation, and thoughtful and accurate responses to questions that demonstrate both your knowledge and critical thinking.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PREQ: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD) and Course CSD 2064 must be passed with a grade "C" or higher

CSD 2070 - ARTICULATION AND PHONOLOGICAL DISORDERS

Minimum Credits: 3

Maximum Credits: 3

Students learn the principles and procedures needed to identify, evaluate and remediate articulation and phonological disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2071 - CHILD LANGUAGE DISORDERS 1

Minimum Credits: 3

Maximum Credits: 3

This course will advance students' knowledge of models of normal and impaired language development. Students will learn to evaluate the underlying bases, the merits, the limitations of, and the empirical support for various approaches to the evaluation and management of childhood language disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2072 - STUTTERING

Minimum Credits: 3

Maximum Credits: 3

An introduction survey of basic information about stuttering. Course content includes theories of stuttering, diagnostic and measurement procedures, and treatment approaches for stuttering across the lifespan.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only. Course CSD 2064 must be passed with a C grade or higher.

CSD 2073 - VOICE DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course covers information regarding the nature and causes of common pathologies affecting voice, voice measurement, and treatment approaches for voice disorders. Traditional as well as non-traditional approaches are emphasized. The course uses a problem-based learning methodology, in which students are required to adopt critical thinking in solving clinical problems based on material covered in the course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher

CSD 2074 - CLEFT PALATE

Minimum Credits: 3

Maximum Credits: 3

An overview of communication problems associated with palatal clefting and interdisciplinary treatment including embryology, anatomy, classification, neonatal problems, hearing, surgery, speech, and social, mental, and emotional development.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2075 - APHASIA

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the nature, appraisal, differential diagnosis, and management of aphasia, a neurologically-based communication disorder.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2076 - DYSPHAGIA

Minimum Credits: 3

Maximum Credits: 3

Principles and practices necessary to provide counseling, evaluation and treatment to clients with alaryngeal speech and/or swallowing disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2077 - AUGMENTATIVE COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

Serving the needs of nonspeaking individuals by augmenting their residual communication skills or by providing alternate systems of communication is the focus of this course. Considered in the course are the history of augmentative communication, the evaluation and assessment of nonspeakers, the fitting of nonspeakers with augmentative communication devices, the training of nonspeakers who have been fitted with devices, and the team approach to meeting the needs of nonspeakers. Implementation is by lecture, discussion, and demonstration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher.

CSD 2078 - PHYSICS, PHYSIOLOGY AND PSYCHOLOGY OF SOUND

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2079 - PEDIATRIC FEEDING AND SWALLOWING

Minimum Credits: 1

Maximum Credits: 1

This course will explore development of the aerodigestive tract from the embryonic and fetal stages of gestation to full-term and childhood, with emphasis on the development of and interactions between the aerodigestive (respiratory and digestive) systems and swallowing function. Other topics include: typical neonatal and pediatric oropharyngeal swallowing and feeding function during postnatal growth and development, comparisons and

contrasts between neonatal and pediatric swallowing anatomy and physiology and those of adults, the range and natural histories of medical, surgical, and developmental conditions leading to feeding and swallowing disorders in children, factors leading to delayed or disordered feeding in children, clinical and instrumental assessment of swallowing and feeding in children, and management/treatment of pediatric feeding disorders. The interdisciplinary nature of managing pediatric feeding disorders will be explored along with the role of parent/caregiver counseling/education and parental/caregiver involvement in management and treatment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2079 - SWALLOWING, DYSPHAGIA AND FEEDING DISORDERS IN CHILDREN

Minimum Credits: 1

Maximum Credits: 1

This course will explore development of the aerodigestive tract from the embryonic and fetal stages of gestation to full-term and childhood, with emphasis on the development of and interactions between the aerodigestive (respiratory and digestive) systems and swallowing function. Other topics include: typical neonatal and pediatric oropharyngeal swallowing and feeding function during postnatal growth and development, comparisons and contrasts between neonatal and pediatric swallowing anatomy and physiology and those of adults, the range and natural histories of medical, surgical, and developmental conditions leading to feeding and swallowing disorders in children, factors leading to delayed or disordered feeding in children, clinical and instrumental assessment of swallowing and feeding in children, and management/treatment of pediatric feeding disorders. The interdisciplinary nature of managing pediatric feeding disorders will be explored along with the role of parent/caregiver counseling/education and parental/caregiver involvement in management and treatment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2080 - CLEFT PALATE AND CRANIOFACIAL DISORDERS

Minimum Credits: 2

Maximum Credits: 2

An overview of communication problems associated with palatal clefting and interdisciplinary treatment including embryology, anatomy, classification, neonatal problems, hearing, surgery, speech, and social, mental, and emotional development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2080 - CLEFT PALATE AND CRANIOFACIAL DISORDERS

Minimum Credits: 2

Maximum Credits: 2

An overview of communication problems associated with palatal clefting and interdisciplinary treatment including embryology, anatomy, classification, neonatal problems, hearing, surgery, speech, and social, mental, and emotional development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2081 - RESEARCH STRATEGIES AND TACTICS

Minimum Credits: 3

Maximum Credits: 3

This course will advance students' knowledge of scientific approaches to the study of communicative processes and disorders. Students will learn a variety of strategies that guide scientific inquiry, and will examine tactics for implementing those strategies. This course will teach students skills needed to be wise consumers and potential producers of research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher.

CSD 2082 - PROFESSIONAL ISSUES 1

Minimum Credits: 1

Maximum Credits: 1

Students address practical and current issues necessary for ethical and informed professional services in the field of speech-language pathology and audiology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2083 - PROFESSIONAL ISSUES 2

Minimum Credits: 1

Maximum Credits: 1

Students address practical and current professional issues, including interprofessional practice and intercultural competence, in preparation for employment and professional practice in the field of speech-language pathology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher.

CSD 2084 - SCIENCE OF IMPLANTABLES

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the underlying physiology and psychoacoustics that contribute to the development and implementation of electrical and bone conducted stimulation as an input to the hearing system. A historical perspective will inform current research and clinical application in this area. Students will leave this course able to compare and contrast current signal processing strategies used in implantable devices. In addition, students will be able to critically evaluate future signal processing strategies in a patient-center manner based on the the underlying knowledge provided through this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2084 - SCIENCE OF IMPLANTABLES

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the underlying physiology and psychoacoustics that contribute to the development and implementation of electrical and bone conducted stimulation as an input to the hearing system. A historical perspective will inform current research and clinical application in this area. Students will leave this course able to compare and contrast current signal processing strategies used in implantable devices. In addition, students will be able to critically evaluate future signal processing strategies in a patient-center manner based on the the underlying knowledge provided through this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2085 - AUD SCREENING AND PREVENTION PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

Supervised clinical practicum experience in screening and prevention in audiology and speech-language pathology.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2085 - AUD SCREENING AND PREVENTION PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

Supervised clinical practicum experience in screening and prevention in audiology and speech-language pathology.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

CSD 2086 - SLP SCREENING AND PREVENTION PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Supervised clinical practicum experience in screening and prevention in audiology and speech-language pathology.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

CSD 2086 - SLP SCREENING AND PREVENTION SKILLS LAB

Minimum Credits: 1

Maximum Credits: 6

Skills lab providing students knowledge and experiential activities related to screening and prevention in audiology and speech-language pathology.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2087 - HEARING CONSERVATION AND RESTORATION

Minimum Credits: 2

Maximum Credits: 2

Trauma to the ear from sound and ototoxic agents can be preventable. This course will focus on 1) understanding mechanisms that damage the inner, 2) selection and implementation of hearing protection methods including physical hearing protection and pharmaceuticals, 3) implementing national guidelines for hearing protection and overseeing medical-based ototoxic monitoring programs, 4) exploring the emerging area of hearing restoration post trauma.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CSD 2101 - DATA AND STATISTICAL LITERACY

Minimum Credits: 3

Maximum Credits: 3

This course is designed for health professionals who will make use of statistical methods in research projects or in interpreting literature. The course provides an overview of methods for understanding data, including visualization approaches, descriptive statistics, and statistical modeling and inference. Methods will be motivated by real-world data, and students will gain hands-on experience using the free, open-source R statistical programming environment. The course will focus on practical application and conceptual understanding of statistical approaches. The foundation

achieved through this training will assist students as they conduct their own research and/or engage in evidence-based practice in their clinical careers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2102 - STATISTICAL METHODS CLINICAL RESEARCH 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of a two-course series for students in the health professions who will make use of statistical methods in research projects or when interpreting literature. Topics covered include one and two-way analysis of variance, analysis of covariance, correlation, simple linear regression, multiple regression, and logistical regression, regression diagnostics, confounding and effect modification and model selection. Students will develop analytic skills through the use of clinical datasets where they will learn to analyze data and explain their findings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: CSD 2101; PROG: SHRS

CSD 2103 - PROFESSIONAL WRITING FOR AUDIOLOGISTS

Minimum Credits: 1

Maximum Credits: 1

Audiologists are called upon to produce a variety of professional writing including, for example, clinical notes/reports, letters to professionals and funding agencies to advocate for patients, and summaries of evaluations of listening spaces. Audiologists should be competent in producing concise manuscripts suitable for publication and effective presentations for professional audiences. This course will provide guided practice in producing the myriad of professional writing expected from an Audiologist using a case-based approach.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2103 - PROFESSIONAL WRITING FOR AUDIOLOGISTS

Minimum Credits: 1

Maximum Credits: 1

Audiologists are called upon to produce a variety of professional writing including, for example, clinical notes/reports, letters to professionals and funding agencies to advocate for patients, and summaries of evaluations of listening spaces. Audiologists should be competent in producing concise manuscripts suitable for publication and effective presentations for professional audiences. This course will provide guided practice in producing the myriad of professional writing expected from an Audiologist using a case-based approach.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2110 - NEUROSCIENCE OF COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2120 - PRINCIPLES OF AUDIOLOGY FOR SPEECH-LANGUAGE PATHOLOGISTS

Minimum Credits: 1

Maximum Credits: 1

The purpose of this course is to provide Speech-Language Pathology students with a foundation for understanding the impact of hearing loss on speech, language, cognition and swallowing. Students will develop the knowledge and skills necessary for preventing hearing loss, screening and appropriately referring for hearing loss, interpreting and providing counseling of audiologic reports, conducting listening checks and trouble-shooting hearing technology, and appropriately adapting clinical procedures and home environments for patients with hearing loss, as defined within the Scope of Practice for SLPs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and Course CSD 2064 must be passed with a grade C or higher.

CSD 2130 - NEUROGENIC LANGUAGE AND COGNITIVE COMMUNICATION DISORDERS 1

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and Course CSD 2064 must be passed with a C grade or higher.

CSD 2162 - COUNSELING STRATEGIES FOR AUD AND SLP

Minimum Credits: 2

Maximum Credits: 2

This course will provide an introduction to counseling for individuals with communication, balance and swallowing disorders and their families, consistent with the defined Scopes of Practice for Audiology and Speech-Language Pathology. Student will develop essential counseling skills, acquire knowledge of key approaches and frameworks, and learn best practices for referral and coordination of care with mental health professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and Course CSD 2064 must be passed with a C grade or higher.

CSD 2230 - NEUROGENIC LANGUAGE AND COGNITIVE COMMUNICATION DISORDERS 2

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and Course CSD 2064 must be passed with a C grade or higher.

CSD 2250 - CHILD LANGUAGE DISORDERS 2

Minimum Credits: 3

Maximum Credits: 3

This course concerns advanced topics in the etiology, diagnosis, and remediation of developmental and acquired language disorders in children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a C grade or higher.

CSD 2251 - VESTIBULAR ASSESSMENT AND REHABILITATION

Minimum Credits: 3

Maximum Credits: 3

Evaluation of the functioning of the vestibular system and its associated neural pathways. Special attention is given to differentiation of peripheral and central vestibular disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2252 - ADVANCED PHYSIOLOGICAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Lectures and discussions on advanced topics in auditory evoked potentials including auditory brainstem response, middle latency and late evoked potentials.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2275 - COGNITIVE COMMUNICATIVE DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course will address the nature, assessment, and management of cognitive and communicative disorders in three populations: adults with right hemisphere brain damage, traumatic brain injury, and dementing conditions. In the first portion of the class, students will become familiar with current concepts, models, and measures of cognitive functions that are associated with, or potentially underlie, the neurologic communication disorders in these three populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2451 - AUDIOLOGY MASTERS COMPREHENSIVE

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2454 - AMPLIFICATION 2

Minimum Credits: 3

Maximum Credits: 3

This course allows for in depth discussion of topics related to hearing aid evaluation, fitting, and selection and signal processing. This course takes a seminar format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2456 - SPEECH PERCEPTION ACROSS THE LIFESPAN

Minimum Credits: 3

Maximum Credits: 3

This seminar focuses on the development and potential decline of speech perception across the life span. The relationships between speech perception and audition, vision, speech production, cognitive function, language, and literacy will be explored for typically developing and aging populations. The implications of hearing loss and auditory therapies and technologies on speech perception will be explored, as well as common clinical tests of speech perception.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2479 - SEMINAR IN SPEECH-LANGUAGE PATHOLOGY

Minimum Credits: 1

Maximum Credits: 3

Content varies across the spectrum of speech and language disorders. Each term has a special and specific focus. Students view the literature and present and discuss specific topics of interest.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Speech-Language Pathology (CSD) or SBPLAN: Speech-Language Pathology (Comm Science and Disorders-MA) or Speech-Language Pathology (Comm Science and Disorders-MS)

CSD 2500 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 3

Minimum Credits: 1

Maximum Credits: 1

The course is designed to enhance the skill and knowledge base of medical speech language pathology. Topics include, but are not limited to, pathophysiology of neurogenic communication and swallowing disorders, tracheotomy management, neurological assessment and advanced applied neuroscience, pediatric feeding assessment and management, structure and function of respiratory and digestive systems, and medical ethics. Active participant learning is essential and performance is judged based on regular participation.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: PREQ: School of Health and Rehabilitation Sciences students only and course CSD 2064 must be passed with a grade C or higher.

CSD 2503 - APPLIED AERODIGESTIVE PHYSIOLOGY 1

Minimum Credits: 3

Maximum Credits: 3

These courses are designed to provide advanced study of the physiological processes involved in speech production and swallowing. Clinical methods used to measure speech production and swallowing physiology will be addressed. Instrumentation will be used to give students hands-on experience in the acquisition, measurement and interpretation of acoustic and physiologic data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD)

CSD 2504 - APPLIED AERODIGESTIVE PHYSIOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

These courses are designed to provide advanced study of the physiological processes involved in speech production and swallowing. Clinical

methods used to measure speech production and swallowing physiology will be addressed. Instrumentation will be used to give students hands-on experience in the acquisition, measurement and interpretation of acoustic and physiologic data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD)

CSD 2505 - PROFESSIONAL WRITING 1

Minimum Credits: 1

Maximum Credits: 1

This course will be composed of two 1-credit didactic classes on the art of succinct professional writing. The nature of "the readership" will be examined and how writing style must be modified to suit a specific audience. Assessment will be based on the production of several items including a scientific abstract for conference peer review, an administrative work such as an evidence based business plan for specific service development, and an information leaflet for careers (lay language use). Some of these may require submission to an outside body if appropriate. The third credit in this series will be a scholarly work in which the student will be mentored by a departmental faculty member on the development of a specific project. . It is a requirement that this scholarly component be submitted to an outside institution for peer review. Class waivers will be considered on an individual basis, provided the student can demonstrate writing skills consistent with the outcomes of this course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2506 - PROFESSIONAL WRITING 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2508 - RESEARCH AND CLINICAL FORUM

Minimum Credits: 0

Maximum Credits: 0

This component encourages residents (and clinical fellows) to attend clinical and research meetings offered by CSD/Pitt/UPMC/VA etc. to gain experience of the various aspects of clinical and research fields relevant to the discipline of communication science and disorders. (Residents and clinical fellows) will attend 4 documented events per semester from the full range of activities available throughout the University of Pittsburgh and its associated medical center's extensive network of institutional and regional clinical, research, and scientific educational offerings.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2509 - HEAD AND NECK ANATOMY

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2510 - COMPLEX DECISIONS

Minimum Credits: 3

Maximum Credits: 3

A problem based learning format will be used to explore situations encountered in medical speech-language pathology. Problems relevant to an array of theoretical, diagnostic and management issues will be presented in a format whereby students will assume complete responsibility for collecting, analyzing, interpreting and summarizing findings with class members.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2511 - ORAL DISSEMINATION SKILLS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2512 - HEAD AND NECK ANATOMY LAB FOR CLINICAL DOCTORATE IN MEDICAL SPEECH LANGUAGE PATHOLOGY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2513 - NON SLP CLINICAL ROTATIONS

Minimum Credits: 1

Maximum Credits: 7

This course provides the csc.d student with the opportunity to develop theoretical and clinical knowledge and skills through observation, discussion, and participation with other health professionals via the completion of three 10-week half-time clinical rotations. These experiences may include such disciplines as physical medicine and rehabilitation, neurology, and other related clinical services.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2514 - SCHOOL BASED SERVICE DELIVERY

Minimum Credits: 1

Maximum Credits: 1

This course is designed to enhance the skill and knowledge base of speech language pathology services provided in an educational setting. Content focuses on current educational topics and issues encountered in school-based settings that may impact professional decision-making and service delivery. Topics include, but are not limited to, educational terminology, federal and state laws and legal mandates, educational reform initiatives, designing specialized services aligned with educational curriculum and standards, service delivery models, and intervention considerations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2516 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2517 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2520 - MENTORED CLINICAL INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

The focus of these internship assignments is to further develop, refine and enhance the CScD student's knowledge, skills and abilities as they pertain to the assessment and management of communication and swallowing disorders in the context of their weekly caseload. Mentoring will be facilitated through weekly interactions with designated faculty members.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2521 - CLINICAL EDUCATION 1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2522 - CLINICAL EDUCATION 2

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2523 - CLINICAL EDUCATION 3

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2524 - CLINICAL CASE EDUCATION

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2525 - INTEGRATED CASES 1

Minimum Credits: 1
Maximum Credits: 1
This required course will use a case-based learning format to explore cases with a variety of diagnoses and characteristics encountered across settings in the field of speech-language pathology. Cases will involve various speech, language, communication, hearing, and swallowing diagnoses across the age range. The course will focus on clinical decision making and integration of content from other courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

CSD 2526 - INTEGRATED CASES 2

Minimum Credits: 1
Maximum Credits: 1
This optional course will use a case-based learning format will be used to explore cases with a variety of diagnosis and characteristics encountered across settings in the field of speech-language pathology. Cases will involve various speech, language, communication, hearing, and swallowing diagnoses across the age range. This course will build on content from Integrated Cases 1 include integration of recently learned content in courses from Summer 1.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

CSD 2572 - COMPREHENSIVE EXAMS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2600 - INTER-PROFESSIONAL ROTATION

Minimum Credits: 1

Maximum Credits: 1

This course includes a clinical rotation where students accompany physicians engaged in clinical examination, diagnosis, and treatment of otology/vestibular patients. Students meet with medical residents in otology conferences and grand rounds. This course exposes students to basic ear anatomy and surgical procedures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2601 - SUPERVISION

Minimum Credits: 1

Maximum Credits: 1

Students will explore activities associated with supervising students through readings and examples presented in class. This course provides future professionals with tools to be effective audiology supervisors. Material is presented in a manner to convince students that supervising future practitioners is a professional responsibility.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2602 - EDUCATIONAL AUDIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course takes a lifespan approach to educational audiology. Laws, working within the educational environment and with other educators, developmental needs, room acoustics, and technology will be explored in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2603 - HUMAN GENETICS FOR HEARING AND SPEECH DISORDERS

Minimum Credits: 2

Maximum Credits: 2

An examination of the mechanisms involved in producing genetic variation in humans and the medical/clinical aspects of genetic variation and disease. Students will learn genetics terminology, patterns of inheritance, DNA/RNA structure and transcription and translation, characteristics of major human syndromic and non-syndromic hearing loss and communication disorders. We will discuss the ethical, legal and social issues associated with our growing knowledge of human genetics and the potential for misuse.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2652 - ADVANCED CLINICAL SEMINAR 3-1

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2654 - PRACTICE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Students will investigate the professional, legal, and ethical issues related to practice management. In-depth exposure and critical discussion will be focused on professional issues that impact licensure, occupational codes, and reimbursement. Students will understand CMS and other government agencies that impact how they manage their audio logy practices. Billing as it relates to CPT codes, ICD-9 CM codes, third party payment, etc. will be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Audiology (AUDIO-AUD; MACAUD-SP; MSCAUD-SP) or Comm Science and Disorders (PHD)

CSD 2655 - ADVANCED CLINICAL SEMINAR 4-1

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2656 - ADV AUDLGY CLN PRACTICE-NETWORK

Minimum Credits: 1
Maximum Credits: 4
Third year audiology students engage in advanced clinical practicum under the supervision of university faculty. Practicum activities target the development of independence in higher level clinical skills such as clinical decision making, diagnostic and treatment planning, case management, and professional oral and written communication skills.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2657 - ADVANCED CLINICAL SEMINAR 3-3

Minimum Credits: 1
Maximum Credits: 1
This course provides advanced students with a forum for discussion of advanced clinical topics through case-based learning.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2658 - ADVANCED CLINICAL SEMINAR 4-3

Minimum Credits: 1
Maximum Credits: 1
This course provides advanced students with a forum for discussion of advanced clinical topics through case-based learning. Participants will access

the course via the chat function on course web.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2659 - AUDIOLOGY EXTERNSHIP

Minimum Credits: 1

Maximum Credits: 9

Consists of full-time supervised work at sites offering diagnostic and rehabilitative audiology within and outside the Pittsburgh region. Students are expected to gain at least 2000 hours of clinical activity through the internship.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2660 - ADVANCED CLINICAL SEMINAR 4-2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2661 - ADVANCED CLINICAL SEMINAR 3-2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Under the direct supervision of a faculty member, the student carries out specific research (library or experimental) pertinent to the student's and/or faculty member's interests.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2970 - TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

Student is supervised in gaining experience in various aspects of university classroom instruction, including preparation of materials, lecturing and discussion, test construction and evaluation and student evaluation.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2971 - RESEARCH PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

This variable credit experience provides opportunities for students to be involved in research studies under the supervision of faculty members.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2972 - EXAMINATION

Minimum Credits: 1

Maximum Credits: 3

Examination credit registration gives official registration status to a student who will be taking an examination but who may not be registered for any other courses.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2973 - PRACTICUM IN CLINIC SUPERVISION

Minimum Credits: 1

Maximum Credits: 3

This course provides advanced graduate students with the opportunity to obtain experience supervising first year masters students. The advanced students, in turn, will work in consultation with the director or the assistant director of the university speech-language and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (CSD-MA; CSD-MS; CSD-PhD; SLPATH-CSD)

CSD 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

Independent study credits are taken without supervision by students who propose projects that complement their academic goals, and projects whose substance is not covered in the division's regular course offerings.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3000 - DISSERTATION RESEARCH PHD DEGREE

Minimum Credits: 1

Maximum Credits: 9

Students will formulate, design, propose, carry out, analyze, interpret, and write up an approved research project, under the direction of a dissertation committee, and in particular the chairperson.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3048 - INTRODUCTION TO PHD STUDIES

Minimum Credits: 3

Maximum Credits: 3

The seminar will focus on professional concerns such as the scientific method, research design and evaluation, effective scientific writing and presentation, funding sources, and the grant writing process. Among the options for a final product are a research proposal, or a publishable paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3049 - PH.D. SEMINAR IN AUDIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Audiology Ph.D. students will participate in this seminar series.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3060 - PHD PROSEMINAR

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD) or Audiology (AUD)

CSD 3479 - RESEARCH SEMINAR IN SPEECH AND LANGUAGE PATHOLOGY

Minimum Credits: 3

Maximum Credits: 3

Content varies across the spectrum of research issues in speech and language disorders. Each term has a special and specific focus. Students will review research literature and present and discuss specific topics of interest.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

CSD 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Students will explore theoretical or applied questions related to their area of interest by analyzing relevant literature under the direction of an appropriate faculty advisor.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

CSD 3971 - RESEARCH PRACTICUM FOR PHD STUDENTS

Minimum Credits: 1

Maximum Credits: 9

A prerequisite to CSD 3000; doctoral students are involved in research projects under the supervision of faculty members.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

Communication: Rhet & Comm

COMMRC 2000 - THESIS FOR MASTERS DEGREE

Minimum Credits: 1

Maximum Credits: 6

After successful completion of the master's level comprehensive examinations, students may elect to write a master's thesis.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

COMMRC 2014 - ARGUMENTATION

Minimum Credits: 3

Maximum Credits: 3

This course interrogates argument as a product, process, and method of inquiry, using a variety of theoretical approaches as points of departure, including pragma-dialectics, speech act theory, controversy studies, informal logic, visual communication, and forensics, as well as critical perspectives such as invitational rhetoric and feminist argumentation theory.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2201 - RHETORICAL CRITICISM

Minimum Credits: 3

Maximum Credits: 3

This course is focused on the history and practice of rhetorical criticism in America during the twentieth century. The student writes several in-depth criticisms of a significant message designed to influence belief and action.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2202 - HISTORICAL METHODS IN RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This course explores the various rhetorical functions that traditional histories of rhetoric serve and introduces students to recent theories of historiography and the rhetorics of historiography.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2212 - VISUAL RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar concentrates on scholarship concerning visual rhetoric and its various synonyms, primarily produced in the United States during the last few decades. Through classroom exercises, readings, and writings, graduate students will become familiar with various practices of message analysis and evaluation pertaining to pictorial persuasion. Seminar participants prepare and present original research concerning visual rhetoric, including the formulation of research questions, developing an appropriate literature review, and, ultimately, inventing sustained argumentation for a thesis concerning the rhetoric of pictorial works.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

COMMRC 2218 - CONTEMPORARY RHETORICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Study of selected theorists from roughly the last fifty years who explicitly thematize rhetoric or whose work helps to shape the intellectual landscape for thinking about rhetoric. Key theorists would include Kenneth Burke, Chaim Perelman, Michael McGee, Celeste Condit, Michel Foucault, Martha Nussbaum, Michael Billing, Richard Weaver, Jeanne Fahnestock, Thomas Farrell, Lloyd Bitzer, and Stephen Toulmin. Specific content will vary. Short response papers and one longer research paper required.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2220 - READINGS IN CRITICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Readings in critical theory concerns contemporary discourses about ideology, rhetoric, cultural institutions, power/ knowledge, desire and the subject. Each year a different area or topic is chosen.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2226 - MEDIA AND CULTURAL STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course traces the history and development of british cultural studies and the role it has played in redefining the study of media in Britain, the US, and Australia. The course examines cultural studies as both a methodology and a political stance by studying its theoretical struggles with Marxism, structuralism, semiotics, social science research, and ethnographic techniques.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2230 - COMMUNICATION RESEARCH 1

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce rhetoric and communication students to empirical research methods. Examined will be historical and philosophical contexts, observation, hypothesis formulation, hypothesis testing (research methods), and the rationales underlying statistical tests.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2296 - PROSEMINAR

Minimum Credits: 3

Maximum Credits: 3

Introduction to graduate study in communication. Required for all new graduate students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2297 - RESEARCH FORUM

Minimum Credits: 1

Maximum Credits: 1

Each week different faculty members discuss their research agendas and how they place their work in scholarly fields.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

COMMRC 2298 - RESEARCH COLLOQUIUM

Minimum Credits: 0

Maximum Credits: 0

The research colloquium provides a forum in which graduate students, faculty, and invited lecturers present research in progress.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: No Grade Required

COMMRC 2299 - RESEARCH COLLOQUIUM SEMINAR

Minimum Credits: 3

Maximum Credits: 3

The research colloquium provides a forum in which graduate students, faculty, and invited lecturers present research in progress with a Seminar component. Please see section course description.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2299 - RESEARCH COLLOQUIUM SEMINAR

Minimum Credits: 3

Maximum Credits: 3

The research colloquium provides a forum in which graduate students, faculty, and invited lecturers present research in progress with a Seminar component. Please see section course description.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2902 - DIRECTED STUDY FOR MA STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course, for individual instruction under a research faculty member, must be within an identifiable area of study in the fields of rhetoric and/or communication. Topics vary. May be taken only once. Open only to students yet to take ma comprehensive examinations.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

COMMRC 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

Independent study is taken without supervision by students who propose projects that complement their academic goals, and projects whose substance is not covered in the division's regular course offerings. Topics vary.

Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad SN Basis

COMMRC 3000 - DISSERTATION RESEARCH PHD DEGREE

Minimum Credits: 1

Maximum Credits: 12

The student will propose and design a research project and then carry out that project through research and writing. The project must be approved by a dissertation committee and executed under the direction of the chair of the committee.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

COMMRC 3001 - PROSPECTUS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Under individual guidance of a designated research faculty member, students design, propose, and execute a research and writing project related to their prospective dissertation topic. May be used for prospectus preparation.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

COMMRC 3002 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

Under individual guidance of a designated research faculty member, students design, propose, and execute a major professional development activity (e.g., Article, conference paper, or grant proposal) or related set of them, not necessarily related to their dissertation topic.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

COMMRC 3306 - SEM IN RHETORIC AND CULTURE

Minimum Credits: 3

Maximum Credits: 3

This course examines the role rhetoric plays in the formation of culture, reading some interdisciplinary texts (rhetorical, philosophical, historical, literary) which represent the intellectual elite of a specific time period. These texts will furnish us with an occasion to inquire into the ways in which intellectuals mobilize rhetoric to perpetuate or transform existing socio-political formations: the kinds of cultural self-understanding shaping their discourse and the kinds of spaces their discourse opens to their audiences. Topics vary.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3314 - SEMINAR IN PUBLIC ARGUMENT

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course dealing with specialized topics in the employment of argument in the public sphere. Textual analysis will serve as the primary mode of analysis for discussing the way policy issues are considered in the public realm.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3316 - SEMINAR ON RHETORIC OF SOCIAL MOVEMENTS

Minimum Credits: 3

Maximum Credits: 3

Social movements have been perennial subjects of rhetorical inquiry. What are social movements? How and why do movements form, grow, and dissipate? Can approaches to rhetorical inquiry traditionally reserved for the analysis of lone speakers and single texts shed useful light on the process through which movements attempt to persuade various audiences? This seminar considers the manner in which early social movement scholars in the field of rhetoric grappled with these and other controversial questions. After developing working knowledge of the rhetorical tradition of social movement scholarship, students will engage other theoretical viewpoints from fields such as sociology and political science to illuminate aspects of movement activity that may be less apparent from within the rhetorical horizon. Consideration of specific case studies will anchor such explorations, and the pedagogical approach guiding such study will privilege direct engagement with movement actors. The goals of the course are to provide students with a grasp on the tradition of social movement inquiry in the field of rhetoric, familiarize them with fruitful interdisciplinary perspectives on movement study, and stimulate reflexive awareness of their own status as agents in the field of social action.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3317 - SEMINAR IN RHETORICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3326 - SEMINAR IN MEDIA STUDIES

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to familiarize students with some of the core issues being debated within contemporary media studies. A number of theoretical perspectives will be incorporated, and topics will vary.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

COMMRC 3384 - TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course focuses on principles and methods for teaching public speaking. It covers such matters as syllabus design; diversity and inclusion in the classroom; lecture preparation and presentation; small and larger group discussions; speech assignments, evaluation and feedback; general classroom management; and techniques for referring troubled students to counseling; and surveys the instructional team approach to teaching large lecture courses and recitations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

COMMRC 3902 - DIRECTED STUDY FOR PHD STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course, for individual instruction under a research faculty member, must be within an identifiable area of study in the fields of rhetoric and/or communication. Topics vary. May be taken only twice. Open only to students yet to defend their Ph.D. comprehensive examinations.

Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

Community Dentistry

CDENT 2113 - DENTAL RESEARCH METHODOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

The focus of this course will be applied and, as such, students will be required to employ statistical software packages for the analysis of dentally relevant data files. Students will be encouraged to develop, collect, encode and analyze their own data sets. Particular emphasis will be placed on analysis of variance techniques involving repeated measures and factorial designs. The interpretation of computer printouts will be paramount. A very brief introduction to the concept of multivariate analysis will also be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CDENT 2114 - DENTAL RESEARCH METHODOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

Course familiarizes students with concepts and methods of research design and measurement in dental medicine. Various systems employed for classifying types of research are presented, including biological and behavioral science approaches. Particular emphasis will be placed on proper design of clinical trials, research paradigms, scientific writing, and methods that can be employed to control for sources of extraneous variance. As a result, students will understand how clinical research becomes a foundation for clinical practice, be able to critically review dental research literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CDENT 2183 - SCIENTIFIC WRITING

Minimum Credits: 1

Maximum Credits: 1

The component parts of the research paper will be presented and the differences between writing for the thesis or dissertation and a journal manuscript will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 2900 - INDEPENDENT STUDY

Minimum Credits: 2

Maximum Credits: 2

This course will provide the opportunity for dental residents to pursue the independent study of topics of interest in Dental Public Health.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

CDENT 5116 - EVIDENCE BASED DENTISTRY

Minimum Credits: 2

Maximum Credits: 2

In this course, students will be introduced to concepts of Evidence-Based Dentistry (EBD) as a foundation for developing high-quality evidence-based treatment decisions. The course presents quantitative thinking concepts (biostatistics) with an emphasis on developing the skills required to become an evidence-based practitioner (including critical thinking, asking clinical questions, searching for relevant evidence, assessing quality of

evidence, using evidence to assist in clinical decision-making). Students will have an opportunity for hands-on experience in searching online literature for evidence. Assessing evidence quality and its relation to clinical care will be addressed. This course includes small group practice (using Process Oriented Guided Inquiry Learning (POGIL) groups in most sessions), lectures, and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDEnt 5117 - PROFESSIONALISM IN DENTAL MEDICINE

Minimum Credits: 2

Maximum Credits: 2

In this course, students will be provided with foundational knowledge in professionalism, including ethical, legal, social and cultural factors in oral health and disease prevention. The goal of the course is to prepare students for clinical dental practice by introducing principles of ethics and professional behavior that are essential to providing the highest level of oral health care in a clinical setting and throughout a career in dentistry. Concepts that are introduced in this course will be reinforced and expanded upon in the Health Promotion and Disease Prevention course series, which is also offered in the first year predoctoral curriculum. This course includes lectures, small group discussions, in-class and homework assignments.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDEnt 5145 - HEALTH PROMOTION AND DISEASE PREVENTION 2

Minimum Credits: 2

Maximum Credits: 2

In this course, students will prepare for their first clinical experience in the Adolescent Clinic in the summer term. Students explore concepts in health promotion and disease prevention and behavioral principles related to clinical practice. Students continue to examine the nature of oral health and disease. All of these concepts are developed and reinforced through the use of readings, online and in-class exercises, pre-clinical and clinical assignments, and oral and written presentation of a case that requires integration of the concepts and effective demonstration of the skills as they apply to patient care. The goals of the course are to prepare the student for clinical dental practice by introducing important concepts and developing skills required for the provision of effective dental care; to introduce students to ethical and behavioral principles related to clinical practice; and to provide students with their first exposure to the nature of oral health and disease.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDEnt 5146 - CARIOLOGY

Minimum Credits: 1

Maximum Credits: 1

In this didactic course, students will be introduced to current concepts of the etiology, epidemiology, and clinical prevention and management strategies of dental caries. Students will be provided with actual clinical experience in diagnosing caries in subsequent courses. Successful completion of this course will provide students with the foundational knowledge for prevention and conservative management of caries appropriate for the general dental practitioner. The course includes lecture and small group Process Oriented Guided Inquiry Learning (POGIL) activities aimed at providing an in-depth understanding of the disease of dental caries. Several guest lectures are planned. Rationale: Caries is the most prevalent disease of children and one of the most prevalent diseases at all ages. The majority of dentists spend the majority of their patient contact time addressing caries-associated problems. Having an in-depth understanding of caries etiology, prevention, and management strategies is the foundation for ethical and appropriate patient care. This course provides for a contemporary understanding of these issues and reflects currently updated approaches to caries prevention and management (such as those now being disseminated under the title of: The International Caries Classification and Management System).

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF with +/- Values

CDEnt 5173 - HEALTH PROMOTION AND DISEASE PREVENTION 3

Minimum Credits: 1.5

Maximum Credits: 1.5

In this course, students will work with peers, adolescent and/or young adult patients in a clinical setting where they will focus on developing practical skills related to risk assessment, oral disease prevention, and health promotion. This course is the capstone experience of the first year of the dental curriculum, preparing students to enter the second year by applying the foundational skills acquired in health promotion and disease prevention. This course includes a variety of activities and assignments such as lectures, in-class discussions, journaling, providing clinical care as doctor and assistant, clinical record management, quizzes, readings, and self-evaluation of clinical communication. The goals of the course are to prepare students for clinical dental practice by applying important concepts and developing skills required for the provision of effective dental care; to introduce students to ethical and behavioral principles related to clinical practice; and to provide students with their first exposure to the nature of oral health and disease in patients.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDENT 5174 - STUDENT COMMUNITY OUTREACH PROGRAM AND EDUCATION 1: COMMUNITY OUTREACH

Minimum Credits: 1.5

Maximum Credits: 1.5

Mission statement: To increase the workforce of dental professionals who treat underserved and at-risk patients by creating a learning environment in the School of Dental Medicine where students are able to expand their personal and professional insights and gain experience by working in a variety of cultural and community settings. The SCOPE program is designed to help cultivate health care professionals who are caring, socially responsible and capable of behaving as patient advocates in all practice environments. The SCOPE service-learning model helps to enable 1) development of relationships and interactions with others, 2) the defining of community, and 3) the maintenance of a balance between personal and professional life. It also aims at developing student cultural competence, communication skills, and enabling a sense of "giving back" to the community as a crucial part of professional development. Course goals include the following: creating an atmosphere of community-minded oral-health professionals; creating more empathic, personally committed dentists; and improving the willingness of students to treat underserved and at-risk patients.

Academic Career: Dental Medicine

Grade Component: ABCF

CDENT 5272 - STUDENT COMMUNITY OUTREACH PROGRAM AND EDUCATION (SCOPE) 1: COMMUNITY OUTREACH

Minimum Credits: 3
Maximum Credits: 3

The SCOPE community service program is designed to help cultivate health care professionals who are caring, socially responsible and capable of behaving as patient advocates in all practice environments. The SCOPE I service-learning model helps to enable 1) development of relationships and interactions with others, 2) the defining of community, and 3) the maintenance of a balance between personal and professional life. It also aims at developing student cultural competence, communication skills, and enabling a sense of giving back to the community as a crucial part of professional development. Course goals include the following: creating an atmosphere of community-minded oral-health professionals; creating more empathic, personally committed dentists; and improving the willingness of students to treat underserved and at-risk patients.

Academic Career: Dental Medicine
Course Component: Seminar
Grade Component: Grad HSU Basis

CDENT 5274 - SCOPE 2: COMMUNITY OUTREACH

Minimum Credits: 1.5
Maximum Credits: 1.5

The course is a continuation of activities started in SCOPE 1 of the first year. Mission statement: To increase the workforce of dental professionals who treat underserved and at-risk patients by creating a learning environment in the School of Dental Medicine where students expand their personal and professional insights and gain experience by working in a variety of cultural and community settings. The SCOPE program is designed to help cultivate health care professionals who are caring, socially responsible and capable of behaving as patient advocates in all practice environments. The SCOPE service-learning model helps to enable 1) development of relationships and interactions with others, 2) the defining of community, and 3) the maintenance of a balance between personal and professional life. It also aims at developing student cultural competence, communication skills, and enabling a sense of "giving back" to the community as a crucial part of professional development. Course goals include the following: creating an atmosphere of community-minded oral-health professionals; creating more empathic, personally committed dentists; and improving the willingness of students to treat underserved and at-risk patients. The mission and goals also reflect the fostering and development of some of the fifteen core skills identified by Community-Campus Partnerships for Health. These skills are considered minimally necessary for health professionals to effectively meet the needs of the public and include the following*: caring for the community's health; promoting healthy lifestyles; participating in racially and culturally diverse society; understanding the role of the physical environment; involving patients and families in the decision-making process; continuing to learn; improving the health care system; and developing cultural competence.

CDENT 5282 - CLINICAL APPLICATION OF PROBLEM-SOLVING SKILLS

Minimum Credits: 1

Maximum Credits: 1

This course is designed to support the continued development of evidence-based and critical thinking skills applied to clinical decision-making. The course is designed for 2nd year predoctoral students and supports the theme for the year (diagnosis and treatment planning) by guiding students in the process of applying evidence to support clinical decisions. The course will build and reinforce student understanding of the basic principles of clinical and translational research (i.e., how such research is conducted, critically evaluated, applied to clinical practice, disseminated and shared with patients). The course is taught as a Process Oriented Guided Inquiry Learning (POGIL) series. (POGIL is a student-centered strategy with students working in small groups with individual roles to ensure that all students are engaged in the process.) The course is designed to repeat and build upon information and skills developed from the Evidence Based Dentistry Course and the Oral Diagnosis and Treatment Planning Course. Information acquired during Oral Pathology, Oral Histology and Head and Neck Anatomy may be applied (repeated) during class. The goals of the course are to prepare students for clinical dental practice by further developing their ability to identify clinical problems and plan for clinical care; to provide students an opportunity to further develop skills for the practice of evidence based dentistry; practice intellectual breadth by thinking with an open mind, recognizing and evaluation assumptions, implications, and consequences; and to develop the ability to communicate professionally and work as a team member.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDENT 5342 - INTRODUCTION TO BEHAVIORAL DENTISTRY

Minimum Credits: 1

Maximum Credits: 1

Introduction to behavioral dentistry is designed to guide students in increasing awareness of the behavioral component of oral health care, increasing commitment to the biopsychosocial model, and strengthening the behavioral skills necessary to provide oral health care.

CDENT 5411 - STUDENT COMMUNITY OUTREACH PROGRAM AND EDUCATION (SCOPE) 2 (FALL)

Minimum Credits: 1.5

Maximum Credits: 1.5

Mission statement: To increase the workforce of dental professionals who treat under-served and at-risk patients by creating a learning environment in the School of Dental Medicine where students are able to expand their personal and professional insights and gain experience by working in a variety of cultural and community settings. SCOPE 2 is an experiential process whereby students are able to shape and develop their clinical skills by providing clinical dentistry to patients in Federally Qualified Health Centers (FQHCs) and non-profit clinics throughout western Pennsylvania and parts of Ohio. The selected extramural clinics provide opportunities to work with patients in under-served communities, where both professional and personal growth are enabled, along with the development of other culturally competent skills.

CDENT 5440 - STUDENT COMMUNITY OUTREACH AND EDUCATION PROGRAM (SCOPE) 2

Minimum Credits: 3

Maximum Credits: 3

This course is required by all third and fourth-year dental students and is structured to 1) foster civic and social responsibility; 2) foster a sense of caring for others; 3) focus on family and patient-centered care; and 4) identify community needs and provide care to these populations. Each participant must participate in five days (40 hours) of clinical dentistry at a School affiliated community facility, maintain a reflective journal regarding their community clinical experience, attend community health forums presented by the SOM and public health seminars given by either the SDM's department of community dentistry, or public health-related seminars given by other members of the schools of the health professions.

CDENT 5811 - HEALTH LAW CLINIC IPE SELECTIVE

Minimum Credits: 1.5

Maximum Credits: 1.5

The overall goal of this selective is to provide students with an interesting and relevant interprofessional experience that explores the legal aspects of health care. Nursing, medical and law students, and now dental students, read and discuss the impact of law, ethics, and policy on social determinants of health and design a project to address an identified area of concern. This course is designed to reinforce dental students' knowledge of social determinants of health, relevant dental law, and professional ethics. The interprofessional experience will help students further develop their professional identity as a member of the interprofessional health care team. Students may also realize their professional responsibilities in regards to development of health care policy and implications on addressing population-level oral health disparities.

CDENT 5916 - CONTEMPORARY ISSUES IN DENTAL PUBLIC HEALTH

Minimum Credits: 2
Maximum Credits: 2

This course is for students wishing to expand their knowledge of the current issues in dental public health. Students will be given directed reading assignments and will search the literature for information on current and controversial topics in dentistry so that group discussions, debates and presentations may successfully be done in class. Topics covered may include: new oral health care delivery and management models, prevention and primary care systems, and dental health services research. Emphasis on evidence-based methodology is highlighted.

Academic Career: Dental Medicine
Course Component: Seminar
Grade Component: Grad HSU Basis

CDENT 5930 - OVERVIEW AND PRACTICE OF DENTAL PUBLIC HEALTH

Minimum Credits: 1

Maximum Credits: 1

This selective course will be available for second, third, and fourth year students. The course material will cover common primary preventive interventions and its incorporation at a community level such as fluoridation, school-based programs, health promotion, sealant programs, health policy initiatives, etc. It will also include discussion on an interdisciplinary approach to community level preventive practices. Finally, the course will also discuss the role of dental public health outside traditional dental practice - such as in federal and national health organizations, as well as underserved areas.

CDENT 5932 - INTERSECTION OF PUBLIC HEALTH AND CAREER GOALS

Minimum Credits: 0.5

Maximum Credits: 0.5

To help facilitate the student's ability to assess personal career goals and public health advocacy positions while concentrating on the oral health needs of the community in which they choose to establish their dental practice. Importantly, the student will be able to reflect on appropriate solutions relative to the specific community needs and prepare them for their role as a health care provider. Also, through participation in this program, the student will further recognize the multi-/inter-disciplinary nature of public health policies within the community and the need to establish partnerships with other health care providers.

CDENT 5973 - BIOSTATISTICS, HUMAN GENETICS, AND PUBLIC HEALTH FOR ORAL HEALTH PRACTITIONERS

Minimum Credits: 0.5

Maximum Credits: 0.5

This course will reinforce biostatistical, epidemiological, and public health principles and provide tools for proper analysis of research and journal manuscripts. Students will learn to better apply fundamental biostatistical principles used to critically evaluate evidence in medical/dental decision-making. Within the genetic epidemiology section of the course, there will be an emphasis on balancing genetic and familial studies with traditional epidemiology, biostatistical information, and public health outcomes. Content will also address the importance of ethically increasing diversity in genetic epi studies to achieve more equitable outcomes.

Academic Career: Dental Medicine

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Community Org and Soc Admin

SWCOSA 2040 - GRANT PROPOSAL WRITING

Minimum Credits: 3

Maximum Credits: 3

Provides students with some insight into the operation of several primary sources of funds for social welfare programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: (SWCOSA 2084 or 2088) (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2052 - SOCIAL ENTREPRENEURSHIP

Minimum Credits: 3

Maximum Credits: 3

Social Entrepreneurship is an elective course in the Community Organization and Social Action (COSA) specialization. Social entrepreneurship infuses models of sustainable business and management practice in social work education and practice. This course is designed to immerse students in the fundamental theoretical and applied social enterprise development process and to equip students with the mindset, tools and techniques to apply the tools of business to address pressing social problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

SWCOSA 2054 - LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

This course examines theories about leadership and provides students with feedback on their own leadership styles. Leadership skills are defined and applied. Teams, as one context for demonstrating leadership, are explored in depth and methods for recognizing and managing group dynamics are introduced. The course combines theory with practical application. It is highly participative and students are expected to join in a wide range of exercises and simulations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2084 - HUMAN SERVICE ORGANIZATION MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course seeks to train professionals to develop, manage, and lead community and human service organizations that address human service needs and revitalize communities. This course will address the social work leadership and management competencies as defined by the Network of Social Work Management, which include: (1) social and public policy context; (2) advocacy; (3) public/community relations and marketing; (4) governance; (5) planning; (6) program development and management; (7) financial development and management; (8) program and organizational evaluation; (9) human resource management and (10) staff development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWGEN 2034 and SWWEL 2081 and SWGEN 2098; CREQ: SWRES 2021; SBPLAN: COSA (Social Work-MS)

SWCOSA 2086 - HUMAN RESOURCE/SUPERVISION AND FINANCIAL MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This skill elective focuses upon the techniques, processes, methods and resources employed by supervisors, managers and other administrators to assure the highest quality social services are delivered in the most effective manner. Historical roots and trends; organizational and administrative theories; and research findings and conclusion provide the foundation for examining current supervisory and personnel management practices and financial management. Practical applications are included to enhance competency-based for mid-level human service management learning in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088; Minimum grade of B-

SWCOSA 2087 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

Given the changing nature of social work practice, the MSW program occasionally offers courses in new and/or unique content areas. When offered, this course is designed to provide skill and knowledge content not covered in other community organization and social administration skill courses

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Social Work students only.

SWCOSA 2088 - COMMUNITY ORGANIZING AND PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course seeks to train professionals to develop, manage and lead community service organizations that address human service needs and revitalize communities. This course will provide a framework of systems, power, and inter-organizational network theories, and will define communities in terms of issues, identity and place. Social work values of social and economic justice, participation, democratic practices, social inclusion, empowerment and capacity building will serve as a foundation for this course. This course will explore models of community organizing, including: locality development, social planning and social action, as well as transformative, participatory, feminist, community building and power-based models. Students will examine consensus, campaign, and contests strategies and tactics relative to these models and the techniques for recruiting and mobilizing citizens and constituencies to address social issues and build on local assets. In addition, students will learn: 1) frameworks and tools for assessment, analysis and planning; 2) development of human, social, and economic capital; 3) community capacity building for leadership, organizational, and partnership development; 4) settings of community practice, including unions, environmental, community and faith-

based organizations, community development corporations, collaborations and coalitions, enabling and intermediary organizations, and policy and social action groups; 5) roles and skills in community organizing; 6) concepts and issues related to urban communities, including racism, poverty, neighborhood/commercial revitalization, workforce development, housing, and crime. Students will produce a major field project to demonstrate community assessment, analysis and action planning competencies and frameworks learned in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWGEN 2098 and SWBEH 2063 and SWGEN 2098; CREQ: SWRES 2021; SBPLAN: COSA (Social Work-MS)

SWCOSA 2090 - WORKING WITH GROUP AND INTERGROUP RELATIONS: FACILITATION/NEGOTIATION/MEDIATION

Minimum Credits: 3

Maximum Credits: 3

Organizers and administrators must be able to work with a range of group processes and interpersonal relationships in community and organizational practice. This course focuses on enhancing student knowledge and skills of group dynamics and processes, as well as the individual relationship management that can be challenging for macro practice. It will also provide a social work values and ethical context for practicing these skills. Three over-arching skill areas will comprise the knowledge and practice base of this modular course: 1) facilitation of task group processes of all types and sizes, 2) negotiating and bargaining, 3) mediation, including conflict mediation and resolution.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2096 - COMMUNITY PLANNING AND DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to a community participation approach to local economic development carried out by a nonprofit organization. It would focus on the practical steps for putting together nonprofit housing developments and commercial and industrial business enterprises under participation conditions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2097 - DIRECTED STUDY - COSA

Minimum Credits: 1

Maximum Credits: 3

This course is designed for those students who are interested in exploring a specific administration and/or policy issue of their choice. The course is appropriate for students with a new and developing interest area or for the student prepared to do advanced work. The course assumes the student's capacity for independent work under the guidance of a faculty member with extensive knowledge and experience in the subject area.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

SWCOSA 2099 - FIELD WORK

Minimum Credits: 1

Maximum Credits: 8

The field practicum emphasizes the integration and application of social work values, knowledge and skills in practice settings. Placements are in community service delivery systems and are individualized to combine the student's choice of concentration area, certification program and specialized skill interest.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: PREQ: SWGEN 2099; SBPLAN: COSA (Social Work-MSW)

Computational Biomedicine and Biotechnology

COBB 2010 - FOUNDATIONS OF COMPUTATIONAL BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to the essential concepts, tools and techniques of modern computational biology, with real-world examples. It covers mathematical concepts, such as linear algebra, differential equations, and statistics, that are central to modeling biological systems. Students will learn the basic theory behind widely-used techniques like automated clustering, parameter estimation, sampling, and numerical integration. Project-based assignments in R and Python center around real-world computational biology problems from genomics, structural biology, and systems modeling. Prerequisites: Although there are no official prerequisites, it is highly recommended that students wishing to enroll in this course have an understanding of differential calculus and at least one semester of programming. This course is open to graduate students and upper-level undergraduates.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COBB 2020 - SYSTEMS BIOLOGY 1

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to genomic data and basic analytical principles pertaining them. Students will learn about high-throughput sequencing methods and applications, genomic variation, transcriptomics and epigenomic data. At the end of the course, the students will be able to analyze efficiently these types of data sets using existing algorithms or algorithms they will develop.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COBB 2025 - INTRODUCTION TO BIOINFORMATICS PROGRAMMING IN PYTHON

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to a selection of popular python packages used in bioinformatics and computational and systems biology. Students will be graded on programming assignments. Each assignment will explore a different sub-discipline of computational biology and introduce students to a new python package. Optional recitations will be available for students with programming and will assist in the development of basic programming skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COBB 2030 - COMPUTATIONAL STRUCTURAL BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

Topics covered include: applying computational and statistical methods to the analysis of DNA and protein structures representing protein, DNA and RNA structure; homology modeling and protein structure prediction; theoretical description of basic interactions, along with computational methods to estimate them; statistical mechanical theory of molecules; molecular dynamics and other sampling methods; modeling protein flexibility, from side chains to loops to slow modes; reaction paths and basics of path sampling; protein-protein and protein-small molecule docking; supramolecular assembly; introduction to Quantitative Structure Activity Relationship (QSAR) in drug design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COBB 2041 - CELLULAR AND SYSTEMS MODELING

Minimum Credits: 4

Maximum Credits: 4

A graduate-level introduction into mathematical modeling and analysis of biological systems on the cellular and other levels. This condensed and broad course conveys the unity of the modeling methodology in biology. It spans a range of perspectives derived from the different disciplines from which this new area of research originated: biology, mathematics, engineering, and computer science. The systems covered include quantitative physiology, quantitative cell biology, biological networks, dynamic systems, cell mechanics, and systems modeling of critical illness. The quantitative physiology topics to be covered include hemodynamics, musculoskeletal systems, endocrinology, neuroendocrinology, gastrointestinal/renal, transport phenomena, and pathophysiological conditions. Quantitative cell biology topics surveyed are mathematical models of the cytoskeleton dynamics, intracellular transport, cell locomotion, spatially-distributed models of cell signaling, approaches to whole-cell modeling, and role of modeling in cell-biological research. Models of cellular mechanics will also be addressed. Mathematics of dynamic systems is presented in application to enzyme reactions, bistability in cellular signaling, programmed cell death, and the mechanisms behind the circadian and cell-division rhythms. Biological network theory is presented as it applies to metabolism, protein interactions, regulation of gene expression, and reverse engineering of the biological systems. Theoretical aspects of application of systems modeling to clinical research are also presented on an example of quantitative systems approach to inflammation, sepsis, and trauma. In addition, the course will survey computational methods and models that are broadly useful across the various system types examined. These will include random walk models, master equations, and continuous and discrete models of chemistry within the cell. Finally, the course will include a presentation of general discrete and continuous models broadly useful in cell and systems modeling as well as computational methods for optimization and parameter tuning on such models. Across the entire range of topics, the universality of the systems modeling methodology and its role in biomedical research are emphasized.

Grade Component: Grad Letter Grade

COBB 2066 - SCALABLE MACHINE LEARNING FOR BIG DATA BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

Machine learning (ML) has become an integral part of computational thinking in the era of big data biology. This course will focus on understanding the statistical structure of largescale biological data sets using ML algorithms. We will cover the basics of ML and study their scalable versions for implementation on a distributed computing framework. We will pursue distributed ML algorithms for: matrix factorization, convex optimization, dimensionality reduction, clustering, classification, graph analytics and deep learning, among others. The course will be project driven (3 to 4 mini projects) with source material from genomic sciences, structural biology, drug discovery, systems modeling and biological imaging. There will be one final project, along with a presentation. Students will be expected to design, implement and test their ML solutions in Apache Spark.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

COBB 2070 - COMPUTATIONAL GENOMICS

Minimum Credits: 3

Maximum Credits: 3

Dramatic advances in experimental technology and computational analysis are fundamentally transforming the basic nature and goal of biological research. The emergence of new frontiers in biology, such as evolutionary genomics and systems biology is demanding new methodologies that can confront quantitative issues of substantial computational and mathematical sophistication. This course introduces classical approaches and the latest methodological advances in the context of the following biological problems: 1) Computational genomics, focusing on gene finding, motifs detection

and sequence evolution. 2) Analysis of high throughput biological data, such as gene expression data, focusing on issues ranging from data acquisition to pattern recognition and classification. 3) Molecular and regulatory evolution, focusing on phylogenetic inference and regulatory network evolution, and 4) Systems biology, concerning how to combine sequence, expression and other biological data sources to infer the structure and function of different systems in the cell. From the computational side this course focuses on modern machine learning methodologies for computational problems in molecular biology and genetics, including probabilistic modeling, inference and learning algorithms, pattern recognition, data integration, time series analysis, active learning, etc.

COBB 2080 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 4

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in computational biology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

COBB 2085 - COBB INTERNSHIP

Minimum Credits: 1

Maximum Credits: 4

To gain experience in the professional application of computational biology, students are required to participate in a 2-to 3-month internship at a company of their choice. Acceptable internship sites include industrial labs, biotech/pharma companies, and governmental organizations. It is the student's responsibility to contact the company and secure the internship. Students wishing to perform the internship in a semester other than summer may petition the Executive Committee for an exception, but must still complete all required coursework. Students who are unable to secure internships may be permitted to substitute additional Independent Study research credit to fulfill the internship requirement, upon approval by the Executive Committee. Upon completion of the internship, each student will submit a written report summarizing the experience and the skills acquired. Students will additionally make an oral presentation to share their experience with others. Supervisors at the internship sites will be asked to provide a written evaluation of the students' performance.

Academic Career: Graduate

COBB 2100 - CURRENT TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Students in this course will attend weekly seminars by internationally recognized researchers, and they will provide critical analyses of the talks.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

COBB 2110 - COBB FACULTY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students in this course will attend weekly seminars by CoBB Faculty. The goal of the course is to introduce our students to our faculty's research through weekly faculty talks.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

COBB 2150 - COMPUTATIONAL DRUG DISCOVERY

Minimum Credits: 4

Maximum Credits: 4

This course introduces students to the essential methods of computational drug discovery, from structural analysis of small molecules, to molecular dynamics simulations, to systems pharmacology. Students will learn to use software for accessing, viewing, and comparing small molecule structures. They will gain experience with molecular dynamics simulations, small molecule docking, virtual screening and pharmacophore modeling. Students will additionally learn how pathway inference and reaction network modeling are used in quantitative systems pharmacology (QSP). Basic programming proficiency (e.g., in Python) is required.

Academic Career: Graduate

Computational Biology

CMPBIO 2010 - SEMINAR IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Seminar series of the joint Pitt-CMU Ph.D. program in computational biology. Nationally and internationally recognized researchers in the field of computational biology present scientific findings. Students meet informally with each speaker to discuss key areas of computational biology, including: computational structural biology, computational genomics, cellular and systems modeling, bio image informatics, and computational neurobiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CMPBIO 2015 - COMPUTATIONAL IMAGING FOR SPATIAL SYSTEMS BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The recent explosion of next-generation, high-content, high-throughput spatial imaging technologies for intact tissues measuring protein expressions, DNA and RNA probes for investigating systems biology challenges has attracted the interest of NIH and other international agencies in funding precision medicine efforts, including Human Tumor Atlas Network (HTAN), Immuno-Oncology Translation Network (IOTN), Human BioMolecular Atlas Program (HuBMAP), Human Cell Atlas (HCA) and Human Protein Atlas (HPA). In this course, we will study these spatial imaging technologies in greater depth, from low-resolution, spatially barcoded approaches for spatial transcriptomics to high-resolution in situ approaches for imaging proteins, DNA and RNA (CODEX, MIBI, IMC-CyTOF, Seq-FISH, MERFISH) expressions. We will focus on several key aspects of these technologies requiring evaluation and benchmarking in the context of spatial approaches: validation of reagents; comparison to gold-standard methods; comparison between related techniques; and relation to analyses on dissociated cells. We will discuss the technologies in terms of: tissue preparation and reagent validation, imaging development and optimization, and computational inference to allow for high-resolution systems biology analysis of large tissues sections. We will include experimental hands-on lectures using in-house hyperplexed immunofluorescence imaging apparatus. Prerequisites: No biological background is expected. The assignments will cover the necessary biology. Experience in programming and some software engineering is preferred. Knowledge of probability, statistics, linear algebra and algorithms will be useful. Prior introduction to machine learning and imaging is a bonus. Strong interest in cancer imaging informatics is a plus. The class is open to senior year undergraduates and

graduate students.

CMPBIO 2050 - LABORATORY METHODS FOR COMPUTATIONAL BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Computational biologists frequently focus on analyzing and modeling large amounts of biological data, often from high-throughput assays or diverse sources. It is therefore critical that students training in computational biology be familiar with the paradigms and methods of experimentation and measurement that lead to the production of these data. This one-semester laboratory course gives students a deeper appreciation of the principles and challenges of biological experimentation. Students learn a range of topics, including experimental design, structural biology, next generation sequencing, genomics, proteomics, bio imaging, and high-content screening. Class sessions are primarily devoted to designing and performing

experiments in the lab using the above techniques. Students are required to keep a detailed laboratory notebook of their experiments and summarize their resulting data in written abstracts and oral presentations given in class-hosted lab meetings. With an emphasis on the basics of experimentation and broad views of multiple cutting-edge and high-throughput techniques, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have and are looking for introductory training in more advanced approaches. Touches upon a range of topics, including structural biology, genomics, proteomics, and bio imaging a different laboratory method is covered each week, in the lab of a host faculty member who uses that method. The theory and practical aspects of each method are covered during a lecture session prior to each lab session. Students are required to submit a short lab report each week, summarizing the goals of the experiment, the critical steps and sources of error, and the analysis of the resulting data. With an emphasis on instrumentation and high-throughput data collection, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have.

CMPBIO 2060 - CURRENT TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course will offer an overview of faculty research in computational biology, a field of tremendous growth and excitement. It will also offer a sampling of current literature in this field, as well as an opportunity for students to develop and practice their presentation skills. The course will meet once a week, and will follow a seminar-style format, with a PowerPoint presentation, followed by a question-and-answer session. To familiarize students with alternative presentation formats, and to allow for more flexibility, the course may also include one or more webinar/teleconference sessions. Throughout the semester, students will take turns serving as introducer, presenter, and moderator of question-and-answer sessions. The topics covered in this course will be in line with the five specialization areas of the joint CMU-Pitt Ph.D. program in computational biology: computational genomics, computational, structural biology, cellular and systems modeling, bio image informatics, and computational neurobiology. The initial meeting will feature an icebreaker exercise and a refresher on professional presentation skills.

CMPBIO 2066 - SCALABLE MACHINE LEARNING FOR BIG DATA BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

High-throughput techniques are revolutionizing biomedical research. From whole genome sequencing, to RNA-Seq transcriptome profiling, to high-throughput mass spectrometry for protein profiling, to high-throughput biochemical screening, to flow cytometry for cell profiling, to high-content screening, to literature analysis and electronic medical records, from molecule to patient, modern techniques generate vast quantities of data. In order to be effective, biomedical researchers require the appropriate computational tools to correctly interpret and utilize this data. As machine learning is the science of finding and applying patterns in data, it is an essential tool for turning data into knowledge and actionable insights and has been rising in prominence in biomedical research. This course will focus on the practical aspects of effectively applying state-of-the-art machine learning methods at scale to large, biomedically relevant datasets. Topics covered include traditional machine learning algorithms, distributed machine learning, cloud and distributed computing, and deep learning. A strong programming and mathematical background is required.

CMPBIO 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

Students are required to keep a detailed laboratory notebook of their experiments and summarize their resulting data in written abstracts and oral presentations given in class-hosted lab meetings. With an emphasis on the basics of experimentation and broad views of multiple cutting-edge and high-throughput techniques, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have and are looking for introductory training in more advanced approaches. Touches upon a range of topics, including structural biology, genomics, proteomics, and bio imaging a different laboratory method is covered each week, in the lab of a host faculty member who uses that method. The theory and practical aspects of each method are covered during a lecture session prior to each lab session. Students are required to submit a short lab report each week, summarizing the goals of the experiment, the critical steps and sources of error, and the analysis of the resulting data. With an emphasis on instrumentation and high-throughput data collection, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have.

MSCBIO 2060 - CURRENT TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course will offer an overview of faculty research in computational biology, a field of tremendous growth and excitement. It will also offer a sampling of current literature in this field, as well as an opportunity for students to develop and practice their presentation skills. The course will meet once a week, and will follow a seminar-style format, with a PowerPoint presentation, followed by a question-and-answer session. To familiarize students with alternative presentation formats, and to allow for more flexibility, the course may also include one or more webinar/teleconference sessions. Throughout the semester, students will take turns serving as introducer, presenter, and moderator of question-and-answer sessions. The topics covered in this course will be in line with the five specialization areas of the joint CMU-Pitt Ph.D. program in computational biology: computational genomics, computational, structural biology, cellular and systems modeling, bio image informatics, and computational neurobiology. The initial meeting will feature an icebreaker exercise and a refresher on professional presentation skills.

Academic Career: Graduate

Grade Component: Grad Letter Grade

MSCBIO 2065 - SCALABLE MACHINE LEARNING FOR BIG DATA BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Machine learning(ML) has become an integral part of computational thinking in the era of big data biology. This course will focus on understanding the statistical structure of largescale biological data sets using ML algorithms. We will cover the basics of ML and study their scalable versions for implementation on a distributed computing framework. We will pursue distributed ML algorithms for: matrix factorization, convex optimization, dimensionality reduction, clustering, classification, graph analytics and deep learning, among others. The course will be project driven (3 to 4 mini projects) with source material from genomic sciences, structural biology, drug discovery, systems modeling and biological imaging. There will be one final project, along with a presentation. Students will be expected to design, implement and test their ML solutions in Apache Spark.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBIO 2066 - SCALABLE MACHINE LEARNING FOR BIG DATA BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

High-throughput techniques are revolutionizing biomedical research. From whole genome sequencing, to RNA-Seq transcriptome profiling, to high-throughput mass spectrometry for protein profiling, to high-throughput biochemical screening, to flow cytometry for cell profiling, to high-content screening, to literature analysis and electronic medical records, from molecule to patient, modern techniques generate vast quantities of data. In order to be effective, biomedical researchers require the appropriate computational tools to correctly interpret and utilize this data. As machine learning is the science of finding and applying patterns in data, it is an essential tool for turning data into knowledge and actionable insights and has been rising in prominence in biomedical research. This course will focus on the practical aspects of effectively applying state-of-the-art machine learning methods at scale to large, biomedically relevant datasets. Topics covered include traditional machine learning algorithms, distributed machine

learning, cloud and distributed computing, and deep learning. A strong programming and mathematical background is required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBIO 2070 - COMPUTATIONAL GENOMICS

Minimum Credits: 3

Maximum Credits: 3

Dramatic advances in experimental technology and computational analysis are fundamentally transforming the basic nature and goal of biological research. The emergence of new frontiers in biology, such as evolutionary genomics and systems biology is demanding new methodologies that can confront quantitative issues of substantial computational and mathematical sophistication. In this course we will discuss classical approaches and latest methodological advances in the context of the following biological problems: 1) computational genomics, focusing on gene finding, motifs detection and sequence evolution. 2) Medical and populational genetics, focusing on polymorphism analysis, linkage analysis, pedigree and genetic demography, 3) analysis of high throughput biological data, such as gene expression data, focusing on issues ranging from data acquisition to pattern recognition and classification. 4) Molecular and regulatory evolution, focusing on phylogenetic inference and regulatory network evolution, and 5) systems biology, concerning how to combine sequence, expression and other biological data sources to infer the structure and function of different systems in the cell. From the computational side this course focuses on modern machine learning methodologies for computational problems in molecular biology and genetics, including probabilistic modeling, inference and learning algorithms, pattern recognition, data integration, time series analysis, active learning, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBIO 2074 - EVOLUTIONARY BIOLOGY OF HUMAN DISEASE

Minimum Credits: 3

Maximum Credits: 3

Evolution is a fundamental unifying principle of biology. This class takes a broad approach to illustrate how an evolutionary perspective augments medical research and practice. Topics covered range from the evolution of human populations, to antibiotic resistance, and include medical conditions as diverse as diabetes, cardiovascular disease, cancer or aging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBIO 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBIO 2080 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in computational biology.

Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad SN Basis

MSCBIO 2085 - COMPUTATIONAL BIOLOGY INTERNSHIP

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

MSCBIO 2090 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a thesis for a master's degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

MSCBIO 2370 - DRUG DISCOVERY

Minimum Credits: 3
Maximum Credits: 3
Drug discovery is an interdisciplinary science that seeks to identify small molecular and/or biologic probes and to understand at the molecular level how these probes affect macromolecular processes. This course will discuss various topics that are relevant to current approaches and principles in drug discovery including target validation, drug origins, cell based screening, high throughput screening, proteomic approaches to drug discovery, computational biological aspects of drug discovery, and pharmacoinformatics, as well as topics in preclinical drug development and intellectual property. The course will include case studies intended to aid students in a full understanding of the drug discovery process.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MSCBIO 3090 - PHD DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 14
After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation.
Academic Career: Graduate
Course Component: Thesis Research

COEA 3893 - GRADUATE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

A weekly series of presentations by engineers and scientists, visiting researchers, faculty, and graduate students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: PLAN: Computer Engineering (MS or PHD)

Computer Science

CS 0401 - INTERMEDIATE PROGRAMMING USING JAVA

Minimum Credits: 4

Maximum Credits: 4

This course is a rigorous introduction to the fundamental concepts and techniques of computer programming using the java programming language. This is a first course for students who intend to major in computer science.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

CS 0441 - DISCRETE STRUCTURES FOR CS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to understand and use (abstract) discrete structures that are backbones of computer science. In particular, this class is meant to introduce logic, proofs, sets, relations, functions, counting, and probability, with an emphasis on applications in computer science.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: MATH 0220 or 0230 or 0235

CS 0445 - DATA STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

This course emphasizes the study of the basic data structures of computer science (stacks, queues, trees, lists) and their implementations using the java language included in this study are programming techniques which use recursion, reference variables, and dynamic memory allocation. Students in this course are also introduced to various searching and sorting methods and also expected to develop an intuitive understanding of the complexity of these algorithms.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 0401 (MIN GRADE 'C')

CS 0447 - COMPUTER ORGANIZATION AND ASSEMBLY LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to study the components of computing systems common to most computer architectures. In particular, this class is meant to introduce data representation, types of processors, memory types and hierarchy, and device drivers. The students will learn MIPS assembly language, the design of arithmetic and logic units, and basic designs for RISC processors.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: CS 0445

CS 1510 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods and strategies that are useful for the design of nonnumeric algorithms. Students are expected to design their own algorithms.

Academic Career: UGRD

Course Component: Lecture

Grade Component: LG/SNC

Course Requirements: PREQ: [(CS 1501 or COE 1501) and CS 1502] or (CS 0458 and CS 1710); MIN GRADE 'C' FOR ALL COURSES LISTED

CS 1511 - INTRODUCTION TO THEORY OF COMPUTATION

Minimum Credits: 3

Maximum Credits: 3

Understanding the theory of computation provides deeper insights into various topics in computer science. This is an introductory level theory course. The aim of this course is to study the power (or lack of it) of various models of computation. Topics to be covered include: automata, formal languages, computability, and computational complexity.

Academic Career: UGRD

Course Component: Lecture

Grade Component: LG/SNC

Course Requirements: PREQ: CS 1502 or 1710; (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 1520 - PROGRAMMING LANGUAGE FOR WEB APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

Various programming paradigms will be studied using java and scripting languages. The use of java in programming web based applications, network applications, and the use of the extensive java libraries will be studied. The programming paradigm of building software by gluing components will be explored through the use of scripting languages such as perl and JavaScript. Applications include developing guis and internet programming.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 0445 or COE 0445; (MIN GRADE 'C'); PROG: Dietrich Sch Arts and Sciences or Sch Computing and Information

CS 1550 - INTRODUCTION TO OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An introduction to basic concepts of operating systems, common to most computer systems, which interfaces the machine with upper-level programs. This course will introduce processes as processing unit, process management, concurrency, communication, memory management and protection, and file systems.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: (CS 0447 or COE 0447) and (CS 0449 or COE 0449) or (0456 and 1750); MIN GRADE 'C' FOR ALL COURSES LISTED; PROG: Dietrich Sch Arts and Sciences or Sch Computing and Information

CS 1621 - STRUCTURE PROGRAMMING LANGUAGES

Minimum Credits: 3

Maximum Credits: 3

An analytical examination of modern high-level programming language structures; including design specification and implementation. Advanced forms of data types, expressions, and control primitives. Relationship of storage management techniques and language design.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS (0441 and 0445) or (0406 and 0455); (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 1651 - ADVANCED SYSTEMS SOFTWARE

Minimum Credits: 3

Maximum Credits: 3

To discuss in depth some advanced features of fundamental importance in the design of operating systems. The subjects discussed include interprocess communication, real-time scheduling, advanced file systems, security and protection mechanisms. The objective of the course is to provide an understanding of these advanced issues, as well as to bring awareness of the known solutions to these problems and to the limitations of these solutions.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 1550 or 1312 or 1792; (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 2000 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Master's thesis research.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CS 2001 - RESEARCH TOPICS/COMPUTER SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course introduces the students to the research being conducted in the computer science department. Active, state-of-the-art research topics will be covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2002 - RESEARCH EXPERIENCE/COMPUTER SCI

Minimum Credits: 3

Maximum Credits: 3

In this course, each student will perform exploratory research topics covered in CS 2001. The research will be supervised and directed by faculty members working in the area of the topic chosen by the student.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2001

CS 2003 - COMPUTER SCIENCE COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

The computer science colloquium is offered as a one unit graduate class, with a satisfactory/no credit (S/NC) grading option. The aim of this weekly meeting is to discuss the most recent advances in computer science.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad SN Basis

Course Requirements: PREQ: CS 2001 and 2002; PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS)

CS 2012 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods and strategies that are useful for the design of nonnumeric algorithms. Students are expected to design their own algorithms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2041 - INTRODUCTION TO COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

Examination of computer architecture and hardware system organization. Topics include: CPU organization, sequential and microprogrammed control, instruction set implementation, memory organizations, input/output structure, peripherals and computer communications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (CS 0447 AND CS 0449) or CSCI-MS

CS 2045 - INTRODUCTION TO HIGH PERFORMANCE COMPUTING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the architecture of and software techniques for parallel and high performance computing systems. The content includes fundamental aspects of vector processing, shared-memory and distributed-memory systems. Students will be expected to complete a number of projects demonstrating specific applications in parallel processing paradigms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2053 - APPLIED CRYPTOGRAPHY AND NETWORK SECURITY

Minimum Credits: 3

Maximum Credits: 3

This course will provide the necessary conceptual background and hands-on experience to understand the most common cryptographic algorithms and protocols and how to use them to secure computers networks and distributed applications. Topics include: cryptographic algorithms for data confidentiality, authentication, and integrity, user authentication methods (secure tokens and biometrics), internet security protocols, security in local area networks, firewalls, and intrusion detection systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2055 - DATABASE MANAGEMENT SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to provide an in-depth knowledge of database systems design. Thus, the emphasis is on how to model one's own data and how to use available database management systems effectively. Towards this end, the relational and the object-relational models are discussed in great detail and object-oriented and other data models are also presented. Commercial database management systems are examined and students get practical experience through the use of such systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2056 - INTRODUCTION TO DATA SCIENCE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Computer Science or Computer Engineering

CS 2057 - PRIVACY IN THE ELECTRONIC SOCIETY

Minimum Credits: 3
Maximum Credits: 3

Privacy is an increasingly significant concern in our modern, connected society. We all share personal information on a daily basis with a wide range of organizations. Although at times such sharing can be intentional and beneficial for the user, other times information is shared against the user's will, used for purposes that the user did not expect, revealed to entities other than those approved by the user, or used to infer additional information that the user did not intend to reveal. In this course, students will learn to reason about what information is revealed through the use of computer systems. They will study several different scenarios in which information sharing is either unavoidable or to some extent desirable, and discuss the balance between the benefits and costs of sharing. Finally, students will learn about several privacy-enhancing technologies (PETs), and how these can be put to use by software developers to defend the privacy of their users.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: PLAN: CSCI-PHD and CSCI-MS.

CS 2071 - HUMAN LANGUAGE TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3

This course provides an introduction to the field of natural language processing (NLP) - the creation of programs that can understand, generate, and learn languages used by humans. It will expose students to applications by means of computational techniques including dynamic programming, hidden markov models, grammars, and machine learning algorithms.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: CS 1501; (MIN GRADE 'C' OR TRANSFER)

CS 2074 - INTRODUCTION TO COMPUTER VISION

Minimum Credits: 3
Maximum Credits: 3

In this class, students will learn the basics of modern computer vision. The course will cover topics such as image filtering, edge detection, feature extraction, description and matching, grouping and clustering, object detection, activity recognition, and recognition with a human in the loop.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2078 - INTRODUCTION FOR DEEP LEARNING

Minimum Credits: 3
Maximum Credits: 3

This course will cover the basics of modern deep neural networks. The first part of the course will introduce neural network architectures, activation functions, and operations. It will present different loss functions and describe how training is performed via backpropagation. In the second part, the course will describe specific types of neural networks, e.g. convolutional, recurrent, and graph networks, as well as their applications in computer vision and natural language processing. The course will also briefly discuss reinforcement learning and unsupervised learning, in the context of neural networks. In addition to attending lectures and completing bi-weekly homework assignments, students will also carry out and present a

project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: MATH 0230 and (MATH 0280 or MATH 1180) and CS 1501 with a minimum grade of C or TRANSFER.

CS 2078 - INTRODUCTION FOR DEEP LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will cover the basics of modern deep neural networks. The first part of the course will introduce neural network architectures, activation functions, and operations. It will present different loss functions and describe how training is performed via backpropagation. In the second part, the course will describe specific types of neural networks, e.g. convolutional, recurrent, and graph networks, as well as their applications in computer vision and natural language processing. The course will also briefly discuss reinforcement learning and unsupervised learning, in the context of neural networks. In addition to attending lectures and completing bi-weekly homework assignments, students will also carry out and present a project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2110 - THEORY OF COMPUTATION

Minimum Credits: 3

Maximum Credits: 3

This course deals with computability theory, automata theory and formal languages. Various models of computation will be examined, their relations to each other and their properties will be studied. Topics include models for computable functions and church's thesis, models for recognizers and their relation to formal grammars, algorithmically solvable and unsolvable problems, and the complexity of computations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2150 - DESIGN & ANALYSIS OF ALGORITHMS

Minimum Credits: 3

Maximum Credits: 3

This course deals with the analysis of algorithms and the relevance of such analysis to the design of efficient algorithms. The derivation of results that are primarily of theoretical significance shares importance with the practical task of designing efficient algorithms. Topics covered: searching and sorting, graph algorithms, arithmetic, np-completeness, and lower bound techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2210 - COMPILER DESIGN

Minimum Credits: 3

Maximum Credits: 3

The design and implementation of current high level languages. Emphasis is placed on the structure of compilers. Lexical, syntax and semantic analysis as well as target code generation and register allocation. Storage management techniques for recursive and retentive control structures. Formal specification techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2310 - SOFTWARE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course will examine the software engineering process in general, the considerations for large software projects in particular, and then will focus on the conversion of software specifications into production code. Topics will include modern design methods, safety-critical software, verification and validation, testing theory and methods, reengineering of legacy software.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2410 - COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

A study of the hardware structure of computer systems and subsystems. Topics include: processor architecture, parallelism and pipelining, cache and main memory organization, i/o controllers and i/o processors, and interconnection structures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2510 - COMPUTER OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An in-depth study of the control abstractions in modern operating systems and the issues involved in efficient implementation of those abstractions. Topics will include concurrency and its control, memory management, resource management, and structure of distributed and parallel operating systems. These topics will be developed through the lectures, assigned readings from the literature, and an examination of actual operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2520 - WIDE AREA NETWORKS

Minimum Credits: 3

Maximum Credits: 3

The course provides an understanding of the basic principles of broadband networks. It will introduce protocols suitable for broadband networks, with emphasis on atm. Other technologies, such as frame relay and smds, will be discussed. The course will also address important design issues for high speed networks including characterizations of (a) network traffic and its implications on network design, and (b) application performance objectives, traffic policing, and congestion control algorithms that can meet those diverse objectives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2530 - COMPUTER AND NETWORK SECURITY

Minimum Credits: 3

Maximum Credits: 3

The goal of the proposed course is to provide our graduate students the necessary background and hands on experience to do well in systems research or advanced development with an emphasis on security. The instructor will lecture on cryptographic algorithms for data confidentiality, authentication, and integrity, security protocols for the internet and local area networks, firewalls, intrusion detection systems, defense against denial of service attacks, user authentication methods, cryptographic file systems, secure email steganography and usable security.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2550 - PRINCIPLES OF DATABASE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The main objective of this course is to provide an in-depth knowledge of database management systems design. Topics covered at length are concurrency control including concurrency on structured data, recovery and query optimization. Some important aspects of distributed databases are discussed, including distributed concurrency control and fault tolerance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2610 - INTERFACE DESIGN & EVALUATION

Minimum Credits: 3

Maximum Credits: 3

This course covers methodology for the modeling, specification, design, measurement, and evaluation of Human-Computer Interfaces (HCI). Included topics are: interaction models and modes, conceptual/logical/physical interface structures, objectively measurable interface patterns, and criteria for interface evaluation. HCI relationships to software engineering and artificial intelligence are highlighted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2620 - INTERDISCIPLINARY MODELING AND VISUALIZATION

Minimum Credits: 3

Maximum Credits: 3

This course discusses computer graphics, modeling and visualization techniques used to solve scientific problems. Focus falls on identifying scientific problems, proposing solutions involving graphical modeling and visualization, and designing, implementing, and evaluating the solutions. Examples include interactive software systems, quantitative analysis tools, or new applications of existing visualizations methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2637 - FOUNDATIONS OF HUMAN-COMPUTER INTERACTION

Minimum Credits: 3

Maximum Credits: 3

Human-Computer Interaction is the science of building technologies for human use and studying how people use existing technologies. This course provides an introduction to user research methods in Human-Computer Interaction, including the generative methods used to design technologies, evaluative methods used to assess technologies, and human and automated data analysis approaches. The course will discuss applications of these

topics to both well-established technologies (websites, mobile apps) and emerging technologies (e.g., brain-computer interfaces, AR/VR) as well as applications to emerging research areas in HCI such as crowdsourcing and human-AI interaction. A strong programming background is expected to take this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2710 - FOUNDATIONS OF ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course covers the foundational techniques in artificial intelligence, including: problem definition and analysis, heuristic search, adversarial search, knowledge representation, planning and constraint satisfaction, and methods for reasoning under uncertainty. Attention will be given to the roles of these techniques in the design of intelligent agents.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2731 - INTRO NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the field of Natural Language Processing (NLP) - the creation of computer programs that can understand, generate, and learn natural language. Natural language understanding will be used as a vehicle to introduce the three major subfields of NLP: syntax, semantics, and pragmatics. The course will introduce both knowledge-based and statistical methods for NLP, and will illustrate the use of such methods in a variety of application areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2750 - MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will give an overview of many techniques and algorithms in machine learning, beginning with topics such as linear and logistic regression, multi-layer neural networks and ending up with more recent topics such as boosting and support vector machines. The basic ideas and intuition behind modern machine learning methods, as well as, a more formal understanding of how and why they work will be covered. Students will have an opportunity to experiment with various machine learning techniques or apply them to a selected problem or domain in the context of a term project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2756 - PRINCIPLES OF DATA MINING

Minimum Credits: 3

Maximum Credits: 3

Data mining is the process of efficient supervised or unsupervised discovery of non-trivial and useful knowledge and patterns from collections of data. This proposed course aims to provide a discussion of multiple common tasks in data mining, including association rules/sequential patterns, classification, anomaly detection, avoiding false discoveries, and clustering. Besides, this course will also introduce the latest advances in data

mining and provide extensive hands-on experience via programming projects. Non-CS students interested in enrolling must suggest project ideas and obtain the instructors written permission to override the enrollment requirements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 1656

Course Requirements: PLAN: Computer Science or Computer Engineering

CS 2900 - GRADUATE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 1

A professional internship may be taken at any time during the course of graduate study. Ph.D. students may take this course up to two times for credit, MS students may take it at most once.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

CS 2905 - COMPUTER SCIENCE COOPERATIVE PROGRAM

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

CS 2910 - MS PROJECT

Minimum Credits: 1

Maximum Credits: 3

A project under the supervision of a faculty member or a group of faculty members.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

CS 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

This course involves study which is approved by the faculty adviser but carried out independently by student.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CS 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 9

Any adjunct or full member of the graduate faculty of the department may direct doctoral dissertations.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CS 3150 - ADV TOPCS DSGN & ANALYS ALGORITHM

Minimum Credits: 3

Maximum Credits: 3

This course covers recent results in the design and analysis of algorithms. The contents change from term to term.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2150

CS 3210 - ADV TOPICS PROGRAMMING LANGUAGES

Minimum Credits: 3

Maximum Credits: 3

Advanced program representations & program analysis techniques for compilers, optimizers, software tools & parallel systems. Analysis techniques include advanced register allocation algorithms, data flow frameworks & techniques, optimizing algorithms & slicing techniques. Program representations include various types of dependence graphs & static single assignment. Analyses & code improving transformations for various types of parallel architectures including VLIW, superscalar, shared memory & distributed memory machines. Current research topics in prog languages.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2210

CS 3220 - COMPILING TECHNQS/PARALLEL SYMS

Minimum Credits: 3

Maximum Credits: 3

This course will study techniques used in the design of parallelizing compilers. Techniques for computing dependencies and program representations suitable for parallelizing software will be presented. Topics will include detection of fine and coarse parallelism, program transformations and scheduling techniques to exploit parallelism, on shared and distributed memory architectures, and techniques for debugging parallel software.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2210

CS 3410 - ADV TOPICS COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

This course will survey current topics in computer architecture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2410

CS 3510 - ADV TOPICS IN OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An in-depth study of specific topics of modern operative systems, the theory behind them, and their implementation. Topics may include advanced concepts in distributed systems, multimedia systems, file systems, resource management, distributed shared memory, among others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2510

CS 3521 - ADV TOPICS SENSING/UBIQUITOUS TEC

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the fundamental issues related to designing and analyzing sensor networks and applications. Topics include but are not limited to: driving applications for sensor nets; wireless networking issues; directed diffusion, aggregation, and data dissemination; power aware routing computing and communication; hardware and software platform and tools.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2520 or TELCOM 2321

CS 3525 - ADVANCED TOPICS IN SECURITY AND PRIVACY

Minimum Credits: 3

Maximum Credits: 3

This course covers current research topics in computer security and privacy. The topics covered will change from term to term.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CS 3530 - ADV TOPICS DISTBD & REAL-TIME SYS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the students to the foundations of real-time systems. The emphasis is on understanding predictability and resource management, at the level of the processor, network, memory, disks, i/o devices, etc. Fault tolerance is another main emphasis of the course, since it is a requirement for real-time behavior. Specific real-time fault-tolerant schemes will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3550 - ADV TOPICS IN MANAGEMENT OF DATA

Minimum Credits: 3

Maximum Credits: 3

The course is devoted to a reevaluation of traditional database techniques and the examination of emerging approaches for the reliable and efficient

data management in large distributed systems. Examples of such systems include multi databases, mobile and multimedia databases, and advanced OS and AI. Topics include object management, workflows and extended transactions, semantics-based concurrency control and recovery, active and real-time database techniques. The concepts will be examined within the context of a state-of-the-art system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3551 - ADV TOPICS IN DISTBD INFOR SYS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on emerging technologies for large scale, distributed information systems. Topics to be examined include data and information modeling, heterogeneous data integration, data distribution, caching and replication, web databases, distributed query processing and searching, multimodal access, quality of data, content networks, and pervasive data management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2510 and 2550

CS 3570 - ADVANCED TOPICS IN USER INTERFACE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CS 3580 - SEM: ADV TOPC PARALLEL COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Different topics related to parallel and systolic computations will be covered at various levels of details. Example of such topics are: architectures of parallel processors and VLSI computational networks, languages and programming environments for parallel systems, the design and analysis of parallel and systolic algorithms, reconfigurable and data driven processor arrays, complexity measures of VLSI computations, and the application of parallel processors to supercomputing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CS 3650 - VISUAL LANGUAGES AND PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course covers the fundamentals of visual language theory, iconic and symbolic representations, parsing techniques, semantics and pragmatics of visual languages, visual programming systems, visual querying systems, visual information systems and knowledge-based visualization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3710 - ADV TOPICS ARTIFICIAL INTELLGNC

Minimum Credits: 3

Maximum Credits: 3

This course will survey current topics in artificial intelligence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: CS 2710

CS 3720 - ADVANCED TOPICS IN INTERNET OF THINGS

Minimum Credits: 3

Maximum Credits: 3

A practical course in expert systems involving discussions of fundamentals of building expert systems, discussion of open problems, and designing and building a prototype expert system.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CS 3730 - ADV TOPCS NATURAL LANG PROCSSNG

Minimum Credits: 3

Maximum Credits: 3

Natural language processing (NLP) is primarily concerned with creating computer programs that interact with human languages. The objective of this course is to continue the studies of natural language processing (NLP), to explore selected topics among syntax, semantics, and pragmatics more deeply, and to discuss recent advances in (NLP).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2731

CS 3750 - ADV TOPICS IN MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will survey advanced topics in machine learning, for example, inductive learning, reinforcement learning, and neural network learning.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2750

CS 3790 - ADVANCED TOPICS IN EDUCATIONAL TECHNOLOGY: PERSONALIZED LEARNING ENVIRONMENTS

Minimum Credits: 3

Maximum Credits: 3

The 2010 National Educational Technology Plan outlined how "The challenge for our education system is to leverage the learning sciences and modern technology to create engaging, relevant, and personalized learning experiences for all learners." While instruction has traditionally been one-size-fits-all, the rise of web-based and mobile technologies provide an opportunity to automatically detect what learners need and adapt instruction to their unique prior knowledge, motivation, and preferences. In this seminar course, we survey different types of personalization in educational technologies (e.g., cognitive, metacognitive, social, motivational), computational modeling techniques for representing learners and their needs, and best practices in designing personalized supports for learners. Students will lead one or more class discussions, participate in the other discussions, and complete a group course project. Students must have a foundational knowledge of algorithms and data structures before enrolling in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CS 3800 - ADVANCED TOPICS IN COMPUTING

Minimum Credits: 3

Maximum Credits: 3

This course aims to provide students with an introduction to a range of advanced topics in computing. It will explore the current and future challenges facing the emerging computing paradigms. These will also be used to illustrate the many different influences and trade-offs involved in computing and information systems.

Academic Career: Graduate

Course Component: Lecture

Computing and Information

CMPINF 0401 - INTERMEDIATE PROGRAMMING

Minimum Credits: 4

Maximum Credits: 4

This is an intermediate programming course that focuses on programming via an object-oriented paradigm. Students entering CMPINF 0401 are expected to have some previous concepts and then focus on object-oriented programming, including classes, encapsulation and abstraction, inheritance, polymorphism and interfaces. Some introductory data structures and algorithms will also be covered in this course. This class is a programming-intensive course, and students will be expected to complete several non-trivial programming projects throughout the term.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: ANTI-REQ: Enrollment not permitted if previously enrolled in CS 0401 OR INFSCI 0017.

CMPINF 2100 - DATA-CENTRIC COMPUTING

Minimum Credits: 3

Maximum Credits: 3

This course will provide an introduction to programming, data processing, and data mining, and applied machine learning using Python for highly motivated students with little or no prior experience in programming. The course will focus on learning the basics of Python programming language in the context of working with data, planning and organizing programs, commonly-used algorithms, data management, data cleaning, basic machine learning, data mining, and fundamentals of computational modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CMPINF 2110 - MANAGING, QUERYING, AND PRESERVING DATA

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to the practical methodologies of data management, storage, and querying in the context of relational, document, and graph database management systems. This course covers fundamental concepts of data organization and retrieval, including the relational model, structured query language (SQL), graph/network concepts, and Cypher. In addition to building skills and understandings for managing data in a database system, this course will examine strategies and important concepts for continued access and preservation of data. This course considers the technical infrastructure for storing, publishing, discovering and preserving research data. It will address the importance of data documentation in data science, disciplinary metadata standards, file formats that support long-term preservation of data, and strategies for sharing data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CMPINF 2100 Introduction to Data-Centric Computing

CMPINF 2120 - APPLIED PREDICTIVE MODELING

Minimum Credits: 3

Maximum Credits: 3

The ability to collect, store and process large amounts of detailed data in a variety of fields has led to a surge in the use of data in various decision making tasks, ranging from governmental policy making to drafting players in sports. Data literacy is thus important and in this first introductory course we will focus on shifting the traditional mode of deterministic (yes/no) thinking to probabilistic thinking. In this course, we will review concepts from applied probability and statistics and explore how they can be used in building a data-driven infrastructure with applications ranging from understanding a variety of everyday phenomena (e.g., descriptive modeling) to making decisions based on data (e.g., predictive modeling). In particular, we will focus on the principles and best practices in dealing with data, including understanding (a) the bias-variance tradeoff, (b) how to avoid overfitting, (c) how to choose the most appropriate model for your data and (d) how to evaluate your model's performance. While the main focus of the course is on supervised learning, we will also introduce unsupervised learning and in particular the problem of clustering. We will also explore the concept of Monte Carlo simulations and resampling, and how they can be used to make predictions for systems that are too complicated to be solved in closed form. We will also provide an overview of analytical methods for specialized form of data including time series and relational data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CMPINF 2100 Introduction to Data Centric Computing

CMPINF 2130 - THE ART OF DATA VISUALIZATION

Minimum Credits: 3

Maximum Credits: 3

Visualization is a language of art to discover, understand, and communicate meanings. This course introduces how to speak in the visual style in the era of big data by programming on the elements of arts: lines, forms, and colors. This course is designed to break the boundaries between art, science, and engineering and teach creative coding to students of all kinds of backgrounds.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CMPINF 2100 - Introduction to Data-Centric Computation

CMPINF 2999 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Various advanced topics in computing and information will be covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Critical Care Medicine

CCM 5430 - CRITICAL CARE MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The goal of this elective is to provide a multi-disciplinary experience in care of the critically ill. Rounds conducted each morning result in a plan of treatment for each day. The medical student will participate in all aspects of care of the patients in ICU. Emphasis is placed on bedside titration of care. Recognition and appropriate treatment of respiratory failure, arrhythmias, and hyperalimantation are emphasized. The student participates in cardiopulmonary resuscitations. Students participate in night call.

Academic Career: Medical School

Course Component: Clinical

Grade Component: Grad LG/SU5

Course Attributes: School of Medicine Year 4

CCM 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CCM 5840 - CRITICAL CARE MEDICINE RESEARCH

Minimum Credits: 0

Maximum Credits: 0

These electives provide opportunities to learn basic research methodology, including approach to experimental design, protocol development, data analysis and evaluation of results. Student participates in ongoing research in the lab and on patients. Opportunities for research in resuscitation high frequency jet ventilation, patient monitoring, hemorheology, brain pathophysiology, and pharmacology of anesthesia-related drugs are available. Many other topics are also possible.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CCM 5899 - INDEPENDENT STUDY IN CRITICAL CARE MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

CCM 5900 - EXTRAMURAL CRITICAL CARE MEDICINE

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in critical care medicine may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM catalog with all appropriate approvals to be received before the course may be added to the student's schedule for credit.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Critical European Culture Studies

CECS 2500 - FOUNDATIONS OF CRITICAL EUROPEAN CULTURE STUDIES

Minimum Credits: 3

Maximum Credits: 3

The EU aspires to political, economic, and cultural union, making it unique among the world's globalist projects. Yet the mechanisms of cultural union remain seldom explored in the studies of the EU and within the field of Cultural Studies in general. The University of Pittsburgh is one of the few places in the world that introduce students to the methods of critical European culture studies. The course will begin by exploring the processes of European unionization that have emerged in the post-WWII era, the institutions that drive political, economic and cultural union in the contemporary EU. It will introduce students to the study of cultural policy and ask them to consider a variety of cultural forms. It will set the contemporary project of the EU in relation to longer histories of Europeanization and it will set them in relief to other models like Paneurope, the Europe of Nations, Eurasia, Eurafica, and so on. Specific attention will be given to border regimes, migration histories, (post)colonial and broad geopolitical relations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CECS 3000 - PH.D. DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 15

Students work individually under the guidance of their faculty advisor in preparation for and during the writing of the dissertation.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Cross-Disciplinary Dental Education

DMED 5001 - DIRECTED STUDY IN PERSON-CENTERED CARE

Minimum Credits: 1

Maximum Credits: 1

A customized course of study in concepts related to person-centered care for students who transfer to the School of Dental Medicine.

Academic Career: Dental Medicine

Course Component: Directed Studies

Grade Component: Grad HSU Basis

DMED 5001 - DIRECTED STUDY IN PERSON-CENTERED CARE

Minimum Credits: 1

Maximum Credits: 1

A customized course of study in concepts related to person-centered care for students who transfer to the School of Dental Medicine.

Academic Career: Dental Medicine

Course Component: Directed Studies

Grade Component: Grad HSU Basis

DMED 5110 - FOUNDATIONS OF PERSON-CENTERED CARE

Minimum Credits: 3

DMED 5113 - FOUNDATIONS OF PERSON-CENTERED CARE LAB (BIOMEDICAL MASTERS PROGRAM)

Minimum Credits: 1

Maximum Credits: 1

This course is the lab component of course DMED 5111 Foundations of Person-Centered Care and is limited to students enrolled in the Biomedical Masters Program.

Academic Career: Graduate

Course Component: Practicum

Grade Component: ABCF

DMED 5113 - FOUNDATIONS OF PERSON-CENTERED CARE LAB (BIOMEDICAL MASTERS PROGRAM)

Minimum Credits: 1

Maximum Credits: 1

This course is the lab component of course DMED 5111 Foundations of Person-Centered Care and is limited to students enrolled in the Biomedical Masters Program.

Academic Career: Graduate

Course Component: Practicum

Grade Component: ABCF

DMED 5142 - FOUNDATIONS OF PERSON-CENTERED CARE 2

Minimum Credits: 2

Maximum Credits: 2

In this course, students will build upon foundational knowledge of person-centered care, including social and cultural factors in oral health, interpersonal communication skills, disease prevention, and evidence-based care.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DMED 5143 - PRINCIPLES OF PROFESSIONAL PRACTICE 2

Minimum Credits: 2

Maximum Credits: 2

The primary goal of the Principles of Professional Practice course series is to teach students how essential practice management concepts contribute to the development and maintenance of a successful professional dental practice. This first- and second-year course series will focus on integrating the new student practitioner into their first practice, which begins with their clinical exposure at the School of Dental Medicine. Corollaries will be made from School practice-to-practice opportunities as an entry-level dental professional. Concepts that are introduced in this course series will be reinforced and expanded upon in the Successful Practice Management course series, which is offered in the third- and fourth-years of the predoctoral

curriculum. Course material will be presented through lectures, in-class discussions, and assignments that relate to the clinical application of presented topics.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad HSU Basis

DMED 5144 - CARIOLOGY AND CARIES MANAGEMENT 1

Minimum Credits: 2

Maximum Credits: 2

In this course, students will be introduced to current concepts of the etiology, epidemiology, and clinical prevention and management strategies of dental caries. Students will be provided with actual clinical experience in diagnosing caries in subsequent courses. Successful completion of this course will provide students with the foundational knowledge for prevention and conservative management of caries appropriate for the general dental practitioner. In addition, the students will be prepared with the operative dentistry knowledge and techniques to successfully restore the dentition utilizing composite resin materials and amalgam. Additionally, the student will learn adjunctive esthetic information and alternative treatment modalities. This course will provide the foundational knowledge to allow the student to understand and apply the basic principles of preparation design, adhesion, and finishing of composite restorations and amalgam restorations. This course includes lectures and class discussions. The accompanying laboratory course, DMED 5141, provides an opportunity for hands-on experiences in a pre-clinical environment.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DMED 5145 - CARIOLOGY AND CARIES MANAGEMENT 1 LAB

Minimum Credits: 3

Maximum Credits: 3

This pre-clinical lab course is given in conjunction with the lecture course (DMED 5140) in which the student will learn how to accurately diagnose and stage caries as well as restore teeth to their proper form and function. In this course, students will acquire the psycho motor and instructional skills in treating Non-Cavitated, Moderate Cavitated and Extensive Cavitated (Class I, II, III, IV, V) lesions using Fluoride varnish, SDF, bonded composite restorative materials and amalgam. Students will also learn how to place sealants and bases. The course director reserves the right to change the pre-clinical sessions and projects. This may be done to ensure the proper information is presented to the student so as to enable them to successfully complete the pre-clinical projects.

DMED 5370 - MULTIDISCIPLINARY CASE STUDIES

Minimum Credits: 1.5

Maximum Credits: 1.5

The purpose of this course is to further develop and refine student's values, knowledge, and skills as they relate to providing person-centered care using an interdisciplinary lens that considers relevant sociocultural, clinical, biomedical, and behavioral facts and risk factors. A hallmark of the course is the integration and synthesis of knowledge learned from the various disciplines. Age, race, sex, and gender-based considerations, as well as social determinants of health, will also be addressed whenever relevant and/or appropriate. The format of the course will be online, synchronous, case-based discussions with a panel of experts from various disciplines, as appropriate to the case. Cases will be presented in a format similar to that used in the Integrated National Board Dental Examination. Opportunities for small group discussions will also be provided. Students may be given preparatory materials to review ahead of the sessions.

Academic Career: Dental Medicine

Course Component: Seminar

Grade Component: ABCF

DMED 5999 - INDEPENDENT CLINICAL STUDIES

Minimum Credits: 7

Maximum Credits: 7

This course is designed for clinical faculty to engage in a series of independent learning activities related to the provision of dental care.

Academic Career: Dental Medicine

Course Component: Independent Study

Grade Component: Grad HSU Basis

Cultural Studies

CLST 2006 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This course entails the exploration of a special topic chosen by the instructor.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLST 2009 - DIRECTED STUDIES

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLST 2050 - CULTURAL STUDIES COMMON SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This annual seminar focuses on a single topic crossing disciplinary and departmental boundaries. Cultural studies faculty with a broad range of research interests participate in weekly talks and discussions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Cultural Studies

Dental Anesthesiology

DSANE 2114 - PATH AND MANAGEMENT OF MEDICAL EMERGENCY

Minimum Credits: 2

Maximum Credits: 2

This course covers the prevention, recognition, and treatment of medical emergencies that can occur in the dental setting. Differential diagnosis is presented according to the presenting signs and symptomatology. Emphasis is placed on the proper office protocol during an emergency, including the assembly of an emergency drug kit. Experience with IV and IM techniques is included.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DSANE 2242 - PRINCIPLES OF ANESTHESIA

Minimum Credits: 2

Maximum Credits: 2

This is the second course in a series of three didactic courses dealing with the philosophy and methods of pain and anxiety control in dentistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DSANE 2243 - POST-DOCTORAL MODERATE SEDATION CLINIC

Minimum Credits: 2

Maximum Credits: 2

This course is designed to integrate with the didactic course series dealing with the philosophy and methods of pain and anxiety control in dentistry. In this clinical course, under the supervision of the anesthesia faculty, students will select and administer the various pain and anxiety control techniques learned in the classroom.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

DSANE 2260 - POST-DOCTORAL MODERATE SEDATION 1

Minimum Credits: 2

Maximum Credits: 2

The course will foster an appreciation for the important role of pain and anxiety control in dentistry. The resident will demonstrate proficiency in technical aspects of nitrous oxide anxiolysis, conscious sedation, patient management, and the pharmacologic use of medications. All aspects of anesthesia will be undertaken in the clinic. The resident will experience hands-on management of intravenous sedation from pre-operative evaluation to discharge.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

DSANE 2270 - POST-DOCTORAL MODERATE SEDATION 2

Minimum Credits: 2

Maximum Credits: 2

The course will foster an appreciation for the important role of pain and anxiety control in dentistry. The resident will demonstrate proficiency in technical aspects of nitrous oxide anxiolysis, conscious sedation, patient management, and the pharmacologic use of medications. All aspects of anesthesia will be undertaken in the clinic. The resident will experience hands-on management of intravenous sedation from pre-operative evaluation to discharge.

DSANE 2500 - INTRODUCTION TO DENTAL ANESTHESIOLOGY 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSANE 5241 - ANESTHESIA 1: LOCAL ANESTHESIA

Minimum Credits: 2

Maximum Credits: 2

A comprehensive course on local anesthesia. Topics include theories of pain, medicolegal considerations, pharmacology of local anesthetics and vasoconstrictors; techniques of local anesthetic administration, armamentarium, complications, and alternative techniques.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5245 - LOCAL ANESTHESIA TECHNIQUE LAB

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5272 - ANESTHESIA 2: MEDICAL EMERGENCIES

Minimum Credits: 1

Maximum Credits: 1

In this course, students are provided with information pertaining to the prevention, recognition, and treatment of selected medical emergencies occurring in the dental office. Emphasis is placed on patient evaluation and prevention. Emergency drugs and equipment are specified, as well as clinical their application. Lifesaving management of the medically compromised patient is incorporated into the dental treatment plan. Course lectures will include concepts endorsed by the American Dental Association and introduce the student to resources available through the Journal of the American Dental Association. This course will offer foundational knowledge in emergency medicine which will enable the student to assess and manage patients experiencing a medical emergency in the dental office.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5311 - PATIENT MANAGEMENT: ENTERAL SEDATION

Minimum Credits: 1

Maximum Credits: 1

In this course, students will be expected to meet the educational requirements for predoctoral dental students set forth in the October, 2007 the American Dental Associations Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students. In combination with course material presented in pharmacology, physiology, and clinical medicine, satisfactory completion of this course, along with subsequent clinical exposures, will place the student in compliance with the ADA guidelines for enteral sedation. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5313 - ANESTHESIA 3: PAIN AND ANXIETY CONTROL

Minimum Credits: 1

Maximum Credits: 1

In this course, students will be presented with methods of pharmacologic management of pain and anxiety. It is presented as essentially two separate sections: 1) anxiety control with nitrous oxide sedation and 2) pain control with analgesic. Anxiety control encompasses current pharmacologic management in anxiety control for dentistry. This section of the course focuses on the techniques that a general practice dentist can provide in an office setting. The methods of anxiety reduction and sedation that will be presented were selected on the basis of efficacy and safety. Inhalation sedation (nitrous oxide) techniques are covered in depth. Sedation and general anesthesia with respect to the role of the dental anesthesiologist is described. Pediatric management techniques are not covered. Pain control encompasses an introduction to prescription writing and establishes prescribing protocols for both non-steroidal anti-inflammatory and opioid analgesics. Often pain medications are prescribed to the dental patient in an empirical sense; the goal of this portion of the course is to impart a clinical rationale for prescribing pain medications. A method is established so that the student can make a therapeutic choice based on the needs of the patient and contemporary dental practice. A focus is placed with respect to drug diversion and responsible opiate prescribing. Atypical analgesics for oral-facial neuropathic pain will also be presented. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5315 - NITROUS OXIDE LAB

Minimum Credits: 0

Maximum Credits: 0

In this course, students will reinforce the knowledge of nitrous oxide gained didactically by engaging in hands-on use of the machines and self-experience of the medication, if desired, in a small group educational setting. This course will serve to assess preclinical competence in order to allow students to progress to the administration of nitrous oxide to dental patients. This course includes small group lab sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5317 - ADVANCED LOCAL ANESTHESIA TECH LAB

Minimum Credits: 0

Maximum Credits: 0

In this course, students will gain an appreciation for the important role of local anesthesia in dentistry. Students will develop and practice techniques in advanced and alternative delivery of local anesthesia. This course also evaluates competency in the standard technique of administering local anesthesia. This course includes one lecture and two small group lab sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5342 - CLINICAL MEDICINE

Minimum Credits: 1

Maximum Credits: 1

This course in clinical medicine is directed to first professional dental students. Utilizing a combination of dental and medical faculty, the course will provide a better understanding of some common medical conditions and its current treatment, preparing students with the basics in providing dental care to the growing population of aging patients with complex medical conditions in conjunction with their physician colleagues.

DENT 3111 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN THE HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

DENT 5115 - HEALTH PROMOTION AND DISEASE PREVENTION 1

Minimum Credits: 1

Maximum Credits: 1

In this course, students will prepare for clinical dental practice by being introduced to important concepts and developing skills required for the provision of effective dental care. Students are introduced to communication skills and behavioral principles related to clinical practice through the health history interview. Students are also provided with their initial clinical exposure to the nature of oral health and disease. All of these concepts are developed and reinforced through the use of readings, pre-clinical, and clinical assignments that require integration of the concepts and effective demonstration of these skills as they apply to patient care. In addition, students will practice conducting a health history interview with a standardized patient. This course includes lecture, class discussion, small group exercises in the pre-clinical and clinical settings, and standardized patient sessions.

Academic Career: Dental Medicine

DENT 5118 - QUALITIES OF A GENERAL DENTIST 1

Minimum Credits: 1

Maximum Credits: 1

This course will follow student progression each term in the non-technique sensitive behaviors that the faculty members of the University of Pittsburgh School of Dental Medicine (SDM) deem are essential qualities to becoming a successful general dentist. As the student advances through the four years of the curriculum, SDM faculty will evaluate the students ability to demonstrate the knowledge, skills, and values in the outlined categories that represent expected professional behaviors. This assessed conduct will include all actions displayed in all locations within the school as well as in all external curricular locations. In addition to the areas listed above, this series of courses will include evaluating the students adherence to all SDM directives and/or University guidelines, requirements, policies and procedures.

DENT 5211 - DIAGNOSIS AND TREATMENT PLANNING 1

Minimum Credits: 1

Maximum Credits: 1

This course parallels the curricular theme of the second year, providing the opportunity to acquire and practice basic clinical skills and to prepare students to conduct comprehensive patient evaluations. Topics include: obtaining and interpreting medical, dental and medication histories; assessing the patient's health status; and assessing risk. The course will utilize previously acquired knowledge related to the examination of oral, dental and periodontal structures. Students will apply knowledge from their periodontology courses to diagnose gingivitis and periodontitis. Students will continue to develop their skills in oral disease prevention and health promotion. This course includes lecture, clinical assignments with an upperclassman, and case-based learning activities.

DENT 5283 - DIAGNOSIS AND TREATMENT PLANNING 3

Minimum Credits: 2
Maximum Credits: 2

In this course, second year students will be provided with an opportunity to apply foundational knowledge in diagnosis and treatment planning to a patient case. The student will work as part of a group to assess, diagnose, treatment plan and present a case to faculty and peers. Students will work within their group to write a written case report. After faculty review of the case report, each group of students will present their case orally during a 20-minute oral presentation. The presentation is followed by faculty questions. Students will also attend one implant conference to gain exposure to multi-disciplinary treatment planning and will then write a journal entry reflecting on this experience. Finally, the student's behavioral skills will be assessed as he/she discusses a treatment plan with a patient through the use of a standardized patient competency examination.

Academic Career: Dental Medicine

Grade Component: Grad HSU Basis

DENT 5310 - SPECIAL NEEDS DENTISTRY

Minimum Credits: 1
Maximum Credits: 1

In this course, students will be provided with an introduction to the arena of special needs dentistry; material presented will demonstrate the management and treatment of patients with disabilities/special needs. The primary goals of this course are to introduce the pre-doctoral dental student to common developmental and acquired disabilities, and to provide an increased understanding regarding barriers to care for individuals with disabilities. The focus of the course is to enable the student to understand the necessary parameters of care and modifications to dental treatment to best accommodate individuals with disabilities. The material presented will aid the student in assessing, planning, implementing and monitoring treatment for the patient with special needs. Speakers will include SDM faculty members, as well as guests from various disciplines within the University and external organizations. This course includes lectures, required assignments (reading and/or audio-video) and class discussions.

Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

DENT 5313 - ONGOING PERFORMANCE EVALUATION 1

Minimum Credits: 2
Maximum Credits: 2

As first- and second-year students, the Global Assessment (GA) program at the University of Pittsburgh School of Dental Medicine (SDM) helps provide guidance and learning opportunities for predoctoral students to grow and develop the knowledge, skills and values related to professional and ethical decision-making. The GA program utilizes a two-pronged approach: 1) The Qualities of a General Dentist (QGD) course series tracks the

students ability to meet the professional and ethical expectations of developing health professionals as they progress through all terms of the four-year curriculum. 2) The Ongoing Performance Evaluation (OPE) course series tracks third- and fourth-year students ability to meet the expected clinical quality care standards, in addition to monitoring their clinical productivity as they provide services to their assigned patients outside rotations. The primary goal of the Ongoing Performance Evaluation (OPE) course series is to follow and assess student clinical progression each term in the third and fourth years of the predoctoral program. The foundation of this course recognizes that the primary goal of the predoctoral dental program is to provide a teaching and learning platform that allows the student to gain the knowledge, skills and values to competently perform as an entry-level general dentist. In doing so, the student is expected to gain clinical experience and advance through the clinical curriculum as s/he provides dental services to SDM patients. It is an expectation of the school that each student will work beyond minimal requirements and subsequent departmental competencies continuing to gain experience and knowledge each semester until graduation, thereby allowing his/her skills to improve.

Maximum Credits: 3

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: ABCF

DENT 5318 - QUALITIES OF A GENERAL DENTIST 7

Minimum Credits: 1

Maximum Credits: 1

This course will follow student progression each term in the non-technique sensitive behaviors that the faculty members of the University of Pittsburgh School of Dental Medicine (SDM) deem are essential qualities to becoming a successful general dentist. As the student advances through the four years of the curriculum, SDM faculty will evaluate the students ability to demonstrate the knowledge, skills, and values in the outlined categories that represent expected professional behaviors. This assessed conduct will include all actions displayed in all locations within the school as well as in all external curricular locations. In addition to the areas listed above, this series of courses will include evaluating the students adherence to all SDM directives and/or University guidelines, requirements, policies and procedures.

DENT 5345 - SUCCESSFUL PRACTICE MANAGEMENT 1-2

Minimum Credits: 3

Maximum Credits: 3

The goal of the Successful Practice Management (SPM) course series is to teach students the value of developing effective strategies to enhance overall clinical productivity that are ethically balanced with the needs of assigned patients. In doing so, this course will follow and assess student clinical progression in their own SDM clinical practice. The course series will emphasize a business model of dental practice development focused on maximizing educational experiences for the student rather than on traditional financial-driven metrics.

DENT 5383 - CLINICAL ORAL DIAGNOSIS AND TREATMENT PLANNING 1

Minimum Credits: 2
Maximum Credits: 2

This course is designed to provide clinical experiences in the areas of oral diagnosis and treatment planning, evidence-based dentistry and the treatment of adult and geriatric patients for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in diagnosing and treatment planning, in providing evidence-based care to patients and in the treatment of adult and geriatric patients at the level of a general dentist and will participate in a variety of additional experiences to increase skills in these areas.

Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: ABCF

DENT 5388 - CLINICAL SPECIAL NEEDS DENTISTRY 1

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide clinical experiences in the area of special needs dentistry for pre-doctoral dental students. By the end of the third year of the curriculum, students will be able to demonstrate competence in assessing the needs of and in providing care to dental patients with special needs at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the patient with special needs.

Grade Component: ABCF

DENT 5393 - ONGOING PERFORMANCE EVALUATION 3

Minimum Credits: 2

Maximum Credits: 2

As first- and second-year students, the Global Assessment (GA) program at the University of Pittsburgh School of Dental Medicine (SDM) helps provide guidance and learning opportunities for predoctoral students to grow and develop the knowledge, skills and values related to professional and ethical decision-making. The GA program utilizes a two-pronged approach: 1) The Qualities of a General Dentist (QGD) course series tracks the students ability to meet the professional and ethical expectations of developing health professionals as they progress through all terms of the four-year curriculum. 2) The Ongoing Performance Evaluation (OPE) course series tracks third- and fourth-year students ability to meet the expected clinical quality care standards, in addition to monitoring their clinical productivity as they provide services to their assigned patients outside rotations. The primary goal of the Ongoing Performance Evaluation (OPE) course series is to follow and assess student clinical progression each term in the third and fourth years of the predoctoral program. The foundation of this course recognizes that the primary goal of the predoctoral dental program is to provide a teaching and learning platform that allows the student to gain the knowledge, skills and values to competently perform as an entry-level general dentist. In doing so, the student is expected to gain clinical experience and advance through the clinical curriculum as s/he provides dental services to SDM patients. It is an expectation of the school that each student will work beyond minimal requirements and subsequent departmental competencies continuing to gain experience and knowledge each semester until graduation, thereby allowing his/her skills to improve.

Dermatology

DERM 5380 - DERMATOLOGY CLERKSHIP

Minimum Credits: 0
Maximum Credits: 0
This elective emphasizes clinical dermatology. The student will participate in the outpatient clinics at Flak Clinic, Childrens Hospital and the VA Hospital. These activities will be complemented by grand rounds, kodachrome conference, dermatopathy conference, and journal club conference. There are lectures in the basic sciences.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

DERM 5420 - BASIC DERMATOLOGY

Minimum Credits: 0
Maximum Credits: 0
This elective emphasizes clinical dermatology. The student will participate in our outpatient clinics at Falk Clinic, Children's Hosp, and the VA Hosp. In addition, the student may participate with hospital consultations, clinical therapeutic trials, the pigmented lesion and melanoma program, the cutaneous ulceration and rehabilitation, and the technique of Mohm's microscopic-controlled excision of skin cancer. These activities will be complemented by weekly grand rounds, Kodachrome conf, dermatopath conf, and journal club conf. There are weekly lectures in basic sciences.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

DERM 5425 - ADVANCED DERMATOLOGY

Minimum Credits: 0
Maximum Credits: 0
Students are expected to develop skills necessary to independently complete a history and physical examination, identify required laboratory studies, develop a rationale differential diagnosis, and articulate and defend an appropriate treatment plan. The didactic portion will include regular

participation in all dermatology department conferences and didactic sessions, and a weekly lecture and q and a session with the course director. Students are expected to formally present one patient at grand rounds and are encouraged to write a case report for publication. Evaluation is based on an exam given on the last day of the elective as well as clinical performance.

Academic Career: Medical School

Course Component: Clinical

Grade Component: Grad LG/SU5

Course Attributes: School of Medicine Year 4

DERM 5430 - DERMATOLOGIC AND PLASTIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

This elective will split time with plastic surgery and dermatology. Such an exposure will provide the optimal learning experience in cutaneous surgery.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5440 - DERMATOPATHOLOGY

Minimum Credits: 0

Maximum Credits: 0

Interact with dermatology and pathology residents as well as dermatopathology fellows and participate in lectures and weekly grand rounds. Participation in case review and sign out sessions. Additional slides available for optional independent study. Independently study at microscope available. Students attempt diagnosis of cases & present them to faculty. Students gain understanding of skin as a separate organ having unique pathobiologic responses. Acquire adequate diagnostic proficiency with response processes seen in dermatopathology. Final evaluation on overall performance.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

An individualized course of study may be arranged with the department of dermatology to fit the student's needs. The student will meet with a department faculty person to design a clinical course of study for a four-week period of time. A written proposal must be approved by the faculty member as well as the student's scheduling advisor. When approvals have been received, the school registrar will schedule the course and notify the department student coordinator.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5810 - DERMATOLOGY RESEARCH

Minimum Credits: 0

Maximum Credits: 0

Research projects in dermatology are available to interested and motivated students. Project areas include 1) various aspects of wound healing; 2) skin microbiology; 3) biological behavior and causes of skin cancer; 4) dermal biochemistry; 5) epidermal cell biology; 6) clinical studies; 7) mycosis fun guides and immune modulation; 8) scleroderma fibroblast study; 9) pigmented lesions and cutaneous immunology. These activities will be complemented by departmental conferences. At the end of the project, the student will present a seminar on his/her results.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5899 - INDEPENDENT STUDY DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

DERM 5900 - EXTRAMURAL DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in dermatology may be arranged at an institution other than the University of Pittsburgh School of Medicine. Arrangements must be made in accordance with the process set out in the UPSOM course catalog with all appropriate approvals to be received before the course may be added to the student schedule for credit.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Diagnostic Sciences

DIASCI 2110 - ADVANCED ORAL PATHOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course in oral pathology is to provide the student a logical approach to the differential diagnosis of oral lesions. The definitive information necessary for the establishment of a final diagnosis is then provided. The course consists of a series of lectures augmented by laboratory sessions and clinical pathologic conferences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 2140 - ADVANCED IMAGING

Minimum Credits: 1

Maximum Credits: 1

The course on advanced imaging reinforces the importance of right way of using technology and understanding the usage of advanced techniques like CT, MRI and ultrasound in dentistry. It also helps them to understand the digital radiography and its advantages and disadvantages over the film based technique. It helps them to choose appropriate imaging modality for treatment planning for procedures like implants. The diagnostic part of the course should help residents in describing, interpreting and developing most relevant differential diagnosis for the systemic and bone pathology that is seen on the radiographs. Literature component of the course will help them in knowing the latest research in the field and promotes ideas to develop research integrating imaging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DIASCI 2142 - ADVANCED ORAL PATHOLOGY 2

Minimum Credits: 1

Maximum Credits: 1

This conference provides the essential information for histologic diagnosis of oral pathologies. This individualized program provides concentrated instruction in the microscopic aspects of those oral diseases related to the specific clinical specialty in which the resident is enrolled.

Academic Career: Graduate

Course Component: Lecture

DIASCI 2282 - PATHOBIOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

Applied pathobiology provides the venue wherein residents apply pathobiology to their field of specialization. Utilizing an investigative approach, residents identify a topic of interest and demonstrate by means of a powerpoint presentation pathobiological concepts as they apply to patient care.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DIASCI 5110 - FUNDAMENTALS OF RADIOLOGY 1

Minimum Credits: 1

Maximum Credits: 1

This course introduces the student to the basic principles of radiology. Students will continue to reinforce concepts addressed in other courses, including Dental Anatomy, Periodontics, and Cariology and Caries Management. This course offers the first-year dental student instruction in the fundamentals of theory and practice that includes discussions of the following: dental radiological physics; radiologic safety as it applies to dentistry; factors that affect the image quality of radiographs and how to prevent radiology technique or artifact errors; concepts of, and equipment used in, digital radiography. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), and mandatory in-class sessions on select topics.

DIASCI 5170 - GENERAL AND SYSTEMIC PATHOLOGY

Minimum Credits: 5

Maximum Credits: 5

This course is organized to present the pathologic processes which underlie a variety of human disease states. Topics in general pathology include cell injury and cell death, inflammation and repair, hemodynamic disorders, neoplasia, and autoimmune, environmental, genetic, and pediatric diseases. Topics in systemic pathology include disease of vasculature, heart, kidneys, lungs, and blood. Oral implications of systemic disease are introduced. This course includes lectures and class discussions. The goal of teaching general pathology is to provide a foundation of the basic processes of disease, such as cellular pathology, inflammation and repair, fluid and hemodynamic derangements, and neoplasia. The study of metabolic deficiencies, environmental, pediatric and genetic disease processes is also included. The student should be able to understand inflammation and repair throughout the body, including the oral cavity. The goal of teaching systemic pathology to the dental student is to educate him/her in the diseases affecting specific organ systems such as cardiovascular, blood, hematopoietic, lymphoreticular and immune systems, respiratory, gastrointestinal, hepatobiliary, pancreatic, genitourinary, male reproductive, breast and female reproductive, endocrine, musculoskeletal and central and peripheral nervous systems. The student should complete the course with a fundamental knowledge of common systemic diseases. They should be able to identify how their patients diseases can affect dental treatment.

Academic Career: Dental Medicine

DIASCI 5171 - INTRODUCTION TO RADIOLOGY 2

Minimum Credits: 0.5

Maximum Credits: 0.5

In this course, students will continue to build on the concepts addressed in the Introduction to Radiology 1, Dental Anatomy, Periodontics and Cariology courses. This course offers the first-year dental students instruction in the fundamentals of theory and practice that include the following: 1. A working knowledge of the dental radiological technique, and interpretation as they apply to dentistry; 2. A pre-clinical laboratory exercise to develop practical skills in the area of dental x-ray procedures; 3. Self-instruction materials that cover normal radiographic anatomy. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), mandatory in class sessions on select topics, and a preclinical radiology technique rotation.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 5211 - INTRODUCTION TO RADIOLOGY PHYSICS AND BASIC INTERPRETATION

Minimum Credits: 1

Maximum Credits: 1

In this course, students will continue to build on the concepts addressed in the Dental Anatomy, Periodontics and Cariology courses. This course offers the second year dental student instruction in the fundamentals of theory and practice that include the following: 1) a working knowledge of the dental radiological physics, technique, safety and interpretation as they apply to dentistry; 2) a pre-clinical laboratory exercise to develop practical skills in the area of dental x-ray procedures; 3) self-instruction materials that cover normal radiographic anatomy; and 4) small group exercises in basic radiographic interpretation of caries and periodontium to serve as the foundation for future radiographic interpretation and patient care. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), small group interpretation exercises, and a preclinical radiology technique rotation. In-class sessions are available upon request for any topics that the class would like to review with the course director.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 5212 - ORAL AND MAXILLOFACIAL PATHOLOGY

Minimum Credits: 4

Maximum Credits: 4

The practice of dentistry requires the ability to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment. Oral and Maxillofacial Pathology is aimed at the recognition of the etiologic, clinical, radiographic, microscopic features of abnormalities, and disease processes unique to the oral perioral structures, as well as those which reflect systemic disease. Where appropriate, treatment of oral diseases will be addressed. The course integrates material learned in the basic science curriculum, including embryology, biochemistry, histology, cell biology, and physiology, and applies it to the diseased state (pathology). Where appropriate, treatment of oral diseases will be addressed. By the end of the course, you will be able to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment, which is essential to the practice of dentistry. This course includes lectures, class discussions, and case-based learning activities.

Academic Career: Dental Medicine

DIASCI 5213 - INTRODUCTION TO RADIOLOGY 3

Minimum Credits: 0.5

Maximum Credits: 0.5

In this course, students will continue to build on the concepts addressed in the Dental Anatomy, Periodontics and Cariology courses as well as Introduction to Radiology 1 and 2. This course offers the second year dental student instruction in the fundamentals of theory and practice that include the following: 1) a working knowledge of the dental radiological interpretation as they apply to dentistry; 2) a pre-clinical/shadowing

exercise to develop practical skills in the area of dental x-ray procedures; and 3) small group exercises in basic radiographic interpretation of caries and periodontium to serve as the foundation for future radiographic interpretation and patient care. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), small group interpretation exercises, and a pre-clinical/shadowing exercise on radiology technique. In-class session is available upon request for any topics that the class would like to review with the course director.

DIASCI 5214 - ORAL AND MAXILLOFACIAL PATHOLOGY AND RADIOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

The practice of dentistry requires the ability to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment. Oral and Maxillofacial Pathology and Radiology are aimed at the recognition of the etiologic, clinical, radiographic, microscopic features of abnormalities, and disease processes unique to the oral perioral structures, as well as those which reflect systemic disease. Selection criteria for prescribing radiographs and advanced imaging modalities are incorporated to prescribe the right imaging and to be able to diagnose on all appropriate methods of dental related imaging. Where appropriate, treatment of oral diseases will be addressed. The course integrates material learned in the basic science curriculum, including embryology, biochemistry, histology, cell biology, and physiology, and applies it to the diseased state (pathology). Where appropriate, treatment of oral diseases will be addressed. By the end of the course, you will be able to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment, which is essential to the practice of dentistry. This course includes lectures, class discussions, and case-based learning activities.

DIASCI 5320 - MANAGEMENT OF DENTAL EMERGENCIES

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn the principles and procedures for the examination, diagnosis, treatment and documentation of the patient with a dental emergency. Students will be provided with numerous examples of dental emergencies that encompass the various dental disciplines. The goal of this course is to provide students with the foundational knowledge needed to properly evaluate and treat dental emergencies in an expeditious and efficient manner. Students will apply the skills acquired in this didactic course when treating patients during their clinical rotations in the Emergency Care Clinic. This knowledge and experience is intended to help the student manage their patients while in dental school, and after graduation when in a private practice setting. This course includes lectures and class discussions.

DIASCI 5373 - RADIOLOGY, IMAGING AND INTERPRETATION 2

Minimum Credits: 1

Maximum Credits: 1

In this course, students will build on the concepts addressed in the anatomy, dental anatomy, oral surgery, oral pathology, and radiology courses taken previously. This course follows DIASCI 5241, (Radiology, Imaging and Interpretation 1), a basic interpretation course which focused on selection criteria to appropriately prescribe radiographs and the identification of the most clinically relevant radiographic pathology (including caries, periodontal conditions, cysts, tumors, systemic conditions, and fibro-osseous conditions). This course is designed to familiarize students with technological advancements in the field of radiology. Application of those advancements to the appropriate prescription of radiographs in a clinical

setting will be addressed. Small group interpretation exercises will be implemented throughout the course to aid student learning. The pathology component of the cases will help students develop an understanding of the disease process and correlate disease with radiographic findings. Students will develop an understanding of the various disease processes of the head and neck and will develop skills to prescribe the appropriate imaging technique for further analysis of the disease process. This course will also serve as a review of radiographic features of intraoral pathology, basic imaging principles, and their applications for the National Board Dental Examination (NBDE) Part II. The course includes lecture, class discussions, and small group interpretation exercises.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DIASCI 5389 - CLINICAL EMERGENCY 1

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide clinical experiences in the area of emergency dentistry for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in providing care to dental patients with emergent needs at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the patient with emergent dental needs.

Digital Studies and Methods

DSAM 3000 - DIGITAL STUDIES AND METHODS: SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This seminar addresses the relationships between digital computing and the humanities and allied social sciences, both as a subject of both historical interest and contemporary practical concern. We engage in ongoing theoretical discussions but also fully engage with what it takes to implement interpretive research in the digital environment. Students leave this class having gained a personally significant understanding of current debates in the field of digitally-oriented interpretive research as well as having built a digital project of their own. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3100 - DIGITAL STUDIES AND METHODS: PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course provides a studio-based, semi-structured learning environment in which students focus exclusively on producing and sharing their own, more advanced, work using digital computing within the context of the humanities and allied social sciences. In this practicum, the students begin to investigate more fully the particular digital tools and methods that seem most promising to their longer-term research agenda. It is designed as a collaboration with the university library system, co-led by and taught in digital scholarship services. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3200 - DIGITAL STUDIES AND METHODS: CAPSTONE

Minimum Credits: 3

Maximum Credits: 3

This course, which serves as the final required course for the graduate certificate in digital studies and methods, will require three major efforts on the part of the student. First, the student will undertake (or substantially add to) a large-scale, independent research project that reflects the mindful use of digital technologies in their field of research that contributes meaningful scholarly knowledge. Second, they will produce an annotated portfolio of the work that they have done during the DSAM certificate that also includes methodological reflections on the use of digital methods in the humanities and allied social sciences. Finally, they will present this portfolio and their capstone work at the end of the term in a DSAM showcase. This course has prerequisites: both DSAM 3000 and DSAM 3100

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3999 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 3

This course allows students to work on individual digital projects under the direction of a faculty advisor. This course requires instructor approval and is used only in exceptional circumstances for the graduate certificate in digital studies and methods.

Economics

ECON 2000 - THESIS AND RESEARCH MA DEGREE

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

ECON 2020 - INTRO TO ECONOMETRIC THEORY

Minimum Credits: 3

Maximum Credits: 3

This course covers elements of inferential statistics necessary for the study of econometric theory. It emphasizes estimation theory and its applications. Illustrations are drawn from several areas of economics. Students are expected to understand the theory of statistical inference mathematically as well as intuitively when applied to economic problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

ECON 2100 - ADVANCED MICROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Theories of consumer behavior, producer behavior, market equilibrium, industry structure.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

ECON 2110 - ADVANCED MACROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

The course covers the comparative static approach to macroeconomics. The objectives include both an understanding of past and recent literature on theory and empirical evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

Course Attributes: Global Studies

ECON 2120 - ADVANCED MICROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This course will present the Arrow-Debreu-McKenzie Theory of competitive equilibrium, the theory of imperfect competition, and economics of uncertainty. The presentation will be self-contained, including a discussion of the mathematical techniques used. As time permits, special topics will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 2130 - ADVANCED MACROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

The first part of the course will be devoted to studying models of economic growth and the role money plays in the growth process. The second part of the course will consist of an introduction to the macro-economic rational expectations literature. Both theoretical as well as empirical contributions will be surveyed and discussed in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 2150 - GENERAL ECONOMETRICS

Minimum Credits: 3

Maximum Credits: 3

Surveys standard econometric models, their estimation, hypothesis testing and other inferential problems of, among others, (1) classical linear regression, (2) generalized linear regression models, including sur an pooled regression models, (3) dynamic models with spherical and nonspherical errors, (4) qualitative and limited dependent variable models, (5) simultaneous equations models--static and dynamic, (6) use and analysis of econometric models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2170 - EMPIRICAL METHODS 2

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods to cope with selection bias and external validity (e.g.: imperfect IV, plausibly exogenous IV, weighting matrix), decomposition methods, multiple hypothesis testing, methods for spatial analysis (ARGIS), causal mediation analysis, an introduction to machine learning and big data in economic research, discrete choice models and dynamic choice model applications. Many examples will come from development, health, labor, public economics, and political economy, but the material will be useful to any applied researcher. The course will focus also on the implementation of econometric techniques learning the basic tools of programming and coding. We will use STATA, ARCGIS, R, and Matlab. The goal of this class is to provide students with the tools needed to become critical readers of empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2230 - PUBLIC ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This is a survey course of topics in public finance. The purpose is to acquaint students with a broad range of classical and contemporary issues in

public finance. The course will be divided into several topic areas; taxation; expenditure analysis; economics of political processes; control of externalities; regulation; and fiscal federalism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2250 - INDIVIDUAL RESEARCH

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

ECON 2320 - TOPICS IN URBAN AND ENVIROMENTAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

The first portion of the course is devoted to examining the allocation of resources within and between urban areas. The second portion of the course examines the relationship between this resource allocation and various urban problems including poverty, discrimination, housing, transportation, and urban public finance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2400 - LABOR MARKET ANALYSIS 1

Minimum Credits: 3

Maximum Credits: 3

This course covers topics in areas of labor economics such as: labor supply; household production and labor force participation; labor demand; minimum wages; schooling and earnings; human capital externalities; wage inequality, and skilled biased technological change. The purpose of the sequence (this course and econ 2410) is to familiarize students with the economic models and empirical strategies used in the labor economics literature, and teach them to critically analyze empirical research in preparation of doing their own applied work. By the end of the course, students should have the background necessary to start developing their own independent research interests in the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2410 - LABOR MARKET ANALYSIS 2

Minimum Credits: 3

Maximum Credits: 3

This course covers topics in areas of labor economics such as: immigration; labor market discrimination; compensating wage differentials; incentives, effort and monitoring; efficiency wages; and the economics of marriage and childbearing. The purpose of the sequence (econ 2400 and this course) is to familiarize students with the economic models and empirical strategies used in the labor economics literature, and teach them to critically analyze empirical research in preparation of doing their own applied work. By the end of the course, students should have the background necessary to start developing their own independent research interests in the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2450 - ECONOMIC HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course explores the economic history of the United States from European settlement up to the recent past. Topics covered will include: the origins of American industrial growth; the political economy of the constitution and constitutional ratification; economic and environmental change; the welfare effects of industrialization; the industrial organization of the great trusts, such as standard oil and American tobacco; the sources and consequences of regulatory change; and the great depression and the new deal. The course will train students in the tools and methods of the economic historian. In this way, the course will consider a wide body of theory and empirical tools that can be applied to the study history and historical change. The course readings will be mix of old classic articles and more recent work.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2530 - ECONOMIC DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

A comprehensive survey of the major analytical literature of development economics. Covers approaches to and theories of development; dualistic models of the development process; the impact of the international economy; and development planning. Both major theoretical literature and empirical findings in each area are covered. Primary focus will be on the analytical techniques and literature, though some time will be spent on discussion of researchable topics in the area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2540 - GROWTH & POLICY MODELS OF ECON

Minimum Credits: 3

Maximum Credits: 3

For students interested in the more formal mathematical approaches to economic development and to related quantitative methods for planning and decision making. Topics will include applications of growth theory, input-output analysis, linear programming, computable general equilibrium, and project analysis in a development context. Problem exercises will be assigned.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2710 - EMPIRICAL METHODS II

Minimum Credits: 3

Maximum Credits: 3

This course will cover cutting-edge methods typically used in applied micro-economic research and it is designed to help you learn how to apply the econometric techniques learned in the econometrics sequence. It is a natural prosecution of the empirical methods class. The course will cover methods for spatial analysis introducing students to the use of ArcGIS for applied microeconomic research. Furthermore, it will introduce students to scraping and data mining techniques using Python and R. The goal of this class is to provide students with the tools needed to become critical readers of empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2730 - SEMINAR EXPERIMENTAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

There is a small, but rapidly growing literature in which behavioral experiments are used to test central propositions of various economic theories. This course will review the experimental literature that exists in several areas of economics, including industrial organization, social choice and preference revelation, behavior of decentralized markets and bargaining. A number of experiments will be replicated. Students will be expected to design their own experiments.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2801 - COMMUNICATING ECONOMIC INSIGHTS

Minimum Credits: 3

Maximum Credits: 3

Communicating Economic Insights helps students develop written and oral communication and presentation skills essential for career success. Students practice writing documents for a variety of professional audiences, collaborative writing as well as multi-author revising skills. Students also learn presentation skills to enhance clear communication of ideas. Written and oral skills will emphasize the importance of one's audience as it determines style, tone, organization, and depth of concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2811 - INDIVIDUALS, FIRMS, AND MARKETS

Minimum Credits: 3

Maximum Credits: 3

Individuals, Firms, and Markets provides a rigorous introduction to contemporary microeconomic theory, with a focus on optimization techniques, the development of modeling skills and critical thinking strategies needed to understand and evaluate a wide variety of economic contexts. Topics covered include consumer and producer theory, decision making under uncertainty, choice over time, welfare analysis, competitive markets, monopoly, externalities, and public goods. The course stresses application of theory to economics and business problems, and a substantial amount of class work is devoted to examining scenarios based on such problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2812 - INCENTIVES AND INFORMATION

Minimum Credits: 3

Maximum Credits: 3

Incentives and Information are central to modern economics, and this course studies the question of how individuals and firms respond to incentives. These incentives are shaped, in large part, by the information possessed by each relevant party. In this course we study how such informational issues can lead to market inefficiencies, and what can be done to exploit or combat them. How should a seller design an auction, or the products available, to extract as much revenue as possible from buyers? How can firms design compensation schemes to get efficient effort from employees? What are the limits of what can be achieved through regulation? Students will learn how to address these and other similar questions using rigorous economic tools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2813 - GLOBAL ECONOMICS AND FINANCE

Minimum Credits: 3

Maximum Credits: 3

Global Economics and Finance presents the main topics in modern macroeconomics and touches important questions in international economics and finance. Among the first set of topics, the course covers economic growth and business cycles, unemployment and labor market frictions, inequality, nominal frictions and monetary policy, and fiscal policy. The course also studies international linkages, including global imbalances, capital account sustainability, international capital market integration, international trade, nominal and real exchange rate determination, external debt, and the relationship between inequality and international trade.

Grade Component: Grad LG/SNC Basis

ECON 2814 - EVIDENCE-BASED ANALYSIS IN LABOR, PUBLIC AND HEALTH ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

Evidence-Based Analysis in Labor, Public and Health Economics affords an opportunity for students to further develop their MQE toolkits through exposure to both seminal and frontier applied research on a diverse set of topics such as education, environmental sustainability, the non-profit sector and employment compensation. In addition to reviewing extant applied research, students will hone their own analytical approach working both individually and in groups to apply economic thinking and analysis to a broad set of business and policy problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2821 - QUANTITATIVE METHODS

Minimum Credits: 3

Maximum Credits: 3

Quantitative Methods presents a framework for data-driven decision making under conditions of uncertainty and partial information, and it covers data analysis methods and techniques used in economic applications. The class will use R throughout; among the topics covered are graphical and descriptive data analysis, conditional probability, random variables, distribution functions, sampling, estimation, confidence intervals, hypothesis testing, and an introduction to regression methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2822 - ECONOMIC INFERENCE FROM DATA

Minimum Credits: 3

Maximum Credits: 3

Economic Inference from Data provides hands-on experience with applied econometric methods, allowing the student to establish empirical relationships of cause and effect. The course will cover advanced methods in regression analysis as well as a full toolkit of quasi-experimental methods that will allow the study of causal relationships even in the absence of a randomized control trial. The course includes hands-on empirical applications to solidify the concepts, with many examples from business and public policy settings. It will also focus also on learning the basic tools of programming and coding in R.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2823 - APPLICATIONS OF ECONOMIC ANALYSIS TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

Applications of Economic Analysis Techniques moves beyond ordinary regression to look at more-specialized models and data that are important to economists. The course expands students' knowledge of econometric methods to account for qualitative and selected dependent variables via maximum likelihood, and presents more structured estimation models. Throughout, the focus is on building students' experience with more advanced techniques, both for estimation and inferences; their understanding of the methods' pros and cons of these methods; and, importantly, how best to extract insights from them to aid in decision making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2824 - BIG DATA AND FORECASTING IN ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

Big Data and Forecasting in Economics covers cutting-edge methods typically used in statistical learning and is designed to help students learn how to apply the econometric techniques learned in the previous courses big data environments. The course introduces students to machine learning, text learning analysis, as well as scraping and data mining techniques using R. Some methods encountered in this course are classification, resampling, regularization, tree-based methods, supporting vector machines, deep learning, and unsupervised learning.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2841 - DATA DESIGN FOR ECONOMIC APPLICATIONS (CAPSTONE)

Minimum Credits: 3

Maximum Credits: 3

Data Design for Economic Applications (Capstone) helps student formulate questions that are critical for an organization and then, guided by economic theory, deliver informative answers using data. The first portion of the course rounds out the data science toolbox of students by training them in techniques for data creation, including survey design and the design and implementation of randomized control trials. The second portion of the course provides students with examples of problems facing real organizations, so they can apply what they have learned in the MQE program, working in groups to identify questions, analyze data, and present results.

Academic Career: Graduate
Course Component: Lecture

ECON 3001 - INTRO TO MATHEMATICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Intensive mathematics preparation for first year Ph.D. students.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Economics (PHD)

ECON 3010 - MATHEMATICAL METHODS OF ECONOMIC ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course introduces the key mathematical tools needed to do economic research: static and dynamic optimization, fixed point theorems, differential equations among others.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: ECON 3001; PLAN: Economics (PhD)

ECON 3020 - ECONOMETRIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

This course covers elements of inferential statistics necessary for the study of econometric theory. It emphasizes estimation theory and its applications. Illustrations are drawn from several areas of economics. Students are expected to understand the theory of statistical inference mathematically as well as intuitively when applied to economic problems.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3030 - MICROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Theories of consumer behavior, producer behavior, market equilibrium, industry structure.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3040 - MACROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Introduction to dynamic macroeconomic theory with emphasis on dynamic optimization, dynamic competitive equilibria, and solution methods for dynamic models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3050 - ECONOMETRIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

Surveys standard econometric models, their estimation, hypothesis testing and other inferential problems of, among others, (1) classical linear regression, (2) generalized linear regression models, including sur and pooled regression models, (3) dynamic models with spherical and nonspherical errors, (4) qualitative and limited dependent variable models, (5) simultaneous equations models--static and dynamic, (6) use and analysis of econometric models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3060 - MICROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This course will present the Arrow-Debreu-McKenzie Theory of competitive equilibrium, the theory of imperfect competition, economics of uncertainty, and game theory. The presentation will be self-contained, including a discussion of the mathematical techniques used.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3070 - MACROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

The first part of the course will be devoted to studying models of economic growth and the role money plays in the growth process. The second part of the course will consist of an introduction to the macro-economic rational expectations literature. Both theoretical as well as empirical contributions will be surveyed and discussed in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3080 - EMPIRICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

This course will cover empirical methods typically used in applied microeconomic research and it is designed to help you apply the techniques learned in the econometrics sequence. We will focus on techniques used in applied microeconomics to identify causal estimates. The course will cover data issues and distributional estimators in some detail along with matching and propensity scores, local regressions, instrumental variables, regression discontinuity designs, and inference issues. Many examples will come from development, health, labor, public economics, and political economy, but the material will be useful to any applied researcher. The course will focus also on the implementation of econometric techniques learning the basic tools of programming and coding. The goal of this class is to provide students with the tools needed to become critical readers of

empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

ECON 3220 - RESEARCH METHODS IN ECONOMICS

Minimum Credits: 1

Maximum Credits: 1

This is a mandatory course for second-year PhD students. The course will introduce students to strategies for identifying interesting research ideas, to determine whether the idea is worth pursuing, to effectively review the literature, and to plan how to conduct the research. Insights into how these strategies change across fields within economics will be provided by relevant faculty guests. Other topics discussed in the course will include the typical difficulties involved in conducting research and how to address them; how to deal with advisors; academic etiquette; techniques for presenting work in progress at seminars; and how to write and submit academic papers. Requirements will include the drafting of the second-year paper proposal (PhD Comprehensive Research Paper) and the selection of two faculty readers.

Academic Career: Graduate

ECON 3330 - TOPICS IN ECONOMIC HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course explores the economic history of the United States from European settlement up to the recent past. Topics covered will include: the origins of American industrial growth; the political economy of the constitution and constitutional ratification; economic and environmental change; the welfare effects of industrialization; the industrial organization of the great trusts, such as standard oil and American tobacco; the sources and consequences of regulatory change; and the great depression and the new deal. The course will train students in the tools and methods of the economic historian. In this way, the course will consider a wide body of theory and empirical tools that can be applied to the study of history and historical change. The course readings will be a mix of old classic articles and more recent work.

ECON 3430 - TOPICS IN LABOR AND HEALTH ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This course will cover frontier applied work in labor and health economics with a particular focus on the economics of family, economic behavior related to children, child health and child economic and social well-being, and the economics of risky health behaviors. The first part of the course will be focused on the economics of family and children. The second part of the course will be focused on health capital emphasizing the long-run effects of health at birth, the economic models of determinants of health, and the economics of risky health behaviors. The course will cover a range of different methods from structural analysis of marriage markets and health investments to reduced-form analysis of policy interventions, and experimental work. We will also explore the recent use of machine learning methods in these domains. There will be data-intensive hands-on sessions devoted to the replication of some of the key studies in the literature.

ECON 3650 - ADVANCED ECONOMETRICS 1

Minimum Credits: 3

Maximum Credits: 3

This course is the first of two courses in the graduate advanced econometrics field. It consists of an introduction to the econometric analysis of time series. Topics include: Exogeneity and causality; Likelihood inference (estimation and testing); Monte Carlo simulation; Optimization; Stationarity; VAR, MA and ARMA processes; Dynamic equations; Multipliers; Unit roots; Cointegration; Error Correction Mechanisms (ECMs); Dynamic state-space models; Kalman filter, Sequential importance sampling and particle filters.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3660 - ADVANCED ECONOMETRICS 2

Minimum Credits: 3

Maximum Credits: 3

Covers qualitative choice models, censored and truncated models, duration models, time series models - univariate and multivariate, causality analysis, dynamic models, cointegration, time series macroeconometrics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3710 - TOPICS IN MICROECONOMIC THEORY

Minimum Credits: 3

Maximum Credits: 3

This is an advanced level course in microeconomic theory. It deals with a broad range of topics, some drawn from recent papers, chosen to prepare students to tackle the literature on their own.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3720 - POLITICAL ECONOMY

Minimum Credits: 3

Maximum Credits: 3

In this course, we will take a formal look at various environments where a group of individuals (committee, society, congress, etc) takes a binding decision through some institutional mechanism (consensus, elections, jury deliberations, legislative bargaining etc). The course will have a strong formal, positive focus on how the varied political, social and legal institutions that define the 'rules' of collective decision-making determine the nature of collective outcomes. On the normative side, the course would focus on certain 'desirable properties' (e.g. Respecting minority preference) of collective decision-making and analyze whether and to what extent the existing institutional arrangements satisfy such properties. While we shall start out using concepts of co-operative game theory, for most part of the course we will be in the realm of non-cooperative game theory. This course will provide a starting point for research in formal political theory and political economy. As such, it might be of interest to students of both economics and political science.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 3750 - TOPICS IN MACROECONOMICS

Minimum Credits: 3

Maximum Credits: Global Studies

This course studies various dimensions of inequality from a macroeconomic perspective, covering topics in household finance, monetary economics, labor markets, technological change and modern business cycle research. The focus is on using empirically grounded quantitative aggregate models with heterogeneous agents or firms to tackle important questions in modern macroeconomics. The course will also provide an introduction to a variety of computational tools and methods, including structural estimation and machine learning.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

ECON 3810 - COMPUTATIONAL METHODS ECONOMICS

Minimum Credits: 3
Maximum Credits: 3

This class is intended to familiarize Ph.D. students with numerical methods to solve economic models. Topics covered depend on instructor. Example topics include approximation methods, fixed point problems, solving functional equations like dynamic programs, Monte Carlo methods. Such methods are used in differentiated product models in industrial organization, political economy models in macroeconomics, and dynamic private information models. Heavy use is made of the computer.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3820 - INTERNATIONAL TRADE

Minimum Credits: 3
Maximum Credits: 3

This course is a rigorous introduction to the pure theory of international trade. The material requires a background in microeconomic theory.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3830 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3

Current topics of particular interest to economics graduate students are discussed and analyzed.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3900 - COMPREHENSIVE PREPARATION

Minimum Credits: 1
Maximum Credits: 12

Graduate students pursue study independently to prepare for comprehensive examinations.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ECON 3902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12

Students pursue study or research under the direct supervision of a faculty member.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECON 3950 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Education

EDUC 2000 - PSYCHOLOGY OF LEARNING AND DEVELOPMENT FOR EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on those areas of development and learning which have relevance for educators. The course covers preschool through old age. For each age range, typical behaviors and competencies that are learned or developed are considered from a number of domains (cognitive, affective, psychomotor, social). Attention is also given to appropriate research methods. An interactionist perspective is utilized; the course may be team taught.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2003 - RESEARCH METHODS IN EDUCATION POLICY AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course presents psychological theory, research and analytical methods applicable to the variety of settings in which adults learn and to the variety of objectives adults have for learning. The roles of memory, prior knowledge and self-regulated learning in these and other task domains are considered. Students should emerge with an understanding of how to analyze what is involved in selected domains of learning and how to identify the more important questions for research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2007 - HUMAN LEARNING

Minimum Credits: 3

Maximum Credits: 3

Presents an overview of theories and of kinds of learning that educational professionals should know. Also considered are recent developments in cognitive psychology, such as information processing and knowledge-based approaches in transition from novice to expert, and from poorly to well adjusted states.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2008 - DEVELOPMENT: CONCEPTION THROUGH EARLY CHILDHOOD

Minimum Credits: 3

Maximum Credits: 3

Focuses on developmental pathways from conception through early childhood within contexts of family, daycare/school, community and culture. Pathways are considered with regard to developmental changes in transactions between individuals and social life conditions, with focus on patterns of change in participation in social-cultural practices. Besides a review of current literature, students will be engaged in qualitative investigations of the social lives of young children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 2009 - DEVELOPMENT: MIDDLE CHILDHOOD/ADOLESCENCE

Minimum Credits: 3

Maximum Credits: 3

Course focuses on developmental pathways from middle childhood through adolescence (ages 7-18) within the contexts of family, school, community and culture. Pathways are considered in regard to developmental changes in transactions between individuals and social life conditions, with regard to patterns of change in participation in social cultural practices. Students will be engaged in qualitative investigations of the social lives of children and adolescents.

Academic Career: Graduate

Grade Component: Grad Letter Grade

EDUC 2011 - CULTURALLY RESPONSIVE PEDAGOGY

Minimum Credits: 3

Maximum Credits: 3

The course, culturally responsive pedagogy, introduces students to theory, research, and especially practice related to developing and enacting curriculum and instructional practices that respond to the social context in which they (will) work. The course covers general principles and approaches to culturally responsive teaching such as how teachers develop meaningful relationships with students, how teachers learn from and about a school and local community, how teachers develop and implement culturally responsive classroom management, and how teachers develop expectations for students that maximize their capacity. In addition, the course will assist students in learning about and developing culturally responsive curriculum and pedagogy in their different content/subject matter areas (such as mathematics, science, art, language arts, and social studies). A recurrent and central question of the course is: how do teachers develop culturally responsive instructional practices in their particular disciplinary domain to maximize students learning opportunities?

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 2046 - SPECIAL TOPICS-THE URBAN ENVIRONMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with an introduction to the social, historical, and political factors shaping urban life and communities in the United States. The course is primarily, but by no means exclusively, intended for education students and is designed to help students develop a more sophisticated understanding of the contexts in which urban education occurs and the relationship between urban processes and urban education. More specifically, the course will focus on the history of cities, including 20th and 21st century urban transformation, the development and persistence of residential segregation, urban poverty, the criminalization of urban communities, immigration, and trends in theory and practice around urban redevelopment. In all cases, we will consider the implications for urban families, communities, and schools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2088 - URBAN EDUCATION REFORM

Minimum Credits: 3

Maximum Credits: 3

The course is designed to provide both a background understanding of urban education, as well as expose students to particular urban education reforms. Students will examine selected historic and contemporary reform efforts in education, in particular studying the theories of change, implementation challenges and critiques associated with these different reforms as they apply to urban districts and schools. We will look at the theoretical underpinnings of particular reforms, as well as why education policies have succeeded or failed, and the consequences of these outcomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2089 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 12

An experimental course with a flexible curriculum oriented to special research topics or current issues of concern to educators. Topics vary.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2100 - EDUCATION AND SOCIETY

Minimum Credits: 3

Maximum Credits: 3

The course focuses on the interaction between educational institutions and their social context. Situated in the field of study known as social foundations of education, the content reflects disciplinary methods in the examination of such policy issues as the role of the schools in social change, the influence and consequences of formal and non-formal educational forces, and the economics and politics of school reform efforts. Students are challenged to consider the relationships between culture and power and the value-laden character of all educational endeavors. Thus the role of schooling is considered in cultivating the habits necessary for democratic citizenship which include ongoing efforts to secure equitable and just social relations, and to advance the common good.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EDUC 2102 - HISTORY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Both a chronological order and a thematic/conceptual investigation will constitute the structure of this course by juxtaposing past and contemporary historical developments. Emphasis will be placed on the ideas that prevailed in different time periods. Conflicting organizational arrangements, competing theories, and growing external pressures in different eras will be traced and analyzed in order to develop an educational historiography.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2105 - SOCIOLOGY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

An analysis of the development of modern social institutions with special reference to the sociology of the schools. The school is studied as a social system and in the context of broad social organization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2107 - EVIDENCE BASED HEALTH PROGRAM PLANNING

Minimum Credits: 3

Maximum Credits: 3

The course focuses on the roles of schools in responding to the health needs of children in collaboration with the family and community. Examined is how schools and communities compliment and support health and social services needed to overcome the conditions that put a young person at educational risk.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2109 - GENDER IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This introductory course provides an overview of anthropological approaches to the study of education. Ethnographic cases drawn from many cultures, knowledge systems, and time periods help to provide a broad, holistic view of education in diverse community and institutional contexts. Modules may include: nurturing a sense of place; comparing folk, popular, and elite cultures; understanding cultural continuity and change; celebrating rituals and holidays; fostering cultural resilience and responsive reform policies; framing multicultural education; and appreciating the sociolinguistics of schools and home. Student's have opportunities to participate in authentic schooling activities, to draft public advocacy pieces, to create team presentations, and to refine a personalized synthesis of a topic of interest. Anthropological field research methods are discussed as a means to craft compelling analytical accounts, but research training is not part of this course

Academic Career: Graduate

EDUC 2112 - POLITICS AND HISTORY OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course surveys the perennial forces which have shaped the character of America's colleges and universities. Institutional control and governance. Curricular goals and organization, and faculty and student life are examined against the background of political, economic, religious, social, and intellectual developments in American culture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2200 - DISCIPLINED INQUIRY

Minimum Credits: 3

Maximum Credits: 3

This course deals both with methods used in educational research and with the underlying theories, assumptions, and limitations. Students will do various inquiry activities, including sampling, observation and other data collection activities, as well as critical analysis of literature relevant to an important educational problem. These inquiry activities and study provide a foundation for further study of epistemological issues on which

educational research and theory are based.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2201 - INTRODUCTION TO RESEARCH METHODOLOGY

Minimum Credits: 3

Maximum Credits: 3

Introduces basic language and concepts of empirical research with emphasis on the applicability of research methodology (statistics, measurement, design, and evaluation) for improvement of professional practice in education.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EDUC 2205 - FIELD METHODS

Minimum Credits: 3

Maximum Credits: 3

Designed to acquaint students with basic ethnographic field work techniques. Topics addressed include taking and managing field notes on participant-observation and use of archival materials. There will also be some discussion of the relationship among research design, data collection, and data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EDUC 2250 - PARTNERING WITH PEERS

Minimum Credits: 3

Maximum Credits: 3

This course helps students in early care and education in developing their knowledge base of Infant Mental Health through guided lectures, community sharing and real-world applications. Overarching goals: Build and strengthen community among early care and education professionals, increase Infant Mental Health knowledge, and advance toward Infant Mental Health endorsement requirements.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EDUC 2300 - DIGITAL MEDIA FOR LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course provides opportunities for graduate learners to explore, examine, reflect, and discuss critical learning theories that inform how we select and use digital media and technology. The course includes discussion and reflections on different digital integration models. It enables you to consider digital media based on four guiding principles "place, pedagogy, praxis, and possibility" (Bell, 2021). We will examine the digital media application and equity, accessibility, and criticality. You will have the opportunity to disseminate your strategies for and experiences using digital media and technology. You will create content using select digital media and technology, receive feedback from instructors and colleagues, and reflect on how you could revise your creations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2301 - ONLINE PEDAGOGY AND PRAXIS

Minimum Credits: 3

Maximum Credits: 3

We will critically examine and discuss online pedagogical theories that inform instructional design, planning, activities, and assessment strategies.

We will explore and discuss instructional design (ID) models and current shifts in the field toward criticality, equity, and justice-oriented praxes. We will ask critical questions about the role of instructional design (ID) in liberatory pedagogy and praxis; examine and reflect on different online learning engagement strategies. We use online pedagogies to guide the design and creation of online content using digital media and critically reflect on our creations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2302 - CRITICAL DIGITAL LITERACIES, SCHOOLING, AND IDENTITY

Minimum Credits: 3

Maximum Credits: 3

This course will examine the relationship between digital literacies, schooling, and identity in relation to an evolving digital media landscape. We will consider what it means to read and write, the world and the word, in a digitally constructed reality. We will collaboratively explore the deictic, participatory, networked, global, and multimodal nature of digital literacies and the implications for classrooms and other educational contexts. To do so, we will critically examine how literacies are situated and how these sociocultural understandings illuminate issues of power and privilege. This course will be grounded in critical praxis, and therefore you will learn to compose and deconstruct a range of digital artifacts (e.g. digital stories, games, podcasts), engage in critical analysis of digital artifacts, and think about how to design digital experiences to nurture learning and literacy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 2303 - TECHNOLOGY IN CONTEXT

Minimum Credits: 3

Maximum Credits: 3

In this course, we will engage in critical discourse about the historical roots, present-day manifestations, and speculative futures of technological innovations. We will explore and be in conversation with scholarly texts and media that provide a critical lens on the values, ideologies and social structures encoded in technological systems. Based on this foundation, we will interrogate applications of technology in our everyday lives and education spaces, and pursue lines of inquiry about the implications of these technologies on society. Our scholarship will build on the wealth of research conducted by women and people of color to analyze the implications of everyday technologies across race, gender, class, ability and other intersections of identity. We will explore a broad range of topics, including algorithms and artificial intelligence (AI), digital surveillance and science fiction. Our goals will be to follow our questions to find new questions, play with ideas, think deeply, and create scholarly artifacts that grapple with technology in the context of our collective humanity.

Academic Career: Graduate

Course Component: Lecture

EDUC 3000 - ADVANCED APPLIED STATISTICAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course will focus on approaches to the analysis of qualitative data. It is designed for students who have some experience with qualitative field research methods (introductory coursework or project experience) and have a set of qualitative data they are interested in analyzing for their own research. The principal aims of the course are to: (1) enable you to make informed and well-documented choices regarding the analysis of qualitative data that is to "establish a transparent path of inference" in your analysis and writing; and (2) explore a range of analysis strategies, techniques and tools. The course has two primary strands. The reading strand will introduce readings about qualitative analysis that delve into methodological issues, technical aspects of various approaches to qualitative analysis, validity and reliability, and issues related to writing and presentation of qualitative research. We will also examine examples of published qualitative analysis for their methodological and presentation choices. The second strand will be a practicum segment included in each course session that will provide time for consultation on your own work in small groups.

EDUC 3001 - PRACTITIONER INQUIRY 1: THE SCIENCE OF IMPROVEMENT

Minimum Credits: 3

Maximum Credits: 3

Foundations 1 and Practitioner 1 represent an integrated 6-credit experience that is designed to help you begin your doctoral adventure. The courses provide an understanding of becoming a Scholarly Practitioner and the tools to identify, frame, and consider ways to thoughtfully engage in systematic inquiry focused on important Problems of Practice in education. Practitioner Inquiry focuses on Improvement Science, our signature method in the EdD. At the center of practitioner inquiry is the ability to use data to understand the effects of innovations that seek to improve problems found in practice. It is the process of posing significant questions, using various research, theories, and professional wisdom, and designing innovative solutions to address complex problems of practice.

Academic Career: Graduate

EDUC 3002 - FOUNDATIONS 1: BECOMING A LEADER SCHOLAR PRACTITIONER

Minimum Credits: 3

Maximum Credits: 3

Foundations 1 and Practitioner 1 represent an integrated 6-credit experience that is designed to help you begin your doctoral adventure. The courses provide an understanding of becoming a Scholarly Practitioner and the tools to identify, frame, and consider ways to thoughtfully engage in systematic inquiry focused on important Problems of Practice in education. Foundations 1 will help you establish your identities as scholarly practitioners and leaders. Scholarly practitioner is defined by the Carnegie Project on the Education Doctorate as one who blends practical wisdom with professional skills and knowledge to name, frame, and solve problems of practice; uses practical research and applied theories as tools for change; addresses problems of practice by collaborating with key stakeholders, including the university, the educational institution, the community, and individuals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3003 - FOUNDATIONS: LEADERSHIP IN GROUPS AND ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the leadership of pre-20 institutions, and other educationally-related entities in an environment characterized by socioeconomic, political, technological, and demographic change. It examined the breadth of leadership theories and styles in education, including traditional, entrepreneurial, behavioral, and relationship-based models. Course participants will learn how to lead system- and institutional-level changes, drawing upon strategic, human resources, financial management, and quality assurance skills. Emphasis is given to leadership models that focus on student-centric solutions, sustainable excellence, equity and social justice within education institutions at all levels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3004 - FOUNDATIONS: CONTEXTS OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course is an overview of the structural relationships informing education and educational systems. We will examine the historical and philosophical roots of education and analyze the nature of power, culture, resources, and identity in educational contexts. Throughout this course, we will promote increased understanding and ability to articulate the role of structural and lived contexts in assessing and developing leadership, policy, practice, interventions, and outcomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3005 - FOUNDATIONS: POLICY AS A LEVER FOR CHANGE

Minimum Credits: 3

Maximum Credits: 3

Students in this core course will learn the principles of policy development; experience the views of decision-makers about how public policies are created; highlight notable examples of both effective and ineffective policies in education, human services, and healthcare; critically examine policies which are evident in local, national, and international realms for critical examination; and respond to problem-based learning scenarios to form and modify real-world examples of policies and regulations in education and related settings; and understand the links among effective policy, leadership, advocacy for children and families, and systems reform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3006 - PRACTITIONER INQUIRY 2

Minimum Credits: 3

Maximum Credits: 3

The course will introduce concepts, tools and methods of quantitative analysis commonly used in research. The course will emphasize real world applications, including data preparation and analysis. Some concepts include: variables and their measurement ' measures of central tendency and variability; sampling; tests of statistical significance; causal inference and research design; data reduction; bivariate relationships: correlation and cross-tabulation; multivariate relationships: inference using regression analysis

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3007 - PRACTITIONER INQUIRY 3

Minimum Credits: 3

Maximum Credits: 3

The course will introduce approaches, strategies, and practices commonly used in qualitative research. The course will emphasize real world contexts and phenomena. Key areas of study include: researcher perspective, stance and voice. Making use of observations, survey, interviews, focus groups, artifact analysis, and other forms of gathering and using 'data'. Applying various research and analytic strategies such as case study, action research, grounded theory, and thematic analysis. Considering emergent genre of research including narrative study, arts-based research and others.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3008 - PRACTITIONER INQUIRY 4: APPLYING DISCIPLINED INQUIRY

Minimum Credits: 3

Maximum Credits: 3

This final course in the research series provides students the opportunity to engage in practice-based research with real-world issues and problems of practice. The seminar will begin with the opportunity to review a number of studies representing quantitative, qualitative, and mixed approaches. Students will then collaborate with colleagues pursuing the same and/or similar research methods and approaches through small workgroups. Each small group will be organized to support students in conducting pilot work in the methods/approaches they plan to use for their practice-based dissertation. Student groups will work with advanced PhD students who have expertise in the methods and who will act as a consultant. Students will be expected to finalize their dissertation overview proposal through this course (in conjunction with their Arco advisor and faculty).

EDUC 3013 - EDUCATION LAW, POLICY & SCHOOL REFORM

Minimum Credits: 3

Maximum Credits: 3

The United States is a country built on a foundation of laws, which are supposed to be a system of rules and procedures designed for the common good of our society. Historically, however, the U.S. legal system has not always considered what is good or just for serving all members of society, particularly in education. This course examines the evolution of education laws and policies in the U.S., as well as their influence on school reform efforts pre- and post-Brown v. Board of Education from an equity and social justice perspective. In this course, students will learn to understand the interplay between the three branches of government - the legislative, executive, and judicial branches - how the U.S. Supreme Court selects education cases, interprets the law, and makes its decisions given the political and social climate of the country. Furthermore, this course studies how the Court's decisions influence school reform policies, with a particular emphasis on urban schools, stakeholders, and society.

EDUC 3045 - CRITICAL RACE THEORY IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on foundational scholarship, theories and germinal texts that inform critical race theory. By introducing central tenets, principles and tensions, we will provide an historical overview of critical race theory and consider the following interrelated questions: how are racial inequities produced, reproduced, and maintained in education and society? In what ways is critical race theory used as an analytic tool to explain policy, reform, practice and other phenomena? In what ways is critical race theory used as a framework to conceptualize research? Students interested in the intersections of race, racism, equity, justice and education should find the course useful in helping them conceptualize and develop research projects.

EDUC 3089 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 12

An experimental course with a flexible curriculum oriented to special research topics or current issues of concern to educators. Topics vary.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3099 - GUIDANCE IN SCHOLARLY PRACTICE

Minimum Credits: 1
Maximum Credits: 15

Students will enact an applied inquiry plan and write a report of the enactment under the supervision of a research advisor. The report becomes the basis for a culminating demonstration of excellence for the doctor of education degree.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

EDUC 3100 - INTRODUCTION TO QUANTITATIVE METHODS: DESCRIPTIVE AND INFERENCE STATISTICS

Minimum Credits: 3
Maximum Credits: 3

This seminar prepares students to conduct descriptive and inferential statistics about a population using data collected under complex survey design. The emphasis throughout the course is on real world data preparation and analysis using the SPSS/STRATA/SAS statistical software package.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3102 - FIRST YEAR SEMINAR 1

Minimum Credits: 1
Maximum Credits: 1

This seminar addresses professional issues germane to doctoral skills and competencies. Topics addressed in the seminar include guidelines for constructing a literature review, IRB requirements, ethical and legal issues pertaining to conducting research, preparing professional presentations and research proposals.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3103 - QUANTITATIVE METHODS 2

Minimum Credits: 3
Maximum Credits: 3

The primary focus of this course is single predictor and multiple regression analysis for continuous and binary outcomes. The pedagogical strategy will be to learn statistical analysis by doing statistical analysis. We will rely primarily on the Stata statistical software package. Over the course of the semester, we will examine a variety of data sets, each of which can be used to address substantive research questions by fitting increasingly sophisticated regression models. As we build understanding about how to use these methods in practice, we will discuss the regression model's purpose, mathematical representation, assumptions, implementation, interpretation, presentation, relationship to other statistical methods, implications for research design, and limitations. Additional principles of research design will be incorporated throughout the semester. The course will also include introductory coverage of more advanced topics, such as: multi-level modeling, structural equation modeling, regression discontinuity and propensity score matching. Introduction to these topics is meant primarily to inform students about upper-level courses that they might consider and not necessarily to prepare students to execute these methods on their own.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3104 - INTRODUCTION TO QUALITATIVE METHODS

Minimum Credits: 3

Maximum Credits: 3

This seminar introduces students to the inquiry traditions (e.g. empirical, interpretive, critical) and modes of research (e.g. narrative, ethnographic, historical, rhetorical, linguistic) associated with qualitative research in the social sciences. Students will gain experience with various elements in the research process (formulation of questions; research design; data organization and reduction; data analysis; validity and reliability issues) and with research methods characteristic qualitative research. This course should be completed by the end of the students' second year.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3105 - FIRST YEAR SEMINAR 2

Minimum Credits: 2

Maximum Credits: 2

This seminar for beginning Ph.D. students addresses professional issues germane to doctoral skills and competencies. Topics addressed in this seminar include guidelines for constructing a literature review, IRB requirements, preparing professional presentations, and research proposals.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3106 - ADVANCED APPLIED QUALITATIVE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3107 - WAYS OF KNOWING

Minimum Credits: 3

Maximum Credits: 3

In making a distinction between ways of knowing and procedures for knowledge generating, students in this seminar will examine various epistemological, ontological and axiological schools of thought that are the basis for educational inquiry. The focus will include assumptions that form the logics of justification for truth claims embedded in educational research.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3109 - SOCIAL CONTEXT OF URBAN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Examines Urban Education with an emphasis on social context (e.g. red lining, gentrification, theories of home) and how communities are working toward empowering their respective neighborhoods. This course draws its theoretical and social action foundation from a spatial justice lens. As such, geography and space are sites of struggle and opportunity. Unjust geographies can contribute to language, policies, research, pedagogical constructs, and narratives that impact Urban Education.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

EDUC 3109 - SOCIAL CONTEXT OF URBAN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Examines Urban Education with an emphasis on social context (e.g. red lining, gentrification, theories of home) and how communities are working toward empowering their respective neighborhoods. This course draws its theoretical and social action foundation from a spatial justice lens. As such, geography and space are sites of struggle and opportunity. Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

EDUC 3114 - BLACK EDUCATIONAL THOUGHT

Minimum Credits: 3

Maximum Credits: 3

The aim of this course is to engage Black education discourse critically, as a popular-cultural idea, and as an area of intellectual thought and scholarly study. Our course readings will include critical social and cultural theory drawing from such areas as Black feminisms, Black cultural studies, Afropessimisms, Critical Race Theory, Black literary studies, Black queer studies, Black education history and philosophy, and empirical analyses and policy studies related to Black educational opportunities, experiences and outcomes. Poetry, music, film and other arts forms will also serve as texts to help us in our attempt to more clearly articulate a critical Black studies in the field of education, and a critical engagement of education in Black studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3501 - CRITICAL POLICY ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This seminar engages doctoral students and advanced master's students in the ways in which all policies are texts, framing some topics to be important and consequentially excluding others. In this course, students will deepen their understandings of power through various critical analyses of policy texts and how they are taken up, modified, and dismissed by those intended to enact them. Specific attention will be focused to education policies in K-12 and higher education contexts.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3505 - RESEARCH-PRACTICE PARTNERSHIPS: APPROACHES TO COLLABORATIVE DESIGN, INQUIRY & CHANGE

Minimum Credits: 3

Maximum Credits: 3

In this course, students learn principles and strategies for developing a research program that is place-based, community-engaged, and rooted in partnership. Through engagement with texts, colleagues, and experienced Research-Practice Partnership (RPP) members, students develop practical skills for navigating key RPP processes including building mutualistic relationships, negotiating research questions, applying design-based implementation research methods, and communicating about engaged research. Possibilities for RPP work are explored and contextualized within the greater Pittsburgh region, within larger historical and contemporary dynamics of exploitation and racism, and within multiple traditions of engaged scholarship and movements for educational justice.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3506 - MIXED METHODS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course to mixed methods research that is grounded in critical perspectives that address issues of power. We engage with the history and philosophy of mixed methods research and how it differs from single-method research. We also build our knowledge of the various types of mixed methods designs and methods for collecting, analyzing, integrating, and reporting data based on the designs. The pedagogical strategy of the course is to learn mixed methods by applying it to a research topic that seeks to disrupt and transform inequitable structures, with an emphasis on the educational system. To engage in these topics deeply, it is strongly recommended that students have taken at least one introductory course in either quantitative or qualitative methods.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Ed Foundations, Org, & Policy

EFOP 2001 - INTRODUCTION TO RESEARCH METHODOLOGY

Minimum Credits: 3

Maximum Credits: 3

Introduces basic language and concepts of empirical research with emphasis on the applicability of research methodology (statistics, measurement, design, and evaluation) for improvement of professional practice in education.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EFOP 2004 - THEORIES OF EDUCATIONAL INEQUALITY

Minimum Credits: 3

Maximum Credits: 3

This course is the first of a required two-course sequence designed for students to explore the meaning and expectations of doctoral study in the department of administrative and policy studies. The doctoral core is planned with a curriculum for radical transition to doctoral studies as students increasingly are called upon to take responsibility for their doctoral experience. Students have the opportunity to organize their own learning proclivities by managing resources such as study group and faculty-led deliberations, readings, computer-based technologies, individual research, and field activities. Students cultivate their identities as practitioner/scholar/citizens.

Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

EFOP 2010 - EDUCATIONAL SYSTEMS, MACRO POLICY, AND POLITICS, MA

Minimum Credits: 3

Maximum Credits: 3

This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Organizational theories provide a framework for understanding educational organizations - early childhood centers, K-12 schools, higher education institutions, and beyond - and over-arching approaches to educational reform. Students will employ a range of lenses to examine policy including equity, productivity and efficiency, choice, and international comparison. In so doing, the course attends to big issues and trends in education policy such as: (a) the ways that educational organizations are embedded within and shaped by a stratified society and occupational system; (b) how educational policies at the federal- and state-level and other macro-policy levers support and constrain education at the local level; (c) how policymaking processes occur within an inherently political process; and (d) how contemporary educational systems have been impacted by broader social movements including standardization, accountability, and consumer choice. For master's degree students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 2011 - EDUCATION POLICY IMPLEMENTATION: STUDENTS, FAMILIES, EDUCATORS, AND POLICYMAKERS, MA SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Economic, sociological, political and other theories provide a framework for understanding how key constituents - students, families, educators, administrators, policymakers and community members - act on or are influenced by education policies formulated and enacted at the local, state and federal levels. Students will employ a range of lenses to examine educational policy implementation including equity, productivity and efficiency, choice and international comparison. In doing so, the course attends to current issues and debates in education policy, such as: (a) What are the economic, educational and social consequences of providing universal access to early childhood education? (b) What policies and practices shape the training, recruitment and retention of teachers in the teacher labor force? (c) What influence do charter school policies and opportunities have on student learning outcomes? (d) How does federal and state higher education funding policy influence college access and success? (e) How do building level school discipline policies shape student and family relationships with their school? For master's degree students.

EFOP 2051 - M.ED RESEARCH METHODS FOR HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Assessment-based research is critical to effective practice in higher education and student affairs. This research methods course for students in the higher education MEd program is designed to provide students with the necessary introductory and foundational research skills they will need throughout their MEd program and in their early career. The class emphasizes the hands-on development of practical skills and competencies for conducting assessment-based research and interpreting data for educationally just decision making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 2052 - M. ED INTERNSHIP IN HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course is a practicum experience for med in the higher education management. The internship course is unique in that students are required to be working in an institution of higher education while enrolled. An on-site supervisor will provide learning opportunities to students in conjunction with the course instructor, while the instructor will enhance the experience through weekly activities and course assignments. The course is also an opportunity to combine research and practice and to develop the professional skills necessary for a fruitful career in academic or student affairs or management in higher education.

Academic Career: Graduate

EFOP 2053 - MANAGEMENT & ORGANIZATION EFFECTIVENESS

Minimum Credits: 3

Maximum Credits: 3

This is one of a two course series (ADMPS 2053 & 2054) for M.Ed. students in the higher education management specialization. The Organization and Management effectiveness course provides students a professional foundation of the practical application of managerial skills required of first and second-line supervisors in higher education. Course topics devote special attention to: the mission and challenges of HE organizations, organization structures and environments, responsibilities and expectations of managers, financial management, budget development and oversight, time and resource management, process improvement, the role of technology in complex organizations, decision making and communicating. In addition, the course will explore the role of supervisors in budget creation and resource management within a broader functional and institutional context.

EFOP 2054 - ORGANIZATION DEVELOPMENT & LEADING CHANGE

Minimum Credits: 3

Maximum Credits: 3

This is one of a two course series (ADMPS 2053 & 2054) for M.Ed. students in the higher education management specialization. The Organization development and Leading Change course explores the practical challenges of strategic planning and the role managers play in its implementation. In addition, the course builds students essential managerial skills in: people and process oversight, understanding and leading transformational change, building competencies through creating measurable performance objectives, developing staff accountability, human resource management and the role of technology as an agent of change.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2055 - STUDENT DEVELOPMENT THEORY

Minimum Credits: 3

Maximum Credits: 3

This course provides foundational knowledge about the nature and history of student development theory, focusing on both a solid overview of theory and the application of theory in the design of effective practice in academic and student services contexts. This course also explores developmental issues facing college students as well as factors that promote and impede development. An understanding of student development theory is integral to working in higher education and this course is designed for students pursuing both scholarly and practitioner focused careers.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EFOP or ADMPS 2307 or EDUC 2112

EFOP 2056 - PROGRAM ASSESSMENT IN HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course introduces the subject of assessment and program evaluation in colleges and universities. Issues related to assessment theory, assessment and evaluation models and methodologies, as well as the political and social contexts of assessment are explored. Students complete a hands-on assessment project from start to finish as a part of the course. Students need to have completed student development theory or an equivalent course prior to enrolling in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2059 - ADVISING AND SUPPORTING SKILLS FOR HIGHER EDUCATION PROFESSIONALS

Minimum Credits: 3

Maximum Credits: 3

This course offers an overview of the skills, strategies, and functions associated with advising and supporting college students. This foundational course regards advising and supporting skills as cultivated across functional areas and considers techniques and strategies applicable to a range of student services units, such as academic advising, career counseling, study abroad advising, student conduct facilitation, and student organization group advising. Additionally, students engage with recent developments associated with advising and supporting students through the evolving technological, legal, and ethical landscapes of higher education.

EFOP 2104 - LATIN AMERICA SOCIAL & PUBLIC POLICY

Minimum Credits: 3

Maximum Credits: 3

This seminar explores contemporary issues of social and public policy in Latin America through complexity, systems, gonadal, policy diffusion, comparative, and case-study approaches. In the first section participants review general policy concepts and theories, to be followed by the historical, economic and political context of public and social policy in the region. The second section examines several policy areas such as education, employment, poverty alleviation, public administration, social security, health, minorities, and violence. Using complexity and systems perspectives it is possible to understand how social and public policy influences the development and practice of fields like education and it could be also influenced by those fields. Disciplines such as economics, history, health, political science, anthropology, and sociology shape and help to make sense of educational issues and vice versa. This seminar is an opportunity for students in education and other disciplines to engage in interdisciplinary deliberation on policy issues in this region and fulfills the requirements for certificates in Latin American studies. Materials for the class include current news, scholarly publications, videos and other material published in English, Spanish, and possibly Portuguese (students must be able to read at least basic Spanish).

EFOP 2120 - CAPSTONE SEMINAR IN STUDENT SERVICES

Minimum Credits: 3

Maximum Credits: 3

Students will learn about the knowledge & skills required of a college or University student services administrator. It is assumed students will have administrative responsibility in future aspect of student services. Responsibilities may include development of vision & mission statement, designing organizational structure & budget. Focus on strategies to effectively manage & administer student services of diverse college & University campuses. Explore how organizational theory can be applied to improve policy making, personnel mgt, resource allocation & organization of administrative units.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 2128 - LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

This course is intended to provide a foundation of the various theories and models that inform leadership education and practice. Throughout the course, students draw from current leadership discourses to build toward a personal leadership praxis that connects their personal and professional development. Through this critical engagement, students also benefit from exposure to strategies and techniques that support and cultivate leadership in others through a range of functional areas within the college environment.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2129 - SOCIAL JUSTICE IN HIGHER EDUCATION SETTINGS

Minimum Credits: 3
Maximum Credits: 3

This course is designed to expand students' understanding of their own privileged and minoritized identities around race, class, gender, socioeconomic status, sexual orientation, ability, and religion, while encouraging the development of a social justice orientation. This course draws on current theories and practical examples for addressing oppression and discrimination within postsecondary institutional contexts and challenges students to develop an orientation for praxis and liberation. Students are required to reflect critically and thoughtfully on their own social identities while incorporating current theories and practices for liberating subjugated students and communities within higher education contexts. Furthermore, students should aim to develop future programs, policies, and practices that promote social justice.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2131 - HIGHER EDUCATION ADMINISTRATION

Minimum Credits: 3
Maximum Credits: 3

This course addresses major organizational theories and how they relate to higher education institutions. Students will develop conceptual frameworks that can be utilized as a generic base for the practice of administration and as a diagnostic tool that will assist in identifying organizational problems.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

EFOP 2133 - GENDER AND EDUCATION

Minimum Credits: 3
Maximum Credits: 3

This seminar examines the role that gender plays in the lives as students, researchers, educators, and policy makers. Major topics may include: changing trends of participation and success in k-16 schooling; childhood and professional socialization; media and curricular bias; coming of age; embodiment, sexuality, and sexual harassment, gender and the educational professions; feminist and anti-bias teaching; leadership and transnational communities of practice; activism and engaged feminist scholarship.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Gender, Sexuality & Women's St

EFOP 2135 - PROFESSIONAL DEVELOPMENT SEMINAR IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3

This course focuses on professional and personal development for careers in higher education. Through classroom activities and assignments, students engage with current critical perspectives in the field, reflect upon their identity as a practitioner, and build plans for future professional success. This course also enables students to assess their personal and professional growth in preparation for the advancement of their careers in higher education.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2140 - HIGHER EDUCATION CAPSTONE SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This course serves as the culminating experience for Higher Education M.Ed. students. As the capstone for the program, this course provides students with the opportunity to consider and apply theoretical and conceptual knowledge from this course as well as all Higher Education courses to practical situations. Through course content, classroom discussions, and the capstone project, students advance their development of essential higher education competencies gained throughout the M.Ed. curriculum.

EFOP 2305 - SOCIOLOGY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course surveys the classic and contemporary literature on schools and socialization. The relevance of sociological theory and research to education policy debate is also highlighted. Students will increase their understanding of the forces shaping learning and development that are beyond the classroom and are embedded in the larger social context.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 2306 - HISTORY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Both a chronological order and a thematic/conceptual investigation will constitute the structure of this course. The literature on past and contemporary historical developments will be compared. Emphasis will be placed on the ideas that prevailed in different time periods. Students will examine the conflicting organizational arrangements, competing theories, and growing external pressures on education.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 2307 - POLITICS AND HISTORY OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course surveys the perennial forces which have shaped the character of America's colleges and universities. In situational control and governance. Curricular goals and organization, and faculty and student life are examined against the background of political, economic, religious, social and intellectual developments in American culture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 2310 - CONTEMPORARY PHILOSOPHY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Examines how philosophies of education can contribute to one's vision of educative experience. Central educational concepts (e.g., Knowing, learning, thinking, valuing, and being) are analyzed in alternative ways.

Academic Career: Graduate

Grade Component: Grad Letter Grade

EFOP 2352 - ANTHROPOLOGY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This introductory course provides an overview of anthropological approaches to the study of education. Ethnographic cases drawn from many cultures, knowledge systems, and time periods help to provide a broad, holistic view of education in diverse community and institutional contexts. Modules may include: nurturing a sense of place; comparing folk, popular, and elite cultures; understanding cultural continuity and change; celebrating rituals and holidays; fostering cultural resilience and responsive reform policies; framing multicultural education; and appreciating the sociolinguistics of schools and home. Students have opportunities to participate in authentic schooling activities, to draft public advocacy pieces, to create team presentations, and to refine a personalized synthesis of a topic of interest. Anthropological field research methods are discussed as a means to craft compelling analytical accounts, but research training is not part of this course

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: African Studies, Asian Studies, Global Studies, West European Studies

EFOP 2353 - APPLIED ANTHROPOLOGY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This advanced seminar explores practical applications of anthropology to educational programs in varied cultural settings around the world. Topics may include: theories of development and social change, the role of schooling in cultural continuity and change, globalization and transnational influences on curriculum and policy; public advocacy and scholarship; school reform and social inequities. Authentic professional activities and meaningful case studies help students to see themselves in the field. Demonstrations of professional skills such as constructive criticism, teamwork, meeting methodological challenges, and critical analysis of texts help students to enhance their academic cv and engaged scholarship portfolio.

EFOP 2356 - FIELD METHODS

Minimum Credits: 3

Maximum Credits: 3

Designed to acquaint students with basic ethnographic field work techniques. Topics addressed include taking and managing field notes on participant-observation and use of archival materials. There will also be some discussion of the relationship among research design, data collection, and data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EFOP 2359 - GENDER, EDUCATION, & INTERNATIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

In this course, we look at gendered dimensions of education and development in international contexts. We look cross-culturally, across space, and across "development" continua and paradigms. We examine gendered issues through three modules that represent diverse levels of educational practice - basic education, higher education, and non-formal and informal education. In order to provide focus in this rich and complex field, we hone in on key policy orientations that build sequentially, starting with the most fundamental issues of access and equity, continuing with capacity building, and extending to sustainability and creating social change. Since this class is feminist by design, we explicitly link policy with agency, theory with advocacy, and reflection with action. Each course section also contains a strand on advocacy and action, through which students are able to create a synthesis of module lessons through a personal, analytical standpoint piece.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: African Studies, Gender, Sexuality & Women's St

EFOP 2398 - ECONOMICS OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This class introduces students to the economic analysis of education in the U.S. And developing countries. Among the topics to be covered are: human capital theory, educational production functions. Rate of return analysis, various issues in educational policy and finance

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 2399 - POLITICAL ECONOMY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

In this class students will continue (from "economics of education") to develop techniques for economic analysis. The subject is placed in a broader intellectual and political context. Particular attention is given to critique of neoclassical economic analysis, to alternative frameworks for economic analysis, including class-conflict and institutional approaches and the applications of economic analysis in the educational policy process. The course covers issues in industrialized and developing countries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EFOP 2410 - APPLIED REGRESSION ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Study of topics related to simple and multiple linear regression, including model specification and assumptions, methods of estimation, significance tests of model parameters and various types of multiple regression and predictor-selection techniques. The relationship of partial and semi partial correlation to regression is covered as well as the use of interaction terms and dummy variables in regression. SPSS and SAS are used to illustrate the correct interpretation of regression results.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EFOP 2416 - APPLIED MULTIVARIATE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course will emphasize understanding, implementation, and interpretation of multivariate statistical methods. The course will involve both lecture and lab work. These methods are manova, manova, profile analysis, doubly manova, discriminant function analysis, logistic regression, principal components and factor analysis. SPSS will be emphasized with an introduction to SAS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: (PSYED 2410 or EFOP 2410) and (PSYED 2422 or EFOP 2422)

EFOP 2422 - DATA ANALYSIS USING COMPUTER PACKAGES

Minimum Credits: 3

Maximum Credits: 3

Introductory course in using SPSS and SAS for data analysis. The course focuses on quantitative methods where specific attributes or variables are measured according to different scales of measurement. Statistical procedures are then applied to study relationships between the variables. The course addresses all stages to data analysis: reviewing research questions and identifying variables of interest; reviewing protocols used to collect data; coding data and creating data codebooks; reading data, screening data, transforming data, and performing file manipulations; and analyzing data using descriptive and basic inferential methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: PSYED 2001 or EFOP 2001 and (PSYED 2014 or PSYED 2018 or EFOP 2018)

EFOP 2491 - SUPERVISED RESEARCH IN RES METH

Minimum Credits: 1

Maximum Credits: 9

The student demonstrates ability to apply research skills by planning and completing a research project under the guidance of an appropriate faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

EFOP 2494 - M.A. PROJECT IN RSRCH METHDOLGY

Minimum Credits: 1

Maximum Credits: 9

Student prepares a library-based research paper that reviews, organizes, synthesizes, and critiques previously conducted research and scholarly discussion pertaining to quantitative research methodological issues and/or techniques in the areas of statistics, research design, and/or measurement.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EFOP 2498 - DIRECTED STUDY IN RES METH

Minimum Credits: 1

Maximum Credits: 3

Student pursues study of various topics under the direction of faculty.

Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

EFOP 2499 - THESIS RES IN RSRCH METHODOLOGY

Minimum Credits: 1

Maximum Credits: 9

Under the guidance of the thesis advisor, the student plans and completes a theoretical or empirical study on a quantitative research methodology topic and prepares a thesis in the form stipulated in the university style and form manual.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EFOP 3001 - RESEARCH METHODS IN EDUCATION POLICY AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

The disciplinary and methodological bases for knowledge and associated inquiry in educational administration and policy study are addressed. Examples of research from various paradigms, disciplines, and professional fields are used to show the relationship among theory, method, and knowledge. The relative importance of substantive and methodological concerns in doing research are emphasized. Positivistic, interpretive, and critical theory inquiry can be addressed by students in their required pilot study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3003 - THEORIES OF EDUCATIONAL INEQUALITY

Minimum Credits: 3

Maximum Credits: 3

This course is the first of a required two-course sequence designed for students to explore the meaning and expectations of doctoral study in the department of administrative and policy studies. The doctoral core is planned with a curriculum for radical transition to doctoral studies as students increasingly are called upon to take responsibility for their doctoral experience. Students have the opportunity to organize their own learning proclivities by managing resources such as study group and faculty-led deliberations, readings, computer-based technologies, individual research, and field activities. Students cultivate their identities as practitioner/scholar/citizens.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3006 - SOCIAL CHANGE IN LOCAL AND GLOBAL CONTEXTS

Minimum Credits: 3

Maximum Credits: 3

Rapid social changes to education policies are being experienced locally, nationally and globally. In this course, comparative policy approaches are used to study how these social systems change across perspectives of time, technology, history, politics and culture. These policy perspectives can help us better describe, predict, give voice to, frame, and map these changes.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: Asian Studies

EFOP 3007 - EDUCATION AND INTERNATIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course will explore a wide range of contemporary social issues and trends in educational development from historical as well as comparative perspective. We will read and analyze educational problems and seek to design policy that can have impact in solving the problems. A central focus

of this course is social analysis emphasizing educational issues in schools and colleges not only in the United States, but in other global contexts as well. We will critically explore key themes, definitions and approaches to education in individuals' lives across the lifespan, and examine how education helps shape social life in urban/rural areas and other settings from a comparative perspective. We will interrogate theoretical approaches used to understand the problems and current debates in the field of education by all stakeholders including institutions involved with educational development in diverse global settings, such as the United Nations and the World Bank.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3008 - COMMUNITY ENGAGEMENT IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course explores a range of contemporary issues and trends in community engagement in education. It addresses educational issues in schools and colleges, not only in the United States but in global contexts as well. It explores critically key themes, definitions and approaches to community engagement in education in individuals' lives across the lifespan, and examines how education helps shape social life in urban/rural areas and other settings. It interrogates policy documents used to understand the problems and current debates related to community engagement in education by individual stakeholders and policymakers as well institutions involved with educational development in diverse local, national and global settings, including the UNESCO "Incheon Declaration." This course is designed to provide students with the grounding they need to perform confidently and competently in areas of their professional practice. It is an opportunity for the critical study of community engagement in education that is relevant to students' professional goals. The course provides tools to explore and assess the theories, ideologies and issues of education from multiple perspectives as well as to situate students' thinking about the issues in searching for policy and practice interventions. Students will frame the discussions within the contextual and practical realities of life in schools and other educational institutions through a range of conceptual lenses, exploring the debates over the meaning and nature of social justice in education, debates that intersect with questions about the person, society, education and knowledge as they strive to understand the complex issues in the field of education. Goals and objectives are aligned with SCAE program commitments to developing in students: deep specialized knowledge; intellectual/practical skills in innovation; taking personal/social responsibility for change; applying/integrating knowledge/understanding to problems of practice; understanding/embracing a commitment to equity; active, intentional, and ongoing engagement with diversity.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3010 - EDUCATIONAL SYSTEMS, MACRO POLICY, AND POLITICS, PHD

Minimum Credits: 3

Maximum Credits: 3

This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Organizational theories provide a framework for understanding educational organizations - early childhood centers, K-12 schools, higher education institutions, and beyond - and over-arching approaches to educational reform. Students will employ a range of lenses to examine policy including equity, productivity and efficiency, choice, and international comparison. In so doing, the course attends to big issues and trends in education policy such as: (a) the ways that educational organizations are embedded within and shaped by a stratified society and occupational system; (b) how educational policies at the federal- and state-level and other macro-policy levers support and constrain education at the local level; (c) how policymaking processes occur within an inherently political process; and (d) how contemporary educational systems have been impacted by broader social movements including standardization, accountability, and consumer choice. For doctoral degree students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3011 - EDUCATION POLICY IMPLEMENTATION: STUDENTS, FAMILIES, EDUCATORS, AND POLICYMAKERS, PHD SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Economic, sociological, political and other theories provide a framework for understanding how key constituents - students, families, educators, administrators, policymakers and community members - act on or are influenced by education policies formulated and enacted at the local, state and federal levels. Students will

employ a range of lenses to examine educational policy implementation including equity, productivity and efficiency, choice and international comparison. In doing so, the course attends to current issues and debates in education policy, such as: (a) What are the economic, educational and social consequences of providing universal access to early childhood education? (b) What policies and practices shape the training, recruitment and retention of teachers in the teacher labor force? (c) What influence do charter school policies and opportunities have on student learning outcomes? (d) How does federal and state higher education funding policy influence college access and success? (e) How do building level school discipline policies shape student and family relationships with their school? For doctoral degree students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3012 - QUALITATIVE DATA MANAGEMENT, ANALYSIS, AND PRESENTATION

Minimum Credits: 3

Maximum Credits: 3

This course introduces software and technological tools to organize, conceptualize, systematically analyze, and effectively present qualitative data of diverse kinds in varied media. Students work in teams with real data in this project-based lab course. Technological skills are paired with conceptual discussions of such key operations as coding, thematic analysis, reflexive and analytical notes, framing questions, and assessing significance. Critiques of core readings, demonstrations, and iterative formal presentations provide opportunities to model professional skills.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3014 - DOCTORAL SEMINAR IN EDUCATION AND SOCIETY

Minimum Credits: 3

Maximum Credits: 3

This course is designed for those seeking to enhance their professional careers with scholarship. The EDD degree offers an intensive cohort experience and preparation for rigorous, applied research based on a broad, but in-depth acquaintance with the contexts within which phenomena, issues, policies and practices have emerged in the past and continue to evolve in our times. First, students will have the opportunity to develop an enhanced scholarly knowledge base encompassing the various facets of education/society relations by exploring the social, political, economic and cultural contexts within which education/educating take place and within which government agencies, educational institutions, policy-makers, educators and other stakeholders are situated or situate themselves when considering, fashioning, implementing, or reacting/responding to educational phenomena and policies/practices/reforms. Second, preparation for rigorous applied research should follow from understanding the rationales for and challenges of undertaking any of a number of possible research approaches to studying specific phenomena or problems of policy/practice and considering the complications imposed by these contexts in terms of what must be taken into consideration when applying research methods to human conditions and environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3015 - ETHICAL ISSUES IN HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

The ethical issues that present themselves in the educational setting are examined. Students are expected to recognize and evaluate these ethical issues in terms of their own value system as well as that of others. Each student is expected to prepare a case study that questions the ethical issues involved.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3016 - INTRODUCTION TO QUALITATIVE RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Course introduces students to distinct discourse communities that have coalesced around different inquiry traditions (e.g., Empirical, interpretive,

critical) and modes of research (e.g., Narrative, ethnographic, historical, rhetorical, and linguistic). Emphasis given to interpretive tradition, in which techniques of data collection and data analysis strategies are secondary to the ways in which researchers make meaning of their data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3017 - ORGANIZATIONS, NETWORKS, AND EDUCATION POLICY

Minimum Credits: 3

Maximum Credits: 3

Understanding educational change requires taking a broad look at how learning environments (e.g. PreK-12, post-secondary, informal, or professional contexts) are influenced by their embeddedness in organizational and policy contexts. This course introduces concepts and frameworks that enable understanding and guide strategic decision-making about organizations that are active in the educational sector.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3018 - ECONOMICS-INFORMED POLICY ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Economics-informed policy analysis involves the consideration of short-term and long-term monetary and non-monetary benefits and costs of competing policy options. Analytical techniques such as cost-benefit analysis and cost-effectiveness analysis can help policymakers select the most socially desirable policy option(s).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3019 - EDUCATIONAL IMPLEMENTATION AND EVALUATION FOR SOCIAL CHANGE

Minimum Credits: 3

Maximum Credits: 3

Pursuit of organizational improvement, systemic transformation, and ultimately social change often begins with systematic approaches to planned change and the leadership actions necessary to support successful implementation and scaling. Thoughtful program evaluation supports implementation and systemic change. Understanding evaluation frameworks (formative, developmental, and summative evaluation) and corresponding methodological approaches will enable students to successfully identify and collaborate with program evaluators.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3085 - COMPARATIVE & INTERNATIONAL EDUCATION PHD SEMINAR

Minimum Credits: 1.5

Maximum Credits: 1.5

This seminar is for PhD degree students interested in Comparative and International Education as a field of study to engage in mentoring activities and professional development with program faculty and build a mutually supportive community. Students in this seminar meet regularly to learn the latest debates and research developments in comparative and international education, to develop their scholarly writing, and to develop their program milestones. The seminar showcases careers and supports planning for professional conferences and publications.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EFOP 3087 - WRITING SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students in this one credit seminar have the opportunity to concentrate their efforts on writing for publication. The seminar attends to editing and revising drafts for students ongoing writing projects (such as degree milestones, proposals, journal articles, and conference papers) and other professional writing (such as letters and vitae). Essentials of writing and publishing are addressed, and specific topics may include: authorship, voice, stance, narrative, epistemologies, evidence, audience, and synthesis. Class organization encourages ongoing revision through self-reflection, peer review, whole group discussion, and instructor review.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

EFOP 3089 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

A course listing for newly instituted and experimental courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3090 - DISSERTATION RESEARCH SEMINAR

Minimum Credits: 3

Maximum Credits: 3

A seminar for doctoral students developing research prior to the preparation of a dissertation overview.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

EFOP 3092 - HIGHER EDUCATION INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

An internship in administration in higher education.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Admin and Policy Studies

EFOP 3097 - SUPERVISED RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Doctoral study initiated by the student with advisor's approval and related to the student's program of study.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

EFOP 3098 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 6

Doctoral study approved and directed by an academic advisor.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

EFOP 3099 - GUIDANCE IN THE DOCTORAL DEGREE

Minimum Credits: 1

Maximum Credits: 18

A registration unit for students preparing a doctoral dissertation or dissertation overview.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EFOP 3104 - HIGHER EDUCATION INSTITUTIONAL STRATEGIC PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course will provide a framework for the development of an integrated institutional strategic plan. It will examine the emergence of higher education planning, the development of preplanning activities, situational analysis, and the establishment of a planning process for the preparation of institutional and department plans.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3127 - CURRICULUM: PERSPECTIVES AND ISSUES (K-12)

Minimum Credits: 3

Maximum Credits: 3

The course draws on current content in the field of curriculum studies. Contemporary approaches to development and research draw on increasingly diverse disciplinary perspectives and diverse methods of inquiry. Curriculum perspectives and issues are central to the often contentious educational discourses in the public arena as well as in the academy as curriculum decisions are being made related to policy, practice and research, informed points of view are crucial to those engaged in such work. This course is intended to capture some of the contentious local, national and international discourses for which the curriculum field is known and, in particular, how these discourses influence curriculum policy and practice toward intended and unintended consequences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3128 - HIGHER EDUCATION BUDGET MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the sources of revenues available to colleges and universities and various methods for allocating these funds to academic and administrative functions. Specific attention will be given to topics of fund accounting, sources of revenue, the budget process, fiscal controls and monitoring.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3129 - HIGHER EDUCATION HUMAN RESOURCE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the development of human resource systems that facilitate the conduct of activities in colleges and universities through the effective and efficient utilization of faculty and staff. It will include such topics as human resource strategic planning, position control and monitoring systems, recruitment and selection procedures, evaluation procedures, development and training, incentive systems, salary administration, and fringe benefits administration. Various human resource policies and practices will be explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3130 - HIGHER EDUCATION PROGRAM MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course is concerned with faculty and staff within an academic institution. It focuses on how faculty should be managed in order to achieve optimal organization performance. Specific topics addressed include: organizational theory, institutional goals, faculty and staff responsibilities and workload, research curriculum and academic organization. Special attention is also given to faculty and administrative evaluation and development. Group discussion and case studies are the principal instructional formats utilized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3131 - STUDENT, CAMPUS, AND SOCIETY

Minimum Credits: 3

Maximum Credits: 3

A seminar focusing on current research dealing with the impact of campus environments, experiences on and off campus, and family background on achievement, values, personal development, and life goals of students in higher education.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3134 - CONTEMPORARY LATINX ISSUES IN US HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on current issues for Latinx people within a higher education context. This includes a look at the overall ecology into and through higher education, from the K-12 setting into the postsecondary context. The course is taught through the perspective of leading Latinx scholars, theorists, and practitioners who are developing cutting edge solutions for best serving the fastest growing demographic in the United States. The course includes a look at the experiences of students, faculty, and staff within postsecondary contexts as well as a focus on understanding the colleges and universities enrolling a large percentage of the Latinx population, including community colleges and Hispanic-Serving Institutions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3135 - SEMINAR IN COLLEGE TEACHING

Minimum Credits: 3

Maximum Credits: 3

The course is intended to provide a practicum-like experience for graduate students in the professions and disciplines who are teaching or expect to teach in higher education. Challenging topics include: analyzing and critiquing current syllabuses of class members; structuring the curriculum; teaching for understanding; process and content; teaching and learning in groups; becoming a dialogic classroom; encountering and responding to contentious discussion; and evaluating learning. Although topics will be considered conceptually through readings, the primary curriculum will develop as members of the class present specific issues from their emergent work. Participants will have the opportunity to explore their beliefs in teaching and learning as they consider a web between themselves, their subject and their students, in order to help their students learn how to weave a world for themselves.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3136 - COMPARATIVE HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This seminar focuses on contemporary problems in post-secondary education throughout the world. The seminar will begin with a brief historical introduction, followed by a review of case studies and other documents on higher education in the United States and other countries. Special attention

will be given to an examination of comparative and contrasting policies and issues in higher education as they unfold in various developing regions and in the United States.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: African Studies, Asian Studies, Global Studies, Russian & East European Studies

EFOP 3137 - CULTURE, INNOVATION & ORGANIZATION PERFORMANCE

Minimum Credits: 3

Maximum Credits: 3

Whether leading a department of 50 people or a division of 500, leaders need to understand the concepts, skills and practices that build strong organizational cultures. This course explores the cultural facets of organizational life in universities with special emphasis on improvement opportunities such as values clarification, cultural norms, innovation, process and people integration, key performance indicators, the balanced scorecard and the alignment of human resources systems such as hiring, faculty and staff development, performance management and career development. Students are introduced to a variety of methods used to encourage creative problem solving in teams; diffusion of innovation is explored in depth. Students work in teams with an actual University client to implement a benchmarking project, an important tool in improving organizational performance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3139 - LEGAL ASPECTS OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

The focus of the course is on federal and state law and higher education in the United States. Although time will be devoted to historical issues pertaining to higher education, most of the time will be devoted to in-depth discussions of contemporary issues. Issues that will be discussed include promotion and tenure, academic freedom, faculty dismissal, sexual harassment, research integrity, campus violence, and student affairs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3141 - POLICY STUDIES IN HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This higher education PhD core course is designed to provide students with the foundational knowledge and skills needed to study higher education policy and to conduct, understand, and critique work in the higher education policy arena. The course examines the formation, design, implementation, and evaluation of public policy to introduce students to the nature of educational policy and policy making, and to equip students with a set of skills to build their capacity as independent and critical policy scholars. The course also exposes and engages students in learning about the major policy areas of concern in higher education, including the in-depth analysis of state cases as a way to understand how the major policy areas of concern impend on one another and can work at cross-purposes. Designed for PhD students and advanced master's students who have an interest in policy or plan to pursue a PhD, the course assignments are designed to engage students in clearly and critically articulating current policy challenges, proposed solutions, and areas where continued scholarship is needed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3150 - FOUNDATIONS FOR THE STUDY OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course is the foundational course on the study of higher education designed to introduce PhD students to the social, political, philosophical and historical contexts that undergird higher education in the United States. Issues, ideas, and current arguments are explored as they relate to the structures and system of higher education, functions and purpose of higher education, and outcomes of higher education. Governance, administration,

faculty, curriculum, finances, and students are covered as they relate to the areas of the course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3151 - THEORETICAL FRAMEWORKS FOR THE STUDY OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course provides doctoral and advanced master's students with a general understanding of theory and its application to the study of higher education. This includes an overview of major paradigms, schools of thought, and theoretical frameworks commonly used in the study of higher education. Through an examination of both conceptual and empirical work, students gain an understanding of important theoretical bodies of knowledge and how to apply them to their scholarship and practice. The course has an interdisciplinary orientation, drawing on sociology, psychology, anthropology, gender studies, cultural studies, and race studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3153 - RESEARCH PERSPECTIVES ON DIVERSITY, EQUITY, AND INCLUSION IN HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course addresses the key dimensions in the study of diversity, equity, and inclusion within the U.S. higher education system. In this doctoral level course, we focus on both theoretical and empirical bodies of literature that have been used to study racialized, gendered, and minoritized groups within higher education. Using a critical and socio-historical lens, we examine individual, structural, and societal dimensions of power and oppression to understand their pervasive implications for diverse groups within educational systems. Students gain a solid foundation for understanding both the historical progression of research on minoritized groups and contemporary approaches to the study of diversity, equity, and inclusion in higher education.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3201 - INTRODUCTION TO EDUCATIONAL EVALUATION

Minimum Credits: 3

Maximum Credits: 3

Provides a general overview of evaluation, which is defined as "providing information useful to decision-making". The various purposes of evaluation are identified, and the use of different types of information for each purpose are discussed. The variables that affect the usefulness of information are emphasized. Both evaluation theory and practical experience are utilized to prepare people who will be fulfilling an evaluation function, or using evaluation results for professional decision making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EFOP 3207 - SECTOR ANALYSIS AND PROJECT DESIGN

Minimum Credits: 3

Maximum Credits: 3

This is a reading and discussion seminar in which participants examine selected analytical and technical approaches used by multilateral and bilateral agencies in the design of appropriate policy meant to intervene in school systems around the world. The class will survey a number of examples of sector studies, projects, and project evaluations. Visiting lecturers will contribute experiences from their own international work in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: African Studies, Global Studies

EFOP 3208 - CASE STUDY METHODS IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the use of case study research methods in investigations of educational policy and practice. The limitations and possibilities of different approaches are considered. Knowledge and skills are acquired through field-based projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3209 - HIGHER EDUCATION INSTITUTIONAL ASSESSMENT & ACCREDITATION

Minimum Credits: 3

Maximum Credits: 3

Course addresses processes and criteria used for evaluation and accreditation of post-secondary and higher education in situations and programs. How to identify, obtain, and use meaningful information for organizational decision-making, such as institutional assessment, program evaluation, and benchmarking are investigated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EFOP 3301 - SOCIAL THEORIES AND EDUCATION GLOBAL CONTEXT

Minimum Credits: 3

Maximum Credits: 3

Students will explore a range of social theories that may be helpful in informing how they understand and operate in educational institutions in local, national, and global economic, political, and cultural contexts. By examining and comparing a variety of theories and contexts, students will be encouraged to develop/refine their own theories of a) how and why society and education are organized as they are; b) how and why education and/or society have or have not changed; and c) how and why education and/or society should be changed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: African Studies

EFOP 3311 - WAYS OF KNOWING

Minimum Credits: 3

Maximum Credits: 3

In making a distinction between ways of knowing and procedures for knowledge generating, students in this seminar will examine various epistemological, ontological and axiological schools of thought that are the basis for educational inquiry. The focus will include assumptions that form the logics of justification for truth claims embedded in educational research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3314 - EDUCATIONAL REFORM

Minimum Credits: 3

Maximum Credits: 3

This course examines the recurrent phenomenon of educational reform in a variety of settings and from a variety of social scientific perspectives. Focus is placed on the analysis of competing explanations of educational reform and the investigation of case studies from a variety of countries and time periods. Emphasis is given to examining whether reform campaigns are structurally similar and whether a general theory of educational reform is possible.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3343 - COMPARATIVE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This seminar introduces participants to the complementary fields of comparative, international, and development education (CIDE). Emphasis is on social justice issues in CIDE and the comparative analysis of policies and practices that constitute the organization, content, processes of education systems and institutions. Selected topics of continuing interest to educational researchers, policy makers, and practitioners are examined in relation to national and global cultural, economic, and political dynamics. Historical and contemporary examples are used to highlight the contributions of and challenges for those involved in CIDE.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: African Studies, Global Studies

EFOP 3347 - INTERNATIONAL ORGANIZATION DEVELOPMENT EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This seminar reviews policies and practices of key international organizations and actors in the complementary fields of comparative, international, and development education (CIDE) and examines their impact on national and regional educational policies. Multilateral organizations (such as UNESCO, UNICEF, and the World Bank), bilateral organizations, nongovernmental organizations, faith-based organizations, community-based organizations, and regional agencies (e.g., the inter-American development bank, the Asian development bank, and the European union) will be among the organizations and actors studied.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: African Studies, Global Studies, Latin American Studies, Russian & East European Studies

EFOP 3408 - HIERARCHICAL LINEAR MODELING

Minimum Credits: 3

Maximum Credits: 3

This course is on hierarchical models for continuous and discrete outcomes. Hierarchical models are used when the units of observation are grouped within clusters. Observations in a cluster typically are not mutually independent for given covariate values as required by conventional linear and logistic regression models. Longitudinal or repeated measures data can also be thought of as clustered data with measurement occasions clustered within subjects. The focus of the course is on hierarchical linear models and their assumptions, as well as practical aspects of developing models to address research questions and interpreting the findings.

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: PSYED 2410 or EFOP 2410 or PSYED 3410

EFOP 3417 - STRUCTURAL EQUATION MODELING

Minimum Credits: 3

Maximum Credits: 3

This course will introduce structural equation modeling (SEM). Some fundamental materials necessary for SEM will be reviewed; i.e. Matrix algebra, covariance algebra, multiple regression; and factor analysis. SEM is a family of techniques. Some of the different SEM techniques that will be discussed include path analysis, confirmatory factor analysis, general SEM, and mediation/moderation models. Advance SEM techniques will also be discussed, e.g. Mean and covariance SEM, latent growth curve models, multi-sample/multi-group SEM, dealing with missing and non-normal data, and mixture modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: PSYED 2410 or EFOP 2410 or PSYED 3410

EFOP 3420 - COMPUTER APPLICATIONS TO RESEARCH METHODOLOGY

Minimum Credits: 3

Maximum Credits: 3

Course in advanced computer-based applications. Topics include design and conducting Monte Carlo studies, computer adaptive testing, and application of Bayesian methods to education. Students will learn the required steps for conducting a monte Carlo study or a computerized experiment: how to design the study, how to simulate data, and how to evaluate results. Procedures in SAS as well as other programs will be considered. Students will also design and implement a small monte Carlo study. For the computer adaptive testing (CAT) component, students will be introduced to cat and issues related to cat assessments: developing and maintaining item pools, selecting items, estimating ability, and validity of scores from cat assessments. Students will be introduced to the theory of Bayesian methods, application of Bayesian methods in educational measurement and statistics, and software that is available to implement Bayesian methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EFOP 3471 - CONSTRUCTING QUESTIONNAIRES AND CONDUCTING SURVEYS

Minimum Credits: 3

Maximum Credits: 3

Introductory course in survey research methodology. The course considers practical considerations in the construction of questionnaires including determining questionnaire content, selection of item types and wording of items, selection of an administration method, piloting questionnaires, and locating existing questionnaires. Discussion about conducting survey research considers sample selection, analyzing information obtained from questionnaires using SPSS, evaluating questionnaires, sources of error and how to reduce measurement error in survey research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: PSYED 2001 or EFOP 2001 and (PSYED 2014 or PSYED 2018 or EFOP 2018)

EFOP 3472 - CAUSAL INFERENCE IN EDUCATIONAL RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Many key questions in the field of education are framed causally. Do investments in full-day kindergarten pay off in terms of improved school readiness? Does project-based learning in mathematics and science increase the pipeline of students into STEM-related fields? Does the introduction of a generous merit-based scholarship program improve students' motivation to prepare rigorously for postsecondary education? Despite this causal framing, analytic tools commonly applied to questions such as these allow for statements about relationships but not about causation. For example, we may observe correlational evidence that communities with full-day kindergarten also have higher levels of school readiness. These same communities, however, may also serve children from higher-income families. Given students' backgrounds, their levels of readiness may have been unchanged by participation in full-day kindergarten. In this course, we will focus on framing research questions with a causal lens and on research designs and analytic techniques that provide the tools for answering these key questions in a causal framework. Specifically, we will learn about research designs for drawing causal inferences, including randomized trials, regression discontinuity, differences-in-differences, instrumental variables, and propensity score and other matching techniques. Our learning will be grounded through the semester in reading scholarly articles in which these techniques are applied to questions in education. Assignments throughout the semester will include preparation for class participation, a referee report to critique the work of another scholar, and a final course project. At the start of the semester, students will be asked to identify an area of focus and potential sources of data for the final course project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EFOP 3485 - ADV TOPICS IN RESEARCH DESIGN

Minimum Credits: 3

Maximum Credits: 3

Includes new strategies in research design, and application of mathematical and behavioral design models for educational research. Topics vary each term around interests of the students enrolled.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

EFOP 3491 - SUPERVISED RESEARCH IN RES METH

Minimum Credits: 1

Maximum Credits: 18

The student demonstrates ability to apply research skills by planning and completing a research project under direction of an appropriate faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

EFOP 3495 - TEACHING INTERNSHIP IN RES METH

Minimum Credits: 3

Maximum Credits: 3

Provides students with training in teaching a section of a research methodology course. It includes the development of course lectures, assignments, and part of the midterm or final exam and the delivery of the lectures.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

EFOP 3498 - DIRECTED STUDY IN RES METH

Minimum Credits: 1

Maximum Credits: 3

Student pursues study of various topics under the direction of faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

EFOP 3499 - DISSERTATION RESEARCH IN RESEARCH METHODOLOGY

Minimum Credits: 1

Maximum Credits: 18

Student registers for this course while conducting research for a doctoral dissertation.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad LG/SNC Basis

EFOP 9257 - EAST ASIA: YESTERDAY AND TODAY

Minimum Credits: 3

Maximum Credits: 3

The course is designed for middle and high school teachers of world cultures, world history, geography, economics, and literature. This seminar will provide students with the content and resources needed to implement the study of East Asia into their curriculum in accordance with various approaches to "standards". The seminar will include an analysis of the recently posted Pennsylvania civics and government standards. It will also reference to the latest national geography, world history, as well as NCSS standards.

ECE 2120 - HARDWARE DESIGN METHODOLOGIES 1

Minimum Credits: 3

Maximum Credits: 3

This course teaches hardware design processes through use of industry tools. Students use graphical tools to design, simulate and synthesize designs using hardware description languages (e.g. VHDL/Verilog). High-level design and problem decomposition are also taught. Optimization, simulation and synthesis of combinatorial functions, data paths, and finite state machines are covered in depth. Architecture encapsulation and reuse through 'Intellectual Property' (IP) modules is described and covered in detail. Students will work individually and as a part of a team to create, simulate, model, document, and test IP models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2130 - TOPICS IN VLSI CAD

Minimum Credits: 3

Maximum Credits: 3

The course introduces state-of-the-art computer-aided design algorithms with application to VLSI. The course starts with a review of fundamental algorithms, from graph theory, sorting, searching and hashing, and then proceeds to focus on major CAD application areas in architectural, logical, and physical design. Major topics discussed are multiple level combinational logic synthesis and optimization, sequential logic optimization (retiming, clock scheduling), convex optimization and its applications, testing test pattern generation and design for testability, placement and routing, simulated annealing. Hot current research topics will be surveyed briefly.

Academic Career: Graduate

Course Requirements: PREQ: ECE 2192; PROG: Swanson School of Engineering

ECE 2140 - SYSTEMS-ON-A-CHIP DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is a full semester project involving the entire class in one System on a Chip design experience. This includes requirements definition, high-level design, system specification, algorithm modeling, decomposition, IP selection and/or IP creation for re-use, synthesis simulation and testing. The system will be a true SoC with at least one processor core with associated system and application software. Lectures will be the

philosophy of SoC as well as the practical issues involved in the SoC design methodology. State of the art CAD software will be used for design and co-simulation of the hardware/software platform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2120; PROG: Swanson School of Engineering

ECE 2141 - VALIDATION AND VERIFICATION TECHNIQUES OF DIGITAL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course presents state of the art methodologies and tools for simulation based validation and formal verification of complex digital systems implemented as systems on a chip. Topics include testing strategies, test bench design, coverage, and model checking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2121 or 2140; PROG: Swanson School of Engineering

ECE 2156 - ADVANCED INFORMATION SECURITY

Minimum Credits: 3

Maximum Credits: 3

This course covers information security at the computer system level, the network level, and the human level. Students will first learn general computer security technology and principles such as cryptographic tools, user authentication, access control, malicious software and attacks. Then, we will delve into the details of network attacks and defending techniques. The latter units of the course cover software and system security, including buffer overflow vulnerability, operating system security, and Cloud and IoT security as well as human factors and legal and ethical issues.

ECE 2160 - EMBEDDED COMPUTER SYSTEM DESIGN

Minimum Credits: 3

Maximum Credits: 3

Design and implementation of embedded microprocessor systems. Topics include 'C' language, top down iteration for assembly language programming, data structures, co-routines, I/O software structures and real time operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2161 - EMBEDDED COMPUTER SYSTEM DESIGN 2

Minimum Credits: 3

Maximum Credits: 3

Organized as a full term project carried out by student design groups. A complex embedded system will be designed, implemented and tested using Altera and other cad tools. Grade will be based on project reviews and the final project report. Proper design process will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2160; PROG: Swanson School of Engineering

ECE 2162 - COMPUTER ARCHITECTURE 1

Minimum Credits: 3

Maximum Credits: 3

Review of basic architecture concepts, data representation, microprocessor and minicomputer architectures, memory and i/o subsystems, stack computers, parallel and pipelined computers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2165 - DEPENDABLE COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

The field of dependable computing has recently emerged as one of the most important areas of study in computer and electrical engineering. Modern computer systems are susceptible to a broad range of potential faults, errors, and failures, and increasing chip density and design complexity exacerbate the problem. Novel methods in hardware, information, network, software, and time redundancy are now available to mitigate these threats in the form of resilient computer architectures, apps, and systems. The focus of studies here is the design and analysis of dependable machines, from small embedded systems to space-based platforms to high-end supercomputers, in terms of reliability, availability, performability, testability, and safety metrics, and more.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2166 - PARALLEL COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental and newly developing hardware and software topics in parallel computer architecture (PCA) including concepts, models, methods, metrics, systems, and applications. PCA has become one of the most challenging and important areas of ECE, and it is now a dominant theme throughout computer architecture, systems, and programming, from low-power embedded systems to high-end supercomputers, and featuring various forms of fixed-logic (e.g., CPU, DSP, GPU), reconfigurable-logic (e.g., FPGA), and hybrid (e.g., CPU+DSP, CPU+FPGA, CPU+GPU, CPU+FPGA+GPU) processing devices. Prerequisite: Completion ECE 2162 Computer Architecture, with B or better grade, or consent of professor

Academic Career: Graduate

Grade Component: Grad Letter Grade

ECE 2180 - COMPUTING AND BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course explores the connections between engineering concepts (such as digital computation, circuit theory, synchronous and asynchronous circuits, distributed computing, simulation vs. emulation, computer architecture) and biological systems. The main theme of the course is applying engineering methods when studying biological systems, but also exploring how these methods can inform design of computing systems. Topics include: discrete and analog modeling of biological networks; model inference vs. model design; data-based vs. knowledge-based modeling in biology; modeling correlations vs. causality in biology; synchronous and asynchronous biological circuits, and stochasticity in biology; static vs.

dynamic analysis of biological systems; role of feedback and feed-forward loops, timing analysis; sensitivity, robustness analysis, and model reduction in biological systems; hardware design for biology; role of advanced computer systems in medicine; design of synthetic biological circuits; biologically-inspired computing.

ECE 2192 - INTRODUCTION TO VLSI DESIGN

Minimum Credits: 4

Maximum Credits: 4

Understand basic concepts and introductory techniques of modern integrated digital circuit design using Complementary Metal-Oxide-Semiconductor (CMOS) transistors. Learn how to design/simulate essential CMOS circuits for digital Very Large Scale Integration (VLSI) designs using state-of-the-art Computer Aided Design (CAD) tools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 0102 AND ECE 0201; PROG: Graduate School of Engineering

ECE 2193 - ADVANCED VLSI DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is organized as a full semester project in conjunction with a small amount of lecture material on advanced CMOS and bicmos digital design techniques, as well as the group design process itself. Students form groups that design and implement different VLSI projects which are then fabricated by NSF Mosis facility and returned for testing. Focus is on group projects with written and oral/reviews and reports.

Grade Component: Letter Grade

ECE 2235 - MONOLITHIC INTEGRATED CIRCUITS

Minimum Credits: 3

Maximum Credits: 3

Fabrication of integrated silicon monolithic circuits, thermal oxidation, solid state diffusion, epitaxial growth, ion implantation, photo and electron lithography, design considerations, active and passive elements in monolithic blocks, surface effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2237 - ANALOG CIRCUIT DESIGN

Minimum Credits: 3

Maximum Credits: 3

The objectives of this course are: to understand the operation of essential CMOS analog circuits and learn how to design them. To design the analog circuits using a 45nm CMOS process and verify their performance by SPICE simulation using a commercial EDA tool (Cadence Spectre). Topics include: comparators; two-stage amplifiers; folded-cascade amplifiers; voltage and current references; oscillators; linear regulators; switched-capacitor circuits; digital-to-analog converters, analog-to-digital converters; SAR ADCs; delta-sigma ADCs; second order effects & noise assignment; sensor interfaces. Prerequisites: ECE 1286 or equivalent

Academic Career: Graduate

ECE 2240 - NANO-OPTICS

Minimum Credits: 3

Maximum Credits: 3

A graduate level course designed for students who want to understand the mechanisms of interaction of light and matter at the nanometer scale, and become acquainted with nano-optics-based technologies. Topics include: electromagnetic theory of optical interaction with matter, optical waves in periodic media, photonic bandgap structures, surface plasmons, optical interaction with metal nanostructures (metal nanoapertures and arrays, and metal nanoparticles), surface plasmon resonance spectroscopy, plasmon coupling and concentration/funneling of electromagnetic energy, surface-enhanced raman scattering, near-field imaging and microscopy, and negative refraction. Prerequisite: junior or senior level em theory course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2250 - POWER ELECTRONICS

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to cover the fundamental concepts in the field in sufficient depth to allow students to analyze and design power electronics circuits. The course covers dc-dc converters and dc-ac converters.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2260 - SCANNING PROBE MICROSCOPY-BASED CHARACTERIZATION AND NANOFABRICATION

Minimum Credits: 3

Maximum Credits: 3

The course concentrates on both theoretical and practical issues of advanced scanning probe microscopy (SPM) techniques. It introduces concepts, theoretical backgrounds, and operation principles of varieties of scanning probe microscopies; addresses the fundamental physical phenomena underlying the SPM imaging mechanism; covers the practical aspects of SPM characterization of a wide range of materials as well as operation devices; discusses SPM-based approaches to nanofabrication and nanolithography such as dip-pen nanolithography and nano-robotic manipulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2262 - LOW-DIMENSIONAL NANOELECTRONIC DEVICES

Minimum Credits: 3

Maximum Credits: 3

This graduate course discusses the electrical transport, electrothermal interactions, and power dissipation in emerging low-dimensional (1D and 2D) nanoelectronics. Topics include band structures, electronic transport in 1D nanowire and nanotubes as well as layered 2D materials (graphene, transition metal dichalcogenides, black phosphorus, and etc.), electrothermal interactions in nanoelectronics, power dissipation in nanoelectronics, thermometry, and system-level power dissipation issues (breakdown, heat sink, etc.). This course is intended to bridge a gap between device operations, solid-state physics, thermal transport, and materials science.

ECE 2263 - EMERGING MEMORY TECHNOLOGY FROM DEVICE TO APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

In today's big data era, trillions of sensors will connect every aspect of our lives to the Internet, constantly producing and processing an overwhelming amount of data. Conventional charge-based memory technology such as DRAM and Flash memory will not sustain the increasing demand for scalable, high-speed, energy-efficient and high density memory devices. In this special topic class, we will discuss the prospect and challenges of various emerging memory technology such as spin transfer torque random access memory (STT RAM), phase change memory (PCM), resistive random access memory (RRAM), conductive bridge random access memory (CBRAM) and possible applications in neuromorphic computing.

ECE 2272 - SIMULATION AND DESIGN OF SILICON PHOTONICS

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to enable students to design basic photonic integrated circuits by providing them with an intuitive understanding of core photonic components (e.g. waveguides, couplers, resonators, etc.) as well as a solid grasp of the tools needed to simulate multi-component designs. By the end of the course, students should understand the steps needed to take a PIC design from original concept to fabrication at a foundry. This

includes such topics as: on-chip filtering/routing using ring resonators and Bragg gratings; methods for optimizing bandwidth and on/off-chip coupling efficiency using edge and grating couplers; integrated high-speed silicon PN modulator design and optimization; integrated high-speed germanium PIN photodetector design and optimization; full photonic circuit simulation using the S-parameter method. Prerequisites: an undergraduate course covering the fundamentals of electromagnetic waves.

Academic Career: Graduate

ECE 2390 - IMAGE PROCESSING AND COMPUTER VISION

Minimum Credits: 3

Maximum Credits: 3

This first level graduate course covers essential elements of image processing for computer vision and introductory subjects in computer vision; image segmentation: region-based, edge detection, scale space, active contours ; shape description, deformable templates; textures ; perspective camera model and its parameters; geometry of multiple (2) views, fundamental matrix; scene planes and homographies; consistent labeling; locating objects in 3-d space; motion analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2521 - ANALYSIS STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Probability theory, random variables, sums and limits of random variable sequences, time and frequency domain, modeling of continuous and discrete random signals, least square estimation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2523 - DIGITAL SIGNAL PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Discrete-time signal processing, discrete Fourier transform and FFT implementation, design and stability considerations of FIR and IIR filters, filter implementation and finite register effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2525 - DETECTION AND ESTIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

A study of optimal techniques for extracting information from the observation of random variables or random signals. This includes hypothesis testing, estimation theory, optimal receiver design, Wiener and Kalman-Bucy filtering, and applications such as digital communications and medical imaging.

Academic Career: Graduate

ECE 2556 - NEURO-SIGNAL MODELING AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course will focus on statistical theory and practical application related to brain imaging analysis. The topics will include statistical inference, analysis of variance, Bayesian analysis, likelihood and factor analysis (exploratory and confirmatory). The content ranges from the traditional to the contemporary. While specific applications are not treated, this course is strongly motivated by bio applications, especially in computational neuroscience. This would be a graduate level course taught through hands-on examples and tutorial data sets and cover the theory and implementation of these methods.

Minimum Credits: 3
Maximum Credits: 3

Linear spaces and operators, mathematical descriptions of linear systems, controllability and observability, irreducible realization of rational transfer-function matrices, canonical forms, state feedback, and state estimators, stability.

Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2647 - INTRODUCTION TO NONLINEAR CONTROL DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to nonlinear control design methods. The main topics include: Lyapunov stability analysis, feedback linearization, sliding mode control, and integrator backstepping. The content will be mathematical, supplemented with application examples from nonlinear systems such as robotic manipulators and human musculoskeletal system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2654 - DIGITAL CONTROL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Transform domain approach to analysis and design of digital computer control systems, linear discrete dynamic systems analysis and the z-transform, discrete equivalents to continuous transfer functions, sampled data systems, design of digital control systems using transform techniques, quantization effects, sample rate selection. Prerequisite: ECE 1673

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2671 - OPTIMIZATION METHODS

Minimum Credits: 3

Maximum Credits: 3

Analytical and computational aspects of finite dimensional optimization, unconstrained and equality constrained problems, basic descent methods, conjugate direction methods, nonlinear programming and the Kuhn-Tucker Theorem, linear programming, dynamic programming, multicriteria optimization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2680 - ADAPTIVE CONTROL

Minimum Credits: 3

Maximum Credits: 3

Adaptation and learning play an essential role in biological systems, and these characteristics have been widely incorporated in modern control systems. This course introduces the general principles of adaptive control and learning. Topics to be covered include: real-time parameter estimation, self-tuning regulators, model-reference adaptive systems, adaptive control of nonlinear systems, practical aspects and implementation of adaptive control systems, introduction to computational learning theory and learning in neural systems, and an example of adaptive control by the cerebellum.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2695 - SPECIAL TOPICS: ADAPTIVE CONTROL

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2774 - ADVANCED POWER SYSTEMS ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Steady state phenomena, matrix transformations, system parameters, system unbalances, digital methods, and numerical analysis techniques applied to load flow, state estimators, and fault studies in the large power systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2775 - ADVANCED ELECTRIC MACHINES AND DRIVES

Minimum Credits: 3

Maximum Credits: 3

This is a course in electric machine and drive analysis and modeling, along with their control systems. The course will cover the dq0 transformation, reference frame theory, saturation, unbalanced operation and dynamics in electric machines. Then cover the converter topologies typically used in machine drives, power electronic device characteristics, pulse-width modulation techniques, current regulation, torque and speed control, and space vector control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2776 - MICROGRID CONCEPTS & DISTRIBUTED GENERATION TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

This course describes fundamental concepts related with the development of microgrids and the integration of distributed generation. Technical topics are divided into three modules. The first module introduces microgrid components and discusses the main types of microsources. The second focuses on energy storage technologies. The third includes system integration topics, such as power electronics interfaces; dc and ac architectures; economics, operation, stabilization, and control; reliability aspects; grid interconnection, and microgrids as part of the "smart" grids. This course also aims at preparing students to conduct research or helping them improve their research skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2777 - POWER SYSTEMS TRANSIENTS 1

Minimum Credits: 3

Maximum Credits: 3

Lumped parameter analysis, switching transients in ac/dc systems, arc modeling, damping, current suppression, traveling wave phenomena, line discontinuities, Ferro resonance, transient recovery voltage.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2778 - FACTS AND HVDC TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

Advanced Power Electronics (FACTS and HVDC) is a comprehensive course in the area of large-scale power electronics systems, circuits, devices, and the ever-advancing areas of applications. This course will provide graduate students with an understanding of the how the broad spectrum of power electronics is integrated into a wide variety of industries, with an emphasis on utility scale FACTS and HVDC technologies and applications, as well as how applications of power electronics circuits, devices, and systems are utilized for control and operation of various processes and business fields. The course will cover, from a ground-up approach, devices and their characteristics, conversion techniques and circuits, and applications of power electronics with an emphasis on power conversion fundamentals for FACTS and HVDC applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2780 - RENEWABLE AND ALTERNATIVE ENERGY

Minimum Credits: 3

Maximum Credits: 3

This course covers an in-depth analysis and understanding of various renewable and alternative energy technologies' including wind, solar, biomass, thermal, wave, hydro, and other sources and systems. Investigation of applications, integration, markets, policy, and other aspects of renewable development will be studied. Supporting technologies, such as energy storage, power electronics, and controls as applied to renewable and alternative energy applications are also explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2781 - SMART GRID TECHNOLOGIES AND APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

This is a comprehensive course designed to introduce students to new technologies dedicated to reliably, efficiently and safely managing electric power across utility, commercial, industrial, and residential networks. The course will cover the application of smart grid technologies from power generation through power consumption including grid automation, smart meters, demand response, communication, electric vehicle integration, grid connectivity, renewable energy, cyber security, microgrids and the business processes. Students will gain an understanding of the how the broad spectrum of smart grid technologies is integrated into the electrical energy industry, with an emphasis on distribution systems within homes, buildings, factories, transportation systems, and the utilities serving them

Academic Career: Graduate

Grade Component: Grad HSU Basis

ECE 3162 - ADVANCED COMPUTER MICROARCHITECTURE

Minimum Credits: 3
Maximum Credits: 3
This upper level graduate course aims to cover the state-of-the-art advances and hot topics in computer architecture research. Topics include emerging non-volatile memory technologies, massive parallel architectures (e.g. GPU), accelerators, optimizing architecture for data analytics, etc. Students are required to read contemporary research papers, and present them throughout a semester. One term project, done either individually or in

a team, is required. Prerequisite: ECE 2162 or equivalent.

ECE 3182 - ADVANCED MACHINE LEARNING & DEEP LEARNING

Minimum Credits: 3

Maximum Credits: 3

In this course, we will study the cutting-edge advanced research topics in machine learning and deep learning by reading and discussing a set of recent research papers. The main objective of this course is to cover the underlying mathematical concepts and representative algorithms, paper reading, and implementation. The student learning outcomes include understanding the advanced machine learning and deep learning models, large-scale optimization algorithms, present and discuss newly published ICML, NeurIPS, KDD papers in classes. The class projects will include a set of emerging machine learning and deep learning research topics. The project reports will be competed to target for potential machine learning conference submissions.

ECE 3750 - ELECTRIC POWER GRIDS AND SYSTEMS RESILIENCE

Minimum Credits: 3

Maximum Credits: 3

This course discusses selected topics in resilience engineering. The focus is on power systems and on information and communication networks as a critical load for electric power grids. These two systems are also the focus of the discussion because they are those specifically identified as particularly important in President Obama's Presidential Policy Directive 21 about National Infrastructure Resilience and because of their increasing integration as part of smart grids. Discussed topics include both theoretical and applied concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 3776 - POWER SYS CONTROL & STABILITY

Minimum Credits: 3

Maximum Credits: 3

The power system model for stability studies, response to disturbances, the behavior of machines, the effect of excitation, and mathematical techniques for stability studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 3777 - POWER ELECTRONICS CONVERSION 2

Minimum Credits: 3

Maximum Credits: 3

This course discusses selected topics in power electronics systems and circuits at a medium graduate level. The course content includes advanced modeling techniques of power electronic components and switched circuits. It also includes advanced concepts in power electronic circuits design, such as thermal and reliable based designs, and controls, including both time domain and geometric based controllers. Some primary applications include microgrids, renewable and alternative energy, sustainable systems, reliable power conversion circuits, smart grids, motor control, and others.

Academic Career: Graduate

Grade Component: Grad Letter Grade

ECE 3779 - HIGH FREQUENCY POWER ELECTRONICS

Minimum Credits: 3

Maximum Credits: 3

This course addresses the motivations and inherent design issues associated with high frequency switched mode power supply design. Origins and dependencies of frequency dependent losses will be reviewed, with specific emphasis on potential design approaches which reduce energy loss and facilitate high frequency operation. Resonance and its application to power converters will be discussed. Students will learn steady-state and dynamic modeling techniques which allow the analysis and design of converters containing significant resonant intervals, for which traditional small ripple assumptions do not hold.

ECE 3783 - MODERN CONTROL AND OPTIMIZATION FOR ENERGY AND COMPLEX ENGINEERING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The main goal of this course is to help the student develop a working knowledge of convex and nonconvex optimizations, i.e., to develop the skills and background needed to recognize, formulate, and solve convex and nonconvex optimization problems in engineering problems. This course provides a fundamental understanding of the operation of complex engineering system problems including energy and power networks, and machine learning from a control and optimization perspective. Students will learn how mathematical tools and computational methods are used for the design, modeling, planning, and 2 real-time operation of engineering systems. They will also learn about the mathematical modeling and calculation engines of related problems.

Emergency Medicine

EMED 5372 - SPECIALTY SELECTIVE

Minimum Credits: 0

Maximum Credits: 0

Specialty Care Clerkship is a two week experience that will run during week 7 and week 8 of the Surgical block. Students will select two options from a list of specialties to include Adult Emergency Medicine, Anesthesiology, ENT, Neurosurgery, Ophthalmology and Orthopedics. Students will complete 1 week of each assigned specialty. Attention will be given to student specialty preference but capacity limits may not allow students to get their top choices. Students will work with the teams in these departments to provide direct patient care in a variety of settings including outpatient clinics, inpatient wards and may include Operating Room experience depending on the specialty. In some cases, bedside learning will be augmented with online modules and simulation experiences. Grading for the course will be Pass/Fail.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

EMED 5376 - SPECIALTY CARE CLERKSHIP

Minimum Credits: 0

Maximum Credits: 0

The specialty care clerkship is a four (4) week rotation that includes a combination of one week experiences in the disciplines of ENT, ophthalmology, adult emergency medicine and pediatric emergency medicine. In addition to four weeks of clinical time, students will attend weekly lectures, workshops and lab activities. This required clerkship begins with orientation and a suturing and splinting session followed by a simulation-based session in phone communication (how to best communicate medical information over the telephone to patients). One morning each week there will be an ophthalmology lecture and an ENT lecture. Additional morning workshops include dermatology, EKG cases, dizziness and audiology, musculoskeletal exam and rehab and musculoskeletal radiology. The lecture will be followed by clinical responsibilities. Students are evaluated by each specialty area based on clinical performance and will take an on-line proctored examination. One grade will be assigned for the entire four week rotation.

EMED 5445 - COMMUNITY EMERGENCY MEDICINE ELECTIVE - UPMC HAMOT

Minimum Credits: 0
Maximum Credits: 0

This rotation is set up to give students opportunities to see and participate in a busy community-based, as opposed to University-based Emergency Department. Additionally, this rotation allows students to rotate and audition at a second UPMC hospital that has an fully ACGME-accredited Emergency Medicine residency. Students interested in EM will be provided with a ESLOE written at the end of rotation. UPSOM students interested in EM as a specialty MUST take the UPSOM home EM elective (EM5450) prior to taking this experience, which counts as a student's one away elective in EM. Students not going in to EM may take this elective without first taking EM5450. Students entering EM as a specialty will have priority for available slots. Logistics and Educational Methods: Rotations are held at UPMC Hamot Emergency Department. Students have approximately 14 10-hour clinical shifts over the 4 week rotation. The shifts vary in times including night and weekend coverage. There is protected time on Tuesday evenings/overnights as well as Wednesday mornings for educational conferences. Students take a 40 question end-of-rotation test and give a 10-minute presentation at Wednesday conference. Evaluations will be filled out per medical school requirements based on collective feedback from supervising residents and attendings.

Academic Career: Medical School
Course Component: Clinical
Grade Component: Exchange MED SU5

EMED 5450 - EMERGENCY MEDICINE

Minimum Credits: 0
Maximum Credits: 0

This 4 week elective is designed for the student desiring added experience in acute care medicine as practiced both in and out of the hospital. Student will become part of mobile intensive care unit field team operating in the city of Pittsburgh's system. Students are responsible for gaining experience in initial on-scene assessment and intervention, rescue, extrication techniques and cases for follow-up and presentation. Module 2 is spent in emergency department with the goal of providing experience and supervision in the initial evaluation and treatment of wide variety of patient problems.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5460 - MEDICAL TOXICOLOGY

Minimum Credits: 0
Maximum Credits: 0

This four week clinical elective will provide students with experience in the assessment and treatment of toxicology patients. Students will spend time with toxicology faculty in consultation, examination, treatment, and follow-up of patients in the emergency, inpatient and outpatient settings. The clinical experience will include daily clinical rounds on inpatients, outpatient consults, and Pittsburgh poison center case review. Students will be on-call daily with the rotating residents and medical toxicology staff member and will be expected to join the resident and attending on cases presenting to UPMC Presbyterian and Children's Hospital of Pittsburgh. A portion of the rotation will be at the Pittsburgh poison center, where students will learn from current patient cases and summary case reviews. Daily teaching sessions will be provided by members of the medical toxicology service on the spectrum of toxicology subjects. Sample topics include: initial approach to the toxicology patient, decontamination, acetaminophen, salicylates, toxic alcohols, antidepressants, iron and digoxin. Students will also attend the medical toxicology service lectures. Additionally, the student will be encouraged to participate in on-going research projects if available (e.g. chart review). Students will also be encouraged to prepare interesting cases for scientific presentation and publication. The overall curriculum will help students develop their knowledge base in medical toxicology, and improve their ability to diagnose and treat a poisoned patient.

Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5465 - POINT OF CARE ULTRASONOGRAPHY

Minimum Credits: 0

Maximum Credits: 0

This elective serves as an introduction to the use of point of care ultrasonography (POCUS) over the course of four weeks. The course will expose students to the use of focused, point of care ultrasonography to make bedside clinical decisions for the care of acutely ill patients. POCUS as serve as an extension of the physical exam to aid physicians narrow their differential diagnosis, provide direct visualization of pathophysiology as well as tracking changes to medical interventions, improve accuracy and safety in procedural skills and obtain direct visualization of pathology without the need for transportation to specialized suites or the use of radiation. These skills are essential in the present medical climate where pocus can aid in improved safety, cost-savings and even patient satisfaction. As the use of this technology expands, it is crucial for medical trainees to have exposure.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

EMED 5466 - POST CARDIAC ARREST SERVICE

Minimum Credits: 0

Maximum Credits: 0

This rotation is an elective experience with the Post Cardiac Arrest Service (PCAS) at the University of Pittsburgh/UPMC Presbyterian. The goal is for students to gain experience in managing post-cardiac arrest patients in the City of Pittsburgh and at UPMC Presbyterian. Students enrolled in the course will provide comprehensive treatment to patients who have suffered cardiac arrest and are seen at UPMC Presbyterian along side the physicians of the PCAS service. Specific therapies include critical care medicine; targeted temperature management; seizure evaluation, prevention, and treatment, neuroprognostication; and discharge planning. The PCAS service coordinates its care with cardiology, CCM, and PM&R services, allowing students to experience the disease of cardiac arrest in a multidisciplinary fashion. Students will be evaluated using the standard UPSOM Elective Evaluation form based on direct observation by attending physicians and housestaff, evaluation from nursing caregivers, as well as completion of didactics and readings. This course is graded Pass/Fail. This elective is available ONLY via permission of the course director and enrolled students must have completed the prerequisites successfully prior to enrollment.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 3

EMED 5470 - SENIOR ELECTIVE IN QUALITY AND PATIENT SAFETY

Minimum Credits: 0

Maximum Credits: 0

The quality and patient safety elective is designed for the motivated learner with self-study modules and learning activities facilitated by preceptors remotely. The course complements busy months of interviewing and travel through the use of on-line media, case reviews, videos, podcasts and blog discussions. Instead of in-person meetings, course directors employ on-line meetings and electronic touch points to ensure progress throughout the course. Learning in this course is asynchronous, so timing is at the convenience of the individual learner. Participants will spend at least 2 hours per day completing required on-line learning modules. In addition, students will work independently to research, understand and create a root cause analysis and a rapid process improvement plan. Students will review the RCA and QI plans of their peers, provide feedback and participate in discussion of their work.

Academic Career: Medical School

Course Component: Lecture

Grade Component: S/U Basis

EMED 5600 - POCUS CERTIFICATE PROGRAM INDEPENDENT STUDY ELECTIVE

Minimum Credits: 0

Maximum Credits: 0

An elective course in clinical point-of-care ultrasound that includes scanning shifts in the Emergency Department and in other inpatient and outpatient settings, participation in semi-weekly grand rounds, MS1 and MS2 POCUS education as instructors, and research/case presentations. Students may request a 2-week or 4-week elective period. This elective is specifically for students in the POCUS Longitudinal Certificate Program. Students interested in POCUS that are not in the Certificate Program may consider the EMED 5465 iPOCUS Elective. Objectives: 1. Understand the normal anatomy of the hollow and solid organs of the neck, thorax, abdomen and extremities. 2. Describe maneuvers in patient positioning that may

help with image acquisition while maintaining patient dignity. 3. Describe the benefits and downfalls of ultrasound when compared to X-ray, CT, and MRI. 4. Describe the sonographic appearance of body structures including blood vessels, nerves, soft tissue, heart, lung, liver, spleen, kidneys, urinary bladder, uterus, and ovaries. 5. Understand the physics and appearance of ultrasound artifacts including posterior shadowing, posterior enhancement, edge artifact, mirror artifact, reverberation, and ring-down. 6. Develop a differential diagnosis for patients with abdominal pain. 7. Recognize sonographic signs of intra-abdominal fluid and its possible causes. 8. Develop a differential diagnosis for patients with chest pain. 9. Recognize sonographic signs of cardiac pathology including wall motion abnormality, hypertrophic cardiomyopathy, ventricular hypertrophy, heart failure, pericardial effusion, and tamponade 10. Recognize sonographic signs of pneumothorax, pulmonary edema, pleural effusion, and interstitial consolidation. 11. Describe the concept of ALARA as it pertains to point-of-care ultrasound. Develop professional interactions with physicians, advanced practice providers, nurses, technologists, other staff, and patients. 12. Perform medical literature searches for relevant topics. 13. Research and perform a case presentation. 14. Provide useful feedback at the end of the rotation.

Grade Component: Exchange MED SU5

EMED 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

An individualized course of study may be arranged with the department of ophthalmology to fit the student's needs. The student will meet with a department faculty person to design a clinical course of study for a four-week period of time. A written proposal must be approved by the faculty member as well as the student's scheduling advisor. When approvals have been received, the school registrar will schedule the course and notify the department student coordinator.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

EMED 5735 - SCIENCE OF RESUSCITATION (ILS)

Minimum Credits: 0

Maximum Credits: 0

This 4-week elective will satisfy requirement for integrated life science course of senior year. Course objectives: 1) identify major physiological influences affecting resuscitation and trace their implementation into clinical guidelines; 2) critique clinical study of resuscitation; 3) become confident conducting medical resuscitation, including use of relevant equipment; 4) appreciate practical/ethical issues surrounding research on emergency interventions. Small group sessions, live animal/simulator sessions and written research critique is required.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5740 - EXERCISE IS MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This is a four week selective that meets the requirement of an integrated life science course. The principles of the exercise is medicine program are shared by the American medical association (AMA) and the American college of sports medicine (ACSM) and they are the focus of this course. At the end of this course, the student will have an understanding of the evidence for the role of exercise in the treatment and prevention of chronic disease and how to apply the evidence to their practice. There are multiple learning modes in this course, including didactic, laboratory, and independent study. The didactic portion will be an active participation exercise in a journal-club format. The goal of the didactic portion will be to critically evaluate the evidence for the role of exercise in chronic disease providing the foundation for understanding, creating, and employing comparative effectiveness research (CER). Through these reviews, the student will evaluate the AXSM/aha exercise recommendations. Laboratory experiences in exercise science will provide insight into the acute response to exercise and exercise stress testing reinforcing principles of physiology learned in the first two years of the curriculum. Students will participate in the labs, wear activity monitors and pedometers at various times during the course to track daily activity to appreciate how these devices can be used to motivate and modify patient lifestyle. Finally, each student will complete an independent study on an aspect of exercise and chronic disease treatment or prevention.

Academic Career: Medical School

Course Component: Workshop

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5750 - GET READY FOR RESIDENCY BOOT CAMP

Minimum Credits: 0

Maximum Credits: 0

This elective is an intensive preparation for students who are about to enter residency. Students will be provided with a combination of general and specialty-specific, clinically relevant content in a variety of modalities. The focus will be on content that will prepare the student to function at the starting level of an intern (and meet the expected intern-level milestones) after graduation. Teaching modalities will include simulation, small group sessions, skills workshops, standardized patient cases, and a limited number of high-yield lectures.

Academic Career: Medical School

Course Component: Clinical

Grade Component: S/U Basis

EMED 5898 - INDIVIDUAL STUDY OR RESEARCH

Minimum Credits: 0

Maximum Credits: 0

This is a senior-level elective offering. This is a four week elective for the student interested in participating in clinical or basic science research in emergency medicine. The student will be offered the opportunity to choose a research project which interests him or her. The student will work closely with the emergency department attending staff as well as the clinical research coordinator for the department of emergency medicine. The coordinator will meet weekly with the student to provide guidance as well as education materials.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5899 - INDEPENDENT STUDY IN EMERGENCY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5900 - EXTRAMURAL EMERGENCY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in emergency medicine may be arranged at an institution other than the University of Pittsburgh school of medicine.

Arrangements must be made in accordance with the process set out in the UPSOM course catalog with all appropriate approvals to be received before the course may be added to the student schedule for credit.

Academic Career: Medical School

Grade Component: H/HS/S/LS/U

Endodontics

ENDOD 2000 - GRADUATE ENDODONTICS

Minimum Credits: 6

Maximum Credits: 6

General studies of various clinical endodontic techniques and procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

ENDOD 2011 - TEACHING/EMERGENCY CARE 1

Minimum Credits: 2

Maximum Credits: 2

The student is involved in teaching clinical endodontics to pre-doctoral dental students. This will include consultation in the pre-doctoral clinics, and assisting the dental student with clinical techniques in endodontics. The resident will also be involved in the diagnosis and treatment of difficult cases in the pre-doctoral emergency clinic.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

ENDOD 2021 - TEACHING/EMERGENCY CARE 2

Minimum Credits: 2

Maximum Credits: 2

The student is involved in teaching clinical endodontics to pre-doctoral dental students. This will include consultation in the pre-doctoral clinics, and assisting the dental student with clinical techniques in endodontics. The resident will also be involved in the diagnosis and treatment of difficult cases in the pre-doctoral emergency clinic.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

ENDOD 2043 - ENDODONTIC SURGERY 3

Minimum Credits: 1

Maximum Credits: 1

This course is designed so that the student will be knowledgeable and competent in surgical endodontic procedures so that he or she is capable of utilizing them in practice. The resident will be knowledgeable of hospital policies, and admitting patient protocol.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

ENDOD 2111 - ENDODONTOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2112 - ENDODONTOLOGY 3

Minimum Credits: 2

Maximum Credits: 2

This course is the study of the scientific rationale for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.

Maximum Credits: 2

This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2422 - CURRENT LITERATURE 4

Minimum Credits: 2

Maximum Credits: 2

This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2430 - CURRENT LITERATURE

Minimum Credits: 2
Maximum Credits: 2

This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2510 - CLINICAL TREATMENT

Minimum Credits: 3
Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2511 - CLINIC 1

Minimum Credits: 3
Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2512 - CLINIC 3

Minimum Credits: 3
Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2520 - CLINICAL TREATMENT

Minimum Credits: 3
Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2521 - CLINIC 2

Minimum Credits: 3

Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

ENDOD 2522 - CLINIC 4

Minimum Credits: 3

Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2530 - CLINICAL TREATMENT

Minimum Credits: 3

Maximum Credits: 3

This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical as well as surgical proficiency in the field of endodontics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2610 - CLINICAL CONCEPTS IN ENDODONTICS

Minimum Credits: 2

Maximum Credits: 2

This course is the study of the scientific rationale for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2611 - CLINICAL CONCEPTS

Minimum Credits: 1

Maximum Credits: 1

This course will provide the clinical aspect of endodontic treatment. By presenting various techniques used to diagnose and treat the patient in the endodontic practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2612 - CLINICAL CONCEPTS 2

Minimum Credits: 1

Maximum Credits: 1

This course will provide the clinical aspect of endodontic treatment. By presenting various techniques used to diagnose and treat the patient in the endodontic practice.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2613 - CLINICAL CONCEPTS 3

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate

Grade Component: Grad Letter Grade

ENDOD 2614 - CLINICAL CONCEPTS 4

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2620 - CLINICAL CONCEPTS IN ENDODONTICS

Minimum Credits: 2
Maximum Credits: 2
This course is the study of the scientific rationale for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2721 - TRAUMATOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course will detail various types of dental trauma; the methods of treatment and possible long-term effects trauma have on oral structures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2821 - SPECIAL LECTURES SERIES

Minimum Credits: 2
Maximum Credits: 2
This course will include an array of lectures that will be presented by experts in various fields, exposing the students to a wide variety of topics and ideas including practice management, dental jurisprudence, and teach methodology
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2921 - ENDODONTIC SURGERY

Minimum Credits: 2
Maximum Credits: 2
This course will provide the surgical aspect of endodontic treatment. Proficiency in the treatment planning of endodontic surgery, as well as evidence based foundation for all aspects of surgical treatment will be explored. 1) Develop the skills for proper case selection and treatment planning of

surgical cases. 2) Understand soft tissue management, and flap design as it pertains to endodontic surgery. 3) Demonstrate knowledge of guided tissue techniques and materials. 4) Demonstrate an understanding of wound healing of both soft and mineralized tissues as they pertain to endodontic surgery. 5) Discuss methods of hemostasis and crypt control during periapical surgery. 6) Understand the possible postoperative complications associated with endodontic surgery and how to manage these situations. 7) Have a strong knowledge of the head and neck anatomy. 8) Understand possible periodontal considerations with the various flap designs. 9) Discuss various suture techniques for specific for the conditions that present themselves.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2999 - RESEARCH PROJECT

Minimum Credits: 1

Maximum Credits: 1

This course involves independent or joint research in the field of endodontics. The completion of this class, oral presentation and written paper must be submitted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

ENDOD 5210 - ENDODONTICS 1

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn the morphology, physiology, and pathology of the human pulp and periapical tissues and the diagnosis, prevention and treatment (to include access preparation, instrumentation and temporization) of diseases and injuries related to these tissues. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

ENDOD 5216 - ENDODONTICS 1 LAB

Minimum Credits: 1.5

Maximum Credits: 1.5

In this course, students will develop clinical skills for endodontic treatment in a simulation/laboratory environment. This course includes small group simulation and laboratory sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: ABCF

ENDOD 5247 - ENDODONTICS 2 LAB

Minimum Credits: 1.5

Maximum Credits: 1.5

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: ABCF

ENDOD 5252 - ENDODONTICS 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

ENDOD 5313 - ENDODONTICS 3

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn about endodontic microbiology, endodontic therapeutics, preventive endodontics, procedural accidents, evaluation of endodontic outcomes, nonsurgical retreatment, bleaching of discolored teeth, management of incompletely formed roots, management of traumatic dental injuries, longitudinal tooth fractures, endodontic and periodontal interrelationships, endodontic surgery and differential diagnosis of orofacial pain. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

ENDOD 5388 - CLINICAL ENDODONTICS 1

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide clinical experiences in the area of endodontics for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in providing care to endodontic dental patients at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the endodontic patient.

Engineering

ENGR 2007 - SUSTAINABILITY CAPSTONE

Minimum Credits: 3
Maximum Credits: 3

Building upon students' previous experience and skills, this course will focus on enabling interdisciplinary student teams to synthesize comprehensive solutions to complex real-world Sustainability challenges. This is a project-based course. Project topics will be developed in consultation with instructors and sustainability stakeholders. Innovative solutions will require the application of critical thinking and collaboration to resolve. By the end of the course the students will have a deeper understanding of 1) the multi-faceted nature of Sustainability solutions 2) approaches to problem solving across fields and 3) how to communicate sustainable solutions and concepts in an interdisciplinary team environment. This course serves as a capstone course for the Sustainability certificate and M.S. in a Sustainable Engineering degree and is a required course for these two programs.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2009 - SUSTAINABLE FOOD SYSTEMS

Minimum Credits: 3
Maximum Credits: 3

Our food system is a multifaceted network of interconnected systems and relationships. In order to be able to feed ourselves well into the future, it must be sustainable. A sustainable food system is a system in which healthy food is provided to people while balancing the environmental, social and economic impacts. These dynamics force stakeholders to confront synergies and tradeoffs in agricultural practices, harvesting, transportation, manufacturing and distribution, healthy diets, and a reduction in wasted food.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2017 - MANUFACTURING FOR THE FUTURE: FLEXIBLE, GREEN, AND DIGITAL

Minimum Credits: 3

Maximum Credits: 3

What is flexible device manufacturing? What is green manufacturing? What is cybermanufacturing? Importantly, how do these emerging "types" of manufacturing differ from traditional manufacturing? It is important to recognize that global manufacturing is undergoing major transformations nowadays. The confluence of new advanced materials, emerging fabrication technologies, and connected cyber-physical systems is creating paradigm shifts for the ways products are conceived, made, distributed, used, and disposed. In the ever-increasing competition of "making things" of value to consumers, many industries are now reinventing themselves to cope with this new reality. This class covers the fundamentals behind major global trends, and their implication for the future of manufacturing from an engineering perspective. Topics covered include the following: (1) How the need for flexible and wearable devices is driving innovation in new materials and fabrication processes beyond the traditional microfabrication techniques adopted in the semiconductor industry. (2) How protein-based materials, degradable polymers, and novel recycling technologies are paving the way for more sustainable manufacturing of consumer products. (3) How data analytics and internet of things (IoT) technologies are enabling a new generation of digital manufacturing systems referred to as Industry 4.0, and beyond.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2050 - TECHNICAL WRITING

Minimum Credits: 3

Maximum Credits: 3

This course is designed for non-native English speaking advanced graduate students preparing to write thesis or dissertation proposals in engineering. Topics covered include: format and content of reports needed in technical writing, abstracts and summaries, project proposals and research reports; correcting language problems encountered by non-native English writers and technical writers in particular.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

ENGR 2051 - PRODUCT REALIZATION

Minimum Credits: 3

Maximum Credits: 3

This interdisciplinary course considers diverse aspects of product realization process. Aspects, include defining user requirements, creation of computer based model and designs of a product from an existing product, rapid prototyping techniques and development of a manufacturing plan. Teams of 3-4 students from engineering and business will take a product with a microsystem or mems technology feature from concept to working prototype. In doing this students will address issues of market analysis, design, manufacturing design and product planning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2052 - INTRODUCTION TO TECHNICAL COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

An introduction to technical writing and oral presentation skills using Word, Powerpoint, Mendeley, InkScape and LaTeX.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

ENGR 2060 - SOCIAL ENTREPRENEURSHIP- ENGINEERING FOR HUMANITY

Minimum Credits: 3

Maximum Credits: 3

The course will explore the concepts of social entrepreneurship through the three tenets of sustainability: environment, economy, and equity in the context of complex or 'wicked' problems. An introduction will provide a foundation in sustainability and social entrepreneurship while exploring the impact of innovative business models, such as disruptive innovation and Prahalad and Hart's fortune at the bottom of the pyramid. Additional class time will explore different examples and challenges in the developed and developing worlds. Through weekly readings, the course will focus on classroom discussions about the tenets of sustainability and the relevance of engineering in crafting 'solutions'. The course project will provide students with an opportunity to work with a multi-disciplinary team to design an engineering-based business plan targeting a specific challenge either locally or in the developing world.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2061 - INTRAPRENEURSHIP: ENTREPRENEURSHIP WITHIN THE CORPORATION

Minimum Credits: 3

Maximum Credits: 3

This course explores the developing practice of intrapreneurship which is defined as the application of entrepreneurial principles in a corporate environment for the creation of new products and businesses. The focus will be on providing the student with the needed awareness of cultural and political barriers while providing a specific tool set targeted at maximizing new business as well as career success. The course is designed for junior and senior engineering students who have already had some work experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2062 - STARTUP FUNDAMENTALS FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course is offered within the Swanson School of Engineering to undergraduate and graduate students. At the undergraduate level, the class is part of the new Certificate in Innovation, Product Design and Entrepreneurship. The class is designed to introduce the student to the core business concepts behind innovation and entrepreneurship. The class is highly interactive, and students will be required to participate in groups and individually. Grading is heavily weighted around participation in the group project which will be ongoing throughout the semester. The class is taught by Babs Carryer, Director of Education & Outreach, Innovation Institute at Pitt. Guest speakers, who are experts in their fields, will supplement the core teaching. Topics covered will include: ideation, problem/solution, market opportunity, competitive analysis, customer discovery, pitching, funding, finance, legal issues, team building, and innovation within existing companies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2080 - LEAN LAUNCHPAD: EVIDENCE-BASED ENTREPRENEURSHIP

Minimum Credits: 3

Maximum Credits: 3

Conventional wisdom regarding starting a business is dead wrong. This conclusion led Steve Blank and others to develop the lean startup method, an approach for systematically exploring the business model needed to make an idea into a success. In Blank's own words: 'existing companies execute a business model, startups search for one. This distinction shapes the lean definition of a startup: a temporary organization designed to search for a repeatable and scalable business model.' In this course, we discuss the basic elements of the lean startup method and apply them to the domain of engineering product and customer development. Students are expected to come to the class with their own idea(s) for potential product offering(s), which they will then test using the lean startup approach over the course of the term.

ENGR 2100 - FUNDAMENTALS OF NUCLEAR ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to application of theory to practical aspects of nuclear science and technology. It is intended as a ramp-up course for non-nuclear engineers who wish to pursue additional graduate level courses in nuclear engineering at the University of Pittsburgh. Graduate level content will be assured by the use of rigorous quantitative homework assignments, take-home exams, and an individual research project to be presented at the end of the semester. This course is designed to accommodate working adults who must travel from time to time though it is not designed to be taken completely asynchronously. Topics will include: atomic and nuclear physics, nuclear reactions and radiation, radiation protection, fission reactor basics, neutron diffusion, time-dependent reactors, reactor thermal-hydraulics including nuclear heat generation, conductive and convective heat transfer, ideal and non-ideal fuel rod analysis, thermodynamics, and a review of major nuclear criticality and power plant accidents.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Engineering (PENGR)

ENGR 2101 - NUCLEAR CORE DYNAMICS

Minimum Credits: 3

Maximum Credits: 3

This course reviews the mathematics of nuclear reactor kinetics. Linear systems of ordinary differential equations are solved by state vector techniques, Laplace transform techniques, or finite difference techniques including the treatment of discretization errors resulting from various finite differencing approximations. A review of the physics of nuclear kinetics is followed by treatments of the kinetics equation including the effect of uncertainties, approximate solutions, and the interpretation of experiments to measure kinetics parameters. Representations and the physical basis of reactivity feedback mechanisms are treated. Lumped and distributed parameter models of fuel, coolant, fission products, and selected plant components are derived and applied to develop quantitative static relationships and qualitative dynamic results for transient conditions. The course provides an introduction to reactor protection and safety analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2102 - NUCLEAR PLANT DYNAMICS AND CONTROL

Minimum Credits: 3

Maximum Credits: 3

This course provides an integrated engineering examination of a nuclear power plant from the perspective of instrumentation and control systems used to infer the condition of the nuclear plants and its systems, control its normal operation, and provide protection during transient situations as well as assess core damage during severe accident situations. Students will apply previous knowledge of analog, digital, and microprocessor

electronics techniques to nuclear power plant design and operation and reactor protection and safety considerations that influence the design of the reactor plant. A major outcome of this course will be an integrated understanding of the interaction between the physics of nuclear plant control (reactivity and heat balance) and the control and protection systems. This integrated plant understanding will be essential for the successful completion of the integrated nuclear power plant operations course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2103 - INTEGRATION OF NUCLEAR PLANT SYSTEMS WITH THE REACTOR CORE

Minimum Credits: 3

Maximum Credits: 3

This course examines design bases for major systems and components in a nuclear plant and evaluates how the systems function in an integrated fashion. The student will examine a typical nuclear power plant and those components and systems of the nuclear plant complex that have the potential for affecting core power, and whose failure could be an initiating event for a plant transient. Dynamic relationships for the systems developed in the companion nuclear courses will be transformed into stable, numerical algorithms for computer solutions and system interactions will be illustrated using a major industry transient analysis code. Emphasis is on how operations of and faults in systems and components can influence reactivity and core behavior. Through classroom discussions the students will assess engineering problems and operational problems that have been experienced in historical nuclear plant operations. The intended outcome is an aptitude for predicting complex transient behavior of the integrated nuclear plant considering factors that are important for safe and efficient operation: reactivity management and control, coolant inventory control, and core heat removal.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2104 - NUCLEAR OPERATIONS AND SAFETY

Minimum Credits: 3

Maximum Credits: 3

Nuclear power is an abundant and renewable power source with unique characteristics which require special attention in its design, licensing and operation. This course explains the fundamental plant processes: nuclear fission, neutron kinetics, heat transfer, chemistry and feedback mechanisms, showing how variations in one plant parameter can propagate effects in the others in ways not seen in fossil, solar, wind, or other systems. The student will also learn methods for analyzing these processes, and the relationship of their features to normal and off-normal plant operations, up to and including postulated severe accidents. Both deterministic analysis and Probabilistic Risk Assessment (PRA) will be employed, with exercises provided in both approaches. Similar concepts will also be applied to the design, manufacture and utilization of nuclear fuel. Stress is placed throughout on the defense in depth concept, and the nuclear safety cultural approach - a necessary point of view regarding how tasks are approached and conducted, whether they be analytical or operational.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2105 - INTEGRATED NUCLEAR POWER PLANT OPERATIONS

Minimum Credits: 3

Maximum Credits: 3

This course promotes understanding of how the integrated nuclear plant works and what challenges the operator faces, and helps an engineer 'speak operations' with interfacing groups. Use of the replica simulator is an effective way for students to understand accident control, emergency operating procedures, and how the control room interfaces with the rest of the plant. Emphasis is placed on understanding plant characteristics and controls, rather than on developing control manipulation skills. Intended outcomes are an aptitude for predicting transient behavior of the integrated plant and a command of reactivity management and control that is important for efficient operation of a nuclear plant complex. The course presumes knowledge of the major systems in a nuclear power plant and will emphasize how operations of and faults in those systems and components can affect reactivity and core transient behavior.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2110 - NUCLEAR MATERIALS

Minimum Credits: 3

Maximum Credits: 3

In this course, materials principles are taught in the initial lectures; students do not need to have prior understanding of them. The course will cover the metallurgy and phase diagrams of alloy systems important in the design of commercial nuclear power plants. The micro-structural changes that result from reactor exposure (including radiation damage and defect cluster evolution) are discussed in detail. The aim is to create a linkage between changes in the material microstructure and changes in the macroscopic behavior of the material. Also discussed is the corrosion of cladding materials as well as the effects of irradiation on corrosion performance, and the effects of primary and secondary coolant chemistry on corrosion. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is guided by experimental data. Materials issues in current commercial nuclear reactors and materials issues in future core and plant designs are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2112 - NUCLEAR CHEMISTRY AND RADIOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Nuclear and radiochemistry are subdisciplines of nuclear science that focus on the study of radioactive materials and their applications. The course will provide students with knowledge of fundamental nuclear science concepts that are key to the understanding of nuclear power plant safety, spent fuel and nuclear waste management, nuclear fuel reprocessing, environmental radioactivity, nuclear forensics, radionuclide production, medical imaging, nuclear pharmacy, and medical and health physics. The proposed course will consist of lectures on nuclear science fundamentals that include: atomic structure, nuclear models and properties, phenomenon of radioactive growth and decay, radiation emissions, nuclear reactions, radiation interactions with matter, radiation detection and measurement, radiation dosimetry and biological effects, and applications of nuclear and radiochemistry in science, engineering, and medicine.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2113 - RADIATION DETECTION AND MEASUREMENT

Minimum Credits: 3

Maximum Credits: 3

This combined lecture and laboratory course will provide students with an introduction to the principles of radiation detection and measurement and experimental techniques. The lecture material will provide students with an understanding of the theoretical basis of detector operation, radiation interactions with matter, signal conditioning and processing electronics, measurement techniques, and statistical considerations. Laboratory work will emphasize the practical aspects of radiation detection using an array of radioactive sources, detectors, and associated signal processing electronics. Through a series of laboratory experiments, students will learn to configure and operate instrumentation used in a wide range of radiation detection applications that are of interest to nuclear power, nuclear medicine, radiochemistry, and other scientific disciplines.

ENGR 2116 - BOILING WATER REACTOR THERMAL-HYDRAULICS AND SAFETY

Minimum Credits: 3

Maximum Credits: 3

BWR Thermal-Hydraulics and Safety is a course that focuses on the Boiling Water Reactor (BWR), design, operation, transient response, and abnormal operating conditions and accidents; boiling water heat transfer and two-phase flow; applications with respect to the Fukushima Daiichi BWR's. The course will cover the evolution of BWR systems including BWR features and characteristics and containment configurations. Thermal-hydraulics (T/H) and safety portions of the lectures cover boiling heat transfer and two-phase flow in BWR systems, T/H performance and thermal limits. BWR abnormal operating conditions and accidents are studied in theoretical response followed by hands-on simulator program exercises. Finally, accident evaluations and overview of the state-of-the-art safety analysis techniques for licensing applications are reviewed.

ENGR 2120 - MATHEMATICAL MODELING OF NUCLEAR PLANTS

Minimum Credits: 3

Maximum Credits: 3

Graduate students will develop the graphics/simulation framework and the underlying mathematical models for simulating nuclear power plants in ME/ENGR 2120 mathematical modeling of nuclear plants. Models will be developed in Matlab/Simulink(tm) and configured to run on a PC so that students can both examine the mathematical models on which the simulation is based and use the simulation program in laboratory-like sessions to study the effect of design changes on plant behavior. The simulation model fidelity developed is suitable for educational purposes and provides students with a desktop tool to realistically model and better understand reactor performance under various conditions. While it would not be intended to replace or duplicate the high-fidelity dynamic simulation used in major accident analysis codes such as Relap, Trac, and Trace, the course will provide the student with an introduction and a working knowledge what is embodied in these industry standard codes.

Academic Career: Graduate

ENGR 2125 - CASE STUDIES IN NUCLEAR CODES AND STANDARDS

Minimum Credits: 3

Maximum Credits: 3

Presentation of major issues associated with systems and component engineering relative to the nuclear power industry and the industry's consensus codes and standards. The course provides an explanation of the necessity of consensus codes and standards, a high-level view of codes and standards organizations, and shows how codes and standards promotes the safe operation of nuclear power plants. The course discusses how the NRC adopts and makes use of consensus codes and standards. It covers codes and standards for current, advanced and next generation, and high-temperature reactors, including global conformity assessment requirements. Relevant codes and standards from other communities, including nuclear quality assurance, are also summarized.

ENGR 2130 - THE NUCLEAR FUEL CYCLE

Minimum Credits: 3

Maximum Credits: 3

Studies the entire nuclear fuel cycle, beginning with the mining of uranium ores and progressing through the chemical and physical processes supporting enrichment, subsequent chemical conversion to uranium dioxide, and design and fabrication of fuel assemblies for use in a power reactor core. Aspects associated with fuel core management, operation and utilization in the reactor core along with the regulatory licensing requirements are presented. Following fuel operation the areas of fuel onsite handling, transportation of spent nuclear fuel and options for diverse long term secure storage are reviewed and evaluated. Reprocessing and recycling are discussed which includes fuel resource utilization, proliferation control, and waste volume minimization. Discussion of regulatory issues completes the picture, enabling the student to understand not only the processes, economics and industry drivers, but also the benefits and issues that have been addressed with nuclear power generation. In all phases of the cycle, the student is acquainted with the quantitative techniques and methods employed in the nuclear fuel cycle.

ENGR 2131 - SPECIAL TOPICS IN NUCLEAR ENGINEERING, METAL COOLED REACTORS

Minimum Credits: 3

Maximum Credits: 3

This course is intended to provide you with an understanding of the technology associated with high-energy neutron reactors (most often called fast reactors). The course materials consist primarily of archival papers from literature, the GENIV International Forum materials, my slides, and the time we spend together during lectures; a bibliography of papers relevant to these reactors is provided in the course syllabus. Although many nations' sodium-cooled reactor programs continue to be based on oxide fuel, there is a better way metal fuel. In this course, the student will become more aware of the state of high-energy neutron reactor technology. Moving nuclear power from low-energy neutron fission (water-cooled reactors) to high-energy neutron fission (metal-, salt-, or gas-cooled reactors) will revolutionize fission, just as jet engines and fracking revolutionized commercial air transportation and oil/gas production, respectively. We will focus on metal-cooled high-energy neutron reactors, but you can easily transpose this knowledge to salt or gas systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Letter Grade

ENGR 2132 - BOILING WATER REACTOR SYSTEMS AND SAFETY

Minimum Credits: 3

Maximum Credits: 3

This course will review the fundamentals of boiling water reactor systems and operations as they apply to analysis, design, selection and application of power generation. The course will cover the evolution of BWR systems including BWR features and characteristics and containment configurations. With successful completion of the class students will understand how BWRs operate through the fundamental principals of reactor power flows and core flow."

ENGR 2210 - UNDERSTANDING BRAZIL-PREPARATIONS FOR RESEARCH AND STUDY IN BRAZIL

Minimum Credits: 2

Maximum Credits: 2

This seminar is specifically designed for students who will be doing research and/or studying in Brazil. It introduces the economic, political, social, and cultural aspects of Latin America in general and Brazil in particular. The seminar is organized and conducted by the center for Latin American studies, and features guest lectures from on Brazil, readings from current popular literature and news sources (available from the Eduardo Lozano Latin American collection, a library resource of over 340,000 volumes spanning 30 years), and contemporary films (such as decade of destruction: killing for land and Brazilian populations: stories and myths). The first half of the course will introduce students to day-to-day life in Brazil, as well as its current socio-economic situation, the influence of politics and ethnic relations, and the many aspects of Brazilian culture. The second half will focus on disciplinary perspectives that allow students to explore regional issues from a variety of viewpoints. The final seminars in the semester will be used for the presentation of individual student reports on a topic related to Brazilian life, such as the governmental structure, university system, or integration of technology with indigenous lifestyles and traditions. This course is required for all Igerd fellows.

ENGR 2300 - INTRODUCTION TO MACHINE LEARNING FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course will provide an introduction to Machine learning (ML). Emphasis will be on understanding the high-level theoretical intuitions and principles underlying the ML algorithms that we discuss, as well as developing a concrete understanding of how to implement and apply ML algorithms to engineering applications. The course will first review core concepts of linear algebra and probability theory that are key for understanding and creating ML algorithms. Then we will build a toolbox by discussing essential unsupervised and supervised machine learning algorithms. Topics include modern regression and classification techniques, dimension reduction, techniques for scalable data processing, compressive sensing, stochastic optimization, and deep neural networks. Evaluation will consist of mathematical problem sets and programming projects. This course is intended for graduate students and qualified undergraduate students with a strong mathematical and programming background. While the aim is to make this class widely accessible, we require the following (or equivalent) prerequisites: (i) Programming: Background in python programming (e.g., for loops, lambdas, debugging, and complexity) that will enable us to focus more on the concepts of Machine Learning and less on the details of programming in python. (ii) Math: Background in linear algebra and multivariable calculus (e.g., basic concepts like linear operators, norms, orthogonality, projections, eigenvectors, derivatives, and integrals).

ENGR 2300 - LINEAR ALGEBRA FOR MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

Core concepts from linear algebra that are key for understanding and creating applied machine learning algorithms. Topics include least square approximation, neural networks, and matrix factorization for dimension reduction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2450 - ENGINEERING- THE GERMAN WAY

Minimum Credits: 1

Maximum Credits: 18

This course highlights the German approach to engineering from various perspectives. It is designed as mixture of in-class lectures and industrial experience in the form of factory tours. Four broad topics are addressed from the German perspective: (1) R&D management, (2) production and manufacturing systems, (3) digital factory layout and factory simulation, and (4) product-ergonomics and ergonomic aspects in manufacturing. In addition students select one of two additional options dealing with unique aspects of the German business economy: (1) the nature of cooperation between trade unions and employers or (2) the impact on technology law and harmonization on engineering in Europe.

ENGR 2451 - EXPLORATORY DATA SCIENCE

Minimum Credits: 3

Maximum Credits: 3

In this course, we will learn data science and analysis approaches to identify statistically significance relationships and better model and predict the behavior of these systems. We will assemble and explore real-world datasets, perform clustering and pair plot analyses to investigate correlations, and logistic regression will be employed to develop associated predictive models. Results will be interpreted, visualized and discussed. We will introduce basic elements of statistical analysis using R Project open source software for exploratory data analysis and model development. R is an open-source software project with broad abilities to access machine-readable open-data resources, data cleaning and munging functions, and a rich selection of statistical packages, used for data analytics, model development and prediction. This will include an introduction to R data types, reading and writing data, looping, plotting and regular expressions, so that one can start performing variable transformations for linear fitting and developing structural equation models, while exploring for statistically significant relationships.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2453 - DATA SCIENCE: STATISTICAL LEARNING, MODELING & PREDICTION

Minimum Credits: 3

Maximum Credits: 3

In this course, we will use an open data science tool chain to develop reproducible data analyses useful for inference, modeling and prediction of the behavior of complex systems. In addition to the standard data cleaning, assembly and exploratory data analysis steps essential to all data analyses, we will identify statistically significant relationships from datasets derived from population samples, and infer the reliability of these findings. We will use regression methods to model a number of both real-world and lab-based systems producing predictive models applicable in comparable populations. We will assemble and explore real-world datasets, use pair-wise plots to explore correlations, perform clustering, self-similarity, and logistic regression develop both fixed-effect and mixed-effect predictive models. We will introduce machine-learning approaches for classification and tree-based methods. Results will be interpreted, visualized and discussed. We will introduce the basic elements of data science and analytics using R Project open source software. R is an open-source software project with broad abilities to access machine-readable open-data resources, data cleaning and assembly functions, and a rich selection of statistical packages, used for data analytics, model development, prediction, inference and clustering. With this background, it becomes possible to start performing variable transformations for linear regression fitting and developing structural equation models, fixed-effects and mixed-effects models along with other statistical learning techniques, while exploring for statistically significant relationships. The class will be structured to have a balance of theory and practice. We'll split class into Foundation and Practicum a) Foundation: lectures, presentations, discussion b) Practicum: coding, demonstrations and hands-on data science work.

ENGR 2625 - ENGINEERING BUSINESS COLLABORATIONS IN INDIA

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the studying modern engineering and business principles, methods, and tools, within the context of the Indian environment. The three focal areas of study are: manufacturing systems, service engineering operations, and call centers. A visit to India will showcase challenges and opportunities available at the corporate level and at the individual level in this rapidly growing economy. It will also focus on the societal impacts of new technologies and rapid expansion of engineering industries in India. Students can utilize this forum to analyze and visualize service manufacturing engineering challenges and opportunities around the world. Plant visits and interfaces with engineering students and practicing engineers will allow students to appreciate the following professional characteristics: ethics, the ability to work with others, an appreciation for other disciplines, adaptability, and an appreciation for life-long learning.

ENGR 2630 - DESIGN FOR CIRCULAR ECONOMY

Minimum Credits: 3

Maximum Credits: 3

The current linear consumption model of raw material extraction, production, use, and disposal has dominated the global economy for hundreds of years. While an extremely wasteful approach to resource management, the linear model was tractable so long as it was employed by a small fraction of the global population, namely the developed world, so that both raw material acquisition and waste management remained economically viable. Today, we clearly see that this linear model has led to serious unintended global consequences. Circular economy (CE) offers promising solutions. CE principles are based on efficient use of resources and eliminating waste from product life cycles through clever design. Valuable material either

moves in loops through the economy, or, if biologically derived, returns to the ecosystem to serve as nutrients; a truly circular economy thus keeps material in continuous use by design. The goal of this course is to provide students a thorough introduction to circular economy, along with integrating design. This course will provide students with skills and knowledge related to CE. Through experiential and project-based learning, the students will develop circular economy affinity groups that will tackle a pressing challenge including design for degradation solutions for ocean plastics and design for reuse of construction materials.

ENGR 2634 - ENVIROMENTAL CONTROLS IN MINING

Minimum Credits: 3

Maximum Credits: 3

The course is designed to study the environmental impact of coal, stone, and other mining operation and examine the engineering controls used to mitigate these impacts. The examination begins with the exploration and permitting of the mine site, emphasizing important environmental issues. Next, the impacts of active mining on land and water use are outlined. Most of these issues are related to subsidence impacting surface structures and water movement both at the surface and underground. To complete the mine's life cycle, closure and remediation issues are investigated. Lastly, a detailed examination of the issues associated with abandoned mined-lands, i.e. Acid-mine drainage, mass-wasting, fires, etc., Are studied. Throughout the course, engineering controls that focus on mitigating the environmental impacts of mining are acknowledged and assessed.

ENGR 2811 - HACKING FOR DEFENSE

Minimum Credits: 3

Maximum Credits: 3

This course will teach students how to build products and services using lean methods. This will be done by solving real-world military and intelligence community problems. The course uses the lean launchpad platform for entrepreneurship. This is a highly customer-centered hypothesis-test approach to developing a mission modes, and is particularly well-suited for technology startups. It incorporates customer needs and user testing to build a minimum viable prototype. At the conclusion of the course, students will be able to understand the problems/needs of searching for product-market fit; understand all the stakeholders, deployment issues, costs, resources, and ultimate mission value; deliver minimum viable products that match customer needs in an extremely short time; produce a repeatable model that can be used to launch other potential technology solutions.

ENGR 2812 - HACKING FOR ENERGY

Minimum Credits: 3

Maximum Credits: 3

This course will teach students how to build products and services using lean methods. This will be done by solving real-world energy industry problems. The course uses the lean launchpad platform for entrepreneurship. This is a highly customer-centered hypothesis-test approach to developing a mission modes, and is particularly well-suited for technology startups. It incorporates customer needs and user testing to build a minimum viable prototype. At the conclusion of the course, students will be able to understand the problems/needs of searching for product-market fit; understand all the stakeholders, deployment issues, costs, resources, and ultimate mission value; deliver minimum viable products that match

customer needs in an extremely short time; produce a repeatable model that can be used to launch other potential technology solutions.

ENGR 2870 - SOLIDS PROCESSING AND TRANSPORT

Minimum Credits: 3

Maximum Credits: 3

Particle technology affects as much as 80% of the chemical process industry, yet is often omitted from the undergraduate curriculum of chemical engineers. This course is designed to give advanced undergraduates as well as early-term graduate students an introduction to this rich and diverse field. Topics will range from fundamentals (particle classification, properties, and flow) to applied (hopper design, mixing, etc. Industry related examples and designs will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2900 - GRADUATE FELLOWSHIPS & PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad HSU Basis

ENGR 2901 - INTRODUCTION TO ENGINEERING COMMUNICATION

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn the fundamental tools and skills for effective technical communication at the graduate level. Students will be introduced to citation tools (e.g. Mendeley, EndNote) and paper-writing tools (e.g. Word, LaTeX) during this course. Students will also learn how to produce high-quality graphics, conduct a literature review, and give a qualifying exam presentation. This course will be one credit, the old course is three credits.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

ENGR 2905 - CURRENT ISSUES IN SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the core principles of sustainability (i.e. Social, economic, and environmental) from the perspective of several disciplines and research fields. Covering a variety of topics such as urban infrastructure, energy policy and the environment, sustainable water-use, habitat sustainability and biodiversity, the curriculum and schedule are updated annually to reflect advancements in the field of sustainable engineering and science, and to continually incorporate current topics. While the course is primarily taught by the sustainability faculty fellows it will also consist of various guest lectures by sustainability faculty and senior practitioners working throughout the Pittsburgh region. Course assignments will consist of a series of essays and assignments and culminate in a team term project. This is a required course for the undergraduate sustainability certificate and the M.S. in Sustainable Engineering.

Academic Career: Graduate

ENGR 3000 - PREPARATION FOR AN ACADEMIC CAREER

Minimum Credits: 1

Maximum Credits: 1

This is seminar series designed for Ph.D. students interested in pursuing an academic career and within 1.5 years of graduating. Experienced faculty provide seminars and discussions on two areas: getting the desired academic position and how to be successful during the early years. Topics include, but not limited to: how to apply for academic positions, preparing for the interview, supervising graduate research, balancing service obligations, the promotion and tenure process, funding avenues, publishing and intellectual property, teaching expectations, and balancing work-life issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: Swanson School of Engineering

ENGR 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1

Maximum Credits: 1

This seminar series is designed for Ph.D. students and post-doctorate fellows interested in pursuing an academic career and wish to gain didactic knowledge and skills related to teaching in a science, technology, engineering and mathematics (STEM) classroom. Experienced faculty provide topics and discussion based seminars.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: Swanson School of Engineering

ENGR 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

Designed for graduate students and postdocs preparing for academic careers in the stem disciplines, this course provides an introduction to the scholarship of teaching and learning (SOLT). This is the second course in a series; however, the former course (3001) is not a required prerequisite. The course will utilize material presented in a massive open online course (MOOC) available through coursera.org and sponsored by the center for the integration of research, teaching and learning (CIRTL). Participants will learn about effective teaching strategies and the research that supports them in addition to learning how to collect, analyze, and act upon their own evidence of student teaching. Topics include but are not limited to: 1. Learning through diversity, 2. Cooperative learning/peer instruction, 3. Inquiry-based labs, 4. Problem-based learning, 5. Flipped classroom pedagogy. Further, participants will learn the process for developing a teaching as research plan as well as the role of human subjects consent for classroom based research.

ENGR 3100 - ENGINEERING RESEARCH LEADERSHIP AND MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course teaches the necessary skills to be a successful researcher including skills in research formulation, funding, proposal writing, peer-review, and research management. Topics include project management, team leadership, professional communication, and professional expectations for independent researchers. A peer-review aspect of the course actively teaches the editorial and review process, and how to take a critical view of writing. This course is intended for students who intend to be independent researchers and engineering research leaders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 3210 - ENGINEERING SUSTAINABILITY CAPSTONE REALIZATION

Minimum Credits: 3

Maximum Credits: 3

A two-semester, interdisciplinary, team-based Ph.D.-Level capstone design course sequence required by IGERT students and other interested graduate students. The courses will require the application of rigorous analytical thinking and research investigation techniques in order to address a real-world, complex problem. The first term of the course will be at Pitt with the second term at unicamp. Project topics will be developed in combination with recommendations from various stakeholders. Research will be firmly rooted in industrial needs. The problem will build upon the combined students' acquired engineering knowledge and will require collaboration to resolve. The capstone courses will reinforce the community-building aspect of the IGERT, since students will work in teams both at Pitt and unicamp.

English Film Studies

ENGFLM 2000 - THE ESSAY FILM

Minimum Credits: 3

Maximum Credits: 3

This seminar explores the essay film from critical and creative standpoints. Students will make short essay films while also investigating the essayistic as a mode of cinematic expression where fiction, nonfiction and experimental traditions collide, and where concerns over the subject and its relationship to the social come to the fore. This is an interdisciplinary course, combining both production and theory, intended for students from a range of academic backgrounds and disciplinary perspectives. No prior production experience is required. Hands-on training in audiovisual recording and editing techniques will be provided.

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2451 - FILM HISTORY/THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will explore issues relating to film theory, history and research methodology. We will discuss dominant modes of film criticism and explore the creation of "cinema history". We will examine different formulations of this history, tracing how certain explanations of events in cinema have come to prevail, and how certain methods of writing about film have become institutionalized.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies, Global Studies

ENGFLM 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g. Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2453 - FILM HISTORY AND THE NON-THEATRICAL

Minimum Credits: 3

Maximum Credits: 3

Over the past three decades, film studies has witnessed a substantial increase in published research into the production, circulation, and uses of motion pictures distinct from the international commercial cinema that emerged at the beginning of the twentieth century. The term "non-theatrical" now describes a widely recognized but unwieldy array of film materials and practices that encompasses the histories of experimental cinema, amateur film, educational and sponsored films, medical imaging, media installations, porn, home movies, military reconnaissance, and law-enforcement surveillance. Scholars' attention to the histories of the non-theatrical has made it clear that our standard film histories were, and continue to be, highly restricted in their consideration of moving-image culture, privileging the type of object that is the basis of what Christian Metz identified as "going to the movies," the fictional narrative film. This seminar surveys the emergence and development of "the non-theatrical" within film and media studies to consider if and how this research has challenged the guiding assumptions and objectives of our discipline, and to study the ways in which the study of non-theatrical moving images might contribute to a radical rethinking of the commercial cinema and its place.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGFLM 2455 - FILM AND MEDIA HISTORIOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This course will look into theories of film history exploring philosophies behind their social, political, economic, technological, and textual stakes. We will analyze how various forms of film history, intellectual and popular, assert their truth and credibility, and discuss how these kinds of claims might be supported and contested. We will explore the problems of writing film history, particularly in eras where little material survives for any kind of study or where language becomes a major barrier.

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2458 - ESSAY FILM/DOCUMENTARY FILM

Minimum Credits: 3

Maximum Credits: 3

This course will explore documentary from critical and creative vantage points. Key theoretical texts from the interdisciplinary field of documentary studies will address the pertinent ethical, formal and thematic concerns.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2459 - DOCUMENTARY THEORY & PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will explore documentary film and video from critical and creative vantage points. Students will be introduced to key discussions from within the interdisciplinary field of documentary studies while also working on individual and collaborative short documentary projects and exercises. Hands-on training in audiovisual recording and editing techniques will be provided. No prior production experience is required.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2467 - CINEMA AND TRAUMA

Minimum Credits: 3

Maximum Credits: 3

Trauma studies now stands at the forefront of contemporary cultural theory, straddling such disciplines as history, psychology, philosophy, and literary criticism. This seminar encourages graduate students to examine and contribute to the rapidly emerging sub-field of cinema/trauma studies. We will focus on the two mid-twentieth century events that continue to anchor many definitions of historical trauma: the Holocaust and Hiroshima. What do films that address these events teach us about the politics and ethics of representing experiences often referred to as unrepresentable? How does cinema force us to refigure debates about the "limits of representation" and the nature of "the event" itself? Is cinema an agent of memory or memory's eraser? A broad range of films will inform our discussion of such questions - documentary and fiction, tragedy and comedy, mass cultural successes and lesser-known art films or genre films, films from the past and present.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2471 - CINEMA AND PSYCHE

Minimum Credits: 3

Maximum Credits: 3

From the earliest years of film theory, writers have likened the discourse of cinema to the workings of the human mind. In 1916, for instance, Hugo Munsterberg (in "the photoplay") drew parallels between film language and recollection, attention, and anticipation. This course (through readings and film screenings) will pursue such comparisons between cinema and the mind, investigating such topics as dream, memory, fantasy, nostalgia, perception, cognition, affect, etc.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2480 - WAR AND CINEMA

Minimum Credits: 3

Maximum Credits: 3

This course theorizes the convergence of military and cinematic technologies, focusing on the logistics of perception, bio-politics, and the relation of cinematic/military technologies to the body. Topics include the military, medical, and cinematic uses of the scope and the screen, theories of human vision and ocularcentrism, new conceptions of space and time, the temporal convergence of production and exhibition (speed and acceleration), new media technologies, and the blurred boundaries of war and entertainment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2485 - GENRE AND FILM MELODRAMA

Minimum Credits: 3

Maximum Credits: 3

Course will interrogate the cultural impact of melodrama through the media. We will explore the various expressions of melodrama in gothic narratives, the "woman's film", historical films, "tragic" melodramas, family melodramas, and TV docudramas. Topics addressed include questions about common sense/folklore and the nature of mass and popular cultural representation, the problematic nature of genre, the relation between melodrama, history, and the construction of narratives of national identity in relation to race, gender and sexuality.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2491 - FILM SOUND: HISTORY, THEORY, AESTHETICS

Minimum Credits: 3

Maximum Credits: 3

Questions framing the course include the relation of sound and image, aural and visual pleasures, soundscapes and theories of shock and modernity, the relation of voice and body to subject formation, sound in silent cinema, the aesthetics of analog and digital sound in cinema, sound technologies and imperialism, theories of non-cinematic audio technology such as radio and gramophone, debates over the ontological status of recorded sound, film sound and space, sound in documentary cinema, and culturally specific theories of sound.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2493 - MEDIA/ECOLOGY

Minimum Credits: 3

Maximum Credits: 3

This seminar will explore media theory and practice through the lens of ecology. From the late twentieth century to the present, ecology as a

scientific discipline and set of cultural narratives has risen to the forefront of knowledge production as a way to study and understand complex biological systems, their environments, and their internal dynamics. During the same period, media systems have grown exponentially in complexity until they too have begun to exhibit some of the behaviors of ecological systems, including self-organization, feedback, evolution, and emergent properties. The term "media ecology" captures both this new, nonlinear systems approach to understanding media itself as well as the intersection between natural ecosystems, the technological assemblages with which they are intertwined, and the human (and non-human) subjects that are produced molded within these structures. This seminar will explore both media that interface with natural ecosystems as well as works and theory that approach mediation from an ecological and systems theoretical perspective. The secret life of information, contagious media, and the post-natural ecologies of our present and future will challenge us to conceive of Media and Ecology as a single coupled system: the emblem of our contemporary environment and an important frontier in media studies of the present. Graduate students from all disciplines are welcome. Participants may optionally produce creative projects in lieu of a seminar paper, in any medium.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2494 - KEY CONCEPTS IN NEW MEDIA

Minimum Credits: 3

Maximum Credits: 3

What exactly is "information"? What is an "interface"? What does it mean when we speak of a "media platform"? These terms and concepts form the backbone of the major theories and discourses in new media, which produce a rich vocabulary that has yet to be rigorously defined. This course aims to provide a theoretical map to navigate the rapidly expanding fields of media studies by critically interrogating a set of key concepts that have been extensively used to deal with the technologies, forms, materials and cultures of new media. We will discuss the meaning, usage, and genealogy of such concepts as "network," "cybernetics," "hardwire," "infrastructure," and "system," which have animated a wide range of researches and debates. By critically engaging with these key concepts, we hope to not only reconstitute a framework for theorizing contemporary media, but to explore the very notion of "media" as a discursive formation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2496 - MEDIA AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

Mobility has been one of the central functions and consequences of media technologies, from papyrus in ancient history to mobile phones in the digital era. This seminar seeks to conduct a thorough theoretical mapping between media and mobility, creating a productive framework in which media can be examined through the ways in which they facilitate, mediate, and regulate various modes of mobility of humans, things, and ideas.

ENGFLM 2661 - QUEER THEORY, QUEER CINEMA

Minimum Credits: 3

Maximum Credits: 3

This seminar explores film (also TV and theater) textuality and reception from a "queer" perspective. What is the relationship among queer authors, queer textuality and the subcultures that consume these texts? What place does non-heteronormative sexuality occupy within the production and reception of mass culture? The course will cover: foundational works in the history of sexuality; camp and gay subcultural reception; gay and lesbian authorship of both Hollywood and avant-garde films; the rise of queer television drama; and queer critical practices.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies, Gender, Sexuality & Women's St

ENGFLM 2695 - HORROR FILM

Minimum Credits: 3

Maximum Credits: 3

This seminar will investigate the key films and critical discussions surrounding the genre from its beginnings to the present, but not merely to perform a genre survey- instead we will use horror as a lens to ask wide-ranging questions about spectatorship, theory, history, aesthetics, and politics that have shaped and continue to transform film studies in profound ways.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2700 - ANIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will approach animation as a method, a way to rethink film theory beyond the assumption of an essentially photographic medium, and to unearth and explore the previously underdeveloped territories in theorizing and making sense of moving images.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2710 - GLOBAL FILM STARDOM

Minimum Credits: 3

Maximum Credits: 3

Historically, film stardom was examined from an American perspective (where it originated in Hollywood in the first decades of the last century), and theories of stardom emerged from an implicitly Hollywood-based understanding of cinematic fame. Instead, while not ignoring the American cinema, this course will take a global perspective on stardom, in terms of performers, films, and theories. Our approach to stardom will be a combination of the historical, the theoretical, and the textual. This means that in addition to studying individual stars, we will also 1) consider the phenomenon of stardom in terms of its origins and the cultural and national institutional conditions that support it, 2) analyze stardom as a public phenomenon to be understood in the context of specific cultures and audiences, 3) discuss various theories of stardom, celebrity, and public fame, 4) consider the manner in which issues of gender and sexuality impact notions of stardom, and 5) consider the relationship between stardom and spectator subjectivity. Although the course will be focused on cinema stardom, we will also briefly consider theoretical overlaps with the broader category of celebrity studies. In general, when we look at individual stars in the course, we will consider their broad "star text" which involves the interrelationship of screen roles, off-screen information, publicity material, and cultural context. Questions raised will include: what constitutes a "star text" in different historical contexts and ideas about the public and the private? What specifically do the media of photography and film bring to public fame? How does stardom presume and shape norms of identity pertaining to gender, sexuality, social class, race/ethnicity, bodily norms, and

other cultural values? What does stardom mean in old and new transnational contexts? What is the relation between stardom, nation, and politics?

English Literature

ENGLIT 2001 - STUDIES IN THE HUMANITIES

Minimum Credits: 1

Maximum Credits: 1

In this course, graduate students read and discuss new scholarship in an area of the humanities that will be the subject of a one-week seminar sponsored by the humanities center.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

ENGLIT 2002 - INTERDISCIPLINARY METHODS IN THE HUMANITIES

Minimum Credits: 3

Maximum Credits: 3

This course will theorize and practice interdisciplinary research methods. A central focus of inquiry is how interdisciplinary research might shift the content and scope of our scholarship. How might it shift our disciplines? What are the gains, losses, and syntheses entailed in that shift? (For example, how might fieldwork benefit literary critical projects?) Readings will address debates in anthropology on fieldwork; oral history methods; and the applicability to the humanities of qualitative research methods from the social sciences. Students will write a final paper in which they launch or develop an interdisciplinary research project that fits their research interests. The paper could be a step towards their manuscripts or dissertations or a more contained project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2003 - LITERARY STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course examines topics in literary studies in relation to current developments in the field of literary studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2004 - INTERDISCIPLINARY METHODS IN LITERARY STUDIES

Minimum Credits: 3

Maximum Credits: 3

A recent trend in literary studies is balancing our consideration of the textual and discursive elements of literature with attention to various aspects of its materiality, as well as its relationship to questions of ontology, embodiment, and lived experience. An exciting part of this development is increased integration of interdisciplinary methodologies, especially archival work and ethnography, into literary research. In this course, we'll learn about the scholarly movements and theoretical conversations shaping this turn, while learning practical ways to engage the material and embodied in our own scholarship. We will be inspired by work in various fields, including book history, childhood studies, Black studies, gender studies, global/postcolonial studies, and American studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2005 - SPECIAL TOPICS IN LITERARY STUDIES

Minimum Credits: 3

Maximum Credits: 3

This seminar studies the most important recent developments in the fields of literary and cultural criticism. It both introduces students to a range of topics, methods, and theories and explores deeply the historical, conceptual, and societal significance presented by all these. The course introduces students to, and helps them learn to evaluate, the most important contemporary work in English studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2009 - DIGITAL/CRITICAL INTERDISCIPLINARY METHODS

Minimum Credits: 3

Maximum Credits: 3

This collaboratively taught seminar exposes students to interdisciplinary and evolving methods for discovery and knowledge construction in the humanities and social sciences. In particular, it focuses on how information flows in and out of sociotechnical systems, the ways that researchers access, arrange, organize and describe information for use in their disciplinary context and how that shapes critical inquiry. Students will do hands-on work with data and methods and interrogate their affordances and limitations. Mini units in this course will be led by faculty from History, Political Science, Economics, English, Sociology, Information Science, and History of Art and Architecture who are involved in the Mellon grant-funded Sawyer Seminar, Information Ecosystems: Creating Data (and Absence) From the Quantitative to the Digital Age, which will feature invited speakers and support several post-docs and grads in AY 2019-2020.

ENGLIT 2041 - PUBLIC HUMANITIES

Minimum Credits: 3

Maximum Credits: 3

This course has two goals: 1.) to explore what the term "public humanities" means; and 2.) to help graduate students in the humanities connect their academic work to public spaces and organizations. With regard to the first goal, our readings and discussions will focus on questions such as: What are the humanities? Are they publicly valuable? If so, are they publicly valuable in ways that differ from other academic disciplines? With regard to the second goal, the course will involve frequent guests and site visits to cultural institutions that will allow students to see the humanities at work in local spaces. Students will also be responsible for designing and executing a public humanities project during the term. The projects will require that students engage with public spaces in developing their work, but will depend on students' prior experience with public humanities for their specific content. Students with a significant degree of public humanities experience may wish to create and implement a collaborative humanities- or arts-based project with a local cultural institution. Those just beginning to think about the relationship between their academic work and non-academic spaces may wish to explore opportunities for public engagement that fit their research interests and methods. Whatever the case, students will work to better formulate the relationship between their academic work and public spaces, and design and/or execute projects based on these formulations.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

ENGLIT 2046 - SCIENCE, HUMANITIES, AND PUBLIC ENGAGEMENT

Minimum Credits: 3

Maximum Credits: 3

The current pandemic seems a good time to consider the relationship between science and democratic decision-making. In this course, we will explore theories, methods, challenges, and challenges of public deliberation, especially with respect to science and technology. The course will be offered in conjunction with an art exhibition called Art's Work in the Age of Biotechnology that will take place online in spring 2021. By presenting works in which artists appropriate tools and techniques that have until recently been the exclusive purview of scientists, the exhibit invites viewers to consider what they want from genomic technologies, and why. Similarly, the course invites students to articulate what they want from community engagements, and then put their ideas into practice. We will draw on the exhibit as an opportunity to experiment with a variety of models of interdisciplinary collaboration and public scholarship.

ENGLIT 2122 - AUTOMATING WRITING FROM AMANUENSES TO ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course counts as a DSAM elective and for the Composition Certificate. We swim in a sea of writing, much of it written by algorithms rather than humans. Automated Writing Systems (AWS) that employ natural language processing techniques are currently used to amplify political messages on social media, to convey sports and financial statistics, to generate click-worthy headlines, as smartphone chatbots, and as creative writing aids.

Whether or not we use them ourselves, AWS are shaping the circulation of our writing and the environment in which we read. This course is a historical and technical dive into why people have developed AWS, what challenges AWS offer, and how to implement AWS using natural language processing and public data sets. The course brings histories of gender and race in writing automata, office automation, and amanuenses in conversation with contemporary questions in artificial intelligence to ask: whose intelligence is being automated or simulated and how? We will explore: what writing is; power dynamics in writing; the limits of what computers can do; and the relationship of human consciousness to computation. Hands-on work in AWS-related systems include basic programming; Tracery (using Javascript) and InferKit (using GPT-2); Twitterbots; Conway's game of life; the Leibniz cipher machine held by ULS. Readings include historical studies of writing automata such as the Maillardet Automaton, creative work with AWS such as Lillian-Yvonne Bertram's Travesty Generator, and theoretical work in AI by Alan Turing and Joy Buolamwini. Assignments include reading histories of AWS, writing short blog posts analyzing different historical and contemporary AWS or their products, and playing with algorithms and datasets such as GPT-2 (an AWS that uses machine learning and which is publicly available in a scaled-down version). The final project for the course asks students to break the boundaries of the class: develop a unit to teach something you learned here in Pitt undergrad English courses such as Composing Digital Media or Narrative and Technology; an online creative project using automated writing; a public art project; or a workshop for others. Students will get both a theoretical and practical introduction to automated writing systems in this course. No prior technical expertise is required, though a willingness to play around with technical systems is.

ENGLIT 2124 - WRITING IN GLOBAL CONTEXTS: TRANSLINGUAL AND MOBILITY PERSPECTIVES

Minimum Credits: 3

Maximum Credits: 3

The global flows of capital, information, artifacts, and people have increasingly made us aware of our multilingual reality. Simultaneously, enactments of physical and imaginary "borders" have permeated discourses that seek to restrain such movements. Although language use in classrooms and communities has always been multilingual, increasing linguistic and cultural heterogeneity of students enrolled in US institutions of education has renewed research interests in understanding students' literacy repertoires as mobilized and negotiated. In writing studies particularly, a conceptual turn toward translanguaging has shifted our view of language and cultural differences as assets for student learning and objects of scholarly inquiry. Such attention indexes broader moves in literacy studies to conceptualize literacy as implicated with global and local forces, mobilized across languages, genres, and modes, and dynamically negotiated across life worlds. This course will introduce research that theoretically and methodologically explores a phenomenon that is rapidly changing: acts of geographical, linguistic, cultural, and disciplinary border-crossing as an important dimension of our literacy lives. How do writers make sense of their experiences and life worlds across languages, modalities, and spaces? How do researchers follow literacy practices on the move? What do principles of translanguaging and mobility theories suggest about pedagogy? These are some of the questions that we inquire by way of readings across rhetoric and composition, literacy studies, and applied linguistics.

ENGLIT 2131 - SHAKESPEARE, GENDER AND SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This course will read some of Shakespeare's plays, emphasizing criticism and theory dealing with gender and sexuality. It will also consider historical difference and related controversies, through such means as reading other early modern texts and history, studying the influence of both dominant and dissident perspectives in later interpretations of his works, or analyzing how recent productions in film and other media deal with gender and sexuality in his plays.

ENGLIT 2161 - CARIBBEAN WATERS: POLITICS AND POETICS IN THE ANTHROPOCENE

Minimum Credits: 3

Maximum Credits: 3

This seminar will pursue two related lines of inquiry: First, it will study the contemporary planetary water crisis through the lens of the Caribbean. What concepts does the Caribbean yield that might provide useful alternatives to some dominant approaches to the Anthropocene? How do contemporary struggles around water fit with longer histories of extractivism? What dialogues can we create between Critical Ocean Studies and the study of the politics of freshwater? What genres of history, reportage, and art shape our imagining of Caribbean waters--and how do we respond to generic and archival absences? For example, what representational alternatives might we find to the spectacularization of both beauty and disaster that is familiar from so many representations of the global south? Second, as scholars located in the global north, we will ask what forms of allyship, documentation, witnessing, and amplification can we practice in support of the global south? What does public engagement or the engaged humanities look like when the site of engagement is not local (a particularly resonant question for Global or Transnational Studies)? How does one practice an immersive scholarship from across an ocean? What affordances and pitfalls do the digital humanities offer in such a project? Our seminar will engage several Caribbean archives and artistic and activist practices--both born-digital ones and ones that have resisted digital mediatization. A workshop with visiting artists or poets will be woven into the course, and we will experiment with various poetic and visual forms, playing at the meeting point of case-study, data, and art.

Grade Component: Grad LG/SNC Basis

ENGLIT 2187 - DATA AND DISCIPLINE

Minimum Credits: 3

Maximum Credits: 3

What does it mean to "join a discipline," and what methods or evidence can we marshal to find out? What does a disciplined approach to data-gathering or analysis look like in a humanistic context? In the first part of the course, we will use these and related questions to interrogate the two key terms of the title in relation to one another. Readings will be drawn from Rhetoric, Composition, and Writing Studies (e.g. Mueller; Kynard; Malencyk et al), Digital Humanities (e.g. D'Ignazio and Klein; Goldstone and Underwood; Sugimoto and Weingart), and critical theory (e.g. Foucault; Ferguson), but the methods are applicable to any disciplinary self study, and all are welcome. The final project for the course is a draft of a data-supported article investigating questions about a discipline or subdiscipline, which we'll develop together starting around midterm. Students are encouraged to work on these article drafts in groups, depending on shared interest. In the second part of the course, we'll work through data labs and writing studios to develop the skills to translate questions into analyses and outputs into arguments. Students will leave the class with a better understanding of how datasets are constructed, with what ethical trade-offs; how to filter, sort, merge, and summarize rectangular datasets using R and/or OpenRefine; how to visualize and summarize simple networks in Gephi and/or Cytoscape; and how to visualize various aspects of textual corpora using VoyantTools. No prior experience with any of these tools or platforms is necessary.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's St, West European Studies

ENGLIT 2237 - CATASTROPHE NARRATIVES: NATURE AND EMPIRE IN AMERICA

Minimum Credits: 3

Maximum Credits: 3

This course will explore the relationship between imperial expansion and ecological catastrophe in the Americas. Rather than reading eco-apocalypse as a future possibility, we will instead attend to the legacy of land theft, environmental degradation, and mass extinction that has been central to the American settlement project from its origins in the seventeenth century to the present. We'll begin the course by grounding our analysis in critical work on environmental crisis by critics such as Kathryn Yusoff, Tiffany Lethabo King, and Leanne Betasamosake Simpson to attend to the following questions: What is the relationship between human-made catastrophe and natural disaster? How do writers grapple with, and address, the different scales of environmental trauma - structural, generational, and individual? And what tools for survival and subsistence can we draw on in the wake of these large-scale events? By drawing on work in critical race studies, settler colonial studies, indigenous studies and eco-criticism, we'll develop a theoretical background in narratives of crisis, identifying catastrophe narratives as one of the main genres of American writing. Our case studies may include writing on pollution and environmental racism in contemporary American cities, conversations about land conservation and indigenous sovereignty at the founding of the National Park System, Protestant theology and Christian "land stewardship" in early colonial writing, and accounts of indigenous resistance such as Nick Estes' *Our History is the Future* (2019). We'll conclude with utopic visions of eco-apocalypse and land reclamation in the novels of Cherie Dimaline and Octavia Butler. By reading catastrophe as its own genealogy of modernity from the early modern period to the present, we'll consider the ways that writers have grappled with the large-scale shared and unshared crises of America's contemporary settlement moment. This course is inherently interdisciplinary, featuring work from scholars in the fields of geology, political science, literature, sociology, cultural studies, and anthropology. Students from across the humanities and humanistic social sciences are welcome and may conduct research that is relevant to their ongoing work in their home departments as they respond to the larger conceptual and thematic engagements of the course. Students will also be able to focus on the genre of writing, and critical or disciplinary framework, that is most relevant to their work in the final weeks of the course. There will be many opportunities throughout the semester for constructive feedback and one-on-one mentorship.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

ENGLIT 2238 - TELL/IN' THEORY: BLACKNESS IN THE DIASPORA

Minimum Credits: 3

Maximum Credits: 3

Destabilizing boundaries between creative and analytical, performative Black thought demonstrates means by which Black(ened) peoples challenge ways intellectual acts might be conceived. Notions of diaspora, similarly, blur static markers of identity to question claims of place-based belonging. In this course, participants will engage texts from across the Black diaspora that theorize through telling. We will, as they, explore and meld rhetorical possibilities of autoethnography, memoir, poetry, academic criticism, and more, blurring conceptions of received genre in generative knowledge making.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2239 - BLACK CRITIQUE AND THE BLACK RADICAL TRADITION

Minimum Credits: 3

Maximum Credits: 3

This seminar will explore the advent and unfurling within modernity of a distinctive set of critical practices and thought that have over the centuries given expression to radical political events, such as the Haitian Revolution, as well as political movements, such as the Black Panther Party, and Black Lives Matter. In other words, we shall engage two questions: that of critique, asking whether it is an activity essential to the continued pertinence of the concept of revolutionary republicanism. Second, whether at this current conjuncture, radicalism is the best purchase from which to

engage critique. In taking up this interrogation, we shall engage a wide array of texts, from political theory and social critique to literary representation, across multiple media, including those of image and sound.

ENGLIT 2245 - STUDIO IN AFRICAN-AMERICAN POETRY AND POETICS

Minimum Credits: 3

Maximum Credits: 3

Explores the interplay of social history and literary texts in the emergence of modern black literature. Readings range from slave narratives to modern novels.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2260 - BLACK WOMEN'S PRINT CIRCUITS

Minimum Credits: 3

Maximum Credits: 3

Whether described as a flourishing, an explosion, or a blossoming, the renaissance of African American women's writing that began in the 1970s is now commonly accepted as the starting point, if not a signature feature, of what we consider the long era of contemporary African American literature. Engaging in bibliographic, archival, and critical work situated at the intersection of textual scholarship and African Americanist criticism, we will examine the gendered dimensions of late-twentieth-century African American print culture by studying the conditions of publication and distribution of black women's novels, short stories, poetry, drama, manifestos, periodical work, anthologies, and essays.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2261 - QUEER WOMEN OF COLOR RADICALISM

Minimum Credits: 3

Maximum Credits: 3

What if we approached the historical and theoretical traditions of activism, feminism, and Marxism using queer women of color as our starting point? We will address intersectional theory derived from Kimberly Crenshaw's legal discourse and how questions of subjectivity have been raised by scholars such as Jennifer Nash and Maria Lugones. However, the course takes its departure from earlier writings by queer women of color in the 1970s and 1980s that resisted multiple oppressions and placed class struggle as a central to social change, including Audre Lorde, Cherrie Moraga, Alice Walker, Gloria Hull, Patricia Hill Collins, and the collective writings from *This Bridge Called My Back*, the Combahee River Collective Statement, *The Black Woman Anthology*, and Keeanga-Yamahtta Taylor's *How We Get Free*. Using this collection of voices as our starting point, we will then look at recent issues and debates in activism studies, contemporary Marxist theory, and the crises of global capitalism, privileging indigenous and grassroots approaches to social change.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's St

ENGLIT 2262 - THE ART AND PHILOSOPHY OF TONI MORRISON

Minimum Credits: 3

Maximum Credits: 3

Toni Morrison has passed but her voice will remain with us for eternity. The ambition of this course is to read with care and precision Morrison's iconic prose for their insight, power, resonance, and perhaps most of all their beauty. There is material here that is shocking, triggering, angering, funny, hopelessly sad, and confusing but also thick with philosophical import. We will study these novels as literature that has much to say about philosophical questions like freedom, self-making, death, race, gender, and the beautiful and the sublime.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2265 - DIGITAL RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This course introduces graduate students to the joys, thrilling possibilities, and frustrations of producing rhetoric and composition scholarship in digital formats. We will read/watch/listen to/engage with scholarship that theorizes the creative and intellectual processes behind the blending of digitality and research. We will also engage with peer-reviewed article-and-book-length projects that push at the boundaries of what rhetoric and composition is and can become as it embraces digitality. As the semester progresses, students will work on their own digital projects in a studio-style creative environment where we pool our knowledge and ideas to help projects emerge in ways that suit the author's vision while meeting (and/or knowingly subverting) its target audience's expectations. You do not need to have any experience with or knowledge of digital production to enroll in this class. We will develop those skills together as we enact and experience the theoretical issues we're learning about through course texts. Final projects will be aimed at publication in a digital journal in our field selected by each author-Kairos, Enculturation, constellations, Computers and Composition Online, Present Tense, Peitho, and more. As students craft their projects, we will analyze (and follow) the instructions their selected journal provides for submissions in their chosen medium. At once experiential and theoretical, this course aims to help build a community of digital producers who collaborate in future projects for years to come.

Academic Career: Graduate

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2380 - GLOBAL LITERATURE: POSTCOLONIAL FICTIONS

Minimum Credits: 3

Maximum Credits: 3

This course will explore postcolonial literature about both our contemporary moment and longer histories of globalization. Together we will ask: How does it illuminate current debates about world literature, the global south, globalization, planetarity, and the Anthropocene? What are the

historical and theoretical dilemmas that each literary text responds to, and what formal resolutions does it fashion? What resources, what forms of dissent, do particular narrative modes and genres afford it? How does it deepen our understanding of actual and possible relationships between the local and the global? Where does it locate its literary genealogies, allies, affiliations, and audiences? What forms of collectivity does it imagine?

ENGLIT 2547 - CRITICAL LITERACIES AND PEDAGOGIES ACROSS URBAN EDUCATION AND HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course examines historical, theoretical, and practical relationships among reading, writing, language, culture, and schooling. Specifically, these connections are explored across urban education and higher education learning sites, both in-school and out-of-school. Ultimately, students will be expected to examine the curricular, pedagogical, and theoretical contexts that shape teaching and learning as a bridge to the continued development of their own pedagogical identities.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2549 - RHETORICAL METHODS IN COMPOSITION STUDIES

Minimum Credits: 3

Maximum Credits: 3

"Rhetorical Methods in Composition Studies" is an advanced introduction in rhetorical techniques for performing scholarship and creative work in and around English departments. Participants will read recent and anti/canonical works of rhetorical scholarship and public-facing work (drawn from composition studies as well as poetry, public address, critical media studies, queer of color critique, fiction, and other textual fields) to build an archive of methods for composing rhetorical criticism and theory in University and other institutional contexts. Course assignments invite students to practice critical contributions to the question of what it means to do rhetoric work in and around University composition programs. Writers across all modes and disciplines are welcome.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2551 - TRANSLINGUALISM AND MULTILINGUALISM

Minimum Credits: 3

Maximum Credits: 3

This graduate seminar explores translingualism and multilingualism from the perspective of composition, rhetoric, and literacy studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2569 - HISTORY OF THE BOOK

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to encourage reflection on the assumptions that underlie our own scholars by investigating modern and post-modern conceptions of writing history, and their use value for both literary and cultural studies.

ENGLIT 3902 - DIRECTED STUDY FOR PH.D. STUDENT

Minimum Credits: 1

Maximum Credits: 6

In exceptional circumstances a student who wishes to pursue a topic for which no course is available can arrange for directed study.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

ENGLIT 3910 - COMPREHENSIVE EXAM

Minimum Credits: 1

Maximum Credits: 12

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

English Writing

ENGWRT 2010 - FICTION WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

This course enables students to master the particular prose fiction forms they are working in. It helps them focus on their manuscript--either a short story collection or a novel-- and to work seriously on it. Close examination of student writing and revision of submitted work are essential parts of the course.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2094 - READINGS IN CONTEMPORARY FICTION

Minimum Credits: 3

Maximum Credits: 3

This course acquaints students with a variety of contemporary writers. This study helps students raise questions about their own developing esthetics as they are reflected in form and take into account their dual roles as creative writers and critics. It also helps students access their relationship to reviewing and criticism, including its benefits to a creative writer developing a career, and to discover techniques of reviewing and criticism which aid and do not transgress upon their esthetics and its expression.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

ENGWRT 2110 - NARRATIVE AUDIO WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2210 - POETRY WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

This graduate seminar emphasizes an intensive consideration of student poems, both first drafts and revisions, in an informal workshop setting.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2245 - STUDIO IN AFRICAN-AMERICAN POETRY AND POETICS

Minimum Credits: 3

Maximum Credits: 3

Intended for graduate students and advanced undergraduates, Studio in African American Poetry and Poetics will be a course in interdisciplinary making, as we investigate the evolving fields of African American poetry and poetics through a critical and a creative lens.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2290 - READINGS IN CONTEMPORARY POETRY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on American poets who have come to prominence since 1963. We will read widely in the poetry of this period to understand its unique contribution to the development of poetic form and its relationship to the culture that produced it.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2310 - NON-FICTION WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

A workshop in non-fiction reporting for magazine publication. Students will research, write, revise and re-write articles. Emphasis will be placed on style, fluidity, organization, suitability for market, and ultimately, on publication.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2390 - READINGS IN CONTEMPORARY NON-FICTION

Minimum Credits: 3

Maximum Credits: 3

This course familiarizes students with a number of different forms of and approaches to contemporary non-fiction writing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2399 - TOPICS IN NONFICTION: NEW YORK TRIP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2403 - STRUCTURES AND TECHNIQUES IN NONFICTION

Minimum Credits: 3

Maximum Credits: 3

This is a grad level course required for NF MFAs. The course is designed to examine and develop advanced research skills for the nonfiction writer, and to explore and practice story structure through required readings and creative exercises. Students will design and participate in immersion research projects, produce one long-form narrative or research-based essay using field research, interview and textual sources. The classwide project will be produced in digital form.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2405 - PUBLISHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This practicum is for nonfiction M.F.A.S in their third year of study. We will survey current trends in book, magazine, journal, and online publishing, as we design a trip to New York City to meet editors and agents. Students must have manuscripts and/or other completed work ready for publication in order to be accepted into the class, which is offered by special permission only.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Attributes: Hybrid

ENGWRT 2430 - LITERARY AND ONLINE PUBLISHING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2501 - TOPICS IN CREATIVE WRITING

Minimum Credits: 3

Maximum Credits: 3

This course concerns itself with matters of interest in creative writing: form and technique, contemporary production, issues in teaching and pedagogy, and/or the relation of the creative writer to society.

Academic Career: GRAD

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2900 - MANUSCRIPT WRITING FOR THE MFA

Minimum Credits: 1

Maximum Credits: 9

For advanced MFA students who have completed or nearly completed their coursework and are completing the MFA manuscript. Can be taken only once toward the 36 credits required for the degree, only in the last year of study, and counts as elective credits.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

ENGWRT 2905 - PRACTICUM IN COMMUNITY TEACHING

Minimum Credits: 1

Maximum Credits: 3

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

ENGWRT 2907 - WRITING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 3

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SNC Basis

ENGWRT 2960 - ENGLISH GSA

Minimum Credits: 3

Maximum Credits: 3

This course provides credits for English department graduate students who have been appointed as a graduate student assistant.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

ENGWRT 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

In order to register for this course a student must work with a faculty member under one of the following circumstances; a) faculty-graduate student shared research project; b) special study in relation to pedagogical problems; c) defined areas of study in relation to comprehensive examinations.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

ENGWRT 3009 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 6

In exceptional circumstances a student who wishes to pursue a topic for which no course is available can arrange for directed study with a member of the graduate faculty willing to supervise the work.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Environmtal & Occupatnal Hlth

EOH 2004 - OCCUPATIONAL HYGIENE

Minimum Credits: 3

Maximum Credits: 3

The course will provide the students with a comprehensive overview of the current technologies in terms of real-time monitors for occupational hygiene. The course is organized around real-time monitors for different hazards and health endpoints. Common concepts related to mode and principle of operations of various real-time monitor will be discussed, along with issues such as sensitivity, reliability, and reproducibility. In addition to the technical and scientific aspect of the monitors, the course will expand to data analysis; transformation of data to information; risk communication; and workers empowerment. This course will also present the concept of work safety and the roles of NIOSH and OSHA in conducting on-site investigations and promoting safety and health of workers. The course will be conducted by in class lectures, hand-on practices for real-time monitors and data analysis, and paper discussions. No pre-requisites are required for taking this course.

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2013 - ENVIRONMENTAL HEALTH AND DISEASE

Minimum Credits: 2

Maximum Credits: 2

This is the school of public health core curriculum course in environmental and occupational health. The world health organization defines environmental health as "those aspects of human health, including qualities of life that are determined by physical, biological, social, and psychosocial factors in the environment." The discipline of environmental and occupation health refers to the "theory and practice of assessing, correcting, controlling, and preventing those factors in the environment that can adversely affect the health of present and future generations." This course will familiarize the students with current issues and practice in environmental and occupational health, as well as assessment of the risk of environmental exposures. It is designed to introduce the students to knowledge basic to public health focusing on chemical and physical environmental factors affecting the health of the community.

Course Component: Directed Studies

Grade Component: Grad Letter Grade

EOH 2108 - ENVIRONMENTAL AND OCCUPATIONAL HEALTH PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This practicum provides an opportunity for EOH MPh students to demonstrate integration and application of knowledge in the area of environmental and occupational health, through a culminating experience. This is a faculty supervised applied research or problem solving project in consultation with a health environment related agency or organization. Student participates after completion of course work. The practicum includes preparation, contribution to field work, and a final written report which may be the basis for a master's essay.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

EOH 2109 - ENVIRONMENTAL AND OCCUPATIONAL HEALTH SCIENCES JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

This course is for students to gain experience in the presentation and discussion of topics of current interest in the fields of industrial and environmental health sciences and toxicology. The format is journal club presented by the students. Our goals are to expose students to the most exciting research in our field of interest. Secondly, to provide a forum to hone skills in organizing and presenting scientific data, as well as critically discussing published work.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad Letter Grade

EOH 2110 - ROTATION/PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This course is designed to be a practical research experience for Ph.D. students, goals of which are for students to gain research experience within laboratories of faculty within the molecular toxicology training program. Each laboratory rotation will be eight (8) weeks in duration with 2 rotations. Students will be required to write a report on their research project upon completion of the laboratory component.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

EOH 2122 - TRANSPORT AND FATE OF ENVIRONMENTAL AGENTS

Minimum Credits: 3

Maximum Credits: 3

This course presents in a quantitative fashion the movement, transformation, bioaccumulation, and fate of various physical, biological, and chemical

agents through the environment, home, and occupational settings. Chemical degradation, atmospheric transport, surface and groundwater transport, deposition on terrestrial surfaces and in sediments, and concentration by biological systems are described, including movement through food chains; also indoor transport and ventilation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EOH 2309; PLAN: For EOH-MPH; MS: PHD (Instructions: Instructor Consent as some students from Engineering apply.)

Course Attributes: Global Studies

EOH 2175 - PRINCIPLES OF TOXICOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the principles governing the interaction of chemicals within the human body. Major organ systems will be described with regard to anatomy, physiology and effects from interactions with chemicals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2180 - INTRODUCTION TO RISK SCIENCES

Minimum Credits: 1

Maximum Credits: 1

Course will explore issues surrounding environmental and occupational risks with focus on adverse human health effects. Will provide overview of risk sciences including: risk assessment, risk perception, risk communication and risk management. Detailed attention to methods for qualitative and quantitative characterization of risks to human health. Qualitative and quantitative approaches for risk assessment will consider methods for assessment of cancer and non cancer health risks using four step paradigm by national academy of sciences

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: CREQ: EOH 2181; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2181 - RISK ASSESSMENT PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

Practicum will provide the student opportunity to conduct a quantitative risk assessment for human health endpoint (either cancer or non-cancer) from an environmental or occupational exposure. Students will learn to identify human health hazards, characterize dose response relationships and site and mechanisms of action, conduct an exposure characterization dose response relationships and site and mechanisms of action, conduct an exposure characterization and use that data to characterize risks to human health.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: CREQ: EOH 2180; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2309 - ENVIRONMENTAL HEALTH CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

The organic, inorganic and mechanistic biochemical details of interactions of toxins and biological systems will be presented. Emphasis on chemical understanding of potential toxicological sequelae of such interactions. Students present one lecture on bioorganic toxicological topic synthesized from recent scientific literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2310 - MOLECULAR FUNDAMENTALS

Minimum Credits: 3

Maximum Credits: 3

Course is designed to be a review of the fundamentals of biochemistry, molecular biology, and cell biology. There is significant time devoted to techniques, with the goal of providing background for Ph.D. students beginning their research careers, and a perspective for mph students on the availability and utility of modern biological research methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EOH 2504 - PRINCIPLES OF ENVIRONMENTAL EXPOSURE

Minimum Credits: 3

Maximum Credits: 3

This course introduces concepts inherent in recognition of sources, contaminant generation, transport and uptake of chemical, biological and physical stresses in the context of potential environmental exposures related to human health. This course prepares students to understand exposure assessment in anticipation, recognition, evaluation and intervention as utilized in risk assessment and composition of matter, exposure pathways, pathway assessment methods including measurement, analogy and exposure modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EOH 2609 - CHEMICAL TOXICOLOGY IN THE AGE OF GREEN CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

The design of safer chemicals is vital to reduce environmental and occupational health diseases. Molecular designers, toxicologists, chemists, and engineers require knowledge about the biochemical mechanisms of toxicity, predictive toxicology, and how chemical structures and properties impact toxicity and the environment. Green chemistry has been widely incepted into the curriculum in higher education to provide students with adequate skills in the fundamental principles of toxicology and structure-activity relationships for the design of safer chemicals. This course will present the concept of designing chemicals for reduced toxicity to promote synthesis of less hazardous chemical substances that possess little or no risks to human health and the environment. Students will be provided with fundamental understanding of how to apply in-silico modelling and QSARs, etc. to identify novel replacements for the generation of hazardous chemicals (such as forever chemicals) already persisting in the environment and also create the next generation of safe chemicals and products. This course will also present the concept of designing chemical products to preserve efficacy of the function while reducing toxicity so that at the end of their function they do not persist in the environment but instead breakdown into safe products. The course will be conducted by in class lectures, hands-on practices for in-silico modeling, and paper discussions. A college level background in chemistry or toxicology will be required for taking this course. A college level background in chemistry or toxicology will be required for taking this course. Courses such as: Environmental Health Chemistry (EOH 2309), Principles of Toxicology (EOH 2175), Transport & Fate of Environmental Agents (EOH 2122), Principles of Environmental Exposures (EOH 2504), Fate & Transport in Environmental Engineering (CEE 1522); OR Chemistry in Environmental Engineering (CEE 1504) are suggested

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: A college level background in chemistry or toxicology will be required for taking this course.

EOH 2805 - EPIGENETICS AND EPIGENOMICS OF ENVIRONMENTAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

Gene environment interactions are important determinants of disease risks. This course will present how environmental stressors (such as chemicals, microbiota or lifestyle) modulate the epigenetic regulation of gene transcription and chromosome stability, which ultimately produce an array of unique phenotypes controlling cell differentiation, growth and cell death. Students will be provided with a fundamental understanding of basic epigenetic processes related to the mechanisms by which exposure to environmental stressors causes environmental diseases not limited to neurological dysregulation, cardiopulmonary and inflammatory diseases, metabolic diseases and cancer. This course will present the concept of epigenetic modulation of cellular signal pathways involved in protection from effects of environmental stressors, including responses to stress and

oxidative damage. In addition, we will present the most recent and advanced genetic and epigenetic techniques to study the impact of the environmental stressors on disease pathogenesis, which includes microarrays, next-generation-sequencing and genetic models. The course will also discuss how to apply the 'omic' data and pathway analysis tools for the identification and validation of disease biomarkers and exposure markers from environmental and occupational health research. Course will be conducted by in class lectures, hand-on practices for epigenomic data analysis and paper discussion. A college level background in the molecular biological sciences is required for taking this course. Course of Molecular Fundamentals (EOH 2310) or Principles of Toxicology (EOH 2175) is suggested.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: PREQ: EOH 2310 OR EOH 2175; PROGRAM: Graduate School of Public Health A college level background in the molecular biological sciences is required for taking this course.

EOH 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Includes doctoral study under the various programs within the department.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EOH 3210 - PATHOPHYSIOLOGY OF ENVIRONMENTAL DISEASE

Minimum Credits: 3

Maximum Credits: 3

This graduate level course focuses on the etiology and pathogenesis of human disease and how the disease process affects normal physiologic function. The course will include a didactic component covering the normal anatomy and function of the major organ systems and a series of student-led presentations and discussions of the nature and cause of commonly encountered diseases and or injuries. Students will be expected to apply basic mechanistic physiologic principles of each organ system in current public health and environmentally relevant topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 3305 - GENOME INSTABILITY AND HUMAN DISEASE

Minimum Credits: 3

Maximum Credits: 3

Mechanisms that maintain genome stability allowed the origin of species. DNA damage is omnipresent and DNA repair and DNA damage tolerance mechanisms are interwoven in systems that control transcription, replication, cell division, signal transduction, cell death and evolution. More than 40 distinct human diseases are caused by defects in DNA repair, including syndromes of impaired development, immunodeficiency, cancer predisposition, neurodegeneration, and premature aging. This course will emphasize the molecular biology and biochemistry of DNA repair, placing these mechanisms into the context of other cellular processes as they pertain to health and disease. Environmental, clinical and endogenous sources of DNA damage will be discussed. An understanding of the fundamental role of DNA repair mechanisms in immunology, oncology, neurology, and aging will be central to all lectures.

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

Epidemiology

EPIDEM 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4

Maximum Credits: 4

This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2012 - WRITING IN POPULATION NEUROSCIENCE

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to write a manuscript or grant proposal related to population neuroscience. Population neuroscience consists of the application of state of the art population science and neuroscience to better understand the pathogenesis and etiology of a given disease of the central nervous system. This course provides a practical opportunity to write a proposal or a manuscript using neuroepidemiological methods that focus on a specific CNS disease/condition. Emphasis is placed on factors that influence vulnerability to onset, progression and response to treatment of neurological diseases, including geographic variations. This course is designed to reach pre- and postdoctoral trainees in epidemiology, neuroscience, neurology, psychiatry, rehabilitation and data sciences. Students are expected to be proficient in scientific writing. This course is part of the curriculum in Population Neuroscience of Alzheimer's Disease and Related Dementias (<https://www.ebrain.pitt.edu/training/>), together with EPIDEM 2017 Population Neuroscience Seminar (Fall) and EPIDEM 2019 Introduction to Multimodal Neuroimaging (Spring).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2017 - POPULATION NEUROSCIENCE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This seminar focuses on the methods and current literature in population neuroscience. Population neuroscience draws from multiple fields, including epidemiology, neuroimaging, and cognitive psychology, to understand the intrinsic (e.g. genetic) and extrinsic (e.g. environmental) factors that contribute to brain structure and function in various populations (healthy, aging, and diseased).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EPIDEM 2019 - INTRODUCTION TO MULTIMODAL NEUROIMAGING AND APPLICATIONS IN POPULATION NEUROSCIENCE

Minimum Credits: 2

Maximum Credits: 2

There have been great advances in neuroimaging techniques, which allow neuroscientists to visualize molecular, cellular and system physiology and functions. The Introduction to Multimodal Neuroimaging course will teach the underlying principles of neuroimaging techniques, including data modeling and visualization. Special emphasis will be on the discussion of the strengths and limitations of each technique, and on novel approaches to utilize complementary imaging modalities. The course will teach the principles and research applications of neuroimaging modalities via basic lectures and workshops that emphasize the integration of multiple imaging modalities.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

EPIDEM 2022 - SPECIAL TOPICS IN EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 3

Properly qualified students may undertake advanced study under guidance of a faculty member(s).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PROG: Public Health (permission from instructor required for no-Public health students)

EPIDEM 2110 - PRINCIPLES OF EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Epidemiology is a scientific discipline which seeks to identify and describe patterns of disease occurrence, identify determinants of disease, and evaluate disease prevention and health care treatment efforts. With its focus of study in human populations, epidemiology is directly linked with public health research, policy, and practice. This course provides an introduction to the fundamental definitions, terminology, concepts, methods, and critical thinking used in epidemiology. The material presented in this course is designed to lay the foundation for future study and practice in public health activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EPIDEM 2141 - BEHAVIORAL LIFESTYLE INTERVENTION TRAINING - THEORY OF PREVENTION EFFORTS

Minimum Credits: 2

Maximum Credits: 2

Translating the findings of clinical trials of lifestyle intervention for disease prevention into community settings is increasingly important. This course will provide the conceptual foundation needed for such public health initiatives and serves as a key component of the Prevention, Lifestyle Intervention, and Physical Activity Area of Emphasis within the Department of Epidemiology. The background and rationale for behavioral lifestyle intervention will be covered in this course, as well as the relationship of lifestyle behaviors to chronic disease, with a focus on diabetes and cardiovascular disease. By attending this lecture-style course, students will receive behavioral lifestyle intervention training based upon a modified version of the Diabetes Prevention Program intervention protocol, called the Group Lifestyle Balance (DPP-GLB) program, which was adapted for use in the community setting. Upon successful completion of this class, each student will also receive a Certificate confirming that he/she was officially trained as a coach for the DPP-GLB intervention program.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health

Course Attributes: Hybrid

EPIDEM 2142 - LIFESTYLE INTERVENTION PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course follows the lifestyle intervention training theory course. The foundation for this practicum is the group lifestyle balance (GLB) program, a behavioral lifestyle intervention training based upon a modified version of the diabetes prevention program intervention protocol. The GLB has already been developed and evaluated by the course instructors. The lifestyle intervention training practicum will provide students with the opportunity to utilize their theoretical knowledge for behavioral lifestyle intervention with hands-on application in the field. This course will be a key component in the new prevention/ lifestyle intervention area of concentration within the department of epidemiology, providing the practical experience needed to deliver the group lifestyle balance program independently.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis
Course Requirements: PREQ: EPIDEM 2141

EPIDEM 2143 - SOCIAL EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to introduce students to a broad overview of the field of social epidemiology related to the history and development of the field including the theoretical underpinnings, conceptual approaches, current topic areas, and research methods. Social epidemiology reveals how social processes are intrinsically linked to the health of populations and individuals. Social epidemiology takes into account the social, psychological, biological, and medical determinants of disease and health and uses a multidisciplinary approach to analyzing and solving complex contemporary social issues. This course will emphasize the role of social determinants of health in relation to health equity. Teaching methods include lectures, readings, class discussions, and written assignments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2150 - EPIDEMIOLOGY CARDIOVASCULAR DISEASES

Minimum Credits: 2

Maximum Credits: 2

In this course, we hope not only to guide you to a better understanding of cardiovascular disease and its epidemiology, but also to help develop your critical and presentation skills. We will do this by "critiquing" an article most sessions and having a twenty-minute student presentation based on recent statements of the American Heart Association.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2151 - PHYSICAL ACTIVITY EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Physical inactivity is a major risk factor for many chronic diseases as identified in the Surgeon General's Report. This course will provide an up-to-date overview of the area of physical activity epidemiology, from the evidence of the relationships between physical activity and/or sedentary behavior and various chronic diseases, to methodological issues pertaining to the assessment of physical activity and/or sedentary behavior, to lifestyle efforts that includes physical activity in population studies, all of which will have a special emphasis on minority groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 OR 2041)

EPIDEM 2152 - STUDENT WORKSHOP IN CARDIOVASCULAR DISEASE EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course is designed to be a supplement to the standard epidemiology coursework. It is a "hands on" workshop that will provide the opportunity for students to practice many of the concepts that they learn in class in the context of CVD epidemiology. It will also cover some areas which are not covered by the current curriculum, including an introduction to subclinical CVD, professional development, reliability analyses, and formal presentations of analysis results.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

EPIDEM 2160 - EPIDEMIOLOGY OF INFECTIOUS DISEASES

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to provide students with a basic understanding of epidemiologic techniques used to describe patterns of infectious disease transmission and risk for infection. In addition, students will learn about the epidemiology, public health impact, and prevention and control measures for selected infectious diseases. This course includes a series of lectures and practical exercises to introduce students to both the application of epidemiologic skills pertaining to infectious diseases and the public health concepts associated with specific infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

Course Attributes: Global Studies

EPIDEM 2161 - METHODS INFECTIOUS DISEASES EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases epidemiology. Course includes lectures, readings, and mid-term (take home) and final examinations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2160

Course Attributes: Global Studies

EPIDEM 2162 - INFECTIOUS DISEASES AND GLOBAL HEALTH

Minimum Credits: 2

Maximum Credits: 2

This course will deal with the epidemiology, pathogenesis, and control aspects of infectious diseases of global health impact including malaria, HIV, tuberculosis, COVID-19, anti-microbial drug resistance, etc. State-of-art knowledge of the natural history, biology, virology or microbiology, epidemiology, clinical and public health, and vaccine efforts will be reviewed. Descriptive, analytic, and experimental epidemiologic studies will be critically reviewed to provide a synthesis of our current understanding of the topical global infectious diseases. The format will include didactic lecture, interactive discussion, small work groups and home-assignments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2160

EPIDEM 2163 - GLOBAL EPIDEMIOLOGY OF VACCINES AND VACCINATION

Minimum Credits: 2

Maximum Credits: 2

This course will provide students with knowledge and skills related to the study of vaccines and vaccination programs in the US/EU and in low- and middle income countries. This course will prepare students for entry-level positions in vaccine research or programming for academic, government, or private sector institutions. This course will provide a broad introduction to a wide range of vaccine related topics ranging from biological mechanisms of vaccines to vaccine financing. Within this range of topics, the course will focus heavily on the epidemiological study of vaccine efficacy, safety, effectiveness, and impact. The course is organized around four themes: 1) introduction; 2) vaccines; 3) research and development; and 3) vaccination programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2166 - GLOBAL CONTROL OF AIDS/HIV AND TUBERCULOSIS

Minimum Credits: 1

Maximum Credits: 1

This course will deal with the epidemiology of infection with human immunodeficiency virus (HIV) and Tuberculosis (TB). Current knowledge of the natural history, biology, virology or microbiology, epidemiology and clinical aspects of AIDS as well as treatment and vaccine efforts against HIV and TB will be reviewed. Descriptive, analytic and experimental epidemiologic studies will be critically reviewed to provide a synthesis of our current understanding of the pathogenesis of these infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2170 - CHRONIC DISEASE EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will reinforce epidemiological concepts, research skills and public health concepts in the context of the study of chronic diseases and associated risk factors. The course will provide an overview of the prevalence, incidence and risk factors for major chronic diseases that face the U.S. population and the population around the world.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2171 - CANCER EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The course reviews basic cancer biology, reviews classic descriptive cancer epidemiology, considers the role for modern biomedical techniques in studies of cancer etiology, and reviews the active hypotheses regarding the etiology of common and uncommon human cancers. Specific topics include biomarkers and intermediate endpoints, tobacco and alcohol associated cancer, viral associated cancer, endocrine related cancer, and nutrition related cancer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2180 - FUNDAMENTALS OF EPIDEMIOLOGICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

This intermediate epidemiology methods course will focus on the use of standard study designs and statistical methods for answering research questions, the interpretation of results obtained from these methods, and consideration of these issues from a causal inference perspective. Students are expected to have some statistical knowledge and will use SAS, a statistical software package, to analyze data sets. Students will be expected to participate in class discussions that extend and apply the topics covered in lectures to epidemiology research articles and to exercises involving epidemiology in practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041; PLAN: EPIDEM-DPH, EPIDEM-PHD, EPIDEM-MS, or EPIDEM-MPH

EPIDEM 2181 - DESIGN AND CONDUCT OF CLINICAL TRIALS

Minimum Credits: 2

Maximum Credits: 2

The course surveys methods in the design and conduct of clinical trials. Clinical trials require successful collaboration of clinical, organizational and statistical skills. This course will focus on clinical and organizational issues, such as patient selection, recruitment, endpoint definition and protocol development. Throughout the semester, students develop a clinical trial proposal that emphasizes the application of the concepts learned. The course will complement courses in biostatistics on the statistical analysis of clinical trials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2183 - READING, ANALYZING AND INTERPRETING PUBLIC HEALTH MEDICAL LITERATURE

Minimum Credits: 2

Maximum Credits: 2

This course provides the opportunity to analyze, interpret and critique original research articles. Assignments consist of oral and written reviews of recently published papers. A literature review paper on a topic chosen by the student is also required. Lecture topics include assessing study validity, subject selection, bias, confounding, laboratory methods, results presentation, quality control, statistical analyses, library searches, and bibliographic data base development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180 and (BIOST 2042 or BIOST 2049)

EPIDEM 2185 - INTRODUCTION TO SAS

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to SAS, a statistical software package commonly used to perform data preparation, statistical analysis, and graphical presentation of results. The course consists of lectures and four lab sessions, where students will practice in a guided manner what was taught during the preceding lectures. The aim of this course is to teach students how to write basic SAS programs to import data, export data, create data sets within SAS, clean data, prepare data sets for analysis and apply statistical, as well as graphical, procedures. Students will also learn to make informed decisions regarding the appropriate SAS commands and options to use for these tasks and will be asked to use SAS for solving a set of simple specific research questions. Upon completion of this course students will feel comfortable using SAS as a tool to conduct research and know how to subsequently further develop their own SAS programming skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Epidemiology (MS or MPH or PHD or DPH)

EPIDEM 2186 - INTRODUCTION TO R

Minimum Credits: 2

Maximum Credits: 2

This introductory course will help students become familiar with the R software for data management and statistical analysis in public health. The R software is widely used in a broad range of scientific disciplines and has a large, active user community. Many resources exist online to learn R, but few are focused on the public health domain. This course will combine lectures and extensive hands-on exercises to guide students in learning R for a wide variety of tasks, including data import/export, data preparation and management, basic statistical analyses, and visualizations. Students will also learn how to create their own functions in R, how to manage their code, and how to make their work reproducible.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2189 - EPIDEMIOLOGICAL METHODS OF LONGITUDINAL & TIME-TO-EVENT ANALYSES

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the students to advanced regression methods used to address research questions involving longitudinally collected data from an epidemiological perspective. It serves as the second epidemiological methods course in the Department of Epidemiology following EPIDEM 2180. The course content includes an introduction to standard analytical methods of longitudinal data and time-to-event outcomes as well as missing data in this study setting. Sample size and power calculations involved when using these methods will be presented. Causal inference framework within the longitudinal study setting will be briefly introduced late in the course. SAS, a statistical software package, will be used in all presented examples and class notes. This course will not cover statistical theories of longitudinal data and survival analyses. It is an applied course of those two methodological approaches.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2180 and BIOST 2049; PLANS: EPIDEM-DPH; EPIDEM-PHD; EPIDEM-MPH; EPIDEM-MS

EPIDEM 2191 - ADVANCED THEORY AND METHODS FOR THE ANALYSIS OF EPIDEMIOLOGICAL DATA

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to advanced epidemiologic and statistical methods. The focus of the course is on the fundamental theoretical and applied aspects of using data to answer research questions. Students will be introduced to the causal inference framework and how it relates to standard (e.g., linear and logistic regression) and novel (e.g., inverse probability weighting, g computation, double robust) analytic methods. Students will learn how to use various machine learning (random forest, gradient boosting, support vector machines) approaches for causal effect estimation and predictive analytics. Student will learn how to apply these methods using R.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Pre-reqs: BIOST 2049 AND EPIDEM 2180 AND EPIDEM 2189

EPIDEM 2192 - CAUSAL INFERENCE IN EPIDEMIOLOGIC RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The focus of this course is on the fundamental theoretical and applied aspects of using data to attempt to answer causal questions in epidemiologic research. Students will be introduced to formal causal inference frameworks, including the concept of target trials, causal diagrams, and counterfactual theory. Using these frameworks, students will learn to articulate well-defined causal questions for point interventions and sustained treatment strategies, describe conditions sufficient for identifying causal effects, and apply appropriate data analyses for estimating causal effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2210 - SPECIAL STUDIES - ESSAY

Minimum Credits: 1

Maximum Credits: 15

Research credits for master's essay. Also applies to credits for doctoral research prior to passing the doctoral comprehensive exam.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EPIDEM 2213 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Properly qualified students may undertake special study or research which does not apply to the master's essay or doctoral dissertation. This study must be done with permission of the specific faculty member who will supervise the work.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

EPIDEM 2214 - PUBLIC HEALTH INTERNSHIP

Minimum Credits: 1

Maximum Credits: 4

This internship provides an opportunity to gain valuable knowledge and experience that would not normally be available through coursework. Placements may be outside of the University of Pittsburgh (e.g., in health services organizations, clinics, health departments, community based organizations working with "at risk" populations) or within the University. Each specific placement is to be agreed upon by each student and his/her faculty advisor, based on the strengths, needs and career/academic goals of students. Internship sites should provide a minimum of 200 hours of public health oriented work (generally 20 hours/week for 10 weeks). Students are encouraged to pursue placements beyond the online list and to think creatively about the domestic and international possibilities. Students are encouraged, but not required, to develop their master's essay based on their internship experience.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041

EPIDEM 2215 - TEACHING PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide doctoral students with opportunities to develop practical skills in teaching and mentoring students taking epidemiology courses. As teaching assistants, students may lecture, grade homework and exams, lead review sessions, hold office hours or maintain course blackboard sites. They may also help plan, update or expand course syllabi or teaching materials. Course goals include improvement in oral and written communication skills and exposure to the process of planning and implementing a course.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

EPIDEM 2221 - GEOSPATIAL MAPPING AND SPATIAL ANALYSIS IN EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide a conceptual understanding of the field of environmental epidemiology and to provide the spatial statistical tools for geospatial analysis. The course will provide "hands on" training in software and tools for analysis of spatio-temporal variations in health and disease with respect to demographic, environmental, behavioral, socioeconomic, genetic, and infectious risk factors. Basic tutorials in Arc GIS (10.3) and Geoda freeware will be provided. There will be 7 assignments over the term and 1 final project. The course is meant for all interested master's and doctoral students who have taken an introduction to Biostatistics and Introduction to Epidemiology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2041 and EPIDEM 2110

EPIDEM 2223 - INTRODUCTION TO ENVIRONMENTAL EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide a conceptual understanding of the field of environmental epidemiology. Topics will include: study design and approaches in environmental epidemiology investigations, statistical issues in the analysis and interpretation of such studies, and class assignments related to specific environmental exposures linked to health outcomes and methods of data collection and analysis. The course will provide an overview of health effects of environmental exposures. This includes the investigation of cancer and other disease clusters, health effects of water and air pollution, radiation threats and exposures, and proximity to toxic waste sites, as well as behavioral and socioeconomic elements which often are found to be effect modifiers in disease outbreaks. There will be seven specific exercises linked to WHO outbreaks which were investigated by well-known environmental epidemiologists that will be presented to the class as assignments, and discussed. Examples will include

environmental justice, health disparities, Marcellus shale and air pollution exposure issues, the built environment and linkage of these elements to outcomes such as obesity, heart disease, cancer, lifestyle, etc. This course is designed to be a companion course for EPIDEM 2221.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or BIOST 2041)

EPIDEM 2230 - SECONDARY DATA ANALYSIS: A CAPSTONE COURSE

Minimum Credits: 2

Maximum Credits: 2

This course covers methods for obtaining and presenting data from existing sources. Classes will cover data management, effective practices for statistical programming when analyzing data, and presenting results of a research project in the context of large public-use datasets. Students will work in groups on a secondary analysis research project that will be presented in seminar format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2180

EPIDEM 2250 - SEMINAR IN EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Areas of current epidemiology interest in research are presented. Often a general theme such as epidemiology of aging, women's health issues, disorders of immunity, is chosen. All departmental majors are expected to take this course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EPIDEM 2260 - EPIDEMIOLOGICAL BASIS DISEASE CONTROL

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to gain understanding of the principles underlying disease prevention and the ability to apply these principles to the design, implementation and evaluation of prevention interventions for chronic and infectious diseases. The first part of the course will be devoted to learning the principles of surveillance and risk assessment development, the second part to application of observational data and efficacy and effectiveness studies to populations. The third part will focus on the evaluation of prevention strategies for chronic and infectious disease.

Throughout the course, there will be an emphasis on the interaction of biologic and clinical information with epidemiologic data and analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2261 - APPLIED EPIDEMIOLOGY FIELD INVESTIGATION METHODS

Minimum Credits: 2

Maximum Credits: 2

This course introduces students to the methods of applied field epidemiology used in applied epidemiology settings such as federal, state, local and tribal government agencies. Upon completion of this course, students will be prepared to conduct urgent public health investigations and write reports for public consumption. This course will also introduce students to applied epidemiology topic areas and their respective analytic methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180; PLAN: EPIDEM - MS or MPH

EPIDEM 2310 - PSYCHIATRIC EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will review the classification systems and methodological issues in psychiatric epidemiology, the research methodologies used, and the distribution of specific psychiatric disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2340 - PEDIATRIC EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on epidemiologic approaches to the study of disorders that occur during childhood and will provide an overview of common physical and psychiatric childhood disorders. In addition to describing the epidemiology of the disorders, consideration will be given to the risk factors, research methods, and methodological issues in pediatric epidemiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2400 - PSYCHOSOCIAL FACTORS IN DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course focuses on psychosocial and behavioral factors that influence the development and course of physical disease. Some of these factors can be modified, so identification can lead to improved health. This course is directed towards students who want to learn about the most common psychosocial factors implicated in disease, how they are measured, psychometric issues, and how to incorporate them into studies of disease and physical health. Students will also learn how to analyze and evaluate the strengths and limitations of studies that include psychosocial factors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2560 - NUTRITIONAL EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This interactive course, involving lectures and in-class learning activities, provides students with the skills and knowledge necessary to understand and critically evaluate the nutritional epidemiology literature and design studies in nutritional epidemiology. The course reviews current methods of assessing nutritional status, with a focus on dietary assessment, as well as biological markers, supplement use, anthropometry, and obesity. The course addresses the application of epidemiologic methods to studies of nutrition and disease, highlighting methodological issues and interpretation of findings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2600 - INTRODUCTION TO MOLECULAR EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

To provide students with an introduction to the key concepts in genetics and molecular biology, and the diverse ways they are used to solve practical problems in the epidemiology of disease and risk identification. This course will deliver the working knowledge of genetics and molecular biology necessary for critical assessment of molecular epidemiological studies. It will provide suitable preparation for more advanced and specialized study in molecular epidemiology. The student will develop familiarity with the ways molecular epidemiology is used to determine susceptibility to disease

and response to interventions. The main topics covered are: genetic susceptibility, the use of biomarkers, and molecular association studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2601 - MOLECULAR EPIDEMIOLOGY TOOLS & TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

There is a steady stream of new methods and technologies entering the biomedical sciences that can be used to generate high-quality, quantitative data on the molecular and biochemical aspects of health and disease. There is tremendous value in applying these methods in epidemiologic studies to interrogate the molecular underpinnings of associations within populations, generate hypotheses on the mechanisms involved, to monitor the effects of interventions and to increase confidence in causal inferences. This course will be an opportunity for students to be exposed to methods for measuring the biologic processes that are relevant to DNA variation in populations, and to exposure effects that impact RNA and protein (and other molecule) expression. This course will go beyond the standard level of awareness of how to receive and analyze data from a laboratory. We will engage students in rigorous thought on how to pose questions on the underlying biology, conduct biomarker selection, design assays, and analyze and interpret data. We will spend ~50% of the time exposing students to hands-on experimentation at the laboratory bench. While, we will discuss 'omics' and high-dimensional methods in lectures, the hands-on work will be limited to single molecule analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2600 and EPIDEM 2180 and EPIDEM 2185

EPIDEM 2602 - APPLICATION OF MOLECULAR BIOMARKERS IN EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will advance the learning of students interested in molecular epidemiology by teaching practical aspects of measuring, quantifying and modeling levels of RNA and protein in human biological specimens (blood, tissue, etc). Some topics will include: selecting and validating biomarkers of RNA and protein for application in epidemiologic study design, candidate molecule vs. omics (high-dimensional) approaches, basic know-how in the design and execution of bioassays, and statistical issues in biomarker data analysis. Students will observe the work of a molecular epidemiology laboratory, and have opportunities for hands-on learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PREQ: Undergraduate Biology, more than one EPIDEM course, one BIOST course, and EPIDEM 2600.

EPIDEM 2640 - INJURY PREVENTION AND CONTROL

Minimum Credits: 2

Maximum Credits: 2

Injuries and violence are leading causes of morbidity and mortality in the United States and globally. This course is directed towards individuals with an interest in learning more about this burden and the current approaches being taken to reduce it. It provides an example of how the disciplines of public health can be used to study, understand, and address a significant public health issue. The course will provide an overview of the basic principles and practice underlying injury prevention and control. Lectures will identify the burden underlying major categories of unintentional and intentional injuries and review the multi-disciplinary approaches being used to reduce injuries and violence, in general, and with respect to specific injury and violence issues. In class discussion and problems will be utilized to enhance understanding of approaches to prevention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2670 - INJURY EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide an introduction to and understanding of the epidemiology of injuries. The class will review the fundamentals underlying injury data and the methods used in injury research studies. Research in major injury topics; motor vehicle crash, violence, sports injury, and other topics will be discussed in depth. Through instruction and practice with data, participants will become familiar with the importance of injury as a public health problem, the strengths and weaknesses of injury data sources and injury surveillance systems, and injury research methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2709 - EPIDEMIOLOGY OF WOMEN'S HEALTH

Minimum Credits: 1

Maximum Credits: 1

This overview course on women's health is designed to introduce the student to a variety of health conditions that are unique to, more common in, or more severe in women. We present these features within a health equity lens. A range of health topics will be covered including reproductive outcomes, maternal outcomes, cardiovascular disease, depression, and ageing. This course will also introduce to students the concept of life course epidemiology and its implementation in women's health research. A life course approach assesses the biological and social factors at each stage of life that affect health during adulthood. This course will review study designs appropriate for a variety of life course research questions related to women's health and health equity.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2719 - REPRODUCTIVE EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course first presents a solid background of critical approaches and methodologic challenges unique to reproductive epidemiology, an overview of maternal physiology, equity in sexual and reproductive health, and availability and application of data sources and dashboards for the study of reproductive epidemiology. The course subsequently covers special topics in gynecologic and sexual health and prenatal health including sexually transmitted infections and infertility, contraception, intimate partner violence and reproductive coercion, preterm birth, infecti

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or BIOST 2041)

EPIDEM 2725 - REPRODUCTIVE DEVELOPMENT FROM MODEL ORGANISMS TO HUMANS

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the molecular aspects of the transition from gamete to a reproductive organism. The course progresses through the building of germ cells, fertilization and stem cell participation to sex determination, gonad morphogenesis, puberty, menopause and pregnancy. This course highlights both human and model organisms to bring together diverse aspects of the cell and developmental biology of reproductive tissues and their impact on disease pathology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: PUBHLT 2015 or EPIDEM 2004

EPIDEM 2850 - PHARMACOEPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide an introduction to the field of pharmacoepidemiology, which uses epidemiologic methods to examine the benefits or risk of medications in the population. This course will: explain what pharmacoepidemiology is and what types of study designs are used

within this methodology, discuss the roles that pharmacoepidemiology studies have regarding drug use and health outcomes; describe the threats to validity that are possible in pharmacoepidemiologic studies and the variety of solutions available to avert or control for these threats. This information will prepare students to both interpret and critique, in writing and through presentations, studies from the pharmacoepidemiology literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EPIDEM 2900 - ADVANCED EPIDEMIOLOGY OF AGING

Minimum Credits: 2

Maximum Credits: 2

This is an advanced course targeted towards Epidemiology PhD students. The purpose of this course is to understand in depth the current epidemiologic research findings regarding common health conditions and geriatric syndromes in the aging population. The course will focus on the common age related processes and chronic health conditions that contribute to disability and frailty and on enhancing successful aging and preventing disability. Advanced research methods will be reviewed as part of each class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2981 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2921 - GRANT WRITING

Minimum Credits: 3

Maximum Credits: 3

During this course, students will develop a grant proposal on a research topic that should be their dissertation topic. The proposal will be written in the format of the National Institutes of Health (NIH) R01 grant application. The application will include specific aims and a research plan that includes significance, innovation, and approach. Students will participate in small-group discussions to provide and receive peer feedback. Students must receive approval to enroll in the course from their academic advisor or dissertation chair and the course instructor.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2180 and 2183. RECOMMENDED: EPIDEM 2160 and 2170.

EPIDEM 2923 - SCIENTIFIC WRITING IN EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The focus of this course will be learning how to organize, write, and review a primary research paper with an emphasis on writing skills through hands-on experience. Through a combination of in-class lectures and independent work, the students will learn how to organize and write a publishable research paper. By the end of the course, students will have a completed manuscript suitable for submission and peer review. Students will become aware of the common problems associated with each section including Introduction, Methods, Results, and Discussion. Students will learn about current issues surrounding the ethics of publication and authorship. Students will review each others' completed manuscripts and discuss the critiques in the format of a journal editorial review board. Students are expected to bring a work in progress for this course. If not actively working on a manuscript, students should seek a project through their advisor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2950 - EPIDEMIOLOGY OF AGING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

The workshops are designed as practical professional skill development to supplement to the additional coursework for the Epidemiology of Aging trainees and students. The workshop will include sessions on: presentations by the students from their research, journal article reviews, longitudinal analyses techniques, and professional skills sessions. The presentation sessions provide an opportunity for students to present and refine their interim

research and data analyses by obtaining feedback from peers, faculty and mentors on their work in progress. Journal article review sessions will provide an opportunity for students to identify and share current articles relevant to the epidemiology of aging and develop proficiency in the critical review of scientific literature. Emphasis will be placed on understanding emerging and novel methods in the field, particularly longitudinal statistical analyses techniques (e.g. handling missing data longitudinally; interpreting changes in slopes over time; joint modeling). A faculty member will help student leaders select articles (distributed before the meeting) and will work with students to encourage questions and discussion among the group. Professional skill sessions will vary by semester and cover topics such as post-doctoral career development, grant and professional medical writing, and longitudinal data analysis.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad HSU Basis

EPIDEM 2980 - BIOLOGY AND PHYSIOLOGY OF AGING

Minimum Credits: 1

Maximum Credits: 1

This course introduces students to the aging process as a foundation for research in the epidemiology of aging. Some topics for the course will include: Overview of aging physiology, molecular and biological processes of aging, model systems of aging and study designs that are currently relevant to human population research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2004 or 2712

EPIDEM 2981 - EPIDEMIOLOGY OF AGING-METHODS

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the methodological aspects of epidemiologic research in the field of aging and to critically evaluate research in older adults. The course will focus on: demography, study design, sampling, recruitment, retention, measurement of key variables and special populations. Students will write a critical review of a published article and comment on proposed future directions for epidemiologic studies addressing these questions in older populations. Throughout the course, a Problem Solving Learning Method will be applied by prompting the students to solve pragmatic issues. Examples include: How to measure a specific outcome? What type of chronic health conditions may be related to the research question? How to operationalize specific measures of interest (e.g.: how to create a composite score for co-morbidity assessment?). The course has been formulated to provide the students with the building blocks of the epidemiological study of aging. By the end of the course, the students will be able to critically evaluate various components of a study to further address the research questions in aging populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 3100 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Research and dissertation for the doctoral degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Faculty Development

FACDEV 2200 - PRACTICUM ON UNIVERSITY TEACHING

Minimum Credits: 1

Maximum Credits: 3

This course in university teaching is designed for people who are teaching independently for the first time, or who have the flexibility in a recitation to design course materials and teach subject matter. It features the application of instructional principles to course development and materials.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Family Medicine

FM 5316 - FAMILY MEDICINE CLERKSHIP

Minimum Credits: 0

Maximum Credits: 0

Family medicine clerkship is a four week experience in primary care discipline that deals with comprehensive care of individuals and families with special focus on preventive medicine, addressing psychological and social determinants and consequences of illness. Clerkship has five goals: 1) improve and evaluate student clinical skills; 2) provide students with fundamental knowledge of diagnosis and management of common problems; 3) provide rational and scientific approach to preventive medicine; 4) learn unique aspects of family medical care; 5) economic influences of health care delivery and care of patient.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 3

FM 5401 - FAMILY MEDICINE ACTING INTERN

Minimum Credits: 0

Maximum Credits: 0

Four week experience which fulfills the acting internship requirement in which students participate in a family practice teaching service at the level of a first year resident under direct supervision of senior residents and attending physicians. Students are responsible for initial patient evaluation and implementation of care, including writing orders and following up on evaluations. Students participate in night call and weekend coverage as well as all conferences. This is primarily an inpatient experience.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5406 - EXTRAMURAL ACTING INTERNSHIP

Minimum Credits: 0

Maximum Credits: 0

Students will register for this course when participating in a family medicine acting internship at an institution outside of the university of Pittsburgh school of medicine. This experience will not fulfill the required acting internship experience to meet graduation requirements.

FM 5420 - INDIAN HEALTH SERVICE

Minimum Credits: 0

Maximum Credits: 0

This clerkship is offered at hospitals on the Navajo and other Indian reservations. Each student participates in a project, using clinical epidemiology or health survey techniques. Students may also have some clinical experience at hospitals or clinics; and opportunities to observe various aspects of the IHS field program. Students live in government quarters and work under the direct supervision of us public health service physicians. Overall coordination and research supervision is provided by clinical epidemiology and preventive medicine faculty.

FM 5425 - CORRECTIONAL MEDICINE ELECTIVE

Minimum Credits: 0

Maximum Credits: 0

This elective is intended to give students an introduction to correctional medicine. The student will be located at the Allegheny County Jail in the Infirmary and Clinic. During the clinical rotation students will work with the medical team under the supervision of experienced correctional practitioners and nursing staff. Medical students will engage with patients in a variety of correctional health care settings including urgent care, chronic care clinic, and the jail infirmary. Inmates present with acute illnesses, have higher prevalence of Hepatitis C and HIV, and are more likely to have chronic illnesses than the general population. Students will have an opportunity to deliver primary care to this unique population. Additionally, students will have exposure to aspects of public health, mental health, juvenile corrections, substance use treatment, and the transition out of the correctional facility. This rotation is geared towards medical students who are interested in correctional medicine as a career, caring for justice-involved patient populations in the community, and want to enhance their outpatient clinical skills caring for complicated patients. The skills for correctional medicine are significantly different, requiring communication and negotiation skills, strong skills in public health, and a desire to serve a population that has been disenfranchised in society. Students are responsible for all expenses; no financial support is provided. There is an eight hour orientation session to familiarize students with ACJ rules and culture with an emphasis on safety. The corrections orientation is followed training on the ACJ EMR. There are a number of days where the student is at Shuman Juvenile Correction Facility and at a half-way house.

FM 5430 - FAMILY PRACTICE-MANAGED CARE

Minimum Credits: 0

Maximum Credits: 0

Clinical education course combining comprehensive clinical experience with an opportunity to learn about the organization and operation of a large group model HMO. Majority of time spent seeing outpatients under direct supervision of practicing physician, regular inpatient rounds and one or more extended hours sessions to participate in the care of urgently ill patients. Time scheduled each week to become familiar with health education, quality assurance, utilization, claims, marketing, and consumer affairs components of an HMO.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5431 - TOPICS IN FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

4 week elective consisting of 2 two week rotations selected from the following three options: 1) healthcare for the homeless, 2) managed care-how an HMO works, 3) medical care for the chronically mentally ill. Each student will also concurrently participate in the following two subjects during the 4 weeks: 1) preventive medicine and 2) critical review of the medical literature. Course objectives are to 1) see how the homeless obtain health care, 2) see how HMO control costs, 3) improve skills in managing medical illness in psych pts, 4) learn role of prevention in primary care.

FM 5448 - FAMILY CENTERED MATERNITY CARE

Minimum Credits: 0

Maximum Credits: 0

This elective is intended to offer medical students the opportunity to develop a wide view of family centered maternity care on a community basis. Through a series of inpatient and outpatient clinical experiences, directed readings, and a "mini-project," students will extend their understanding of integrated, interdisciplinary family centered maternity care; barriers to prenatal care; creative programs for reducing low birth weight infants; use of doulas, midwives and others in prenatal and intrapartum care; the role of health insurers in augmenting systems of prenatal care; and the abuse of detrimental drugs in pregnancy, such as alcohol, tobacco, and cocaine. The student will be evaluated by various faculty members and the course director based on oral examination of the knowledge of the readings, the "mini-project," and engagement in the topic.

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5461 - EXTRAMURAL FAMILY PRACTICE

Minimum Credits: 0

Maximum Credits: 0

Clinical experience, intensive exposure to comprehensive primary care in primarily outpatient office settings. These family practice experiences will take place in community settings or medical schools away from the university of Pittsburgh but within the United States.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5462 - COMBINED FAMILY MEDICINE AND FAMILY PSYCHIATRY

Minimum Credits: 0

Maximum Credits: 0

This four-week elective focuses on psychiatric and general medical problems in a variety of patients. Student will work on the consultation/liaison service at St. Margaret's Hospital where the student will respond to requests from physicians for psychiatric evaluation of patients on inpatient units. The student conducts the clinical evaluation, investigates any ward management difficulties, assesses the role of the patient's family in the clinical problem, makes treatment recommendations and when appropriate does follow up during the patient's hospital stay. The multi disciplinary team on the service attempts to integrate the biological with the psychosocial perspective to achieve a comprehensive view of patient care. Students will participate in family medicine case conferences, attend outpatient experiences at primary care clinics, participate in palliative care interventions and work on the medical care of the psychiatry patient (MCPP) service at WPIC. Learning opportunities include: supervised clinical assessments; hospital rounds; case conferences and seminars. This elective can prepare a student for combined family medicine/psychiatry residency programs.

FM 5470 - PRACTICE-BASED PHARMACOTHERAPY

Minimum Credits: 0

Maximum Credits: 0

This is a 4-week elective where students will participate in a variety of activities (direct patient care, group/individual case-based discussions, chart reviews, and projects to improve skills in prescribing and management of medications. Special emphasis will be placed on obtaining a thorough medication and history and using evidence-based drug information databases. The student will learn rational prescribing strategies based on cost, formulary guidelines, effectiveness and individual patient characteristics. Contact will be with clinical pharmacists and family physicians.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5485 - CULTURAL COMPETENCY

Minimum Credits: 0

Maximum Credits: 0

Course objectives: to create better understanding of different health beliefs in different culture, resulting in students with facility in operating in a multicultural environment; foster an understanding of the challenges to physicians and the health care system of varying cultural beliefs and practices; improve the recognition of health beliefs and practice as they present in the clinical setting. The medical student will be introduced to a variety of cultural issues as they relate to medical care. Directed readings will be assigned to expose students to major health beliefs, disparities, challenges and practices of members of a variety of culture groups, including native Americans, African Americans, Arab Americans, eastern European immigrants, Latino Americans, and Asian Americans. Students will spend time with UPMC medical translators, attending to inpatients and outpatients, both in clinics and on house calls, learning both from the medical reasons for the patient seeking care, and the background health belief. Students will also attend health education events as available in community settings, including steps to a healthy community programs, center for minority health programs, Jewish community center programs, and other opportunities. The student will be expected to do a complete family health belief study on a selected patient's family, including recommendations for improvement of the quality of their health experience. Students will have a weekly meeting with the course director to discuss suggested readings and how the content applied to the clinical experiences.

FM 5505 - FAMILY MEDICINE IN HONDURAS

Minimum Credits: 0

Maximum Credits: 0

This is a four week elective to expose the student to a global health experience in a community based project working with shoulder to shoulder San Jose in Honduras. It will consist of 2 weeks in Pittsburgh and 2 weeks in San Jose del Negrito, Honduras, under the direction of shoulder to shoulder Pittsburgh and the UPMC family medicine global health (GH) team. In select situations a student with fluency in Spanish and prior international travel experience may construct a four week rotation entirely in Honduras. Each student will have an opportunity to practice clinical medicine and

preventative care in a low resource setting in rural Honduras. There will be structured educational objectives in public health, tropical medicine and community oriented primary care. The team traveling to San Jose will work with the local nurse and physician in the local clinic setting as well as the various community projects. Each student will be active not only in the clinic setting but in the wider community as the project focuses on community development and community health.

FMST 2153 - PROSEMINAR IN FILM AND MEDIA STUDIES

Minimum Credits: 1

Maximum Credits: 1

All students in the Film and Media Studies Ph.D. program are required to complete a one credit proseminar in film and media studies prior to taking their comprehensive examinations. Enrolled students attend a designated lecture by invited scholars, as well as an associated ninety-minute seminar conducted by a Film and Media Studies faculty member concerning the work of the speaker or the topic addressed. The faculty member conducting the seminar will typically choose pertinent readings to be completed prior to the lecture and seminar. The proseminar is usually offered twice a year: once during the fall term and once during the spring, with a lecture and its associated seminar scheduled each term. Invited scholars may or may not participate in the seminar meetings. Dates and times of visiting speakers and the associated seminars will be announced well in advance so that students may plan their schedules accordingly. A student in the program may repeat the proseminar for up to three credits. The proseminar in film and media studies seeks to expand and enhance our graduate students' experience of the critical exchange of ideas, by involving them more fully in the contemporary research being conducted by film and media scholars from around the world.

FMST 2416 - CINEMA AND TRAUMA

Minimum Credits: 3

Maximum Credits: 3

Trauma studies now stands at the forefront of contemporary cultural theory, straddling such disciplines as history, psychology, philosophy, and literary criticism. This seminar encourages graduate students to examine and contribute to the rapidly emerging sub-field of cinema/trauma studies. We will focus on the two mid-twentieth century events that continue to anchor many definitions of historical trauma: the Holocaust and Hiroshima. What do films that address these events teach us about the politics and ethics of representing experiences often referred to as unrepresentable? How does cinema force us to refigure debates about the "limits of representation" and the nature of "the event" itself? Is cinema an agent of memory or memory's eraser? A broad range of films will inform our discussion of such questions - documentary and fiction, tragedy and comedy, mass cultural successes and lesser-known art films or genre films, films from the past and present.

FMST 2420 - CINEMA AND COUNTER-HISTORY

Minimum Credits: 3

Maximum Credits: 3

This graduate course focuses on visual media's connection to historicizing. It is concerned with theoretical writings that can be understood as offering versions of the past that run counter to received perceptions about historical forms through visual media. The readings and the films pay specific attention to various, often conflicting, theories, forms, and styles to identify the philosophic, aesthetic, and political stakes in activating the past. Among the texts to be studied that are related to philosophies of history are those of Walter Benjamin, Michel Foucault, Gilles Deleuze, Jacques Rancire, Hayden White, Carlo Ginzburg, and Fredric Jameson as well texts on Andr Bazin, Jean-Luc Godard. Philip Rosen, Mary Ann Doane, Robert Rosenstone, and Vivian Sobchack. The films proposed for screening are Cabiria, Abel Gance's Napoleon, Scipione Africanus, Roberto Rossellini's the Rise to Power of Louis XIV, Pasolini's Mamma Roma, Kubrick's Paths of Glory, Carry on up the Khyber, Monty Python and the Holy Grail, The Camp at Thiaroye, Hyenas, Morfia, a History of Violence, the White Ribbon, and Il Divo.

FMST 2420 - CINEMA AND COUNTER-HISTORY

Minimum Credits: 3

Maximum Credits: 3

This graduate course focuses on visual media's connection to historicizing. It is concerned with theoretical writings that can be understood as offering versions of the past that run counter to received perceptions about historical forms through visual media. The readings and the films pay specific attention to various, often conflicting, theories, forms, and styles to identify the philosophic, aesthetic, and political stakes in activating the past. Among the texts to be studied that are related to philosophies of history are those of Walter Benjamin, Michel Foucault, Gilles Deleuze, Jacques Rancire, Hayden White, Carlo Ginzburg, and Fredric Jameson as well texts on Andr Bazin, Jean-Luc Godard. Philip Rosen, Mary Ann Doane,

Robert Rosenstone, and Vivian Sobchack. The films proposed for screening are Cabiria, Abel Gance's Napoleon, Scipione Africanus, Roberto Rossellini's the Rise to Power of Louis XIV, Pasolini's Mamma Roma, Kubrick's Paths of Glory, Carry on up the Khyber, Monty Python and the Holy Grail, The Camp at Thiaroye, Hyenas, Morfia, a History of Violence, the White Ribbon, and Il Divo.

FMST 2421 - GLOBAL FILM STARDOM

Minimum Credits: 3

Maximum Credits: 3

Historically, film stardom was examined from an American perspective (where it originated in Hollywood in the first decades of the last century), and theories of stardom emerged from an implicitly Hollywood-based understanding of cinematic fame. Instead, while not ignoring the American cinema, this course will take a global perspective on stardom, in terms of performers, films, and theories. Our approach to stardom will be a combination of the historical, the theoretical, and the textual. This means that in addition to studying individual stars, we will also 1) consider the phenomenon of stardom in terms of its origins and the cultural and national institutional conditions that support it, 2) analyze stardom as a public phenomenon to be understood in the context of specific cultures and audiences, 3) discuss various theories of stardom, celebrity, and public fame, 4) consider the manner in which issues of gender and sexuality impact notions of stardom, and 5) consider the relationship between stardom and spectator subjectivity. Although the course will be focused on cinema stardom, we will also briefly consider theoretical overlaps with the broader category of celebrity studies. In general, when we look at individual stars in the course, we will consider their broad "star text" which involves the interrelationship of screen roles, off-screen information, publicity material, and cultural context. Questions raised will include: what constitutes a "star text" in different historical contexts and ideas about the public and the private? What specifically do the media of photography and film bring to public fame? How does stardom presume and shape norms of identity pertaining to gender, sexuality, social class, race/ethnicity, bodily norms, and other cultural values? What does stardom mean in old and new transnational contexts? What is the relation between stardom, nation, and politics?

FMST 2422 - MEDIA AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

Mobility has been one of the central functions and consequences of media technologies, from papyrus in ancient history to mobile phones in the digital era. This seminar seeks to conduct a thorough theoretical mapping between media and mobility, creating a productive framework in which

media can be examined through the ways in which they facilitate, mediate, and regulate various modes of mobility of humans, things, and ideas.

FMST 2520 - FILM COMEDY

Minimum Credits: 3

Maximum Credits: 3

Since the earliest days of the cinema, film comedy has been one of the most profitable, prevalent and persistent genres-ranging from the primitive burlesques of Edison or Lumiere to the popular features of today. While comedy appeals to a viewer's sense of pleasure, it also addresses her intellect, for as Ousmane Sembene once said, comedy "makes people laugh but it also makes them think." That is precisely what we will do in this course: think through comedy. Here, it is interesting to note that, in 2010, the academic journal comic studies began publication.

FMST 2570 - KEY CONCEPTS IN NEW MEDIA

Minimum Credits: 3

Maximum Credits: 3

What exactly is "information"? What is an "interface"? What does it mean when we speak of a "media platform"? These terms and concepts form the backbone of the major theories and discourses in new media, which produce a rich vocabulary that has yet to be rigorously defined. This course aims to provide a theoretical map to navigate the rapidly expanding fields of media studies by critically interrogating a set of key concepts that have been extensively used to deal with the technologies, forms, materials and cultures of new media. We will discuss the meaning, usage, and genealogy of such concepts as "network," "cybernetics," "hardwire," "infrastructure," and "system," which have animated a wide range of researches and debates. By critically engaging with these key concepts, we hope to not only reconstitute a framework for theorizing contemporary media, but to explore the very notion of "media" as a discursive formation.

FMST 2760 - THEORY/TECH/MEDIA PLATO-GAMES

Minimum Credits: 3
Maximum Credits: 3

This course will examine a number of key theoretical debates in the history of visual and verbal media, beginning with the technology of writing itself and moving into the invention of the codex, the printing press, and 19th and 20th century forms of imagistic production. Of particular concern will be modes of competition and symbiosis among various technologies of representation at particular historical moments, such as the relations between speech and print, poetry and theater, painting and photography, and cinema and digital media. Although case studies will be drawn from a number of historical periods, special attention will be paid to the Renaissance and to recent decades, when media of all kinds have come under increasing technological and theoretical pressure. Students will have the opportunity to extend the seminar's concerns to their own areas of research.

Film Studies - Graduate Program

FILMG 2451 - FILM HISTORY/THEORY 1

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema up to 1960, taking up such topics as: the origins of cinema; the development of narrative; the rise of Hollywood and its global appeal; national and international cinemas; the relation between film and the other arts; the coming of sound; arguments between realist and modernist movements; the avant-garde; and the technological and social history of cinema. These topics will be addressed through consideration of major film movements and significant films. Students will also be introduced to key theorists from this time, including Kuleshov, Vertov, Eisenstein, Balz, Mntsterberg, Lindsay, Epstein, Kracauer, Benjamin, Arnheim, Bazin, and others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FILMG 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g., Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

FILMG 2905 - PROSEMINAR IN FILM AND MEDIA STUDIES

Minimum Credits: 1

Maximum Credits: 1

All students in the Ph.D. Film studies program are required to complete a one credit proseminar in film and media studies prior to taking their comprehensive examinations. Enrolled students attend a designated lecture by invited scholars, as well as an associated ninety-minute seminar conducted by a film studies faculty member concerning the work of the speaker or the topic addressed. The faculty member conducting the seminar

will typically choose pertinent readings to be completed prior to the lecture and seminar. The proseminar is usually offered twice a year: once during the fall term and once during the spring, with a lecture and its associated seminar scheduled each term. Invited scholars may or may not participate in the seminar meetings. Dates and times of visiting speakers and the associated seminars will be announced well in advance so that students may plan their schedules accordingly. A student in the program may repeat the proseminar for up to three credits. The proseminar in film and media studies seeks to expand and enhance our graduate students' experience of the critical exchange of ideas, by involving them more fully in the contemporary research being conducted by film and media scholars from around the world.

French

FR 2000 - INTRODUCTION TO GRADUATE STUDIES IN MODERN LANGUAGES AND CULTURES

Minimum Credits: 1

Maximum Credits: 1

This one-credit course offers an introduction to graduate study in modern languages and cultures. It will help you adjust to your graduate program and will cover the nuts and bolts of how to take seminars, do readings, teach, balance your various obligations and meet the emotional and life challenges of graduate school. What matters most in teaching is not skills but a sense of personal identity and a strong relationship to the disciplinary knowledge. We will engage with the latest research in positive psychology, resilience, pedagogy, deep learning, creativity, sociology of work and executive coaching. The class will prepare you better to move among different kinds of professional situations within and outside academia.

Academic Career: Graduate

FR 2605 - SEMINAR: 20TH CENTURY TOPIC

Minimum Credits: 3

Maximum Credits: 3

This course, limited in scope, will usually treat an author, but occasionally a movement or group of authors of the period will be treated.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

FR 2648 - CONTEMPORARY FRENCH CINEMA

Minimum Credits: 3

Maximum Credits: 3

This seminar examines the history of recent French cinema and/or emerging trends in contemporary French film production. Topics covered vary greatly with instructor and term.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

FR 2703 - SEMINARS: TOPICS, GENRES, THEMES

Minimum Credits: 3

Maximum Credits: 3

These seminars are subject - rather than author - or century - specific. Examples might be Vichy France, Baroque religious poetry, or Don Juan in French literature.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FR 2710 - INTRODUCTION TO LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

In this course intended for beginning graduate students in the modern languages, students will survey major movements and concepts in literary and cultural theory of the 20th/21st centuries. These theories have provided us important ways to think about how to read and interpret literature, film, and other cultural artifacts, and, as such, are an important aspect of graduate studies in the humanities. This course is meant to provide students a general background in theory that they can further develop in certain areas as they continue their studies. The course will be taught in English, and all readings will be available in English.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Russian & East European Studies, West European Studies

FR 2715 - TOPICS IN LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

In this course, students will examine a special topic in literary and cultural theory. The course may be organized around a given theoretician, a theoretical movement, or a problematic. Students are expected to have some background in literary and cultural theory.

Academic Career: Graduate

FR 2761 - FRENCH STUDIES GENDER STUDIES

Minimum Credits: 3

Maximum Credits: 3

What does it mean to put gender/sexuality studies and French studies into productive dialogue? This course treats selected topics related to gender and sexuality in French/Francophone studies. Texts studied might include film, theater, news media, literature, autobiography, and others. Texts may come from a variety of time periods from the middle ages to the twenty-first century. Gender/sexuality will be understood in a broad sense, including women/feminism, masculinity, queer and trans*.

FR 2794 - LE FRANCAIS PEDAGOGIQUE

Minimum Credits: 1

Maximum Credits: 1

Qu'est-ce que la grammaire au juste ? Quelle place doit-elle occuper dans les cours de français langue seconde ou étrangère ? Comment trouver la clef secrète qui permettra de mieux connaître et, partant, de mieux expliquer aux apprenants, la logique cognitive de la grammaire française ? Comment déceler les façons dont l'interaction de la grammaire et du lexique représente, chez les francophones tant totaux que partiels, la construction des pensées et leurs mises en communication éventuelles ? Pour répondre à ces questions, ce cours offre une introduction à la grammaire dite "pédagogique" ou "didactique" aux étudiants de cycle supérieur qui enseignent le français à l'Université de Pittsburgh. Axant nos efforts sur les questions que nos élèves nous posent le plus souvent en classe, nous examinons de près: 1) les idées reçues sur la grammaire française; 2) le(s) piège(s) des règles "empiriques" ou "générales"; 3) les métaphores conceptuelles qui sous-tendent les structures lexico-grammaticales du français; et

4) la pragmatique et l'importance du contexte dans les échanges écrits et oraux.

FR 2795 - TEACHING IN THE MODERN LANGUAGES DEPARTMENT

Minimum Credits: 1

Maximum Credits: 1

This one-credit course in teaching will focus on issues related to advanced teaching in modern language courses that integrate language and disciplinary questions such as literary studies, media analysis, cultural history, public-facing scholarship, among others. Topics covered may include advanced-level syllabus design; scaffolding techniques for different types of textual and media objects; designing and mentoring for undergraduate research experiences; modern language program curriculum analysis and design; writing teaching statements; teaching for diverse students; assessment design; responding to OMETs and class visit reports; and teaching in study abroad programs. The course will be run as a workshop drawing on the resources and expertise of faculty within and beyond the department. Outputs and assessments for the one-credit course will operate on a menu model, allowing each student to determine what would be most helpful for their ongoing teacher training in conjunction with their departmental mentors and teaching supervisors. Course will be taught in English.

FR 2796 - FRENCH FOR THE HUMANITIES

Minimum Credits: 1

Maximum Credits: 3

This course is intended for graduate students in the humanities seeking to improve their professional French reading, writing, and translation skills in academic fields such as French literature, theory, social sciences, and philosophy. The course is composed of three different five-week modules: 1) comprehension of complex novelistic prose from the 18th to the 21st centuries; 2) comprehension of complex theoretical, philosophical, and social science texts likely to appear in one's career; 3) translation into English of both kind of texts, as one often needs to translate less-known references in one's professional writing. This course offers variable enrollment, meaning that students can enroll in one, two, or three credits to take the module(s) most relevant for their professional goals. While especially useful for non-French native speakers, everyone will benefit from learning the specific lexicon, syntactic structures, and ironic registers necessary for the humanities scholar working with texts coming from the Francophone tradition. The class will be workshop-based and will use a variety of short literary, theoretical, and social science texts written in French. Assessment will be based on regular, short assignments that take a hands-on approach. Prerequisites: Graduate Status in the French Program or proven graduate proficiency in the French language.

FR 2903 - MA RESEARCH PAPER DIRECTED STUDY

Minimum Credits: 3

Maximum Credits: 3

MA students write a research paper (6000-8000 words), typically during their final semester in the program.

Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

FR 2910 - COMPREHENSIVE EXAMINATION MA

Minimum Credits: 1
Maximum Credits: 3

This course is intended for ma candidates in their last term of study when they present themselves for the ma comprehensive examination.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FR 2970 - TEACHING OF FRENCH

Minimum Credits: 3
Maximum Credits: 3

Teaching French, Italian, and Spanish supports the concept that instructional expertise is developed in and through practice-based projects, teaching experiences, and the study of the research evidence and theories on additional language learning. The course is designed for language teaching at the university level and is primarily intended for teaching assistants, although part time instructors may enroll in this class for credit. In the course, four major areas associated with contextualized instruction are presented: 1) situations and themes as context, 2) culture as context, 3) academic subject matter as context, and 4) literature as context. All assignments are project-based and include analytical and reflective reports on the students' own teaching and lesson development projects intended to be used and evaluated in actual foreign language classes. Teaching assistants and instructors in other language are welcome to register for the course but examples are primarily in Spanish, French, Italian, and English.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

FR 2973 - ISSUES IN FOREIGN LANGUAGE ED

Minimum Credits: 3
Maximum Credits: 3

The course deals with current issues in foreign language teaching in terms of procedures and techniques. This course is a more practical approach to the theories of foreign language methodology.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

FR 2975 - ADVANCED TOPICS IN FOREIGN LANGUAGE LEARNING AND TEACHING

Minimum Credits: 3
Maximum Credits: 3

In this course intended for experienced foreign language teachers, students will focus on pedagogical issues encountered in advanced-level teaching in the areas of language, literature, and culture.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

FR 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12

This independent course is for ma students who have completed, or are completing in their last term of study, all course requirements for the ma degree.

Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FR 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Students register for this course while doing research for their Ph.D. Dissertations.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Attributes: West European Studies

Gender, Sexuality, and Women's Studies

GSWS 2058 - FEMINIST SOCIAL WORK

Minimum Credits: 3

Maximum Credits: 3

This course focuses on gender and social work, beginning with a critical examination of the concept of feminist practice, with attention to oppression, power, and privilege in helping relationships and in women's lives more broadly. It explores meanings of gender as it intersects with race/ethnicity, class, sexuality, age, and ability in the lives of women in general and specifically as social workers and clients. Taught in a seminar format, this course examines topics such as work, welfare, family, violence, justice system involvement, health, mental health, and women as agents of change and is appropriate for students concentrating in micro or macro levels of practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's St

GSWS 2150 - TRANSNATIONAL FEMINISMS

Minimum Credits: 3

Maximum Credits: 3

This class will look at the situation of women in international perspective. We will examine how feminist organizations operate in difficult national and local contexts and how women's rights have been addressed through international organizations such as the United Nations and the World Court. Through case studies, we will consider a number of contentious issues in global feminism, including sexual assault, sex tourism, and the global assembly line, and the role of feminism in national liberation movements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GSWS 2240 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This graduate course addresses a current topic in gender, sexuality, or women's studies. Topic varies by instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Gender, Sexuality & Women's St

GSWS 2242 - FEMINIST THEORY

Minimum Credits: 3

Maximum Credits: 3

This course is an interdisciplinary introduction to feminist theory. It will examine a wide range of feminist theories and theories of gender, drawing from works in history, social sciences, philosophy, legal studies, and literary theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's St, Global Studies

GSWS 2252 - THEORIES OF GENDER AND SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of important current topics and controversies in gender and sexuality studies, emphasizing emerging directions in scholarship and the foundational readings that have prepared the way for them. Gender and sexuality studies are interdisciplinary fields in conversation with feminist theory and queer theory as well as a host of academic disciplines. Drawing on readings from a variety of disciplines and sampling a range of methodologies, this course works through some of the key moments, movements, and problems that shape contemporary thinking about gender and sexuality. The course invites students to think through materials and ideas in relation to their own research, interests, and commitments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's St

GSWS 2262 - GENDER, ETHICS, AND THE BODY

Minimum Credits: 3

Maximum Credits: 3

This seminar explores what it means to take a feminist approach to something, particularly ethics, and what it means to examine the gendered nature of something, particularly bodies, ethics, and even feminist approaches themselves.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's St

GSWS 2270 - QUEER THEORIES

Minimum Credits: 3

Maximum Credits: 3

Study of recent theories of sexuality, emphasizing work in lesbian, gay, transgender, and queer studies. Consideration of the development of 'queer' as critical category (including its limitations), and of the history of queer theory and LGBT studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's St

GSWS 2902 - DIRECTED STUDY

Minimum Credits: 3

Maximum Credits: 3

Individual study on a topic related to gender, sexuality, or women's studies under supervision of a faculty member from the program. A variety of individual research and reading projects not covered in other courses may be undertaken.

Geology

GEOL 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1

Maximum Credits: 12

This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a master's degree in geology.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Geology and Planetary Science (MS) or Geology and Environmental Sci (MS)

GEOL 2001 - SCIENTIFIC COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

The Scientific Communication course is required for all new MS and PHD students in Geology and Environmental Science. It is designed to introduce students to the department and develop communication skills. The goal of the class is to provide a foundation for students to develop a proposal and research strategy for their thesis project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Geology and Planetary Science(PHD or MS) or Geographical Information Sys (MS) or Geology and Environmental Sci (PHD or MS)

GEOL 2002 - MINEROLOGY/PETROLOGY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: GEOL 0800 or 0820 or 0860

GEOL 2006 - ENVIRONMENTAL MODELING

Minimum Credits: 3

Maximum Credits: 3

Models allow scientists and others to represent features and behaviors of environmental systems in order to promote inquiry, develop insight, test hypotheses, and consider solutions to problems. The class will use primary literature and hands on experiences with computer models to introduce environmentally relevant modeling tools. Topics covered will include process-based models of disease, climate, ice, ecosystems, ecosystem services, hydrology, predator-prey systems, and competition among species for resources. Students will have the opportunity to conduct original research projects either by developing their own environmental model or by using existing models. No programming experience is required. Students should have some upper level undergraduate coursework in environmental studies, science, biology, geology, physics or chemistry and be comfortable thinking quantitatively.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2015 - GEOLOGY COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

Geology colloquium is a required course for MS and PhD students in geology and planetary science each term. It is a formalization of the seminar series with weekly guest speakers from industry, academia, and government. Each seminar will focus on a different research topic in the earth sciences and describe active and on-going projects of immediate interest to students.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad SN Basis

GEOL 2020 - ANSWERING REGIONAL CHALLENGES IN WATER SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

A graduate-level seminar class devoted to examining local/regional challenges in water sustainability. Course components will include guest presentations by water practitioners, hands on data synthesis and analysis, group/class projects, and development of infographics and briefing sheets for key water challenges.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

GEOL 2021 - ADVANCED PETROLOGY

Minimum Credits: 3

Maximum Credits: 3

The origin and characteristics of the common igneous rocks and minerals are studied in light of natural and synthetic rock systems. Main topics covered are equilibrium relations of the main silicate systems, petrogenesis of the principal igneous rock types and their relation to plate tectonic regimes, and generation and source of magma.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2025 - ADVANCED VOLCANOLOGY

Minimum Credits: 3

This course will provide an in-depth discussion of the generation of magma beneath the Earth's surface, the processes by which different volcanic eruptions occur and the deposits that are left behind. We will also discuss the monitoring and mitigation of volcanic hazards, through remote sensing

and modelling techniques, as well as the volcanic processes that occur and have occurred on other planetary bodies in our solar system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2045 - STATISTICS FOR EARTH SCIENCE

Minimum Credits: 3

Maximum Credits: 3

A statistics course geared toward environmental science and geology majors with an emphasis on applying data analysis and statistical techniques to environmental data. Topics will include: visualizing data, summary statistics, correlation, selected parametric statistics (t-tests, general linear models), selected non-parametric methods, statistical inference, and experimental design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2049 - PALEOCLIMATOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course presents the different types of data used to study the earth's climatic history and long-term climatic variability. Particular emphasis is given to the climatic changes during the last Cenozoic -- the so called glacial ages. Topics of discussion include time scales of climatic change, types of paleoclimatic records and their limitations, numerical climate models, the causes of climatic change, and the importance of paleoclimatic research in forecasting the future.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2054 - SOILS: GEOBIOCHEMICAL LANDSCAPES

Minimum Credits: 4

Maximum Credits: 4

An overview of soils with a strong emphasis on landscape scale process. The course consists of lecture and laboratory/field work. The lecture will include description of physical and chemical soil properties and processes, discussion of major soil classifications and description of ramifications at the landscape scale.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2060 - GEOMORPHOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course is a survey of the major landform features found on the earth's surface. Each landform type is first described qualitatively and then examined in terms of the processes, such as stream flow or glacial activity, which cause its development. The purpose of the course is to familiarize students with geomorphic principles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2110 - PLATE TECTONICS

Minimum Credits: 3

Maximum Credits: 3

The geometry and kinematics of plate tectonics are developed together with the geophysical evidence for plate motions in the first half of the course. The second half involves a geological examination of convergent, divergent, and transform-dominated terranes.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2120 - BASIN ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

The integrated study of sedimentary basins as geodynamic entities, including tectonic environment, geologic history and associated strength of the lithosphere, rock weathering and erosion, and sediment transport. The class will give students a background in driving mechanisms for basin formation and subsidence, sedimentary record preservation and alteration, sedimentary geometry, facies and petrology and provide a basic understanding of the continuum mechanics equations that approximate basin formation.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: GEOL 1100 and GEOL 1020; LVL: Graduate or PhD

GEOL 2150 - SURFACE WATER HYDROLOGY

Minimum Credits: 4

Maximum Credits: 4

This course shall provide an Earth systems science overview of the processes that govern the hydrologic cycle including precipitation, evapotranspiration, runoff and discharge, infiltration, and groundwater. The course shall emphasize the movement of water through the atmosphere, over the land surface, and within the unsaturated and saturated zones.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2151 - GROUNDWATER GEOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course focuses on physical and chemical processes controlling water movement and composition in sub-surface environments. The lab focuses on practical field methods for the characterization of groundwater.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2316 - ENVIRONMENTAL JUSTICE

Minimum Credits: 3

Maximum Credits: 3

What is Environmental Justice (EJ)? How does this change our approach to the environment and environmental issues? This seminar course will introduce students to environmental justice (EJ) theory and frameworks for analyzing environmental inequities. We will explore the historical, social, political, and economic causes for disproportionate environmental burdens. The course is organized into seven topic modules. The first three will focus on the history of the environmental movement, EJ theory, and intersectional environmentalism to situate EJ within US environmentalism. Four to six will examine specific EJ issues - housing, food security, air, and water quality - and focus on SWPA and Pittsburgh communities as case studies, learning how communities are impacted and the actions being taken to promote the wellbeing of communities. The seventh and final module will address the current state of the environmental movement and EJ initiatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2446 - ADVANCED GEOGRAPHICAL INFORMATION SYSTEM

Minimum Credits: 3

Maximum Credits: 3

Using advanced geographical information systems technologies and geospatial analysis techniques students will extend their knowledge of geographical information systems to include raster, geostatistical, network, model, and 3d/4d based analysis completing complex analysis of real world data sets.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: GEOL 2449

GEOL 2447 - GEOPHYSICAL WELL LOGGIN'

Minimum Credits: 3

Maximum Credits: 3

This course introduces the ersiarview tool. Numerous computer workstation based assignments introduce the student to gis landbases and gis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2449 - GIS, GPS, AND COMPUTER METHODS

Minimum Credits: 3

Maximum Credits: 3

The goals of this course are to gain expertise in spatial analysis and geographical information systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

GEOL 2460 - APPLIED REMOTE SENSNG AND GPS TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

Designed as a follow on to the introduction to remote sensing course this advanced class emphasizes field-oriented problems, data collection, and validation. The ultimate goal is to explore the connection between re motely-gathered imagery and the real-world factors which influence those data. Students taking the course should have had at least 1 semester of high school or college physics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2461 - ADVANCE REMOTE SENSING

Minimum Credits: 3

Maximum Credits: 3

This course is offered in conjunction with the introduction to remote sensing (geol-1460) - this course provides a foundation in the theory and techniques of remote sensing and geospatial data visualization spanning the electromagnetic spectrum from the ultraviolet to microwave wavelength region. Topics will include light/matter interaction, optics and sensor design, image analysis using commercial software, as well as current applications of remote sensing to science and engineering problems. The course and integrated image-processing laboratory are designed to provide you with an appreciation of current remote sensing issues, the geologic and human processes that impact remotely-gathered data, and how those processes can be measured using remote sensing. Students taking this course will participate in an independent research project involving remote sensing theory/data analysis. Students with no prior remote sensing background will also be required to participate in the geol-1460 lecture and computer labs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Geology and Planetary Science(PHD or MS) or Geographical Information Sys (MS) or Geology and Environmental Sci (PHD or MS)

GEOL 2462 - GEOMORPHOLOGY: DYNAMIC EVOLUTION OF EARTH'S SURFACE

Minimum Credits: 4

Maximum Credits: 4

This course aims to introduce students to the geomorphologic processes that shape the surface of Earth, the physical mechanisms by which they operate, and the landforms they create. It will combine qualitative and quantitative descriptions of land-shaping processes such as river erosion, glaciers motion, and landslides. The course builds on in class discussions and assignments to train students in applying basic physical and mathematical tools to explore geomorphological processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2468 - QUANTITATIVE RESEARCH METHODS IN EARTH SCIENCE IN MATLAB

Minimum Credits: 4

Maximum Credits: 4

Quantitative methods are essential for solving problems in Geologic and Environmental Sciences and are often implemented by programming in specialized software. This course focuses on methods for quantitative data exploration and hypothesis testing with Mat lab. The course will introduce students to programming with Mat lab, and use Mat lab to implement and explore a variety of quantitative methods, including: uni- and multi- variate statistics, dimensional analysis, signal processing, spatial extrapolation, and numerical modeling. Classes will include lectures and group assignments that will use various methods to detect patterns in data, pose hypotheses regarding these patterns, and test them.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2469 - TOPOGRAPHIC ANALYSIS

Minimum Credits: 3

Topographic analysis: Landscape topography can reveal valuable information about the processes, evolution, and external conditions that formed a landscape. This class will introduce students to different methods of topographic analysis and the information they can provide. It will include examination of algorithms for analysis of digital elevation models (DEMs), ways for filtering DEMs for features of interest, and analysis of different topographic attributes and how they relate to factors such as climate, tectonics, and anthropogenic modifications. Methods will be executed and developed using Matlab and ArcGis. The class will focus on the analysis of a specific environment (the specific environment/s will vary from year to year and may include: urban areas, mountain-ranges, Arctic vs Tropical topography etc.). It will use the analyses methods we will learn, together with literature on this specific environment to explore questions regarding the topographic characteristics and environmental conditions that prevail in this environment. Knowledge of Arc GIS and Matlab required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2470 - CONSERVATION LAWS AND EARTH SURFACE DYNAMICS

Minimum Credits: 4

Maximum Credits: 4

Earth's topography is shaped by interactions between surface, tectonics and climatic processes. This course combines literature reviews with analytical and numerical models to examine how these processes act to modify Earth's surface over long time periods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2501 - ORGANIC AND STABLE ISOTOPE BIOGEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

This is mainly a lecture course that will examine the carbon cycle and the life cycle of the organisms that are responsible for the eventual accumulation of organic materials in sediments. The processes involved in the simultaneous preservation and transformation of organic materials into coal, petroleum, natural gas, kerogen and other dispersed organics will be reviewed in light of modern concepts of thermal maturation processes. The structures of naturally-occurring organic materials in sediments will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2510 - AQUATIC AND SEDIMENTARY GEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

THIS COURSE WILL EXAMINE THE CHEMISTRY AND GEOCHEMISTRY OF MODERN AND ANCIENT AQUATIC AND SEDIMENTARY SYSTEMS, INCLUDING OCEANS AND FRESH WATERS. STUDENTS WILL GAIN AN UNDERSTANDING OF THE BIOGEOCHEMICAL PROCESSES OCCURRING IN AQUATIC SYSTEMS, AND THE GEOCHEMICAL SIGNATURES THEY LEAVE IN THE SEDIMENTARY RECORD.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: (CHEM 0110 and GEOL 0055) or GEOL 0800 or 0860

GEOL 2518 - INTRODUCTION TO ATMOSPHERIC CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

This course will apply the basic principles of physics and chemistry to describe the complex system of the Earth's atmosphere. We will cover fundamental concepts such as atmospheric structure, transport, chemical kinetics, and photochemistry to address topics including stratospheric ozone, the oxidizing capacity of the Earth's atmosphere, and air pollution via tropospheric ozone, aerosols, and acid rain. We will also study the role of atmospheric composition and chemistry in mediating Earth's climate through topics such as the greenhouse effect, and feedbacks between chemistry, air quality, and climate. The course will familiarize students with the current state of the research through interactive projects and is open to both graduate students and advanced undergraduates.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2520 - RADIOGENIC ISOTOPE GEOLOGY AND GEOCHRONOLOGY

Minimum Credits: 3

Maximum Credits: 3

Introduction to isotope systematics (including mass dependent fractionation, radioactive decay, generation of cosmogenic nuclides, and nucleosynthesis), and application of isotope systems to problems in geochronology, geology, hydrology, oceanography, biology, and Cosmo chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2525 - STABLE ISOTOPES

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with a thorough introduction to the stable isotope systematics of light elements (hydrogen, carbon, nitrogen, oxygen, and sulfur). The course examines the fundamental concepts of isotope equilibrium and kinetics, physiochemical and biogenic mechanisms of isotope exchange, and the principles of mass spectrometry and stable isotope extraction techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CHEM 0110 and GEOL 2520

GEOL 2640 - ADV GEOHAZARDS & RISK MGMNT

Minimum Credits: 3

Maximum Credits: 3

The geological and natural processes that affect the human environment in catastrophic ways are examined in this class in terms of science, prediction, mitigation, avoidance and the policy/safety issues involved. These problems commonly result from human activity modifying and impinging the natural geologic processes. Detailed topics covered include the four primary hazards that are common in the united states: earthquakes, hurricanes, wildfires, and flooding.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2750 - VOLCANOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on a specific but different topic of volcanology each time it is offered. The course is offered dependent on student demand. Courses that have been offered in the past include: describing and interpreting pyroclastic rocks, exploring explosions and glaciovolcanism. All the courses include discussion in the classroom, especially of recent volcanological literature, study of hand samples and microscope study of thin-sections.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2853 - WATERSHED HYDROLOGY AND BIOGEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Understanding the science of watersheds is critical to improving water quality. This course will examine surface water hydrology, biogeochemistry, and management of watersheds. In addition, we will focus on how varying land uses influence the dynamics of hydrology and biogeochemistry across these systems. Student will develop an understanding of the biogeochemistry of various major elements in watersheds, including nitrogen, carbon, sulfur, and mercury, and how these elemental fluxes are exchanged through atmospheric-terrestrial-aquatic interactions. Students will be expected to demonstrate critical thinking, communication, and analytical skills through student-led lectures, journal discussions, and projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2960 - FIELD CAMP

Minimum Credits: 6

Graduate geology summer field camp is six to eight weeks long and includes a substantial component of geologic mapping and report writing. Graduate students should enroll at an accredited field camp offering at least six semester units of credit and transfer the credits to the University of Pittsburgh.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

GEOL 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

This course permits graduate students to explore specific topics in the geological sciences. The course is designed in a more flexible format than a

directed study, stressing a higher degree of independent library research.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

GEOL 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a PhD degree in geology.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Geology and Planetary Science (PHD) or Geology and Environmental Sci (PHD)

GEOL 3410 - EXPLORATION GEOPHYSICS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on exploration geophysics including reflection seismic, well log, gravity, electromagnetic, magnetic, electrical, and other methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3853 - ECOSYSTEMS: LAND-WATER-ATMOSPHERE INTERACTIONS

Minimum Credits: 3

Maximum Credits: 3

Understanding the science of watersheds is critical to improving water quality. This course will examine surface water hydrology, biogeochemistry, and management of watersheds. In addition, we will focus on how varying land uses influence the dynamics of hydrology and biogeochemistry across these systems. Student will develop an understanding of the biogeochemistry of various major elements in watersheds, including nitrogen, carbon, sulfur, and mercury, and how these elemental fluxes are exchanged through atmospheric-terrestrial-aquatic interactions. Students will be expected to demonstrate critical thinking, communication, and analytical skills through student-led lectures, journal discussions, and projects.

Grade Component: Grad LG/SU3 Basis

GEOL 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

This is a course designed to permit graduate students an opportunity to explore facets of research possibly leading to project/thesis/dissertation topic.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3904 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

This is a course designed to permit graduate students an opportunity to explore facets of research possibly in the area of information science systems related to their project/thesis/dissertation topic.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3908 - TOPICS GEOLOGY

Minimum Credits: 3

Maximum Credits: 3

This is a course designed to permit the teaching of new and significant developments in the field of geology. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3923 - TECTONIC GEOMORPHOLOGY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Participants read and discuss recent and foundational literature in tectonic geomorphology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3924 - TOPICS IN GEOMORPHOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is a course designed to permit the teaching of new and significant developments in the integrated fields of geomorphology, tectonics, and climate. The theory, techniques and applications are emphasized as is the use of current data sets through a combination of readings, lectures and analyses. Field trip is associated with this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3925 - TOPICS IN PALEOLIMNOLOGY

Minimum Credits: 3

Maximum Credits: 3

This graduate class will focus on the study lake sediments as archives of climatic change. Lake deposits form a significant part of the geologic record and contain high resolution records of past climatic and environmental changes in continental environments. Because lake deposits are the product of diverse geochemical experiments they provide a framework to discuss numerous problems which are of general interest in both chemical sedimentology and general sedimentology. Readings assigned from current journal articles.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3931 - TOPICS IN PALEOENVIRONMENTAL

Minimum Credits: 1

Maximum Credits: 1

This is a course designed to permit the teaching of new and significant developments in the field of paleo environmental analysis. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3946 - PYTHON SCRIPTING

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to gain expertise in programming methods using environmental systems research incorporated arcobjects and the visual studio .net programming environment of microsoft. Arcobjects is a software technology based on the com protocol and can be used within any compliant programming language. Our goal in this class is to gain fundamental skills in visual basic programming using the microsoft developers studio visual basic environment through applied examples and homeworks. After students have gained some programming expertise they will immediately begin programming the arcgis desktop using arcobjects technology.

GERON 2013 - EVIDENCE-BASED APPROACHES TO SUPPORT FAMILY CAREGIVERS

Minimum Credits: 3

Maximum Credits: 3

Evidence-Based Approaches to Support Family Caregivers, is an online course that provides a more in-depth look at research-informed approaches and interventions in supporting family caregivers. By delving into these approaches, which is based on the most recent research, helping professionals will be better equipped to assist family caregivers in providing care, maximizing self-efficacy, and infusing increased knowledge to family caregivers who are the primary source of support for older adults with chronic illness and disability. By investigating evidenced-based interventional approaches, students will examine psychosocial, psychotherapeutic, technologically-based interventions, as well as coordination care services & resources. Our study will also focus on the experiences of family caregivers and walking the journey alongside them, while also being able to assist in interventional approaches and tools for best care practices. In this work, students will envelope a view of holistic approaches of caring for the caregiver, but also in giving voice to the care recipient and understanding their needs during this journey of being cared for. The exploration of several dimensions and approaches to caregiving will include psychological and physical health, as well as social relationships and support. In focusing on these areas, we will not only look at risk factors for adverse outcomes but also positive aspects of caregiving. This course will briefly touch on special populations for caregiving which will include looking at families who care for their children due to illness or disability. The information attained in this course will enable helping professionals to apply approaches and concepts learned to carers and care recipients in comprehending the multi-faceted dynamics that come along with the role of caregiving.

GERON 2014 - CAREGIVING IN AGING

Minimum Credits: 3

This course is designed for students to learn about the evolving role of caregiving in our society. This course will examine the challenges and responsibilities associated with caring for an older adult in the home setting, and the supportive options and resources that are available.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GERON 2015 - DIGITAL INEQUALITY IN OLDER ADULTS

Minimum Credits: 3

Maximum Credits: 3

As the world population ages, older adults comprise a growing proportion of current and potential Internet users. Yet outdated attitudes about older

adults prevent markets and institutions from seeing them as worthy and relevant consumers and citizens. This course will examine the state of research on Internet use among older adults including how social inequalities have both evolved and remain in relation to who goes online and what they do once connected. We will explore generational differences in the ways people use the Internet as well as examine the relationship between Internet use and well-being. The goal is for students both to gain exposure to this area of work and identify aspects of Internet use among older adults that warrant further inquiry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GERON 2016 - DIVERSITY IN AGING

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of diversity in aging from a multidisciplinary perspective. Key concepts, current research findings, and important policies concerning older adults are discussed.

Minimum Credits: 3

Maximum Credits: 3

This course (formerly known as A&P, Pathophysiology, Medical Terminology and Pharmacology) has multiple topics, including an introduction to the structure of human cells, tissues, organs and organ systems, and functions associated with them; a general overview of the predisposing factors and direct causes of disease, as well as their effects on the human body; an introduction to pharmacology; and word construction, pronunciation, spelling, definition and use of terms related to all areas of medical science, hospital service and health related professions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2021 - PRACTICAL STATISTICS AND PROGRAMMING USING R

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to statistical methods and computer programming in R that are essential for data scientists. This course covers practical statistics from the perspective of data science in health care and how to apply various statistical methods to data analytics projects. In addition, this course introduces the most widely used statistical programming tools in data science: R. Prior experience in R is not expected in this course, however, familiarity with basic statistics concepts and modern programming language will be very useful. The approach of this course is practical, hands-on and project oriented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2022 - INTRODUCTION TO PYTHON FOR HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to Python for students in health informatics. It aims to provide students with an understanding of the modern computer programming and to help students learn how to use computer programs to solve real-world problems in health sciences. Students will be guided to write Python programs to process multiple types of data in health informatics, such as electronic health records, clinical data, and clinical texts. In addition, this course practices basic concepts and applications of artificial intelligence, machine learning, and natural language processing in health care using Python. The approach of this course is practical, hands-on and project oriented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2210 - HEALTH INFORMATION AND THE HEALTH CARE SYSTEM

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to the healthcare system and health information management as well as the integrity of the health data that is used by healthcare organizations. It will also introduce the student to the importance of the quality of healthcare and health information and the need for risk management and patient safety in healthcare organizations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2230 - FINANCIAL MANAGEMENT AND HEALTH CARE REIMBURSEMENT

Minimum Credits: 3

Maximum Credits: 3

This course introduces key principles of financial management and reimbursement in the health care industry. The aim is to provide an understanding of financial and reimbursement language, concepts, and processes to enhance the daily management performance of current and future leaders in healthcare. Students will be offered tools to develop a working knowledge of financial statements, dashboard metrics and industry financial issues. Students will learn reimbursement methodologies, health care compliance regulations and tools for managing all aspects of the revenue cycle. Course modules and exercises offer insight into the development of operational budgets, understanding financial trends and variances, developing financial negotiating strategy, quantifying productivity, interpreting reimbursement analytics, ensuring compliance, understanding healthcare reimbursement, and managing the revenue cycle.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2231 - TALENT MANAGEMENT AND HUMAN RESOURCES

Minimum Credits: 3

Maximum Credits: 3

This course is a practical guide to human resource management in health care, and covers topics such as recruitment, compensation and benefits, training, discipline, termination, legal issues, labor unions, and multi-human interactions that emerge in the workplace. It is also an overview of the laws and regulations that guide every decision related to managing people in the complex society that we exist in today.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2236 - QUALITY AND PERFORMANCE IMPROVEMENT IN HEALTHCARE: METHODOLOGIES, CORE SKILLS, AND LEAN GREEN BELT C

Minimum Credits: 3

Maximum Credits: 3

In this course, you will examine healthcare's quality movement over the last 20-25 years and survey the major methodologies for performance improvement. These methodologies include: the IHI Improvement Cycle, Lean (the Toyota Production System), Six Sigma, High Reliability, Positive Deviance, and the Baldrige and Shingo frameworks. In the second part of the course, you will do a deeper dive into the philosophy and tools of Lean Healthcare. This online course includes workshop exercises that allow you to practice core improvement skills like problem definition, process mapping, root cause analysis, setting target conditions, selecting appropriate metrics, and driving rapid cycles of experimentation. The course culminates in a final project in which you will document an actual improvement project of your choice. You can also earn a Green Belt in Lean Healthcare if you earn at least a B grade in the course and pass an optional final lean competency exam.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2250 - FOUNDATIONS OF HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course introduces health informatics, providing an overview of the important topics and a foundation for other courses in the master's and certificate programs in health informatics. Students will learn what health informatics is, the challenges in health informatics, career in and profession of health informatics. Students will be briefly introduced to important concepts in health informatics including computing and networking in health informatics, digital health, data analytics and machine learning, data science, health technology intervention, electronic health record, healthcare standard, privacy and security, and bioinformatics and digital imaging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2410 - HEALTH VOCABULARY, TERMINOLOGY AND CLASSIFICATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course aims to evaluate the reference terminologies that are currently used in health care settings (SNOMED-CT, LOINC) as well as applications of data capture technologies (such as natural language processing, voice recognition, document imaging). Further, the course intends to introduce the students to computer assisted coding technology applications and evaluate the use of health care terminologies, vocabularies and classification systems found both nationally and internationally. A more focused review on format, guidelines and application for ICD-10-CM, ICD-10-PCS and HCPCS/CPT will take place. Students will utilize online coding tools to obtain hands-on practice with each of these 3 systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2450 - SECURITY, PRIVACY, LEGAL, AND ETHICAL ISSUES IN HEALTH INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to introduce basic knowledge of security, privacy, legal and ethical issues in health information systems. In the first half of the course, the major focus will be on security techniques, including basic concepts, encryption and decryption methods, program operating systems, databases, and network security. In the second half of the course, we will shift our attention to the application of the concepts of privacy and security in the healthcare industry. Legal and ethical issues around the privacy and security of health information will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2451 - DATABASE DESIGN AND BIG DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

The ability to capture, organize, and analyze data is critical to healthcare organizations and to biomedical research. Database is arguably the most important tool in supporting data capture, organization, and analysis of outcomes, both for regular, transactional data as well as big data. This course will provide students with opportunities to learn data and big data management skills: principles in database, approaches to manage data, as well as provide a place to discuss and analyze key issues in data management. The course will have two sections. The first section will emphasize on the theoretical and technical aspects of database, specifically in data modeling, design of database, as well as learning the 'language' to manage database. The second section will address advanced topics in database and big data, including transforming data, data warehousing and data mining, as well as analysis and visualization of data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2452 - DIGITAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

The advancement of informatics in health has allowed a convergence of digital technologies with health and healthcare, with the goal of improving the efficiency and effectiveness of health services as well as making medicines more personalized and precise. These technologies include solutions for both healthcare providers and patients, ranging from Electronic Health Records, Telemedicine, Mobile Health, Wearable Devices, as well as many emerging Internet-of-Things devices and sensors. Interventions through digital health require a multi-disciplinary domain team involving both informatics and social sciences. This course will provide students with opportunities to explore, analyze, and discuss key issues, principles (both from technical and social science perspectives), approaches, and policies surrounding digital health. The final assignment of this course will task student to work with key health service stakeholders (who would actually share their knowledge throughout the course as well) to investigate and propose a practical digital health solution to tackle a specific health issue.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2453 - MACHINE LEARNING IN HEALTH SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students who want to learn data analytics and machine learning, and their applications in health science. Data analytics tools and methods, machine learning procedure and tools, and their applications in health science will be discussed in this course. Students who finish this course should be able to use statistical and machine learning methods and tools to analyze various types of data sets in health science, and make predictions and recommendations according to the obtained results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HI 2020; PLAN: Restricted to Health Informatics students only

HI 2454 - DATA SCIENCE IN HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course to data science. Data sources, types, data collection methods, data processing and analysis methods, and analysis result interpretation will be covered in this course. Students will learn these skills by finishing several assigned projects. By finishing the course, students will have the skills to analyze various types of data sets using different methods and have the ability to interpret the meaning the results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2455 - DATABASE DESIGN AND MANAGEMENT FOR HEALTHCARE

Minimum Credits: 3

Maximum Credits: 3

This course covers two main topics. The first topic is on database design and data modeling in a relational database environment, and database manipulation using structured query language (SQL). The second topic is on data analytics that includes transformation of transactional database into analytical database (data warehouse), and data analytics and visualization. This course does not require Python programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2456 - HEALTHCARE IT TRENDS AND INNOVATION

Minimum Credits: 3

Maximum Credits: 3

This course discusses current trends in modern healthcare, as well as innovations that can be used in providing better patient treatments, medical research, and outcome analysis. The introduction of innovative new healthcare technologies will have a major impact on the industry. AI, Big Data, Novel Medicines, and Cloud infrastructure will provide environments where both clinical medicine and research can reside and flourish. With emerging technologies, data management needs will grow. We will discuss keeping data safe, available, and usable for analytics to facilitate innovation and improve healthcare and patient outcomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2632 - LEADERSHIP AND PROJECT MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Leadership and Project Management is a course designed to introduce and develop leadership behaviors as well as manage the project management process. The goal of this course is to advance the capabilities in meeting current healthcare organizations challenges through both leader and leadership development. It is not intended to provide a background on the evolution of thought on leadership or leadership theory. The course takes a developmental "not training" approach by providing a leadership development framework that helps guide one in acquiring the characteristics and behaviors associated with good leadership. This course will study how technology, people, and economics of software projects interact and the impact these elements have on managing software projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2650 - PRACTICAL RESEARCH AND EVALUATION METHODS

Minimum Credits: 3

Maximum Credits: 3

The ability to measure and describe issues in health informatics is vital in the process of decision making in healthcare. The process of evaluation itself depends on the questions and the contexts in which the issue arises. This course will study the methods of evaluation in health informatics, specifically the practical application of well-established research and evaluation techniques to problems in health informatics. Different situations in healthcare will necessitate the use of different evaluation methods, therefore in this course students will be exposed to approaches to develop measurement instruments, design study, analyze result, as well as presenting the result of the study in health informatics evaluations. Case studies will be used to facilitate active learning, including conducting usability evaluation and cost evaluation of health informatics resource. By the end of the course, students will be able to develop a working evaluation 'contract', which can be used to guide the evaluation process as well as to validate the result of the evaluation process itself -that the result is indeed what the stakeholders want/need to know to make a decision.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2670 - HEALTH INFORMATICS CAPSTONE/INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Supervised practical experience providing an opportunity for students to learn new skills and to apply previously learned skills and theories in the analysis, design, implementation, and evaluation of health information systems.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

HI 2902 - DIRECTED STUDIES

Minimum Credits: 1

Under the direct supervision of a faculty member, the student carries out specific research pertinent to the student's and/or faculty member's interests.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Course Requirements: Restricted to Health Informatics students only

HI 2999 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad Letter Grade

Course Requirements: Restricted to Health Informatics students only

Health and Human Development

HHD 2003 - REFLECTIVE CONSULTATION

HHD 2040 - HEALTH AND WELLNESS FOR INFANT, TODDLERS AND YOUNG CHILDREN

Minimum Credits: 3

Maximum Credits: 3

This class provides the future pre-k ' grade 4 classroom teacher with a knowledge base in motor development, health and physical education curriculum planning, and appropriate selection of health knowledge and skills and physical activities for infants, toddlers, and young children. Included are labs and field experiences in the pre-k-grade 4 classroom setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2113 - DEVELOPMENTAL PSYCHOPATHOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course examines emotional and behavioral disorders of childhood and adolescence in terms of current conceptual models. Through an examination of current prevention, treatment, and intervention research, students develop an understanding of problems as well as principles of prevention, treatment and intervention. The format includes lectures film illustrations, small group exercises, and case-based learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2127 - HUMAN LEARNING

Minimum Credits: 3

Maximum Credits: 3

Presents students with an understanding of various learning theories and their application in a wide variety of settings. Consideration is given to current research focusing on biological aspects of learning, classical and operant conditioning, social cognitive theory, information processing and selected cognitive concepts in learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2143 - CHILD AND YOUTH DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course expands and deepens on themes introduced in Child and Youth Work I. Topics include the challenges of ecological approaches to learning and development; the roles of decision-makers at multiple levels (government, program directors, youth workers, youth themselves); and the benefits and challenges of youth-adult partnership approaches to child and youth work.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2261 - ADOLESCENT DEVELOPMENT 1

Minimum Credits: 1

Maximum Credits: 1

The adolescent development course sequence for teacher education students covers developmental pathways from middle childhood through adolescence across multiple contexts (e.g. Individual, family, peers, school, community, and cultural) and the important considerations and relationships in these contexts. This first course in the sequence for teacher education students focuses on the importance of and considerations for forming authentic, meaningful relationships with all adolescents and the vital role such relationships play in promoting positive outcomes. Students will learn about developmental theories and concepts that are important in forming such relationships and will apply the concepts in their work with adolescents in educational settings. Key developmental tasks for adolescents are introduced in the context of understanding adolescent thinking and behavior. In addition to reading about development from a variety of sources, students will have the opportunity to apply the new information in their practice settings.

Academic Career: Graduate

HHD 2262 - ADOLESCENT DEVELOPMENT 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Instruction and Learning (MAT, MED, MA, or ND)

HHD 2263 - ADOLESCENT DEVELOPMENT 3

Minimum Credits: 1

Maximum Credits: 1

The adolescent development course sequence for teacher education students covers developmental pathways from middle childhood through

adolescence across multiple contexts (e.g. individual, family, peers, school, community, and cultural) and the important considerations and relationships in these contexts. This class is the third course in the sequence for teacher education students. The course focuses on the nature and types of atypical development, especially as they relate to educational settings. Topics covered include learning, emotional, developmental, and behavioral disabilities, as well as psychological difficulties, with a continuing focus on the importance of positive relationships and the particularly vital role such relationships play in promoting positive outcomes for youth with disabilities. Students will learn about the ways in which 'typical' development is impacted by a disability and the potential implications of these impacts on adolescents' educational, social, and psychological functioning and development. Using a developmental framework, students will analyze and evaluate current interventions and/or teaching methods and apply knowledge of development to improve these approaches. Students will have the opportunity to apply the concepts in their work with adolescents in applied settings

Academic Career: Graduate

Grade Component: Grad Letter Grade

HHD 2265 - ATTENTIONAL TEACHING PRACTICES 1

Minimum Credits: 1

Maximum Credits: 1

Attentional teaching practices (ATP) aims to train pre-service teachers to cultivate a safe psychological space for learning, so students can make the greatest academic gains possible. In ATP I, preservice teachers will (1) learn to recognize the psychological dynamics that occur in classrooms and that may enhance the effectiveness of instruction, will (2) learn principles of adolescent development to improve their ability understand adolescent perspectives, and will (3) begin to build a toolbox of strategies to improve their psychological competence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

HHD 2266 - ATTENTIONAL TEACHING PRACTICES 2

Minimum Credits: 1

Maximum Credits: 1

Attention teaching practices (ATP) aims to train pre-service teachers to cultivate a safe psychological space for learning, so students can make the greatest academic gains possible. In APT II, preservice teachers will (1) learn how to shift the psychological dynamics in the classroom when needed, will (2) practice interacting with adolescents in ways that build on knowledge of adolescent development, and will (3) continue to strengthen their toolbox of strategies to improve their psychological competence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HHD 2267 - PHYSIOLOGICAL BASIS-FITNESS AND SPORT CONDITIONING

Minimum Credits: 3

Maximum Credits: 3

This course is aimed at developing an understanding of the physiological adaptations to fitness or long term physical training with emphasis on metabolic, strength and conditioning principles. Through the awareness of the body's responses to chronic and acute exercise. The student will be able to organize and design a physical training or fitness program for young adults, athletes and special populations. This course provides preparation for the American college of sports medicine health fitness instructor or national strength and conditioning exams.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2268 - PHYSICAL ACTIVITY AND HEALTH

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expose the student to the topics related to the role of physical activity in the prevention and treatment of chronic diseases and additional health-related outcomes according to the most current literature. Students will become aware of all aspects of physical

activity epidemiology, including the different methods to measure physical activity, evaluating the strengths and weaknesses of each, and understanding the analysis of physical activity data and research. In addition, this class will cover the physiology and mechanisms through which physical activity and exercise may affect the primary and secondary prevention and/or treatment of various health conditions, and will examine the risks and benefits associated with physical activity participation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2269 - OBESITY PREVENTION AND TREATMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide students opportunities to understand issues related to obesity. Topics may include prevalence rates, dietary considerations, exercise considerations and special population considerations. Behavioral strategies to enhance obesity treatment outcomes will also be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2316 - ADP PROFESSIONAL SEMINAR 1

Minimum Credits: 1

Maximum Credits: 1

This course, taken concurrently with Community-Cased Practice Learning I, engages students across all specializations in their practice learning placements. The ADP professional seminar will develop students' sense of identity as an applied developmental scientist and will help them to actively develop professional ethics and standards in this process. As part of the ADP professional seminar, students will collaborate with faculty, agency supervisor, and master student colleagues to progress with completion of the master's written capstone project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HHD 2317 - ADP PROFESSIONAL SEMINAR 2

Minimum Credits: 1

Maximum Credits: 1

This course, taken concurrently with community-based practice learning ii, engages students across all specializations in their practice learning placements. The ADP professional seminar will develop students' sense of identity as an applied developmental scientist and will help them to actively develop professional ethics and standards in this process. As part of the ADP professional seminar, students will collaborate with faculty, agency supervisor, and master student colleagues to progress with completion of the master's written capstone project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2320 - PSYCHOSOCIAL ASPECTS OF HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course will increase students' understanding of the diverse personal, socio-cultural, and institutional factors that influence health, physical activity, and nutrition-related behaviors, and ultimately intervention design and approach. The course will cover the social determinants of health and health disparities, theoretical models of health behavior change, and intervention/behavior change strategies and tools. Students coming away from this course will have a better understanding of how to apply health behavior change models to promote physical activity and healthy eating in diverse populations through tailored interventions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2322 - EVIDENCE BASED HEALTH PROGRAM PLANNING

Minimum Credits: 3

Maximum Credits: 3

Team based course designing health promotion programs at local large, medium and small organizations. The course presents students an opportunity to design a real health promotion program that has the potential to impact their career trajectory. Students are encouraged to seize the opportunity with enthusiasm. To maximize the opportunity students need to be flexible and demonstrate initiative to travel to the organizational site to meet according to staff schedules. The course is linked with the HPA 2990 course offered in the Spring.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2349 - CHILD LIFE PRACTICE IN HOSPITALS

Minimum Credits: 3

Maximum Credits: 3

This seminar identifies important concepts and practices to working as child life specialists in medical/hospital settings. Given the complex interdisciplinary nature of the child life specialist's role, and the need for ongoing consultation and collaboration with a variety of professionals involved in a child's care, this course will cover a range of practical and professional topics. These topics include family coping strategies, hospital policies and practices (e.g. charting, notes, supervision, etc.), death and dying, medical terminology, and interdisciplinary consultation and communication. Students will gain an understanding of the theories and concepts underlying practices, the necessary and important day-to-day practices in hospital settings, and strategies for successful collaborations with medical professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2371 - ADVANCED EXERCISE PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Theory experiences relating to the mechanisms by which the body adapts physiologically to selected conditions of muscular performance within the context of (1) physical education and sport, (2) work environments and (3) disease prevention and rehabilitation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2373 - INTRODUCTION TO EXERCISE ASSESSMENT AND PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course examines exercise therapy for the cardiac patient and individuals with chd risk factors. Topics include functional capacity assessment (central and peripheral adaptations, graded exercise testing, electrocardiography), exercise prescription (dosage, format, energy cost, case studies), exercise supervision (phase 1, 2 and 3, practical leadership experiences, emergency procedures, nutritional counseling, psychological considerations) and factors that influence the exercise responses are presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2374 - EXERCISE TESTING, PRESCRIPTION, AND SUPERVISION

Minimum Credits: 3

Maximum Credits: 3

An introductory lecture, laboratory course in cardiac rehabilitation. Topics presented include: the pathophysiology and epidemiology of coronary artery disease, coronary anatomy, basic and advanced electrocardiography, principles of graded exercise testing, exercise prescription and supervision, nuclear diagnostic techniques, current considerations in pharmacological treatment of coronary artery disease and cardiac rehabilitation

in a clinical setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2375 - RESEARCH AND EXPERIMENTAL DESIGN IN EXERCISE PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the development of experimental design and methodologies in exercise physiology research. The designs are explored within the context of ergogenic aids, training strategies, selected disease states, temperature regulation, and isokinetic strength and energy metabolism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (NCDEG, MS, PHD) or Health Physical/Recreation Ed (MED)

HHD 2380 - BEHAVIOR CHANGE AND HEALTH COACHING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on applying evidence-based behavioral strategies to interactions with health-fitness participants and patient populations to enhance engagement, adherence, and sustainability of lifestyle behaviors related to health. The course will include interaction strategies with patients, listening skills of health coaches, strategies to enhance compliance, strategies for working with non-compliant patients, and application to specific health-fitness and healthcare setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2381 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 1

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in exercise physiology for the healthy adults as well as for special populations across the lifespan. Emphasis will be placed on mechanisms underlying metabolic and cardiorespiratory responses and adaptation to exercise and on the metabolic determinants of human adaptation and performance under normal conditions as well as during various environmental and physiological changes. Additional emphasis will be on taking in depth look at the acute and chronic responses to exercise in children and adolescents, pregnancy, and older adults. Instruction includes both didactic and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2382 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 2

Minimum Credits: 3

Maximum Credits: 3

This course is an extension of the Clinical Exercise and Physical Activity Physiology 1 course. This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in the application of exercise physiology to clinical populations. Particular emphasis is placed on the acute and chronic responses to exercise in patients at risk for or having cardiovascular, endocrine, pulmonary, and metabolic diseases. Additional topics include clinical exercise physiology for cancer, disorders of the bone/joints, and neuromuscular disorders. Instruction includes both didactic and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2383 - ADVANCED CLINICAL HEALTH AND PHYSICAL ACTIVITY ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

This course includes training on advanced assessment of fitness and health-related measures that can be implemented across various settings including clinical, public health, health-fitness, worksite, etc. Measures will include fitness, physical activity and sedentary behavior, body composition, and a variety of health-related measures. Instruction will include both didactic and laboratory-based experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2384 - MOVEMENT SCIENCE IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

This course examines human movement across the lifespan (youth, adults, older adults), health conditions, and exercise-related activities. Student will learn how to assess movement patterns and how to apply this knowledge to prevention, treatment, and rehabilitation situations. This course will be a combination of classroom and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2385 - INTERNSHIP IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

Supervised experience for the master's degree student. Student placement is to a clinical setting, applied health-fitness setting, or health promotion setting that is appropriate to the pursuit of the intended degree. Students are also required to attend didactic and online course-related sessions with the instructor throughout this experience. Students intending to take this course need to coordinate the placement with the supervising faculty instructor at least 1 term in advance of registering for this course to allow for appropriate placement.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HHD 2386 - HEALTH AND PHYSICAL ACTIVITY PROMOTION AND MARKETING

Minimum Credits: 3

Maximum Credits: 3

This course provides students with the conceptual background and practical skills necessary to address how to introduce and market health and physical activity programs and initiatives, and how to identify and implement channels of distribution of these programs and initiatives. This course will include both didactic and practical experiences for students to obtain and apply the necessary knowledge.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2387 - MEDIA AND TECHNOLOGY IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

This course address the application of media and technology in health and physical activity program implementation. Examples include the application of video, audio, online programming, etc. Students will have opportunities to uses the various technologies across various applications related to health and physical activity programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-MS

HHD 2390 - NUTRITION IN SPORT AND EXERCISE

Minimum Credits: 3

Maximum Credits: 3

A lecture and laboratory class in which the principles of nutrition are applied to sports performance and exercise. Topics presented include energy release and substrate utilization, energy metabolism during exercise, fluid intake and athletic performance, body composition, ergogenic aids, vitamins and minerals, the pre-game meal, sports anemia, nutritional considerations for the diabetic individual, lipid metabolism and coronary heart disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2410 - STATISTICS IN HPA RESEARCH

Minimum Credits: 3

Maximum Credits: 3

A general knowledge of computer hardware/software and its use in physical education research is the major focus of this class. Software packages are examined for word processing and statistical analysis. An introduction to basic programming is given.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2490 - SUPERVISED RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1

Maximum Credits: 18

The student demonstrates ability to apply research skills by planning and completing a research project under direction of an appropriate faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HHD 2503 - DEVELOPMENT: CONCEPTION THROUGH EARLY CHILDHOOD

Minimum Credits: 3

Maximum Credits: 3

Focuses on developmental pathways from conception through early childhood within contexts of family, daycare/school, community and culture. Pathways are considered with regard to developmental changes in transactions between individuals and social life conditions, with focus on patterns of change in participation in social-cultural practices. Besides a review of current literature, students will be engaged in qualitative investigations of the social lives of young children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HHD 2504 - DVLP: MIDDLE CHLHD/ADOLESCENCE

Minimum Credits: 3

Maximum Credits: 3

You will be teaching adolescents, or youth ages 11 - 18 years old. How your students think, feel, and experience the world around them will be unique to their own life histories and perspectives, but developmental psychology can provide some helpful insights into typical and normal thoughts, feelings and experiences during adolescence. This hybrid course (focuses on the cognitive, social, and biological changes from middle childhood, youth ages 6 - 10 years old through adolescence within the contexts of family, peers, community, school, and culture. Assignments will focus on observing in your field placements and applying theory to practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2510 - ASSESSMENT OF CHILDREN'S DEVELOPMENT IN REAL WORLD CONTEXTS

Minimum Credits: 3

Maximum Credits: 3

The course is intended for interdisciplinary graduate students (masters and doctoral) from such programs as applied developmental psychology, developmental psychology, social work, early childhood special education, health and rehabilitation sciences, and nursing. The course content and applied group activities will help prepare graduate students as emerging leaders to understand 'best practices' in the measurement of both children's development and the quality and impact of services and interventions that are applied to them and to their families. These 'best practices' are both professionally sanctioned by the major national early childhood professional organizations and many also have a research evidence-base that supports their use. Thus, this course will help students to understand and use various applied assessment strategies that can: (1) describe the development and progress of children (birth to adulthood) and families in functional ways; (2) sensitively monitor children's progress in intervention programs; (3) be applied by teachers and other direct care professionals; (4) collect evidence of children's daily functioning in natural everyday settings; (5) be selected to conduct applied program evaluation research for schools, agencies, and human service programs; and (6) document the impact and outcomes of intervention programs. The course will help students who are interventionists, but is not primarily clinical in orientation. Rather, it is designed to prepare future leaders-researchers, program administrators, program evaluators, and policy specialists-in best practices and their implications. It is a required course in the ADP MS course sequence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HHD 2520 - INTRODUCTION TO COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course will include theoretical models of counseling; units on crisis intervention, family support and intervention, home based models of support and intervention, the reflective practitioner; and counseling skills for child and youth care practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2521 - THEORY, MEANING AND PRACTICE OF PLAY AND ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

This course provides a comprehensive overview of the role of play and activity in human development, with a particular focus on ways of utilizing play and activity to promote positive growth in social, emotional, physical, and cognitive domains; and on interpreting the meaning of individual and group play and activity. Play and activity in the lives of persons of all ages will be considered with some emphasis on the early and school years. While academic learning is essential in this course, the focus will be on hands-on, real play as the ideal way to learn about it, and encouragement of a life-long playful spirit.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2524 - BEHAVIORAL ASSESSMENT AND INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

This course helps graduate students respond to the needs of K-12 students with emotional and behavioral problems in school settings. These problems include disruptive, oppositional and aggressive behaviors, limited interpersonal and study skills, and behaviors caused by learning difficulties, mental illness and stressful life events. The emphasis of the course is on research-based positive behavioral supports and interventions. In addition, students learn consulting strategies to assist those who teach challenging youth.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2530 - APPLIED DEVELOPMENTAL PSYCHOLOGY (ADP): PROFESSIONAL IDENTITY AND LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce the field of applied developmental psychology (ADP). This course focuses on helping students to develop a professional identity, ethical reasoning skills, and leadership skills that align with ADP. Students will gain knowledge of the overall field, reading an advanced textbook and related literature, while getting to know how developmental thinking is being applied in our local community of practice. Attention will focus on the relations and partnerships that are necessary for the development, implementation, and evaluation of programs and policies that effectively support the positive biopsychosocial & spiritual development of children and youth in contexts of their families, schools and communities. The course introduces students to local experts who apply developmental thinking in different systems of practice, including education, juvenile justice, child welfare, and behavioral health. In this process, students will frame their own professional development, considering their goals in relation to needed competencies and opportunities in the field, and think critically about ethical principles and their applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2532 - PSYCHOSOCIAL ASPECTS OF ILLNESS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to enable students to understand the nature of and dynamics of pediatric illness, appreciate the impact an acute or prolonged health care experience may have upon children throughout the developmental process, better understand a family health care philosophy and gain an understanding of the multi-faceted role child life specialists play in today's health care environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HHD 2538 - ADVANCED COUNSELING SKILLS

Minimum Credits: 3

Maximum Credits: 3

Course will teach indirect communication techniques, methods for dealing with secondary gains, methods to help clients develop a sense of empowerment and the therapeutic use of visual imagery. The course will emphasize hands-on practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: PSYED 2520

HHD 2542 - EVIDENCE-BASED INTERVENTIONS IN REAL WORLD CONTEXTS I

Minimum Credits: 3

Maximum Credits: 3

Evidence-based interventions (EBIS) are the foundation of effective and high-quality prevention and intervention programs in education, human services, and healthcare. Both pre-service and continuing education of interdisciplinary professionals must emphasize the acquisition of knowledge and applied competencies about diverse ebis in this continuously evolving area. Many forms of prevention and intervention are used in education, human services, and healthcare, but few such practices have 'practice-based evidence' conducted in real-world settings which validate their continued use. Thus, in this course, students will gain knowledge and skills in evidence-based contextual and individual interventions, their content, methodology, implementation, and evaluation. The course will help students who are interventionists but is not primarily clinical in orientation. Rather, it is designed to prepare future leaders ' practitioners, researchers, program administrators/directors, program evaluators, and policy specialists - in best practices and their implications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2543 - EVIDENCE-BASED INTERVENTIONS IN REAL WORLD CONTEXTS 2

Minimum Credits: 3

Maximum Credits: 3

Evidence-based interventions (EBIS) are the foundation of effective and high-quality prevention and intervention programs in education, human services, and healthcare. In this second part of a 2-course sequence, students will: learn about and apply qualitative and quantitative data-based decision-making techniques and measures to collect evidence of child/youth daily performance and to assess the dimensions of various home, school, and community contexts which hinder or promote progress; create EBI plans for individuals and groups to promote progress in real-world settings; apply a short-term EBI in a real-life case situation; and evaluate the quality, impact, or outcomes of the data-based decision making methods and process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2557 - COGNITIVE-BEHAVIOR THERAPY

Minimum Credits: 3

Maximum Credits: 3

This course introduces the theory and practices of cognitive-behavioral therapy (CBT) to help students develop a basic therapeutic skill set. The CBT approach applies to a variety of clinical problems and practice settings. CBT is a flexible approach and is used in diverse settings such as inpatient, outpatient and partial hospital programs as well as in schools and community-based programs. Students will learn about how CBT may be used to address issues such as depression, anxiety, attention-deficit/ hyperactivity disorder, and other emotional and behavioral disorders. In addition to clinical practice, many people find the principles of the cognitive-behavioral model useful in maintaining a healthy emotional outlook in their own lives. This course will emphasize both theory and practice of cognitive-behavioral skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2562 - PLAY THERAPY AND FIELD WORK

Minimum Credits: 3

Maximum Credits: 3

Supervised experience in direct interaction with children on an individual basis in play interviews with concomitant consideration of children's developmental dynamics as revealed in a one-to-one relationship. An ongoing weekly seminar is a part of the course.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

HHD 2565 - PROGRAM DESIGN AND EVALUATION

Minimum Credits: 3

Maximum Credits: 3

An integration of child development theory and research in the design of programs for children, youth, and families. Focus is on skills in designing developmentally appropriate and interventive programs, structure of service models, and program evaluation. The major paper for the graduate program will be part of this course's requirements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: PSYED 2540

HHD 2588 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This advanced course focuses on selected topical areas of special importance for child care and child development. Each time it is offered a different topic is addressed from theoretical, research, intervention, and professional practice perspectives.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2590 - MASTER'S RESEARCH TEAM

Minimum Credits: 1
Maximum Credits: 1

This weekly course is designed for students who are pursuing a research project as their option for their master's program. Topics include discussions and hands-on support for how to design, conduct and write-up results for a research project.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

HHD 2596 - INTERNSHIP IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 6

A university-approved agency based supervised internship in developmental/interventive practice with and/or for children, youth and families.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HHD 2598 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6

Directed study provides an opportunity for focused work with faculty supervision. The student must present a plan for the independent study for approval by the supervising faculty member prior to registration for the course.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

HHD 2599 - THESIS

Minimum Credits: 1
Maximum Credits: 6

Designed to help the student to carry out his or her research or creative project and to write an acceptable thesis. This course is subject to repeated registration.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HHD 2622 - CHILD LIFE PRACTICUM

Minimum Credits: 1
Maximum Credits: 3

Credits for approved hospital-based child life practicum experience.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HHD 2632 - APPLIED RESEARCH DESIGN

Minimum Credits: 3
Maximum Credits: 3

This introductory methods seminar focuses on applied research design including developing conceptual definitions, applying models of theory testing and theory building, and developing relevant policy and practice research questions. This course will cover key debates occurring in the field of applied research in terms of producing evidence to support policy, practice, and program development, and is designed to encourage practical skill development; experiential learning opportunities are integrated into course content. Students will gain an understanding of applied research design and an improved skill set in proposing, designing, and evaluating applied studies of interventions and programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 2722 - CHILD LIFE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Credits for approved hospital-based child life internship placement.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

HHD 2765 - COMMUNITY-BASED PRACTICE LEARNING 1

Minimum Credits: 1

Maximum Credits: 3

This course provides students with the opportunity to participate in an individual community-based practice learning experience with a partner agency. As part of the placement, students engage in activities that lead to the production of an agreed-upon, tangible product to meet an identified need for the agency. This product will also meet the requirements for the student written capstone project for the master's program and will serve as the presentation topic for the master's comprehensive exam. This course is taken concurrently with the ADP Professional Seminar I & II.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HHD 2766 - COMMUNITY-BASED PRACTICE LEARNING 2

Minimum Credits: 1

Maximum Credits: 3

This course provides students with the opportunity to participate in an individual community-based practice learning experience with a partner agency. As part of the placement, students engage in activities that lead to the production of an agreed-upon, tangible product to meet an identified need for the agency. This product will also meet the requirements for the student written capstone project for the master's program and will serve as the presentation topic for the master's comprehensive exam. This course is taken concurrently with the ADP Professional Seminar 1 & 2.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HHD 2990 - RESEARCH SEMINAR IN HPA

Minimum Credits: 3

Maximum Credits: 3

This course is required of all non-thesis master's degree candidates and includes the development and presentation of an original research paper. The student works in cooperation with a graduate advisor in their area of content specialization. The nature of acceptable projects includes the following: data based research; expanded literature review; development of software and/or hardware, development of instructional materials (i.e., Video tapes, slide series, films, etc.); Journal article.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HHD 2996 - CLINICAL INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Supervised clinical experience for the master's degree student. The student is placed in a clinical setting appropriate to his/her degree interests and career goals and must complete a minimum of 25 hours of clinical work per credit hour. Supervision is provided by the cooperating clinical supervisor and the university clinical advisor.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HHD 2998 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

HHD 2999 - MASTER'S THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 9

He student prepares a proposal for an original research project, has that project approved by an appropriate faculty thesis committee, completes proposed project, and defends the completed report in a thesis final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HHD 3006 - FUTURE OF OUT OF SCHOOL LEARNING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3022 - ORGANIZATIONS, NETWORKS, AND POLICY IN INFORMAL LEARNING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HHD 3023 - YOUTH DEVELOPMENT IN OUT-OF-SCHOOL SETTINGS

Minimum Credits: 3

Maximum Credits: 3

Organized activities for children and youth that occur outside of school are a big deal. A bigger deal than they used to be. Participation rates are soaring, innovative programs are thriving, and research shows that, in many cases, attendance can benefit young people. In this course, we'll apply a developmental lens to the vibrant and growing out-of-school learning field. We'll explore the current realities and future promise of organized activities as important settings for child and youth development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3024 - INFORMAL LEARNING: THEORY AND FOUNDATION

Minimum Credits: 3

Maximum Credits: 3

This course is an overview of how we have thought about and address learning in and out-of-school learning settings. How do we define it? How do we know when it happens? What's the time scale? How do we support it? The course will highlight contemporary trends as well as trace the historical foundations of the field, paying particular attention to how the field connects with research on learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3114 - EVIDENCE BASED LIFESTYLE PROGRAM DESIGN AND EVALUATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3115 - HEALTH PROMOTION POLICY AND PROGRAM IMPLEMENTATION

Minimum Credits: 3

Maximum Credits: 3

This course investigates the impact of legislation, policies, and implementation on individuals' and populations' physical activity (pa) and nutrition. Centering on students' conceptualizations of their problem of practice, this course will explore: a) pa and nutrition program implementation and challenges to implementation, b) evidence-based policies, practices, interventions, and services and c) advocacy partnerships and organizations. This course will also integrate discussions of social justice and diversity in pa and nutrition policy and program implementation. Students will analyze these problems and their causes with the goal to craft and advocate for policies that promote pa and nutrition health equity for individuals and populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-EDD)

HHD 3116 - RESOURCE AND FUNDING ACQUISITION FOR HEALTH PROMOTION PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

The course presents the process of developing and submitting extramural grants related to health, physical activity and nutrition. Students develop an idea and write a grant proposal linked to a funding source with the aim of providing higher quality, more efficient and less expensive health promotion and health care to populations. The potential funding sources are public sector, private sector, and non-profit sector. Furthermore, students incorporate into the grant proposal alternative funding strategies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-EDD (Health and Physical Activity)

HHD 3117 - HEALTH PROMOTION PROGRAM TRANSLATION AND SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Educational Administration Ed.D.

HHD 3190 - RES SEM IN PSYCHOLOGY IN EDUC

Minimum Credits: 3

Maximum Credits: 3

Advanced seminar in research for doctoral students in psychology in education.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HHD 3197 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

Independent study for doctoral students in psychology in education.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HHD 3374 - ADVANCED LABORATORY TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This course provides a framework that aids the advanced graduate student in acquiring knowledge and technical laboratory skills pertinent to exercise physiology research. Content includes: cardiac output, maximal oxygen uptake, isokinetic exercise testing, hydrostatic weighing, techniques for assessing core and skin temperature and plasma volume changes, combined arm and leg exercise and water immersion exercise.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 3377 - CHRONIC DISEASE CASE STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course integrates selected elements of the knowledge base in the areas of exercise science, graded exercise testing electrocardiography, pharmacology and exercise prescription in order to develop an effective and realistic therapeutic plan for individuals who have coronary disease or are at risk for its development. The principal learning experiences for the course will center on the development, interpretation and presentation of cardiovascular case studies for intervention.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS or PhD)

HHD 3400 - ADVANCED RESEARCH METHODS IN MOVEMENT SCIENCE

Minimum Credits: 1

Maximum Credits: 1

Provides the Ph.D. student with a team oriented process to develop, implement, present and publish experimental research in exercise physiology and health-fitness.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HHD 3404 - COLLEGE TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course provides the Ph.D. Student the opportunity to teach an undergraduate specialization course in this area of expertise while exploring appropriate teaching methodology and theory.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

HHD 3405 - GRANT WRITING IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to provide guidance to doctoral level students on the process of developing a grant proposal for extramural funding. This course will be modeled from the NIH submission and review process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3406 - PROFESSIONAL WRITING IN HPA

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expose the student to the process of developing professional abstracts and manuscripts that can be submitted for peer-review related to health and physical activity. This course will focus on developing empirically-based abstracts, manuscripts, the submission process, the peer-review process, and considerations for resubmission. The culminating experiences will include the submission of an abstract and manuscript for professional presentation and publication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3450 - INTRO TO EDUCATIONAL EVALUATION

Minimum Credits: 3

Maximum Credits: 3

Issues relevant to doing evaluation and utilizing results are addressed. Both evaluation "theory" and practical experience are utilized to prepare people who will be providing or using evaluation information. Special emphasis is given to: a) differences between evaluation and research; b) problems in using quantitative or qualitative methods when assumptions are not met; and c) issues that affect the usefulness of information in decision making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3531 - FAMILY INFLUENCE ON CHILD DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course provides an analysis of the multiple pathways through which parents, siblings, and families shape child development. Each of several pathways--the determinants of parenting, parental influences, marital influences, and sibling influences--is examined and discussed across three developmental periods: infancy, early childhood, and middle childhood. Primary attention will be paid to the unique impact of parental care on early development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3535 - CULTURE AND COGNITION

Minimum Credits: 3

Maximum Credits: 3

This course will examine cultural influences on children's cognition. Students will be introduced to thinking and research in cross cultural psychology. The implications of this work for the assessment of children's learning and development will be discussed. A multicultural perspective on the education of minority children in the United States will be presented and evaluated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HHD 3587 - SPECIAL TOPICS 2

Minimum Credits: 3

Maximum Credits: 3

This course has two aims: (1) to understand how risk and resilience processes and competence develop in social contexts and (2) to explore how preventions and interventions based on this developmental information can enhance competence. The course will emphasize how developmental processes of risk and resilience are affected by social contexts. Contexts to be studied range from the small-group, organizational, and community contexts up to the level of public policy and culture. The course will review strategies and systems of prevention and intervention that target change in these social contexts, and thereby reduce risk or increase adaptation. The course will also draw on multidisciplinary content from the fields of human development, education, developmental and community psychology, psychiatry, public health, and public policy. The first part of the course will focus on developmental theories relevant to a contextual approach to risk, resilience, and competence. The second part will explore, in depth, a range of strategies for prevention, intervention, and social change that show evidence of positive impacts on child and youth development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Psychology in Education (PHD)

HHD 3589 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This course will provide a psychologically safe place to develop professional writing skills that are specific to our field. We will work on refining writing that students are working on already (manuscripts, conference proposals, revise and resubmit letters, CVS, dissertation proposals, etc.). This will include self-reflection and analysis, peer-review, and whole group discussion. Weekly topics will include grammar/APA style, tone, and flow, integrating evidence, and staying motivated and engaged in your writing. Students will have many opportunities to give and receive feedback.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HHD 3590 - SPECIAL TOPICS 3

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HHD 3591 - SUPERVISED RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1

Maximum Credits: 18

Students will pursue selected topics under the guidance of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

HHD 3592 - PRACTICUM IN COLLEGE TEACHING

Minimum Credits: 3

Maximum Credits: 3

The practicum in college teaching allows doctoral students the opportunity to teach, or assist in teaching, a course in educational psychology. Students may be assigned to assist a faculty member with a course, or be assigned a course as primary instructor, under faculty supervision. In addition to a full range of responsibilities involving course preparation, planning, classroom instruction, testing student progress, assigning grades and course evaluation, students are expected to attend an accompanying seminar in college teaching.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

HHD 3598 - DIRECTED STUDY IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1

Maximum Credits: 6

Federal and state reforms in recent decades have focused on the establishment of standards and assessments as means of improving teaching and learning and closing the achievement gap between more and less privileged students. Reforms such as no child left behind, the common core state standards, and the federal race to the top competition have resulted in a proliferation of standards and high-stakes tests, and have been accompanied by both desirable and undesirable changes in school and district practices. In this course we will explore the debates surrounding these various standards and assessment reforms. The topics this course will address include the use of assessments to lever instructional change, the assumptions about learning that underpin different types of assessments and test-based accountability, and research investigating the influence of high-stakes testing on instruction and learning. This course also will consider research pertaining to high-stakes teacher evaluation including value-added models, pay for performance, and direct assessment of teaching quality.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HHD 3599 - DISSERTATION RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1

Maximum Credits: 18

Student registers for this course while conducting research for a doctoral dissertation.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HHD 3632 - APPLIED RESEARCH DESIGN

Minimum Credits: 3

Maximum Credits: 3

This introductory methods seminar focuses on applied research design including developing conceptual definitions, applying models of theory testing and theory building, and developing relevant policy and practice research questions. This course will cover key debates occurring in the field of applied research in terms of producing evidence to support policy, practice, and program development, and is designed to encourage practical skill development; experiential learning opportunities are integrated into course content. Students will gain an understanding of applied research design and an improved skill set in proposing, designing, and evaluating applied studies of interventions and programs.

HHD 3995 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within either developmental movement and sport studies or exercise physiology.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity

HHD 3998 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis

HHD 3999 - DOCTORAL DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

Health and Rehabilitation Scs

HRS 1000 - INTRODUCTION TO RESEARCH

Minimum Credits: 3
Maximum Credits: 3

The study of the nature of research and the applications of the scientific approach in the research procedures. The course focuses on concepts, design techniques and interpretations, as well as limiting factors and ethical considerations.

Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PROG: Sch Hlth & Rehabilitation Scs; PLAN: Clinical Dietetics -Nutrition (BS, BOH, BS-H) or (NDNUTR-ND) or (NS-BS)

HRS 1006 - INTRO TO HUMAN NUTRITION

Minimum Credits: 3
Maximum Credits: 3

This course will cover an overview of the scientific principles of nutrition and application of these principles to humans throughout the life cycle. Major focuses of the course are the classification and function of the six major nutrients, review of current nutrition standards, safety of the food supply, and nutrition misinformation.

Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

HRS 1020 - ANATOMY AND PHYSIOLOGY

Minimum Credits: 4
Maximum Credits: 4

Introduces the structure of human cells, tissues, organs and organ systems, and functions associated with them. Range of topics extends from gross anatomical features to considerations of chemical processes that serve as the basis for cellular controls, gene expression and energy metabolism.

Emphasis on relationship of structure to function and on understanding how structural or functional disturbances can become the basis for disease processes.

Academic Career: UGRD

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 1023 - HUMAN PHYSIOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course has been designed in an effort to provide pre-clinical students with a foundational scientific knowledge base and conceptual understanding of physiological processes. Each organ system, and its contribution to the maintenance of homeostasis, will be discussed. Further, the essential components of each system will be explored, to the extent that life is supported. Some disease states will be discussed, in order to exhibit certain processes.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: PLAN: Clinical Dietetics-Nutrition(BS or BSH or BPH)

HRS 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4

Maximum Credits: 4

This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2017 - INJURY EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This introductory course in injury epidemiology will address injury epidemiology, and concepts in basic epidemiology and biostatistics related to injury surveillance, prevention and control. The epidemiological perspective of injuries will address the concepts in the Haddon's matrix and classic epidemiologic triad; current injury epidemiology research needs and injury as a public health issue. Topics addressed will include epidemiology of injuries in developed and developing countries, and injuries in vulnerable populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Sports Medicine (MSSPM-SP)

HRS 2020 - ANATOMY AND PHYSIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Introduces the structure of human cells, tissues, organs and organ systems, and functions associated with them. Range of topics extends from gross anatomical features to considerations of chemical processes that serve as the basis for cellular controls, gene expression and energy metabolism. Emphasis on relationship of structure to function and on understanding how structural or functional disturbances can become the basis for disease processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2022 - HUMAN ANATOMY

Minimum Credits: 3

Maximum Credits: 3

Emphasizes the understanding and application of knowledge of human anatomy in diagnostics of clinical conditions commonly encountered by an occupational therapist. The practical component includes the use of prosected cadavers, skeletal models, and palpation of surface anatomical features in live models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Occupational Therapy (MOT)

HRS 2079 - CHILDREN W/DISABILITIES: CLIN 1

Minimum Credits: 2

Maximum Credits: 2

Course provides an interdisciplinary clinical training experience to graduate students from nursing, medicine, public health, psychology, social work, education, early intervention, nutrition, physical therapy, speech/language pathology, occupational therapy, and audiology. Students have the opportunity to learn about the impact of disabilities on children, families, schools, communities, and society thru clinical activities as part of the university, community leaders for individuals with disabilities (UCLID) center's leadership training program.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2084 - SPECIAL TOPICS IN OSTEOARTHRITIS

Minimum Credits: 1

Maximum Credits: 2

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2089 - CHILDREN W/DISABILITIES: CLIN 2

Minimum Credits: 2

Maximum Credits: 2

Course provides an interdisciplinary clinical training experience to graduate students from nursing, medicine, public health, psychology, social work, education, early intervention, nutrition, physical therapy, speech/language pathology, occupational therapy, and audiology. Students have the opportunity to learn about the impact of disabilities on children, families, schools, communities, and society thru clinical activities as part of the university, community leaders for individuals with disabilities (UCLID) center's leadership training program.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2091 - MATERNAL AND CHILD HEALTH LEADERSHIP 1

Minimum Credits: 2

Maximum Credits: 2

This interdisciplinary leadership course addresses specific knowledge, skills, personal characteristics, and values necessary for maternal and child health (MCH) leadership. There is a primary focus on the members of the interdisciplinary team who work with children with disabilities and their families. Skills that enhance effective teamwork to provide evidence-based, family- and patient-centered care are addressed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HRS 2092 - MATERNAL AND CHILD HEALTH LEADERSHIP 2

Minimum Credits: 2

Maximum Credits: 2

This interdisciplinary leadership course addresses specific knowledge, skills, personal characteristics, and values necessary for maternal and child health (MCH) leadership. There is a primary focus on leadership development and styles through examination of public policy, advocacy, ethics, and social determinants of health across systems of care with diverse populations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2128 - LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2305 - ADVANCED NEUROSCIENCE

Minimum Credits: 4

Maximum Credits: 4

This course will provide the student with an in-depth study of neuroanatomical structures and functions. Brain anatomy, function, and interrelationships especially as they relate to movement dysfunction will be reviewed. The clinician will have an opportunity to "revisit" how anatomy and movement are interrelated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2306 - MOTOR LEARNING AND CONTROL OF MOVEMENT/HEALTH PROMOTION

Minimum Credits: 3

Maximum Credits: 3

Principles of motor learning and motor control will be discussed as they relate to persons with disability. Models of disability will be shared with ideas of how to incorporate some of the principles of motor learning/control into interventions. Health promotion and fitness for persons with neuromuscular disorders will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2307 - FALLS AND BALANCE DYSFUNCTION: PHYSICAL THERAPY MANAGEMENT AND INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with the knowledge and skills to provide advanced assessment and management of persons with balance and vestibular disorders, including those at risk for falls. Students will discuss and practice using assessment tools. Lecture, laboratory practice, case studies, and discussion will be included. This course is offered on 4-5 weekends throughout the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: [HRS 2314 (MIN GRADE: 'C') and SBPLAN: Musculoskeletal Physical Therapy] or [HRS 2305 (MIN GRADE: 'C') and SBPLAN: Neuromuscular Physical Therapy]

HRS 2308 - CLINICAL PRACTICE SEMINAR

Minimum Credits: 2

Maximum Credits: 2

This course will cover basic concepts of physical examination of the patient with neuromusculoskeletal dysfunction. Fundamental examination skills and knowledge will be covered, including issues related to screening, review of systems, history, physical examination and clinical decision making. An introduction to radiology and diagnostic imaging will be provided. Concepts related to pain and the inflammatory process, boney healing and remodeling, and how these concepts impact clinical practice will also be covered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2309 - ANALYSIS OF NEUROMUSCULAR SIGNS AND SYMPTOMS IN CLINICAL DECISION MAKING

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the analysis of the process and knowledge necessary for identifying the neuromuscular tissue or system representing the origin of disorders in patients. Signs and symptoms from history and physical examination will be the focus with appropriate ancillary testing necessary to confirm hypotheses regarding neuromusculoskeletal pathology. The intent is for clinicians to be able to differentiate clusters of signs and symptoms and to make appropriate clinical decisions regarding same.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: [HRS 2314 (MIN GRADE: 'C') and SBPLAN: Musculoskeletal Physical Therapy] or [HRS 2305 (MIN GRADE: 'C') and SBPLAN: Neuromuscular Physical Therapy]

HRS 2310 - ADVANCED MUSCULOSKELETAL DISSECTION ANATOMY

Minimum Credits: 2

Maximum Credits: 2

This course will provide students with an opportunity to study and dissect specified anatomical regions of the human musculoskeletal system and present their dissection to the class with particular emphasis given to clinical applications of that anatomy. Students will be given guidelines and basic instruction in the dissection process and will then work independently throughout the semester to complete their dissections. Through this experience students will gain a mastery of select regions of musculoskeletal anatomy and a greater understanding of the clinical applications of that

anatomy.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2312 - SEMINAR IN NEUROLOGIC PHYSICAL THERAPY

Minimum Credits: 2

Maximum Credits: 2

A series of papers will be presented with interactive discussion related to novel interventions. Students will be responsible for reviewing the paper and presenting the case to the class. Each student will "teach" the class once and lead the discussion. Topic areas will be assigned by the instructor.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2313 - PHYSICAL THERAPY SPECIAL TOPICS SEMINAR

Minimum Credits: 2

Maximum Credits: 2

This course is designed to foster discussion of current physical therapy clinical issues, such as prospective payment for medical rehabilitation, healthcare trends, reimbursement regulations, legislative policies, practice environments, strategies for maintaining continued competence, and emerging professional issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2314 - FUNDAMENTALS OF NEUROSCIENCE FOR THE ORTHOPEDIC CLINICIAN

Minimum Credits: 4

Maximum Credits: 4

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2315 - ADVANCED MUSCULOSKELETAL DISSECTION ANATOMY

Minimum Credits: 1

Maximum Credits: 1

This course will provide students with an opportunity to study and dissect specified anatomical regions of the human musculoskeletal system and present their dissection to the class with particular emphasis given to clinical applications of that anatomy. Students will be given guidelines and basic instruction in the dissection process and will then work independently throughout the semester to complete their dissections. Through this experience students will gain a mastery of select regions of musculoskeletal anatomy and a greater understanding of the clinical applications of that anatomy.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

HRS 2356 - CONCEPTS AND PRINCIPLES RELATED TO SENSORY MOTOR CONTROL 1

Minimum Credits: 3

Maximum Credits: 3

Topical areas of the neurological sciences will be presented including introductory neuropathology, neuro-diagnostic techniques, and clinical manifestations of certain diseases of the nervous system. Topics will include: reflexes; the pain experience and pain management; somatosensory changes in peripheral and central nervous system diseases; motor dysfunction associated with peripheral and central nervous system diseases; articular neurology; sensorimotor learning principles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 2305 (MIN GRADE 'C'); SBPLAN: Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2361 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS LUMBOPELVIC SPINE

Minimum Credits: 3

Maximum Credits: 3

Course content will include evaluation and treatment of the musculoskeletal conditions involving the lumbopelvic complex including the hip joint utilizing advanced orthopedic physical therapy skills. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2362 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS LOWER EXTREMITY

Minimum Credits: 3

Maximum Credits: 3

Course content will include evaluation and treatment of musculoskeletal conditions involving the foot, ankle, and knee. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2364 - EVIDENCE BASED MEDICAL AND PHYSICAL THERAPY INTERVENTIONS FOR PERSONS WITH NEUROMUSCULAR DISEASE

Minimum Credits: 3

Maximum Credits: 3

This course will focus on an evidence based comparison of newer vs. Older 'techniques' used in the field of neurologic rehabilitation. Students will be asked to explore the evidence basis that supports or refutes use of these various approaches and techniques currently in use. Newer approaches to neurological rehabilitation will also be discussed-these include: constraint induced movement therapy, virtual reality, robotics, and dewatering. Lab and clinic visits will be incorporated into this course so that students will be able to see some of the techniques 'in action'.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2365 - CASE STUDIES OF PERSONS WITH NEUROMUSCULAR DISORDERS

Minimum Credits: 3

Maximum Credits: 3

A series of cases will be presented with interactive discussion related to interventions that have been shown to demonstrate evidence and efficacy to address the person's functional limitations and impairments. Students will be responsible for preparing for the case prior to each session and will

bring 'evidence' to support ideas for intervention. Innovative physical therapy and medical interventions will be discussed. Lecture and interactive discussion are the teaching methods of choice. Advanced clinicians will participate in the course to bring 'real life' cases to the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2372 - ADVANCED CLINICAL PRACTICE: THE LOWER QUARTER

Minimum Credits: 3

Maximum Credits: 3

This course will integrate advanced clinical applications of therapeutic technique and rationale for the assessment and treatment of the neuromuscular system. This course will synthesize clinical application of mobilization and manipulation techniques for the lumbopelvic spine and the lower extremities, the assessment and treatment of muscular and soft tissue imbalances, and the application of medical exercise training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2373 - ADVANCED MUSCULOSKELETAL CLINICAL PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will integrate advanced clinical applications of therapeutic technique and rationale for the assessment and treatment of the neuromuscular system. This course will synthesize clinical application of mobilization and manipulation techniques for the cervicothoracic spine and the upper extremities, the assessment and treatment of muscular and soft tissue imbalances, and the application of medical exercise training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2374 - CLINICAL ROUNDS AND CASE PRESENTATION

Minimum Credits: 1

Maximum Credits: 1

Weekly rounds will be presented by various speakers/clinicians/researchers in both the fall and spring terms. These presentations will consist of case presentations, relevant clinical and/or research updates pertaining to the clinical practice of physical therapy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2380 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS FOR CERVICAL AND THORACIC SPINE

Minimum Credits: 3

Maximum Credits: 3

This course will include evaluation and treatment of musculoskeletal conditions involving the cervical spine, the temporomandibular joint, the thoracic spine and rib cage. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills into the plan of care for the patient. Classes will consist of lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2381 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS FOR UPPER EXTREMITY

Minimum Credits: 3

Maximum Credits: 3

This course will include evaluation and treatment of the musculoskeletal conditions involving the shoulder, elbow, wrist and hand. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2391 - PHYSICAL THERAPY CLINICAL ROTATION 2

Minimum Credits: 1

Maximum Credits: 3

This clinical opportunity will provide students the ability to observe and participate in assessment and management of various musculoskeletal disorders. Students will have an opportunity to work with an experienced clinician to learn more about advanced skills in the treatment of neuromuscular dysfunction in the out-patient setting.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: PREQ: HRS 2305 (MIN GRADE 'C'); SBPLAN: Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2392 - PHYSICAL THERAPY CLINICAL ROTATION 3

Minimum Credits: 1

Maximum Credits: 3

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

HRS 2403 - MEDICAL TERMINOLOGY, PHARMACOLOGY, & PATHOPHYSIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition, and use of terms related to all areas of medical science, hospital service, and health related professions. This ONLINE course is designed to give the student a knowledge of words frequently used in the medical field and provides examples through the review of basic anatomy, physiology, surgical procedures, diagnostic procedures, and symptomatology. Coverage of the pathology of each body system is will take place along with an introduction to pharmacology, and the pharmacological treatment of frequently occurring conditions of each body system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2465 - LEADERSHIP SKILL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

Various areas related to a leader's personal development in the health-care environment will be explored. The course will include didactic and

experiential work in the following topics: stress management, self-assessment, caring concepts, mentoring, creative problem solving, and personal styles of learning or teaching, leadership.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2475 - DISABILITY RELATIONS AND SERVICES INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2480 - DIMENSIONS OF AGING: CULT & HLTH

Minimum Credits: 2

Maximum Credits: 2

This course provides an overview of the aging experience from a cross-cultural and public health perspective. An understanding of the aging process and the different strategies that people use in the Western and non-Western societies to cope with this universal phenomenon will be the theme of the course. Within this framework, multiple facets of aging including the demographic, biological, environmental and socio-cultural aspects are identified and discussed. This course will provide core knowledge for professionals who will work with/on behalf of the aged.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

Course Attributes: Global Studies

HRS 2501 - FUNCTIONAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Course focuses on functional assessment from the perspective of body structures and functions, activity and participation as defined by the international classification of functioning, disability, and health of the world health organization. Students may focus on infants, children, adults, or older adults.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2502 - HUMAN PERFORMANCE: ANALYSIS

Minimum Credits: 4

Maximum Credits: 4

Course focuses on diagnostic decision-making using neuroscience concepts as an exemplar. Clinical reasoning is emphasized while developing knowledge and skills for the evaluation of individuals with neurological impairments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2503 - HUMAN PERFORMANCE: ADAPTATION

Minimum Credits: 3

Maximum Credits: 3

Course focuses on locating and synthesizing evidence supporting rehabilitation interventions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2504 - DIRECTED READINGS IN OT

Minimum Credits: 3

Maximum Credits: 3

This course focuses on research design for evidence hierarchies in the context of occupation therapy research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2510 - FUNDAMENTALS EVIDENCED-BASED OT

Minimum Credits: 3

Maximum Credits: 3

Course focuses on the skills for asking occupational therapy clinical questions, searching for the best evidence to answer questions, and critically appraising the evidence. It emphasizes the research methodologies associated with hierarchies of evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2514 - HUMAN PERFORMANCE: COMPENSATION

Minimum Credits: 3

Maximum Credits: 3

Course examines the interface between functional impairment, activity, and societal participation. Emphasis is on person-task environment analysis and adaptation to compensate for dysfunction during self-care, home management, school/ work, and play/leisure occupations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2525 - SPECIAL TOPICS SEMINAR

Minimum Credits: 3

Maximum Credits: 3

Course focuses on the principles and practices of therapeutic use of self, clinical reasoning, and evidence-based practice as they are applied in diverse practice environments (e.g., Hospital, school systems, community agencies).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2555 - BIOMECHANICS OF BALANCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PROG: Sch Hlth & Rehabilitation Scs or School of Medicine or Swanson School of Engineering; LEVEL: Graduate

HRS 2579 - OT AND HEALTH POLICY

Minimum Credits: 2

Maximum Credits: 2

Course content focuses on healthcare trends, reimbursement regulations, legislative policies, practice environments, strategies for maintaining continued competence, and emerging professional issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2582 - ANAL CLIN DATA/EVDNC FUNCT CHNG

Minimum Credits: 3

Maximum Credits: 3

Course focuses on how to design and carry out single-subject design studies and use quantitative methods of analysis (celeration line, 2 SD band, c-statistic) to document functional changes in client performance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2583 - OT MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2590 - SPECLZD PRECEPTORSHIP: CLINICAL

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in a specialized area of occupational therapy practice (e.g., pediatrics, assistive technology, home healthcare, hand therapy, case management) for the purpose of developing advanced skills related to a specialty practice area.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

HRS 2591 - SPECLZD PRECEPTSHIP: EDUCATION

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in the teaching-learning process applied to entry-level professional education, distance education, client/patient education, consumer education, or knowledge application to clinical settings.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2592 - SPECIALIZED PRECEPTORSHIP: MANAGEMENT

Minimum Credits: 1

Maximum Credits: 6

This course addresses the role of the occupational therapist as manager of occupational therapy services. The focus is on the principles and practices of administration and supervision as they are applied in diverse practice environments (e.g., hospital, school systems, and community agencies).

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2594 - SPECLZD PRECEPTORSHIP: RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in coordinating occupational therapy research, including obtaining IRB approval, getting informed consent, participating in data collection, and managing data quality.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2600 - NUTRITION RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 3

An opportunity for students to investigate and formulate potential research topics. Students will be exposed to possible research ideas, discuss technical requirements and identify proper format for presenting research projects, written and verbal.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2612 - ADVANCED MEDICAL NUTRITION THERAPY 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from her/his undergraduate coursework and HRS 2623 and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology and treatment, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions, including nutrition support, for acute and chronic diseases based on evidence-based research and guidelines. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class discussions, and problem-based learning through case studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ND-MS; SUBPLAN: Post-Bacc Clin Diet Nutr Diet (NDNUTR-TR) or Accelerated Nutr Sci Nutr Diet (NSBS-TR)

HRS 2621 - ADVANCED SEMINAR IN CLINICAL DIETETICS

Minimum Credits: 3

Maximum Credits: 3

In-depth study of the nutritional management of hospitalized patients. Students will be required to research the appropriate literature, to survey current practices, and to make presentations at a seminar session.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2623 - ADVANCED MEDICAL NUTRITION THERAPY 1

Minimum Credits: 3

Maximum Credits: 3

This is the first of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from her/his undergraduate coursework and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology and treatment, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions for acute and chronic diseases based on evidence-based research and guidelines. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class discussions, and problem-based learning through case studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ND-MS

HRS 2625 - COUNSELING METHODS

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course that emphasizes counseling as a supportive process, characterized by a collaborative counselor-patient relationship that involves behavior and attitudinal change. It will focus on the conceptual foundations and philosophy of behavior change theories, with an emphasis on motivational interviewing, including application in practice to provide the learner with a collection of evidence-based strategies and counseling skills to promote behavior change in patients/clients.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2626 - SPECIAL TOPICS IN EATING BEHAVIOR

Minimum Credits: 3

Maximum Credits: 3

This class will introduce students to a range of eating behaviors, eating disturbances and body weight issues in the general populations. A primary aim of the course is expose students to the many factors that influence eating behaviors including lifestyle, environment, sport, and pathology. A second aim is to enable students to synthesize and evaluate current research on disordered eating in the general population, and in athletes, with the goal of coming to understand the role of the scientific literature in evidence-based practice. A third aim of this course is to empower students to develop, implement and evaluate presentations and programs on special topics related to eating behavior.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2627 - DIET & EXERCISE CHRONIC DISEASE MGT

Minimum Credits: 3

Maximum Credits: 3

Theory and practical application of the use of diet and exercise therapies in the prevention and treatment of chronic diseases including, diabetes mellitus, hypertension, coronary heart disease, obesity, and arthritis/osteoporosis.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2628 - NUTRITION AND PERFORMANCE WITH LAB

Minimum Credits: 3
Maximum Credits: 3

A lecture and laboratory class in which the principles of nutrition are applied to sports performance and exercise. Topics presented include energy release and substrate utilization, energy metabolism during exercise, fluid intake and athletic performance, body composition, vitamins and minerals, nutrition for training and competition, sports specific considerations, fitness and nutrition assessment in athletes, and special issues, such as vegetarian diets, and environmental obstacles.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2629 - DIETARY SUPPLEMENTS FOR HEALTH AND PERFORMANCE

Minimum Credits: 3
Maximum Credits: 3

This course will integrate classroom lecture and discussion to help students learn how research evidence supports or negates the use of dietary supplements for health and performance. Emphasis of course will be interpreting research evidence on dietary supplements, ergogenic aids and other performance enhancing methods, and adapting the evidence into clinical practice recommendations/guidelines.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2631 - NUTRITION FOCUSED PHYSICAL EXAMINATION

Minimum Credits: 3
Maximum Credits: 3

Introduction to professional knowledge and skills in nutrition focused physical examination. The course is based on the knowledge/application of the NCP and Model in professional practice. Learning experiences will include formal class presentations, class discussions, case-based problem solving and simulation laboratory sessions. Knowledge based learning leading to examination technique simulations for anthropometric measurements for body composition, nutrition focused physical examination for malnutrition diagnosing and examination techniques, e.g., vital signs, head and neck exam, intra and extra-oral exams, heart and lung auscultation, as well as, abdominal auscultation and palpation are included. At the completion of the course competency in application of nutrition focused physical examination techniques will be assessed on an individual basis.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2632 - PRINCIPLES OF NUTRITION EDUCATION AND COUNSELING

Minimum Credits: 3
Maximum Credits: 3

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2633 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course provides students with opportunities to explore through study, discussion and practical application, the issues and trends that are affecting food and nutrition professionals and the profession of dietetics. Included is an introduction to the history and structure of the profession of dietetics and to existing and emerging roles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2635 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 2

Maximum Credits: 2

This course provides students with opportunities to explore through study, discussion and practical application, the issues and trends that are affecting food and nutrition professionals and the profession of dietetics. Included is an introduction to the history and structure of the profession of dietetics and to existing and emerging roles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ND-MS

HRS 2637 - PRACTICAL APPLICATIONS OF MEDICAL NUTRITION THERAPY 1

Minimum Credits: 1

Maximum Credits: 2

This weekly conference is designed to prepare students for their planned, supervised practice experiences to be completed at the assigned clinical facility. Teaching approaches for the course include lectures/presentations, group discussions, student presentations, guest lectures, and problem-based learning through case studies. Class exercises are designed to simulate supervised practice assignments and provide opportunity for the student to apply didactic content to the practice of food service management and the nutrition care process used in patient care. Class participation is an important component of the course. Group discussions are used to report on events and share experiences in order to broaden the class's perspective on dietetics practice in the acute care setting.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (MS)

HRS 2639 - ADVANCED MATERNAL AND PEDIATRIC NUTRITION

Minimum Credits: 3

Maximum Credits: 3

This seminar course provides students with an evidence-based understanding of the anatomical, physiological, and biochemical changes that occur during pregnancy, human lactation, and development from infancy to adolescence. Students will learn about nutritional and lifestyle factors associated with fertility, pregnancy outcomes, and other high-risk groups in the pediatric population. Students will obtain advanced knowledge on the medical nutrition therapy for management of diseases specific to these life-stages. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class activities and discussions, and site visits.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2640 - SUPERVISED PRACTICE : COMMUNITY NUTRITION

Minimum Credits: 2

Maximum Credits: 2

This course is a combination of dietetics related classroom, observation and supervised practice experiences in community settings. Emphasis is on

delivering food and nutrition services in community based settings with a focus on wellness. Core rotations are in the following areas: child and adult day care, WIC and breastfeeding support, congregate and home delivered meals (Meals-On-Wheels), schools, the Western Pennsylvania School for Blind Children, food banks and pantries and community-based wellness programs. Students are required to complete the core rotations and to meet course requirements through special projects in sites of their choice across the lifecycle. Course minimum: 120 hours.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (MS)

HRS 2641 - SUPERVISED PRACTICE: FOOD SERVICE MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course will provide supervised practice experience in the area of food service management. The purpose of the learning activities and assignments is to provide the student with the opportunity to apply knowledge and skill in food service management in a health care setting. The student will observe and then model the functions of a food service manager. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in food service management by completing a Food Service Management Staff Relief. management of food service to hospitalized patients. The student will function as a Food Service Supervisor at the site and will independently conduct all phases of the job role for the last three days of the rotation. The student will attend and participate in any food service management meetings or hospital management meetings attended by food service managers.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2642 - SUPERVISED PRACTICE: CLINICAL 1

Minimum Credits: 5

Maximum Credits: 5

This course will provide supervised practice experience in the area of clinical dietetics. This course is designed to follow the topic sequence and content of HRS 2623: Advanced Medical Nutrition Therapy 1. It provides the students with the opportunity to apply their knowledge of the nutrition care process and medical nutrition therapy (MNT) to the practice of dietetics in the acute care setting. This involves planned learning experiences with a variety of patients at various stages of the health/illness continuum. Students will have opportunity to observe and then model the functions of a clinical dietitian. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in providing comprehensive nutritional care to individuals within the practice setting. This course is the first of two courses which will provide clinical dietetics supervised practice experience. In this course the initial skills required for the nutrition care process will be mastered: nutrition assessment, diet interviewing, developing a care plan, written documentation, and nutrition education/counseling. Supervised practice experience caring for patients with the following disease states will be provided: feeding difficulties, energy imbalances, cardiovascular diseases, diabetes mellitus, and renal disease. During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the site's Clinical Nutrition Department and/or the field of clinical dietetics. This is a two term project that will continue into HRS 2643: Supervised Practice: Clinical II.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (MS)

HRS 2643 - SUPERVISED PRACTICE: CLINICAL 2

Minimum Credits: 5

Maximum Credits: 5

This course is the second of two courses which will provide supervised practice experience in the area of clinical dietetics. This course is designed to follow the topic sequence and content of HRS 2624: Advanced Medical Nutrition Therapy 2. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting. This involves planned learning experiences with a variety of patients of all ages at various stages of the health/illness continuum. Students will have opportunity to observe and then model the functions of a clinical dietitian. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in providing comprehensive nutritional care to individuals within the practice setting. Students will

be assigned to their same primary site as the fall term; however selected rotations outside of the primary site may be necessary to provide appropriate learning activities. This course will build on skills mastered in HRS 2642 and will provide the students supervised practice experiences to develop and master new skills including calculating and assessing enteral and parenteral nutrition regimens. Supervised practice experience caring for patients with the following disease states/conditions will be provided: gastrointestinal, pancreatic, and liver disorders, cancer, critical illness, and patients requiring nutrition support. During this course the student will complete their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the site's Clinical Nutrition Department and/or the field of clinical dietetics. This is a two term project that will build on the project content from HRS 2642.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ND-MS (Nutrition and Dietetics)

HRS 2644 - SUPERVISED PRACTICE: MANAGEMENT OF NUTRITION CARE

Minimum Credits: 2

Maximum Credits: 2

The supervised practice experience activities for HRS 2644: Management of Nutrition Care are planned to provide the student with the opportunity to assume increased responsibility for the management of nutrition care to hospitalized patients. In this course, the student will function as a clinical dietitian at the clinical site and will independently conduct all phases of the nutrition care process. Students will continue in the same primary supervised practice facility where they were assigned for Supervised Practice: Clinical 1 and 2.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ND-MS (Nutrition and Dietetics)

HRS 2645 - SUPERVISED PRACTICE MANAGEMENT IN LONG-TERM CARE

Minimum Credits: 2

Maximum Credits: 2

This course provides supervised practice experience in a long-term care setting. The course will provide supervised practice experience in the areas of food service management and also clinical dietetics to allow the student to carry out the nutrition care process for patients/residents in this population.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Master in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2646 - INTRODUCTION TO FUNCTIONAL NUTRITION WITH LAB

Minimum Credits: 3

Maximum Credits: 3

This introductory course to functional nutrition is based on a food first approach to promotion of optimal health. Lectures and class activities will explore the scientific basis of medicinal foods and herbs used in cooking. Students will demonstrate practical application by incorporating 'health promoting foods and herbs' into meal planning and preparation with the goal of optimizing health for the prevention and treatment of diet and lifestyle related diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2647 - EXPERIENTIAL PRACTICE: COMMUNITY NUTRITION

Minimum Credits: 3

Maximum Credits: 3

This course is a combination of dietetics related classroom, observation and experiential practice experiences in community settings. Emphasis is on

delivering food and nutrition services in community based settings with a focus on wellness. Core rotations are designed to meet course requirements through special projects in sites that span across the lifecycle.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2649 - QI RESEARCH PROJECT DEVELOPMENT

Minimum Credits: 1

Maximum Credits: 1

During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2650 - EXERCISE PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide graduate students, within the field of rehabilitation science, the knowledge of theoretical and applied aspects of exercise physiology. An in-depth understanding of how the body responds when exposed to acute and chronic bouts of exercise will be provided through lectures and laboratories. Topics discussed will include physiological responses and adaptations of the cardiovascular, respiratory, metabolic, and neuromuscular systems to exercise; assessing cardiorespiratory fitness, body composition, anaerobic performance and muscular fitness; designing exercise programs for health and wellness and special populations; sport performance; environmental considerations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2651 - EXPERIENTIAL PRACTICE 2

Minimum Credits: 7

Maximum Credits: 7

This course provides advanced experiential practice experience in clinical nutrition and long-term care setting. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2652 - EXPERIENTIAL PRACTICE 3

Minimum Credits: 3

Maximum Credits: 3

The experiential practice experience activities for HRS 2652 are planned to provide the student with the opportunity to assume increased responsibility for the management of nutrition care to hospitalized patients. In this course, the student will function as a clinical dietitian at the clinical site and will independently conduct all phases of the nutrition care process.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2653 - QI RESEARCH PROJECT

Minimum Credits: 1

Maximum Credits: 1

During this course the student will complete their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2654 - PRACTICUM IN DIETETICS 1

Minimum Credits: 1

Maximum Credits: 1

This self-guided course prepares students for their planned, supervised experiential practicums completed at an assigned clinical facility. Online teaching approaches include quizzes, lectures, group discussions, student presentations, and problem-based learning through case studies. Active participation in the online components is a requirement of the course. This course includes planned supervised experiential learning (SEL) hours. Each student is expected record their hours in our CBE portal.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2655 - RESEARCH METHODOLOGY AND APPLIED STATISTICS

Minimum Credits: 3

Maximum Credits: 3

This introductory course in research methods and applied statistics will address research study design and descriptive and inferential statistics related to the research process. Inferential statistics will include one-sample, two-sample and multi-sample inference. Topics covered will include issues related to measuring variables (reliability/validity), an introduction to epidemiology and measures of association, and interpreting scientific literature. The course will include hands-on practice in running statistical tests previously taught in class. This course provides awareness about research methods and statistical analysis considerations needed by health sciences students. There are no pre-requisites.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2656 - PRACTICUM IN DIETETICS 2

Minimum Credits: 1

Maximum Credits: 1

This self-guided course prepares students for their planned, experiential practicums completed at an assigned clinical facility. Online teaching approaches include quizzes, lectures, group discussions, student presentations, and problem-based learning through case studies. Active participation in the online components is a requirement of the course. This course includes planned supervised experiential learning (SEL) hours. Each student is expected record their hours in our CBE portal.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2657 - EXPERIENTIAL PRACTICE 1

Minimum Credits: 9

Maximum Credits: 9

This course will provide experiential practice experience in the area of food service management and clinical nutrition. The purpose of the learning

activities and assignments is to provide the student with the opportunity to apply knowledge and skill in food service management and clinical nutrition in a health care setting.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

HRS 2658 - CAPSTONE PROJECT

Minimum Credits: 2

Maximum Credits: 2

During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

HRS 2659 - PRACTICUM IN DIETETICS 2

Minimum Credits: 2

Maximum Credits: 2

This self-guided course prepares students for their planned, experiential practicums completed at an assigned clinical facility. Online teaching approaches include quizzes, lectures, group discussions, student presentations, and problem-based learning through case studies. Active participation in the online components is a requirement of the course. This course includes planned supervised experiential learning (SEL) hours. Each student is expected record their hours in our CBE portal.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

HRS 2660 - ADVANCED HUMAN PERFORMANCE AND TESTING

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with advanced knowledge in the field of human performance training and evaluation through classroom lectures and laboratory/filed experiences. Topics include developing and testing strength, speed, power, agility, endurance, stability, and flexibility.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2661 - SPORTS SCIENCE PRACTICUM 1

Minimum Credits: 3

Maximum Credits: 3

This course will provide supervised practical experience in the area of sports science. It provides the students with the opportunity to apply their knowledge of sports science, performance, and testing/monitoring in an athletic setting. This involves planned learning experiences with an athletic team at various stages of the training program and season. Students will have opportunity to observe and then model the functions of a performance specialist. Through the combination of planned learning activities and professional interaction, the students will demonstrate an increasing level of proficiency in providing and evaluating comprehensive training to athletes and teams within the athletic setting. This course is the first of three courses which will provide sports science practical experience. In this course the initial skills required of a sports scientist will be mastered:

sport/athlete assessment, performance testing, developing a training plan, athlete monitoring/tracking, and data management. During this course, the student will begin to develop and construct their Capstone project. This project will give each student the opportunity to work independently on a sports science or performance outcome with their practicum site. The project should focus on an area that is relevant to the field of sports science or the site's Sports Science/Performance Department's goals. This is a 3 term project that will continue into HRS 2627: Sports Science Practicum 2 and HRS 2630: Sports Science Practicum 3.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2662 - SPORTS SCIENCE PRACTICUM 2

Minimum Credits: 3

Maximum Credits: 3

This course is the second of three courses which will provide supervised practical experience in the area of sports science. It provides the students with the opportunity to apply their knowledge of sports science, performance, and testing/monitoring in an athletic setting. This involves planned learning experiences with an athletic team at various stages of the training program and season. Students will have opportunity to observe and then model the functions of a performance specialist. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in providing and evaluating comprehensive training to athletes and teams within the athletic setting. Students will be assigned to their same primary site as the fall term; however, selected rotations outside of the primary site may be necessary to provide appropriate learning activities. This course will build on skills mastered in HRS 2626 and will provide the students supervised practical experiences to develop and master new skills including calculating and assessing athlete data and training regimens. During this course, the student will continue their Capstone project. This project will give each student the opportunity to work independently on a sports science or performance outcome with their practicum site. The project should focus on an area that is relevant to the field of sports science or the site's Sports Science/Performance Department's goals. This is a three-term project that will build on the project content from HRS 2626.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2663 - SPORTS SCIENCE PRACTICUM 3

Minimum Credits: 3

Maximum Credits: 3

This course is the third of three courses which will provide supervised practical experience in the area of sports science. It provides the students with the opportunity to apply their knowledge of sports science, performance, and testing/monitoring in an athletic setting. This involves planned learning experiences with an athletic team at various stages of the training program and season. Students will have the opportunity to observe and then model the functions of a performance specialist. Through the combination of planned learning activities and professional interaction, the students will demonstrate an increasing level of proficiency in providing and evaluating comprehensive training to athletes and teams within the athletic setting. Students will be assigned to their same primary site as the fall and spring term; however, selected rotations outside of the primary site may be necessary to provide appropriate learning activities. This course will build on skills mastered in HRS 2626 and HRS 2627 and will provide the students supervised practical experiences to develop and master new skills including interpreting athlete/team data, implementing training plans, and evaluating outcomes. During this course, the student will complete their Capstone project. This project will give each student the opportunity to work independently on a sports science or performance outcome with their practicum site. The project should focus on an area that is relevant to the site's Sports Science/Performance Department and/or the field of sports science. This is a three-term project that will build on the project content from HRS 2626 and HRS 2627.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2664 - SPORTS SCIENCE DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to statistical methods and computer programming that are essential for data scientists. This course covers fundamental statistics from the perspective of data science in sports and how to apply various statistical methods to data science. This course provides introduction to the two of the most widely used statistical programming tools in data science: R and Python. Prior experience in R and Python is not expected in this course, however, familiarity with basic statistical concepts and modern programming language will be very useful. The approach of this course is practical, hands-on and project oriented. The goal of the course is to provide students with skills of solving various problems in health informatics using R and Python.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2665 - APPLIED SPORTS SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of sports science and the role of a sports scientist in the applied setting. Topics covered will include training theory, needs analysis, athlete monitoring/assessment, managing data/analytics, and communicating information.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2671 - EXPERIENTIAL PRACTICE 2

Minimum Credits: 6

Maximum Credits: 6

This course provides advanced experiential practice experience in clinical nutrition and long-term care setting. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

HRS 2672 - EXPERIENTIAL PRACTICE 2

Minimum Credits: 7

Maximum Credits: 7

This course provides advanced experiential practice experience in clinical nutrition and long-term care setting. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HRS 2674 - CAPSTONE PROJECT

Minimum Credits: 3

Maximum Credits: 3

This is the second portion two-semester capstone project. During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

HRS 2705 - PRACT REHAB ENGR & ASSISTV TECHN

Minimum Credits: 3

Maximum Credits: 3

Develop the clinical skills needed to apply at and re solutions to help persons with disabilities achieve their goals in the area of productivity, education, employment, communication, and environmental access. Students will match knowledge of at products gained in HRS 2704 to the needs of individuals. Taught using a model for assessing the individual, the context, the technology-user interface and an interdisciplinary team approach. A 3 hour a week commitment to serving learning & a journal is integrated with lectures, guide learning and semester case-based learning project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2709 - MANUAL WHEELCHAIR DESIGN

Minimum Credits: 2

Maximum Credits: 2

Covers the basic nomenclature used to describe and order wheelchairs. Wheelchair adjustment, assembly, training and operation will be covered. Students will be introduced to wheelchair standards and government controls. The focus on manual wheelchairs. Various types of manual wheelchairs will be used during the course. Students will participate in lectures and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2718 - PROJECT BASED TECHNOLOGY DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is the second course in a two-course sequence on Rehabilitation Engineering Design. HRS 1706/2706 is in the Fall, and 1718/2718 is in the Spring. HRS 1718/2718 is a project-based design course in which students use design methods and tools learnt in 1706/2706, follow an iterative design and testing process with clients and experts, and develop assistive technology device prototypes for their clients.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2719 - FUNDAMENTALS OF REHABILITATION ENGINEERING & TECHNOLOGY 1 LAB COMPONENT

Minimum Credits: 1

Maximum Credits: 1

This is the 1-credit lab component associated with HRS 2704. It is optional, for those who wish to get the hands-on experience in a clinic setting. Do not register for this course if you have not also registered for HRS 2704. Introduction to fundamental principles and practices related to multiple areas of assistive technology. Technology areas include: seating and wheelchair mobility, augmentative communication, environmental control, computer access, transportation safety, prosthetics, worksite ergonomics, and man/ machine modeling. In addition, common terminology, disability ethics and models of service delivery related to assistive technology are discussed.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2727 - CAPSTONE FOR PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 2

The capstone for P&O course is completed as part of the research requirement for the MSPO program. This course is taken in two different semesters as students work to formulate ideas and further conceptualize that idea into a cohesive research project under the guidance of faculty. The capstone is then presented to peers and faculty prior to graduation.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2747 - JOB PLACEMENT PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Practicum involves a minimum of 100 clock hours of supervised rehabilitation counseling vocational interventions, with specific involvement in placement of rehab consumers in employment. Practicum designed to provide specific experience and supervision in job development and placement and work adjustment activities.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2748 - ASSISTIVE TECHNOLOGY PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Practicum involves a minimum of 100 clock hours of supervised assistive technology experience including assessment, development, training, evaluation and follow-up regarding rehab technology. Practicum designed to provide specific experience and supervision in the provision of assistive technology to rehab consumers.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2771 - FUNCTIONAL ANATOMY AND KINESIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course is the study of the structure and function of the human body, with special emphasis on the musculoskeletal and peripheral nervous systems. Cadavers and anatomical models will be utilized. Palpation of anatomical landmarks, actions of individual muscles and muscle groups, and normal joint motions will be studied using the students' own surface anatomy. The concepts of measuring muscle strength and length, measurement of joint range of motion, and identification of postural or structural deviations will be introduced. The roles of muscles and types of muscle contraction during movement and exercise will be discussed. The basics of normal gait will be studied, and some common pathological gaits will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2772 - PATHOLOGY IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide a general overview of the pre-disposing factors and direct causes of disease, as well as their effects on the human body. It will also include a systemic approach to the basic disease processes, in terms of etiology, symptomatology, general pathological changes, diagnostic procedures, and types of treatment. Universal precautions to be used in patient care will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2773 - INTRODUCTION TO MATERIALS, EQUIPMENT, AND FABRICATION

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the student to the concepts of general material properties, the common materials used in orthotics and prosthetics, and the specific properties of these materials. The student will be introduced to equipment and fabrication techniques as well as safety precautions for handling and using materials and equipment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2774 - REHABILITATION BIOMECHANICS FOR THE HEALTH CARE PROFESSIONS

Minimum Credits: 3

Maximum Credits: 3

This course is a basic introduction to biomechanics of human motion for individuals in the health and rehabilitation fields. It is designed for individuals with a non-technical background, but a basic knowledge of mathematics, physics, and kinesiology is expected and will be utilized. Topics covered include statics, dynamics, anthropometry, motion analysis, electromyography, and soft-tissue biomechanics. Applications to rehabilitation will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS) or Health and Rehabilitation Scs (MS) or SBPLAN: Rehabilitation Sci & Tech (Health and Rehabilitation Scs-MS)

HRS 2775 - INTRODUCTION TO EVIDENCE - BASED PRACTICE IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2776 - PROFESSIONAL ISSUES IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

Issues and organizations relevant to the practice of orthotics and prosthetics will be presented and discussed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2777 - PRACTICE MANAGEMENT IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 2

Maximum Credits: 2

This course will provide knowledge of all the facets of running or managing the business end of an orthotics and prosthetics department or company.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2778 - RESEARCH SEMINAR IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

This course includes reading and discussion of research related to the practice of orthotics and prosthetics. Case studies, along with the evidence for the chosen or alternative orthotic or prosthetic treatments, will be presented by students and faculty. Students will formulate a research or scholarly paper topic related to orthotics and prosthetics, identify a mentor, and begin research on the topic.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2779 - PATIENT MANAGEMENT IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 1

Maximum Credits: 1

Study of new concepts, devices, and manufacturing techniques in orthotics and prosthetics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2783 - SPINAL ORTHOTICS

Minimum Credits: 3

Maximum Credits: 3

Topics to be covered include: conditions and symptoms indicating treatment with spinal orthotics; evidence for effectiveness of treatment; patient evaluation for prescription and design of spinal orthoses; fabrication of spinal orthoses, including techniques for taking measurements and impressions; fitting, evaluation of effectiveness, and modification of spinal orthoses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Sch Hlth & Rehabilitation Scs

HRS 2785 - LOWER EXTREMITY ORTHOTICS 1

Minimum Credits: 5

Maximum Credits: 5

Review of conditions and symptoms indicating treatment with lower extremity orthotics. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of lower extremity orthoses. Fabrication of lower extremity orthoses, including techniques for taking measurements and impressions. Fitting, evaluation of effectiveness, and modification of lower extremity orthoses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2786 - LOWER EXTREMITY ORTHOTICS 2

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2828 - STUDY ABROAD PROGRAM IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

The objectives of the course are to let the students to observe and practice prosthetics and orthotics techniques of fabrication and clinical assessment in the treatment of patients with limited sources in Ecuador. Review of conditions and symptoms indicating treatment with lower extremity prosthetics below and above the knee as well as upper extremity prosthetics below and above the elbow, lower extremity orthotics for the foot, ankle, knee and hip as well as spinal orthoses. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of spinal orthoses, upper and lower extremity prostheses and orthoses. Impressions, measurements and fabrication of the prosthetic and orthotic devices. Fitting, delivery and evaluation of effectiveness. A local prosthetics and orthotics company in that country will provide the logistic support of

equipment and tools during the program. This experience will reinforce the concepts and knowledge acquired during the past terms in prosthetics and orthotics, and also prepares those who decide to take advantage of this opportunity with better tools of experience before their residence.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2866 - PSYCHOLOGY OF SPORT

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2867 - PATHOKIN ORTHOPADC/ATHL INJURIES

Minimum Credits: 3

Maximum Credits: 3

Course will provide a detailed and sequential approach to the assessment and treatment procedures utilized for management of orthopedic related athletic injuries. Course is divided into regional techniques appropriate for management of specific athletic injuries. Course will present techniques which should be utilized to functionally assess the athlete's readiness to return to preinjury activities following rehab of the orthopaedic injury.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SUBPLAN: Sports Medicine

HRS 2868 - SEMINAR IN SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course designed to address a variety of current issues and technical advancements in sports medicine. Course divided into three units including a medical, legal, and ethical issues in sports medicine unit. The second unit will focus on the unique and newly developed technical advances in the field supported by the current research. Final unit will address the research and clinical application of isokinetic testing devices.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2869 - ANATOMICAL BASIS SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course will include dissection of the human cadaver and will emphasize the musculoskeletal, articular, nervous, and vascular systems. Dissection experiences will be supplemented with classroom lectures. The role of anatomical structures as they relate to athletic injury mechanism, evaluation, and rehabilitation will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Sports Medicine (Health and Rehabilitation Scs-MS)

HRS 2883 - TRANS-TIBIAL PROSTHETICS

Minimum Credits: 5

Maximum Credits: 5

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2885 - TRANS-FEMORAL PROSTHETICS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2902 - TOPICS IN HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course will be to present to all graduate students in SHRS a thorough review of the most current and pertinent issues confronting the health-care industry today. Discussion and assignments will be designed to require students to investigate critical issues which affect health-care delivery, quality of service, cost of health care, manpower utilization, and the effects of various federal and state legislation on health-care delivery.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2903 - ISSUES IN THE HEALTH SYSTEM

Minimum Credits: 2
Maximum Credits: 2
This course will present current and predicted future issues faced by America in the maintenance of the good health of its citizens. Options for resolution of the issues will be identified and pros and cons investigated and discussed both from the standpoint of the lay public and from that of the health professional. The course is required for all advanced degrees, and the enrollment will be composed of students from all professions represented in SHRS.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: School of Health and Rehabilitation Sciences

HRS 2905 - ETHICAL ISSUES IN HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
This course examines a variety of complex ethical issues which confront health-care practitioners and researchers as they work with clients and colleagues within the health-care system and society. By analyzing actual cases, health-care workers are enabled to make informed choices when faced with these issues.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2906 - HIST MED AND HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
This course examines the origins and evolution of both traditional medical systems and alternative health-care patterns in West civilization from the
1836

earliest society to the present. Particular attention is placed on the impact of religion, warfare, and other societal factors on the development of medicine. Special sessions cover the role of the physician in defining society's treatment of women, minorities, and the mentally retarded.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

Course Attributes: Global Studies

HRS 2907 - CLINICAL INVESTIGATIONS

Minimum Credits: 2

Maximum Credits: 2

This course will focus on all aspects of clinical investigation, including developing and populating a clinical data base for the purposes of quality improvement, clinical description and clinical research. Interviewing skills, diagnosis, management, outcome and keeping up to date will be covered in depth with a particular focus on evidence-based practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2908 - MUSCULOSKELETAL ASSESSMENT AND INJURY PREVENTION

Minimum Credits: 3

Maximum Credits: 3

The first part of the course will present the assessment and evaluation techniques necessary to accurately diagnose and prevent musculoskeletal injury. The student will be presented with the necessary information regarding the tissue(s) involved (anatomy/functional anatomy); the signs and symptoms in relation to the injury and tissue(s); and the evidence for determining the most sensitive and specific assessment evaluation and assessment techniques/tools. The second part of the course will include lecture/demonstrations by the students enrolled in the course. Students will select a specific condition or pathology and lead a lecture and lab demonstration providing an overview of the objectives related to the course content.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SUBPLAN: Sports Medicine

HRS 2910 - STATSTCL APPLCS/HEALTH & REHAB

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to statistical concepts, methods and applications useful for health care and rehabilitation professionals. Emphasis on application of statistical tools to support clinical and managerial decision making and identifying statistical tests and methods appropriate for the data and research design. Use of a computer-based statistical package will be required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2915 - TELEMEDICINE, TELEREHABILITATION, AND E-HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course provides a combination of didactic survey and applied skill development/experiential case-based learning. The curriculum includes: history of telemedicine, telehealth and tele rehabilitation; survey of research findings related to tele rehabilitation; guidelines for implementation of rehabilitation services using tele rehabilitation technology; review of policy related to tele rehabilitation; funding and reimbursement issues and strategies; privacy and security of tele rehabilitation; standards for tele rehabilitation; review and experience with tele rehabilitation technologies

including but not limited to tele video ((pots, high bandwidth ISDN, IP conferencing) web-based resources (e.g., Email, discussion boards, instant messaging, listserv), data logging and body media, pdas and other devices (e.g., GPS), etc., And a case-based tele rehabilitation trial experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2920 - ADMINISTRATIVE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience providing an opportunity to learn new skills in administration of a service or facility and permitting the application of previously learned skills and theories.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2921 - CLINICAL INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2922 - TEACHING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised experience in a health-related educational program permitting the student to develop and present instructional materials, to experiment with innovative methods of instruction, and to evaluate the effectiveness of the presentations.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2924 - GRADUATE RESEARCH PROPOSAL

Minimum Credits: 1

Maximum Credits: 6

Graduate student writes thesis proposal, receives committee approval and institutional review board (IRB) approval for thesis study.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2925 - GRADUATE RESEARCH

Minimum Credits: 1

Maximum Credits: 6

An original in-depth investigative study of a selected area of professional interest. A research report suitable in format and content for publication is required.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2926 - SCHOLARLY PAPER

Minimum Credits: 1

Maximum Credits: 6

A research oriented paper based on work the student has done in his or her area of study. Students will be encouraged to submit honors papers for publication or presentation at a national or state professional meeting. The adviser and an appropriate faculty reader will supervise the student's work on the scholarly paper.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2927 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 1

Minimum Credits: 3

Maximum Credits: 3

Statistical methods for health science research i. This is the first of a two-course series in statistical methods. Topics covered include measurement, frequency distributions, histograms, bar graphs, stem-and-leaf displays, boxplots, scatterplots, measures of central tendency, measures of variability, point estimation, interval estimation, sampling distributions, one and two-sample tests of hypotheses for means and an introduction to non-parametric tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2928 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of a two-course series in statistical methods. Topics covered include one and two way analysis of variance, multiple comparisons for main effects and interactions, analysis of co-variance, multiple comparisons for adjusted means, correlation, simple linear regression, multiple regression, and meta-analytic methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2930 - ADVANCED TOPICS IN STATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Advanced topics in statistical methods. This course focuses on applied longitudinal data analysis. Topics include: the multilevel model for change, with an emphasis on individual change over time; applied data analysis using the multilevel model with random and fixed effects; evaluation of model fit; and the discrete-time hazard model.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: REHSCI-PHD or CSD-PHD

HRS 2932 - MASTER OF PROSTHETICS AND ORTHOTICS CLINICAL INTERNSHIP

Minimum Credits: 6

Maximum Credits: 8

This course is reserved for second year MSPO students needing to earn their clinical internship hours prior to graduation.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2933 - UPPER EXTREMITY ORTHOTICS

Minimum Credits: 1

Maximum Credits: 3

Upper Extremity Orthotics Variable credit option due to COVID-19 Lab Restrictions

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2934 - UPPER EXTREMITY PROSTHETICS

Minimum Credits: 1

Maximum Credits: 3

Upper Extremity Prosthetics for Variable Credit due to COVID-19 lab restrictions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2999 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3000 - DOCTORAL SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Faculty and students in the rehabilitation doctoral program will participate in this seminar series. Research will be presented and critiqued by faculty and students. Topics related to grantmanship, ethics in research, and issues related to survival in an academic/research environment will be addressed in this seminar series. Doctoral students must present their research for critique by faculty prior to their dissertation defense.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3001 - DISSERTATION RES PHD DEGREE

Minimum Credits: 1

Maximum Credits: 12

Students will formulate, design, propose, carry out, analyze, interpret, and write up an approved research project, under the direction of a dissertation committee, and in particular the chairperson.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3002 - METHODS OF INQUIRY FOR REHABILITATION SCIENCES I

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3003 - CORE CONCEPTS IN DISABILITY AND REHABILITATION 1

Minimum Credits: 2

Maximum Credits: 2

This course is the first course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this first course, we will review models of disability and rehabilitation. We will focus on aspects of concepts of functioning and disability, including body structures, body functions, activities and participation. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. Students will learn through faculty presentations (from among the various research programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3004 - METHODS OF INQUIRY FOR REHABILITATION SCIENTISTS II

Minimum Credits: 1

Maximum Credits: 1

Course focuses on foundational knowledge regarding methods of inquiry for rehabilitation science. The first segment emphasizes outcome measures and the second segment emphasizes prognostic studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 3002 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3005 - CORE CONCEPTS 2

Minimum Credits: 2

Maximum Credits: 2

This course is the second course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this second course, we will focus on individual and contextual factors that influence disability and rehabilitation, and implications for research. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. We will also synthesize concepts and principles and discuss their application in individual student research programs. Students will learn through faculty presentations (from among the various research

programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 3003 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3006 - ADVANCED NEUROMUSCULAR PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

At the turn of the twentieth century, the pioneering neuroscientist and Nobel Laureate Charles Sherrington said that "To move things is all that mankind can do... for such the sole executant is muscle, whether in whispering or felling a tree". The smooth and effortless movements we produce in everyday life are the result of exquisite neuromuscular interactions that we are only beginning to understand. The goal of this course is to develop a working knowledge of neurophysiological principles and techniques fundamental to successful movements in health and disease. The course will begin with a basic overview of the anatomical components of voluntary movement followed by three modules. Module 1 will cover neurophysiological principles of movement. Module 2 will provide knowledge about non-invasive techniques used to study neuromuscular function in humans. Module 3 will convey new perspectives on pathologies of the neuromuscular system based on the integration of course concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: ACADEMIC PLAN: REHSCI-PHD (Rehabilitation Science) ACADEMIC SUBPLAN: PHDSMN-TR (Sports Medicine and Nutrition)

HRS 3140 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN THE HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3702 - SOFT TISSUE BIOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Soft tissue responses to external mechanical loading are of interest in the prevention and treatment of pressure-related tissue injuries. These injuries include ulcers occurring on the plantar surface of diabetic feet, wounds at the inter face between a PROSTheses and a residual limb and pressure ulcers over the bony prominences of immobile individuals with neuromuscular impairments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3703 - ARCHITECTURAL ACCESSIBILITY

Minimum Credits: 2

Maximum Credits: 2

Provides a basic working knowledge of architectural design and construction systems, procedures and terminology related to accessibility and universal design. Topics include: understanding architectural drawings, planning phases of the construction process, translating human needs into construction terms, building codes and ADA accessibility standards. Student project will involve measuring for and designing a home or workplace modification. Access to architectural graphic standards by the American institute of architects is recommended.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3705 - WHEELCHAIR BIOMECHANICS

Minimum Credits: 1

Maximum Credits: 1

Discuss all areas of wheelchair biomechanics including stability of wheelchairs and propulsion biomechanics. Students will use kinetic and kinematic analysis to determine the forces and moments occurring in upper extremity joints during the propulsive stroke. Clinical correlates to the biomechanical studies will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3709 - INTRODUCTION TO REHABILITATION ROBOTICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed as an introduction to topics related to rehabilitation robotics. The course will cover areas including intelligent mobility aids, robotic manipulation aids, and therapeutic robots. Clinical applications of these technologies are also discussed. The course will be a mix of lectures and projects where students can engage in hands-on learning skills relevant to the design and evaluation of rehabilitation robotics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3710 - CLINICAL APPLICATIONS AND SEATING

Minimum Credits: 4

Maximum Credits: 4

Course will cover the clinical aspects of seating and mobility intervention for four diverse populations. First, the special needs of children will be addressed. Include various disability specific goals of intervention. Second are people with acquired spinal cord lesions. Seating and mobility intervention from the time onset - through rehab to independent living. The final two populations are people with musculoskeletal disorders and the elderly.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 2704 and 2705; PROG: Sch Hlth & Rehabilitation Scs

HRS 3713 - REHABILITATION ENGINEERING DESIGN

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3895 - RDG NEUROMUSCLR ASPCT SPRT INJRY

Minimum Credits: 3

Maximum Credits: 3

The course contains in depth study, readings, and critical discussion related to the role of the sensorimotor system in providing joint stability and how these sensorimotor mechanism are altered with orthopedic sport injury.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3896 - RESEARCH SEMINAR SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course is designed to introduce student to critical review of research in sports medicine. Students will critique research problems, methodology, analysis and clinical application of published manuscripts. Course will provide student with an opportunity to present and discuss paradigms and specific research proposals that are being developed for completion of thesis and dissertation requirements.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HRS-MS (MSSPM-SP), HRS-MS (MSSPSC-SP) Restricted to MS-Sports Medicine and MS-Sports Science students only.

HRS 3897 - LAB TECHNIQUES SPORTS MEDICINE 2

Minimum Credits: 3

Maximum Credits: 3

Advance graduate level course into the mechanical, neuromuscular and anatomical bases of human movement. Course is to expand the prerequisite knowledge in basic biomechanics as applied to sports medicine. Students will learn quantitative techniques in kinematics, inverse dynamics, and energetic of human movement. Students will also expand on their basic knowledge of programming so as to be able to process data in an autonomous manner.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3898 - LAB TECHNIQUES SPORTS MEDICINE 1

Minimum Credits: 3

Maximum Credits: 3

Course is designed to provide an overview of clinical research paradigms within sports medicine. Student will be introduced to lab testing techniques related to neuromuscular mechanisms associated with sport and orthopedic injuries and develop lab proficiency with components on neuromuscular profiling. Will provide student with acquire data management and analysis techniques and develop research related writing skills necessary to complete thesis and dissertation requirements as well as provide a basis for future scholarly activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HRS-MS (MSSPM-SP), HRS-MS (MSSPSC-SP), SPRTSCI-MS or SPRTMED-MS Restricted to MS-Sports Medicine and MS-Sports Science students only.

HRS 3998 - CLINICAL TRIALS IN REHABILITATION: INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 2

The clinical trials independent study is for students who want to learn more about the design and analysis of clinical trials in rehabilitation. The

trainee must choose which path of the independent study they will pursue; option 1: an introduction to clinical trials methodology or option 2: in depth study of a particular aspect of clinical trial designs or methods relative to rehabilitation research. If option 1 is chosen, the student must have an idea for a randomized controlled trial even if hypothetical. The trainee will follow a structured set of learning objectives on research questions, justification, methodological procedures, data management, ethics, safety, monitoring, statistical considerations, and dissemination of clinical trials. The student will develop a clinical trial protocol during the independent study, applying the concepts learned during the readings and meetings with the instructor. If option 2 is chosen, each trainee is encouraged to work with an experienced clinical researcher (investigator) who agrees to provide the trainee mentorship. The investigator must be planning a clinical trial, conducting a clinical trial, or have conducted a clinical trial. Trainees are expected to become part of the research team and learn how studies or trials are designed, implemented, managed, and analyzed. Trainees are expected to provide an outline of readings relevant for the independent study objectives and at the end provide summaries of their experiences and reading materials.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad Letter Grade

Course Requirements: PREQ: Option 1: completion of HRS 3002 with a B or better OR Option 2: completion of CLRES 2800 and 2810 and 2820, OR BOST 2062, each with a B or better

HRS 3999 - DOCTORAL INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

Health Policy and Management

HPM 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

The core course is designed to give students an overview of the disciplines and competencies associated with the field of health policy and health care management. Understanding the role of leadership in a public health environment is a unifying theme in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2004 - COMPARATIVE GLOBAL HEALTH SYSTEMS AND POLICY

Minimum Credits: 2

Maximum Credits: 2

This two credit course will focus on an understanding of the structures and processes of the health system and the health policies at its foundation from the perspective of 'true access' as defined by application of the of the eight-factor model of Lovett-Scott and Prather. The complexity of health systems will be manifest by comparative studies of national health systems ranging from low-to high income nations. A secondary emphasis will be placed on a retrospective analysis of the UN Millennium Development Goals and a prospective view of the UN's post-2015 Development Goals as an aspirational framework for advocating community development and sustainability with implications for global health policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2005 - CURRENT ISSUES IN HEALTH LAW

Minimum Credits: 1

Maximum Credits: 1

Current Issues in Health Law is an interdisciplinary course for students of public health and law. In this course, students will be introduced to cutting-edge issues in public health law, health law and policy. The course focuses on developments in health care and public health, particularly as they affect medically under-served populations, with implications for lawyers and public health practitioners as policy makers. It will also introduce students to the variety of settings in which lawyers and public health practitioners are involved in law. Classes will be taught by leading experts in the field as well as student led discussions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2010 - ORGANIZATION STUDIES: THEORY AND APPLICATIONS TO HEALTH CARE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Focus on the understanding and application of fundamental concepts, principles and models associated with organization theory within healthcare, rehabilitation, and long-term care. Content will encompass the traditional foci of organization theory, e.g. Structure and functions, authority relationships, coordination and control processes, as well as constructs associated with related disciplines of organization behavior e.g motivation theory, leadership, etc. Emphasis on real-world applications. Organization design discussed in contemporary organization structures and processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2012 - FINANCIAL MANAGEMENT FOUNDATIONS HEALTH CARE AND PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

Introduction to selected finance and accounting topics of health care professional, supervisor and department head. No previous knowledge of accounting or financial management required. First half emphasis on basic financial accounting concepts to provide organization-level understanding language, concepts, processes and functions of financial management. Second half emphasizes managerial accounting principles and techniques including cost accounting and budgeting. Focus shifts to departmental level financial management and role of supervisor process including budget development and control.

Academic Career: Graduate

Course Component: Lecture

Course Requirements: PROG: PPBHL; PLAN: HPM-MHA or HPM-MPH

HPM 2014 - APPLICATIONS AND ISSUES IN FINANCIAL MANAGEMENT OF HEALTH CARE INSTITUTIONS

Minimum Credits: 3

Maximum Credits: 3

This curriculum is designed to expand on the concepts presented in the financial management foundations for health care and public health course (HPM 2012). The focus of the instruction will be less book-learning and, instead, primarily be comprised of real-life, practical situations faced in today's healthcare industry. Teachings will be a mix of guest speakers from the local area's leaders and the instructor's experiences. The first part of the semester will revolve around understanding what's behind the data contained in an organization's financial statements. The course will also cover alternative revenue opportunities, such as philanthropic initiatives and investment earnings. Once these concepts have been presented, the instruction will change its focus to managing within a healthcare organization concentrating on budgeting, determining how/what programs to invest in or implement, and balance sheet management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2017 - QUANTITATIVE METHODS: DECISION TECHNOLOGIES AND OPERATIONS MANAGEMENT IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course gives an introduction to decision technologies and to the art of successfully using them in practice. Part i: focus on methodologies for optimizing and for predicting the consequences of decisions. Health care applications are considered: resource allocation, scheduling, project management. Part ii: focus on operations management issues in health care. Topics include: forecasting, inventory management and quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Grade Component: H/S/U Basis

Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2025 - HPM PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The student may register for the HPM practicum upon approval of the faculty of the department of health policy and management. The HPM practicum is designed to provide the student already employed in a healthcare organization with exposure to executive management, leadership, and policy-making processes and activities. Typically, the student will complete the practicum at their employing organization.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2028 - MICROECONOMICS APPLIED TO HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to microeconomics, the study of resource allocation with particular emphasis on the role of markets. The course focuses on the competitive model. Examples of the use of economic concepts are drawn primarily from the health and medical care delivery systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2029 - HEALTH MANAGEMENT INFORMATION SYSTEMS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide future health care managers and policy-makers a conceptual framework for understanding and managing an integrated health management information system (HMIS). Primary attention will be given to the overall architecture of HMIS and issues related to health information management. The course focuses on the health care manager's role in the design, implementation and control of an effective HMIS. Instructional methods include lectures by regular faculty and guest resources, class discussion, case analyses and an applied field site study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2037 - ESSAY-HA

Minimum Credits: 1

Maximum Credits: 3

The essay is designed to provide the student with an opportunity to integrate the major components of the health administration learning experience. The student is expected to demonstrate analytical ability and technical proficiency in expository writing.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2049 - HUMAN RESOURCES MANAGEMENT FOR HEALTH CARE AND PUBLIC HEALTH PROFESSIONALS

Minimum Credits: 2

Maximum Credits: 2

This course encompasses both personnel administration and labor relations concepts, processes and issues presented within a broad human resource management perspective. The emphasis of the course is on behavioral implications of legal-regulatory, economic, cultural, and technical forces affecting the management of people in health care organizations viewed as an open system. Perspectives of organization theory and behavior, personnel and labor law will be applied to the analysis of human resource/labor relations problems and effective management and supervisory practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2050 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 1

Maximum Credits: 1

The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2051 - HEALTHCARE APPLICATIONS OF OPERATIONS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The Healthcare Applications of Operations Research course provides students with an understanding of operations research concepts and how to appropriately apply those concepts in healthcare settings. Students will develop skills in analyzing and improving healthcare systems and processes through the application of health systems engineering and operations research techniques. The course will feature a mix of didactic instruction followed by small group breakouts using primarily healthcare-related examples to apply concepts.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2011 or BIOST 204. HSEPH-ACM students only. COREQ: Must be enrolled in IE 2000

HPM 2055 - MANAGING HEALTH PROGRAMS AND PROJECTS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to prepare students to effectively manage health programs and projects. The course is lecture/discussion based, but with ample analytical and written assignments. Extensive use is made of internet resources. A conceptual model of core (strategizing, designing, and leading) and facilitative (communicating, managing quality, marketing, and decision-making) management activities is used to structure the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2063 - THE POLITICS OF HEALTH POLICY

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is designed to provide an understanding of the key political dimensions of the health policy-making process in the United States. The course is designed for students with an interest in health policy, although no previous formal training in policy or politics is required. We will examine the roles of government institutions and political actors both inside and outside government in developing and implementing health policy. Past and present health care policy debates will be used to illustrate the concepts and theories discussed in class. Students will acquire an understanding of the political processes in which health policies are considered, and gain practical experience executing political strategies in the context of health policy campaigns.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2064 - HEALTH POLICY ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

The aims of this course are to provide students with 1) an overview of the U.S. health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2075 - NAVIGATING THE PHYSICIAN-ADMINISTRATOR RELATIONSHIP

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide the student with an introduction to the role of physician administrators in the emerging healthcare matrix based organizational model. Physicians, by virtue of their training and clinical experience, bring a background and orientation to administrative roles that differs significantly from the traditional orientation of the non-physician administrator. This often results in a clash of cultures which if not properly managed can negatively impact organizational efficiency. It is imperative that non-physician administrators develop the skill sets that will facilitate the merging of the physician's primarily clinical culture with the non-physician administrator's more traditional business and operational culture in support of an organization's overall mission. The course will emphasize the physician administrator's approach to C-Suite management and provide the student with exposure to and practical knowledge of the administrative and operational issues which commonly engage physician administrators. This course should prepare the student to function within a C-Suite environment that is led or populated by physicians in either a combined clinical and administrative or purely administrative role. Additionally, the student will gain exposure to the myriad of regulatory, quality/safety and patient centric issues for which physician administrators commonly assume overall responsibility. Commonly, while these issues are championed by the physician administrator, the day to day responsibility for the design and implementation of focused resolution strategies becomes the responsibility of the non-physician administrator. This mandates the development of the ability to prioritize, for strategic planning purposes, and to have sufficient competency with the identification and analysis of relevant metrics and the ability to utilize this type of data to formulate effective action plans. This course focuses upon this skill set and is structured to afford the student the opportunity to develop project specific strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence. The student will also be provided the opportunity to develop resolution strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence.

HPM 2105 - INTRODUCTION TO THE US HEALTHCARE DELIVERY SYSTEM 1

Minimum Credits: 1

Maximum Credits: 1

Introduction to the US Healthcare Delivery System 1 is a required course for first year HPM MHA and MPH students. This course is the first of a two part sequence that will: provide an historic and current overview of basic elements of the US healthcare delivery system, review HPM practical experiences in the context of professional and leadership competencies, and include current perspectives provided by selected guest healthcare executives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (HPM-MHA or HPM-MPH) or Health Services Res and Policy (MS or PHD)

HPM 2106 - HEALTH SYSTEMS LEADERSHIP AND PROFESSIONAL DEVELOPMENT 2

Minimum Credits: 1

Maximum Credits: 1

This is a required spring course for the first year MHA that covers additional elements of us healthcare system. Review in great depth of the management residency process, expectations and opportunities continues in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA or MPH) or Law (LAWMPH-JD)

HPM 2108 - LEADERSHIP

Minimum Credits: 1

Maximum Credits: 1

This is a required course for MPH and MHA students related to the fundamentals of three areas: leadership, which focuses on teamwork, managing and leading people, and communication best practices. The second, professionalism, focuses primarily on principles of etiquette, professional dress, communication best practices and setting oneself apart in the professional setting. Finally, career development principles are covered and this touches on career paths, decision making for career success, and optimizing various work and professional organization experiences for professional growth. The course is primarily interactive in lectures and also requires the students to keep a journal for self-reflection on the topics. A dinner etiquette consultant joins the class as well as an executive from the field to give their perspectives on the three main principles. Accountability, communication, leadership, self-development, and professionalism are the competencies covered in the course.

Grade Component: Grad LG/SU3 Basis

Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2123 - ADVANCED TOPICS IN DECISION AND COST-EFFECTIVE ANALYSIS IN HEALTHCARE

Minimum Credits: 3

Maximum Credits: 3

This is an intermediate/advanced level course on using simulation models in health decision sciences and cost-effectiveness analyses. Simulation models have been used widely in healthcare to address important policy questions, such as cancer screening recommendations and efficient organ allocations among transplant patients. The emphasis of this course is on applications and methods that are particularly applicable to issues of medical decision making and public health. Students will learn how to choose a model that best fits their applications. They will learn how to construct, parameterize, and analyze complex decision models, including calibration and validation. In addition, the student will be introduced to state-of-the art methods in uncertainty analysis, value-of-information analysis, and diagnostic test evaluations. Although advanced topics will be discussed, the focus will not be on programming and mathematical notations will be kept to a minimum. Some familiarity with programming and linear algebra are helpful, but not required. Class sessions will be a combination of lecture format, case discussion, and computer labs with expectations of class participation. It is expected that all students will keep up with the required readings and homework assignments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2124 - AN INTRODUCTION TO SIMULATION MODELING IN PUBLIC HEALTH

Minimum Credits: 2

Maximum Credits: 2

This is an introductory level course on introducing simulation models in public health. Simulation models have been used widely in healthcare to address important policy questions, such as cancer screening recommendations, the spread of social behavior, and the dynamics of infectious disease transmission.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2130 - HEALTH LAW AND ETHICS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce students to the legal and ethical issues which impact the administration and delivery of health services. This course is designed to provide students with the practical knowledge needed to identify legal issues inherent in health care and public health administration and to understand the legal ramifications of administrative and management decisions. Through lecture and class discussion four main subject areas are presented: an introduction to the legal system, legal issues in managing health care organizations, regulating quality of care and public health legal authority. Specific course topics include: sources of law, the court system and legal procedures, professional and institutional liability, governmental regulatory methods, antitrust law, corporate compliance programs, emergency care, and issues concerning informed consent, credentialing of medical professionals, confidentiality of health information, and termination of care, family planning, and public health law.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2131 - PUBLIC HEALTH LAW AND ETHICS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce students to public health law and policy and the legal environment in which public health is practiced. The course is designed to familiarize students with the process by which laws are created, interpreted and enforced, and to introduce them to the substantive areas of law most relevant to the field of public health. Through lecture, case analysis, class discussion and student presentations, five main content areas will be presented. 1) The legal basis for public health practice; 2) the law and core public health functions; 3) the law and controlling and preventing diseases, injuries, and disabilities; 4) public health emergency law; and 5) the ethical issues impacting public health practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2133 - LAW IN PUBLIC HEALTH PRACTICE

Minimum Credits: 2

Maximum Credits: 2

Local health departments play increasingly pivotal roles in the provision of community public health services; however, they also are experiencing diminished funding and reduced workforces. This course is the first of its kind offered at the University of Pittsburgh: a practice-based, collaborative learning experience for public health and law students. Together, students will develop interventions to address an issue identified by the Allegheny county health department as requiring the expertise of both cohorts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Community Element -General Community Impact

HPM 2134 - HEALTH CARE FRAUD, ABUSE, AND COMPLIANCE

Minimum Credits: 2

Maximum Credits: 2

United States health care spending reached \$3.6 trillion in 2018, accounting for 17.7% of the gross domestic product. Government officials have been quoted as saying that up to ten percent of this spending is due to fraud, waste, or abuse. In fiscal year 2019, the federal government won or negotiated \$2.6 billion in health care fraud and abuse judgments and settlements, as well as additional amounts from administrative cases. As one of the most highly regulated industries in the United States, health care entities are required to comply with numerous statutes and regulations, including those related to fraud and abuse. These laws are increasingly complex, thereby exposing health care entities to liability for non-compliance. Thus, individuals involved in the administration and delivery of health care and lawyers who wish to practice health law must be well-versed in the laws and regulations that govern health care fraud, abuse, and compliance, as well as the strategies health care entities employ to address these concerns. In this course, students will explore the major federal civil, administrative, and criminal laws that have been used to combat health care fraud and abuse. These laws include the False Claims Act, the Anti-Kickback Statute, the Physician Self-Referral Law, and the Civil Monetary Penalties Law. Related compliance strategies and the practical compliance issues faced by health care providers will also be covered, including the seven elements of effective compliance programs, conflicts of interest and governance, repayments and disclosures, privacy and security, and corporate integrity agreements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2141 - MANAGERIAL EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Epidemiology is concerned with the measurement of the health of populations and understanding the determinants of that health. It is one of the fundamental disciplines of public health, and provides the basis for much of what we know about health and disease. As a required MHA course managerial epidemiology takes a broad view of the definition of, population, and will include the study of multiple populations of interest, such as the population: cared for in the service area of a hospital, covered by a particular insurance carrier, and larger populations such as a state, nation and the world. The course provides students with the knowledge and skills required to analyze, understand and interpret the data produced by health care organizations and identify the managerial implications of the data by summarizing data appropriately, understand the characteristics of mechanisms (methodologies) that created the data, and know when data observed is a common/expected or rare occurrence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2145 - MARKETING HEALTH SERVICES STRATEGY AND BUSINESS PLANS

Minimum Credits: 3

Maximum Credits: 3

Analysis of concepts vital to the creation of superior competitive marketing planning strategies for health services providers. Emphasis, using principles of epidemiology, on effective measurement of need in service area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2150 - STRATEGIC MANAGEMENT OF HEALTH SERVICE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This "capstone" course for the program stresses the application and integration of knowledge and techniques learned in the context of specific functions and disciplines focuses on identifying strategic issues in complex environments, and formulating realistic responses. The emphasis throughout is on understanding how to improve the major patterns of resource allocation within the organization in order to create lasting value.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPM-MHA; SUBPLAN: MHAMBA-TR

HPM 2205 - INDEPENDENT STUDY-HA

Minimum Credits: 1

Maximum Credits: 3

Students with major interests in specialized areas participate in individual study, research activities, or advanced readings with a specified faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2207 - QUALITY ASSESSMENT AND PATIENT SAFETY

Minimum Credits: 3

Maximum Credits: 3

Examines the definition of quality in healthcare from the perspectives of providers, health plans and consumers. Healthcare standards of JCAHO, NCQA, and HEDIS are reviewed. The role of clinical pathways, outcome measures, technology and the internet are explored as they impact the quality of healthcare.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2214 - FUNDAMENTALS OF HEALTHCARE GOVERNANCE

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide students with a sense of the responsibilities of governing boards of voluntary hospitals and to enable them to interrelate with their boards appropriately and constructively. The substance of interrelationships between governing boards and managements is as varied as are the forms of the organizations to which they relate and the personalities of the individuals involved. Subjective perceptions are often more important than formal rules and effective governance is more art than science. The course provides guidelines to this art.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2215 - COMPUTER METHODS IN DECISION AND COST-EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course expands on topics introduced in cost-effectiveness analysis in health care and in clinical decision analysis and provides additional guidelines for using decision sciences in larger, more complex applications. Topics include modeling clinical processes and systems; discrete event simulation; advanced sensitivity analysis and confidence limits; controversies surrounding the use of cost-effectiveness analyses; and multi attribute utility theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2216 - HEALTH INSURANCE: FINANCING HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

Course examines the concerns and practices of private health insurance; the relationships and activities established by the insurance contracts among the insurer, insured, and providers; the insuring process of marketing, underwriting and pricing; the interrelationships of private and public insurance programs; and the varied government activities related to insurance. The objective of this course is to increase understanding of the access, funding, and insuring issues surrounding health care and to explore the alternate strategies being pursued in response to environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2217 - CLINICAL DECISION ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course provides an introduction to the use of decision sciences in health care. In addition to developing a conceptual understanding of medical decision-making, the course will develop technical skills in decision analysis including the creation/evaluation of decision trees, the use of sensitivity analysis, and the incorporation of specific patient preferences through the use of utility analysis. The advantages and disadvantages of formal mathematical models for the analysis of clinical conditions will be presented. Examples from current medical literature will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2218 - INTEGRATED DELIVERY SYSTEMS NETWORK

Minimum Credits: 2

Maximum Credits: 2

Course will explore three aspects of integrated delivery systems: 1) efforts to develop vertically integrated services 2) integration of physician and hospital services, and 3) integration of payer and providers. Students enrolled in the course will complete an in-depth analysis of a successfully operating integrated system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2220 - COST EFFECTIVENESS ANALYSIS HEALTH CARE

Minimum Credits: 1

Maximum Credits: 1

Provides an introduction to and develops technical skills in the economic evaluation of health care programs. A brief introduction to the economic foundation of cost effectiveness and cost benefit analysis is followed by an examination of the methodologies involved in performing cost effectiveness analyses. Topics include: definitions of cost and benefits, effect of the perspective of the analysis, calculation of cost-effectiveness ratios, performance of sensitivity analysis, discounting of costs and benefits, and discussions of current controversies in conduct of cost-effectiveness analysis.

HPM 2240 - CASE STUDY ANALYSIS AND PRESENTATION IN HEALTHCARE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to foster crucial skills for healthcare leaders including persuasive public speaking, assessment and analysis skills of case studies, as well as the ability to work in teams to solve problems. This course focuses not only on the ability to increase skill in these areas but also develop professionally by presenting in front of healthcare executives and conveying messages effectively and creating buy-in on their proposed solutions to problems. The course is a prep course for the students to also attend the University of Alabama at Birmingham case competition in the winter, a prestigious competition of most mha programs in the country. The course will include three cases, analyzed and prepared by students broken into teams, where after preparation and analysis will present to executives in the community for scoring and judging. The team will be selected based on student performance from the course.

Academic Career: Graduate

Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2700 - SEMINAR IN HEALTH SYSTEMS LEADERSHIP

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will consist of a series of case-based examinations of specific managerial and leadership problems and decisions that have faced local health systems leaders in Western Pennsylvania. Health care reimbursement, licensing and accreditation, and measuring health care quality has become both more complicated and more important as pressures to reduce expenses and improve quality increase. Simultaneously, there has been a steady increase in the number of clinicians who have assumed managerial positions, such as medical directors of clinical units, directors of quality measurement and improvement programs, utilization review and many others, as well as the appearance of clinicians in the "c-suite" of many hospitals and health care organizations. Utilizing adjunct faculty who are currently (or very recently have been) executive leaders in health systems, this course will examine a series of collaborations, problems, conflicts and solutions that developed between health system administrators and clinical leadership in health care organizations in the Western pa area. The mechanics of the course will be a series of cases, based on an actual recent issue in health care management in which the senior adjunct faculty member was involved. Students (individually or in groups) will evaluate the case, prepare a response, and make a short presentation of their 'solution' to the problem to the health system executive and clinical leader involved in that case. An interactive discussion will follow. This is a required course for students in the certificate in health systems leadership and management program, and can be used as an elective course by other students with permission of the instructor.

HPM 2905 - QUASI-EXPERIMENTAL DESIGN FOR HEALTH SERVICES RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students with the research design skills drawn from the social science tradition as applied to the delivery of health services. This course provides a survey of research design, selection and development of research questions, conceptualization, measurement, and data collection/acquisition. The focus is on the application of quasi-experimental and observational approaches to research in applied health care settings.

HPM 3010 - SEMINAR ON ORGANIZATIONAL STUDIES: HEALTHCARE ORGANIZATIONS AND ENVIRONMENTS

Minimum Credits: 3

Maximum Credits: 3

This seminar is intended to facilitate the mastery of conceptual approaches to health care organizations. Through a combination of in-class discussions, self-directed research, written analyses, and oral presentations, students will clarify complex issues and evaluate innovative ideas. The course content will include such topics as organizational design, organizational behavior, and organizational environments. The primary approach to analyzing organizational phenomena will be the theoretical basis of causality, and the level(s) of analysis addressed by the theory.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPM 3064 - HEALTH POLICY ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course is the doctoral version of HPM 2064. Doctoral students have supplemental reading and writing requirements for this course. The aims of this course are to provide students with 1) an overview of the U.S. Health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. Pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 3065 - ADVANCED HEALTH POLICY ANALYSIS: IMPLEMENTATION, EVALUATION, AND TRANSLATION

Minimum Credits: 2

Maximum Credits: 2

This course is designed to build on the principles learned in HPM 3064: health policy analysis. It is an advanced course for doctoral students in health policy and other disciplines with a focus on policy evaluation, translating the results of policy research for policy makers, and challenges to implementing health policies. Students will be expected to examine four current health policy topics in depth by examining the challenges to policy implementation, critiquing large-scale evaluations of health policies, and tracking the influence of research evidence on the policymaking process. The perspectives of policy analysts, practitioners implementing (or responding to) policies, and policy makers will be examined for each of four topics. The course format will include a combination of student-led discussions and formal presentations, lectures by the instructor, and guest

lectures.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPM 3066 - CURRENT TOPICS IN AGING, DISABILITY, AND LONG-TERM SERVICES AND SUPPORTS POLICY

Minimum Credits: 2

Maximum Credits: 2

This course is seminar in policy issues related to aging and disability. The focus will be on financing, organization and delivery of long-term services and supports to the elderly and people with disabilities. Topics include LTSS settings, financing, quality of care, quality of life, and proposals for reform. The COVID-19 pandemic exposed weaknesses in care systems for the elderly and people with disabilities; we will use this issue as a lens through which to understand long-standing challenges and opportunities for reform. Weekly discussions will be student led.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Plan: HSRP-PHD

HPM 3125 - INTERMEDIATE HEALTH ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expand on intermediate microeconomic principles and apply these more sophisticated dynamics to the health care market, both domestic and international. Familiarity with introductory economics and calculus is assumed. Course time will be spent on a combination of lectures and discussions of seminal papers to explore theoretical frameworks and their empirical applications.

Academic Career: Graduate

Course Component: Lecture

HPM 3505 - ADVANCED EMPIRICAL MICROECONOMICS METHODS WITH APPLICATIONS FOR HEALTHCARE RESEARCH

Minimum Credits: 3

Maximum Credits: 3

This course is designed to cover applied econometrics and regression methods at a fairly advanced level. The course reviews the fundamentals of econometrics, summarizes empirical microeconomics methods and discusses the applications for unique issues in healthcare research. This course will provide students with advanced tools necessary to evaluate and conduct empirical research using existing datasets. The focus is on the 'hands-on' use of economic and health data.

Course Requirements: PREQ: STAT 2131 and STAT 2132 and BIOST 2046, PLAN: HSRP-PHD

HPM 3506 - DISSERTATION GRANT WRITING CAPSTONE

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will provide a structured environment in which PhD students in Health Services Research & Policy can prepare competitive dissertation grants and/or fellowship applications to the National Institutes of Health (NIH), the Agency for Healthcare Research and Quality (AHRQ), or other funders to support health services research. The class will include 3 core components: (1) Understanding the major components of dissertation grants and fellowship applications, how these grant applications are scored, and reviewing recent examples of funded grants in health services research from students at Pitt and peer institutions (2) Giving students structured writing "milestones" to facilitate progress on writing their own applications (3) Providing targeted feedback about students' grant applications, focused on "grantsmanship" Weekly written assignments will be structured to pace students through the preparation of a grant. The class will culminate in a 'mock' study section in which students and faculty reviewers critically discuss and score students' grant applications following the format of an NIH study section.

History

HIST 2000 - PROFESSIONALIZATION SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This one hour one-credit course introduces graduate students to the discipline of history and to Pitt's graduate program in history. In addition, the course will enable students to commence work on their MA essays. Our main goals are to gain a better understanding of: a) the principal intellectual strengths of the history department; b) degree requirements such as the MA thesis and the comprehensive exams; c) various methodological approaches, such as social and gender history; d) fundamental analytical skills, such as how to write a historiographical essay, how to use databases, and how to edit your own work; and e) professional issues, such as participation in conferences and academic associations.

HIST 2009 - GRADUATE TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

The History Department's Program for Graduate Training in Pedagogy aims to prepare graduate students for the job market by assuring that they have the most complete qualifications possible, including a rich teaching portfolio, the badge in pedagogy offered by the University, and specialty training provided by the History Department. This program capitalizes upon the expertise of our Department's most experienced classroom instructors as well as the offerings of the Center for Teaching and Learning. It integrates these resources in a way that is tailored to the changing obligations and dynamics of the graduate students first three years in the program. It expects students to integrate pedagogical skills and effectiveness throughout their graduate education, recognizing that the study and practice of pedagogy is best done over an extended period of time and through a variety of methods. In order to reflect this sustained effort in skill-building, students will earn one hour of independent-study credit per year for three years.

HIST 2022 - PUBLIC-FACING HISTORY LABORATORY

Minimum Credits: 3

Maximum Credits: 3

The Public-Facing History Laboratory is a multidisciplinary graduate seminar that provides a space for experimental and collaborative student-led research designed to create historical products and tools for the public. Students from a range of disciplines will learn techniques from oral history, digital history, material history, and videography as they grapple with how to make the past speak to the present. By definition, Public-Facing History Laboratory projects cannot be limited to the academic world. We will deliberately engage with public partners, such as museums, libraries, archives, advocacy groups, non-profits and historical societies, as well as local residents and organizations whose voices have yet to be heard. However, our goal need not be to speak for others. Projects that create toolkits to enable non-academics to create their own histories would be as welcome as polished documentary films, original exhibitions, or definitive oral histories. This is a project-oriented course that requires skill building and collaboration with public-facing outcomes. We will combine well developed pedagogies for oral history with innovations in digital history. Of course, critical reflection on process and product are essential. We will analyze selected cases of public-facing history to gain an understanding of how and why these projects were created as well as the ethical, social, and cultural ramifications these projects have had. Because this course is project-based, we will begin the process of project definition immediately, followed quickly by team building, then connecting with public partners and resources before launching into structured project development, assessment, and delivery. Skill development will occur simultaneously in learning modules that will be required regardless of whether or not they are actually deployed in the student's project this term.

HIST 2046 - HISTORICAL INJUSTICES AND THE POLITICS OF MEMORY

Minimum Credits: 3

Maximum Credits: 3

Is it possible to repair wrongs of the past? How have different societies dealt with traumatic pasts? How are those pasts being memorialized (or de-memorialized) and reenacted in the world of art, entertainment and tourism in ways that potentially reinforce discriminatory practices? How have claims based on the past led to the creation of structures of transitional justice? What are the moral, legal and historical bases for claims for reparations and restitutions? With no intention to exhaust those questions, this seminar aims to discuss the concepts of traumatic pasts and historical injustice through philosophical, legal, political and historical lenses, discussing the role and the moral responsibility of intellectuals in this process, and analyzing and comparing specific cases, such as the Armenian genocide, the Holocaust, the enslavement of Africans, military dictatorships in Latin America, European colonialism in Africa, and the Japanese-American incarceration in the United States.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2047 - PUBLIC NARRATIVES

Minimum Credits: 3

Maximum Credits: 3

Students in this course will examine monuments, cultural centers, and museums as sites of discourse, of inclusion and exclusion, and of nation-building. Using case studies from across North America and exploring both the elements of public history sites as well as the contested histories that informed their creation, this course calls into question the ideas of indigeneity, memory, victimhood, and national identity that inform the sites we consider. Specific questions that will shape students' readings of the following sources include: Who should decide which (and whose) perspectives shape a public history site? Can and should a public history include every perspective on a narrative/event/group of people? How do public history narratives include and exclude certain people in their scope? How do nations use public history to build consensus and unity, but also to justify or expunge wrongdoing?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2130 - GENDER, SEXUALITY, + MASCULINITY IN HISTORICAL PERSPECTIVE

Minimum Credits: 3

Maximum Credits: 3

The seminar will examine Modern European history through the lens of gender, analyzing how gender roles and expectations and the social, economic and political participation of men and women evolved over the course of the 18th to the 20th centuries. We will look at a wide variety of political trends 'nationalism, feminism the welfare state, liberalism, communism and fascism, and at the impact of powerful events such as revolutions and wars on the development of gender roles. The course format is guided discussion of assigned literature. Evaluation based on discussion, presentations and essays.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's St, Russian & East European Studies

HIST 2240 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This graduate course addresses a current topic in gender, sexuality, or women's studies. Topic varies by instructor.

Course Component: Lecture

Grade Component: Grad Letter Grade

HIST 2400 - APPROACHES TO ASIAN HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course approaches Asia not as a geographic place but as a malleable object of study. In exploring "Asia," each week will adopt a different guide. One week will ask about the map of Asia that various Asian religions would create, depending on which religion did the mapping. Another week will ask how various modern pan-Asian movements imagined Asia. What happens to our conception of Asia if we adopt Confucianism as our guide? Or the Chinese writing system, the Devanagari writing system, the Arabic alphabet, or non-Latin alphabets put together? What happens if we think of Asia in terms of its physical environment? How have the ways in which we understand environmental history changed our understanding of what Asia might, or might not, consist of? What about early modern empires, old and new trade networks, or Asian diasporas? In this way, this course will explore a multiplicity of Asias, each of which is created as much by Asia as an object of study as by the position from which we approach it. Classes will consist of two parts. The first will discuss key works of recent scholarship and the second will think critically about primary sources. This will include thinking about what types of primary sources each of the readings has used, where these sources might be found, what they reveal, and what they obscure. But it will also encourage students to think about what other sources, whether textual, visual, quantitative, or otherwise, could provide alternative perspectives. This will include looking for datasets that can be used to think about each approach to Asia systematically. What datasets could help us map languages in Asia? How have scholars used big data to trace Confucian networks? How could data provide a different approach to Asian diasporas. In addition to weekly readings and short response papers, students will write a final paper that will seek to integrate into their own research some of the approaches discussed in the course.

HIST 2440 - ENVIRONMENTAL HISTORY AS WORLD HISTORY: NEW TRENDS

Minimum Credits: 3

Maximum Credits: 3

This reading seminar will provide an introduction to the field of environmental history in world historical perspective. In order to ground our understanding of environmental history, the course will begin with a review of foundational works written since the birth of the field in the mid-1970s. After establishing this intellectual foundation, we will spend the rest of the semester reading more recently published books and articles that focus on the most important themes within the field of environmental history today. We will consider how these themes have been shaped by, and shape, ongoing discussions of globalization and world historical perspectives. We will consider traditional historical categories such as race, class, and gender, but will also examine more global themes including migration, imperialism and colonialism, the spread of epidemic diseases, and global capitalism, among others.

HIST 2509 - WOMEN, GENDER AND BLACK INTERNATIONALISM

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the complex dynamics of black internationalism, focusing on the global visions; transnational activities; and transracial political alliances of people of African descent in the United States and in other parts of the globe. Highlighting the writings, speeches, activism, and overseas travel of a diverse group of men and women, this course employs a gender analysis and moves black women from the margins to the center of the black internationalist story. The seminar examines varied expressions of black internationalism in the United States and abroad from the late 19th century to the Civil Rights-Black Power era. It engages two key questions: how was black women's engagement in internationalism similar to and/or different from their male counterparts? And to what extent did black women merge internationalism with issues of women's rights and/or feminist concerns? Course readings will represent a combination of primary and secondary sources that reflect the geographical breadth of the African Diaspora including Africa, the Americas, and Europe.

HIST 2516 - LATIN AMERICAN REVOLUTIONS

Minimum Credits: 3
Maximum Credits: 3
This course examines the origins, course, and consequences of social revolutions in 20th century Latin America. We begin with the Mexican Revolution (1910-40) to better understand the key role peasants play in promoting revolutionary change. Next, we consider the role of indigenous peoples and mineworkers in the Bolivian Revolution (1952-64). We then turn to the Cuban Revolution of 1959, focusing on the origins and impact of its communist project. We end with the Chilean Revolution (1970-73) and Nicaragua's Sandinista Revolution (1979-90) in order to consider the complicated relationship between revolution and democracy.

HIST 2540 - EUROPEAN EMPIRES IN THE WORLD

Minimum Credits: 3

Maximum Credits: 3

This seminar offers a survey of European empires in comparative perspective. The sequence is loosely chronological, beginning with hegemonic powers from the 16th through 18th centuries, then lingering in the long nineteenth century of European global dominance, and ultimately examining how that age of empires shaped our own world. Geographically, it ranges from Britain to Russia to European colonies in India, Africa, and Latin America. Thematically, the seminar singles out, first and foremost, geopolitics, but also engages topics such as political economy, networks and exchange, warfare, and the development of "modern" categories of knowledge. Although rooted in historical methodology, the seminar also considers questions relevant to political science and anthropology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2640 - GLOBAL APPROACHES TO THE CONCEPT OF MODERNITY

Minimum Credits: 3

Maximum Credits: 3

When did modernity start? Is our society postmodern? Are some societies more modern than others? Should we altogether jettison the word "modernity"? Modernity is not only a word whose use you may one day be asked to justify, it is also a gateway unto debates about whether humanity has progressed, about Western expansion, and about how to compare global societies. The first part of this class will give you an overview of three key debates surrounding the concept of modernity: 1) whether modernity is primarily related to capitalism, to the nation-state system, or to transformations in forms of subjectivity, 2) how the temporal markers of modernity, early modernity, and postmodernity have been debated, and 3) how people in societies on the receiving end of Western expansion wrote about modernity and about its twin concept, tradition. The second part of this class will look at actual uses of the concept of modernity by inviting half a dozen faculty members to discuss how they use modernity in their own work. Although based in the history department, this seminar seeks to foster an inter-disciplinary conversation among students from a broad array of disciplines.

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2699 - POWER AND INEQUALITY IN AMERICAN HISTORY

Minimum Credits: 3

Maximum Credits: 3

"Power and Inequality in American History" is a readings course that covers the full sweep of American history from early Native America to the near-present. The course will concentrate on four themes within the broader rubric of power and inequality: race, class, gender, and capitalism. We will pay special attention to transnational approaches and to the ever-shifting politics of American historical writing. We will read classic and newer works to demonstrate how historical practice has changed over time. The course will serve as a broad survey for graduate students in any department or discipline who study any period or theme in American history.

Minimum Credits: 3

Maximum Credits: 3

Texts and contexts links aspects of the history of ideas (historical, political, religious, scientific, legal and cultural) to the modes of their transmission (objects, concepts, languages; spoken, manuscript and printed texts). This course relates a wide variety of texts to the cultural as well as historical circumstances of their generation, while also introducing methodological issues of more general importance to history as a discipline.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2724 - RETHINKING THE 20TH CENTURY BLACK ATLANTIC: CIRCUITS, SPHERES, SOCIAL MOVEMENTS

Minimum Credits: 3

Maximum Credits: 3

How has the African diaspora shaped the modern world? What role did afro-diasporic intellectuals and social movements play in the post-emancipation Atlantic world? Recent scholarship in multiple disciplines has traced how men and women from the Caribbean, North America, Brazil, West Africa, and beyond remade 20th C. politics and culture on an international as well as national level. Exploring performance, ritual, literature, social movements, and everyday life, we trace evolving ideas of race and nation, ancestry and authenticity, belonging and rights.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: African Studies

HIST 2729 - SEAS, PEOPLES, AND EMPIRES

Minimum Credits: 3

Maximum Credits: 3

This course focuses on interactions between seas, peoples, and empires in historical and comparative contexts. Using maritime history as its point of departure, the course explores the multiple ways in which contact with the sea shaped the lives of peoples and empires across the world. Beginning with Braudel's pioneering regional study of the Mediterranean and the Mediterranean World, the course moves into the Atlantic, Indian, and Pacific Oceans. In each of these contexts, students will consider how the lives of people across social hierarchies were mediated through the interpenetration of empires and maritime regions. The course also considers the extent to which enclosed maritime worlds make sense historically - as the voluminous literature on specific basins suggest that they do - and if so, what distinguished one such world from that of another? Students will explore these lines of inquiry through readings that concentrate predominantly, though not exclusively, on the early modern and modern periods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2736 - WORLD HISTORY METHODS SEMINAR: DIGITAL METHODS FOR SPATIAL ANALYSIS OF THE PAST

Minimum Credits: 3

Maximum Credits: 3

Over the past two to three decades, scholars in the humanities and social sciences have increasingly referred to a "spatial turn" of increasing attention to the place of geography and landscape in understanding society and culture. At the same time, historians have taken up the term spatial history to describe the ways in which they articulate geographical perspectives from their particular disciplinary approach. The reach of approachable desktop GIS and database design platforms, accessible satellite imagery, and online spatial visualization has amplified these trends. This seminar is an introduction to exemplary projects, applied methods, and techniques and tools for spatial analysis of the human past. At the same time, it is an effort to bring together several approaches that are not yet frequently joined. For instance, spatial history theory, method and exemplar are not well integrated, and we will approach the field from all three of these perspectives. Moreover, spatial history is seldom practiced at the global scale. World historians have not yet "put the world in world history." This class combines reading in theory and exemplars, interaction with online projects, and hands-on work with digital archives and tools. By the end of the class, students will understand the state of the art and possible future trajectories of spatial history as a field and its relationship with the field of world history. They will also be able to plan a spatial history project at the global scale, articulate its significance and scholarly contribution, and identify the sources, tools and expertise needed to complete it. Student work will include reading responses and archive and website assessments throughout the semester, and will culminate in a large-scale project prospectus.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2737 - HISTORY FROM BELOW

Minimum Credits: 3

Maximum Credits: 3

"History from Below" - also called Peoples' History and Radical History - has been an important part of the appearance and spectacular growth of social history over the past half century and one of the most important developments in the discipline and profession of history. This course is designed to introduce graduate students in a broad variety of disciplines, departments, and programs to the key theories, methods, and issues in history from below, from its origin in the 1930s, through the New Left of the 1960s and 1970s, to the present. The course will concentrate on four major themes: race, class, gender, and capitalism. We will read classic and newer works to demonstrate how historical practice has changed over time. Special emphasis will also be given to sources, especially archival research, and to writing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2738 - TIME KITCHEN

Minimum Credits: 3

Maximum Credits: 3

This course is a deep exploration of one of the central concepts and materials shaping the work of the historian: time. It is open to students writing about or with the past in any discipline or department. Together, we will bring together the crafts of history and creative writing in order to explore a number of key questions: How does time inhere in materials and material experience? How do material and conceptual technologies and our relations with them produce and constrain our experiences of time? How do particular conceptions of time determine particular kinds of historical experience? How do they constrain us into particular kinds of historical practice? How might thinking time differently create opportunities for us to experience time differently, and thus to expand our craft as storytellers?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2739 - CITY AS TEXT

Minimum Credits: 3

Maximum Credits: 3

The 'City as Text' seminar focuses on analyzing cities as readable realities that can be interpreted, so as to enable students to appreciate the ways in which cities (the built environment) can be understood as physical and symbolic manifestations of those forces (be they ideological, cultural, political, economic, social or technological) that shaped them and were, in turn, shaped by those forces. Following a series of readings on

methodological and conceptual issues, the seminar focuses on case studies from various geographical areas and time periods, although the major focus is on 19th and 20th century cities.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2741 - MIGRATION AND CHALLENGES OF MOBILITY AND BELONGING

Minimum Credits: 3

Maximum Credits: 3

Migration has been a main feature throughout human history. The recent arrival of hundreds of thousands of refugees from the Middle East and Africa in the European Union, and the discussions on the treatment of thousands of people fleeing violence and poverty in Central and South America on the US-Mexican border are only the latest examples of its enduring occurrence. The main emphasis of the course will be on the movement of people, with a regional focus on Europe and with strong comparative views on Asia and the Americas. We will look into changing mobility patterns of the nineteenth and twentieth centuries, and how such changes transformed ways of migration and migrants' identities. Another emphasis will be on the development of the modern state border as an emerging obstacle for migrations and the closely related discussions on inclusion and exclusion. While the course is historical in scope, we will compare past processes with more recent occurrences of migration and the related debates on the issue.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2805 - HISTORY OF SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This course is intended as a general introduction to the historiography on the history of sexuality. Students will familiarize themselves with the most influential works from the previous decades as well as recent significant publications in the field so that students get a sense of the evolution of history of sexuality as a field. The readings are organized thematically. There will be no particular geographical focus so students will have the opportunity to read about history of sexuality in different contexts. Students will also propose themes/readings for the last two sessions so that the course also reflects their own research interests.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

M.A. candidates wishing to do independent reading with a professor on a subject not dealt with in a seminar may take this course, as May M.A. candidates who wish to do one of their papers independently, rather than in a seminar.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HIST 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Candidates with M.A. degrees who are preparing for their Ph.D. Comprehensive examination may register for HIST 2990, a course of independent reading and study with one faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HIST 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

Ph.D. candidates who have passed their comprehensive examination may register for HIST 3000 with their advisor as they undertake their research for the doctoral thesis.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

HIST 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

History 3902 is a special course designed only for one type of student and one type of work. Candidates for the Ph.D. degree who have entered this program with a M.A. from another institution register for HIST 3902 when they undertake individual study with a faculty advisor to complete the research paper required for them.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

History and Phil of Science

HPS 2000 - TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This is a survey course designed specifically for teaching assistants and fellows. The focus will be on practical teaching methods and techniques used in classroom recitations and lectures.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HPS 2101 - PHILOSOPHY OF SCIENCE CORE SEM

Minimum Credits: 3

Maximum Credits: 3

This seminar is an intensive and advanced introduction to some of the main themes and problems in philosophy of science including the nature of evidence, theory comparison, and the theory-observation distinction, the meaning of theoretical terms, scientific explanation and scientific change.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD) or Philosophy (PHD)

HPS 2102 - HISTORY OF SCIENCE 1

Minimum Credits: 3

Maximum Credits: 3

This is the first of two "core" seminars designed to survey the development of scientific thought in Western civilization. In this first seminar, Greek medicine, astronomy, mathematics, biology and physics, its disappearance in the West, its preservation and development in Islam and finally the emergence of modern science in the renaissance, are the main focus.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD)

Course Attributes: West European Studies

HPS 2103 - HISTORY AND PHILOSOPHY OF SCIENCE CORE SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This course will consider the nature of integrated history and philosophy of science. Through key exemplars, we will critically explore different strategies for researching and writing history and philosophy of science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2110 - HISTORIOGRAPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course will consider major trends in the writing of the history of science. Possible topics include intellectual histories of science, the difference between internalist and externalist approaches, and the turns to scientific practice and global and transnational histories.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2115 - HISTORY OF SCIENCE IN GLOBAL CONTEXT

Minimum Credits: 3

Maximum Credits: 3

Science has never been an exclusive practice of any one society or region. In this seminar, we will explore science as a global phenomenon by considering how different practices and traditions of science developed in disparate global contexts, how science travelled and was transformed through global circulation, and how a global and comparative perspective can inform our understandings of science, its history and its philosophy. Regions and time periods considered may vary from offering to offering. Every course offering will include a comparative component which considers how the circulation of materials, texts, technologies, and people have shaped the historical development of science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2116 - COLONIALITY AND THE DECOLONIZATION OF SCIENCE: HISTORY, PHILOSOPHY, RESPONSIBILITIES

Minimum Credits: 3

Maximum Credits: 3

This course explores questions concerned with Western science and its philosophy in light of the decolonization aspirations emerging in contemporary debates about Western colonialism, such as: Is Western science colonialist and racist? Is it possible to recover a genuine indigenous knowledge? What are the epistemological responsibilities of the Western colonialist powers? Can Western scientific modes of thought which, according to some theorists, have been affected by colonialism and racism be decolonized? Is a reparative science possible and desirable? More broadly, should scientists commit to a universal declaration of epistemic responsibility towards coloniality?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2117 - MODERN WOMEN PHILOSOPHERS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on women philosophers in the modern period spanning the late Middle Ages to the nineteenth century. The pedagogy of the seminar is student-centered and promotes intellectual and identity emancipation. Participants are welcome from all academic fields and perspectives. We will debate visibility, oppression, objectification, seclusion, the denial of sexuality, violence, institutional racism, and the role of hierarchies in marking disciplinary boundaries [place holder for participant suggestions]. We will read women scholars who have contributed to women science

studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2118 - HUMAN/ANIMAL IN WESTERN CIVILIZATION

Minimum Credits: 3

Maximum Credits: 3

This seminar explores the liminality that has continually demarcated the frontier between human and animal in the history of Western civilization. We will engage diverse historical-philosophical approaches to the question of what constitutes human as opposed to animal, beginning with ancient Greek philosophy, and tracing contemporary ideas back to their origins in the Graeco-Christian worldview. We will investigate the shifting human/animal frontier during the Renaissance and the scientific revolution of the seventeenth-century, in the Enlightenment and Romanticism, and in contemporary thought. By reconstructing the genesis of human/animal debates, we will transgress the bounds of sectarian divisions between styles of thinking and become more self-conscious about history and philosophy of science as an intellectually multi-faceted form of inquiry open to pluralism and diversity.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2121 - ARISTOTLE'S PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar explores Aristotle's views on the nature of science, such as explanation, causation, demonstration, and necessity. We will study a number of Aristotle's works, including the analytics and physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2122 - ORGANA: ANCIENT AND NEW

Minimum Credits: 3

Maximum Credits: 3

Aristotle's Organon served as foundational orienting texts for much of early Greek, Roman, Arabic, and medieval European natural philosophy. The decline of scholastic Aristotelian orientation in natural science is epitomized in Francis Bacon's pointedly named New Organon. This course compares and contrasts Aristotle's Organon with Bacon's New Organon together with additional scholastic and early modern writings on scientific method.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2123 - THE DEATH OF NATURE

Minimum Credits: 3

Maximum Credits: 3

This course traces the history of the scientific revolution from feminist and ecological perspectives. We will learn how to ask historically and philosophically informed questions from feminist perspectives regarding the emergence of modern science, the transformation of the premodern organic worldview into a mechanistic one (the death of nature), and the mutual relations of science and medicine and magic. We will value feminist perspectives, according to which the mechanistic worldview sanctioned the exploitation of nature, unrestrained commercialism, ecological risk, and the subordination of women. Finally, we will memorize narratives in outline concerning broader historical and philosophical problems raised by feminist history and philosophy in regard to magic, medicine and science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2124 - SCHOLASTICISM

Minimum Credits: 3

Maximum Credits: 3

This seminar explores the intellectual movement known as European Scholasticism, comparing and contrasting its nature with the debates it spawned. Scholasticism inherited ancient Greek philosophy and recast it in the framework of Christianity, shaping a worldview that laid the philosophical foundations of Western civilization. History and philosophy of science, analytic philosophy, and higher education institutions such as the university have their roots in Scholasticism, which spanned the late Middle Ages to the end of the seventeenth century. We investigate the scholastic origins of fundamental philosophical categories such as method, reality, essence, science, causality, demonstration, substance, order, analysis and synthesis.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2125 - EARLY MODERN NATURAL PHILOSOPHIES

Minimum Credits: 3

Maximum Credits: 3

In this seminar we will explore the emergence of early modern natural philosophies. We will examine competing conceptions of the natural world that rose to prominence in the aftermath of the religious reforms of the sixteenth century, the Renaissance, the modern state and the formation of capitalistic economies. Our investigations will be based upon the works of major figures such as Galileo, Descartes and Newton, who referred to their style of inquiry as 'natural philosophical'. What was natural? What was philosophical? How did natural philosophy become mathematical and experimental? In sharp contrast to, or in harmony with medieval scholasticism? Was natural philosophy unified or dis-unified? What was the epistemic status of natural philosophical principles? Questions such as these will torture and nurture our minds during the seminar.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2130 - TELEOLOGY: HISTORY & THEORY

Minimum Credits: 3

Maximum Credits: 3

This course traces debates about the validity, nature and scope of teleological explanation in the study of the living world. Topics may include teleological reasoning in Ancient Greek science and philosophy, in Plato's Phaedo and Timaeus, Aristotle's biological works, the Epicurean criticism and Galen's defense of teleology; the debate between vitalism and mechanism in the 18th century; teleo-mechanism in the 19th century; debates about the place of teleology within evolutionary and developmental biology; and debates about the goal-directedness of development and behavior in the 20th century.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2150 - SCIENTIFIC REPRESENTATION

Minimum Credits: 3

Maximum Credits: 3

It is often claimed that scientific theories, when true, provide a "mirror of nature" in its representations. What counts as scientific representations (mathematical, linguistic, visual, etc.) and in what relationships do they stand to the natural world? Topics that may be considered are the variety of characterizations of the model-world relationship, including forms of similarity, structuralism, perspectivism, fictionalism and inferentialism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2151 - CAUSALITY

Minimum Credits: 3

Maximum Credits: 3

Consideration of various theories of causality and how the theories relate to questions of metaphysics, epistemology and explanation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2152 - REALISM

Minimum Credits: 3

Maximum Credits: 3

What, if anything, makes scientific claims true or false? Is scientific language about anything? If it is, can we know which scientific claims are true, or can we arrange our beliefs to converge towards the truth? If not, what purpose can the enterprise of science serve? This seminar will examine these and related questions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2153 - MODELS AND MODELING IN SCIENCE

Minimum Credits: 3

Maximum Credits: 3

There is increasing interest in representing scientific knowledge by means of models. Some (Suppes, Giere, Vanfraassen) have argued for model theoretic rather than axiomatic formulations in defending a semantic account of theories. For others, models are understood in light of scientific practice, autonomous from theory, or mediating between theory and observation (Morrison, Morgan). This seminar will examine recent philosophical literature (Cartwright and others) on related topics including, the relation of model to theory and to observation, the nature of abstraction, idealization, analogy and isomorphism in modeling, and different types of models including physical and scale models, mathematical models and computer simulations

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2154 - THEORIES OF CONFIRMATION

Minimum Credits: 3

Maximum Credits: 3

Survey of accounts of the confirmation of scientific hypotheses, including both Bayesian and non-Bayesian approaches.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2155 - EXPERIMENT & SCIENTIFIC PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This will be a course on the epistemology of science. An honest way to do epistemology of science is to ask, given a theory and a set of evidence: to what extent does this evidence support this theory? In this course we will not investigate the topography of evidential warrant so directly. We will turn instead to some recent studies of the experimental practices through which particular pieces of evidence emerge as evidence.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2157 - EXPLANATIONS, CAUSES, AND MECHANISMS

Minimum Credits: 3

Maximum Credits: 3

The seminar will examine some recent philosophical writings on these three topics. Specifically, we will analyze the nature of explanations by mechanisms in a variety of domains and fields, including social science, cognitive science, and neuroscience. We shall also consider multi-level

explanations, such as those that relate persons to sub-personal states and environments. Along the way we shall discuss the issues of reduction, emergence, the space of reasons, and the nature of information as used in some sciences. If there is interest and time we may spend a session or two on discovery of mechanisms.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2158 - REDUCTION AND EMERGENCE

Minimum Credits: 3

Maximum Credits: 3

Hierarchical and mereological relationships are often used to describe natural ontological structures. We will consider both the characterization of such structures and reductive and more holistic approaches to their explanation. Topics may include 19th century 'levels of being' and a 20th century revival of emergence with the expansion of computational technologies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2159 - FEMINIST PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

If there is a legitimate role for political values in scientific knowledge production, why should those values be feminist? In this course, we will explore the ways that feminist epistemologists and philosophers of science have characterized a positive role for feminist values in scientific theory and practice. We will ask what this means for traditional accounts of science as objective and value-free, and consider possible consequences of feminist arguments for how science ought to be done, and by whom. In particular, we'll examine feminist critiques of essentialism, biological determinism, and reductionism in science, using examples from sex differences research. We'll then consider how political values might play a role in so-called "good science," focusing on underdetermination and the argument from inductive risk. We will examine arguments about the particular role(s) of feminist values in science by attending to the traditions of feminist empiricism and feminist standpoint theory. We will evaluate the consequences of these arguments for concepts of objectivity, for the structure of scientific communities, and for the authority and trustworthiness of scientific explanation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2160 - SCIENCE AND VALUES

Minimum Credits: 3

Maximum Credits: 3

This course will examine values as they appear in scientific reasoning and practice. It will deal with issues such as the distinction between cognitive and social values, and how values enter into the selection of theories and research projects, and their subsequent applications. It will also take up the ethical assumptions and implications of scientific judgments and policy decisions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2162 - SCIENTIFIC METHODS AND DISCOVERY

Minimum Credits: 3

Maximum Credits: 3

This course will examine the rich history of attempts to describe the methods of science and the processes of scientific discovery. We may consider, seventeenth century defenses of inductivism, nineteenth century attempts to codify Newtonian methods by Herschel, Whewell, and Mill, twentieth century empirico-logical methods, and twenty-first century data-driven and automated methodologies. We will consider whether and how processes of discovery and innovation can be captured by such methodological investigations.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2163 - SCIENTIFIC CHANGE

Minimum Credits: 3
Maximum Credits: 3

The aim of this seminar is to examine the various attempts made by philosophers, historians, cognitive scientists and sociologists to understand the nature of historical changes in the concepts, methods and theories of the natural sciences. We will consider a range of claims regarding the causes of change, the tempo and scale of scientific change, whether scientific change entails incommensurability, and in what ways it may be progressive or degenerative

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2170 - LAWS OF NATURE

Minimum Credits: 3
Maximum Credits: 3

The purpose of this seminar is to critically survey recent accounts of the concept of a law of nature, including the origins of the concept of law, regularity accounts, necessitarian accounts, pragmatic and 'no laws' accounts. Depending upon the interests of participants, more specialized topics concerning the role of laws in the social, biological and physical sciences will be taken up.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2171 - THE UNITY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3

This seminar focuses on the changing conceptions of the structure and unity/disunity of science as a whole in the modern era. The seminar explores how these conceptions relate to questions regarding the proper domain of the sciences, the notion of method, skepticism and foundationalism. We will read fundamental philosophical texts from antiquity through modernity to the logical positivists.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2172 - TECHNOLOGY

Minimum Credits: 3
Maximum Credits: 3

This course will address topics in the history and philosophy of technology. Possible topics may include the relationship between technology and science, the place of design in technology, technological determinism in the history of science, the role of instrumentation in science, and the ethics of various technologies, including issues of bias, fairness, and surveillance

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2175 - SCIENCE AND METAPHYSICS

Minimum Credits: 3
Maximum Credits: 3

The appropriate relationship between science, philosophy of science, and metaphysics has recently been a topic of considerable controversy. This course will selectively examine the changing historical relationship between these fields in the 20th century before turning toward contemporary debates. Our focus will be on both the broad methodological dispute(s) and certain special topics, such as causation, laws of nature, or modality, where one can see this debate play out.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2180 - TOPICS IN THE HISTORY OF PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course deals with selected topics in the history of the philosophy of science. This course may focus on particular individuals, groups, eras, traditions, or themes in the history of the philosophy of science. The contents of the course may vary from one offering to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2190 - METHODS IN HPS

Minimum Credits: 3

Maximum Credits: 3

This course will address different qualitative and quantitative methods that are useful for research in HPS. This may include formal methods, such as game theory, and computational methods, such topic modeling, and methods for oral history and archival research. The contents of the course may vary from one offering to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2222 - DARWIN AND DARWINISM

Minimum Credits: 3

Maximum Credits: 3

Charles Darwin wrote *The Origin of Species* at a time when John Herschel, William Whewell and John Stuart Mill were attempting to articulate the inductive method of Newtonian science. This seminar explores this major revolution in biology in both philosophical and historical context examining both Darwin's texts, notebooks and letters as well as the intellectual, social and political contexts of the 19th century. We will also consider the content and contexts for subsequent developments of Darwinism in the 20th and 21st centuries.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2233 - MODERN EVOLUTIONARY BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Twentieth and twenty-first century evolutionary biology have been fertile ground for historians and philosophers of biology. This seminar will address historical and philosophical issues arising from the theory and practice of modern evolutionary biology. Topics may include the levels of selection debate, adaptationism and its alternatives, the place of chance and drift in evolution, species concepts and speciation processes, the challenges of phylogenetic inference, and the relationships between evolutionary and ethical accounts of altruism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2244 - HISTORY OF GENETICS: MENDEL TO METHYLATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2245 - EUGENICS AND SOCIAL DARWINISM

Minimum Credits: 3

Maximum Credits: 3

This seminar will address efforts to manage human heredity and evolution. We will consider the origins social Darwinism and eugenics in the nineteenth century and its global rise in popularity in the early twentieth century. We will critically examine claims regarding the decline of eugenics in response to its uses in Nazi Germany, and consider late twentieth century efforts of population control, genetic counseling, genetic engineering, and gene editing as forms of eugenics. We will also grapple with issues regarding the ethics of eugenics

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2260 - THE MOLECULARIZATION OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The rise of molecular biology stands as one of the landmarks of twentieth century biology. In this seminar, we will come to terms with the transformative impact of molecular biology on biology in general. After reviewing different approaches to the history of molecular biology, we will consider how concepts, data, practices, and technologies from molecular biology have altered the fields of genetics, evolutionary biology, systematics, and developmental biology. This seminar will address fundamental questions about scientific change, and how it should be characterized and assessed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2269 - OMICS AND DATA IN BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The genome projects of the 1990s transformed biology by drawing together biological research with computer automation and a deluge of new data. This seminar will examine historical and philosophical issues surrounding "data-centric" biology, including changes in scientific practice that move it away from experimentation, the rise of model organisms, the explosion of a variety of -omics approaches, the reinscription of identity in genomic terms, and the ownership, regulation, and control of biological data.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2270 - PHILOSOPHY OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This seminar will consider foundational conceptual issues in biology including the nature and structure of biological explanation, the possibility of laws in biology and the relationship of biology to other sciences, natural kinds and the classification of species, teleology and biological function. In addition we will explore cutting edge topics of robustness in complex biological systems and the challenges raised for causal inference, emergence and multi-level organization as well as the relationship between unity of science and pluralism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2275 - CAUSATION AND EXPLANATION IN BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

What is the character of explanation in biology? We will consider mechanistic vs. difference making approaches to causation as well as the way functional (teleological) and structural (network or systems models) explain evolved, adapted systems. What is the role of biological laws, complexity and robustness in shaping causal understanding and explanation in biology?

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2276 - BIOLOGICAL COMPLEXITY

Minimum Credits: 3

Maximum Credits: 3

Biological systems are multi-level, historically contingent, robust and evolved structures. What are the special complexities of biological organization and dynamics? Some have identified biocomplexity as the reasons there are no laws of biology, others have defended reductionist strategies to explain the complexity, and others have founded new disciplines, like systems biology, as a response to bio complexity. This seminar explores topics related to ontological and methodological challenges for scientific approaches to knowledge of biological systems.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2278 - RACE: HISTORY, BIOLOGY, PSYCHOLOGY & PHILOSOPHY

Minimum Credits: 3

Maximum Credits: 3

This seminar will critically examine the intersection of race and science from a number of different disciplinary perspectives. Topics may include philosophical reflection on the biological reality of race, historical accounts of the rise of modern race concepts and their use in scientific research, and the psychology and ethics of race and racial discourse.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2279 - SCIENCE, SEX, AND SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This seminar will critically investigate scientific theories of biological sex, sex determination, sex difference, and their intersections with scientific approaches to gender and sexuality. We will explore the interplay between science and society with regard to the theories of sex and sexuality that we consider. Specific case studies may include how gender verification criteria were established for the Olympics, how research on sex-gender-sexuality systems has changed over time, and how sex determination research became framed as a balance of male and female factors, on the one hand, and under the control of "master molecules," on the other.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2290 - TOPICS IN HISTORY AND PHILOSOPHY OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course aims to examine a variety of philosophical issues that arise in the biological sciences in historical context. Topics that may be covered, depending on which faculty member is teaching it, include: teleological explanation in biology; the nature of selection and/or levels of selection; debates over the gene concept or the species concept; biological individuality; whether there are 'laws of nature' in the biological sciences; mechanistic explanation; biological classification and systematics; biological kinds and natural kinds; integration of development and evolution; etc.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2330 - HISTORY AND PHILOSOPHY OF NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3

Maximum Credits: 3

This seminar will survey historically important episodes or influential scientists in the neural, behavioral, and cognitive sciences, potentially spanning, ancient and modern approaches to brains and behavior, or focusing more specifically on the context in which particular scientific approaches such as the neuron doctrine or behaviorism gained (or lost) influence within the sciences themselves, and how these scientific developments influenced and were influenced by contemporary philosophy of mind. According to the instructor's preference, this focus could also be directed towards a particular subarea or approach, such as psychophysics, psychometrics, or comparative cognition, towards a method such as electrophysiology, MRI, optogenetics, or lesion studies, or towards a topic such as memory, personality, or rationality.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2353 - PHILOSOPHICAL FOUNDATIONS OF NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3

Maximum Credits: 3

This course will broadly survey several of the main philosophical assumptions underlying current approaches in the neural, behavioral, and cognitive sciences. Students will acquire a comprehensive grasp of issues such as the status of computational and representational theories of mind, the nature of explanation in these sciences, modularity of mind, the significance of embodied and situated theories of cognition, the scientific status of folk-psychological notions such as concepts, beliefs, and consciousness, the relevance of neuroscience to psychology, and vice versa, cognitive ontology, and the possibility of defining cognition.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2354 - ARTIFICIAL INTELLIGENCE AND PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar will consider artificial intelligence and machine learning (AI/ML) from the perspective of philosophy of science. Issues addressed by the course may vary from year to year, but they will require critical engagement with several of the following themes: the role of AI/ML in the historical and philosophical foundations of cognitive science and robotics; AI/ML as models of nervous system function, cognitive capacities, and psychological phenomena such as consciousness; explain ability or transparency of AI/ML systems; ethical and other value issues relating arising in scientific and commercial applications of AI/ML; the prospects for automating scientific discovery and scientific reasoning through AI/ML.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2355 - COGNITIVE AND NEURAL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course will examine the theoretical foundations of neuroscience, with a special focus on systems neuroscience, asking what progress has been made towards a general account of neural processing and discussing obstacles to theoretical unification. Example seminar topics are; the neuron doctrine, information theory and the brain, network science, the Bayesian brain, dynamic representation, understanding intrinsic activity, and cognitive architecture.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2356 - MORALITY AND THE MIND- BRAIN SCIENCES

Minimum Credits: 3

Maximum Credits: 3

This course will examine the issues that the behavioral, cognitive, and brain sciences raise in relation to morality. The topics to be covered may be tilted towards ethical issues in these sciences (aka "neuroethics"), or the role of these sciences in understanding and explaining human morality ("moral psychology"). Topics in neuroethics may include neurological and brain enhancement, ethical and policy issues related to neuroimaging, mind control and "mindreading", and the neuroscience of free will and responsibility as these relate to criminal culpability. Examples of topics in

moral psychology and moral cognition include neurodevelopment and the emergence of personhood, agency and the self, and the neural basis of moral judgements

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2358 - ISSUES PERCEPTION AND CONSCIOUS AGENCY

Minimum Credits: 3

Maximum Credits: 3

This course will examine how developments in the behavioral, cognitive, and brain sciences bear on questions about perception, concepts, reasoning, memory, attention and consciousness, which touch on longstanding issues in philosophy such as epistemology, rationality, agency, selfhood, and subjectivity. This course examines recent work on one or more of these topics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2359 - METHODS, MODELS, AND MEASUREMENTS IN THE NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3

Maximum Credits: 3

Mathematical, and statistical treatments of behavior and cognition were central to the emergence of psychology as scientific discipline in the late 19th C., were a driving force for developments in statistical testing, in measurement theory, and in computational modeling during the 20th C., and continue to be important for ongoing debates about the so-called replication crisis in psychology, and different views about the value of formal, mathematical, and computational models in cognitive science. Other topics of interest to philosophy of science include the interplay between statistical models and experimental design, particularly where the latter rely on methods that generate large amounts of noisy data, such as EEG or fMRI. Bayesian, information theoretic, dynamical, and mechanistic approaches to explanation all have different implications for understanding the relationship between cognition and nervous systems

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2360 - SOCIAL, CULTURAL, AND EVOLUTIONARY APPROACHES TO THE COGNITIVE SCIENCES

Minimum Credits: 3

Maximum Credits: 3

Methodological individualism has been the predominant approach within the cognitive sciences. And while the importance of social, cultural, and evolutionary factors in the explanation of individual behavior has frequently been acknowledged, it is only recently that the degree to which these factors contribute to experimental results has begun to be systematically investigated. Topics to be covered in this course may include whether there are any cognitive universals, evidentiary gaps in evolutionary psychology, anti-individualism and approaches to group cognition, and other topics related to social, cultural, and evolutionary psychology and neuroscience.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2365 - ANIMAL COGNITION

Minimum Credits: 3

Maximum Credits: 3

This course examines current issues in the science of animal cognition. Specific topics may include whether animals have beliefs, semantically meaningful communication, episodic memory, the capacity to track the mental states of others, the capacity for reasoning, causal cognition, emotions, and consciousness. The course may also consider the different roles played by laboratory and field studies of animal behavior in the discussion about the tractability of animal minds as a target of scientific investigation.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2390 - TOPICS IN HISTORY AND PHILOSOPHY OF NEUROSCIENCE AND COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar will examine recent work at the cutting edge of the history and philosophy of neuroscience and cognitive science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2410 - HISTORY AND PHILOSOPHY OF MODERN CALCULUS

Minimum Credits: 3

Maximum Credits: 3

This seminar explores historical, cultural and philosophical questions concerning the history of the calculus. These questions include: Indivisibles quantities vs. infinitesimal quantities, the problem of tangents, fluxions vs. differentials, analysis/synthesis, limits/ integration, discovery/ emergence/ justification in mathematics, the roots of modern mathematics in ancient classical Greek culture, the cultural significance of modern mathematics and the evolution of the disciplinary boundaries that define the structure of science and the way it is taught and practiced in the modern universities. No prerequisites.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2421 - PHILOSOPHY OF MATHEMATICS

Minimum Credits: 3

Maximum Credits: 3

Historical perspectives in philosophy of mathematics, by historical study of philosophical views about mathematics or by philosophical analysis of episodes in the history of mathematics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2422 - PROBABILITY AND STATISTICS

Minimum Credits: 3

Maximum Credits: 3

We shall review the development of the notion that uncertainty and the chaos of chance may be tamed by the application of numbers. We trace its birth in the 17th century as a device for bloodlessly resolving gambling disputes; its growth through statistical theory into one of science's most important analytic tools; and its ascendance in the work of philosophically minded Bayesians as the framework of all belief.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2460 - PHILOSOPHY OF SOCIAL SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar explores issues in social ontology (social objects and social actors), social causation (methodological individualism and meso- and macro-causes), social explanation (mechanisms, middle-range theories, and laws) and methodology (case-study methods, participant-observer methods, laboratory and statistical methods). We will consider unique issues and resources for sciences of society (rational choice theory, normativity and intentionality).

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2490 - TOPICS IN HISTORY AND PHILOSOPHY OF MATHEMATICS

Minimum Credits: 3

Maximum Credits: 3

This seminar will examine recent work at the cutting edge of the history and philosophy of mathematics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2503 - HISTORY OF SCIENCE 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will provide an overview of some of the major developments in the sciences from the second half of the seventeenth century to the first half of the Twentieth Century, considering the physical, chemical, biological, geological and social sciences. It will deal with the work of individuals, of general movements and their institutional and national settings.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD)

HPS 2505 - PHILOSOPHICAL FOUNDATIONS OF COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2509 - SPECIAL TOPICS IN THE HISTORY OF THE PHILOSOPHY OF SCIENCE`

Minimum Credits: 3

Maximum Credits: 3

This course deals with selected special topics in the history of the philosophy of science. It is an intermediate to advanced graduate seminar, usually taken by students in the doctoral program. The exact contents of the course vary from one occasion to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2519 - CONTROVERSY, CRISIS, AND CONSENSUS

Minimum Credits: 3

Grade Component: Grad Letter Grade

HPS 2522 - SPEC TOPICS-HISTORY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This open-platform seminar questions the presence and absence of women in early modern Europe. The seminar is student-centered and promotes

intellectual emancipation. Participants are welcome from all academic fields and perspectives. We will debate women philosophers and the role of visibility, oppression, seclusion, sexuality, violence, institutional racism, colonial prejudice, and gender in marking disciplinary boundaries within philosophy [place holder for participants' suggestions]. Suggested examples of women in early modern philosophy and science include Virginia Galilei, Anne Conway, Maria Gaetana Agnesi, Laura Bassi, Marie-Anne de Roumier-Robert, Émilie du Châtelet, Friederike Charlotte of Brandenburg-Schwedt, Clémence Royer [place holder for participants' suggestions]. Readings, writing and creative projects, punctuated silence, and colorful patterns of resistance are encouraged. Activism and disobedience, diversity, sexual preference, political and linguistic difference, and advocacy are welcome.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2527 - ORGANIZATION, LEVELS AND EMERGENCE

Minimum Credits: 3

Maximum Credits: 3

Biology is a science where both reductive and holistic approaches have frequently been championed. In this seminar we will consider reductive vs emergentist strategies and specific debates including gene-centric vs levels-of-selection accounts of evolution by natural selection, molecular vs systems biology. How can we specify different levels in biology? What types of organization support emergent explanation? Requirements include class participation and presentation, plus the option of 4 short papers or a longer, term paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2530 - READING SEM HIST OF SCIENCE

Minimum Credits: 1

Maximum Credits: 6

This seminar is designed as an intensive reading of one or a small number of texts in the history of science. The text(s) is to be selected by the instructor. Ordinarily this will be a chance to do a directed reading of texts not studied in the department's regular course offerings.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HPS 2531 - FREUD AND PSYCHOANALYSIS

Minimum Credits: 3

Maximum Credits: 3

An intense reading of the works of Freud and selected secondary works. Emphasis will be on psychoanalytic theory rather than therapy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2533 - DESCARTES

Minimum Credits: 3

Maximum Credits: 3

An examination of some of the major works of Descartes. Also a look at his precursors, his culture and his influences.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

HPS 2540 - LOCKE AND LEIBNIZ

Minimum Credits: 3

Maximum Credits: 3

John Locke's Essay Concerning Human Understanding is often considered to be one of the classics of early modern philosophy. It was first published in 1690, though many of Locke's famous doctrines, like the association of ideas were not developed in the original edition of the Essay but were added to later editions (e.g., the association of ideas comes in the 4th edition of the Essay (1700)). The image of Locke grows during the Enlightenment. Yet very quickly, Locke's vision and specific doctrines were disputed. Most notably by G.W. Leibniz in his New Essays Concerning Human Understanding; [Nouveaux essais sur l'entendement humain] (finished in 1704, but suppressed on Locke's death). This is a chapter by chapter rebuttal of Locke's ideas. This seminar will carefully examine these two books, plus a little supplementary material.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2541 - HISTORY OF NEUROSCIENCES

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2555 - ARISTOTLE'S CONCEPT OF NATURAL SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Among theoretical forms of investigation and knowledge, Aristotle distinguishes mathematics, natural science and first philosophy (metaphysics). This seminar explores Aristotle's understanding of the aims, methods and the conceptual and explanatory structure of natural science, and the relationship between it and the other forms of theoretical inquiry.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Medieval & Renaissance Studies, West European Studies

HPS 2559 - THERMODYNAMICS AND STATISTICAL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This course will treat topics in the history and foundations of thermodynamics and statistical mechanics, such as the nature of entropy and irreversibility.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2563 - HISTORY OF MEDICINE

Minimum Credits: 3

Maximum Credits: 3

This course explores recurring themes in the history of medicine from ancient Greece to the present. These themes include the nature of health and disease, the relation between science and medicine, the evolution of clinical medicine, and the development of medical institutions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2571 - GOING MOLECULAR

Minimum Credits: 3

Maximum Credits: 3

The course is given to an examination of the impact of molecular biological methods and concepts upon the biomedical sciences. Has molecular biology become just a bag of tricks with which to carry on "business as usual"? Have these sciences, perhaps, changed their outward appearance but

not their hearts? Consider the neutral theory, the home box, jumping genes, or prions. We take examples like these and explore the nature of the concepts, the degree of discontinuity in their history, and the dependence of these changes on the molecular approach.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2590 - EINSTEIN 1905

Minimum Credits: 3

Maximum Credits: 3

1905 was the year for Einstein the patent examiner. In papers in *Annalen der Physik*, he proposed the special theory of relativity, $e=mc^2$, the molecular account of Brownian motion and that light energy came in quanta. In preparation for the centenary of 1905, we will study these papers which laid the foundations of modern physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2622 - RECENT TOPICS IN PHIL OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

In this seminar we will read and discuss recent works in the philosophy of science. The choice of authors and topics will depend on who is doing the most interesting new work in the field.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2626 - TOPICS IN PHILOSOPHY OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

The course will examine some of the fascinating problems to which the modern physical theories of quantum mechanics and relativity have given rise. No previous formal training in physics or mathematics will be presupposed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2627 - PHILOSOPHY OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

This seminar investigates philosophical issues in the foundations of fundamental theories of physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2634 - TOPICS IN PHILOSOPHY OF COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This class focuses on advanced topics that have been recently debated in the philosophy of cognitive science. Students will acquire an in-depth understanding of these debates.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2643 - PHILOSOPHY OF CLIMATE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course will explore philosophical questions about climate science. It will begin with central epistemological questions that arise in distinctive ways for climate science: e.g. questions concerning evidence in the historical sciences; the use of simplifying models of complex systems; and the interpretation of computer simulations. It will then broaden the picture by considering the interplay between perspectives emerging from difference sciences (e.g. ecology vs physics) and different varieties of expertise and practical knowledge; the place(s) and problems of values in climate science; choices concerning geoengineering and adaptation research; and scientific thinking about existential risk.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2663 - PERCEPTION

Minimum Credits: 3

Maximum Credits: 3

An in-depth analysis of contemporary theoretical and experimental issues in perception.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2665 - PHILOSOPHY OF MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2667 - PHILOSOPHY OF QUANTUM MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This seminar provides an introduction to philosophical problems of quantum theory including variously the EPR paper, bell's inequalities, the measurement problem and quantum logic.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2668 - TOPICS IN PHILOSOPHY OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

In this seminar we will read both philosophy and biology concerning issues that have led to the development of a new discipline 'systems biology.' Robustness is a system level property of central significance for systems biology. Robustness can refer to the character of a theory or explanation, the evidence for a theory or explanation or a feature of phenomena themselves. In this course it is the latter 'robustness as a feature of complex phenomena' that we will examine. Kitano (2002, science) suggests that robustness occurs in 'adaptation, which denotes the ability to cope with environmental changes; parameter insensitivity, which indicates a system's relative insensitivity to specific kinetic parameters; and graceful degradation, which reflects the characteristic slow degradation of a system's functions after damage, rather than catastrophic failure.' How does a system maintain robustness, how does robustness evolve? How does robustness analysis affect our understanding of causality in flexible networks, modularity, and feedback control, as well as the empirical access to this form of dynamic stability? We will explore a wide variety of examples from bacterial chemotaxis to brain reorganization. In addition to robustness, biological systems also display multi-level organization, and are subject to multi-level explanations. We will consider alternative views about the relationships among the levels, and how experimental and explanatory strategies manage the multiple levels. For example, we will investigate if system-level properties are emergent and whether causal mechanisms can be multi-level.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2673 - STUDIES IN ARISTOTLE

Minimum Credits: 3

Maximum Credits: 3

Study of selected Aristotelian texts and topics (readings in Greek). Course may be repeated for credit if the material covered is different.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

HPS 2680 - READING SEM IN PHIL OF SCIENCE

Minimum Credits: 1

Maximum Credits: 6

Selected texts in the philosophy of science.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HPS 2681 - AUTHORITY: POLITICAL & SCIENTIFIC

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2687 - THE EPISTEMOLOGY OF EXPERIMENTAL PRACTICES

Minimum Credits: 3

Maximum Credits: 3

Observation and experimentation have long been taken as central to the legitimacy of scientific claims. This seminar examines the assumptions and inferences involved in reasoning about experimental results.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2690 - HISTORY AND PHIL OF PSYCHOLOGY

Minimum Credits: 3

Maximum Credits: 3

Examination of historical and/or philosophical texts dealing with the nature of psychology and its theories, experiments and methodology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2705 - HISTORY OF MEDICINE

Minimum Credits: 3

Maximum Credits: 3

This course explores recurring themes in the history of medicine from ancient Greece to the present. These themes include the nature of health and

disease, the relation between science and medicine, the evolution of clinical medicine, and the development of medical institutions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2710 - HISTORY OF PSYCHIATRY

Minimum Credits: 3

Maximum Credits: 3

This seminar course will study the history of psychiatry using an integrated history and philosophy of science approach. We will explore ideas and practices in psychiatric research and clinical psychiatry. Topics may include: psychiatry and the asylum, mental disorder and normality, Freudian psychoanalysis, biological psychiatry, the DSM, and the relationship between psychiatry and medicine.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2725 - HISTORY OF PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

This seminar course will study the history of public health science and practice. Topics may include: public health and epidemics, public health and noncommunicable diseases, the history of epidemiology in relation to public health, public health in particular regional contexts, global public health, and public health and colonialism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2730 - PHILOSOPHY OF MEDICINE

Minimum Credits: 3

Maximum Credits: 3

This seminar course provides a graduate level introduction to the philosophy of medicine. We will explore both classic and recent work. In line with the orientation of the field, we will examine metaphysical/conceptual and epistemic questions in medicine and medical research rather than the kinds of questions traditionally asked in the field of bioethics. Also following the contemporary focus of philosophy of medicine, readings are situated in the philosophy of science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2740 - PHILOSOPHY OF PSYCHIATRY

Minimum Credits: 3

Maximum Credits: 3

This course examines conceptual, methodological, and some historical issues in psychiatry. General analyses of psychiatric disorders and classifications, and their reliability and validity, will lead to a consideration of the DSM and ICD. The function of etiological, reductive, and mechanical dimensions (including genetic and neuroimaging research) will be discussed. Historical topics include the contrast between and transition from psychoanalytical, narrative approaches to the rise of bio-chemical psychiatry. Extended consideration of schizophrenia and depressive disorder will be course themes. The seminar closes with a discussion of legal and ethical issues in psychiatry.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2750 - PHILOSOPHY OF EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This seminar course provides a graduate level introduction to the philosophy of epidemiology, the study of the distribution and determinants of health and disease in populations. Topics may include: epidemiological causal inference, statistics in epidemiology, epidemiological study design, theory in epidemiology, prediction and explanation in epidemiology, the social determinants of health, race in epidemiology, population health, and public health policy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2785 - PHILOSOPHY OF MIND AND MEDICINE

Minimum Credits: 3

Maximum Credits: 3

This seminar course will explore problems at the intersection of philosophy of mind and philosophy of medicine. Topics may include: abnormal states of consciousness, death, medical disorders and identity, empathy and the explanatory gap, pain, mental disorder versus neurological disorder, brain imaging, and free will and medical disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2790 - TOPICS IN HISTORY AND PHILOSOPHY OF MEDICINE

Minimum Credits: 3

Maximum Credits: 3

This seminar will examine recent work at the cutting edge of the history and philosophy of medicine.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2810 - GALILEO AND ALL THAT

Minimum Credits: 3

Maximum Credits: 3

This seminar focuses on Galileo's contributions to the cultural revolution of the seventeenth century, including the astronomical discoveries, the physics of falling bodies, the philosophy of nature, the harmony of religion and science. The seminar approaches Galileo in the broader humanistic, philosophical, mathematical and religious context of early modern Europe. His ingenious experiments are really or virtually re-enacted in order to illuminate his creative pathways towards. The seminar traces Galileo's lasting legacy in the controversies that shaped the history and philosophy of modern science.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2812 - NEWTON

Minimum Credits: 3

Maximum Credits: 3

This seminar will consider the establishment of dynamical astronomy with the publication of Newton's principia in 1687. The development and significance of Newton's early thought will be analyzed in relation to his mature "system of the world". Some aspects of the work of Newton's principal predecessors--especially Descartes and Kepler--will also be considered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2813 - HELMHOLTZ

Minimum Credits: 3

Maximum Credits: 3

Hermann von Helmholtz (1821-1894) played a major role in the history of science and philosophy. This seminar will explore Helmholtz's fundamental contributions especially to the neurophysiology of hearing (including topics such as perception of sound, frequency analysis, harmony) and vision (including topics such as color and depth perception). We will examine Helmholtz's influential idea of perception as unconscious inference and we will also consider his work in physics and the popularization of science. We will place Helmholtz in the intellectual and cultural context of the nineteenth century, investigate the debates that informed his philosophy of science, and look at the lasting influence that he had on twentieth-century science and philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2814 - EINSTEIN

Minimum Credits: 3

Maximum Credits: 3

This seminar covers Einstein's work in physics and his philosophical entanglements, with topics selected according to the interests of the seminar participants. Suitable topics include the papers of Einstein's annus mirabilis of 1905 (the special theory of relativity, $E=mc^2$, the molecular account of Brownian motion and that light energy came in quanta), his discovery of general relativity and its development into modern cosmology and the theory of gravitational waves; his pursuit of a unified field theory; and his more general pronouncements in philosophy of science

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2815 - HISTORY OF OLD QUANTUM THEORY

Minimum Credits: 3

Maximum Credits: 3

This course surveys the development of the old quantum theory from its origins in Planck's work on black body radiation, through Bohr's atomic model to the emergence of modern quantum theory in the mid 1920's.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2816 - THE MAKING OF MODERN QUANTUM THEORY

Minimum Credits: 3

Maximum Credits: 3

This course covers the major historical developments in modern quantum mechanics from the mid 1920's to the 1960's. Topics may include: Heisenberg's matrix mechanics, Schrodinger's wave mechanics, their theoretical equivalence, von Neumann's axiomatization, the discovery of spin, evidence for wave-particle duality, the rise of the Copenhagen interpretation, the incorporation of group theory representations, quantum logic, the EPR paper, Bell's theorem, and the Everett interpretation.

Academic Career: Graduate

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2820 - PHILOSOPHY OF SPACETIME AND SYMMETRY

Minimum Credits: 3

Maximum Credits: 3

This course explores the interpretation of spacetime theories (past, present, and perhaps future) and the role of symmetries (spacetime and otherwise) in the development and interpretation of physical theories. Topics covered may include: the debate over the reality of space and spacetime (that is, the debate between relationism and substantivalism); the relation between geometry, coordinate systems and reference frames; the modal, conceptual, and epistemic status of symmetry transformations; the relation between spacetime geometry and gravity. (Not all topics will be covered in all years.)

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2821 - GENERAL RELATIVITY AND GRAVITATION

Minimum Credits: 3

Maximum Credits: 3

Over a period of eight years, 1907 to 1915, working almost single handedly, Einstein made the greatest discovery of his scientific life, the general theory of relativity. We have a detailed record of his process of discovery in both published papers and private notebooks. After the initial excitement, work in general relativity stagnated until the 1960s when a new cohort of mathematical physicists revived work in general relativity with geometrical methods and celebrated singularity theorems. Modern topics include the physics of black holes and gravitational waves

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2825 - PHILOSOPHY OF QUANTUM THEORY

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the philosophical problems of quantum theory. Topics covered may include: the quantum measurement problem; non-locality, EPR, and Bell's inequality; the no-go results of Bell/Kochen/Specker, Gleason, and PBR; alternatives to quantum mechanics (such as dynamical-collapse theories and the de Broglie-Bohm theory); the Everett (many-worlds) interpretation and the role of decoherence; operationalist and psi-epistemic approaches to quantum theory. (Not all topics will be covered in all years.)

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2826 - PHILOSOPHY OF QUANTUM FIELD THEORY

Minimum Credits: 3

Maximum Credits: 3

This course covers quantum field theory (QFT) and its applications in particle physics and beyond. Topics covered will vary but may include: algebraic and Lagrangian formulations of QFT; the Interpretation of effective field theories; the relation between particles and fields; spontaneous symmetry breaking; the gauge principle.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2828 - PHILOSOPHY OF QUANTUM GRAVITY

Minimum Credits: 3

Maximum Credits: 3

This course covers the conceptual and foundational issues that arise in attempting to create a quantum theory of gravity. Topics covered will vary but may include: canonical quantum gravity and the problem of time; string theory; the AdS/CFT correspondence; black hole thermodynamics; the emergence of spacetime.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2830 - PHILOSOPHY OF THERMODYNAMICS AND STATISTICAL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This course covers foundational issues in thermodynamics and statistical mechanics. Topics covered may include: the interpretation of the Laws of Thermodynamics, and of central concepts in thermodynamics like equilibrium and reversibility; the Boltzmannian and Gibbsian approaches to statistical mechanics; the relation between thermodynamics and statistical mechanics; the origin of time-asymmetry and irreversibility; Maxwell's demon. (Not all topics will be covered in all years.)

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2840 - PHILOSOPHY OF COSMOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course covers the philosophical challenges posed by modern cosmology. Topics covered will vary but may include: the development of the modern (Big Bang) synthesis; dark matter; dark energy and the cosmological constant problem; the distinctive epistemic and methodological problems thrown up by cosmology; inflation, the horizon problem, and the flatness problem; cosmological fine-tuning.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2844 - MODERN COSMOLOGY

Minimum Credits: 3

Maximum Credits: 3

In 1917 Einstein asked his new general theory of relativity how the universe might look on the largest scale. So was born the modern tradition in cosmology--rich in wild speculation, technical physics and controversy. We shall review its history and philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2850 - PHILOSOPHY OF GAUGE THEORY

Minimum Credits: 3

Maximum Credits: 3

This course studies conceptual and foundational issues in gauge theories. Topics may include: the geometrization of gauge theory, surplus structure and gauge freedom, the Aharonov-Bohm effect, the holonomy interpretation, locality, gauge symmetries and the interpretation of associated physical quantities.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2865 - MATHEMATICS FOR FOUNDATIONS OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students specializing in philosophy of physics who would like additional training in the mathematical aspects of foundations of physics. The course will survey mathematical objects most frequently used in foundations of physics (e.g. manifolds, vector spaces, operator algebras, fiber bundles, etc.), together with the philosophical debates that rely heavily upon the relevant areas of mathematics. The approach will be project based: students will choose a topic of philosophical interest and sequentially develop the appropriate mathematical skillset for their chosen project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2880 - HISTORY AND PHILOSOPHY OF MUSICAL SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar explores historical and philosophical questions concerning music as a form of knowledge in the history of Western civilization (with some ethno-musicological excursions relatively beyond). These questions include (but are not limited to): The emergence of music theory in antiquity; the role of music in the scientific revolution of the seventeenth century; the relation between music as a science and musical aesthetics; music and mathematics; music and cognition in humans and animals; the foundations of modern psychoacoustics; the nature of harmony. We will engage in both theoretical and empirical inquiry and design experiments in the domain of sound and music perception and esthetics

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2890 - TOPICS IN HISTORY AND PHILOSOPHY OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

This is a survey course for the study of any collection of topics in the history and philosophy of physics, to be determined on the basis of student and faculty interest.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2900 - PRE MA DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides credit for supervised research on an approved master's thesis topic.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HPS 2910 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

This is an opportunity for a student and instructor to determine a topic in history and/or philosophy of science which is of special interest. Reading assignments are established by individual instructors.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HPS 2980 - COMPREHENSIVE RESEARCH PAPER

Minimum Credits: 3

Maximum Credits: 3

Students may enroll for up to 3 credit hours in any term immediately preceding or overlapping with submission of the final paper(s) for the Comprehensive Requirement.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2999 - PROSPECTUS RESEARCH

Minimum Credits: 1

Maximum Credits: 6

This course is intended for students who are preparing for their prospectus meeting.

Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad SN Basis

HPS 3000 - DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 12

Students work on a dissertation topic guided by dissertation director.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HPS 3900 - ADVANCED DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

Topics to be selected by students in consultation with faculty advisors.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

History of Art & Architecture

HAA 2000 - RESEARCH AND THESIS MA DEGREE

Minimum Credits: 1

Maximum Credits: 6

Independent research for m. A. Paper.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2005 - METHODS RESEARCH AND SCHOLARSHIP

Minimum Credits: 3

Maximum Credits: 3

This is the introductory seminar for entering graduate students in the history of art and architecture. As such it has two goals; 1) to explore, through use, the bibliography of reference works central to the history of art; 2) to consider the intellectual history of the discipline, with the various approaches to the work of art revealed in art historical literature.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2006 - ART HISTORY WRITING PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

This graduate seminar will give students the opportunity to think critically about the process of art-historical writing and to get constructive, detailed feedback on their own written work.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2007 - HISTORIOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This class examines the history of analytic approaches to art objects, doing so with an eye to the department's array of research constellations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2008 - CONSTELLATIONS OF ART HISTORY

Minimum Credits: 3

This is a graduate reading course tied to HAA's constellations. Readings will address one of the constellations from multiple perspectives. In lieu of a research paper there will be a series of shorter response papers that vary in format and goals, from brief "blog" entries on a particular reading to longer essays that compare several readings to exploratory papers that apply readings to the interpretation of specific works of art.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HAA 2009 - PROSEMINAR FOR GRADUATE STUDIES IN ART HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course aims to familiarize students with the professional landscape they will confront as art historians, and to give them the tools they need to succeed as they do so. Topics covered will concern such subjects as writing grant applications, turning seminar papers into publishable essays, composing successful research statements, working in the digital humanities, and exploring the range of professional outcomes and career paths available to students in the 21st century.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2010 - APPROACHES TO ART HISTORY

Minimum Credits: 3

Maximum Credits: 3

HAA 2010 is the capstone research seminar required of all HAA majors and is an official w-course. Students in this class will conduct extensive readings on a special topic devised by the course instructor. Each student in the class will be required to produce a substantive research paper under the guidance of the instructor. Students will work to master the skills that are fundamental to the discipline and broader arts related professions: critical thinking, research, and written and oral communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HAA 2011 - PITTSBURGH NEIGHBORHOODS

Minimum Credits: 3

Maximum Credits: 3

Pittsburgh Neighborhoods is a course where students learn about people, culture, history, and current issues that confront under-represented communities and neighborhoods in Pittsburgh. Throughout the semester, with direction from the instructor, students learn about and employ ways to see, document, and interpret a neighborhood by engaging the built environment, historical documents, and community members in storytelling. They approach the built environment as a cultural product, explore place as a fusion of material culture and human perceptions and practices, and frame questions of power around the politics of the built environment. In this class, we will employ methods that help us transcend the realm of the visual and explore the experiential and ephemeral. We will learn to observe with all our senses, listen to community members, and document life when in the field, and excavate and explore visual and textual records when in the archive. In doing so, we will adopt theories and methodologies from multiple fields, including urban/architectural history, cultural geography, anthropology, public history, and material culture studies.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2019 - CURATORIAL DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3

This museum studies course draws on the University Art Gallery collection to develop an exhibition that will be realized in the Fall by students in the Exhibition Presentation Seminar. Within a defined thematic or collection-area focus, students will survey the holdings of the gallery to develop an exhibition concept and conduct in-depth research into a single work of art to contribute to a catalogue for the exhibition. Students will explore the key texts related to the subject of the exhibition and identify potential loans to complement its storyline.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2021 - INSIDE THE MUSEUM

Minimum Credits: 3
Maximum Credits: 3

This course will enable students, particularly those who are pursuing the Museum Studies Minor, to gain behind-the-scenes knowledge of museum practices with sessions taught on location at the various Carnegie Museums of Pittsburgh. The course will provide students interested in museum careers with a rich variety of hands-on, practical, and experience-based learning in addition to theoretical exploration and connect students to professionals working in these institutions. Specific topics will vary depending on the opportunities provided by initiatives and projects that are underway at the time the class is offered.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2022 - EXHIBITION PRESENTATION

Minimum Credits: 3
Maximum Credits: 3

This course teaches museum practice through practical experience with the permanent collection and with special exhibitions. Students will help in all aspects of exhibitions, from writing labels and/or catalogue copy, deciding how to best display the works, participating in the actual installation of exhibitions and planning related events such as tours.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2025 - HISTORY AND ETHICS OF COLLECTING

Minimum Credits: 3

This course will critically examine the history of public and private collecting practices, the cultural and scholarly rationales behind collecting, and the legal and ethical challenges that collections face. Case studies will include the British museum and the Louvre, Pittsburgh's private collectors Frick and Mellon, the fate of art in Europe during World War II, the antiquities trade, and ethnographic collections. Using these and other examples, we will evaluate the arguments for and against universal art museums, the repatriation of works to source nations or original owners, and the protection of cultural heritage during times of conflict.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2026 - EXHIBITIONS: FROM WORLD'S FAIRS TO GLOBAL BIENNIALS

Minimum Credits: 3

This course surveys the Western origins of museums, world's fairs, and biennials in the 19th century and traces the increasingly global development of exhibitions of visual and material culture up through the present day. Our focus in this long and varied history will be on those shows that have

sought, not without controversy, to shape viewers' knowledge of the past, while also structuring their sense of self and relationship to others in national, international, universal, and/or global terms. We'll critically assess the motivations behind these exhibitions and the changing "world picture" each presented in relation to modernizing and globalizing tendencies of the past two centuries. We'll also take a close look not only at what these shows presented, but also how and for what purpose(s) our chosen exhibitions were organized. Whose worldview, ideology, and/or political interests did they serve? How in each case did the very arrangement of objects and the physical context of their presentation seek to articulate those interests? What sort of public did they envision and attempt to create? We'll also address how and to what extent the achievements and shortcomings of earlier exhibitions have informed the character of subsequent shows down to today. Throughout the course, we'll measure our understanding of this history against local examples of Pittsburgh's rich and extensive museum culture. Written assignments will involve students in exploring these and other local installations as we assess what role museums can and should continue to play in fostering understanding of ourselves and others now and into the future.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2027 - HERITAGE SITES

Minimum Credits: 3

Maximum Credits: 3

According to the United Nations Educational, Scientific and Cultural Organization (UNESCO), heritage sites encompass sites of "outstanding universal value from the historical, aesthetic, ethnological or anthropological point of view." This course will develop the fundamental themes, ideas, and case studies required to analyze, understand and critically engage with heritage sites in a comparative and global perspective. We will begin charting the European origins of the western understandings of heritage and exploring the development of national and international heritage legislation, charters and organizations. The course will then explore emerging trends that challenge Eurocentric notions of heritage: from critical heritage studies to approaches that specifically focus on minorities, women, and indigenous groups, and the broader issues of human rights and development. Starting from the second third of the semester, case studies from different geographic areas, time periods and themes will be discussed: heritage sites and national identity; heritage sites and tourism; heritage sites and sustainable development; threats to heritage; negative and difficult heritage; heritage and human rights; heritage futures. Finally, we will discuss the increasing interest in bottom-up initiatives that focus on grassroots, people-centered approaches to foster community engagement and participation in the management, programming and interpretation of heritage.

HAA 2040 - INFORMATION ECOSYSTEMS: INTERDISCIPLINARY USES OF DIGITAL METHODS

Minimum Credits: 3

This advanced graduate course unites students from widely varying disciplines to share the work of learning new disciplines. It explores humanities, social and natural sciences. Specific course objectives are: (1) to introduce students to a wide range of disciplines, theories, and methods; (2) to enable individual students to develop substantial strength in a new discipline and method of their choice; (3) to emphasize the historical discipline

and the factor of time; and (4) to compare and contrast the various disciplines in topic, framework, data, method, analysis, and philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HAA 2045 - DIGITAL STUDIES AND METHODS: SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This seminar addresses the relationships between digital computing and the humanities and allied social sciences, both as a subject of both historical interest and contemporary practical concern. We engage in ongoing theoretical discussions but also fully engage with what it takes to implement interpretive research in the digital environment. Students leave this class having gained a personally significant understanding of current debates in the field of digitally-oriented interpretive research as well as having built a digital project of their own. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2051 - WORLD ART: CONTACT AND CONFLICT

Minimum Credits: 3

Maximum Credits: 3

This course, an advanced undergraduate seminar, is a counterpart to the introductory core course Introduction to World Art and invites students to think more critically about 'World Art' as a disciplinary enterprise as it emerged in the last several decades with the 'global turn', post-colonialism, and a call for art history to be more inclusive. Students will be introduced to key terms that are employed by this discourse (contact zones, planetarity, world-picturing, cosmopolitanism). The course works through these ideas by focusing its attention on specific sites and art objects, case studies that explicitly circulate within or take as their subject the meeting point of different cultures and groups. First and foremost, this course regards 'the contact zone' as a messy and complicated place. To inhabit the earth as a human being, people encounter, perceive, collaborate with and often resist others. Through the spaces and material objects humans create, boundaries are established and individuals and communities are defined and circumscribed. Art objects and constructed spaces not only arise from but define the contact point of individuals or groups occupying different worlds. By studying these works as a space of encounter, students will learn that boundaries between people are porous, with cultural contact a zone of potentially productive collaboration but also power inequity and strife. How do works of art and built spaces incite, mediate, or instantiate such strife? How have people traditionally perceived to reside at the periphery employed artistic expression or rhetorical strategies to subvert existing power structures (the center) and formulate identity? Students who have taken the HAA 0010 Introductory version of this course are encouraged to take this more advanced version, but it is not necessary to have had HAA 0010 to enroll in HAA 1050

HAA 2103 - RELIGIONS OF ANCIENT EGYPT

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to ancient Egyptian religious thought and practices with its massive temples, multitude of gods and goddesses, and fascinating funeral rites. The course includes a group project to design a hypothetical Egyptian exhibit for a museum and sessions at the Carnegie museum of natural history.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2107 - JERUSALEM HISTORY AND IMAGINATION

Minimum Credits: 3

Maximum Credits: 3

Jerusalem was and remains both a magnet for cultic devotion and an epicenter of religious conflict. This course examines the political, religious, and cultural history of Jerusalem, focusing primarily on Jerusalem as a concrete and conceptual phenomenon in the premodern period. Beginning our story in the bronze age, we will explore a wide range of sources-literary, archaeological, and iconographical-that bear witness to the remarkable transformation of a small, backwater village in the hills of Canaan to a sacred center for millions of Jews, Christians, and Muslims today. We will study the political, physical, and conceptual development of this urban space through its multiple destructions and reconstructions, considering the emergence of Jerusalem as a sacred space, an apocalyptic space, and a contested space.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2111 - GREEK ART

Minimum Credits: 3

Maximum Credits: 3

The study of Greek art begins ca. 3000 B.C. In the so-called "age of bronze" and traditionally ends in 30 B.C. With the completion of the roman conquest of the eastern Mediterranean. The course will trace the development of architecture, sculpture and painting in mainland Greece and to a lesser extent in the Greek colonies of Asia minor and Italy, emphasizing the changes in style and taste which took place over this period.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2131 - ROMAN ART

Minimum Credits: 3

Maximum Credits: 3

Roman art served as the funnel through which the principles of Greek art passed into European culture, but the principles were transformed in the process of transmission. The course will trace the beginnings and subsequent development of the arts of painting, sculpture, and architecture in Italy from the period of the kings to the middle years of the empire (ca. 150 A.D.).

Maximum Credits: Medieval & Renaissance Studies

Special topics in medieval art.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: Medieval & Renaissance Studies

HAA 2232 - PAGANS AND CHRISTIANS: THE EARLY MIDDLE AGES

Minimum Credits: 3

Maximum Credits: 3

This course examines the art of the early middle ages, paying particular attention to the slow disintegration of the roman empire, the rapid rise of Christianity, and the evolving identity of Europe and the Mediterranean in a period of migration, crisis, and transformation. Special attention will be paid to the roles played by emperors and kings in this period, including Constantine, Justinian, Clovis and Charlemagne, and the peculiar blend of pagan and Christian cultures that defined early medieval art.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2240 - ROMANS AFTER ROME

Minimum Credits: 3

Maximum Credits: 3

Romanesque architecture, evolving from the building practices of about A.D. 800 In the Carolingian Empire, marks the coming of age of European culture in the post-Antique era. Most of what survives was ecclesiastical in purpose and consists predominantly of monastery churches and their claustral structures. This course will treat both formal and functional issues in the development of the Romanesque tradition and will emphasize the Mature period, 1050-1140.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2255 - GOTHIC ART

Minimum Credits: 3

Maximum Credits: 3

The survey of the architecture, painting and sculpture of the period circa 1140 to 1500 with an emphasis on French art and its influence in the rest of Europe.

Academic Career: Graduate

HAA 2441 - EXPRESSIONISM

Minimum Credits: 3

Maximum Credits: 3

A history of the development of modernist art in Germany from the founding of the "bridge" group in 1905 to the "death" of German expressionism in 1920. Although primarily focused on the art of the "bridge" and "blue rider" groups, the course will also situate this art within the broader context of German art production during these years (academic art, Jugendstil, secession, dada).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HAA 2451 - ART IN THE WEIMAR REPUBLIC

Minimum Credits: 3

Maximum Credits: 3

The course will examine art and architecture in Germany from the end of World War I to the rise of the national socialist dictatorship in 1933. Emphasis will be on a chronological study of the ways in which art developed in Germany under democratic social concepts and a new internationalist outlook in the early years of the republic, and the ways art became embedded in the political structures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2455 - ART OF THE THIRD REICH

Minimum Credits: 3

Maximum Credits: 3

This course examines national socialist art and the fate of modernism under Hitler in the years between 1933 and 1945. As we will explore, Hitler's

regime enlisted the arts and architecture, through party rallies, art exhibitions, building programs, and film, in enforcing its dictatorial policies on everything from the extermination of the Jews to sexuality and the war effort. We shall also consider the impact of the purge of modern art under Hitler on the work of such noted modernists as Otto Dix and Kite Kollwitz, who chose to remain in Germany, and on the art of those who fled into exile, among them John heart field, George Grosz, and Max Beckmann. The final weeks of the course will consider critical issues involved in recent--and invariably controversial--attempts in museum building, sculpture, and site-specific installations to memorialize the holocaust and examine Germany's Nazi past.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2491 - ART SINCE 1945

Minimum Credits: 3

Maximum Credits: 3

This course will present a review of art movements in America and Europe from 1905 - 1945 in the introduction, followed by a more intensive study of post-World War II art movements in Western Europe and America from 1945 to the 1980's. We will give special attention to: a) different styles of art which fit into the label "abstract expressionism" b) different styles under "pop(ular) art" c) conceptual art movements d) issues in critical evaluations of contemporary art.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2520 - BLACK BUILT AMERICA: ARCHITECTURES OF BLACK RESISTANCE IN THE UNITED STATES

Minimum Credits: 3

Maximum Credits: 3

This course offers a critical history of the Black labor, creativity, craftsmanship, engineering, and activism that built the United States of America. It is undeniable that Black Americans and African Americans have been brutally marginalized by the instruments of systemic racism including segregation, redlining, eviction, and more recently gentrification. In this class, however, that very real and continuing history of oppression is studied as the fuel for the creative agency of Black individuals and communities. Appropriating, intervening, and shaping the built environment became one of the many forms of Black resistance to racism and systemic injustices. In doing so, Black hands and Black minds shaped the very fabric of America's landscape. Our class begins and ends in Washington DC, posing important questions about the hidden and overt symbols of Black heritage in the nation's capital.

HAA 2630 - CHINA: VILLAGE & URBAN ARCHITECTURAL SPACE

Minimum Credits: 3

Maximum Credits: 3

The design of Chinese cities is guided by philosophical principles established in the early dynastic period. Imperial cities follow a regular grid pattern that faces south, and includes an inner city, open only to the imperial leaders and aristocrats, and an outer city in which the business is carried out. The design and use of the city is guided by Confucian and Daoist ideals. Religious centers follow palace designs, but are tied to Buddhist, Confucian and Daoist practice. Village centers are arranged according to Daoist ideas about nature called Fengshui.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2641 - MODERN AND CONTEMPORARY CHINESE ART

Minimum Credits: 3

Maximum Credits: 3

This course examines art in China since ca. 1900, a period of major cultural transformation. Beginning with the collapse of the 2000-year-old imperial system and ending with the globalized nation-state, students will analyze works in a wide range of media, including ink and oil painting, printmaking and photography, architecture, and video and performance art. Modes and movements range from "national painting" (guohua) and modernist design to socialist realism and state propaganda, contemporary craft, and experimental calligraphy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2692 - BUDDHISM CIVILIZATION ALONG THE SILK ROAD

Minimum Credits: 3

Maximum Credits: 3

This class serves as an introduction to Buddhism from its origins through the seventh century CE as it moved along the Silk Road, the ancient EurAsian trading network that is considered one of the earliest and most important super highways of trade and culture. Concomitantly, it serves as an introduction to the silk road as the scenario for contact and exchange. The emphasis is on religious praxis, the actors and places that transformed Buddhism and were transformed by it. We will examine archaeological remains and art and discuss how they complement or sometimes contradict textually-based historical narratives. Through the examination of four case studies we will discuss questions related to religious interaction as embodied in material culture and analyze it in context.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2901 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Directed study for M.A. Students.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Directed study for M.A. Students.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2903 - GRADUATE INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Academic credit is awarded for experience gained through a directed internship. The internship is arranged by the student in consultation with the director of graduate studies in the history of art and architecture department.

Academic Career: Graduate

Course Component: Internship
Grade Component: Grad SN Basis

HAA 2905 - COMPREHENSIVE EXAM PREPARATION

Minimum Credits: 1

Maximum Credits: 9

This course is an independent study for Ph.D. students who are actively preparing for their comprehensive exams. The student works under the supervision of a dissertation advisor, with the assistance of other members of the dissertation committee. Committee and student agree on bibliographies in advance, and the student is encouraged to discuss the readings on a regular basis with his or her advisor and other members of the committee if necessary.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2906 - DISSERTATION PROSPECTUS

Minimum Credits: 1

Maximum Credits: 9

This course is an independent study for Ph.D. students who are preparing their dissertation prospectus. Working under the supervision of a dissertation advisor, the student writes a prospectus that summarizes the dissertation topic, its original contribution to the field, and its methodology. The prospectus should also include a brief chapter outline, a research plan, and a bibliography-the whole document totaling approximately 10 to 20 pages.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2951 - MENTORING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 3

This course provides an opportunity for graduate students to mentor undergraduates under the supervision of a faculty instructor. The course is designed to enable graduate interns to mentor individual undergraduates, or small groups, who are engaged in advanced research or other projects in the University art gallery or digital media workshop or elsewhere under faculty supervision. Supervising faculty will meet regularly with the graduate intern to design and monitor the mentoring experience, and to discuss the practice of mentoring.

Academic Career: Graduate

Course Component: Internship

Human Behavior

SWBEH 2008 - HUMN BHVR: URBAN ENVIRONMENT

Minimum Credits: 3
Maximum Credits: 3
This course deals with collective behavior and societal values relative to key urban issues, particularly race, gender, and poverty. Guest experts will lecture, with the course drawn together, coordinated, and enriched by a single instructor of wide experience, both in teaching and in running a large innovative agency.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063; SBPLAN: COSA (Social Work-MS)

SWBEH 2062 - HUMN BHVR: CHLD FMLY AT RISK

Minimum Credits: 3
Maximum Credits: 3
This course is designed to examine the strengths and needs of children and families at risk. The effects on parent and child development of poverty, unemployment, drug and alcohol abuse, family violence, child maltreatment, inadequate housing, inadequate health care, inferior educational opportunities and other micro and macro factors will be examined.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2063 - HUMAN BEHAVIOR & SOCIAL ENVRNMNT

Minimum Credits: 3
Maximum Credits: 3
Using systems theory as an organizing framework, human behavior and its determinants are studied from the societal systems through the group, family, and individual systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Social Work students only.

SWBEH 2065 - HUMAN BEHAVIOR: MENTAL HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course addresses the etiology, nature, course and treatment of mental disorders across the life cycle. Some mental illnesses begin early in life, and may continue throughout life, being modified by growth and development; others begin later in life or are specific to a particular stage in the life

cycle; while others occur in response to environmental circumstances and stressors. Furthermore, gender, race, culture, ethnicity, socioeconomic status and other aspects of diversity shape how symptoms of mental illness are experienced, interpreted and expressed. A selection of the major categories of mental disorder and abnormal behavior will be addressed although it will not be possible to examine all of them in class. Understanding and applying the DSM-IV-TR manual as a clinical assessment tool, an introduction to psychopharmacology, and the nature and role of risk and protective factors associated with suicidal and violent behavior will also be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2066 - HUMAN BEHAVIOR: HEALTH/MENTAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

The overall purpose of this course is to expand student knowledge of physical health and mental health interactions which impact individuals and target populations during the life cycle process. This knowledge is used to design theory driven health promotion interventions. This course will investigate selected physical and public challenges that impact the overall health and well-being of individuals from early childhood to late adulthood. Definitions of health and well-being from both a social work and public health perspective will be defined and discussed to more fully understand the state of physical and mental issues in the western society. Understanding the integration of health education, health behavior, health promotion, is required to facilitate the development of theory driven interventions. Special attention is focused on how values, historical experience, cultural norms and environmental factors such as race, gender, socioeconomic status, and access to resources impact the public's health and their access to service delivery. Students will develop the ability to apply their knowledge and understanding of the interactions between physical health and mental health status across the lifespan to their own work with clients, organizations and policy initiatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2077 - HUMN BHVR: ADLT DVLP AGING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on substantive content during adulthood (early and middle age) and old age. This course offers a framework for understanding mid-life and old age from a life-span developmental perspective and examines physical, social (environmental), and personal factors that influence the developing personality. The knowledge is integrated and appraised for its usefulness in working directly with and/or in behalf of middle-aged and older persons.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

Human Genetics

HUGEN 2010 - BIOINFORMATIC RESOURCES FOR GENETICISTS

Minimum Credits: 1

Maximum Credits: 1

The focus of this course is the online bioinformatic resources available to geneticists. Students will learn to locate and use such resources and interpret the data therein to inform the development of research questions, aid in clinical decision-making, and enhance the understanding and contextualization of research results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Human Genetics or Public Health Genetics; CREQ: HUGEN 2022 & 2040

HUGEN 2011 - SCIENTIFIC WRITING IN HUMAN GENETICS

Minimum Credits: 1

Maximum Credits: 1

Writing and communication skills are amongst the most important assets for any human genetics researcher and/or public health genetics professional. By facilitated discussions and reading and writing exercises/assignments, Scientific Writing in Human Genetics is designed to empower Human Genetics students to establish the communication mindset to write clear and compelling scientific narratives in plain language, utilize the writing resources available on campus and online, improve their scientific writing skills, and complete a solid draft of the Background/Introduction section of their MPH essay, MS Thesis, or PhD research proposal/comprehensive exam document (and possibly, additional sections, including methods, results, or the entire MPH essay) or another academic work with permission of the instructor. The ability to write and use standard English language is required. Whether English is your first or second language, if you are not comfortable writing grammatically correct and properly punctuated English, an "ESL course" is recommended.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2020 - INTRODUCTION TO POPULATION GENETICS AND GENETIC EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This survey course covers the principles of population genetics as applicable to human populations, including (1) the laws of inheritance that govern the organization of the genomes in populations, (2) the evolutionary forces and phenomena that impact genetic diversity in human populations, and (3) the foundational concepts of genetic epidemiology and gene discovery.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2021 - SPECIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

Qualified students may undertake advanced work or research with the approval and under the guidance of a member of the staff.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HUGEN 2022 - HUMAN POPULATION GENETICS

Minimum Credits: 2

Maximum Credits: 2

This survey course covers the principles of population genetics as applicable to human populations, including (1) the laws of inheritance that govern the organization of the genomes in populations, (2) the evolutionary forces and phenomena that impact genetic diversity in human populations, and (3) the foundational concepts of genetic epidemiology and gene discovery.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2025 - HUMAN GENETICS SEMINAR

Minimum Credits: 0

Maximum Credits: 0

Human genetics seminars present current genetics methodology, theory, and data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HUGEN 2026 - SPECIAL STUDIES HUMAN GENETICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide advanced undergraduates and graduate students with directed, intensive training in laboratory, statistical or clinical research methods relevant to human genetics. These specialized skills are not available in regularly taught courses in the university. Each special study is designed in consultation with an individual member of the human genetics faculty.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2028 - HUMAN GENETICS JOURNAL CLUB AND PEER REVIEW

Minimum Credits: 1

Maximum Credits: 1

Human genetics journal club provides students and faculty with an opportunity to present and discuss exciting research in an informal format. The purpose of the course is to hone students' oral and written critical evaluation skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2029 - INTRODUCTION TO GENE MAPPING

Minimum Credits: 3

Maximum Credits: 3

This course presents a literature-based approach to understanding and interpreting results from gene mapping papers in the field of human genetics. Traditional and state-of-the-art genetic mapping methodologies will be explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2022 and 2034 and 2040 and BIOST 2041

HUGEN 2031 - CHROMOSOMES AND HUMAN DISEASE

Minimum Credits: 3

Maximum Credits: 3

The role of chromosomes in human disease is discussed after a thorough background on chromosome structure and function is presented. Topics covered include cytogenetic methodology, aneuploidy, chromosome rearrangements, chromosomes and cancer, chromosome breakage syndromes, and fragile sites on human chromosomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2032 - GENETIC TECHNIQUES

Minimum Credits: 2

Maximum Credits: 2

Students participate in laboratory exercises to become acquainted with cytogenetics laboratory procedures including cell culture, chromosome preparation, chromosome banding, and karyotyping. Chromosome analysis and karyotype interpretation are practiced.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: CREQ: HUGEN 2031; Graduate Sch of Public Health Students Only

HUGEN 2034 - BIOCHEMICAL AND MOLECULAR GENETICS OF COMPLEX DISEASES

Minimum Credits: 3

Maximum Credits: 3

This course provides students with an overview of the molecular and biochemical genetic approaches to determine the underlying genetic architecture of common diseases that account for a large portion of the public health burden of disease. The genetic, environmental and epigenetic factors that influence susceptibility to common disease will be illustrated using selected examples, such as cardiovascular disease, neurodegenerative diseases, mental health diseases, autoimmune diseases and eye diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course addresses fundamental concepts important to genetic counseling principles and practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course addresses fundamental concepts important to genetic counseling principles and practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: GNCSLG-MS or MPHMSG-TR or instructor permission

HUGEN 2036 - GENETIC COUNSELING INTERNSHIP

Minimum Credits: 4

Maximum Credits: 4

For this course, students will participate in supervised genetic counseling clinical rotations in a variety of specialty areas. The lectures that are part of the course will address topics relevant to clinical genetics and counseling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2037 - GENETIC COUNSELING PROFESSIONAL DEVELOPMENT AND RESEARCH SERIES

Minimum Credits: 2

Maximum Credits: 2

This course is participatory with opportunities to engage in activities that promote the acquisition of skills and knowledge in the areas of professional development and research. The completion of several thesis project milestones is an important outcome of the research module. The research module of the course examines various research methodologies, the ethical conduct of research, and the dissemination of research findings such as writing abstracts and constructing posters. The professional development module addresses items related to transitioning into and succeeding within the workforce.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

HUGEN 2038 - INTERVENTION SKILLS FOR GENETIC COUNSELING

Minimum Credits: 3

Maximum Credits: 3

Focuses on the understanding of theories of intervention, skill development and application to genetic counseling. The course aims at sensitizing

students to the ethical dilemmas faced by affected families and health-care providers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2039 - RISK CALCULATION GENETIC COUNSELING

Minimum Credits: 1

Maximum Credits: 1

This course provides hands-on training in calculating risk of disease or carrier status in a variety of typical genetic counseling situations, as well as discussion of the limitations of those calculation methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: CREQ: HUGEN 2022

HUGEN 2040 - MOLECULAR BASIS OF HUMAN INHERITED DISEASE

Minimum Credits: 3

Maximum Credits: 3

This course will provide an overview of selected human inherited disorders and integrate clinical descriptions with recent genetic, molecular genetics and biochemical insights. Current state of the art molecular genetics methodologies will be integrated into the overviews.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2047 - CLINICAL GENETICS CASE CONFERENCE

Minimum Credits: 1

Maximum Credits: 1

With clinical cases and specimens from various clinical genetics service units, this seminar illustrates and provides insights into the biologic, medical, ethical, and emotional aspects of genetic disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HUGEN 2049 - INTRODUCTION PUBLIC HEALTH GENETICS

Minimum Credits: 3

Maximum Credits: 3

This course provides a framework in which to assess how advances in genomics may be applied to public health practice and policies that affect both individuals and society. In addition, the ethical, legal, and social consequences of historical, current, and future interventions are considered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2050 - PUBLIC HEALTH GENETICS PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

The practicum is a short term field placement (minimum 200 hours of public health oriented work) with an organization or agency that is relevant to the student's area of interest. Each placement must be agreed upon by the student and the MPH program advisor.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Public Health Genetics (MPH or CERT)

Course Attributes: Community Element -General Community Impact

HUGEN 2051 - INBORN ERRORS OF DEVELOPMENT

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the connections between human development and inherited disease. The course will include core principles of development of the body plan and signaling pathways involved in development and differentiation. These biological processes will be used to categorize inherited human diseases, understand disease mechanisms, and the current efforts to develop targeted treatments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2052 - ETHICAL ISSUES IN CLINICAL AND PUBLIC HEALTH GENETICS

Minimum Credits: 1

Maximum Credits: 1

This course is designed to explore ethical issues as they relate to genetics and genomics in both the clinical and public health contexts. This seminar series provides an ethical framework for analyzing arguments in the literature and cases arising in clinical and research contexts and proceeds throughout the semester with a discussion-based format that encourages students to assume responsibility for engaging in ethical analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

Course Requirements: CREQ: HUGEN 2035 or 2049; PLAN: HUGEN-MS or GNCSLG-MS or PHGEN-CR4 or PHGEN-MPH

HUGEN 2053 - APPLICATIONS IN PUBLIC HEALTH GENETICS AND GENOMICS

Minimum Credits: 2

Maximum Credits: 2

This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2041 or BIOST 2011; CREQ: HUGEN 2049; PLAN: Human Genetics or Genetic Counseling or Public Health Genetics

HUGEN 2054 - APPLICATIONS IN PUBLIC HEALTH GENETICS AND GENOMICS

Minimum Credits: 3

Maximum Credits: 3

This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2056 - GENETIC CONDITIONS AND PUBLIC HEALTH PROGRAMS

Minimum Credits: 2

Maximum Credits: 2

This graduate level course focuses on teaching genetic conditions that are being addressed by public health genetics programs. The goal of this course is to educate students on the natural history, available screening and/or genetic testing, and prevention strategies of these genetic conditions as well as the influencers of access to genetic services by at-risk individuals in the population.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2060 - CHROMOSOMES - STRUCTURE AND FUNCTION

Minimum Credits: 2

Maximum Credits: 2

Chromosomes are the primary means of biologically organizing and manipulating nuclear DNA within the cell, across cell generations, and across sexual generations. In this course we will investigate how differences in chromosome structure and function affect the roles chromosomes play as dynamic "megamolecules" in reproduction, development, health and disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2061 - CANCER GENETIC COUNSELING

Minimum Credits: 1

Maximum Credits: 1

This course is designed to provide students with the knowledge and skills fundamental to the practice of cancer genetic counseling. The overall goal of the course is to allow students to apply cancer genetics knowledge to clinical situations. The course will cover hereditary cancer syndromes, cancer risk assessment models, and germline and somatic genomic testing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2035 and COREQ: HUGEN 2060; PLAN: HUGEN-MS, HUGEN-PHD, PHGEN-MPH, GNCSLG-MS, or PHGEN-CR4

HUGEN 2071 - GENOMIC DATA PROCESSING AND STRUCTURE

Minimum Credits: 3

Maximum Credits: 3

Bioinformatics involves an in-depth understanding of data and a substantial amount of data processing. This course focuses on the manipulation and management of human genetic and genomic data via two platforms: the R statistical computing environment and the Unix operating system. The course will also cover the major data formats and structures used to store human genetic and genomic data. A key component of the course will be hands-on analyses of example data sets in a variety of formats.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Pre-reqs: HUGEN 2022 AND BIOST 2041 for MS-GB plan; or approval of instructors.

HUGEN 2072 - GENOMIC DATA PIPELINES AND TOOLS

Minimum Credits: 3

Maximum Credits: 3

This course will teach the analytical methods and tools used for genotype data quality control, sequencing read alignment, base calling, genotype calling, quantitative sequencing methods, data harmonization, genotype imputation, and statistical analysis and meta-analysis through the development and implementation of next-generation whole genome sequencing and RNA-Seq pipelines.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2071

HUGEN 2073 - GENOMIC DATA VISUALIZATION AND INTEGRATION

Minimum Credits: 3

Maximum Credits: 3

This course will teach principles of data visualization and data visualizations that are specific to genetic and genomic analyses. It will also delve into the integration of data from multiple resources to appropriately annotate genetic associations with relevant information from a variety of repositories of genetic, genomic and other "omic" data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2041 and HUGEN 2022

HUGEN 2074 - GENOME BIOINFORMATICS CAPSTONE

Minimum Credits: 6

Maximum Credits: 6

The capstone course provides students in the Master of Science in Genome Bioinformatics with the opportunity to expand their repertoire of analysis and professional skills and communicate results of their internship to faculty and fellow students. As part of this course, students will develop final analyses based on their internship data or use other (faculty-provided) data if the results of their summer internship project are not appropriate thesis material. The capstone course will ensure that the thesis project demonstrates the student's competency in genome bioinformatics as well as communication skills in general.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2075 - GENOME BIOINFORMATICS THESIS AND WRITING

Minimum Credits: 2

Maximum Credits: 2

The thesis writing course provides students in the Master of Science in Genome Bioinformatics with skills requisite for writing documentation covering project and analysis relevance, scientific gaps, describing research opportunities to address those gaps, and summarizing and contextualizing research project results. It will improve their general scientific writing skills. Coming into the course, the students will have completed their research project analysis. At the end of the course the students will have completed their thesis document describing that analysis for review by the MSGB thesis committee.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2080 - STATISTICAL GENETICS

Minimum Credits: 3

Maximum Credits: 3

An advanced course which discusses the principles and practice of statistical genetics in the area of genetic epidemiology of human diseases and traits. The course will cover statistical modeling and methodology in familial aggregation, linkage analysis and association analysis; the course includes hands-on experience with current computer programs used in these research areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2022 and BIOST 2041

HUGEN 2090 - GENETICS OF COMPLEX DISEASES 1

Minimum Credits: 2

Maximum Credits: 2

This course provides students with an overview of the molecular and biochemical genetic approaches to determine the underlying genetic architecture of common diseases that account for a large portion of the public health burden of disease. The genetic, environmental and epigenetic

factors that influence susceptibility to common disease will be illustrated using selected examples, such as cardiovascular disease, neurodegenerative diseases, and mental health diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2091 - GENETICS OF COMPLEX DISEASES 2

Minimum Credits: 1

Maximum Credits: 1

This course provides students with an understanding of the biochemical and molecular genetic approaches to understand genetically determined susceptibility to common diseases. This will be presented using selected examples of complex human diseases, including cardiovascular and neurodegenerative diseases. Risk of common, complex diseases is determined by genotypes at multiple genetic loci and a complex interaction of genetic variation and environmental exposures. Risk of almost every common disease is influenced by genes, but the relationship between genotype and disease phenotype is weak compared to that observed with rare Mendelian traits. However, understanding the contribution of genes to common disease susceptibility is important to public health.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: COREQ: HUGEN 2090; PLAN: HUGEN-MS; HUGEN-PHD; PHGEN-MPH; GNCSLG-MS; or PHGEN-CR4

HUGEN 3010 - RESEARCH AND DISSERTATION PH.D.

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HUGEN 3020 - DOCTORAL RESEARCH AND PROFESSIONAL SKILLS DEVELOPMENT

Minimum Credits: 1

Maximum Credits: 1

This course provides an opportunity for Human Genetics doctoral students to learn about specific genetics research projects being carried out in the Human Genetics department and across the Schools of the Health Sciences and enhance their professional skills. The format of the course includes seminar presentations by continuing doctoral students of in-progress genetics research projects and short talks by established investigators within and outside academia offering diverse perspectives on professional development and career trajectories. Students will have the opportunity to showcase their own in-progress research, develop and hone their oral presentation skills, provide and receive constructive written feedback on genetics research, discuss applications of novel methodologies and research approaches, and learn about career opportunities in genetics.

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSIMM 2210 - COMPREHENSIVE IMMUNOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is a lecture course that will introduce the students to the fundamental concepts of modern immunology. The course will cover cells, tissues and organs of the immune system. Furthermore in-depth analysis of the development, activation, effector functions and regulation of immune response will be presented in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSIMM 2230 - EXPERIMENTAL BASIS OF IMMUNOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will expose the students to classical and contemporary literature in modern immunology. Emphasis will be on paper analysis and critical evaluation of primary data. This course will parallel the topics presented in comprehensive immunology lecture course which must be taken before or simultaneously with experimental basis of immunology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: MSIMM 2210

MSIMM 2240 - INTRODUCTION TO IMMUNOBIOTHERAPEUTICS

Minimum Credits: 2

Maximum Credits: 2

This course will provide a comprehensive overview of the principles and the technology upon which immunobiotherapeutics are based. The course will focus on the overall aims of using small molecules, antibodies, genes and cells as immunotherapeutic agents. It will cover the use of viral and non-viral agents as gene delivery vehicles, cells as therapeutic agents and small molecules as delivery and therapeutic vehicles. The course will also cover diseases and disorders in which immunobiotherapy has proven safety and demonstrated successful outcomes like cancer, Mendelian disorders and autoimmunity. Lectures and student presentations will cover: genes and cells as drugs, peptides, antibodies and small molecules as therapeutics and delivery vehicles, viral and non-viral vectors, stem cells, and specific diseases where immunotherapy has shown safety and efficacy. Students may also be educated on bioethical issues and existing laws governing biotechnology and molecular medicine approaches.

Graduate students and faculty present their current research in a seminar format.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSIMM 2290 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in immunology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: Immunology (PHD) or Interdis Biomedical (UNK)

MSIMM 3200 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of 40 credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Immunology (PHD)

MSIMM 3220 - CONTEMPORARY TOPICS - IMMUNOLOGY

Minimum Credits: 1

Maximum Credits: 1

This is an advanced level course in which students will read, present and evaluate the primary literature in immunology. Each semester will feature an integrated set of papers addressing a current issue of interest to modern immunologists. The course may be taken more than once by each student, since the topic addressed will change each semester.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSIMM 3230 - IMMUNOLOGY AND HUMAN DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course surveys basic immunological principles as they impact our understanding of the causes or treatments of human disease. The course consists of a series of lecture blocks. Background reading is required and the course relies heavily on the reading of original articles. Classes are regularly devoted to paper discussions, and each student will be responsible for introducing one paper.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSIMM 3260 - IMMUNITY AND THE NEUROENDOCRINE AXIS

Minimum Credits: 2

Maximum Credits: 2

This course will consider the interaction among the immune, nervous and endocrine systems. It will prepare the students for a critical understanding

of how endocrine organs and the hormones they produce affect immune cell function, how the nervous system and neuropeptides/neurohormones and neurotransmitters modify immunity and how the immune system (cells and their secreted molecules) affect the endocrine and the nervous system. The course will also permit the students to critically appraise and understand how drug therapy aimed at immunostimulation or immunosuppression may be affected by, and affect the neuroendocrine axis and how pharmacologic manipulation of the neuroendocrine axis can affect the immune system and the outcome of immunotherapies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: MSIMM 3230

MSIMM 3270 - INNATE IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the several aspects of host innate immunity against infection. Topics will include the conceptual basis for innate versus adaptive immunity, induction of innate immunity by pathogens, signaling by innate immune receptors, effector cells of the innate immune system, secreted effectors of innate immune signaling, and subversion of innate immune signaling by pathogens. Courses like molecular virology and comprehensive immunology are highly recommended but not a prerequisite for the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSIMM 3280 - IMMUNOLOGY OF INFECTIOUS DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course examines the immune responses to pathogens, as well as on immune evasion of microbes. The organisms studied include bacteria, parasites, and viruses. Topics focus on host-pathogen interaction and include innate immunity, modulation of antigen processing and presentation, pathogenic strategies for subversion of immune responses, effector functions of immune cells, and immunopathology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: MSIMM 2210

MSIMM 3290 - AUTOIMMUNITY & IMMUNOPATHOLOGY

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: MSIMM 2210 and 2230

MSIMM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Industrial Engineering

IE 2000 - FUNDAMNTLS OF INDUSTRIAL ENGR

Minimum Credits: 1

Maximum Credits: 1

This course will provide an overview of basic industrial engineering principals, primarily for those students who have not had prior exposure to industrial engineering. Topics will include, but are not limited to, flow charts, work methods, and work measurement including work sampling and most.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2001 - OPERATIONS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The operations research method; linear programming; network flows; CPM/pert; integer programming formulations. A group project is required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2003 - ENGINEERING MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Concepts and processes of qualitative engineering management applied to the management of technical and scientific organizations. Topics include: (1) general systems theory; (2) management and the systems concept; (3) strategic planning and management systems; (4) systems analysis; (5) project management systems; (6) organizational design; (7) evaluation and control of systems; and (8) managing technical professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2004 - DATA BASE DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course introduces the fundamental aspects of database design and management within the context of a relational data base management system (DBMS). Covered topics include: relational model, database design life-cycle, database design optimization, client/server architecture, data modeling, SQL, database security, database management, data warehousing, internet database environment. Students will gain hands-on experience in analysis, design, implementation, and management of relational data base systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2005 - PROBABILITY AND STATISTICS FOR ENGINEERS 1

Minimum Credits: 3

Maximum Credits: 3

Probability, random variables, common discrete and continuous probability distributions, expected values, central limit theorem, distributions derived from the normal distribution (χ^2 , t and f), estimation of parameters and fitting of probability distributions, testing hypothesis and assessing goodness of fit, comparing two samples.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2006 - INTRO TO MANUFACTURING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students that have a background in advanced manufacturing technologies with an opportunity to learn about fundamentals of micro and Nano machining processes. The course represents a good balance between theoretical problems and practical considerations related to the advanced manufacturing processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2007 - STATISTICS AND DATA ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Analysis of variance, experiments with one factor, experiments with two or more factors, regression analysis, multiple linear regression, response surface methods, analysis of categorical data, nonparametric statistics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2011 - FUNDAMENTAL OF MICRO AND NANOMANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2012 - MANUFACTURE OF STRUCTURAL NANOMATERIALS

Minimum Credits: 3

Maximum Credits: 3

Description: this course covers contemporary research topics on the design and manufacture of nanostructured materials. In addition to design and manufacturing, this course would also emphasize the nanometer-scale phenomena that make nanostructured materials particularly attractive for structural applications. Topics such as dislocation theory, large strain plasticity phenomena, super plasticity and kinetics of coarsening will be discussed in the context of structural nanomaterials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2013 - MOLECULAR MANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

You often hear in the news about the potential societal impact of nanotechnology, which is simply described as the science and technology of manipulating matter in the 10-100 nm length-scale. However, with the continued miniaturization of material building blocks approaching the atomic scale, a paradigm shift is needed in the way of thinking about how to synthesize and assemble atomically precise units that integrate various different components, which eventually build a functioning device or material. This bottom-up approach to fabrication with atomic level precision is the focus

of this course. The course will include molecular fabrication methods such as DNA origami, protein assembly, chemical synthesis of carbon materials, block copolymer self-assembly, and scanning probe methods that are capable of atomic level manipulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2014 - MANUFACTURING PROCESS ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to instill a fundamental understanding of manufacturing processes by focusing on the processes, metallurgy and mechanics of deformation in metal forming. To this end, analysis techniques will be developed from solid mechanical principles (stress-strain relationship, deformation and failure) which would then be applied bulk deformation and material removal processes. The course assumes no prerequisites except basic concepts of stress, strain and strength of materials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2023 - INTRODUCTION TO MEDICAL PRODUCT DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This is an undergrad/grad level course in medical product development covering fundamentals, regulatory processes, intellectual property management, and commercialization strategies. This course will provide basic knowledge on the development of medical devices including designing, manufacturing and testing medical devices. This course will also provide an overview of the medical product commercialization (i.e., bench to bedside). This course will develop the students ability to select and properly use the biomaterials and manufacturing processes for developing medical devices, instruments, biomedical sensors and artificial organs. Students will also learn how to commercialize the medical products to the market through intellectual property management and regulatory processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: IE 1055, IE 1081, and IE 1082

IE 2025 - FACILITY LAYOUT AND MATERIAL HANDLING

Minimum Credits: 3

Maximum Credits: 3

Introduction to facility layout and location. Topics including activity relationships, space and personnel requirements, computer algorithms for constructing layouts, and both single and multiple facility location methodologies; material handling methods and equipment including conveyors, lift trucks, carousels, automated guided vehicles, and automated storage and retrieval systems are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE)

IE 2044 - INVESTMENT SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to basic concepts of modern quantitative finance and investment. Group projects involving financial market data. Topics: basic interest rate; evaluating investments: scenario-based analysis and Monte Carlo simulation; fixed-income markets: bonds, yield, duration, and portfolio immunization; measuring risk: volatility and value at risk; the concept of investment diversification in the presence of uncertainty; designing optimal security portfolios; the capital asset pricing model, practical implementation of the concepts, including comparison of loan (e.g., house and auto) terms, credit card financial terms; derivative market and option pricing. No prior knowledge of finance required.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2045 - TRANSPORTATION PLANNING METHODS: OR APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3

This course will focus on modeling and optimization of a wide range of systems in the field of transportation. It will cover quantitative techniques of Operations Research with emphasis on applications in transportation systems analysis and planning: Operations, Management, Transportation technologies and evaluation of passenger and freight transportation systems, Implementation of the Decision Support Systems, Data Envelopment Analysis (DEA) and Heuristic Algorithms.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2050 - SOCIAL NETWORKS & HEALTH

Minimum Credits: 1
Maximum Credits: 1

This course is an introduction to the theory, methods, and procedures of network analysis with emphasis on applications to health and social behavior. The goal of the course is to provide a working knowledge of concepts and methods used to describe and analyze social networks so that professionals and researchers can understand the results and implications of this body of research. The course also provides the training necessary for scholars to conduct network analysis in their own research and practice careers. The course consists of readings, class discussions, analysis assignments, and a final project. Assignments are designed to build components of a full network study, culminating in the final project. Individual projects will use data that the student collects him/herself. The data collection and entry process will be quite simple and consist of identifying a group (a class, a club, organization, etc.) that students can ask to complete a simple questionnaire. Other electronic or observational sources of data may also be used.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2060 - COMPUTER METHODS FOR SOCIAL NETWORKS

Minimum Credits: 1
Maximum Credits: 1

This course provides hands-on training in social network analysis using 3 different software packages: UCINet, R, and Gephi. It is intended for those students who are interested in conducting their own social network studies using the latest available software. It is a time-intensive lab and project course. Topics to be covered include: - How to use UCINet to conduct intermediate and advanced SNA - How to use R to use custom SNA packages - How to use Gephi to conduct basic SNA and generate descriptive network graphs

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2061 - ERGONOMICS & OCCUPATIONAL BIOMECHANICS

Minimum Credits: 3
Maximum Credits: 3

Fundamentals of ergonomics as applied to the industrial workplace. Specific topics include: occupational bio mechanics, anthropometry, work physiology, cumulative trauma disorders and slip and fall prevention applied to the organization and physical design of the workstation, effects of hand tool design on workers, and analysis of manual material handling jobs.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2062 - DATA ANALYTICS FUNDAMENTALS

Minimum Credits: 3

Maximum Credits: 3

This is a course in the fundamentals of data analytics that requires probability as a prerequisite. The objective is to prepare students to effectively collect and analyze data and to teach data-driven thinking, problem-solving and decision-making. In this class, we will cover various statistics and data mining methodologies and use them to analyze real-world problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2005; PROG: Swanson School of Engineering

IE 2064 - APPLIED DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to applied data analytics. The first part of the courses focuses on practical skills: datawrangling, visualization, data processing, exploratory data analysis and scoping projects. The second and main part of this course focuses on building predictive models for regression and classification: linear models, support vector machines, kernel methods, nearest neighbor, and tree-based models. The primary assessment is a project where students will apply their acquired skills on a real dataset. All course work will be done using R. While not required, it is suggested that IE 2062 is taken concurrently with this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2065 - STATISTICAL ANALYSIS AND OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2007 or 2064 or 1072 or STAT 1152

IE 2072 - PROBABILITY

Minimum Credits: 3

Maximum Credits: 3

Interpretations of probability, counting methods, conditional probability, Bayes theorem, random variables and distributions, functions of random variables, expectations, special discrete and continuous univariate distributions, law of large numbers and central limit theorems, multivariate distributions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2076 - TOTAL QUALITY MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

introduces the total quality management philosophies and practices of Deming, Juran, and others. We will focus on the use of statistical process control, understanding variability and process capability, acceptance sampling, as well as managing supplier relationships. Research papers and student teaching projects allow students to explore additional topics such as Kaizen, Taguchi methods, FMEA, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2079 - LOGISTICS & SUPPLY CHAIN ENGRNG

Minimum Credits: 3

Maximum Credits: 3

Modern supply chains are based on networks with a number of actors from manufacturer to distributor to retailer. This course covers the use of modeling for coordinating production, inventory, distribution, and transportation across a supply chain network.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2081 - NONLINEAR OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Necessary and sufficient conditions for an optimal solution to the non-linear programming problem; convex sets and functions; numerical solution of non-linear equations; search methods; unconstrained optimization including gradient, metric and penalty methods; algorithms for constrained optimization; quadratic and geometric programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2082 - LINEAR OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Review of linear algebra, matrices and the simplex methods; revised simplex method; generalized bounds; product form of inverse; pricing and pivot selection; duality and sensitivity analysis; separable programming; linear complementarity; Dantzig-Wolfe decomposition; column generation; generalized LP; semi-infinite LP, stochastic LP; interior point methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2084 - STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Reviews probability theory; conditional probability and expectations; discrete-time and continuous time Markov chains; Poisson process and exponential distributions; renewal theory and its applications; queuing theory; stochastic systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2072

IE 2086 - DECISION MODELS

Minimum Credits: 3

Maximum Credits: 3

Decision making under uncertainty is the key to understanding a variety of problems from industry, including inventory control, revenue management, energy, healthcare, and logistics. This course covers the fundamentals of stochastic (sequential) decision models, including data-driven and risk-averse methods, with applications to real-world problems.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: CREQ: IE 2005; PROG: Swanson School of Engineering

IE 2088 - DIGITAL SYSTEMS SIMULATION

Minimum Credits: 3

Maximum Credits: 3

Nature of simulation; discrete event simulators; modeling complex systems; input data reduction; random number generation; output data analysis; validation of simulation models; experimental design; variance reduction techniques; comparing alternative systems; overview of simulation languages.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2005 or IE 1071 or ENGR 0020; PROGRAM: SSOE

IE 2089 - ADDITIVE MANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

In this course we will analyze the seven primary types of additive manufacturing, their materials, and machines, highlighting their benefits and limitations. Examples of industrial applications will be given along with ongoing research trends and future directions. Labs will focus on design for additive manufacturing, data capture and input, machine setup, and post processing. Field trips will include observation of machine building and part production at some local industries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2090 - M. S. PROJECT

Minimum Credits: 3

Maximum Credits: 3

This is the capstone project course for M.S. Students. Students working in teams of 3 or 4 will solve a real world problem in conjunction with a company liaison and a faculty advisor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2100 - SUPPLY CHAIN ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

An overview of supply chain management with an emphasis on operations and strong quantitative orientation. Supply chain strategies; sourcing decisions; demand forecasting; aggregate planning; managing supply and demand; production and inventory control systems including MRP and JIT; dealing with uncertainty; distribution networks; coordination and integration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2001 & 2005

IE 2102 - LEAN SIX SIGMA I (GREEN BELT)

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to lean and six sigma principles with an emphasis on the application of statistics to quality control. Topics include value stream mapping, various lean tools, DMAIC methodology, data collection and measurement, and applications of ANOVA and doe. A project is required and the student should be prepared for green belt certification at the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2103 - LEAN SIX SIGMA II (BLACK BELT)

Minimum Credits: 3

Maximum Credits: 3

This is a follow up course in lean and six sigma covering topics such as influence principles and techniques, systems analysis, design for six sigma, lean enterprise analysis and response surface methods. Several projects are required and the student should be prepared for black belt certification at the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2102; PROG: Swanson School of Engineering

IE 2104 - FRUGAL ENGINEERING & VALUE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the principles of frugal design of products and processes. Foundational skills in Value Engineering/Analysis including tools such as Functional Analysis will be detailed. Additionally, topics such as Customer Needs Identification, Quality Engineering, Operational Excellence and Lean Process Engineering will be integrated into developing frugal product and process designs. Students in the course will have taken the first step towards certification as Value Methodology Associates (VMA) offered by the SAVE International.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 2105 - GEOGRAPHIC INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Explore the concepts and history of geographic information systems and learn to effectively use the most utilitarian GIS software, ArcGIS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2106 - OPERATIONS IMPROVEMENT IN HEALTHCARE

Minimum Credits: 3

Maximum Credits: 3

This course leads students to apply basic industrial engineering tools to healthcare operations, with a focus on healthcare providers. This includes data gathering, process mapping, system analysis and modeling, work sampling, work study and workflow improvement. This course will provide an overview of the differences between healthcare and other more traditional industrial engineering settings (e.g., manufacturing, retail), and the opportunity to apply industrial engineering techniques, while developing and understanding basic healthcare operations and systems in the United States. (This class is designed to be a complement to IE 1108/2108.)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering

IE 2108 - HEALTH SYSTEMS ENGINEERING: QUANTITATIVE ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

This course leads students to apply basic industrial engineering tools to healthcare, with a focus on the financial aspect of healthcare (payers and reimbursement, revenue cycle, and other financial analytics). This course familiarizes students with healthcare financial data, demographic and population health information, quality ratings, and other key data and measures. Students will access data from commercial payers, government healthcare programs and/or hospitals, and utilize data analysis and industrial engineering tools to better understand the financial aspect of healthcare systems in the United States. (This class is designed to be a complement to IE 1106/2106.)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering

IE 2110 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 0

Maximum Credits: 0

The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: Swanson School of Engineering

IE 2122 - FUNDAMENTALS OF SYSTEMS ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the fundamentals of systems engineering, including technical processes (e.g., requirements definition, architecture design, system verification), technical management processes (e.g., project planning, risk management), agreement processes (acquisition and supply) and project-enabling processes (e.g., life-cycle model management, quality management). Key systems engineering techniques and methods (e.g., system modeling and simulation, function-based systems engineering) will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2123 - PROJECT MANAGEMENT FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

The focus of the course will be to understand professional project management in achieving strategic organizational objectives and mitigating risks. The process for obtaining professional project management (PMP) certification will be the foundation. The six domains of project management that will be addressed include: initiating the project, planning the project, executing the project, monitoring and controlling the project, project transition and closure, professional and social responsibility.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2003; PROG: Swanson School of Engineering

IE 2125 - PROJECT MANAGEMENT AND STRATEGY: DESIGN AND IMPLEMENTATION

Course Requirements: PROG: Swanson School of Engineering

IE 2144 - DISCRETE OPTIMIZATION: MODELING AND COMPUTATION

Minimum Credits: 3
Maximum Credits: 3

Discrete optimization is a powerful modeling and computational tool in decision making, especially for critical industrial systems (e.g., transportation, energy and healthcare systems). In this course, we focus on learning various modeling techniques, classical and popular models (including location, scheduling and material handling problems), and solution techniques (including exact and heuristic algorithms) for these models that lead to millions of dollars savings.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2155 - DISCRETE OPTIMIZATION AND APPLICATIONS IN INFRASTRUCTURE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3

Discrete optimization is a powerful modeling and computational tool in decision making, especially for critical industrial systems (e.g., transportation and energy systems). In this course, the focus will be on learning various modeling techniques, classical and popular models (including location, scheduling and transportation problems) and solution techniques (including exact and heuristic algorithms) for these models that lead to millions of dollars in savings.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2001; PLAN: Industrial Engineering

IE 2184 - STOCHASTIC MODELING AND DATA ANALYTICS IN HEALTHCARE OPERATIONS MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3

The purpose of this course is to introduce stochastic modeling methods and data analytics tools for analysis, design, and decision support for healthcare delivery systems. The aim is to expose students to various application areas related to hospital workflow and operations management in healthcare systems. Emphasis is placed on rigorous model formulation to solve system performance evaluation and decision-making questions in healthcare delivery systems. The application of Markov process, systems modeling, simulation, and data analytics methods are discussed through papers and case studies in different care settings and areas (e.g., hospital workflow, patient safety, clinical diagnosis and decision process, prediction and intervention).

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (IE 1070 and IE 1071 or IE 2005) and (IE 1081 or IE 2001)

IE 2186 - REINFORCEMENT LEARNING

Minimum Credits: 3
Maximum Credits: 3

This is an introductory course on reinforcement learning (RL), a set of techniques used for learning sequential decision making policies from data. The basics of Markov decision processes necessary for RL will be covered, but a firm grasp of undergraduate level probability and basic programming ability (in Python and MATLAB) will be assumed. A wide range of methods (e.g., TD learning, Q-learning, policy gradients) that perform evaluation and control will be covered. The focus in this course will be on applications, implementation, intuition and some theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2005 or IE 1070 or Equivalent and IE 1082 PLAN: Industrial Engineering

IE 2187 - OPTIMIZATION FOR MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

Modern machine learning involves fitting predictive models on huge data sets using optimization methods. The choice of optimization method is critical in these problems. For example, using traditional (factorization based) methods to perform regression with ten thousand data points and features will fail - a tiny dataset by modern standards. Moreover, modern machine learning methods such as stochastic gradient descent are not plug-and-play: they require user expertise to select tuning parameters and interpret results. The goal of this course is to teach students how to use modern first-order methods to solve large-scale machine learning problems. Coding will be done in python using pytorch. This course will move at a faster pace and cover more content than its undergraduate counterpart IE 1187. Topics covered: Convexity, nonconvexity, critical points and saddle points. Gradient descent. First-order methods vs second-order methods. Training vs test error. Stochastic gradient descent. Hyperparameter tuning. Explicit and implicit regularization. Batch sizes, parallelization, and GPUs. Transfer learning. Advanced methods: momentum, proximal methods, variance reduction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 2188 - SIMULATION MODELING AND APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

Introductory graduate course to the concepts, technology and applications of discrete-event and hybrid simulation. Covers the foundational concepts of simulation and the application of those concepts using commercial software. Topics include simulation, modeling, validation, input/output analysis, animation, and project success skills. Students will learn to use the Simio commercial simulation product as well as how to conduct/manage simulation projects. Practical experience will be gained in a simulation project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2001 and 2005; PROG: Swanson School of Engineering

IE 2201 - BIOMATERIALS AND BIOMANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students having a background in biomaterials and biomanufacturing with an opportunity to learn about the many modern aspect of biomaterials from basic science to clinical applications, across the formulations and chemistry of polymers, ceramics, metals and their use in various biomedical devices and implants, as well as their clinical performance and host responses. Students will also gain knowledge and experiences with designing and manufacturing biomedical devices through team projects. This one-semester, graduate course is intended for students majoring in the industrial engineering, or those who contemplating such a major (or minor). Students enrolled in the class should have an understanding of various biomaterials, and the ability to understand biological phenomena and manufacturing processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2203 - WAREHOUSE OPERATIONS

Minimum Credits: 3

Maximum Credits: 3

In both manufacturing and service, transportation and logistics have become increasingly important. A principal component of many logistics systems are warehouses and distribution centers. Companies in the retail sector, healthcare related fields, and manufacturing all have significant

distribution networks that utilize warehouses and distribution centers to supply their products. The aim of this course is to study and analyze key factors affecting the productivity of logistics operations and material flows in facilities. In particular, the course focuses on warehouse and distribution center design and operations including material handling equipment and system design, order picking, sortation systems, and cross docking.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: IE 2025, IE 2001 or IE 2082, and IE 2084.

IE 2301 - INTRODUCTION TO SAFETY ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Introduction to safety engineering" provides a basis to assist students in understanding and applying the scientific and engineering principles associated with the field of safety engineering. Specifically, the course will provide a background in, information on and application exercises in the natural, chemical and physical laws and forces associated with safe design and implementation of work-related tasks and industrial and construction projects. These involve soils and excavation, trenching and shoring, permanent and temporary work platforms and scaffolding, cranes, rigging, ropes, slings and chains, fall protection, pressure vessels, confined space entry, energy isolation and preparation of equipment, hot work, welding, personal protective equipment and non-destructive testing. The course will also address safety related issues associated with building and facility design and layout, job, task and work setting layout. The course will stress the importance of safety engineering as part of both the corrective process and the design process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2302 - ENGINEERING FOR PROCESS SAFETY

Minimum Credits: 3

Maximum Credits: 3

Engineering for process safety provides for a basic understanding of the quantitative and qualitative analysis methods of process safety engineering and process safety management. The course also provides guidance in planning, implementing and managing an overall process safety management program. It includes coverage of such applicable science and engineering principles as risk, human reliability, fault logic, failure modes, incident cost and prediction. The course is presented in an applied format where several different types of industries are discussed such as oil and chemical, pharmaceuticals, defense, nuclear, aerospace, paper, information technology and manufacturing industries. Regulatory influence on process safety is discussed. Quantitative aspects of the course include application of risk analysis, fault tree analysis, hazard and operability analysis, vapor-cloud dispersion modeling, human reliability analysis, failure modes and effects analysis, etc. This course is also intended to provide a background in managing an overall system safety program and its application to several industries, therefore, cost and effectiveness measurement are covered in the material.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2303 - WORK DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide students the opportunity to learn and use standard industrial tools commonly used in analyzing, troubleshooting, and designing work spaces and work processes. It includes the concepts of cost effectiveness, functional effectiveness, human interface design and characterization, analysis and improvement of productivity. These tools and design methodologies include human information processing, basic auditory and visual displays, cost models, facility layout and network transportation and delivery systems, cognitive engineering, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and time and motion analysis. Students taking this course should be familiar with basic engineering economics.

Academic Career: Graduate

Grade Component: Grad SN Basis

IE 3051 - COMPUTATIONAL OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This course addresses issues arising in the implementation of optimization algorithms. Computational strategies and techniques will be explored. A major emphasis will be placed on implementing various algorithms for large-scale linear, nonlinear, and integer programs. Such algorithms include benders' decomposition, Dantzig-Wolfe decomposition, Lagrangian relaxation and algorithms for specially-structured problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3053 - GLOBAL OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course to the theory and applications of global optimization. The topics covered in this course include properties of convex/non-convex sets and functions, convex envelopes, duality, local and global optimality conditions, algorithms and their convergence and finiteness, computational complexity of global optimization, cutting planes, outer approximation, convexification, decomposition, branch and bound, DC Programming, Lipschitzian programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3055 - ROBUST OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Today the modeling of uncertain phenomena in both theory and practice is done via probability theory, the foundation of which is based on the axioms set forth by Kolmogorov in 1933. While it offers insights into understanding uncertainty, probability theory (in contrast to optimization) has not been developed with computational tractability as an objective when the dimension increases. Correspondingly, some of its major areas of application remain unsolved when the underlying systems become multidimensional. The goals of this course will be to propose an alternative via robust optimization (RO) for modeling uncertain phenomena, to develop RO as a tractable methodology for solving optimization problems under uncertainty, and to expose students to a large number of applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 3056 - OPTIMIZATION UNDER UNCERTAINTY

Minimum Credits: 3

Maximum Credits: 3

In this course, students will learn popular formulations and algorithms for stochastic programming, robust optimization, chance constrained optimization, stochastic dual dynamic programming, and VaR and CVaR based models, as well as some interesting applications. Students should have knowledge of Matlab, Python, C, or C++ programming languages, a doctoral level linear programming background, good mathematical reasoning ability, and a good understanding of integer programming and computational optimization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 3057 - BILEVEL OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This is a course on the theory, algorithms and applications of bilevel optimization. Bilevel optimization models are motivated by various real-life settings (e.g., in transportation, energy, defense, network design) that involve independent decision-makers, referred to as the leader and the follower, who interact in a hierarchical manner. Specifically, the leader (the upper-level decision maker), whose perspective is modeled, needs to take into account the decisions of the other (lower-level) decision-maker, i.e., the follower, who solves his/her own optimization problem that, in turn, also depends on the decisions of the leader. In this class we will overview basic modeling concepts of bilevel programming, computational complexity issues, solution algorithms and several notable applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 3072 - NANOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Mechanics at the nanometer-scale often greatly diverges from that observed in the macro-scale. This course will elucidate how under different

physicochemical condition, different coupled nanoscale phenomenon are dominant. For example, length-scale dependence can be introduced in both elastic and plastic deformation. Topics covered in this course will include size-effects in nanoindentation, their associated strain-gradient dependent phenomena, surface and interface stress dependent phenomena in nanowires and bulk nanomaterials, switch-overs in deformation-modes with shrinking length-scales, implications of interfacial diffusion phenomena in microstructure evolution, thermomechanical response of nanomaterials, diffusion-driven solid-state dewetting, force-controlled mechanochemistry, and elastocapillary of nanofilaments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering Graduate

IE 3078 - CONVEX OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This course develops a modern framework for convex optimization. The topics covered in this course include concepts of convex analysis, smooth convex optimization, non-smooth convex optimization, structural optimization, duality theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3080 - ADV TOPICS IN OPERATIONS RES

Minimum Credits: 3

Maximum Credits: 3

May cover various topics at the leading edge of technology in the area of operations research. Course content is announced by the professor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3085 - QUEUING THEORY

Minimum Credits: 3

Maximum Credits: 3

Simple queuing models using Markov processes. Network series and cyclic queues. Models with general arrival or service patterns. Closed queues. Numerical and simulation techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3087 - NETWORK-BASED OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This course covers graphs, digraphs and related concepts, node and edge covering problems, Euler tours, Hamiltonian cycles, tsp, set covering and matching problems, shortest path problems, maximum flow problems and minimum cost network flow problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3088 - INTEGER PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

Polyhedral theory, computational complexity, super additive duality, and integral polyhedral.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3089 - REPAIRABLE SYSTEMS MODELING AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

A repairable system is a system that can be restored to a satisfactory condition through some intervention by a decision maker. In a manufacturing setting, such actions might include inspections, part replacements or setting adjustments; in a medical context, such actions might include disease screening, surgery or drug therapy. In this course, we consider applications of probability, simulation and optimization in the: (a) mathematical modeling of the performance of repairable systems, and (b) designing of optimal inspection and maintenance policies for repairable systems. In each case, we compare and contrast

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3093 - STOCHASTIC PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course considers stochastic programming, a technique for making optimal decisions under uncertainty. Will consider theory, algorithms and applications. Extensions to multi-stage problems and stochastic integer programs will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3094 - MARKOV DECISION PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Introduces the fundamentals of discrete sequential models when outcomes are uncertain. Covers formulation and analysis of stochastic dynamic programs under several objective criteria; developing and enhancing solution algorithms; applications in the areas of inventory control, vehicle routing, and resource allocation; development of approximate solution techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3095 - GRADUATE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Speakers from universities and industry discuss research topics and state-of-the-art material in the areas of operations research, engineering management, and manufacturing systems. Enrollment in this course is mandatory for all full-time Ph.D. students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: Swanson School of Engineering

IE 3097 - ALGORITHMS FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course will develop students' ability to understand algorithms and use them appropriately for real-world and theoretical problems. Our discussion will be geared towards topics and example arising in IE applications, in particular, in the context of optimization problems. Topics covered will include introduction to complexity theory, running times and performances measures, common ideas in algorithmic design including randomized algorithms, approximation algorithms, and heuristics..

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3186 - APPROXIMATE DYNAMIC PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the theory and application of large-scale dynamic programming with emphasis on a broad spectrum of applications in finance, revenue management, and health policy. The first part of the course emphasis more on approximate dynamic programming algorithms. The second part of the course is devoted to the recent advances in reinforcement learning. Topics include Markov decision processes, dynamic programming algorithms, simulation-based algorithms, q-learning, theory and algorithms for value function approximation and policy search methods, stochastic approximation, r-max algorithm, online learning and regret minimization, and posterior sampling method.

Infect Disease & Microbiology

IDM 2001 - MOLECULAR BIOLOGY OF MICROBIAL PATHOGENS

Minimum Credits: 3

Maximum Credits: 3

Students will develop a comprehension of (1) bacterial anatomy, metabolism, regulation of gene expression, genetics, and the action of anti-microbial agents at the molecular level; and (2) the relevance of this knowledge to understanding microbial pathogenesis and the host response. In addition, prokaryotic and eukaryotic model system of gene regulation will be compared to emphasize the conceptual aspects and application of molecular biology to infectious disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IDM 2002 - MOLECULAR VIROLOGY

Minimum Credits: 3

Maximum Credits: 3

The intent of this course is to provide a comprehensive coverage of the animal virus families and a few selected examples of bacterial viruses. The emphasis of the course will be to provide an in depth coverage of the viral life cycle, including the fundamental mechanisms of viral replication and gene regulation. Representative members of each virus family will be selected for the lecture material.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: IDM 2001 or INTBP 2000

IDM 2003 - HOST RESPONSE TO MICROBIAL INFECTION

Minimum Credits: 2

Maximum Credits: 2

Students will develop a comprehension of the concepts and knowledge of resistance and immune responses of humans to microbial infection. The role of phagocytic cells; complement; lymphocytes; the development of humoral and cell mediated immunity at the molecular, cellular, and organ level; and the consequences in controlling and enhancing disease are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2004 - VIRAL PATHOGENESIS

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to integrate the lectures given on a particular virus in the comprehensive virology course with two additional lectures which expand the basic biology of the virus life cycle to the level of virus-host interactions. The first lecture will address the pathogenic properties of the virus from the perspective of disease manifestations, immunology, and the natural history of infection. This will be followed by a second lecture which will address the molecular basis of viral pathogenesis and current advances in antiviral research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: LEVEL: Second Year Graduate Students and above

IDM 2007 - PUBLIC HEALTH COMMUNICABLE DISEASE PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The practicum, through structured and educationally supervised assignments at an approved site with an experienced professional, is aimed at providing a means to identify and to apply a variety of theories and skills discussed and demonstrated in the classroom to the real life experiences to which the student is assigned in the field under professional supervision. The assignments and choice of site are determined by the director of the program and the program requirements and career goals of the student.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Attributes: Community Element -General Community Impact

IDM 2010 - PATHOGEN BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to teach the basic biology and pathogenesis of many of the most important infectious diseases that are public health challenges in the 21st century. It is intended for students with a background in biological sciences, and will review those features that make these pathogens so successful as agents of disease. Topics covered will include: the interaction between the pathogen and the host genome, the strategies used by each pathogen to evade the host response, and the ways in which the pathogen defends itself against treatments and vaccines. The course will be taught using a combination of didactic lectures and paper discussions based on the current primary research literature.

Academic Career: Graduate

Course Component: Lecture

Course Requirements: PREQ: PUBHLT 2015; PLAN: Infct Disease & Microbiology (MS or PHD); SUBPLAN: Infect Dis Path Erad Lab Pract or Inf Dis Mgmt Interv Comm Pract or Peace Corps (IDM)

IDM 2014 - FUNCTIONAL GENOMICS OF MICROBIAL PATHOGENS

Minimum Credits: 3

Maximum Credits: 3

Functional genomics involves the systematic study of genes and their function. This course will introduce many of these innovative technologies for the systematic analysis of gene function including gene discovery, transcriptome analysis, random and targeted gene disruption strategies, proteomics, metabolomics, and integrative systems approaches with a particular emphasis on their application to infectious disease pathogens and their interaction with their host cells. We will also examine the genomes of well-studied pathogens and explore how these technologies have been used to study their biology and pathogenesis and the application of these techniques for drug and vaccine targeting and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IDM 2001

IDM 2019 - THE EMERGENCE AND GLOBAL SPREAD OF COVID-19

Minimum Credits: 2

Maximum Credits: 2

In this course of IDM 2019, students will learn about the emergence of the SARS-CoV-2 virus in November 2019, and its global spread to the present date. This course will be taught with an infectious disease prevention and control focus, but will cross-cut each major discipline within public health, including modules related to epidemiology; statistical modeling of the COVID-19 pandemic; health policy; behavioral and community health; genetics; and occupational health.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2021 - SPECIAL STUDIES IN MICROBIOLOGY

Minimum Credits: 1

Maximum Credits: 15

Properly qualified students may undertake special study, experience in a clinical laboratory, or research with the approval and under the guidance of a member of the faculty. Part or all of such study may be used as the basis for the essay or dissertation requirement for the master's and doctoral degrees.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IDM 2022 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

Properly qualified students may undertake special study under guidance of a faculty member to acquire knowledge and skill to use independently a specific laboratory research tool, e.g., Gene cloning, DNA sequencing, cell sorting, oligonucleotide synthesizer, polymerase chain reaction, statistical analysis with pc.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IDM 2023 - MICROBIOLOGY LABORATORY

Minimum Credits: 2

Maximum Credits: 2

A series of laboratory exercises introduces the student to microbiological procedures, especially as they apply to virology and bacteriology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2025 - MICROBIOLOGY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

In this course students are going to present scientific journal articles dealing with virology, immunology, molecular biology, and epidemiology and drug therapy of viral diseases. In addition, students will present similar aspects of bacterial diseases. In some sessions students may be shown video presentation of diagnosis and clinical management of a particular viral or bacterial disease.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IDM 2032 - HUMAN DIVERSITY AND PUBLIC HEALTH

Minimum Credits: 2

Maximum Credits: 2

This course will provide a theoretical framework for designing policy, research, and programs for diverse populations. Opportunities for expanding understanding and examining attitudes about human diversity will be presented. Community organizing and marketing methods related to program design and recruiting and sustaining volunteer or patient participation in programs will be a major focus of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2034 - CONTROL AND PREVENTION OF HIV/AIDS

Minimum Credits: 2

Maximum Credits: 2

This graduate level course on HIV disease prevention and control is aimed at providing an in-depth study of the HIV disease. The course goal is to provide advanced knowledge base of information on the complex clinical, preventive, treatment, and policy issues on HIV/aids.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)

Course Attributes: Global Studies

IDM 2035 - ADVANCED VECTOR-BORNE INFECTIOUS DISEASES

Minimum Credits: 2

Maximum Credits: 2

This is a graduate level course that will familiarize students with endemic and emerging vector-borne diseases (VBD), disease surveillance, diagnostic, disease notification and VBD control measures. The students will receive information on a) vector and disease surveillance at local and global levels; b) overview of the disease notification system and databases; c) identification of new pathogens circulating in urban environment; d) case definition and diagnostic approaches of new or re-emerging VBD; e) community-based approaches for disease surveillance and prevention, f) immunization and vector control strategies, g) policies to mitigate exposure and susceptibility to VBD, and h) preparedness for future VBD outbreaks.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2038 - PREVENTION, TREATMENT, AND CONTROL OF GLOBAL INFECTIOUS DISEASES

Minimum Credits: 3

Maximum Credits: 3

This course is aimed to prepare the student to demonstrate knowledge of the prevention, treatment, and control of infectious diseases throughout the world. Students will develop knowledge in the pathogenesis, treatment, individual, and environment intervention in prevention and spread of infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)

IDM 2041 - RESEARCH ETHICS AND SCIENTIFIC COMMUNICATION

Minimum Credits: 1

Maximum Credits: 1

This course will introduce students to ethical considerations associated with public health research. Topics will include research on human and animal subjects, conflicts of interest, data management and transparency in reporting, authorship and peer review, and mentorship. Students will also learn how to improve their communication skills by identifying their target audience, refining their technical writing and graphics preparation skills, and developing their oral presentation skills. Classes will include lectures and small group discussions on assigned readings. Class attendance and participation are required. Satisfactory letter grades will be contingent upon the student's in-class contributions, completion of out-of-class homework assignments and projects, and performance on quizzes based on the course topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2068 - INFECTION PREVENTION AND CONTROL PRACTICUM/INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

This course in infection control practice is a clinical and institutional experience within a hospital or other clinical settings aimed at providing the student practice experience and skills to potentially function as an infection preventionist within a health care setting. Students in this course must take Infection Prevention Course (IDM 2069) as a prerequisite for this practicum/internship. Students may complete a minimum 200 hours within a clinical setting within an infection control department which also meets the requirements for the MPH program in the School of Public Health. This internship aims at assisting students to become proficient in addressing hospital-acquired infections, patient isolation practices, infection surveillance, documentation, reporting, medical record review and collaboration with the infection control practitioners through on-site, experiential learning. Acceptance into the practicum will be competitive and include an application process with the course directors and selected infection prevention specialists. Students who complete the 2 credit course, IDM 2069, Infection Prevention and Control in Healthcare Settings will be considered for this internship and accepted by permission only.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

IDM 2069 - INFECTION PREVENTION AND CONTROL IN HEALTH CARE SETTINGS

Minimum Credits: 2

Maximum Credits: 2

This course in infection control is aimed at building knowledge and skills as well as critical thinking through evidenced-based and case-based learning to provide students with a foundation in infection prevention and control in a healthcare settings. As the end of this course, successful students will have current knowledge of hospital acquired infections, patient isolation practices, infection surveillance, documentation, monitoring, reporting, and outbreak investigations. The course will be taught by expert practitioners, researchers, and clinicians in infection prevention. Students may enroll in this course only or they may combine it with an optional practicum/internship of a minimum of 200 hours within a clinical setting if accepted into IDM 2068 (Infection Prevention and Control Practicum/Internship)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2161 - METHODS OF INFECTIOUS DISEASE EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Component: Thesis Research

Grade Component: Grad SN Basis

IDM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: IDM 2003; PROG: School of Public Health

IDM 3441 - EPIDEMIOLOGY AND CONTROL OF SEXUALLY TRANSMITTED INFECTIONS

Minimum Credits: 1

Maximum Credits: 1

The purpose of IDM 3441 is to provide students with an understanding of the major sexually transmitted infections (STIs) in the U.S. This course will focus on the underlying transmission dynamics, history, risk factors, public health impact and current strategies for control. The method of teaching will be to provide STI-specific lectures and promote critical discussion about the strategy and control limitations thereof. Approximately 50% of class time will be lecture and the remaining 50% will be devoted to a critical review of the assigned papers (2) for each class period.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Information Science

HIM 1405 - MEDICAL TERMINOLOGY LAB

Minimum Credits: 1

Maximum Credits: 1

This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition, and use of terms related to all areas of medical science, hospital service, and health related professions. This ONLINE course is designed to give the student a knowledge of words frequently used in the medical field and provides examples through the review of basic anatomy, physiology, surgical procedures, diagnostic procedures, and symptomatology. Coverage of the pathology of each body system is will take place along with an introduction to pharmacology, and the pharmacological treatment of frequently occurring conditions of each body system.

Academic Career: UGRD

Course Component: Mass Media

Grade Component: Letter Grade

Course Requirements: PLAN: Health Information Management (BPH or BS or BS-H)

INFSCI 0017 - FUNDAMENTALS OF OBJECT-ORIENTED PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

First programming course for is majors, designed for students with little or no programming experience. Basic principles and concepts of object-oriented programming using java. Classes, interfaces, operators, program control, arrays, testing, debugging, inheritance, polymorphism, and event handling. Techniques for simplifying the programming process and improving code quality. Activity-based learning.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: INFSCI 0010

INFSCI 1430 - USER EXPERIENCE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course presents the fundamental principles of user experience (UX) engineering across three broad categories of designs and products - digital products, virtual worlds, and physical spaces. This course will cover a broad range of topics, including specifying, designing, and evaluating user experiences, understanding the role of user experience in the design of digital products, virtual environments, and physical spaces, and the roles of psychology, sociology, and psychometrics in user experience design. This is an active learning course where students will be expected to read research papers, participate in class discussions, and work with external stakeholders.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: (INFSCI 0410 or INFSCI 1044) and (INFSCI 0510 or INFSCI 0419 or INFSCI 0019); Minimum C grade or Transfer

INFSCI 1450 - GAME DESIGN

Minimum Credits: 3

Maximum Credits: 3

Games have become ubiquitous in our modern world. In addition to entertainment, elements of games are present in everything from promotional advertisements to university classrooms. This course focuses on the exploration of game design in its many permutations. Join us as we critique and design all manner of entertainment and serious game. The class itself is designed as a multiplayer game experience to immerse and engage the student in game design on a fundamental level. One of the final goals of this class is for each student to have designed two separate games in their entirety. These games may be useful in the follow-up course, Immersive Media Technologies.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: INFSCI 0410 or INFSCI 1044; Minimum C grade or Transfer; and Enrollment not permitted if currently or previously completed INFSCI 1060

INFSCI 1470 - IMMERSIVE MEDIA TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the design and development of immersive media technologies, such as interactive narratives, digital games, augmented/mixed reality and virtual reality experiences. Students will develop skills in user experience design, user interface design, storytelling, and animation, as well as gain technical knowledge required to program, optimize, and deploy media experiences for multiple platforms/devices.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: (INFSCI 0410 or INFSCI 1044) and (INFSCI 0510 or INFSCI 0419 or INFSCI 0019) and (INFSCI 0610 or INFSCI 1070); Minimum C grade or Transfer; and Enrollment not permitted if currently or previously completed INFSCI 1061

INFSCI 2000 - INTRODUCTION TO INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Overview of the history, academic roots, conceptual structure, and methodology of information science. Explores principles and concepts that underlie information processing, including information theory, models of information storage and retrieval, and human cognition. Basic processes of information systems analysis, design and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

Course Attributes: Global Studies

INFSCI 2020 - MATHEMATICAL FOUNDATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course introduces the primary mathematical foundations underlying principles of information science, particularly the concepts, representations, and functions associated with the mathematically-intensive information science areas such as data mining, information retrieval, machine learning, cloud computing, and network science. Topics include, but are not limited to, probability, matrix operations, graph theory, logic, combinatorics, and information theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced) -AND- Enrollment not permitted if previously enrolled in INFSCI 2710 or INFSCI 2591

INFSCI 2040 - RESEARCH DESIGN

Minimum Credits: 3

Maximum Credits: 3

Beginning research design with emphasis on the basic process of inquiry. Identifying and articulating research problems, determining and describing procedures for conducting research, designing data collecting procedures, formulating testable hypotheses, interpreting and drawing conclusions from data analysis, and reporting research findings and implications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or School of Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2120 - INFORMATION AND CODING THEORY

Minimum Credits: 3

Maximum Credits: 3

Includes measures of information, information sources, joint and conditional uncertainty, noiseless and deterministic channels, reliable messages through unreliable channels, channel capacities, properties of codes, minimal codes, and error-detecting and error-correcting codes. Examines entropy as a measure of semantic content.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2125 - NETWORK SCIENCE & ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course explores networks as a primary metaphor and mechanism for a variety of information-related phenomena. The advancement of interconnected information and communication technologies has made networks one of the dominant ways of analyzing the use and flow of information among individuals, institutions, and societies. We will frequently turn to a diverse array of applications and problem areas to motivate and understand the use of networks for analyzing real-world networked systems. The course starts with the basics of graph theory and moves to studying network structures and how they emerge through various network models. We begin with the traditional random graph model and we move to more realistic, socially-inspired models such as preferential attachment. We will further explore processes in a network such as diffusion of epidemics and network search. Additional topics might include attacking the power grid, measuring systemic resilience to attack, and understanding the structure of collaboration in science.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDAL-ACG, SAISYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2130 - DECISION ANALYSIS AND DECISION SUPPORT SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduction to decision analysis with elements of human cognition under uncertainty, including structuring decision problems and developing creative decision options, quantifying uncertainty and preferences, and combining uncertainty and preferences to arrive at optimal decisions. Foundations needed for applying the methods of decision analysis in decision support systems. Note: can also be used to fulfill distribution requirement in cognitive science area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2135 - PROBABILISTIC METHODS

Minimum Credits: 3

Maximum Credits: 3

This seminar provides an introduction to computational approaches for probabilistic modeling and inference. A particular focus is placed on Bayesian networks, although other probabilistic models also will be studied. Medical applications are emphasized, however, the principles are general and no medical knowledge is needed to take the course. The course does not require knowledge of a computer programming language. An understanding of basic probability theory would be helpful, but is not required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2140 - INFORMATION STORAGE AND RETRIEVAL

Minimum Credits: 3

Maximum Credits: 3

Problems and techniques related to storing and accessing unstructured information with an emphasis on textual information. Overview of several approaches to information access with a primary focus on search-based information access. Covers automated retrieval system design, content analysis, retrieval models, result presentation, and system evaluation. Examines applications of retrieval techniques on the web, in multimedia and multilingual environments, and in text classification and event tracking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2149 - INTRODUCTION TO INFORMATION SECURITY

Minimum Credits: 3

Maximum Credits: 3

Introductory information security and privacy course for non-SCI students enrolled in the Graduate Certificate Program in Cybersecurity, Policy and Law. Covers fundamental issues and first principles of security and information assurance, including security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. The course will introduce students to risk management, security assurance, secure design principles, organizational security policy, legal and ethical issues in security, and standards and methodologies for security evaluation and certification.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Plan = CPL-ACG or CSPL-ACG or CSPL-MN or PLAW or PGSPA

INFSCI 2150 - INFORMATION SECURITY AND PRIVACY

Minimum Credits: 3

Maximum Credits: 3

Fundamental issues and first principles of security and information assurance. Security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. Basics of cryptography such as key management and digital signatures, etc. And network security such as PKI, IPsec, intrusion detection and prevention. Risk management, security assurance and secure design principles. Issues such as organizational security policy, legal and ethical issues in security, standards and methodologies for security evaluation and certification.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: TELCOM 2000 or INFSCI 1070; PROG: School of Information Science or Sch Computing and Information

INFSCI 2160 - DATA MINING

Minimum Credits: 3

Maximum Credits: 3

Introduction to data mining techniques, including data preprocessing, data mining primitives, association rules, decision trees, cluster analysis, classification and machine learning, data visualization, and data warehousing. Detailed applications from a wide variety of domains.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2020 (B or greater) or INFSCI 2725 (B or greater) or INFSCI Exemption-Analytics Component (Test Score 6 or higher);

INFSCI 2165 - ADVANCED TOPICS IN DATA MINING: SOCIAL & HETEROGENEOUS GRAPH MINING

Minimum Credits: 3

Maximum Credits: 3

This course will cover a number of advanced topics in data mining, with special attention to graph/network mining, recommender systems, and techniques for analyzing large-scale, heterogeneous, high-dimensional, and multi-relational data in various domains -- e.g., web science, social science, and health and natural sciences. A mix of lectures, readings, and homework assignments will be offered to familiarize the students with recent methods and algorithms in these topics, as well as the basic concepts and theoretical foundations of these advanced techniques. The course is for students with prior background in data mining or machine learning techniques. It is a good option for graduate students who are interested in gaining in-depth knowledge or research experience in the field, or students from other disciplines who need to develop data mining systems to analyze large amounts of heterogeneous data. Hands-on experience in data analytics and machine learning with large datasets is required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2595 and PLAN = ISCI-MSI, ISCI-AC, BDAL-ACG, SAISYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2170 - CRYPTOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

Principles of number theory, cryptographic algorithms and cryptanalysis. Steganography, block and stream ciphers, secret key encryption (DES, re, re-n), primes, random numbers, factoring, and discrete logarithms. Public key encryption (RSA, Diffie-Helman, elliptical curve cryptography, n'tru); key management, hash functions (md5, sha-1, ripemd-160, HMAC), digital signatures, certificates and authentication protocols. Cryptanalytic methods (known, chosen plaintext etc.) For secret and public key schemes (linear and differential cryptanalysis, pollard's rho method, number field sieve, etc.).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2204 - INTRODUCTION TO TECHNICAL COMMUNICATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

An English language support course for international students in SIS who are non-native speakers of English. Introduces students' to strategies and skills for comprehension and production in academic English contexts. Also addresses issues of academic integrity and plagiarism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

INFSCI 2205 - TECHNICAL COMMUNICATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

An English language support course for international students in SIS who are non-native speakers of English. Helps develop students' strategies and skills for comprehension and production in academic English contexts. Also addresses issues of academic integrity and plagiarism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

INFSCI 2230 - CYBERCRIME

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

INFSCI 2300 - HUMAN INFORMATION PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Introduction to research and theory in human cognition, including perception, attention, pattern recognition, memory, representation of knowledge, language, problem solving, reasoning, and decision making, with emphasis on modeling human cognition and implications for user interface design and design of intelligent systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2350 - HUMAN FACTORS IN SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduces principles for analysis of human performance in human-machine systems. Emphasis on principles of human factors as applied to the design of systems other than the graphical user interface (GUI) that is covered in interactive systems INFSCI 2470.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2410 - INTRODUCTION TO NEURAL NETWORKS

Minimum Credits: 3

Maximum Credits: 3

Introduces mathematical and computer techniques used in constructing models of information processing by parallel distributed processing (PDP) networks; principles of input-output functions and adaptation (learning) functions in single units and in networks; examines the relation between PDP networks, neurobiology, artificial intelligence, and cognition.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2415 - INFORMATION VISUALIZATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the visual design, structure, and organization of information as applied to library and information environments and web site design. Topics include visualization literacy, usability research, theories of visual perception and cognition, visualization models, visual analytics, and data graphics. The emphasis is on user and task-centered design for developing and evaluating visualization-based tools for various types of data. Practical work with visualization technologies will be included.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

INFSCI 2420 - INTRODUCTION NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Overview of computational approaches to natural language processing. Issues in syntax, semantics, and pragmatics, as well as overall system architectures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2300 and (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PROG: School of Information Science or Sch Computing and Information

INFSCI 2430 - SOCIAL COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Introduction to key theories and technologies of social computing. Reviews major types of social computing systems. Several social computing systems are explored and used throughout the course. Final group project focuses on designing and implementing a social web system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2440 - ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

With the focus on the machine intelligence technologies around processing, representing, modeling, and learning from large quantity of data in the current web context, this course serves as a broad introduction to students of the theories, algorithms and applications of modern Artificial Intelligence (AI). Taking a data science oriented perspective, this course aims to help students to develop a broad theoretical knowledge and practical experience in AI. With the understanding that modern AI is actually a discipline of theories and techniques around the idea of data driven model-based machine intelligence, this course consists of four broad modules: 1) representation of knowledge, 2) uncertainty-based modeling and reasoning, 3) improvements with machine learning, and 4) communication with natural language processing, all of which are necessary components for an intelligent agent to engage intelligently with other agents or people in the real world. The goal of this course is to prepare students to work creatively and productively in current data-driven and intelligence-rich environment, and it is ideal for students who would like to be introduced to the techniques of modern AI. Topics include: search, logic and deduction, knowledge representation and memory organization, production systems, expert systems, planning, language understanding, and machine learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2591 PROG: Sch Computing and Information

INFSCI 2460 - SPATIAL REASONING FOR GIS

Minimum Credits: 3

Maximum Credits: 3

Fundamental issues in qualitative spatial reasoning, spatial languages, and spatial decision-making. Applications of spatial reasoning including problems of navigation and interface issues for GIS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2470 - INTERACTIVE SYSTEM DESIGN

Minimum Credits: 3

Maximum Credits: 3

The environments that can or should be provided for interactive use of computers. Necessary hardware, software, and behavioral components of an interactive system; data structure considerations for various types of interactive applications; operating system fundamentals, functions, and characteristics. Emphasis on interactive operating systems, human machine dialogues, interactive graphics, programming languages, and application(s) design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Information Science (MS or PHD); SUB: Digital Libraries & Info Mgmt

INFSCI 2480 - ADAPTIVE INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduces key principles of adaptive information systems and modern techniques for user modeling and personalization. Covers the construction of user models and user profiles. Examines the use of various personalization techniques such as adaptive search, recommendation, and navigation support. Reviews major types of adaptive information systems and explores important application areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2710 or 2470; PROG: School of Information Science or Sch Computing and Information

INFSCI 2500 - DATA STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Theory and application of data structures. Data and file structures and their appropriateness to various applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: (ISCI-MSI, ISCI-AC, SAISYS-ACG, BDAL-ACG, ISCI-PHD, NDSCIG-ND, TCOMM-AC, TCOMM-MST) - AND- ANTI-REQ: Enrollment not permitted if previously enrolled in INFSCI 2710 or INFSCI 2591

INFSCI 2510 - INFORMATION SYSTEMS ANALYSIS AND DESIGN

Minimum Credits: 3

Maximum Credits: 3

The focus of this course is on studies of specifications of the information systems development process. The course covers fundamental topics on two main stages of information systems development life cycle: analysis, and design. Students will become familiar in techniques to investigate, collect, organize, and structure requirements for an information system as well as understanding how to design different component of the information system to satisfy the requirements. The course hands-on experiences such as working directly with real-world clients to address an information need challenge. Students are evaluated through regular assignments, quizzes, and a course project

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information ; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2511 - INFORMATION SYSTEMS DESIGN

Minimum Credits: 3

Maximum Credits: 3

Object-oriented design best practices; principles of system architecture; design patterns; requirements traceability; construction of uml-compliant models (class, sequence, communication and package diagrams); refactoring; iterative development of system prototype. Requires knowledge of fundamental of programming concepts including abstract classes, interfaces, inheritance, polymorphism, and message passing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2510; PROG: School of information Science or Sch Computing and Information

Course Attributes: Global Studies

INFSCI 2540 - SOFTWARE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Critical analysis of leading iterative software development processes; TSP/PSP, unified process, extreme programming and related agile processes; enterprise management and control of software projects (CMM and COBIT); configuration and change management; quality assurance and testing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2545 - SOFTWARE QUALITY ASSURANCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2550 - CLIENT-SERVER SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Analysis and design of distributed systems. Emphasis on distributed applications and various protocols used in such applications. Explores algorithms for various iterative and concurrent server designs as well as the design of application level protocols. Includes various languages and operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science or Sch Computing and Information

INFSCI 2560 - NETWORK AND WEB DATA TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

Covers core technologies and standards for distributed systems, especially web-based distributed systems. Includes an overview of the standardization process and the standards organizations. Looks at network and data standards with significant attention to HTML, XML, HTTP, URL and other web technologies including APIS to programming with them. Topics covered include: Web and Restful protocols (HTTP, COAP), Publish-Subscribe protocols (MQTT), Web services (SOAP, etc.), and Web programming with CSS, JS, and HTML5.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2591 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of algorithm design including greedy algorithms, divide-and-conquer algorithms, dynamic programming, heuristics and approximate algorithms, parallel and distributed algorithms, multi-dimensional data structures, time complexity of algorithms, and development of programs from algorithms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science or Sch Computing and Information

INFSCI 2595 - MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

Introduction to machine learning, includes algorithms of supervised and unsupervised machine learning techniques, designing a machine learning system, bias-variance tradeoffs, evaluation metrics; Parametric and non-parametric algorithms for regression and classification, k-nearest-neighbor estimation, decision trees, discriminant analysis, neural networks, deep learning, kernels, support vector machines, ensemble methods, regularization techniques; Dimensionality reduction, principle component analysis, LDA, t-SNE; Clustering methods such as k-means, hierarchical clustering, spectral clustering, DBSCAN; Mathematical foundations including linear algebra, probability theory, statistical tests, statistical learning theory; Best practices and application to real-world problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2620 - DEVELOPING SECURE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Design and implementation of secure systems. Principles and practice of trustworthy computing, secure and high assurance software development process and lifecycle models. Secure software design using UMLSEC, secure design of operating systems and network services, database and applications. Secure webs services, cots-based and service-oriented systems. Software assurance tools and techniques such as code analysis and testing, evaluation and certification of software. Secure programming techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2150 or TELCOM 2810; PROG: School of Information Science or Sch Computing and Information

INFSCI 2621 - SECURITY MANAGEMENT AND COMPUTER FORENSICS

Minimum Credits: 3

Maximum Credits: 3

This course covers issues related to the administration and management of the security of enterprise information systems and networks. Topics include intrusion detection systems, vulnerability analysis, anomaly detection, computer forensics, application logging, auditing and data management, risk management, contingency planning and incident handling, cyber defense/operations, and security program management and lifecycle. The course will detail the principles and tools related to these topics. The course will also cover security standards, evaluation, accreditation and certification process, security planning, compliance issues, ethical and legal issues in information, privacy, traceability, and cyber-evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (INFSCI 2150 or TELCOM 2810) and TELCOM 2821; PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2625 - CYBERSECURITY AND PRIVACY REGULATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

INFSCI 2629 - CAPSTONE IN SECURITY

Minimum Credits: 3

Maximum Credits: 3

Integrative class for master's students in their final semester of the sais track. Combination of business and technical case studies and group projects. Case studies focus on business/economics aspects of providing information assurance and how this service impacts technology. Group projects involve design and development of a prototype secure and survivable information system including application development, system deployment, system optimization and system economics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (INFSCI 2150 or TELCOM 2810) and TELCOM 2821; PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2710 - DATABASE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Basic graduate course on database systems. Centralized relational database systems with emphasis on database design, implementation, and administration. Comprehensive coverage of SQL, data modeling, normalization, storage management, transaction management, and query evaluation. Students will develop practical skills in building and maintaining realistic medium-scale database systems. Also covers more advanced topics including data warehousing and OLAP.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PLAN: IIS-MS or INFSCI-AC or INFSCI-MSI or INFSCI-PHD or IISCI-MS or ISCI-AC or ISCI-MSI or ISCI-PHD or SAISYS-AC or SAISSYS-ACG or TCOMM-MST or TCOMM-AC) or (SUBPLAN: MLISDL-TR or MLISDLI-SP or MLIDLIM-SP)

INFSCI 2711 - ADVANCED TOPICS IN DATABASE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Advanced graduate course on database systems. Key issues that typically arise in the context of large-scale enterprise database management in heterogeneous wide-area environments including distributed and non-relational database systems, network-centric data management, web-based information systems, heterogeneous databases, information integration, and wireless data management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2710; PLAN ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2725 - DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental technologies underlying distributed storage and efficient analysis of very large amounts of data. An overview of approaches to extracting information and knowledge from data, verification, testing, and presentation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

INFSCI 2730 - E-BUSINESS

Minimum Credits: 3

Maximum Credits: 3

Conceptualization of e-business in the context of markets, business practices, and information theory. Implementation of e-business websites and services via various programming languages. Examines various models for online consumer systems, business-to-business systems, and enterprise

computing--e.g., Supply chain models. Covers related technologies in document processing, telecommunications, and security.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2560 and 2710; PROG: School of Information Science or Sch Computing and Information

INFSCI 2731 - SECURITY IN E-COMMERCE

Minimum Credits: 3

Maximum Credits: 3
