Grade Component: Grad HSU Basis

East Asian Studies

EAS 2000 - RESEARCH AND THESIS MA DEGREE

Minimum Credits: 1
Maximum Credits: 6
Preparation of thesis.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Attributes: Asian Studies

EAS 2005 - APPROACHES TO EAST ASIA

Minimum Credits: 3
Maximum Credits: 3
This course will center on how to use library materials for research on China and Japan. Students will be trained in bibliography, library techniques, and the use of text and reference works for East Asian studies. Students will also be encouraged to familiarize themselves with the range of new technologies available for advanced level research, including library databases and internet resources.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: Asian Studies

EAS 2702 - READING JAPANESE 2

Minimum Credits: 3
Maximum Credits: 3
A continuation of EAS 2701. Students will continue to develop reading skills by reading a variety of literature relevant to their fields of research.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Asian Studies

EAS 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
The student undertakes a course of study under the direct supervision of a department faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Attributes: Asian Studies

EAS 2990 - INDEPENDENT STUDY

Minimum Credits: 3
Maximum Credits: 3
Individual study under the guidance of a department faculty member.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis
Course Attributes: Asian Studies

Economics

ECON 2000 - THESIS AND RESEARCH MA DEGREE

Minimum Credits: 1
Maximum Credits: 12
Students pursue study or research independently with minimal supervision by faculty.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

ECON 2320 - TOPICS IN URBAN AND ENVIROMENTAL ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
The first portion of the course is devoted to examining the allocation of resources within and between urban areas. The second portion of the course examines the relationship between this resource allocation and various urban problems including poverty, discrimination, housing, transportation, and urban public finance.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2450 - ECONOMIC HISTORY

Minimum Credits: 3
Maximum Credits: 3
This course explores the economic history of the United States from European settlement up to the recent past. Topics covered will include: the origins of American industrial growth; the political economy of the constitution and constitutional ratification; economic and environmental change; the welfare effects of industrialization; the industrial organization of the great trusts, such as standard oil and American tobacco; the sources and consequences of regulatory change; and the great depression and the new deal. The course will train students in the tools and methods of the economic historian. In this way, the course will consider a wide body of theory and empirical tools that can be applied to the study history and historical change. The course readings will be mix of old classic articles and more recent work.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2730 - SEMINAR EXPERIMENTAL ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
There is a small, but rapidly growing literature in which behavioral experiments are used to test central propositions of various economic theories. This course will review the experimental literature that exists in several areas of economics, including industrial organization, social choice and preference revelation, behavior of decentralized markets and bargaining. A number of experiments will be replicated. Students will be expected to design their own experiments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2801 - COMMUNICATING ECONOMIC INSIGHTS

Minimum Credits: 3
Maximum Credits: 3
Communicating Economic Insights helps students develop written and oral communication and presentation skills essential for career success. Students practice writing documents for a variety of professional audiences, collaborative writing as well as multi-author revising skills. Students also learn presentation skills to enhance clear communication of ideas. Written and oral skills will emphasize the importance of one's audience as it determines style, tone, organization, and depth of concepts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2811 - INDIVIDUALS, FIRMS, AND MARKETS

Minimum Credits: 3
Maximum Credits: 3
Individuals, Firms, and Markets provides a rigorous introduction to contemporary microeconomic theory, with a focus on optimization techniques, the development of modeling skills and critical thinking strategies needed to understand and evaluate a wide variety of economic contexts. Topics covered include consumer and producer theory, decision making under uncertainty, choice over time, welfare analysis, competitive markets, monopoly, externalities, and public goods. The course stresses application of theory to economics and business problems, and a substantial amount of class work is devoted to examining scenarios based on such problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2812 - INCENTIVES AND INFORMATION

Minimum Credits: 3
Maximum Credits: 3
Incentives and Information are central to modern economics, and this course studies the question of how individuals and firms respond to incentives. These incentives are shaped, in large part, by the information possessed by each relevant party. In this course we study how such informational issues can lead to market inefficiencies, and what can be done to exploit or combat them. How should a seller design an auction, or the products available, to extract as much revenue as possible from buyers? How can firms design compensation schemes to get efficient effort from employees? What are the limits of what can be achieved through regulation? Students will learn how to address these and other similar questions using rigorous economic tools.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2813 - GLOBAL ECONOMICS AND FINANCE

Minimum Credits: 3
Maximum Credits: 3
Global Economics and Finance presents the main topics in modern macroeconomics and touches important questions in international economics and finance. Among the first set of topics, the course covers economic growth and business cycles, unemployment and labor market frictions, inequality, nominal frictions and monetary policy, and fiscal policy. The course also studies international linkages, including global imbalances, capital account sustainability, international capital market integration, international trade, nominal and real exchange rate determination, external debt, and the relationship between inequality and international trade.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2814 - EVIDENCE-BASED ANALYSIS IN LABOR, PUBLIC AND HEALTH ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
Evidence-Based Analysis in Labor, Public and Health Economics affords an opportunity for students to further develop their MQE toolkits through exposure to both seminal and frontier applied research on a diverse set of topics such as education, environmental sustainability, the non-profit sector and employment compensation. In addition to reviewing extant applied research, students will hone their own analytical approach working both individually and in groups to apply economic thinking and analysis to a broad set of business and policy problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2821 - QUANTITATIVE METHODS

Minimum Credits: 3
Maximum Credits: 3
Quantitative Methods presents a framework for data-driven decision making under conditions of uncertainty and partial information, and it covers data analysis methods and techniques used in economic applications. The class will use R throughout; among the topics covered are graphical and descriptive data analysis, conditional probability, random variables, distribution functions, sampling, estimation, confidence intervals, hypothesis testing, and an introduction to regression methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2822 - ECONOMIC INFERENCE FROM DATA

Minimum Credits: 3
Maximum Credits: 3
Economic Inference from Data provides hands-on experience with applied econometric methods, allowing the student to establish empirical relationships of cause and effect. The course will cover advanced methods in regression analysis as well as a full toolkit of quasi-experimental methods that will allow the study of causal relationships even in the absence of a randomized control trial. The course includes hands-on empirical applications to solidify the concepts, with many examples from business and public policy settings. It will also focus also on learning the basic tools of programming and coding in R.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2823 - APPLICATIONS OF ECONOMIC ANALYSIS TECHNIQUES

Minimum Credits: 3
Maximum Credits: 3
Applications of Economic Analysis Techniques moves beyond ordinary regression to look at more-specialized models and data that are important to economists. The course expands students' knowledge of econometric methods to account for qualitative and selected dependent variables via maximum likelihood, and presents more structured estimation models. Throughout, the focus is on building students' experience with more advanced techniques, both for estimation and inferences; their understanding of the methods' pros and cons of these methods; and, importantly, how best to extract insights from them to aid in decision making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2824 - BIG DATA AND FORECASTING IN ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
Big Data and Forecasting in Economics covers cutting-edge methods typically used in statistical learning and is designed to help students learn how to apply the econometric techniques learned in the previous courses big data environments. The course introduces students to machine learning, text learning analysis, as well as scraping and data mining techniques using R. Some methods encountered in this course are classification, resampling, regularization, tree-based methods, supporting vector machines, deep learning, and unsupervised learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 2841 - DATA DESIGN FOR ECONOMIC APPLICATIONS (CAPSTONE)

Minimum Credits: 3
Maximum Credits: 3
Data Design for Economic Applications (Capstone) helps student formulate questions that are critical for an organization and then, guided by economic theory, deliver informative answers using data. The first portion of the course rounds out the data science toolbox of students by training them in techniques for data creation, including survey design and the design and implementation of randomized control trials.

The second portion of the course provides students with examples of problems facing real organizations, so they can apply what they have learned in the MQE program, working in groups to identify questions, analyze data, and present results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3001 - INTRO TO MATHEMATICAL METHODS

Minimum Credits: 3
Maximum Credits: 3
Intensive mathematics preparation for first year Ph.D. students.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Economics (PHD), LEVEL: Year 1

ECON 3010 - MATHEMATICAL METHODS OF ECONOMIC ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course introduces the key mathematical tools needed to do economic research: static and dynamic optimization, fixed point theorems, differential equations among others.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: ECON 3001; PLAN: Economics (PhD)

ECON 3020 - ECONOMETRIC THEORY 1

Minimum Credits: 3
Maximum Credits: 3
This course covers elements of inferential statistics necessary for the study of econometric theory. It emphasizes estimation theory and its applications. Illustrations are drawn from several areas of economics. Students are expected to understand the theory of statistical inference mathematically as well as intuitively when applied to economic problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3030 - MICROECONOMIC THEORY 1

Minimum Credits: 3
Maximum Credits: 3
Theories of consumer behavior, producer behavior, market equilibrium, industry structure.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3040 - MACROECONOMIC THEORY 1

Minimum Credits: 3
Maximum Credits: 3
Introduction to dynamic macroeconomic theory with emphasis on dynamic optimization, dynamic competitive equilibria, and solution methods for dynamic models.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3050 - ECONOMETRIC THEORY 2

Minimum Credits: 3
Maximum Credits: 3
Surveys standard econometric models, their estimation, hypothesis testing and other inferential problems of, among others, (1) classical linear regression, (2) generalized linear regression models, including sur and pooled regression models, (3) dynamic models with spherical and nonspherical errors, (4) qualitative and limited dependent variable models, (5) simultaneous equations models--static and dynamic, (6) use and analysis of econometric models.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3060 - MICROECONOMIC THEORY 2

Minimum Credits: 3
Maximum Credits: 3
This course will present the Arrow-Debreu-McKenzie Theory of competitive equilibrium, the theory of imperfect competition, economics of uncertainty, and game theory. The presentation will be self-contained, including a discussion of the mathematical techniques used.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3070 - MACROECONOMIC THEORY 2

Minimum Credits: 3
Maximum Credits: 3
The first part of the course will be devoted to studying models of economic growth and the role money plays in the growth process. The second part of the course will consist of an introduction to the macro-economic rational expectations literature. Both theoretical as well as empirical contributions will be surveyed and discussed in this area.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3080 - EMPIRICAL METHODS

Minimum Credits: 3
Maximum Credits: 3
This course will cover empirical methods typically used in applied microeconomic research and it is designed to help you apply the techniques learned in the econometrics sequence. We will focus on techniques used in applied microeconomics to identify causal estimates. The course will cover data issues and distributional estimators in some detail along with matching and propensity scores, local regressions, instrumental variables, regression discontinuity designs, and inference issues. Many examples will come from development, health, labor, public economics, and political economy, but the material will be useful to any applied researcher. The course will focus also on the implementation of econometric techniques learning the basic tools of programming and coding. The goal of this class is to provide students with the tools needed to become critical readers of empirical work and teach them techniques that they can apply to their own original research.
Academic Career: Graduate
Course Component: Lecture

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ECON 3210 - TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
Hands-on teaching practicum course for graduate students to learn about university-level teaching. Theory and pedagogy are part of this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

ECON 3220 - RESEARCH METHODS IN ECONOMICS

Minimum Credits: 1
Maximum Credits: 1
This is a mandatory course for second-year PhD students. The course will introduce students to strategies for identifying interesting research ideas, to determine whether the idea is worth pursuing, to effectively review the literature, and to plan how to conduct the research. Insights into how these strategies change across fields within economics will be provided by relevant faculty guests. Other topics discussed in the course will include the typical difficulties involved in conducting research and how to address them; how to deal with

advisors; academic etiquette; techniques for presenting work in progress at seminars; and how to write and submit academic papers. Requirements will include the drafting of the second-year paper proposal (PhD Comprehensive Research Paper) and the selection of two faculty readers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3230 - OVERVIEW PREPARATION

Minimum Credits: 1
Maximum Credits: 1
In this course, PhD students who have not passed their overview will meet with the Director of Graduate Studies to discuss next steps.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ECON 3310 - TOPICS IN URBAN ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
The course will introduce students to the fundamental papers and concepts in spatial economics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3310 - TOPICS IN URBAN ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This is a survey course of topics in public finance. The purpose is to acquaint students with a broad range of classical and contemporary issues in public finance. The course will be divided into several topic areas; taxation; expenditure analysis; economics of political processes; control of externalities; regulation; and fiscal federalism.
Academic Career: Graduate
Course Component: Lecture

ECON 3430 - TOPICS IN LABOR AND HEALTH ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This course will cover frontier applied work in labor and health economics with a particular focus on the economics of family, economic behavior related to children, child health and child economic and social well-being, and the economics of risky health behaviors. The first part of the course will be focused on the economics of family and children. The second part of the course will be focused on health capital emphasizing the long-run effects of health at birth, the economic models of determinants of health, and the economics of risky health behaviors. The course will cover a range of different methods from structural analysis of marriage markets and health investments to reduced-form analysis of policy interventions, and experimental work. We will also explore the recent use of machine learning methods in these domains. There will be data-intensive hands-on sessions devoted to the replication of some of the key studies in the literature.

ECON 3440 - TOPICS IN DEVELOPMENT ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This course introduces topics at the frontier of development economics. Lectures and readings will review empirical methods, some seminal papers and current open questions in the field. The goal is for students to learn how to (1) identify gaps in the existing literature, (2) design and implement valid identification strategies, and (3) interpret empirical findings. The first half of the course covers micro-based issues including health and education; credit and savings; labor markets; and behavioral development economics. The second half takes a micro-macro approach and studies long run persistence of bad and good institutions; the impact of social media in autocracies on growth and corruption; quantifying the value and impact of political connections; and the functioning and impact of state-owned firms.

The seminar will focus on the most recent theoretical and empirical studies that are being carried out by specialists in these areas. It will consist of presentations both by the university of Pittsburgh and outside faculty.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis

ECON 3610 - EXPERIMENTAL AND BEHAVIORAL ECONOMICS 1

Minimum Credits: 3
Maximum Credits: 3
The course is designed to familiarize the student with experimental methodology and the range of application of experimental methods in economics. Students will devise and execute (in consultation with the instructor) a "pilot" experiment in a substantive area of interest. This can be done in small groups of 2 or 3 or be a solo project. The object is to provide hands-on experience in conducting an economics experiment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3620 - EXPERIMENTAL AND BEHAVIORAL ECONOMICS 2

Minimum Credits: 3
Maximum Credits: 3
The course is designed to familiarize the student with current experimental research in various economic topics. Students will work together with the instructor on an experiment from design to implementation to data analysis to write. The objective is to provide hands-on experience with conducting economic experiments and writing a publishable paper.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3620 - EXPERIMENTAL AND BEHAVIORAL ECONOMICS 2

Minimum Credits: 3
Maximum Credits: 3
The course is designed to familiarize the student with current experimental research in various economic topics. Students will work together with the instructor on an experiment from design to implementation to data analysis to write. The objective is to provide hands-on experience with conducting economic experiments and writing a publishable paper.

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3650 - ADVANCED ECONOMETRICS 1

Minimum Credits: 3
Maximum Credits: 3
This course is the first of two courses in the graduate advanced econometrics field. It consists of an introduction to the econometric analysis of time series. Topics include: Exogeneity and causality; Likelihood inference (estimation and testing); Monte Carlo simulation; Optimization; Stationarity; VAR, MA and ARMA processes; Dynamic equations; Multipliers; Unit roots; Cointegration; Error Correction Mechanisms (ECMs); Dynamic state-space models; Kalman filter, Sequential importance sampling and particle filters.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3660 - ADVANCED ECONOMETRICS 2

Minimum Credits: 3
Maximum Credits: 3
Covers qualitative choice models, censored and truncated models, duration models, time series models - univariate and multivariate, causality analysis, dynamic models, cointegration, time series macroeconometrics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3710 - TOPICS IN MICROECONOMIC THEORY

Minimum Credits: 3
Maximum Credits: 3
This is an advanced level course in microeconomic theory. It deals with a broad range of topics, some drawn from recent papers, chosen to prepare students to tackle the literature on their own.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3720 - POLITICAL ECONOMY

Minimum Credits: 3
Maximum Credits: 3
In this course, we will take a formal look at various environments where a group of individuals (committee, society, congress, etc) takes a binding decision through some institutional mechanism (consensus, elections, jury deliberations, legislative bargaining etc). The course will have a strong formal, positive focus on how the varied political, social and legal institutions that define the 'rules' of collective decision-making determine the nature of collective outcomes. On the normative side, the course would focus on certain 'desirable properties' (e.g. Respecting minority preference) of collective decision-making and analyze whether and to what extent the existing institutional arrangements satisfy such properties. While we shall start out using concepts of co-operative game theory, for most part of the course we will be in the realm of non-cooperative game theory. This course will provide a starting point for research in formal political theory and political economy. As such, it might be of interest to students of both economics and political science.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3750 - TOPICS IN MACROECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This course studies various dimensions of inequality from a macroeconomic perspective, covering topics in household finance, monetary economics, labor markets, technological change and modern business cycle research. The focus is on using empirically grounded quantitative aggregate models with heterogeneous agents or firms to tackle important questions in modern macroeconomics. The course will also provide an introduction to a variety of computational tools and methods, including structural estimation and machine learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

ECON 3830 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Current topics of particular interest to economics graduate students are discussed and analyzed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ECON 3900 - COMPREHENSIVE PREPARATION

Minimum Credits: 1
Maximum Credits: 12
Graduate students pursue study independently to prepare for comprehensive examinations.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ECON 3902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
Students pursue study or research under the direct supervision of a faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECON 3950 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12
Students pursue study or research independently with minimal supervision by faculty.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ECON 3990 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 12
Graduate students pursue study or research under the supervision of faculty.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

Education

EDUC 2000 - PSYCHOLOGY OF LEARNING AND DEVELOPMENT FOR EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on those areas of development and learning which have relevance for educators. The course covers preschool through old age. For each age range, typical behaviors and competencies that are learned or developed are considered from a number of domains (cognitive, affective, psychomotor, social). Attention is also given to appropriate research methods. An interactionist perspective is utilized; the course may be team taught.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2007 - HUMAN LEARNING

Minimum Credits: 3
Maximum Credits: 3
Presents an overview of theories and of kinds of learning that educational professionals should know. Also considered are recent developments in cognitive psychology, such as information processing and knowledge-based approaches in transition from novice to expert, and from poorly to well adjusted states.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2008 - DEVELOPMENT: CONCEPTION THROUGH EARLY CHILDHOOD

Minimum Credits: 3
Maximum Credits: 3
Focuses on developmental pathways from conception through early childhood within contexts of family, daycare/school, community and culture. Pathways are considered with regard to developmental changes in transactions between individuals and social life conditions, with focus on patterns of change in participation in social-cultural practices. Besides a review of current literature, students will be engaged in qualitative investigations of the social lives of young children.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 2009 - DEVELOPMENT: MIDDLE CHILDHOOD/ADOLESCENCE

Minimum Credits: 3
Maximum Credits: 3
Course focuses on developmental pathways from middle child hood through adolescence (ages 7-18) within the contexts of family, school, community and culture. Pathways are considered in regard to developmental changes in transactions between individuals and social life conditions, with regard to patterns of change in participation in social cultural practices. Students will be engaged in qualitative investigations of the social lives of children and adolescents.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2100 - EDUCATION AND SOCIETY

Minimum Credits: 3
Maximum Credits: 3
The course focuses on the interaction between educational institutions and their social context. Situated in the field of study known as social foundations of education, the content reflects disciplinary methods in the examination of such policy issues as the role of the schools in social change, the influence and consequences of formal and non-formal educational forces, and the economics and politics of school reform efforts. Students are challenged to consider the relationships between culture and power and the value-laden character of all educational endeavors. Thus the role of schooling is considered in cultivating the habits necessary for democratic citizenship which include ongoing efforts to secure equitable and just social relations, and to advance the common good.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

EDUC 2105 - SOCIOLOGY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
An analysis of the development of modern social institutions with special reference to the sociology of the schools. The school is studied as a social system and in the context of broad social organization.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2110 - GENDER AND EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar examines the role that gender plays in the lives as students, researchers, educators, and policy makers. Major topics may include: changing trends of participation and success in k-16 schooling; childhood and professional socialization; media and curricular bias; coming of age; embodiment, sexuality, and sexual harassment; gender and the educational professions; feminist and antibias teaching; leadership and transnational communities of practice; activism and engaged feminist scholarship.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Gender, Sexuality & Women's St

EDUC 2112 - POLITICS AND HISTORY OF HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course surveys the perennial forces which have shaped the character of America's colleges and universities. Institutional control and governance. Curricular goals and organization, and faculty and student life are examined against the background of political, economic, religious, social, and intellectual developments in American culture.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2200 - DISCIPLINED INQUIRY

Minimum Credits: 3
Maximum Credits: 3
This course deals both with methods used in educational research and with the underlying theories, assumptions, and limitations. Students will do various inquiry activities, including sampling, observation and other data collection activities, as well as critical analysis of literature relevant to an important educational problem. These inquiry activities and study provide a foundation for further study of epistemological issues on which educational research and theory are based.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2201 - INTRODUCTION TO RESEARCH METHODOLOGY

Minimum Credits: 3
Maximum Credits: 3
Introduces basic language and concepts of empirical research with emphasis on the applicability of research methodology (statistics, measurement, design, and evaluation) for improvement of professional practice in education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EDUC 2205 - FIELD METHODS

Minimum Credits: 3
Maximum Credits: 3
Designed to acquaint students with basic ethnographic field work techniques. Topics addressed include taking and managing field notes on

participant-observation and use of archival materials. There will also be some discussion of the relationship among research design, data collection, and data analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EDUC 2250 - PARTNERING WITH PEERS

Minimum Credits: 3
Maximum Credits: 3
This course helps students in early care and education in developing their knowledge base of Infant Mental Health through guided lectures, community sharing and real-world applications. Overarching goals: Build and strengthen community among early care and education professionals, increase Infant Mental Health knowledge, and advance toward Infant Mental Health endorsement requirements.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EDUC 2300 - DIGITAL MEDIA FOR LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course provides opportunities for graduate learners to explore, examine, reflect, and discuss critical learning theories that inform how we select and use digital media and technology. The course includes discussion and reflections on different digital integration models. It enables you to consider digital media based on four guiding principles "place, pedagogy, praxis, and possibility" (Bell, 2021). We will examine the digital media application and equity, accessibility, and criticality. You will have the opportunity to disseminate your strategies for and experiences using digital media and technology. You will create content using select digital media and technology, receive feedback from instructors and colleagues, and reflect on how you could revise your creations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2301 - ONLINE PEDAGOGY AND PRAXIS

Minimum Credits: 3
Maximum Credits: 3
We will critically examine and discuss online pedagogical theories that inform instructional design, planning, activities, and assessment strategies. We will explore and discuss instructional design (ID) models and current shifts in the field toward criticality, equity, and justice-oriented praxes. We will ask critical questions about the role of instructional design (ID) in liberatory pedagogy and praxis; examine and reflect on different online learning engagement strategies. We use online pedagogies to guide the design and creation of online content using digital media and critically reflect on our creations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2302 - CRITICAL DIGITAL LITERACIES, SCHOOLING, AND IDENTITY

Minimum Credits: 3
Maximum Credits: 3
This course will examine the relationship between digital literacies, schooling, and identity in relation to an evolving digital media landscape. We will consider what it means to read and write, the world and the word, in a digitally constructed reality. We will collaboratively explore the deictic, participatory, networked, global, and multimodal nature of digital literacies and the implications for classrooms and other educational contexts. To do so, we will critically examine how literacies are situated and how these sociocultural understandings illuminate issues of power and privilege. This course will be grounded in critical praxis, and therefore you will learn to compose and deconstruct a range of digital artifacts (e.g. digital stories, games, podcasts), engage in critical analysis of digital artifacts, and think about how to design digital experiences to nurture learning and literacy.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 2303 - TECHNOLOGY IN CONTEXT

Minimum Credits: 3
Maximum Credits: 3
In this course, we will engage in critical discourse about the historical roots, present-day manifestations, and speculative futures of technological innovations. We will explore and be in conversation with scholarly texts and media that provide a critical lens on the values, ideologies and social structures encoded in technological systems. Based on this foundation, we will interrogate applications of technology in our everyday lives and education spaces, and pursue lines of inquiry about the implications of these technologies on society. Our scholarship will build on the wealth of research conducted by women and people of color to analyze the implications of everyday technologies across race, gender, class, ability and other intersections of identity. We will explore a broad range of topics, including algorithms and artificial intelligence (AI), digital surveillance and science fiction. Our goals will be to follow our questions to find new questions, play with ideas, think deeply, and create scholarly artifacts that grapple with technology in the context of our collective humanity.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 2304 - PROJECT-BASED INSTRUCTIONAL DESIGN

Minimum Credits: 3
Maximum Credits: 3
The project-based instructional design (ID) course explores project management strategies and tools to plan, coordinate, and monitor collaborative instructional design projects. Students will work in small teams to develop a project management plan for setting goals and milestones, allocating support and resources, budgeting, monitoring progress and completion, and considering pedagogical factors. Students will examine their commitments to equity and design justice as they collaborate on their instructional design case-based projects. The course will promote opportunities for students to focus on building relationships with their team members. Students will lead and navigate project design and development processes that include constructive peer-review feedback and multiple project iterations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3000 - ADVANCED APPLIED STATISTICAL ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course will focus on approaches to the analysis of qualitative data. It is designed for students who have some experience with qualitative field research methods (introductory coursework or project experience) and have a set of qualitative data they are interested in analyzing for their own research. The principal aims of the course are to: (1) enable you to make informed and well-documented choices regarding the analysis of qualitative data that is to "establish a transparent path of inference" in your analysis and writing; and (2) explore a range of analysis strategies, techniques and tools. The course has two primary strands. The reading strand will introduce readings about qualitative analysis that delve into methodological issues, technical aspects of various approaches to qualitative analysis, validity and reliability, and issues related to writing and presentation of qualitative research. We will also examine examples of published qualitative analysis for their methodological and presentation choices. The second strand will be a practicum segment included in each course session that will provide time for consultation on your own work in small groups.

EDUC 3001 - PRACTITIONER INQUIRY 1: THE SCIENCE OF IMPROVEMENT

Minimum Credits: 3
Maximum Credits: 3
Foundations 1 and Practitioner 1 represent an integrated 6-credit experience that is designed to help you begin your doctoral adventure. The courses provide an understanding of becoming a Scholarly Practitioner and the tools to identify, frame, and consider ways to thoughtfully engage in systematic inquiry focused on important Problems of Practice in education. Practitioner Inquiry focuses on Improvement Science, our signature method in the EdD. At the center of practitioner inquiry is the ability to use data to understand the effects of innovations that seek to improve problems found in practice. It is the process of posing significant questions, using various research, theories, and professional wisdom, and designing innovative solutions to address complex problems of practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3002 - FOUNDATIONS 1: BECOMING A LEADER SCHOLAR PRACTITIONER

Minimum Credits: 3
Maximum Credits: 3
Foundations 1 and Practitioner 1 represent an integrated 6-credit experience that is designed to help you begin your doctoral adventure. The courses provide an understanding of becoming a Scholarly Practitioner and the tools to identify, frame, and consider ways to thoughtfully engage in systematic inquiry focused on important Problems of Practice in education. Foundations 1 will help you establish your identities as scholarly practitioners and leaders. Scholarly practitioner is defined by the Carnegie Project on the Education Doctorate as one who blends practical wisdom with professional skills and knowledge to name, frame, and solve problems of practice; uses practical research and applied theories as tools for change; addresses problems of practice by collaborating with key stakeholders, including the university, the educational institution, the community, and individuals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3003 - FOUNDATIONS: LEADERSHIP IN GROUPS AND ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the leadership of pre-20 institutions, and other educationally-related entities in an environment characterized by socioeconomic, political, technological, and demographic change. It examined the breadth of leadership theories and styles in education, including traditional, entrepreneurial, behavioral, and relationship-based models. Course participants will learn how to lead system- and institutional-level changes, drawing upon strategic, human resources, financial management, and quality assurance skills. Emphasis is given to leadership models that focus on student-centric solutions, sustainable excellence, equity and social justice within education institutions at all levels.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 3004 - FOUNDATIONS: CONTEXTS OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course is an overview of the structural relationships informing education and educational systems. We will examine the historical and philosophical roots of education and analyze the nature of power, culture, resources, and identity in educational contexts. Throughout this course, we will promote increased understanding and ability to articulate the role of structural and lived contexts in assessing and developing leadership, policy, practice, interventions, and outcomes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 3005 - FOUNDATIONS: POLICY AS A LEVER FOR CHANGE

Minimum Credits: 3
Maximum Credits: 3
Students in this core course will learn the principles of policy development; experience the views of decision-makers about how public policies are created; highlight notable examples of both effective and ineffective policies in education, human services, and healthcare; critically examine policies which are evident in local, national, and international realms for critical examination; and respond to problem-based learning scenarios to form and modify real-world examples of policies and regulations in education and related settings; and understand the links among effective policy, leadership, advocacy for children and families, and systems reform.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 3006 - PRACTITIONER INQUIRY 2

Minimum Credits: 3
Maximum Credits: 3
The course will introduce concepts, tools and methods of quantitative analysis commonly used in research. The course will emphasize real world applications, including data preparation and analysis. Some concepts include: variables and their measurement ' measures of central tendency and variability; sampling; tests of statistical significance; causal inference and research design; data reduction; bivariate relationships: correlation and cross-tabulation; multivariate relationships: inference using regression analysis
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3007 - PRACTITIONER INQUIRY 3

Minimum Credits: 3
Maximum Credits: 3
The course will introduce approaches, strategies, and practices commonly used in qualitative research. The course will emphasize real world contexts and phenomena. Key areas of study include: researcher perspective, stance and voice. Making use of observations, survey, interviews, focus groups, artifact analysis, and other forms of gathering and using 'data'. Applying various research and analytic strategies such as case study, action research, grounded theory, and thematic analysis. Considering emergent genre of research including narrative study, arts-based research and others.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3008 - PRACTITIONER INQUIRY 4: APPLYING DISCIPLINED INQUIRY

Minimum Credits: 3
Maximum Credits: 3
This final course in the research series provides students the opportunity to engage in practice-based research with real-world issues and problems of practice. The seminar will begin with the opportunity to review a number of studies representing quantitative, qualitative, and mixed approaches. Students will then collaborate with colleagues pursuing the same and/or similar research methods and approaches through small workgroups. Each small group will be organized to support students in conducting pilot work in the methods/approaches they plan to use for their practice-based dissertation. Student groups will work with advanced PhD students who have expertise in the methods and who will act as a consultant. Students will be expected to finalize their dissertation overview proposal through this course (in conjunction with their Arco advisor and faculty).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 3009 - SUPERVISED PRACTITIONER INQUIRY

Minimum Credits: 3
Maximum Credits: 3

Ed.D research seminar is a faculty-led inquiry group focused on developing deep knowledge in an area of interest.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis

EDUC 3010 - INTRODUCTION TO THE HISTORY & SOCIAL CONTEXTS OF URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
In this course, students will develop an introductory and foundational understanding of the dynamics of urban education. The course will address the history of urban life, communities, and schools in the U.S., as well as provide an introduction to policy and practices in the field of urban education. Additionally, the course will take an interdisciplinary approach through readings and activities that are designed to help students establish a basis for lifelong learning through normative and critical reflection on urban education within its historical, philosophical, cultural and social contexts. This includes a focus on the history of cities, including 20th and 21st century urban transformation, the development and persistence of residential segregation, urban poverty, the criminalization of urban communities, and current trends in urban redevelopment, which may shape the future of urban education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EDUC 3011 - PEDAGOGIES AND PRACTICES IN URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to theory, research, and especially practice related to developing and enacting curriculum and instructional practices that respond to the social context in which they (will) work. The course covers general principles and approaches to culturally responsive teaching such as how teachers can develop meaningful relationships with students, how teachers can learn from and about the school and local community, how teachers can develop and implement culturally responsive classroom management, and how teachers can develop expectations for students that maximize their capacity. In addition, the course will assist students in learning about and developing culturally responsive curriculum and pedagogy in their different content/subject matter areas (such as Mathematics, Science, Art, Language Arts, and Social Studies). A recurrent and central question of the course is: How do teachers develop culturally responsive instructional practices in their particular disciplinary domain to maximize students' learning opportunities?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3012 - LABORATORY OF PRACTICE

Minimum Credits: 3
Maximum Credits: 3
Students may complete one of three internship experiences: Job-embedded internship: students already working in their field of choice may elect to have their current responsibilities reviewed for eligibility for a full-time job-embedded internship. If the advisor and student agree that the student's current responsibilities represent relevant and meaningful internship experiences, then a plan will be developed that will engage the student in analysis of practice and leadership activities. Aspirant internship: students will have an apprenticeship experience in which they shadow and collaborate with a trained mentor in their discipline. Global studies experience: students will have the opportunity to design an international experience that provides direct observation or experience with practice or policy in another country.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

EDUC 3013 - EDUCATION LAW, POLICY & SCHOOL REFORM

Minimum Credits: 3
Maximum Credits: 3
The United States is a country built on a foundation of laws, which are supposed to be a system of rules and procedures designed for the

common good of our society. Historically, however, the U.S. legal system has not always considered what is good or just for serving all members of society, particularly in education. This course examines the evolution of education laws and policies in the U.S., as well as their influence on school reform efforts pre- and post-Brown v. Board of Education from an equity and social justice perspective. In this course, students will learn to understand the interplay between the three branches of government - the legislative, executive, and judicial branches - how the U.S. Supreme Court selects education cases, interprets the law, and makes its decisions given the political and social climate of the country. Furthermore, this course studies how the Court's decisions influence school reform policies, with a particular emphasis on urban schools, stakeholders, and society.

EDUC 3015 - CRITICAL PERSPECTIVES IN URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course examines major sociological, historical and philosophical ideas that together constitute the discourse known as an "Urbanized Education." The course will provide both an opportunity for rigorous engagement with philosophical and cultural issues in the study of an Urbanized education and society. Through course readings and class discussions, we explore the following: (1) the broader sociopolitical urban context of K-12 schools and the communities they are situated, (2) the possibilities of education as the practice of freedom; and (3) (re)form and (re)imagining urban education. It will also provide a space for personal encounters with the ways in which ideology and culture insinuate themselves into our lives, beliefs, values and emotional being.

EDUC 3067 - FREEDOM SEMINAR

Minimum Credits: 1
Maximum Credits: 1
The Freedom Microseminar courses attend to a range of freedom projects, theories, pedagogies, and praxes. Each course is a focused engagement with a specific set of questions, ideas, and topics relevant for understanding education within social, cultural, and political movements, systems, and structures. Students study both the what and how of freedom through insurgent knowledge traditions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EDUC 3087 - ADVANCED FREEDOM SEMINAR

Minimum Credits: 3
Maximum Credits: 3
The Freedom Seminar courses attend to a range of freedom projects, theories, pedagogies, and praxes. Each course is focused on engagement with a specific set of questions, ideas, topics relevant for understanding education with a social, cultural, and political movements, systems, and structures. Students study both the what and the how of freedom through insurgent knowledge traditions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EDUC 3089 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 12
An experimental course with a flexible curriculum oriented to special research topics or current issues of concern to educators. Topics vary.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3090 - PRACTITIONER INQUIRY 5: DISSERTATION-IN-PRACTICE OVERVIEW SEMINAR

Minimum Credits: 3
Maximum Credits: 3

This course guides EdD students through the process of developing a comprehensive overview document for the dissertation-in-practice. Students align, refine, and integrate previous milestone work (e.g., problem of practice, review of literature, theory of change, intervention plan) into a draft of their dissertation-in-practice overview. Students receive instructor and peer feedback on the overview draft and faculty support in gaining IRB approval, forming their dissertation committee, and practicing their overview presentation. By the end of the course, students have a well-developed proposal ready for committee review.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EDUC 3099 - GUIDANCE IN SCHOLARLY PRACTICE

Minimum Credits: 1
Maximum Credits: 15
Students will enact an applied inquiry plan and write a report of the enactment under the supervision of a research advisor. The report becomes the basis for a culminating demonstrations of excellence for the doctor of education degree.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

EDUC 3100 - INTRODUCTION TO QUAN METHODS: DESCRIPTIVE AND INFERENTIAL STATISTICS

Minimum Credits: 3
Maximum Credits: 3
This seminar prepares students to conduct descriptive and inferential statistics about a population using data collected under complex survey design. The emphasis throughout the course is on real world data preparation and analysis using the SPSS/STRATA/SAS statistical software package.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3101 - FIRST YEAR PHD SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar for beginning Ph.D. students addresses professional issues germane to doctoral skills and competencies. Topics addressed in this seminar include guidelines for constructing a literature review, IRB requirements, preparing professional presentations, and research proposals.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3102 - FIRST YEAR SEMINAR 1

Minimum Credits: 1
Maximum Credits: 1
This seminar addresses professional issues Germane to doctoral skills and competencies. Topics addressed in the seminar include guidelines for constructing a literature review, IRB requirements, ethical and legal issues pertaining to conducting research, preparing professional presentations and research proposals.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3103 - QUANTITATIVE METHODS 2

Minimum Credits: 3
Maximum Credits: 3
The primary focus of this course is single predictor and multiple regression analysis for continuous and binary outcomes. The pedagogical strategy will be to learn statistical analysis by doing statistical analysis. We will rely primarily on the Stata statistical software package. Over the course of the semester, we will examine a variety of data sets, each of which can be used to address substantive research questions by fitting increasingly sophisticated regression models. As we build understanding about how to use these methods in practice, we will discuss the regression model's purpose, mathematical representation, assumptions, implementation, interpretation, presentation, relationship to other statistical methods, implications for research design, and limitations. Additional principles of research design will be incorporated throughout the semester. The course will also include introductory coverage of more advanced topics, such as: multi-level modeling, structural equation modeling, regression discontinuity and propensity score matching. Introduction to these topics is meant primarily to inform students about upper-level courses that they might consider and not necessarily to prepare students to execute these methods on their own.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3104 - INTRODUCTION TO QUALITATIVE METHODS

Minimum Credits: 3
Maximum Credits: 3
This seminar introduces students to the inquiry traditions (e.g. empirical, interpretive, critical) and modes of research (e.g. narrative, ethnographic, historical, rhetorical, linguistic) associated with qualitative research i the social sciences. Students will gain experience with various elements in the research process (formulation of questions; research design; data organization and reduction; data analysis; validity and reliability issues) and with research methods characteristic qualitative research. This course should be completed by the end of the students' second year.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3105 - FIRST YEAR SEMINAR 2

Minimum Credits: 2
Maximum Credits: 2
This seminar for beginning Ph.D. students addresses professional issues germane to doctoral skills and competencies. Topics addressed in this seminar include guidelines for constructing a literature review, IRB requirements, preparing professional presentations, and research proposals.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3106 - ADVANCED APPLIED QUALITATIVE ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3107 - WAYS OF KNOWING

Minimum Credits: 3
Maximum Credits: 3
In making a distinction between ways of knowing and procedures for knowledge generating, students in this seminar will examine various epistemological, ontological and axiological schools of thought that are the basis for educational inquiry. The focus will include assumptions that form the logics of justification for truth claims embedded in educational research.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3109 - SOCIAL CONTEXT OF URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
Examines Urban Education with an emphasis on social context (e.g. red lining, gentrification, theories of home) and how communities are working toward empowering their respective neighborhoods. This course draws its theoretical and social action foundation from a spatial justice lens. As such, geography and space are sites of struggle and opportunity. Unjust geographies can contribute to language, policies, research, pedagogical constructs, and narratives that impact Urban Education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

EDUC 3109 - SOCIAL CONTEXT OF URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
Examines Urban Education with an emphasis on social context (e.g. red lining, gentrification, theories of home) and how communities are working toward empowering their respective neighborhoods. This course draws its theoretical and social action foundation from a spatial justice lens. As such, geography and space are sites of struggle and opportunity. EDUC 3114 - BLACK EDUCATIONAL THOUGHT

Minimum Credits: 3
Maximum Credits: 3
The aim of this course is to engage Black education discourse critically, as a popular-cultural idea, and as an area of intellectual thought and scholarly study. Our course readings will include critical social and cultural theory drawing from such areas as Black feminisms, Black cultural studies, Afropessimisms, Critical Race Theory, Black literary studies, Black queer studies, Black education history and philosophy, and empirical analyses and policy studies related to Black educational opportunities, experiences and outcomes. Poetry, music, film and other arts forms will also serve as texts to help us in our attempt to more clearly articulate a critical Black studies in the field of education, and a critical engagement of education in Black studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3418 - CAUSAL MODERATION AND MEDIATION ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course is designed for graduate students who are interested in applying advanced quantitative methods to their research. Research questions regarding how, for whom, and where a treatment achieves its effect on an outcome are often key to the advancement of scientific knowledge and have become increasingly valued in various fields. Such questions can be answered by causal moderation and mediation analysis, which assesses the heterogeneity of the treatment effect across individual and contextual characteristics and uncovers the mediation mechanism underlying the treatment effect. This course introduces the theoretical concepts of moderated effects and mediated effects under the potential outcomes framework, cutting-edge methodological approaches, and how to implement the methods with user-friendly R packages. The course blends theory and applications -- avoiding the extremes of presenting unneeded theory in isolation, or of giving application tools without the foundation needed for practical understanding. Prerequisites of the course are Introduction to Statistics and Introduction to Causal Inference or their equivalents.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EDUC 3100 and EFOP 3472

EDUC 3501 - CRITICAL POLICY ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This seminar engages doctoral students and advanced master's students in the ways in which all policies are texts, framing some topics to be important and consequentially excluding others. In this course, students will deepen their understandings of power through various critical analyses of policy texts and how they are taken up, modified, and dismissed by those intended to enact them. Specific attention will be focused to education policies in K-12 and higher education contexts.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3503 - HISTORICAL RESEARCH ANALYSIS AND ARCHIVAL METHODS

Minimum Credits: 3
Maximum Credits: 3
This course introduces graduate students to the diverse culture of historical research and methodologies that impact the processes of writing history, historical analysis, and the praxis of keeping memory. Students engage in the course aims and objectives of investigating who is constructing history and how history is being written by examining a diverse array of resources which include primary sources (i.e., diaries, letters, interviews, oral histories, newspaper articles, government documents), archival collection finding aids, digital history projects & exhibits, electronic records, photograph collections, and most importantly, archival collections. Students of the course are challenged to think critically about the multifaceted usages of history and meticulously study the fundamental methods of historical interpretation while developing the necessary skills of writing history and the cultural & political purposes of keeping memory. Most important, this course is driven by the significant functions of praxis in relation to archival research. Thus, students are provided with invaluable opportunities to actively engage in diverse field-based practicum data collection activities at various local and regional archival repositories. In conjunction with support from the course instructor, students apply the skills developed during the course by producing projects which align to their scholarly interests as prospective historians.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3505 - RESEARCH-PRACTICE PARTNERSHIPS: APPROACHES TO COLLABORATIVE DESIGN, INQUIRY & CHANGE

Minimum Credits: 3
Maximum Credits: 3
In this course, students learn principles and strategies for developing a research program that is place-based, community-engaged, and rooted in partnership. Through engagement with texts, colleagues, and experienced Research-Practice Partnership (RPP) members, students develop practical skills for navigating key RPP processes including building mutualistic relationships, negotiating research questions, applying design-based implementation research methods, and communicating about engaged research. Possibilities for RPP work are explored and contextualized within the greater Pittsburgh region, within larger historical and contemporary dynamics of exploitation and racism, and within multiple traditions of engaged scholarship and movements for educational justice.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EDUC 3506 - MIXED METHODS RESEARCH

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course to mixed methods research that is grounded in critical perspectives that address issues of power. We engage with the history and philosophy of mixed methods research and how it differs from single-method research. We also build our knowledge of the various types of mixed methods designs and methods for collecting, analyzing, integrating, and reporting data based on the designs. The pedagogical strategy of the course is to learn mixed methods by applying it to a research topic that seeks to disrupt and transform inequitable structures, with an emphasis on the educational system. To engage in these topics deeply, it is strongly recommended that students have taken at least one introductory course in either quantitative or qualitative methods.
Academic Career: Graduate

Grade Component: Grad Letter Grade

Educational Foundations, Organization, and Policy

EFOP 2001 - INTRODUCTION TO RESEARCH METHODOLOGY

Minimum Credits: 3
Maximum Credits: 3
Introduces basic language and concepts of empirical research with emphasis on the applicability of research methodology (statistics, measurement, design, and evaluation) for improvement of professional practice in education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EFOP 2004 - THEORIES OF EDUCATIONAL INEQUALITY

Minimum Credits: 3
Maximum Credits: 3
This course is the first of a required two-course sequence designed for students to explore the meaning and expectations of doctoral study in the department of administrative and policy studies. The doctoral core is planned with a curriculum for radical transition to doctoral

studies as students increasingly are called upon to take responsibility for their doctoral experience. Students have the opportunity to organize their own learning proclivities by managing resources such as study group and faculty-led deliberations, readings, computer-based technologies, individual research, and field activities. Students cultivate their identities as practitioner/scholar/citizens.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 2010 - EDUCATIONAL SYSTEMS, MACRO POLICY, AND POLITICS, MA

Minimum Credits: 3
Maximum Credits: 3
This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Organizational theories provide a framework for understanding educational organizations - early childhood centers, K-12 schools, higher education institutions, and beyond - and over-arching approaches to educational reform. Students will employ a range of lenses to examine policy including equity, productivity and efficiency, choice, and international comparison. In so doing, the course attends to big issues and trends in education policy such as: (a) the ways that educational organizations are embedded within and shaped by a stratified society and occupational system; (b) how educational policies at the federal- and state-level and other macro-policy levers support and constrain education at the local level; (c) how policymaking processes occur within an inherently political process; and (d) how contemporary educational systems have been impacted by broader social movements including standardization, accountability, and consumer choice. For master's degree students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2011 - EDUCATION POLICY IMPLEMENTATION: STUDENTS, FAMILIES, EDUCATORS, AND POLICYMAKERS, MA SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Economic, sociological, political and other theories provide a framework for understanding how key constituents - students, families, educators, administrators, policymakers and community members - act on or are influenced by education policies formulated and enacted at the local, state and federal levels. Students will employ a range of lenses to examine educational policy implementation including equity, productivity and efficiency, choice and international comparison. In doing so, the course attends to current issues and debates in education policy, such as: (a) What are the economic, educational and social consequences of providing universal access to early childhood education? (b) What policies and practices shape the training, recruitment and retention of teachers in the teacher labor force? (c) What influence do charter school policies and opportunities have on student learning outcomes? (d) How does federal and state higher education funding policy influence college access and success? (e) How do building level school discipline policies shape student and family relationships with their school? For master's degree students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2018 - STATISTICS 1: DESCRIPTIVE AND INFERENTIAL STATISTICS

Minimum Credits: 3
Maximum Credits: 3
Introduction to descriptive and inferential statistics. Topics include frequency distributions, graphs, stem-and-leaf displays, box plots, scatter diagrams, measures of central tendency, measures of variability, correlation, sampling distributions, point estimation, introduction to hypothesis testing, introduction to interval estimations, chi-square analysis, one-sample and two-sample tests of hypothesis for means, variances, proportions, and correlation coefficients.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2019 - STATISTICS 2: ANALYSIS OF VARIANCE

Minimum Credits: 3
Maximum Credits: 3
Topics include one- and two-way analysis of variance, multiple comparisons for main effects and interactions, analysis of covariance, multiple comparisons for adjusted means, randomized block designs, nested designs, repeated measures designs, non-orthogonal designs and linear regression. SPSS for Windows will be used.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: PSYED 2018 or EFOP 2018

EFOP 2030 - EXPERIMENTAL DESIGN

Minimum Credits: 3
Maximum Credits: 3
Topics include characteristics of experimental research, steps for implementing an experiment, internal and external validity, classification of experimental designs, and design techniques such as random sampling, random assignment, blocking, analysis of covariance, and gain scores.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: PSYED 2019 or EFOP 2019

EFOP 2050 - RACE AND RACISM IN EDUCATION AND SOCIETY

Minimum Credits: 3
Maximum Credits: 3
This course focuses on issues of equity in education based upon the divisions of American society by social constructs of "race". The course is designed to expose students to conceptual frameworks of culture, society, race, class and gender from the social sciences and humanities for understanding the experiences of subordinated minority groups in school and society. The practical problems of social and school reform in American communities and schools will be addressed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies

EFOP 2051 - M.ED RESEARCH METHODS FOR HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
Assessment-based research is critical to effective practice in higher education and student affairs. This research methods course for students in the higher education MEd program is designed to provide students with the necessary introductory and foundational research skills they will need throughout their MEd program and in their early career. The class emphasizes the hands-on development of practical skills and competencies for conducting assessment-based research and interpreting data for educationally just decision making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2052 - M. ED INTERNSHIP IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course is a practicum experience for med in the higher education management. The internship course is unique in that students are

required to be working in an institution of higher education while enrolled. An on-site supervisor will provide learning opportunities to students in conjunction with the course instructor, while the instructor will enhance the experience through weekly activities and course assignments. The course is also an opportunity to combine research and practice and to develop the professional skills necessary for a fruitful career in academic or student affairs or management in higher education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2053 - MANAGEMENT & ORGANIZATION EFFECTIVENESS

Minimum Credits: 3
Maximum Credits: 3
This course provides students with a professional foundation of the practical application of managerial skills required of first and second-line supervisors in higher education. Course topics devote special attention to the mission and challenges of HE organizations, organization structures and environments, responsibilities and expectations of managers, financial management, budget development and oversight, time and resource management, process improvement, the role of technology, decision making, and communication strategy. In addition, the course considers the role of supervisors in fostering diversity, equity, and inclusion across functional and institutional contexts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2055 - STUDENT DEVELOPMENT THEORY

Minimum Credits: 3
Maximum Credits: 3
This course provides foundational knowledge about the nature and history of student development theory, focusing on both a solid overview of theory and the application of theory in the design of effective practice in academic and student services contexts. This course also explores developmental issues facing college students as well as factors that promote and impede development. An understanding of student development theory is integral to working in higher education and this course is designed for students pursuing both scholarly and practitioner focused careers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EFOP or ADMPS 2307 or EDUC 2112

EFOP 2056 - PROGRAM ASSESSMENT IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course introduces the subject of assessment and program evaluation in colleges and universities. Issues related to assessment theory, assessment and evaluation models and methodologies, as well as the political and social contexts of assessment are explored. Students complete a hands-on assessment project from start to finish as a part of the course. Students need to have completed student development theory or an equivalent course prior to enrolling in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2059 - ADVISING AND SUPPORTING SKILLS FOR HIGHER EDUCATION PROFESSIONALS

Minimum Credits: 3
Maximum Credits: 3
This course offers an overview of the skills, strategies, and functions associated with advising and supporting college students. This foundational course regards advising and supporting skills as cultivated across functional areas and considers techniques and strategies applicable to a range of student services units, such as academic advising, career counseling, study abroad advising, student conduct

facilitation, and student organization group advising. Additionally, students engage with recent developments associated with advising and supporting students through the evolving technological, legal, and ethical landscapes of higher education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2072 - EDUCATIONAL AND PSYCHOLOGICAL MEASUREMENT

Minimum Credits: 3
Maximum Credits: 3
Introduction to basic principles of measurement and a survey of educational and psychological testing. Topics include the role of testing in decision-making, proper an improper uses of tests, test score interpretations (norm-referencing and criterion-referencing), ascertaining the validity and reliability of test scores and interpretations, classroom assessment and item analysis, and an overview of the different types of tests: standardized achievement and ability tests, intelligence tests, personality tests, and other non-cognitive tests (e.g. attitude surveys, interest inventories).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: PSYED 2001 or EFOP 2001 and (PSYED 2014 or PSYED 2018 or EFOP 2018)

EFOP 2085 - COMPARATIVE & INTERNATIONAL EDUCATION MASTER'S SEMINAR

Minimum Credits: 1
Maximum Credits: 1
This seminar is for master's degree students interested in Comparative and International Education as a field of study to engage in mentoring activities and professional development with program faculty and build a mutually supportive community. Students in this seminar meet regularly to learn the latest debates and research developments in comparative and international education, to develop their scholarly writing, and to develop their program milestones. The seminar showcases careers and supports planning for professional conferences and publications.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EFOP 2089 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
This course is for administrative and policy studies newly instituted and experimental courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 2090 - CAPSTONE SEMINAR IN EDUCATION POLICY

Minimum Credits: 3
Maximum Credits: 3
Final seminar for candidates for the master's degree in Education Policy in which each student completes an original capstone project.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

EFOP 2096 - INTERNSHIP IN EDUCATIONAL FOUNDATIONS, ORGANIZATIONS & POLICY

Minimum Credits: 1
Maximum Credits: 6
Students work under the guidance of a faculty member in the Department of Educational Foundations, Organizations, and Policy to complete a professional and/or research-based internship.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad LG/SNC Basis

EFOP 2098 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
Study approved and directed by an academic advisor.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

EFOP 2099 - GUIDANCE IN THE MASTER'S DEGREE

Minimum Credits: 1
Maximum Credits: 6
A registration unit for students preparing a master's overview and thesis.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

EFOP 2104 - LATIN AMERICA SOCIAL & PUBLIC POLICY

Minimum Credits: 3
Maximum Credits: 3
This seminar explores contemporary issues of social and public policy in Latin America through complexity, systems, gonadal, policy diffusion, comparative, and case-study approaches. In the first section participants review general policy concepts and theories, to be followed by the historical, economic and political context of public and social policy in the region. The second section examines several policy areas such as education, employment, poverty alleviation, public administration, social security, health, minorities, and violence. Using complexity and systems perspectives it is possible to understand how social and public policy influences the development and practice of fields like education and it could be also influenced by those fields. Disciplines such as economics, history, health, political science, anthropology, and sociology shape and help to make sense of educational issues and vice versa. This seminar is an opportunity for students in education and other disciplines to engage in interdisciplinary deliberation on policy issues in this region and fulfills the requirements for certificates in Latin American studies. Materials for the class include current news, scholarly publications, videos and other material published in English, Spanish, and possibly Portuguese (students must be able to read at least basic Spanish).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2106 - INTERNATIONAL AND GLOBAL EDUCATION

Minimum Credits: 3
Maximum Credits: 3
The course introduces different perspectives of the world as well as various conceptions of global development. Students consider these issues in examining how formal and non-formal education programs, as well as the media, contribute to developing individual's views of and engagement in local, national, international, and global communities.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Attributes: African Studies, Global Studies, Russian & East European Studies

EFOP 2120 - CAPSTONE SEMINAR IN STUDENT SERVICES

Minimum Credits: 3
Maximum Credits: 3
Students will learn about the knowledge & skills required of a college or University student services administrator. It is assumed students will have administrative responsibility in future aspect of student services. Responsibilities may include development of vision & mission statement, designing organizational structure & budget. Focus on strategies to effectively manage & administer student services of diverse college & University campuses. Explore how organizational theory can be applied to improve policy making, personnel management, resource allocation & organization of administrative units.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 2127 - THE COMMUNITY COLLEGE

Minimum Credits: 3
Maximum Credits: 3
This course explores the purposes, functions, and objectives of community colleges in the U.S., examining the social forces and political structures influencing their development. Students will analyze the characteristics and needs of community college student populations, educational programs, and learning strategies. Additionally, the course covers organizational structures, administration, finance, and leadership related to community college contexts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2128 - LEADERSHIP

Minimum Credits: 3
Maximum Credits: 3
This course is intended to provide a foundation of the various theories and models that inform leadership education and practice. Throughout the course, students draw from current leadership discourses to build toward a personal leadership praxis that connects their personal and professional development. Through this critical engagement, students also benefit from exposure to strategies and techniques that support and cultivate leadership in others through a range of functional areas within the college environment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2129 - SOCIAL JUSTICE IN HIGHER EDUCATION SETTINGS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to expand students' understanding of their own privileged and minoritized identities around race, class, gender, socioeconomic status, sexual orientation, ability, and religion, while encouraging the development of a social justice orientation. This course draws on current theories and practical examples for addressing oppression and discrimination within postsecondary institutional contexts and challenges students to develop an orientation for praxis and liberation. Students are required to reflect critically and thoughtfully on their own social identities while incorporating current theories and practices for liberating subjugated students and communities within higher education contexts. Furthermore, students should aim to develop future programs, policies, and practices that promote social justice.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2131 - HIGHER EDUCATION ADMINISTRATION

Minimum Credits: 3
Maximum Credits: 3
This course addresses major organizational theories and how they relate to higher education institutions. Students will develop conceptual frameworks that can be utilized as a generic base for the practice of administration and as a diagnostic tool that will assist in identifying organizational problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

EFOP 2133 - GENDER AND EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar examines the role that gender plays in the lives as students, researchers, educators, and policy makers. Major topics may include: changing trends of participation and success in k-16 schooling; childhood and professional socialization; media and curricular bias; coming of age; embodiment, sexuality, and sexual harassment, gender and the educational professions; feminist and ant- bias teaching; leadership and transnational communities of practice; activism and engaged feminist scholarship.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Gender, Sexuality & Women's St

EFOP 2135 - PROFESSIONAL DEVELOPMENT SEMINAR IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on professional and personal development for careers in higher education. Through classroom activities and assignments, students engage with current critical perspectives in the field, reflect upon their identity as a practitioner, and build plans for future professional success. This course also enables students to assess their personal and professional growth in preparation for the advancement of their careers in higher education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ADMPS or EFOP 2055

EFOP 2140 - HIGHER EDUCATION CAPSTONE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course serves as the culminating experience for Higher Education M.Ed. students. As the capstone for the program, this course provides students with the opportunity to consider and apply theoretical and conceptual knowledge from this course as well as all Higher Education courses to practical situations. Through course content, classroom discussions, and the capstone project, students advance their development of essential higher education competencies gained throughout the M.Ed. curriculum.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2305 - SOCIOLOGY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course surveys the classic and contemporary literature on schools and socialization. The relevance of sociological theory and research to education policy debate is also highlighted. Students will increase their understanding of the forces shaping learning and development that are beyond the classroom and are embedded in the larger social context.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2306 - HISTORY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
Both a chronological order and a thematic/conceptual investigation will constitute the structure of this course. The literature on past and contemporary historical developments will be compared. Emphasis will be placed on the ideas that prevailed in different time periods. Students will examine the conflicting organizational arrangements, competing theories, and growing external pressures on education.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2307 - POLITICS AND HISTORY OF HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course surveys the perennial forces which have shaped the character of America's colleges and universities. In situational control and governance. Curricular goals and organization, and faculty and student life are examined against the background of political, economic, religious, social and intellectual developments in American culture.
Academic Career: Graduate

EFOP 2343 - EDUCATION AND CULTURE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2352 - ANTHROPOLOGY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This introductory course provides an overview of anthropological approaches to the study of education. Ethnographic cases drawn from many cultures, knowledge systems, and time periods help to provide a broad, holistic view of education in diverse community and institutional contexts. Modules may include: nurturing a sense of place; comparing folk, popular, and elite cultures; understanding cultural continuity and change; celebrating rituals and holidays; fostering cultural resilience and responsive reform policies; framing multicultural education; and appreciating the sociolinguistics of schools and home. Students have opportunities to participate in authentic schooling activities, to draft public advocacy pieces, to create team presentations, and to refine a personalized synthesis of a topic of interest. Anthropological field research methods are discussed as a means to craft compelling analytical accounts, but research training is not part of this course
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Asian Studies, Global Studies, West European Studies

EFOP 2353 - APPLIED ANTHROPOLOGY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This advanced seminar explores practical applications of anthropology to educational programs in varied cultural settings around the world. Topics may include: theories of development and social change, the role of schooling in cultural continuity and change, globalization and transnational influences on curriculum and policy; public advocacy and scholarship; school reform and social inequities. Authentic professional activities and meaningful case studies help students to see themselves in the field. Demonstrations of professional skills such as constructive criticism, teamwork, meeting methodological challenges, and critical analysis of texts help students to enhance their academic cv and engaged scholarship portfolio.

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2357 - EDUCATIONAL TOPICS IN AFRICAN STUDIES

Minimum Credits: 3
Maximum Credits: 3
Rotating educational topics in African Studies are offered in this graduate seminar, with emphasis on current issues of concern, historical context, and comparative education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 2359 - GENDER, EDUCATION, & INTERNATIONAL DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
In this course, we look at gendered dimensions of education and development in international contexts. We look cross-culturally, across space, and across "development" continua and paradigms. We examine gendered issues through three modules that represent diverse levels of educational practice - basic education, higher education, and non-formal and informal education. In order to provide focus in this rich and complex field, we hone in on key policy orientations that build sequentially, starting with the most fundamental issues of access and equity, continuing with capacity building, and extending to sustainability and creating social change. Since this class is feminist by design, we explicitly link policy with agency, theory with advocacy, and reflection with action. Each course section also contains a strand on advocacy and action, through which students are able to create a synthesis of module lessons through a personal, analytical standpoint piece.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Gender, Sexuality & Women's St

EFOP 2398 - ECONOMICS OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This class introduces students to the economic analysis of education in the U.S. And developing countries. Among the topics to be covered are: human capital theory, educational production functions. Rate of return analysis, various issues in educational policy and finance
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 2399 - POLITICAL ECONOMY OF EDUCATION

Minimum Credits: 3
Maximum Credits: 3
In this class students will continue (from "economics of education") to develop techniques for economic analysis. The subject is placed in a broader intellectual and political context. Particular attention is given to critique of neoclassical economic analysis, to alternative frameworks for economic analysis, including class-conflict and institutional approaches and the applications of economic analysis in the educational policy process. The course covers issues in industrialized and developing countries.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

EFOP 2410 - APPLIED REGRESSION ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Study of topics related to simple and multiple linear regression, including model specification and assumptions, methods of estimation, significance tests of model parameters and various types of multiple regression and predictor-selection techniques. The relationship of partial and semi partial correlation to regression is covered as well as the use of interaction terms and dummy variables in regression. SPSS and SAS are used to illustrate the correct interpretation of regression results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EFOP 2416 - APPLIED MULTIVARIATE ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course will emphasize understanding, implementation, and interpretation of multivariate statistical methods. The course will involve both lecture and lab work. These methods are manova, mancova, profile analysis, doubly manova, discriminant function analysis, logistic regression, principal components and factor analysis. SPSS will be emphasized with an introduction to SAS.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: (PSYED 2410 or EFOP 2410) and (PSYED 2422 or EFOP 2422)

EFOP 2422 - DATA ANALYSIS USING COMPUTER PACKAGES

Minimum Credits: 3
Maximum Credits: 3
Introductory course in using SPSS and SAS for data analysis. The course focuses on quantitative methods where specific attributes or variables are measured according to different scales of measurement. Statistical procedures are then applied to study relationships between the variables. The course addresses all stages to data analysis: reviewing research questions and identifying variables of interest; reviewing protocols used to collect data; coding data and creating data codebooks; reading data, screening data, transforming data, and performing file manipulations; and analyzing data using descriptive and basic inferential methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EFOP 2491 - SUPERVISED RESEARCH IN RES METH

Minimum Credits: 1
Maximum Credits: 9
The student demonstrates ability to apply research skills by planning and completing a research project under the guidance of an appropriate faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

EFOP 2494 - M.A. PROJECT IN RSRCH METHODLGY

Minimum Credits: 1
Maximum Credits: 9
Student prepares a library-based research paper that reviews, organizes, synthesizes, and critiques previously conducted research and scholarly discussion pertaining to quantitative research methodological issues and/or techniques in the areas of statistics, research design, and/or measurement.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

EFOP 2498 - DIRECTED STUDY IN RES METH

Minimum Credits: 1
Maximum Credits: 3
Student pursues study of various topics under the direction of faculty.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

EFOP 2499 - THESIS RES IN RSRCH METHODOLOGY

Minimum Credits: 1
Maximum Credits: 9
Under the guidance of the thesis advisor, the student plans and completes a theoretical or empirical study on a quantitative research methodology topic and prepares a thesis in the form stipulated in the university style and form manual.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

EFOP 3001 - RESEARCH METHODS IN EDUCATION POLICY AND PRACTICE

Minimum Credits: 3
Maximum Credits: 3
The disciplinary and methodological bases for knowledge and associated inquiry in educational administration and policy study are addressed. Examples of research from various paradigms, disciplines, and professional fields are used to show the relationship among theory, method, and knowledge. The relative importance of substantive and methodological concerns in doing research are emphasized. Positivistic, interpretive, and critical theory inquiry can be addressed by students in their required pilot study.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3003 - THEORIES OF EDUCATIONAL INEQUALITY

Minimum Credits: 3
Maximum Credits: 3

This course is the first of a required two-course sequence designed for students to explore the meaning and expectations of doctoral study in the department of administrative and policy studies. The doctoral core is planned with a curriculum for radical transition to doctoral studies as students increasingly are called upon to take responsibility for their doctoral experience. Students have the opportunity to organize their own learning proclivities by managing resources such as study group and faculty-led deliberations, readings, computer-based technologies, individual research, and field activities. Students cultivate their identities as practitioner/scholar/citizens.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 3006 - SOCIAL CHANGE IN LOCAL AND GLOBAL CONTEXTS

Minimum Credits: 3
Maximum Credits: 3
Today's rapid social changes affect the education policies embedded in our social systems. It is one way in which the past helps shape the present and future. In this course, comparative policy approaches are used to study how systems' policies are constructed and experienced locally, nationally, and globally, often all at the same time. Complex and often conflicted policy perspectives can help us better understand the effects of time, technology, history, politics, and culture. Multiple perspectives of these policies in systems can help us better describe, predict, give voice to, frame, interpret, and map their consequences.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: Asian Studies

EFOP 3007 - EDUCATION AND INTERNATIONAL DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This course will explore a wide range of contemporary social issues and trends in educational development from historical as well as comparative perspective. We will read and analyze educational problems and seek to design policy that can have impact in solving the problems. A central focus of this course is social analysis emphasizing educational issues in schools and colleges not only in the United States, but in other global contexts as well. We will critically explore key themes, definitions and approaches to education in individuals' lives across the lifespan, and examine how education helps shape social life in urban/rural areas and other settings from a comparative perspective. We will interrogate theoretical approaches used to understand the problems and current debates in the field of education by all stakeholders including institutions involved with educational development in diverse global settings, such as the United Nations and the World Bank.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3008 - COMMUNITY ENGAGEMENT IN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course explores a range of contemporary issues and trends in community engagement in education. It addresses educational issues in schools and colleges, not only in the United States but in global contexts as well. It explores critically key themes, definitions and approaches to community engagement in education in individuals' lives across the lifespan, and examines how education helps shape social life in urban/rural areas and other settings. It interrogates policy documents used to understand the problems and current debates related to community engagement in education by individual stakeholders and policymakers as well institutions involved with educational development in diverse local, national and global settings, including the UNESCO "Incheon Declaration." This course is designed to provide students with the grounding they need to perform confidently and competently in areas of their professional practice. It is an opportunity for the critical study of community engagement in education that is relevant to students' professional goals. The course provides tools to explore and assess the theories, ideologies and issues of education from multiple perspectives as well as to situate students' thinking about the issues in searching for policy and practice interventions. Students will frame the discussions within the contextual and practical realities of life in schools and other educational institutions through a range of conceptual lenses, exploring the debates over the meaning and nature of social justice in education, debates that intersect with questions about the person, society, education

and knowledge as they strive to understand the complex issues in the field of education. Goals and objectives are aligned with SCAE program commitments to developing in students: deep specialized knowledge; intellectual/practical skills in innovation; taking personal/social responsibility for change; applying/integrating knowledge/understanding to problems of practice; understanding/embracing a commitment to equity; active, intentional, and ongoing engagement with diversity.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3010 - EDUCATIONAL SYSTEMS, MACRO POLICY, AND POLITICS, PHD

Minimum Credits: 3
Maximum Credits: 3
This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Organizational theories provide a framework for understanding educational organizations - early childhood centers, K-12 schools, higher education institutions, and beyond - and over-arching approaches to educational reform. Students will employ a range of lenses to examine policy including equity, productivity and efficiency, choice, and international comparison. In so doing, the course attends to big issues and trends in education policy such as: (a) the ways that educational organizations are embedded within and shaped by a stratified society and occupational system; (b) how educational policies at the federal- and state-level and other macro-policy levers support and constrain education at the local level; (c) how policymaking processes occur within an inherently political process; and (d) how contemporary educational systems have been impacted by broader social movements including standardization, accountability, and consumer choice. For doctoral degree students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3011 - EDUCATION POLICY IMPLEMENTATION: STUDENTS, FAMILIES, EDUCATORS, AND POLICYMAKERS, PHD SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course is based on theoretical and empirical insights on continuity and change in education policy and its impacts. Economic, sociological, political and other theories provide a framework for understanding how key constituents - students, families, educators, administrators, policymakers and community members - act on or are influenced by education policies formulated and enacted at the local, state and federal levels. Students will employ a range of lenses to examine educational policy implementation including equity, productivity and efficiency, choice and international comparison. In doing so, the course attends to current issues and debates in education policy, such as: (a) What are the economic, educational and social consequences of providing universal access to early childhood education? (b) What policies and practices shape the training, recruitment and retention of teachers in the teacher labor force? (c) What influence do charter school policies and opportunities have on student learning outcomes? (d) How does federal and state higher education funding policy influence college access and success? (e) How do building level school discipline policies shape student and family relationships with their school? For doctoral degree students.

Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3012 - QUALITATIVE DATA MANAGEMENT, ANALYSIS, AND PRESENTATION

Minimum Credits: 3
Maximum Credits: 3
This course introduces software and technological tools to organize, conceptualize, systematically analyze, and effectively present qualitative data of diverse kinds in varied media. Students work in teams with real data in this project-based lab course. Technological skills are paired with conceptual discussions of such key operations as coding, thematic analysis, reflexive and analytical notes, framing questions, and assessing significance. Critiques of core readings, demonstrations, and iterative formal presentations provide opportunities to model professional skills.
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3015 - ETHICAL ISSUES IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
The ethical issues that present themselves in the educational setting are examined. Students are expected to recognize and evaluate these ethical issues in terms of their own value system as well as that of others. Each student is expected to prepare a case study that questions the ethical issues involved.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 3017 - ORGANIZATIONS, NETWORKS, AND EDUCATION POLICY

Minimum Credits: 3
Maximum Credits: 3
Understanding educational change requires taking a broad look at how learning environments (e.g. PreK-12, post-secondary, informal, or professional contexts) are influenced by their embeddedness in organizational and policy contexts. This course introduces concepts and frameworks that enable understanding and guide strategic decision-making about organizations that are active in the educational sector.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3018 - ECONOMICS-INFORMED POLICY ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Economics-informed policy analysis involves the consideration of short-term and long-term monetary and non-monetary benefits and costs of competing policy options. Analytical techniques such as cost-benefit analysis and cost-effectiveness analysis can help policymakers select the most socially desirable policy option(s).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3019 - EDUCATIONAL IMPLEMENTATION AND EVALUATION FOR SOCIAL CHANGE

Minimum Credits: 3
Maximum Credits: 3
Pursuit of organizational improvement, systemic transformation, and ultimately social change often begins with systematic approaches to planned change and the leadership actions necessary to support successful implementation and scaling. Thoughtful program evaluation supports implementation and systemic change. Understanding evaluation frameworks (formative, developmental, and summative evaluation) and corresponding methodological approaches will enable students to successfully identify and collaborate with program evaluators.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3085 - COMPARATIVE & INTERNATIONAL EDUCATION PHD SEMINAR

Minimum Credits: 1
Maximum Credits: 1
This seminar is for PhD degree students interested in Comparative and International Education as a field of study to engage in mentoring

activities and professional development with program faculty and build a mutually supportive community. Students in this seminar meet regularly to learn the latest debates and research developments in comparative and international education, to develop their scholarly writing, and to develop their program milestones. The seminar showcases careers and supports planning for professional conferences and publications.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EFOP 3087 - WRITING SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Students in this one credit seminar have the opportunity to concentrate their efforts on writing for publication. The seminar attends to editing and revising drafts for students ongoing writing projects (such as degree milestones, proposals, journal articles, and conference papers) and other professional writing (such as letters and vitae). Essentials of writing and publishing are addressed, and specific topics may include: authorship, voice, stance, narrative, epistemologies, evidence, audience, and synthesis. Class organization encourages ongoing revision through self-reflection, peer review, whole group discussion, and instructor review.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

EFOP 3089 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
A course listing for newly instituted and experimental courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 3090 - DISSERTATION RESEARCH SEMINAR

Minimum Credits: 3
Maximum Credits: 3
A seminar for doctoral students developing research prior to the preparation of a dissertation overview.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

EFOP 3092 - HIGHER EDUCATION INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
An internship in administration in higher education.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad LG/SU3 Basis
Course Requirements: PLAN: Admin and Policy Studies

EFOP 3095 - ORGANIZATINAL PERSPECTIVES ON EDUCATIONAL IMPROVEMENT

Minimum Credits: 3
Maximum Credits: 3
One way to see the act of education is that it is essentially about what occurs between teachers and learner. In other words the key unit of

analysis is the classroom or activity structure. The classroom is important, but teaching and learning are also shaped by their context. Individuals are situated in organizations, which are situated in broader social, cultural, and political environments. Consequently, reform and improvement efforts must not only take seriously individual factors, they must understand the ways in which individual action is enabled and constrained by organizational and environmental contexts. This seminar will focus on schools as organizations drawing on theoretical and empirical work grounded in organizational theory. We will interrogate the institutional, organizational, and day-to-day contexts of work in schools. We also explore how reform efforts targeting organizational features can intervene and perhaps, improve teaching and learning. In order to grapple with the concepts from the literature, students will analyze several cases or organizational improvement efforts and conduct a small study examining an improvement effort in a local educational organization.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3097 - SUPERVISED RESEARCH

Minimum Credits: 1
Maximum Credits: 6
Doctoral study initiated by the student with advisor's approval and related to the student's program of study.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis

EFOP 3098 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
Doctoral study approved and directed by an academic advisor.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

EFOP 3099 - GUIDANCE IN THE DOCTORAL DEGREE

Minimum Credits: 1
Maximum Credits: 18
A registration unit for students preparing a doctoral dissertation or dissertation overview.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

EFOP 3104 - INCLUSIVE LEADERSHIP AND STRATEGY IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course explores the interplay between inclusive leadership and strategic initiatives within higher education settings. Key topics include strategic planning, equity audits, developing as an inclusive leader, and administrative leadership for equity and justice. Students gain expertise in formulating effective strategies for institutional transformation through principles of strategic planning. Additionally, the course covers administrative leadership strategies needed to navigate challenges and implement inclusive strategic policies and plans, contributing to more equitable and just higher education environments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 3128 - HIGHER EDUCATION BUDGET MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
This course will focus on the sources of revenues available to colleges and universities and various methods for allocating these funds to academic and administrative functions. Specific attention will be given to topics of fund accounting, sources of revenue, the budget process, fiscal controls and monitoring.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EFOP 3129 - HIGHER EDUCATION RESOURCE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
This course focuses on essential aspects of higher education staff supervision and development through three central themes: human resources and equity, organizational finance, and organizational development. Through class conversations and activities, students explore the conceptual and practical knowledge needed for the effective management of organizational and staff dynamics within higher education institutions. The course also considers the complexities of human resources management specific to academia, covering recruitment, performance evaluation, and strategies for addressing diversity challenges. Throughout, students gain exposure to the ways higher education institutions develop as organizations that foster equitable and just change.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3130 - FACULTY, ADMINISTRATION, AND GOVERNANCE IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar examines scholarship on faculty, administration, and governance in higher education, with particular attention to how institutional structures, roles, and power relations shape academic work and organizational life. Grounded in critical and equity-centered perspectives, the seminar engages research on faculty work, professional socialization, careers, and work environments, as well as the administrative and governance contexts within which faculty labor is organized and evaluated. Students will explore how faculty roles intersect with institutional leadership, governance arrangements, and policy environments, and how these dynamics influence teaching, research, service, and relationships with students and student outcomes. The seminar also attends to how faculty and administrative work are shaped by broader organizational and policy conditions, including (in)equity, stratification, accountability, and institutional change within higher education. This seminar emphasizes conceptual frameworks and research traditions that support scholarly inquiry into faculty, administration, and governance as interconnected sites of power, practice, and institutional transformation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3131 - STUDENT, CAMPUS, AND SOCIETY

Minimum Credits: 3
Maximum Credits: 3
A seminar focusing on current research dealing with the impact of campus environments, experiences on and off campus, and family background on achievement, values, personal development, and life goals of students in higher education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3132 - THE IMPACTS OF COLLEGE ON STUDENTS

Minimum Credits: 3
Maximum Credits: 3
This seminar focuses on current research on the college experience. Covering issues from college access and choice to student outcomes,

this seminar is designed to assist students in developing an understanding of the impact of college on students and how the student experience and issues related to students and student outcomes are studied in the field of higher education and how in(equities) in student outcomes manifest within higher education systems. This seminar is designed for advanced master's students and doctoral students whose research interests are situated in higher education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3133 - CONTEMPORARY ISSUES IN RACIALIZATION, CULTURE, AND IDENTITY IN US HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar looks closely at the history of categories, assumptions, and ideas used to analyze educational inequality in US higher education. This course will guide students through scholarly thought on 1) the historical, political, and educational consequences of the labeling and emergence of racialized or "othered" groups in the context of higher education, and 2) critical, intellectual, and pragmatic interventions that have emerged from a range of disciplines and thinkers for imagining and building equitable higher education spaces beyond the constraints of hegemonic structures. This course draws from multiple disciplines to consider how identities are constructed in discourse and policy in order to differentially deliver benefits and burdens over time.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3134 - CONTEMPORARY LATINX ISSUES IN US HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on current issues for Latinx people within a higher education context. This includes a look at the overall ecology into and through higher education, from the K-12 setting into the postsecondary context. The course is taught through the perspective of leading Latinx scholars, theorists, and practitioners who are developing cutting edge solutions for best serving the fastest growing demographic in the United States. The course includes a look at the experiences of students, faculty, and staff within postsecondary contexts as well as a focus on understanding the colleges and universities enrolling a large percentage of the Latinx population, including community colleges and Hispanic-Serving Institutions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3135 - SEMINAR IN COLLEGE TEACHING

Minimum Credits: 3
Maximum Credits: 3
The course in intended to provide a practicum-like experience for graduate students in the professions and disciplines who are teaching or expect to teach in higher education. Challenging topics include: analyzing and critiquing current syllabuses of class members; structuring the curriculum; teaching for understanding; process and content; teaching and learning in groups; becoming a dialogic classroom; encountering and responding to contentious discussion; and evaluating learning. Although topics will be considered conceptually through readings, the primary curriculum will develop as members of the class present specific issues from their emergent work. Participants will have the opportunity to explore their beliefs in teaching and learning as they consider a web between themselves, their subject and their students, in order to help their students learn how to weave a world for themselves.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3136 - COMPARATIVE HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar focuses on contemporary problems in post-secondary education throughout the world. The seminar will begin with a brief historical introduction, followed by a review of case studies and other documents on higher education in the United States and other countries. Special attention will be given to an examination of comparative and contrasting policies and issues in higher education as they unfold in various developing regions and in the United States.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Asian Studies, Global Studies, Russian & East European Studies

EFOP 3137 - CULTURE, INNOVATION & ORGANIZATION PERFORMANCE

Minimum Credits: 3
Maximum Credits: 3
Whether leading a department of 50 people or a division of 500, leaders need to understand the concepts, skills and practices that build strong organizational cultures. This course explores the cultural facets of organizational life in universities with special emphasis on improvement opportunities such as values clarification, cultural norms, innovation, process and people integration, key performance indicators, the balanced scorecard and the alignment of human resources systems such as hiring, faculty and staff development, performance management and career development. Students are introduced to a variety of methods used to encourage creative problem solving in teams; diffusion of innovation is explored in depth. Students work in teams with an actual University client to implement a benchmarking project, an important tool in improving organizational performance.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3138 - GENDER AND SEXUALITY STUDIES IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar offers an in-depth exploration of contemporary theories and perspectives on gender and sexuality, focusing on their application to research and praxis aimed at cultivating inclusive and justice-oriented programs, policies, advising strategies, and environments in higher education. Adopting an intersectional critical lens, the course will investigate a range of pertinent topics, including Women of Color (WOC) feminisms, advanced gender and sexuality identity development for college students, the complexities surrounding LGBTQIA+ topics (Queer of Color Critique, Joteria Pedagogy, etc.), the experiences of trans* and gender non-binary individuals, the pervasive gender inequities that exist in higher education, as well as the intricate policy challenges related to gender and sexuality.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3139 - LEGAL ASPECTS OF HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
The focus of the course is on federal and state law and higher education in the United States. Although time will be devoted to historical issues pertaining to higher education, most of the time will be devoted to in-depth discussions of contemporary issues. Issues that will be discussed include promotion and tenure, academic freedom, faculty dismissal, sexual harassment, research integrity, campus violence, and student affairs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3141 - POLICY STUDIES IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This higher education PhD core course is designed to provide students with the foundational knowledge and skills needed to study higher education policy and to conduct, understand, and critique work in the higher education policy arena. The course examines the formation, design, implementation, and evaluation of public policy to introduce students to the nature of educational policy and policy making, and to equip students with a set of skills to build their capacity as independent and critical policy scholars. The course also exposes and engages students in learning about the major policy areas of concern in higher education, including the in-depth analysis of state cases as a way understand how the major policy areas of concern impend on one another and can work at cross-purposes. Designed for PhD students and advanced master's students who have an interest in policy or plan to pursue a PhD, the course assignments are designed to engage students in clearly and critically articulating current policy challenges, proposed solutions, and areas where continued scholarship is needed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3142 - CRITICAL ORGANIZATIONAL THEORY IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to major theories from organizational studies that can help explain how postsecondary institutions and fields maintain or transform their structures over time. Students will engage with both foundational literature in the field as well as work more critical of race- and power-evasive approaches to organizational analysis. This course is particularly concerned with how and why inequities in higher education persist even in the face of myriad attempts at the macro and micro level to eradicate them. Students will take up tools of the field to propose their own empirical study of organizational persistence and change.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3143 - STUDYING COMMUNITY COLLEGES IN SOCIETY

Minimum Credits: 3
Maximum Credits: 3
This course provides students with a comprehensive understanding of the issues facing community college stakeholders, inclusive of faculty, students, staff, administrators, community members, and constituents, and how researchers work to tell these individuals' stories and opportunities. Along the way, students will connect with leading community college scholars and centers that address contemporary challenges, as well as engage with foundational and novel scholarship. Ultimately, students will develop the necessary skills to conduct meaningful and thoughtfully designed studies on these postsecondary education institutions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3144 - FINANCE, FUNDING, AND EQUITY IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course examines the foundations of higher education finance and funding with particular attention to structures of stratification and (in)equality. We will consider the postsecondary funding ecosystem holistically to understand federal (e.g., student aid, research grants), state (e.g., public per-student appropriations), private (e.g., foundations, alumni giving), and local (e.g., contracts) funding streams and mechanisms and the public policy landscape and beliefs about higher education that shape them. By the end of the course, students will have a solid understanding of the current state of higher education funding and finance, the implications for local economies, equitable educational attainment, and intergenerational wealth that can inform student interests ranging from policy to institutional to student-level concerns.
Academic Career: Graduate

EFOP 3150 - FOUNDATIONS FOR THE STUDY OF HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course is the foundational course on the study of higher education designed to introduce PhD students to the social, political, philosophical and historical contexts that undergird higher education in the United States. Issues, ideas, and current arguments are explored as they relate to the structures and system of higher education, functions and purpose of higher education, and outcomes of higher education. Governance, administration, faculty, curriculum, finances, and students are covered as they relate to the areas of the course.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3151 - THEORETICAL FRAMEWORKS FOR THE STUDY OF HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course provides doctoral and advanced master's students with a general understanding of theory and its application to the study of higher education. This includes an overview of major paradigms, schools of thought, and theoretical frameworks commonly used in the study of higher education. Through an examination of both conceptual and empirical work, students gain an understanding of important theoretical bodies of knowledge and how to apply them to their scholarship and practice. The course has an interdisciplinary orientation, drawing on sociology, psychology, anthropology, gender studies, cultural studies, and race studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3153 - RESEARCH PERSPECTIVES ON DIVERSITY, EQUITY, AND INCLUSION IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course addresses the key dimensions in the study of diversity, equity, and inclusion within the U.S. higher education system. In this doctoral level course, we focus on both theoretical and empirical bodies of literature that have been used to study racialized, gendered, and minoritized groups within higher education. Using a critical and socio-historical lens, we examine individual, structural, and societal dimensions of power and oppression to understand their pervasive implications for diverse groups within educational systems. Students gain a solid foundation for understanding both the historical progression of research on minoritized groups and contemporary approaches to the study of diversity, equity, and inclusion in higher education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3201 - INTRODUCTION TO EDUCATIONAL EVALUATION

Minimum Credits: 3
Maximum Credits: 3
Provides a general overview of evaluation, which is defined as "providing information useful to decision-making". The various purposes of evaluation are identified, and the use of different types of information for each purpose are discussed. The variables that affect the usefulness of information are emphasized. Both evaluation theory and practical experience are utilized to prepare people who will be fulfilling an evaluation function, or using evaluation results for professional decision making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3208 - CASE STUDY METHODS IN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the use of case study research methods in investigations of educational policy and practice. The limitations and possibilities of different approaches are considered. Knowledge and skills are acquired through field-based projects.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3209 - EQUITY-BASED ASSESSMENT IN HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course covers the design of assessments and the interpretation of data through an equity and justice lens, with a secondary focus on assessment for higher education learning, development, and engagement of students, employees, and campus partners. Students develop practical methodological and analysis skills for creating inclusive assessments that measure a range of outcomes. Topics covered include foundational principles of higher education student learning, advanced assessment design techniques, and interpreting data for equitable outcomes.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3210 - COMPLEX CASES FOR HIGHER EDUCATION LEADERS

Minimum Credits: 3
Maximum Credits: 3
Tailored for scholarly leaders, this advanced seminar examines contemporary issues and current events shaping the higher education landscape. This course delves into challenges faced by higher education leaders, and students participate in a hands-on approach by applying scholarly practice to generate innovative solutions for the complex and multifaceted issues in the field today. Real-world case studies and collaborative team-based learning provide engagement with equity-based decision-making frameworks in order to offer a holistic overview of various dilemmas in higher education. This course is thematic in nature and precise topics may shift but include policy, legal, budgetary, developmental, ethical, and diversity, equity, and inclusion perspectives.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3301 - SOCIAL THEORIES AND EDUCATION GLOBAL CONTEXT

Minimum Credits: 3
Maximum Credits: 3
Students will explore a range of social theories that may be helpful in informing how they understand and operate in educational institutions in local, national, and global economic, political, and cultural contexts. By examining and com paring a variety of theories and contexts, students will be encouraged to develop/refine their own theories of a) how and why society and education are organized as they are; b) how and why education and/or society have or have not changed; and c) how and why education and/or society should be changed.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: African Studies

EFOP 3310 - PHILOSOPHY OF EDUCATION, EQUITY, AND JUSTICE

Minimum Credits: 3
Maximum Credits: 3
This course examines the meaning and value of education and its relation to equity and justice. Students gain a nuanced understanding of the varied philosophies that inform discussions about key contemporary issues in education, such as theories of knowledge, the self, the student/teacher relation, professional ethics, collective responsibility, and moral education. Philosophies and varied wisdom traditions are

considered to help students contribute to their own visions of education, equity, and justice. Methods of educational philosophy are studied, including close reading, conceptual analysis, and philosophical writing. No prior experience in philosophy or social theory is required. This course is for graduate students working or studying all forms of education, including early childhood education, K-12 education, higher education, and non-formal education settings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EFOP 3314 - EDUCATIONAL REFORM

Minimum Credits: 3
Maximum Credits: 3
This course examines the recurrent phenomenon of educational reform in a variety of settings and from a variety of social scientific perspectives. Focus is placed on the analysis of competing explanations of educational reform and the investigation of case studies from a variety of countries and time periods. Emphasis is given to examining whether reform campaigns are structurally similar and whether a general theory of educational reform is possible.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3315 - EDUCATION POLITICS: POWER AND INEQUALITY IN K12 EDUCATION SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This course examines the political systems that maintain inequality in U.S. primary and secondary schools, including the creation of rights, agenda setting, and policy solutions. The course also examines the ways in way various policy solutions that are intended to mitigate inequality have succeeded and failed (e.g., school finance reform, standards-based reform, "desegregation"). We study the politics of inequality in the context of primary and secondary schools. The goal of the course is to answer the following questions: (1) What are the political origins of U.S. systems that promote educational inequality? (2) What US systems contribute to educational inequality in K12 schools? (3) What changes can be made to systems to either mitigate inequality or promote inequality?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3343 - COMPARATIVE EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar introduces participants to the complementary fields of comparative, international, and development education (CIDE). Emphasis is on social justice issues in CIDE and the comparative analysis of policies and practices that constitute the organization, content, processes of education systems and institutions. Selected topics of continuing interest to educational researchers, policy makers, and practitioners are examined in relation to national and global cultural, economic, and political dynamics. Historical and contemporary examples are used to highlight the contributions of and challenges for those involved in CIDE.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Global Studies

EFOP 3347 - INTERNATIONAL ORGANIZATION DEVELOPMENT EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This seminar reviews policies and practices of key international organizations and actors in the complementary fields of comparative, international, and development education (CIDE) and examines their impact on national and regional educational policies. Multilateral organizations (such as UNESCO, UNICEF, and the World Bank), bilateral organizations, nongovernmental organizations, faith-based

organizations, community-based organizations, and regional agencies (e.g., the inter-American development bank, the Asian development bank, and the European union) will be among the organizations and actors studied.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: African Studies, Global Studies, Latin American Studies, Russian & East European Studies

EFOP 3350 - ADVANCED SEMINAR IN COMPARATIVE AND INTERNATIONAL EDUCATION

Minimum Credits: 3
Maximum Credits: 3
In this course, students explore a topic or set of issues in Comparative and International Education in depth. Issues change in each iteration of the course, which can be repeated for credit.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3408 - HIERARCHICAL LINEAR MODELING

Minimum Credits: 3
Maximum Credits: 3
This course is on hierarchical models for continuous and discrete outcomes. Hierarchical models are used when the units of observation are grouped within clusters. Observations in a cluster typically are not mutually independent for given covariate values as required by conventional linear and logistic regression models. Longitudinal or repeated measures data can also be thought of as clustered data with measurement occasions clustered within subjects. The focus of the course is on hierarchical linear models and their assumptions, as well as practical aspects of developing models to address research questions and interpreting the findings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: PSYED 2410 or EFOP 2410 or PSYED 3410

EFOP 3417 - STRUCTURAL EQUATION MODELING

Minimum Credits: 3
Maximum Credits: 3
This course will introduce structural equation modeling (SEM). Some fundamental materials necessary for SEM will be reviewed; i.e. Matrix algebra, covariance algebra, multiple regression; and factor analysis. SEM is a family of techniques. Some of the different SEM techniques that will be discussed include path analysis, confirmatory factor analysis, general SEM, and mediation/moderation models. Advance SEM techniques will also be discussed, e.g. Mean and covariance SEM, latent growth curve models, multi-sample/multi-group SEM, dealing with missing and non-normal data, and mixture modeling.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: PSYED 2410 or EFOP 2410 or PSYED 3410

EFOP 3420 - COMPUTER APPLICATIONS TO RESEARCH METHODOLOGY

Minimum Credits: 3
Maximum Credits: 3
Course in advanced computer-based applications. Topics include design and conducting Monte Carlo studies, computer adaptive testing, and application of Bayesian methods to education. Students will learn the required steps for conducting a monte Carlo study or a computerized experiment: how to design the study, how to simulate data, and how to evaluate results. Procedures in SAS as well as other programs will be considered. Students will also design and implement a small monte Carlo study. For the computer adaptive testing (CAT) component, students will be introduced to cat and issues related to cat assessments: developing and maintaining item pools, selecting items, estimating ability, and validity of scores from cat assessments. Students will be introduced to the theory of Bayesian methods, application

of Bayesian methods in educational measurement and statistics, and software that is available to implement Bayesian methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EFOP 3471 - CONSTRUCTING QUESTIONNAIRES AND CONDUCTING SURVEYS

Minimum Credits: 3
Maximum Credits: 3
Introductory course in survey research methodology. The course considers practical considerations in the construction of questionnaires including determining questionnaire content, selection of item types and wording of items, selection of an administration method, piloting questionnaires, and locating existing questionnaires. Discussion about conducting survey research considers sample selection, analyzing information obtained from questionnaires using SPSS, evaluating questionnaires, sources of error and how to reduce measurement error in survey research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: PSYED 2001or EFOP 2001 and (PSYED 2014 or PSYED 2018 or EFOP 2018)

EFOP 3472 - CAUSAL INFERENCE IN EDUCATIONAL RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Many key questions in the field of education are framed causally. Do investments in full-day kindergarten pay off in terms of improved school readiness? Does project-based learning in mathematics and science increase the pipeline of students into STEM-related fields? Does the introduction of a generous merit-based scholarship program improve students' motivation to prepare rigorously for postsecondary education? Despite this causal framing, analytic tools commonly applied to questions such as these allow for statements about relationships but not about causation. For example, we may observe correlational evidence that communities with full-day kindergarten also have higher levels of school readiness. These same communities, however, may also serve children from higher-income families. Given students' backgrounds, their levels of readiness may have been unchanged by participation in full-day kindergarten. In this course, we will focus on framing research questions with a causal lens and on research designs and analytic techniques that provide the tools for answering these key questions in a causal framework. Specifically, we will learn about research designs for drawing causal inferences, including randomized trials, regression discontinuity, differences-in-differences, instrumental variables, and propensity score and other matching techniques. Our learning will be grounded through the semester in reading scholarly articles in which these techniques are applied to questions in education. Assignments throughout the semester will include preparation for class participation, a referee report to critique the work of another scholar, and a final course project. At the start of the semester, students will be asked to identify an area of focus and potential sources of data for the final course project.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

EFOP 3485 - ADV TOPICS IN RESEARCH DESIGN

Minimum Credits: 3
Maximum Credits: 3
Includes new strategies in research design, and application of mathematical and behavioral design models for educational research. Topics vary each term around interests of the students enrolled.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

EFOP 9257 - EAST ASIA: YESTERDAY AND TODAY

Minimum Credits: 3
Maximum Credits: 3

The course is designed for middle and high school teachers of world cultures, world history, geography, economics, and literature. This seminar will provide students with the content and resources needed to implement the study of East Asia into their curriculum in accordance with various approaches to "standards". The seminar will include an analysis of the recently posted Pennsylvania civics and government standards. It will also reference to the latest national geography, world history, as well as NCSS standards.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad HSU Basis
Course Attributes: Asian Studies

Electrical and Computer Engr

ECE 1115 - HIGH-PERFORMANCE COMPUTING

Minimum Credits: 3
Maximum Credits: 3
This course teaches high-performance computing as a complex system that sits at the intersection of algorithms, programming, systems, networks, and processors. Students are introduced to generalized abstractions of parallel programming via data and task parallelism. Topics include processor pipelining, instruction-level parallelism, superscalar instructions, multiprocessor parallelism with threading, cluster computing and interconnection networks. Students engage in several hands-on programming assignments using parallel programming standards, such as MPI.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PREQ: ECE 0202 and 0302; PLAN: Electrical Engineering or Computer Engineering

ECE 1157 - DATA SCIENCE AND SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course introduces data science and machine learning methods for securing modern systems, with emphasis on anomaly detection, adversarial machine learning, and data privacy. Students learn to identify unusual patterns in data and system behavior to detect unreliable data, rare events, and potential cyberattacks, while also examining how machine learning models can be attacked and how their robustness can be improved. The course covers extreme value analysis for modeling low-frequency, high-impact events; supervised, unsupervised, and semi-supervised machine learning approaches to anomaly detection; and privacy-preserving techniques, including data anonymization and differential privacy.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

ECE 1259 - ELECTROMAGNETICS

Minimum Credits: 3
Maximum Credits: 3
Vector calculus, gradient curl, divergence theorem and stokes' theorem, coulomb's law gauss's law, Laplace equation, poisson equation, dielectrics, BIOT-Savart Law, vector potentials, ampere's law, faraday's law, inductance, magnetic materials, Lorentz force, Maxwell's equation, electromagnetic radiation.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PREQ: MATH 0240 and (ECE 0401 or MATH 0290); PLAN: Electrical Engineering or Computer Engineering

ECE 1273 - EXTREME ENVIRONMENT ELECTRONICS

Minimum Credits: 3
Maximum Credits: 3
This course teaches the tools, techniques, and design methodologies for building microelectronic circuits that operate reliably in extreme environments, with an emphasis on high-radiation environments. Students first grasp the fundamentals of widely used digital and mixed-signal circuits tailored for standard settings, then delve into advanced versions engineered for challenging environments such as space, avionics, high-energy physics, medical, and nuclear applications. The course combines lectures, hands-on labs using professional CAD tools, case studies, and a culminating design project.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

ECE 1686 - SPACE ORBITAL MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This course presents rigorous treatment of classical mechanical systems pertaining to spaceflight and orbital dynamics. Students will be able to apply mathematical treatments to Newtonian systems and in the process appreciate both physical nature and engineering feats achieved in the successful completion of space missions.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

ECE 2073 - INTRODUCTION TO SPACE ENGINEERING

Minimum Credits: 4
Maximum Credits: 4
This course is a comprehensive overview of space engineering. Topics to be covered include: importance and applications of space, space environment, orbital mechanics, spacecraft dynamics, systems engineering, control systems, spacecraft subsystems (communication and data-handling subsystem, electrical power subsystem, environmental control and life-support subsystem, and structures), rocket propulsion, space operations, and space politics and economics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2095 - SPECIAL TOPICS: GRADUATE

Minimum Credits: 4
Maximum Credits: 4
A graduate-level course in special topics of current interest in electrical and computer engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2098 - MS PROJECT ON SPACE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
MS Project on Space Systems is a special project course intended to provide practical experience that supplements theory-oriented, lecture-based courses. Possible topics include modeling/simulation, software development, design/development/fabrication of prototypes, or any other types of projects that will provide hands-on-experience and knowledge base that complements regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office, a point-of-contact instructor is assigned to oversee each subject area and will provide guidance on determining project topics.
Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2156 - ADVANCED INFORMATION SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course covers information security at the computer system level, the network level, and the human level. Students will first learn general computer security technology and principles such as cryptographic tools, user authentication, access control, malicious software and attacks. Then, we will delve into the details of network attacks and defending techniques. The latter units of the course cover software and system security, including buffer overflow vulnerability, operating system security, and Cloud and IoT security as well as human factors and legal and ethical issues.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2157 - DATA SCIENCE AND SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course introduces data science and machine learning methods for securing modern systems, with emphasis on anomaly detection, adversarial machine learning, and data privacy. Students learn to identify unusual patterns in data and system behavior to detect unreliable data, rare events, and potential cyberattacks, while also examining how machine learning models can be attacked and how their robustness can be improved. The course covers extreme value analysis for modeling low-frequency, high-impact events; supervised, unsupervised, and semi-supervised machine learning approaches to anomaly detection; and privacy-preserving techniques, including data anonymization and differential privacy.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE-PHD or ECE-MSECE

ECE 2160 - EMBEDDED COMPUTER SYSTEM DESIGN

Minimum Credits: 3
Maximum Credits: 3
Design and implementation of embedded microprocessor systems. Topics include 'C' language, top down iteration for assembly language programming, data structures, co-routines, I/O software structures and real time operating systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate School of Engineering

ECE 2161 - EMBEDDED COMPUTER SYSTEM DESIGN 2

Minimum Credits: 3
Maximum Credits: 3
Organized as a full term project carried out by student design groups. A complex embedded system will be designed, implemented and tested using Altera and other cad tools. Grade will be based on project reviews and the final project report. Proper design process will be emphasized.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2160; PROG: Swanson School of Engineering

ECE 2162 - COMPUTER ARCHITECTURE 1

Minimum Credits: 3
Maximum Credits: 3
Review of basic architecture concepts, data representation, microprocessor and minicomputer architectures, memory and i/o subsystems, stack computers, parallel and pipelined computers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2165 - DEPENDABLE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
The field of dependable computing has recently emerged as one of the most important areas of study in computer and electrical engineering. Modern computer systems are susceptible to a broad range of potential faults, errors, and failures, and increasing chip density and design complexity exacerbate the problem. Novel methods in hardware, information, network, software, and time redundancy are now available to mitigate these threats in the form of resilient computer architectures, apps, and systems. The focus of studies here is the design and analysis of dependable machines, from small embedded systems to space-based platforms to high-end supercomputers, in terms of reliability, availability, performability, testability, and safety metrics, and more.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2166 - PARALLEL SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduction to fundamental and newly developing hardware and software topics in parallel computer architecture (PCA) including concepts, models, methods, metrics, systems, and applications. PCA has become one of the most challenging and important areas of ECE, and it is now a dominant theme throughout computer architecture, systems, and programming, from low-power embedded systems to high-end supercomputers, and featuring various forms of fixed-logic (e.g., CPU, DSP, GPU), reconfigurable-logic (e.g., FPGA), and hybrid (e.g., CPU+DSP, CPU+FPGA, CPU+GPU, CPU+FPGA+GPU) processing devices.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2168 - NEUROMORPHIC SYSTEMS DESIGN

Minimum Credits: 3
Maximum Credits: 3
Neuromorphic engineering is a promising frontier to usher in the next generation of AI systems. This course will teach principles, design methodology and applications of neuromorphic computing architectures and energy-efficient event-based sensors like Dynamic Vision Sensors (DVS) and silicon cochlea. By the end of the course, students should understand the steps needed to develop neuromorphic systems from an original concept to a working demo.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2180 - COMPUTING AND BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course explores the connections between engineering concepts (such as digital computation, circuit theory, synchronous and asynchronous circuits, distributed computing, simulation vs. emulation, computer architecture) and biological systems. The main theme of the course is applying engineering methods when studying biological systems, but also exploring how these methods can inform design of computing systems. Topics include: discrete and analog modeling of biological networks; model inference vs. model design; data-based vs. knowledge-based modeling in biology; modeling correlations vs. causality in biology; synchronous and asynchronous biological circuits, and stochasticity in biology; static vs. dynamic analysis of biological systems; role of feedback and feed-forward loops, timing analysis; sensitivity, robustness analysis, and model reduction in biological systems; hardware design for biology; role of advanced computer systems in medicine; design of synthetic biological circuits; biologically-inspired computing.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2192 - INTRODUCTION TO VLSI DESIGN

Minimum Credits: 4
Maximum Credits: 4
Understand basic concepts and introductory techniques of modern integrated digital circuit design using Complementary Metal-Oxide-Semiconductor (CMOS) transistors. Learn how to design/simulate essential CMOS circuits for digital Very Large Scale Integration (VLSI) designs using state-of-the-art Computer Aided Design (CAD) tools.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2193 - ADVANCED VLSI DESIGN

Minimum Credits: 3
Maximum Credits: 3
This course is organized as a full semester project in conjunction with a small amount of lecture material on advanced CMOS and bicmos digital design techniques, as well as the group design process itself. Students form groups that design and implement different VISI projects which are then fabricated by NSF Mosis facility and returned for testing. Focus is on group projects with written and oral/reviews and reports.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2192; PROG: Swanson School of Engineering

ECE 2195 - SPECIAL TOPICS: COMPUTERS

Minimum Credits: 3
Maximum Credits: 3
An MS level course in special topics of current interest in computer engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2198 - MS PROJECT ON SEMICONDUCTOR DESIGN

Minimum Credits: 3
Maximum Credits: 3
MS Project on Semiconductor Design is a special project course intended to provide practical experience that supplements theory-oriented,

lecture-based courses. Possible topics include modeling/simulation, software development, design/development/fabrication of prototypes, or any other types of projects that will provide hands-on-experience and knowledge base that complements regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office, a point-of-contact instructor is assigned to oversee each subject area and will provide guidance on determining project topics.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2231 - FUNDAMENTALS OF SEMICONDUCTOR AND QUANTUM ELECTRONIC DEVICES

Minimum Credits: 3
Maximum Credits: 3
Fundamental quantum theory, electron in potential well, harmonic oscillator, band theory of solids, Kronig-Penny Model.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2233 - FOCUSED ION BEAM AND SCANNING ELECTRON MICROSCOPY

Minimum Credits: 3
Maximum Credits: 3
This course introduces the basic theory of FIB, SEM, X-EDS, and EBSD instrumentation, milling, deposition, and analytical capabilities. It discusses and presents the theory directly related to applications and techniques used in FIB/SEM dual beam platform instruments. Throughout the course, the students will be exposed to these methods and required to apply them to real research projects either provided by the instructor or from their research supervisors.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2235 - MONOLITHIC INTEGRATED CIRCUITS

Minimum Credits: 3
Maximum Credits: 3
Fabrication of integrated silicon monolithic circuits, thermal oxidation, solid state diffusion, epitaxial growth, ion implantation, photo and electron lithography, design considerations, active and passive elements in monolithic blocks, surface effects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate School of Engineering

ECE 2237 - ANALOG CIRCUIT DESIGN

Minimum Credits: 3
Maximum Credits: 3
The objectives of this course are: to understand the operation of essential CMOS analog circuits and learn how to design them. To design the analog circuits using a 45nm CMOS process and verify their performance by SPICE simulation using a commercial EDA tool (Cadence Spectre). Topics include: comparators; two-stage amplifiers; folded-cascade amplifiers; voltage and current references; oscillators; linear regulators; switched-capacitor circuits; digital-to-analog converters, analog-to-digital converters; SAR ADCs; delta-sigma ADCs; second order effects & noise assignment; sensor interfaces. Prerequisites: ECE 1286 or equivalent
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate School of Engineering

ECE 2240 - NANO-OPTICS

Minimum Credits: 3
Maximum Credits: 3
A graduate level course designed for students who want to understand the mechanisms of interaction of light and matter at the nanometer scale, and become acquainted with nano-optics-based technologies. Topics include: electromagnetic theory of optical interaction with matter, optical waves in periodic media, photonic bandgap structures, surface plasmons, optical interaction with metal nanostructures (metal nanoapertures and arrays, and metal nanoparticles), surface plasmon resonance spectroscopy, plasmon coupling and concentration/funneling of electromagnetic energy, surface-enhanced raman scattering, near-field imaging and microscopy, and negative refraction. Prerequisite: junior or senior level em theory course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2250 - POWER ELECTRONICS

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to cover the fundamental concepts in the field in sufficient depth to allow students to analyze and design power electronics circuits. The course covers dc-dc converters and dc-ac converters.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2260 - SCANNING PROBE MICROSCOPY-BASED CHARACTERIZATION AND NANOFABRICATION

Minimum Credits: 3
Maximum Credits: 3
The course concentrates on both theoretical and practical issues of advanced scanning problem microscopy (SPM) techniques. It introduces concepts, theoretical backgrounds, and operation principles of varieties of scanning probe microscopies; addresses the fundamental physical phenomena underlying the SPM imaging mechanism; covers the practical aspects of SPM characterization of a wide range of materials as well as operation devices; discusses SPM-based approaches to nanofabrication and nanolithography such as dip-pen nanolithography and nano-robotic manipulation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 2262 - LOW-DIMENSIONAL NANOELECTRONIC DEVICES

Minimum Credits: 3
Maximum Credits: 3
This graduate course discusses the electrical transport, electrothermal interactions, and power dissipation in emerging low-dimensional (1D and 2D) nanoelectronics. Topics include band structures, electronic transport in 1D nanowire and nanotubes as well as layered 2D materials (graphene, transition metal dichalcogenides, black phosphorus, and etc.), electrothermal interactions in nanoelectronics, power dissipation in nanoelectronics, thermometry, and system-level power dissipation issues (breakdown, heat sink, etc.). This course is intended to bridge a gap between device operations, solid-state physics, thermal transport, and materials science.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2263 - EMERGING MEMORY TECHNOLOGY FROM DEVICE TO APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
In today's big data era, trillions of sensors will connect every aspect of our lives to the Internet, constantly producing and processing an overwhelming amount of data. Conventional charge-based memory technology such as DRAM and Flash memory will not sustain the increasing demand for scalable, high-speed, energy-efficient and high density memory devices. In this special topic class, we will discuss the prospect and challenges of various emerging memory technology such as spin transfer torque random access memory (STT RAM), phase change memory (PCM), resistive random access memory (RRAM), conductive bridge random access memory (CBRAM) and possible applications in neuromorphic computing.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2264 - FLEXIBLE ELECTRONICS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to provide an understanding of scientific and technical aspects of the flexible electronics and to enable students to contribute to the rapidly developing flexible electronics information. The course aims to introduce graduate level students to semiconductor devices, modern electronic devices on flexible substrate, and wearable and stretchable devices.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2270 - FUNDAMENTALS OF PHOTOVOLTAICS

Minimum Credits: 3
Maximum Credits: 3
The course introduces the basic principles of photovoltaics which covers the basic physics of semiconductors in photovoltaic devices, physical models of solar cell operation, characteristics and design of common types of solar cell, and approaches to increasing solar cell efficiency. Besides the first generation of photovoltaics (single crystal), the second generation of photovoltaics (amorphous Si, CdTe, dye-sensitized, organic) is also covered in the course. The topics on the third generation of photovoltaics (hot electron converter, multiple exciton generation, mid-band photovoltaics, quantum dot solar cells) are also discussed in the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: MCSI - Sustainability Related

ECE 2272 - SIMULATION AND DESIGN OF SILICON PHOTONICS

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to enable students to design basic photonic integrated circuits by providing them with an intuitive understanding of core photonic components (e.g. waveguides, couplers, resonators, etc.) as well as a solid grasp of the tools needed to simulate multi-component designs. By the end of the course, students should understand the steps needed to take a PIC design from original concept to fabrication at a foundry. This includes such topics as: on-chip filtering/routing using ring resonators and Bragg gratings; methods for optimizing bandwidth and on/off-chip coupling efficiency using edge and grating couplers; integrated high-speed silicon PN modulator design and optimization; integrated high-speed germanium PIN photodetector design and optimization; full photonic circuit simulation using the S-parameter method. Prerequisites: an undergraduate course covering the fundamentals of electromagnetic waves.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2295 - SPECIAL TOPICS: ELECTRONICS

Minimum Credits: 3
Maximum Credits: 3
An MS level course in special topics of current interest in electronics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 2298 - MS PROJECT ON SEMICONDUCTOR DEVICES

Minimum Credits: 1
Maximum Credits: 4
This MS special project course intends to provide practical experience that will supplement theory-oriented regular courses. Possible topics include modeling/simulation, learning/practicing software packages, design/development/fabrication of prototypes, or any other types of skillsets that will help expand hands-on experience in conjunction with regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office: The point-of-contact instructors assigned for each area will provide guidance on determining project topics. As an alternative to ECE2998, students can take this project course (3cr) and use to fulfill 30-cr MS graduation requirements.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-MSECE

ECE 2372 - PATTERN RECOGNITION

Minimum Credits: 3
Maximum Credits: 3
Emphasis on machine pattern recognition and learning; Bayes decision theory, parameter estimation, Bayesian belief networks, discriminant functions, supervised learning, nonparametric techniques, feature extraction, principal component analysis, hidden Markov models, expectation-maximization, support vector machines, artificial neural networks, unsupervised learning, clustering, and syntactic pattern recognition.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2390 - IMAGE PROCESSING AND COMPUTER VISION

Minimum Credits: 3
Maximum Credits: 3
This first level graduate course covers essential elements of image processing for computer vision and introductory subjects in computer vision; image segmentation: region-based, edge detection, scale space, active contours ; shape description, deformable templates; textures ; perspective camera model and its parameters; geometry of multiple (2) views, fundamental matrix; scene planes and homographies; consistent labeling; locating objects in 3-d space; motion analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2521 - ANALYSIS STOCHASTIC PROCESSES

Minimum Credits: 3
Maximum Credits: 3
Probability theory, random variables, sums and limits of random variable sequences, time and frequency domain, modeling of continuous and discrete random signals, lease square estimation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2523 - DIGITAL SIGNAL PROCESSING

Minimum Credits: 3
Maximum Credits: 3
Discrete-time signal processing, discrete Fourier transform and FFT implementation, design and stability considerations of FIR and IIR filters, filter implementation and finite register effects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2525 - DETECTION AND ESTIMATION THEORY

Minimum Credits: 3
Maximum Credits: 3
A study of optimal techniques for extracting information from the observation of random variables or random signals. This includes hypothesis testing, estimation theory, optimal receiver design, wiener and Kalman-Bucy filtering, and applications such as digital communications and medical imaging.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 2556 - NEURO-SIGNAL MODELING AND ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course will focus on statistical theory and practical application related to brain imaging analysis. The topics will include statistical inference, analysis of variance, Bayesian analysis, likelihood and factor analysis (exploratory and confirmatory).The content ranges from the traditional to the contemporary. While specific applications are not treated, this course is strongly motivated by bio applications, especially in computational neuroscience. This would be a graduate level course taught through hands-on examples and tutorial data sets and cover the theory and implementation of these methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2570 - ROBOTIC CONTROL

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the application of control theory in robotics. Topics to be covered include: review of classical and modern control design methods such as PID control, state feedback, optimal control, adaptive control, and hybrid system control; control of mobile robots; control of robot manipulators; and cognitive robotics.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2595 - SPEC TOPCS: SIGNL PROCSSNG/COM

Minimum Credits: 3
Maximum Credits: 3
An MS level course in special topics of current interest in signal processing/communications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 2598 - MS PROJECT ON COMMUNICATIONS ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
MS Project on Communications Engineering is a special project course intended to provide practical experience that supplements theory-oriented, lecture-based courses. Possible topics include modeling/simulation, software development, design/development/fabrication of prototypes, or any other types of projects that will provide hands-on-experience and knowledge base that complements regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office, a point-of-contact instructor is assigned to oversee each subject area and will provide guidance on determining project topics.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2646 - LINEAR SYSTEM THEORY

Minimum Credits: 3
Maximum Credits: 3
Linear spaces and operators, mathematical descriptions of linear systems, controllability and observability, irreducible realization of rational transfer-function matrices, canonical forms, state feedback, and state estimators, stability.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2654 - DIGITAL CONTROL SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Transform domain approach to analysis and design of digital computer control systems, linear discrete dynamic systems analysis and the z-transform, discrete equivalents to continuous transfer functions, sampled data systems, design of digital control systems using transform techniques, quantization effects, sample rate selection. Prerequisite: Completion of an undergraduate course on linear control systems
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate School of Engineering

ECE 2671 - OPTIMIZATION METHODS

Minimum Credits: 3
Maximum Credits: 3
Analytical and computational aspects of finite dimensional optimization, unconstrained and equality constrained problems, basic descent

methods, conjugate direction methods, nonlinear programming and the Kuhn-Tucker Theorem, linear programming, dynamic programming, multicriteria optimization.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2680 - ADAPTIVE CONTROL

Minimum Credits: 3
Maximum Credits: 3
Adaptation and learning play an essential role in biological systems, and these characteristics have been widely incorporated in modern control systems. This course introduces the general principles of adaptive control and learning. Topics to be covered include: real-time parameter estimation, self-tuning regulators, model-reference adaptive systems, adaptive control of nonlinear systems, practical aspects and implementation of adaptive control systems, introduction to computational learning theory and learning in neural systems, and an example of adaptive control by the cerebellum.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 2686 - SPACE ORBITAL MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This course presents rigorous treatment of classical mechanical systems pertaining to spaceflight and orbital dynamics. Students will be able to apply mathematical treatments to Newtonian systems and in the process appreciate both physical nature and engineering feats achieved in the successful completion of space missions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2695 - SPECIAL TOPICS: ADAPTIVE CONTROL

Minimum Credits: 3
Maximum Credits: 3
An MS level course in special topics of current interest in control.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2698 - MS PROJECT ON CONTROL

Minimum Credits: 3
Maximum Credits: 3
MS Project on Control is a special project course intended to provide practical experience that supplements theory-oriented, lecture-based courses. Possible topics include modeling/simulation, software development, design/development/fabrication of prototypes, or any other types of projects that will provide hands-on-experience and knowledge base that complements regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office, a point-of-contact instructor is assigned to oversee each subject area and will provide guidance on determining project topics.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2774 - COMPUTER ANALYSIS OF POWER SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Steady state phenomena, matrix transformations, system parameters, system unbalances, digital methods, and numerical analysis techniques applied to load flow, state estimators, and fault studies in the large power systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2775 - ADVANCED ELECTRIC MACHINES AND DRIVES

Minimum Credits: 3
Maximum Credits: 3
This is a course in electric machine and drive analysis and modeling, along with their control systems. The course will cover the dq0 transformation, reference frame theory, saturation, unbalanced operation and dynamics in electric machines. Then cover the converter topologies typically used in machine drives, power electronic device characteristics, pulse-width modulation techniques, current regulation, torque and speed control, and space vector control.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2776 - MICROGRID CONCEPTS & DISTRIBUTED GENERATION TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
This course describes fundamental concepts related with the development of microgrids and the integration of distributed generation. Technical topics are divided into three modules. The first module introduces microgrid components and discusses the main types of microsources. The second focuses on energy storage technologies. The third includes system integration topics, such as power electronics interfaces; dc and ac architectures,; economics, operation, stabilization, and control; reliability aspects; grid interconnection, and microgrids as part of the "smart" grids. This course also aims at preparing students to conduct research or helping them improve their research skills.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE
Course Attributes: MCSI - Sustainability Related

ECE 2777 - POWER SYSTEMS TRANSIENTS 1

Minimum Credits: 3
Maximum Credits: 3
Lumped parameter analysis, switching transients in ac/dc systems, arc modeling, damping, current suppression, traveling wave phenomena, line discontinuities, Ferro resonance, transient recovery voltage.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2778 - FACTS AND HVDC TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
Advanced Power Electronics (FACTS and HVDC) is a comprehensive course in the area of large-scale power electronics systems, circuits,

devices, and the ever-advancing areas of applications. This course will provide graduate students with an understanding of the how the broad spectrum of power electronics is integrated into a wide variety of industries, with an emphasis on utility scale FACTS and HVDC technologies and applications, as well as how applications of power electronics circuits, devices, and systems are utilized for control and operation of various processes and business fields. The course will cover, from a ground-up approach, devices and their characteristics, conversion techniques and circuits, and applications of power electronics with an emphasis on power conversion fundamentals for FACTS and HVDC applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2780 - RENEWABLE AND ALTERNATIVE ENERGY

Minimum Credits: 3
Maximum Credits: 3
This course covers an in-depth analysis and understanding of various renewable and alternative energy technologies' including wind, solar, biomass, thermal, wave, hydro, and other sources and systems. Investigation of applications, integration, markets, policy, and other aspects of renewable development will be studied. Supporting technologies, such as energy storage, power electronics, and controls as applied to renewable and alternative energy applications are also explored.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: MCSI - Sustainability Related

ECE 2781 - SMART GRID TECHNOLOGIES AND APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
This is a comprehensive course designed to introduce students to new technologies dedicated to reliably, efficiently and safely managing electric power across utility, commercial, industrial, and residential networks. The course will cover the application of smart grid technologies from power generation through power consumption including grid automation, smart meters, demand response, communication, electric vehicle integration, grid connectivity, renewable energy, cyber security, microgrids and the business processes. Students will gain an understanding of the how the broad spectrum of smart grid technologies is integrated into the electrical energy industry, with an emphasis on distribution systems within homes, buildings, factories, transportation systems, and the utilities serving them
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2783 - ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING IN MODERN POWER SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This course aims to explore the use of big data, artificial intelligence (AI), and machine learning technology and tools on power system datasets to identify and improve existing knowledge and discover new insights and tools for better grid operation and management. We will learn about the basics of deep neural networks and their applications to different tasks in power grid operation and control. Students will be able to apply deep learning to a variety of artificial intelligence tasks pertinent to domains of data-driven problems in power systems. Deep learning applications in generation, transmission, and distribution systems will be discussed. The main goal of this course is to learn how to generate a dataset and use available datasets for specific objectives for detection, prediction, and anticipation in different time horizons of power system operation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 2795 - SPECIAL TOPICS POWER

Minimum Credits: 3
Maximum Credits: 3
An MS level course in special topics of current interest in power.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 2798 - MS PROJECT ON POWER

Minimum Credits: 3
Maximum Credits: 3
MS Project on Communications Engineering is a special project course intended to provide practical experience that supplements theory-oriented, lecture-based courses. Possible topics include modeling/simulation, software development, design/development/fabrication of prototypes, or any other types of projects that will provide hands-on-experience and knowledge base that complements regular courses taken in the same subject area. Interested students should contact the ECE Graduate Program Office, a point-of-contact instructor is assigned to oversee each subject area and will provide guidance on determining project topics.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1
Maximum Credits: 1
This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad SN Basis

ECE 2990 - MBA/MS GRADUATE PROJECTS

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2997 - RESEARCH, MS

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Electrical and Computer Engineering MS

ECE 2998 - GRADUATE PROJECTS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Electrical and Computer Engineering MS

ECE 2999 - MS THESIS

Minimum Credits: 1
Maximum Credits: 12
N/A
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

ECE 3000 - PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
For full-time graduate students interested in industrial internships as a means of gaining practical experience in their areas of research. Students are responsible for arranging practicum with industry. See practicum guidelines and application. Requires permission of graduate coordinator.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

ECE 3162 - ADVANCED COMPUTER MICROARCHITECTURE

Minimum Credits: 3
Maximum Credits: 3
This upper level graduate course aims to cover the state-of-the-art advances and hot topics in computer architecture research. Topics include emerging non-volatile memory technologies, massive parallel architectures (e.g. GPU), accelerators, optimizing architecture for data analytics, etc. Students are required to read contemporary research papers, and present them throughout a semester. One term project, done either individually or in a team, is required. Prerequisite: ECE 2162 or equivalent.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 3182 - ADVANCED MACHINE LEARNING & DEEP LEARNING

Minimum Credits: 3
Maximum Credits: 3
In this course, we will study the cutting-edge advanced research topics in machine learning and deep learning by reading and discussing a set of recent research papers. The main objective of this course is to cover the underlying mathematical concepts and representative algorithms, paper reading, and implementation. The student learning outcomes include understanding the advanced machine learning and deep learning models, large-scale optimization algorithms, present and discuss newly published ICML, NeurIPS, KDD papers in classes. The class projects will include a set of emerging machine learning and deep learning research topics. The project reports will be competed to target for potential machine learning conference submissions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 3195 - ADVANCED TOPICS-COMPUTERS

Minimum Credits: 3
Maximum Credits: 3
A Ph.D. level course in advanced topics of current interest in the area of computer engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 3235 - SEMICONDUCTOR LASERS

Minimum Credits: 3
Maximum Credits: 3
Properties of heterojunctions, stimulated emission in semiconductors, carrier and optical confinement, fabrication and operating characteristics of semiconductor lasers including double-heterostructure lasers, quantum well lasers, distributed feedback lasers, surface emitting lasers, various modulation techniques of semiconductor lasers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2231; PROG: Swanson School of Engineering

ECE 3526 - MODERN SPECTRAL ESTIMATION

Minimum Credits: 3
Maximum Credits: 3
An overview of concepts of modern spectral analysis covering traditional approaches and modern estimation methods. The properties, advantages and disadvantages of each estimator will be covered in detail and demonstrated using computer experiments. Also covered are applications of spectral estimation to signal detection and beam forming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2521; PROG: Swanson School of Engineering

ECE 3650 - OPTIMAL CONTROL

Minimum Credits: 3
Maximum Credits: 3
Variation calculus and optimality conditions, linear quadratic problems, the Riccati equation, Pontryagin maximum principle, time optimal control, dynamic programming and the Hamilton-Jacobi equation, numerical methods, decentralized control, multicontroller-multiobjective systems, differential games.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2646; PROG: Swanson School of Engineering

ECE 3750 - ELECTRIC POWER GRIDS AND SYSTEMS RESILIENCE

Minimum Credits: 3
Maximum Credits: 3
This course discusses selected topics in resilience engineering. The focus is on power systems and on information and communication networks as a critical load for electric power grids. These two systems are also the focus of the discussion because they are those specifically identified as particularly important in President Obama's Presidential Policy Directive 21 about National Infrastructure Resilience and because of their increasing integration as part of smart grids. Discussed topics include both theoretical and applied concepts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ECE 3779 - HIGH FREQUENCY POWER ELECTRONICS

Minimum Credits: 3
Maximum Credits: 3
This course addresses the motivations and inherent design issues associated with high frequency switched mode power supply design. Origins and dependencies of frequency dependent losses will be reviewed, with specific emphasis on potential design approaches which reduce energy loss and facilitate high frequency operation. Resonance and its application to power converters will be discussed. Students will learn steady-state and dynamic modeling techniques which allow the analysis and design of converters containing significant resonant intervals, for which traditional small ripple assumptions do not hold.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 3783 - MODERN CONTROL AND OPTIMIZATION FOR ENERGY AND COMPLEX ENGINEERING SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
The main goal of this course is to help the student develop a working knowledge of convex and nonconvex optimizations, i.e., to develop the skills and background needed to recognize, formulate, and solve convex and nonconvex optimization problems in engineering problems. This course provides a fundamental understanding of the operation of complex engineering system problems including energy and power networks, and machine learning from a control and optimization perspective. Students will learn how mathematical tools and computational methods are used for the design, modeling, planning, and 2 real-time operation of engineering systems. They will also learn about the mathematical modeling and calculation engines of related problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ECE 2671 or ECE 2646; PLAN: ELECTRICAL AND COMPUTER ENGINEERING

ECE 3795 - ADVANCED TOPICS POWER

Minimum Credits: 3
Maximum Credits: 3
A Ph.D. level course in advanced topics of current interest in power.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering
Course Attributes: MCSI - Sustainability Related

ECE 3893 - GRADUATE SEMINAR

Minimum Credits: 1
Maximum Credits: 1
A weekly series of presentations by engineers and scientists, visiting researchers, faculty, and graduate students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: PLAN: ECE-PHD or ECE-MSECE

ECE 3995 - RESEARCH TOPICS IN ELECTRICAL AND COMPUTER ENGINEERING

Minimum Credits: 3
Maximum Credits: 15
A research course for PhD students that focuses on specific skills required by students to conduct original research in a particular area of Electrical and Computer Engineering. Students will complete a project, such as a full journal paper, a proposal for research funding, or a complete patent application, as specified by the faculty teaching the course. The project should be beyond material to be included in the student's dissertation. This course requires approval by the Program Conference Committee, based on a 1-2 page proposal citing the topic, rationale for the course, the professor, and the specific project to be completed.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

ECE 3997 - RESEARCH, PHD

Minimum Credits: 1
Maximum Credits: 15
Research, PHD
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: Electrical and Computer Engineering PHD

ECE 3998 - PHD PROJECT

Minimum Credits: 3
Maximum Credits: 15
Independent study
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Electrical and Computer Engineering PHD

ECE 3999 - PHD DISSERTATION

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

Emergency Medicine

EM 2252 - STRUCTURAL DRIVERS OF HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course exposes students to the components of the Structural Drivers of Health and Social Ecology as it relates to health conditions and progression of maladies due to external factors. Topics include Health and Information Literacy, Social Support Mechanisms, Economic and Environmental effects on Health, Influence of Insurance coverage and benefits on care planning and compliance with health plans. Students will understand the correlation between intrinsic and extrinsic health drivers and their impact on both near- and long-term patient needs and outcomes. In addition, students will be asked to select a structural health driver of their choice and develop a strategy for mitigation in a community of their choice.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

EMED 5372 - SPECIALTY SELECTIVE

Minimum Credits: 0
Maximum Credits: 0
Specialty Care Clerkship is a two week experience that will run during week 7 and week 8 of the Surgical block. Students will select two options from a list of specialties to include Adult Emergency Medicine, Anesthesiology, ENT, Neurosurgery, Ophthalmology and Orthopedics. Students will complete 1 week of each assigned specialty. Attention will be given to student specialty preference but capacity limits may not allow students to get their top choices. Students will work with the teams in these departments to provide direct patient care in a variety of settings including outpatient clinics, inpatient wards and may include Operating Room experience depending on the specialty. In some cases, bedside learning will be augmented with online modules and simulation experiences. Grading for the course will be Pass/Fail.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

EMED 5376 - SPECIALTY CARE CLERKSHIP

Minimum Credits: 0
Maximum Credits: 0
The specialty care clerkship is a four (4) week rotation that includes a combination of one week experiences in the disciplines of ENT, ophthalmology, adult emergency medicine and pediatric emergency medicine. In addition to four weeks of clinical time, students will attend weekly lectures, workshops and lab activities. This required clerkship begins with orientation and a suturing and splinting session followed by a simulation-based session in phone communication (how to best communicate medical information over the telephone to patients). One morning each week there will be an ophthalmology lecture and an ENT lecture. Additional morning workshops include dermatology, EKG cases, dizziness and audiology, musculoskeletal exam and rehab and musculoskeletal radiology. The lecture will be followed by clinical responsibilities. Students are evaluated by each specialty area based on clinical performance and will take an on-line proctored examination. One grade will be assigned for the entire four week rotation.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

EMED 5445 - COMMUNITY EMERGENCY MEDICINE ELECTIVE - UPMC HAMOT

Minimum Credits: 0
Maximum Credits: 0
This rotation is set up to give students opportunities to see and participate in a busy community-based, as opposed to University-based Emergency Department. Additionally, this rotation allows students to rotate and audition at a second UPMC hospital that has an fully ACGME-accredited Emergency Medicine residency. Students interested in EM will be provided with a ESLOE written at the end of rotation. UPSOM students interested in EM as a specialty MUST take the UPSOM home EM elective (EM5450) prior to taking this experience, which counts as a student's one away elective in EM. Students not going in to EM may take this elective without first taking EM5450. Students entering EM as a specialty will have priority for available slots. Logistics and Educational Methods: Rotations are held at UPMC Hamot Emergency Department. Students have approximately 14 10-hour clinical shifts over the 4 week rotation. The shifts vary in times including night and weekend coverage. There is protected time on Tuesday evenings/overnights as well as Wednesday mornings for educational conferences. Students take a 40 question end-of-rotation test and give a 10-minute presentation at Wednesday conference. Evaluations will be filled out per medical school requirements based on collective feedback from supervising residents and attendings.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

EMED 5446 - SCIENCE OF RESUSCITATION

Minimum Credits: 0
Maximum Credits: 0
This course goal is to learn to critique primary literature using standardized methodology and, in doing so, to be able to develop clinical guidelines from basic science, translational and human subject research. The course uses current issues in cardiopulmonary resuscitation (CPR) as a model for this exercise. The course will emphasize how research in acute resuscitation science has been translated into clinical guidelines and practice. Specifically, we will critically evaluate the primary evidence (original research) upon which the current Advanced Cardiac Life Support (ACLS) protocols are based, and identify gaps in current knowledge. The didactic portion will consist of journal-club style small-group sessions with the faculty five days per week. During these sessions, the group will critically evaluate practical actions advocated by ACLS using an evidence-based format. Additional small group simulation sessions will be used to reinforce and demonstrate particular concepts and equipment. Each student will round for 1 week with the UPMC Post Cardiac Arrest Service in order to apply knowledge gained in resuscitation to post cardiac arrest patients. Structured laboratory experiences in resuscitation research laboratories will emphasize how the physiological principles of resuscitation have been discovered. These laboratory experiences may involve direct participation in human subject and/or animal research. Each student will generate a written critique of an existing clinical problem, or propose a new clinical research project. This document must demonstrate attention to the basic science of resuscitation and deal with important confounding variables that plague resuscitation research. During the course, students will complete the required material for certification in ACLS.
Academic Career: Medical School
Course Component: Clinical
Grade Component: S/U Basis

EMED 5450 - EMERGENCY MEDICINE

Minimum Credits: 0
Maximum Credits: 0
This 4 week elective is designed for the student desiring added experience in acute care medicine as practiced both in and out of the hospital. Student will become part of mobile intensive care unit field team operating in the city of Pittsburgh's system. Students are responsible for gaining experience in initial on-scene assessment and intervention, rescue, extrication techniques and cases for follow-up and presentation. Module 2 is spent in emergency department with the goal of providing experience and supervision in the initial evaluation and treatment of wide variety of patient problems.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5460 - MEDICAL TOXICOLOGY

Minimum Credits: 0
Maximum Credits: 0
This four week clinical elective will provide students with experience in the assessment and treatment of toxicology patients. Students will spend time with toxicology faculty in consultation, examination, treatment, and follow-up of patients in the emergency, inpatient and outpatient settings. The clinical experience will include daily clinical rounds on inpatients, outpatient consults, and Pittsburgh poison center case review. Students will be on-call daily with the rotating residents and medical toxicology staff member and will be expected to join the resident and attending on cases presenting to UPMC Presbyterian and Children's Hospital of Pittsburgh. A portion of the rotation will be at the Pittsburgh poison center, where students will learn from current patient cases and summary case reviews. Daily teaching sessions will be provided by members of the medical toxicology service on the spectrum of toxicology subjects. Sample topics include: initial approach to the toxicology patient, decontamination, acetaminophen, salicylates, toxic alcohols, antidepressants, iron and digoxin. Students will also attend the medical toxicology service lectures. Additionally, the student will be encouraged to participate in on-going research projects if available (e.g. chart review). Students will also be encouraged to prepare interesting cases for scientific presentation and publication. The overall curriculum will help students develop their knowledge base in medical toxicology, and improve their ability to diagnose and treat a poisoned patient.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5465 - POINT OF CARE ULTRASONOGRAPHY

Minimum Credits: 0
Maximum Credits: 0
This elective serves as an introduction to the use of point of care ultrasonography (POCUS) over the course of four weeks. The course will expose students to the use of focused, point of care ultrasonography to make bedside clinical decisions for the care of acutely ill patients. POCUS as serve as an extension of the physical exam to aid physicians narrow their differential diagnosis, provide direct visualization of pathophysiology as well as tracking changes to medical interventions, improve accuracy and safety in procedural skills and obtain direct visualization of pathology without the need for transportation to specialized suites or the use of radiation. These skills are essential in the present medical climate where pocus can aid in improved safety, cost-savings and even patient satisfaction. As the use of this technology expands, it is crucial for medical trainees to have exposure.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

EMED 5466 - POST CARDIAC ARREST SERVICE

Minimum Credits: 0
Maximum Credits: 0
This rotation is an elective experience with the Post Cardiac Arrest Service (PCAS) at the University of Pittsburgh/UPMC Presbyterian. The goal is for students to gain experience in managing post-cardiac arrest patients in the City of Pittsburgh and at UPMC Presbyterian. Students enrolled in the course will provide comprehensive treatment to patients who have suffered cardiac arrest and are seen at UPMC Presbyterian along side the physicians of the PCAS service. Specific therapies include critical care medicine; targeted temperature management; seizure evaluation, prevention, and treatment, neuroprognostication; and discharge planning. The PCAS service coordinates its care with cardiology, CCM, and PM&R services, allowing students to experience the disease of cardiac arrest in a multidisciplinary fashion. Students will be evaluated using the standard UPSOM Elective Evaluation form based on direct observation by attending physicians and housestaff, evaluation from nursing caregivers, as well as completion of didactics and readings. This course is graded Pass/Fail. This elective is available ONLY via permission of the course director and enrolled students must have completed the prerequisites successfully prior to enrollment.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

EMED 5468 - FUNDAMENTALS OF QUALITY EMPROVEMENT

Minimum Credits: 0
Maximum Credits: 0
This entirely remote course will introduce students to the fundamentals of quality improvement. Students will asynchronously complete a series of Wolfe Leaning modules to provide a foundation in interprofessional quality improvement techniques. There will be online group meetings with a facilitator Monday-Thursday mornings to review and extend upon the material presented in the modules. Students will attend (on Teams) one Patient Safety Committee meeting and one QI Meeting during each two-week block. Students will develop and present a sample Quality Improvement project based upon a scenario of their choosing (or sample scenarios provided).
Academic Career: Medical School
Course Component: Workshop
Grade Component: S/U Basis

EMED 5470 - SENIOR ELECTIVE IN QUALITY AND PATIENT SAFETY

Minimum Credits: 0
Maximum Credits: 0
The quality and patient safety elective is designed for the motivated learner with self-study modules and learning activities facilitated by preceptors remotely. The course complements busy months of interviewing and travel through the use of on-line media, case reviews, videos, podcasts and blog discussions. Instead of in-person meetings, course directors employ on-line meetings and electronic touch points to ensure progress throughout the course. Learning in this course is asynchronous, so timing is at the convenience of the individual learner.

Participants will spend at least 2 hours per day completing required on-line learning modules. In addition, students will work independently to research, understand and create a root cause analysis and a rapid process improvement plan. Students will review the RCA and QI plans of their peers, provide feedback and participate in discussion of their work.
Academic Career: Medical School
Course Component: Lecture
Grade Component: S/U Basis

EMED 5475 - EMERGENCY MEDICINE 2-WEEK ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
This 2-week elective is designed to provide students with the opportunity to see patients in the emergency room setting. Students hone their skills in the performance of focused histories and physical examinations and participate in the development of a plan for the patients. Students work closely with residents and faculty, and participate as the first point of contact for many patient encounters. In addition, there are didactics in select areas, including interpretation of electrocardiograms.
Academic Career: Medical School
Course Component: Workshop
Grade Component: S/U Basis

EMED 5600 - POCUS CERTIFICATE PROGRAM INDEPENDENT STUDY ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
An elective course in clinical point-of-care ultrasound that includes scanning shifts in the Emergency Department and in other inpatient and outpatient settings, participation in semi-weekly grand rounds, MS1 and MS2 POCUS education as instructors, and research/case presentations. Students may request a 2-week or 4-week elective period. This elective is specifically for students in the POCUS Longitudinal Certificate Program. Students interested in POCUS that are not in the Certificate Program may consider the EMED 5465 iPOCUS Elective. Objectives: 1. Understand the normal anatomy of the hollow and solid organs of the neck, thorax, abdomen and extremities. 2. Describe maneuvers in patient positioning that may help with image acquisition while maintaining patient dignity. 3. Describe the benefits and downfalls of ultrasound when compared to X-ray, CT, and MRI. 4. Describe the sonographic appearance of body structures including blood vessels, nerves, soft tissue, heart, lung, liver, spleen, kidneys, urinary bladder, uterus, and ovaries. 5. Understand the physics and appearance of ultrasound artifacts including posterior shadowing, posterior enhancement, edge artifact, mirror artifact, reverberation, and ring-down. 6. Develop a differential diagnosis for patients with abdominal pain. 7. Recognize sonographic signs of intra-abdominal fluid and its possible causes. 8. Develop a differential diagnosis for patients with chest pain. 9. Recognize sonographic signs of cardiac pathology including wall motion abnormality, hypertrophic cardiomyopathy, ventricular hypertrophy, heart failure, pericardial effusion, and tamponade 10. Recognize sonographic signs of pneumothorax, pulmonary edema, pleural effusion, and interstitial consolidation. 11. Describe the concept of ALARA as it pertains to point-of-care ultrasound. Develop professional interactions with physicians, advanced practice providers, nurses, technologists, other staff, and patients. 12. Perform medical literature searches for relevant topics. 13. Research and perform a case presentation. 14.Provide useful feedback at the end of the rotation.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

EMED 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0
Maximum Credits: 0
An individualized course of study may be arranged with the department of ophthalmology to fit the student's needs. The student will meet with a department faculty person to design a clinical course of study for a four-week period of time. A written proposal must be approved by the faculty member as well as the student's scheduling advisor. When approvals have been received, the school registrar will schedule the course and notify the department student coordinator.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5735 - SCIENCE OF RESUSCITATION (ILS)

Minimum Credits: 0
Maximum Credits: 0
This 4-week elective will satisfy requirement for integrated life science course of senior year. Course objectives: 1) identify major physiological influences affecting resuscitation and trace their implementation into clinical guidelines; 2) critique clinical study of resuscitation; 3) become confident conducting medical resuscitation, including use of relevant equipment; 4) appreciate practical/ethical issues surrounding research on emergency interventions. Small group sessions, live animal/simulator sessions and written research critique is required.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5750 - GET READY FOR RESIDENCY BOOT CAMP

Minimum Credits: 0
Maximum Credits: 0
This elective is an intensive preparation for students who are about to enter residency. Students will be provided with a combination of general and specialty-specific, clinically relevant content in a variety of modalities. The focus will be on content that will prepare the student to function at the starting level of an intern (and meet the expected intern-level milestones) after graduation. Teaching modalities will include simulation, small group sessions, skills workshops, standardized patient cases, and a limited number of high-yield lectures.
Academic Career: Medical School
Course Component: Clinical
Grade Component: S/U Basis

EMED 5788 - TOXICOLOGY: THE TOXICOLOGIST'S ROLE OUTSIDE THE HOSPITAL 2-WEEK ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
This elective will focus on exposing medical students to the role of toxicology beyond inpatient clinical care. This will involve learning about and experiencing topics related to the poison center, environmental and occupational toxicology, public health and emerging drug surveillance.
Academic Career: Medical School
Course Component: Workshop
Grade Component: S/U Basis

EMED 5898 - INDIVIDUAL STUDY OR RESEARCH

Minimum Credits: 0
Maximum Credits: 0
This is a senior-level elective offering. This is a four week elective for the student interested in participating in clinical or basic science research in emergency medicine. The student will be offered the opportunity to choose a research project which interests him or her. The student will work closely with the emergency department attending staff as well as the clinical research coordinator for the department of emergency medicine. The coordinator will meet weekly with the student to provide guidance as well as education materials.
Academic Career: Medical School
Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

EMED 5900 - EXTRAMURAL EMERGENCY MEDICINE

Minimum Credits: 0
Maximum Credits: 0
A clinical experience in emergency medicine may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM course catalog with all appropriate approvals to be received before the course may be added to the student schedule for credit.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

Endodontics

ENDOD 2000 - GRADUATE ENDODONTICS

Minimum Credits: 6
Maximum Credits: 6
General studies of various clinical endodontic techniques and procedures.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2001 - CLINIC 1

Minimum Credits: 6
Maximum Credits: 6
This course will involve the actual treatment of patients. The resident will provide care to endodontic dental patients, including care to endodontic dental patients, including non-surgical treatment, non-surgical endodontic retreatment and endodontic microsurgery.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2004 - CLINIC 4

Minimum Credits: 6
Maximum Credits: 6
This course will involve the actual treatment of patients. The resident will provide care to endodontic dental patients, including non-surgical endodontic treatment, non-surgical endodontic retreatment and endodontic microsurgery.
Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2007 - CLINICAL ENDODONTICS

Minimum Credits: 12
Maximum Credits: 12
Through the treatment of patients in the graduate endodontic clinic, residents learn and master all aspects of nonsurgical and surgical endodontic treatment. Residents are required to maintain accurate clinical records and appropriately record informed consent, all clinical records, and photographic and videographic documentation of each case. Residents are encouraged to use various endodontic materials, techniques, and equipment, including Passive Ultrasonic Irrigation, GentleWave, EndoVac, and EdgePro Laser. To prepare residents for private practice, four handed dentistry as well as practice management will be taught. Residents will be instructed in inventory management and staffing requirements. Residents will utilize intra and extraoral radiographic imaging, including Limited Field of View (LFOV) cone beam computed tomography (CBCT). Evidence based treatment will be emphasized.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2011 - TEACHING/EMERGENCY CARE 1

Minimum Credits: 2
Maximum Credits: 2
This is a clinical course focused on rendering emergency endodontic care to dental student patients. This course is also focused on teaching and helping dental students with their own cases. This course includes rotation in the emergency clinic.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2014 - CLINICAL ENDODONTICS YEAR ONE

Minimum Credits: 12
Maximum Credits: 12
Through the treatment of patients in the graduate endodontic clinic, residents learn and master all aspects of nonsurgical and surgical endodontic treatment. Residents are required to maintain accurate clinical records and appropriately record informed consent, all clinical records, and photographic and videographic documentation of each case. Residents are encouraged to use various endodontic materials, techniques, and equipment, including Passive Ultrasonic Irrigation, GentleWave, EndoVac, and EdgePro Laser. To prepare residents for private practice, four handed dentistry as well as practice management will be taught. Residents will be instructed in inventory management and staffing requirements. Residents will utilize intra and extraoral radiographic imaging, including Limited Field of View (LFOV) cone beam computed tomography (CBCT). Evidence based treatment will be emphasized.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2015 - CLINICAL ENDODONTICS YEAR 2

Minimum Credits: 12
Maximum Credits: 12
Through the treatment of patients in the graduate endodontic clinic, residents learn and master all aspects of nonsurgical and surgical endodontic treatment. Residents are required to maintain accurate clinical records and appropriately record informed consent, all clinical records, and photographic and videographic documentation of each case. Residents are encouraged to use various endodontic materials, techniques, and equipment, including Passive Ultrasonic Irrigation, GentleWave, EndoVac, and EdgePro Laser. To prepare residents for private practice, four handed dentistry as well as practice management will be taught. Residents will be instructed in inventory management and staffing requirements. Residents will utilize intra and extraoral radiographic imaging, including Limited Field of View (LFOV) cone beam computed tomography (CBCT). Evidence based treatment will be emphasized.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2016 - PRE-CLINICAL ENDODONTIC WORKSHOP

Minimum Credits: 12
Maximum Credits: 12
In this pre-clinical course, first year residents learn all aspects of nonsurgical treatment. The course is designed to ensure that first year residents have sufficient clinical and basic didactic knowledge to effectively treat patients in the graduate clinic. Residents are instructed on how to maintain accurate clinical records and appropriately record informed consent, and photographic and videographic documentation of each case. Residents are taught how to use various endodontic materials, techniques, and equipment, including Passive Ultrasonic Irrigation, GentleWave, EndoVac, and EdgePro Laser. Residents are instructed on how to perform intra and extraoral radiographic imaging, including Limited Field of View (LFOV) cone beam computed tomography (CBCT).
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2017 - EVIDENCE BASED ENDODONTICS

Minimum Credits: 1
Maximum Credits: 1
The Evidence based Endodontics course is designed to teach students how to evaluate information from research and professional consensus statements. The program provides a comprehensive overview of evidence-based practice (EBP) and the components essential for implementation of EBP in a clinical setting.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2018 - PULP BIOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course will provide in-depth instruction in the biological principles concerning the dental pulp and periradicular tissues including: 1. Microscopic and ultrastructural anatomy of the soft and hard tissues of teeth and supporting structures. 2. Embryology, histology, and physiology of the pulpal/periradicular complex. 3. Microbiologic aspects of caries. 4. Pulpal and periradicular diseases. 5. Pathophysiology as it relates to diseases of the pulpal/periradicular complex and orofacial pain. Further, skills developed through this course should enable endodontic residents to use the best evidence-based science or practices to guide clinical decision-making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2022 - MULTIDISCIPLINARY SEMINARS

Minimum Credits: 1
Maximum Credits: 1
This course discusses evidence-based and multidisciplinary approach for patient care.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2023 - MULTIDISCIPLINARY SEMINARS

Minimum Credits: 2
Maximum Credits: 2
This course involves seminars with other disciplines.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2039 - ENDODONTIC MICROSURGERY

Minimum Credits: 1
Maximum Credits: 1
This course provides students with a solid foundation in surgical endodontics. The course focuses on evidence-based decision making regarding all components of endodontic microsurgery. Students will complete perform various endodontic surgeries using a manikin and typodont.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad Letter Grade

ENDOD 2060 - CASE PRESENTATION AND TREATMENT PLANNING

Minimum Credits: 3
Maximum Credits: 3
Through the presentation of recently completed cases from the graduate endodontic clinic, residents gain knowledge of nonsurgical and surgical endodontics through group discussion. Residents learn how medical and dental histories can affect endodontic treatment. They develop and demonstrate their ability to determine definitive and differential diagnoses, determine all treatment alternatives and which treatment plan would be considered optimal, determine the prognosis for each case and assess the likely outcomes. Through interaction between all the residents and their faculty, they learn to incorporate radiographic interpretation, diagnostic methods, professionalism and ethics into clinical practice. Evidence based treatment planning and clinical decision making are emphasized.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ENDOD 2070 - TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
Hands-on teaching practicum course for endodontic residents to learn about university-level teaching. Topcis include endodontic diagnosis, theory, nonsurgical treatment procedures, outcome and prognosis for endodontically treated teeth, treatment planning, and jurisprudence.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2072 - PHARMACOLOGY AND MEDICALLY COMPROMISED PATIENT CARE FOR ENDODONTISTS

Minimum Credits: 0
Maximum Credits: 0
Endodontic residents will be instructed in the fundamentals of pharmacology and how it is interrelated with biological science. While the course will incorporate the discussion of pharmacological actions of various drug classes, the primary focus will be on the effective use of pharmacology in endodontic practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2113 - CLASSIC LITERATURE 1

Minimum Credits: 2
Maximum Credits: 2
The goal of this Classic Literature Review course is to review the history of endodontics. In this course, residents will discuss classic endodontic papers. Residents will also review endodontic textbooks and AAE position statements. Furthermore, knowledge and skills developed throughout this course will enable residents to use the best evidence-based science or practices to guide clinical decision-making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2115 - ENDODONTIC MICROSCOPE

Minimum Credits: 1
Maximum Credits: 1
In this course, residents will develop the necessary clinical skills for modern endodontic based on magnification, ideal illumination and ergonomics.
Academic Career: Graduate

Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2122 - ENDODONTOLOGY 4

Minimum Credits: 2
Maximum Credits: 2
This course is the study of the scientific rational for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2123 - ABE BOARD PREPARATION 1

Minimum Credits: 2
Maximum Credits: 2
This course will provide a review of basic concepts in endodontics which will provide a framework for clinical treatment.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2124 - ABE BOARD PREPARATION 3

Minimum Credits: 2
Maximum Credits: 2
This course will provide a review of basic concepts in endodontics which will provide a framework for clinical treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2211 - CASE PRESENTATION 1

Minimum Credits: 2
Maximum Credits: 2
This course will involve the presentation of cases completed by the resident in the previous week. Treatment diagnosis, treatment planning and procedures will be discussed by the residents and faculties. Residents must present an evidence-based rationale for their endodontic treatment provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2221 - CASE PRESENTATION 2

Minimum Credits: 2
Maximum Credits: 2
This course will provide each resident with the experience of presenting clinical cases in a formal setting. The cases will be discussed in detail, and the student must be prepared to answer questions regarding the general medical condition of the patient, as well as present an evidence based rationale for the endodontic treatment provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2280 - CASE PRESENTATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide each resident's with the experience of presenting clinical cases in a formal setting. The cases will be discussed in detail, and the student must be prepared to answer questions regarding the general medical condition of the patient, as well as present an evidence based rationale for the endodontic treatment provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2281 - CASE PRESENTATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide each resident's with the experience of presenting clinical cases in a formal setting. The cases will be discussed in detail, and the student must be prepared to answer questions regarding the general medical condition of the patient, as well as present an evidence based rationale for the endodontic treatment provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2282 - CASE PRESENTATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide each resident's with the experience of presenting clinical cases in a formal setting. The cases will be discussed in detail, and the student must be prepared to answer questions regarding the general medical condition of the patient, as well as present an evidence based rationale for the endodontic treatment provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2326 - PRACTICE MANAGEMENT 1

Minimum Credits: 1
Maximum Credits: 1
The Practice management course will involve discussion of several aspects of private practice and academia, including ethics, finance and business.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2327 - PRACTICE MANAGEMENT 2

Minimum Credits: 1
Maximum Credits: 1
The Practice management course will involve discussion of several aspects of private practice and academia, including ethics, finance and business
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2357 - CURRENT LITERATURE 2

Minimum Credits: 1
Maximum Credits: 1
The goal of this Current Literature Review course is to enable endodontic residents to develop an effective method for reading scientific articles peer-reviewed journals and the critical thinking skills necessary for appropriate interpretation of scientific methodology and results. Further, skills developed through this course should enable endodontic residents to use the best evidence-based science or practices to guide clinical decision-making.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

ENDOD 2375 - ENDODONTIC CLINIC 5

Minimum Credits: 1
Maximum Credits: 1
Endodontic resident clinical patient care. This treatment will include all phases of endodontics, such as conventional surgical and emergency endodontic treatment.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2380 - TOPICAL LITERATURE 1

Minimum Credits: 2
Maximum Credits: 2
This class will cover specific areas of endodontics through the review of classic and current literature. The resident will be given reading assignments and will be required to present a narrative of the reading for further discussion in a small seminar format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2381 - CLASSIC LITERATURE 3

Minimum Credits: 2
Maximum Credits: 2
The goal of this Classic Literature Review course is to review the history of endodontics. In this course, residents will discuss classic endodontic papers. Residents will also review endodontic textbooks and AAE position statements. Furthermore, knowledge and skills developed throughout this course will enable residents to use the best evidence-based science or practices to guide clinical decision-making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2383 - TOPICAL LITERATURE 4

Minimum Credits: 2
Maximum Credits: 2
This class will cover specific areas of endodontics through the review of classic and current literature. The resident will be given reading assignments and will be required to present a narrative of the reading for further discussion in a small seminar format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2385 - CURRENT LITERATURE REVIEW

Minimum Credits: 1
Maximum Credits: 1
The Current Literature Review course provides residents with the opportunity to become familiar with the most recent endodontic and medical/dental research. Reading, writing abstracts for the articles reviewed, and discussing the literature reinforces the scientific method as well as expands the resident's knowledge base. The course facilitates critical thinking that enables endodontic residents to use the best evidence-based science or practices to guide their clinical decision-making.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ENDOD 2389 - CLASSIC LITERATURE REVIEW

Minimum Credits: 3
Maximum Credits: 3
The Classic Literature Review is the foundational course for endodontics. The course provides students with a critical appraisal of the history of endodontics and classic scientific studies that define the literature base and define the specialty. Students will utilize endodontic textbooks to provide the context to interpret classic literature base. Position statements from the American Dental Association and the American Association of Endodontists will all be reviewed.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

ENDOD 2390 - ENDODONTIC SEMINAR

Minimum Credits: 2
Maximum Credits: 2
This course is designed to solidify a student's understanding of the endodontic literature base. Each endodontic topic will be reviewed. Each student will be assigned a point of view and will have to defend his or her position using the best evidence-based research and clinical reasoning. The defense of opposing points view will provide students with a greater depth of understanding.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ENDOD 2395 - RESIDENT RESEARCH

Minimum Credits: 1
Maximum Credits: 1
Resident Research provides students with time to work on their individual research projects. Students will use this time to collect data, analyze data, and complete their manuscripts, which are required for graduation. Class time will also be utilized to allow students to prepare their research for presentations at local, regional, and national meetings.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

ENDOD 2410 - CURRENT LITERATURE

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2411 - CURRENT LITERATURE 1

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The students will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2412 - CURRENT LITERATURE 3

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The students will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2420 - CURRENT LITERATURE

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2421 - CURRENT LITERATURE 5

Minimum Credits: 2
Maximum Credits: 2
The goal of this Current Literature Review course is to enable endodontic residents to develop an effective method for reading scientific articles peer-reviewed journals and the critical thinking skills necessary for appropriate interpretation of scientific methodology and results. Further, skills developed through this course should enable endodontic residents to use the best evidence-based science or practices to guide clinical decision-making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2422 - CURRENT LITERATURE 4

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2430 - CURRENT LITERATURE

Minimum Credits: 2
Maximum Credits: 2
This class will entail the reading of current periodicals. The student will abstract assigned articles and then present the abstract for discussion in a round table format.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2512 - CLINIC 3

Minimum Credits: 3
Maximum Credits: 3
This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2513 - ENDODONTICS PRE-CLINIC 2

Minimum Credits: 3
Maximum Credits: 3
In this course, residents will develop the clinical skills for endodontic treatment in a simulation/laboratory environment. The resident will provide training in endodontic procedures, including non-surgical endodontic treatment, non-surgical endodontic retreatment.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2520 - CLINICAL TREATMENT

Minimum Credits: 3
Maximum Credits: 3
This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical as well as surgical proficiency in the field of endodontics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2522 - CLINIC 4

Minimum Credits: 3
Maximum Credits: 3
This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical, as well as surgical proficiency in the field of endodontics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2523 - RESEARCH

Minimum Credits: 3
Maximum Credits: 3
This course involves discussion of possible research projects. This course will also enable students to improve their scientific writing skills as well as grant application.

Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2524 - CLINIC 4

Minimum Credits: 6
Maximum Credits: 6
This course will involve the actual treatment of patients. The resident will provide care to endodontic dental patients, including non-surgical endodontic treatment, non-surgical endodontic retreatment and endodontic microsurgery.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2530 - CLINICAL TREATMENT

Minimum Credits: 3
Maximum Credits: 3
This course will involve the actual treatment of patients. The resident will demonstrate both nonsurgical as well as surgical proficiency in the field of endodontics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2610 - CLINICAL CONCEPTS IN ENDODONTICS

Minimum Credits: 1
Maximum Credits: 1
This course is the study of the scientific rational for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2612 - CLINICAL CONCEPTS 2

Minimum Credits: 1
Maximum Credits: 1
This course will provide the clinical aspect of endodontic treatment. By presenting various techniques used to diagnose and treat the patient in the endodontic practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2613 - CLINICAL CONCEPTS 3

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

ENDOD 2620 - CLINICAL CONCEPTS IN ENDODONTICS

Minimum Credits: 1
Maximum Credits: 1
This course is the study of the scientific rationale for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 2721 - TRAUMATOLGY

Minimum Credits: 1
Maximum Credits: 1
This course provides information regarding endodontic approaches to traumatic dental injury.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENDOD 5210 - ENDODONTICS 1

Minimum Credits: 1
Maximum Credits: 1
In this course, students will learn the morphology, physiology, and pathology of the human pulp and periapical tissues and the diagnosis, prevention and treatment (to include access preparation, instrumentation and temporization) of diseases and injuries related to these tissues. This course includes lectures and class discussions.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

ENDOD 5216 - ENDODONTICS 1 LAB

Minimum Credits: 1
Maximum Credits: 1
In this course, students will develop clinical skills for endodontic treatment in a simulation/laboratory environment. This course includes small group simulation and laboratory sessions.
Academic Career: Dental Medicine
Course Component: Practicum
Grade Component: ABCF

ENDOD 5247 - ENDODONTICS 2 LAB

Minimum Credits: 1
Maximum Credits: 1
In this course, students will develop clinical skills for endodontic treatment in a simulation/laboratory environment. This course includes small group simulation and laboratory sessions.
Academic Career: Dental Medicine
Course Component: Practicum
Grade Component: ABCF

ENDOD 5252 - ENDODONTICS 2

Minimum Credits: 1
Maximum Credits: 1
The goal of this course is to provide preclinical experience in performing diagnosis, case selection and nonsurgical endodontic treatment on

uncomplicated anterior, premolar, and molar teeth. This course is designed to prepare the dental student for the management of patients with pulpal and periradicular disease through a series of classes and accompanying laboratory sessions, including various clinical simulation projects in Endodontics 2 Lab (ENDOD 5247). Problem-solving skills, critical-thinking, patient-simulation, treatment (to include rotary instrumentation, obturation techniques, preparations for restoring an endodontically treated tooth, referral, informed consent, patient education, isolation and rubber dam placement, endodontic anesthesia, endodontic emergencies, and geriatric endodontics), radiology and self-assessment criteria will be emphasized throughout the course. Furthermore, knowledge and skills developed throughout this course and the accompanying laboratory course will enable dental students to use the best evidence-based science or practices to guide clinical decision-making
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

ENDOD 5313 - ENDODONTICS 3

Minimum Credits: 1
Maximum Credits: 1
In this course, students will learn about endodontic microbiology, endodontic therapeutics, preventive endodontics, procedural accidents, evaluation of endodontic outcomes, nonsurgical retreatment, bleaching of discolored teeth, management of incompletely formed roots, management of traumatic dental injuries, longitudinal tooth fractures, endodontic and periodontal interrelationships, endodontic surgery and differential diagnosis of orofacial pain. This course includes lectures and class discussions.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

ENDOD 5388 - CLINICAL ENDODONTICS 1

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide clinical experiences in endodontics for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in providing care to endodontic dental patients at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the endodontic patient.
Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: Grad HSU Basis

ENDOD 5448 - CLINICAL ENDODONTICS 2

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide clinical experiences in the area of endodontics for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in providing care to endodontic dental patients at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the endodontic patient.
Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: Grad HSU Basis

ENDOD 5801 - ADVANCED TECHNIQUES IN ENDODONTICS

Minimum Credits: 1
Maximum Credits: 1
This course introduces students to more advanced concepts and techniques in endodontics, including use of different instrument systems, ultrasonics, microscope, CBCT and management of complex patient cases. This course will include a didactic component, a chair-side learning component, and individual hands-on sessions where students will be able to use different file systems for the instrumentation of molar extracted teeth.
Academic Career: Dental Medicine

Course Component: Clinical
Grade Component: Grad HSU Basis

ENDOD 5900 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Dental Medicine
Course Component: Independent Study
Grade Component: Grad HSU Basis

ENDOD 5911 - ADVANCED ENDODONTICS

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: Grad HSU Basis

Energy Resources

ENRES 2096 - INTERNSHIP

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: Swanson School of Engineering

ENRES 2097 - GRADUATE PROJECTS

Minimum Credits: 1
Maximum Credits: 12

Grade Component: Grad SN Basis

Engineering

ENGR 0712 - ADVANCED ENGINEERING APPLICATIONS FOR FRESHMAN

Minimum Credits: 3
Maximum Credits: 3
This is an honors course and a continuation of ENGR 0711. Students will be introduced to engineering research and various special topics.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PREQ: ENGR 0711; CREQ: ENGR 0082; PROG: Undergraduate Swanson School of Engineering

ENGR 2007 - SUSTAINABILITY CAPSTONE

Minimum Credits: 3
Maximum Credits: 3
Building upon students' previous experience and skills, this course will focus on enabling interdisciplinary student teams to synthesize comprehensive solutions to complex real-world Sustainability challenges. This is a project-based course. Project topics will be developed in consultation with instructors and sustainability stakeholders. Innovative solutions will require the application of critical thinking and collaboration to resolve. By the end of the course the students will have a deeper understanding of 1) the multi-faceted nature of Sustainability solutions 2) approaches to problem solving across fields and 3) how to communicate sustainable solutions and concepts in an interdisciplinary team environment. This course serves as a capstone course for the Sustainability certificate and M.S. in a Sustainable Engineering degree and is a required course for these two programs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ENGR 1905 or 2905
Course Attributes: Capstone Course, MCSI - Sustainability Focused, MCSI - Sustainability Related

ENGR 2009 - SUSTAINABLE FOOD SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Our food system is a multifaceted network of interconnected systems and relationships. In order to be able to feed ourselves well into the future, it must be sustainable. A sustainable food system is a system in which healthy food is provided to people while balancing the environmental, social and economic impacts. These dynamics force stakeholders to confront synergies and tradeoffs in agricultural practices, harvesting, transportation, manufacturing and distribution, healthy diets, and a reduction in wasted food.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2017 - MANUFACTURING FOR THE FUTURE: FLEXIBLE, GREEN, AND DIGITAL

Minimum Credits: 3
Maximum Credits: 3
What is flexible device manufacturing? What is green manufacturing? What is cybermanufacturing? Importantly, how do these emerging "types" of manufacturing differ from traditional manufacturing? It is important to recognize that global manufacturing is undergoing major transformations nowadays. The confluence of new advanced materials, emerging fabrication technologies, and connected cyber-physical systems is creating paradigm shifts for the ways products are conceived, made, distributed, used, and disposed. In the ever-increasing competition of "making things" of value to consumers, many industries are now reinventing themselves to cope with this new reality. This class covers the fundamentals behind major global trends, and their implication for the future of manufacturing from an engineering perspective. Topics covered include the following: (1) How the need for flexible and wearable devices is driving innovation in new materials and fabrication processes beyond the traditional microfabrication techniques adopted in the semiconductor industry. (2) How protein-based materials, degradable polymers, and novel recycling technologies are paving the way for more sustainable manufacturing of

consumer products. (3) How data analytics and internet of things (IoT) technologies are enabling a new generation of digital manufacturing systems referred to as Industry 4.0, and beyond.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2050 - TECHNICAL WRITING

Minimum Credits: 3
Maximum Credits: 3
This course is designed for non-native English speaking advanced graduate students preparing to write thesis or dissertation proposals in engineering. Topics covered include: format and content of reports needed in technical writing, abstracts and summaries, project proposals and research reports; correcting language problems encountered by non-native English writers and technical writers in particular.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

ENGR 2051 - PRODUCT REALIZATION

Minimum Credits: 3
Maximum Credits: 3
This interdisciplinary course considers diverse aspects of product realization process. Aspects, include defining user requirements, creation of computer based model and designs of a product from an existing product, rapid prototyping techniques and development of a manufacturing plan. Teams of 3-4 students from engineering and business will take a product with a microsystem or mems technology feature from concept to working prototype. In doing this students will address issues of market analysis, design, manufacturing design and product planning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2060 - SOCIAL ENTREPRENEURSHIP- ENGINEERING FOR HUMANITY

Minimum Credits: 3
Maximum Credits: 3
The course will explore the concepts of social entrepreneurship through the three tenets of sustainability: environment, economy, and equity in the context of complex or `wicked' problems. An introduction will provide a foundation in sustainability and social entrepreneurship while exploring the impact of innovative business models, such as disruptive innovation and Prahalad and Hart's fortune at the bottom of the pyramid. Additional class time will explore different examples and challenges in the developed and developing worlds. Through weekly readings, the course will focus on classroom discussions about the tenets of sustainability and the relevance of engineering in crafting `solutions'. The course project will provide students with an opportunity to work with a multi-disciplinary team to design an engineering-based business plan targeting a specific challenge either locally or in the developing world.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2073 - INTRODUCTION TO SPACE ENGINEERING

Minimum Credits: 4
Maximum Credits: 4
This course is a comprehensive overview of space engineering. Topics to be covered include: importance and applications of space, space environment, orbital mechanics, spacecraft dynamics, systems engineering, control systems, spacecraft subsystems (communication and data-handling subsystem, electrical power subsystem, environmental control and life-support subsystem, and structures), rocket propulsion, space operations, and space politics and economics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2078 - SPACE ENGINEERING PROJECT

Minimum Credits: 3
Maximum Credits: 3
In this course, students work in teams to solve real-world engineering problems in space technologies through a mentored design project. Students are provided with mission-driven design requirements and are charged with the development and testing of a functional prototype or system component. In addition to technical skills, students develop professional competencies, including communication and teamwork, through regular interaction and meetings with industry or research mentors.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ENGR 2080 - INNOVATING FOR COMMERCIAL IMPACT

Minimum Credits: 3
Maximum Credits: 3
Conventional wisdom regarding starting a business is dead wrong. This conclusion led Steve Blank and others to develop the lean startup method, an approach for systematically exploring the business model needed to make an idea into a success. In Blank's own words: 'existing companies execute a business model, startups search for one. This distinction shapes the lean definition of a startup: a temporary organization designed to search for a repeatable and scalable business model.' In this course, we discuss the basic elements of the lean startup method and apply them to the domain of engineering product and customer development. Students are expected to come to the class with their own idea(s) for potential product offering(s), which they will then test using the lean startup approach over the course of the term. *This course was formerly titled LEAN LAUNCHPAD: EVIDENCE-BASED ENTREPRENEURSHIP

ENGR 2100 - FUNDAMENTALS OF NUCLEAR ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
Provides an introduction to application of theory to practical aspects of nuclear science and technology. It is intended as a ramp-up course

for non-nuclear engineers who wish to pursue additional graduate level courses in nuclear engineering at the University of Pittsburgh. Graduate level content will be assured by the use of rigorous quantitative homework assignments, take-home exams, and an individual research project to be presented at the end of the semester. This course is designed to accommodate working adults who must travel from time to time though it is not designed to be taken completely asynchronously. Topics will include: atomic and nuclear physics, nuclear reactions and radiation, radiation protection, fission reactor basics, neutron diffusion, time-dependent reactors, reactor thermal-hydraulics including nuclear heat generation, conductive and convective heat transfer, ideal and non-ideal fuel rod analysis, thermodynamics, and a review of major nuclear criticality and power plant accidents.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: School of Engineering (PENGR)

ENGR 2101 - NUCLEAR CORE DYNAMICS

Minimum Credits: 3
Maximum Credits: 3
This course reviews the mathematics of nuclear reactor kinetics. Linear systems of ordinary differential equations are solved by state vector techniques, Laplace transform techniques, or finite difference techniques including the treatment of discretization errors resulting from various finite differencing approximations. A review of the physics of nuclear kinetics is followed by treatments of the kinetics equation including the effect of uncertainties, approximate solutions, and the interpretation of experiments to measure kinetics parameters. Representations and the physical basis of reactivity feedback mechanisms are treated. Lumped and distributed parameter models of fuel, coolant, fission products, and selected plant components are derived and applied to develop quantitative static relationships and qualitative dynamic results for transient conditions. The course provides an introduction to reactor protection and safety analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2102 - NUCLEAR PLANT DYNAMICS AND CONTROL

Minimum Credits: 3
Maximum Credits: 3
This course provides an integrated engineering examination of a nuclear power plant from the perspective of instrumentation and control systems used to infer the condition of the nuclear plants and its systems, control its normal operation, and provide protection during transient situations as well as assess core damage during severe accident situations. Students will apply previous knowledge of analog, digital, and microprocessor electronics techniques to nuclear power plant design and operation and reactor protection and safety considerations that influence the design of the reactor plant. A major outcome of this course will be an integrated understanding of the interaction between the physics of nuclear plant control (reactivity and heat balance) and the control and protection systems. This integrated plant understanding will be essential for the successful completion of the integrated nuclear power plant operations course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2103 - INTEGRATION OF NUCLEAR PLANT SYSTEMS WITH THE REACTOR CORE

Minimum Credits: 3
Maximum Credits: 3
This course examines design bases for major systems and components in a nuclear plant and evaluates how the systems function in an integrated fashion. The student will examine a typical nuclear power plant and those components and systems of the nuclear plant complex that have the potential for affecting core power, and whose failure could be an initiating event for a plant transient. Dynamic relationships for the systems developed in the companion nuclear courses will be transformed into stable, numerical algorithms for computer solutions and system interactions will be illustrated using a major industry transient analysis code. Emphasis is on how operations of and faults in systems and components can influence reactivity and core behavior. Through classroom discussions the students will assess engineering problems and operational problems that have been experienced in historical nuclear plant operations. The intended outcome is an aptitude

for predicting complex transient behavior of the integrated nuclear plant considering factors that are important for safe and efficient operation: reactivity management and control, coolant inventory control, and core heat removal.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2104 - NUCLEAR OPERATIONS AND SAFETY

Minimum Credits: 3
Maximum Credits: 3
Nuclear power is an abundant and renewable power source with unique characteristics which require special attention in its design, licensing and operation. This course explains the fundamental plant processes: nuclear fission, neutron kinetics, heat transfer, chemistry and feedback mechanisms, showing how variations in one plant parameter can propagate effects in the others in ways not seen in fossil, solar, wind, or other systems. The student will also learn methods for analyzing these processes, and the relationship of their features to normal and off-normal plant operations, up to and including postulated severe accidents. Both deterministic analysis and Probabilistic Risk Assessment (PRA) will be employed, with exercises provided in both approaches. Similar concepts will also be applied to the design, manufacture and utilization of nuclear fuel. Stress is placed throughout on the defense in depth concept, and the nuclear safety cultural approach - a necessary point of view regarding how tasks are approached and conducted, whether they be analytical or operational.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2108 - CYBERSECURITY-BY-DESIGN FOR OPERATIONAL TECHNOLOGY SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to cybersecurity-by-design practices for operational technology (OT) systems. An OT system is the hardware and software used to monitor, control, and automate physical processes in industrial environments. OT systems were traditionally designed for reliability and safety, not cybersecurity; however, the increasing digitization and connectivity of these systems have exposed them to sophisticated cyber threats. Students will learn to integrate cybersecurity engineering with other aspects of OT system design to achieve "security-by-design". Students will learn the fundamental principles of OT systems and OT cybersecurity, then apply those principles through a series of hands-on research projects aligned with the design of a high-stakes OT system. Topics include threat modeling, risk assessment, consequence analysis, defensive cybersecurity architecture design, and adversary task analysis. Cybersecurity-by-design is a multi-disciplinary challenge - students of all engineering disciplines are encouraged to participate.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2110 - NUCLEAR MATERIALS

Minimum Credits: 3
Maximum Credits: 3
In this course, materials principles are taught in the initial lectures; students do not need to have prior understanding of them. The course will cover the metallurgy and phase diagrams of alloy systems important in the design of commercial nuclear power plants. The micro-structural changes that result from reactor exposure (including radiation damage and defect cluster evolution) are discussed in detail. The aim is to create a linkage between changes in the material microstructure and changes in the macroscopic behavior of the material. Also discussed is the corrosion of cladding materials as well as the effects of irradiation on corrosion performance, and the effects of primary and secondary coolant chemistry on corrosion. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is guided by experimental data. Materials issues in current commercial nuclear reactors and materials issues in future core and plant designs are covered.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2113 - RADIATION DETECTION AND MEASUREMENT

Minimum Credits: 3
Maximum Credits: 3
This combined lecture and laboratory course will provide students with an introduction to the principles of radiation detection and measurement and experimental techniques. The lecture material will provide students with an understanding of the theoretical basis of detector operation, radiation interactions with matter, signal conditioning and processing electronics, measurement techniques, and statistical considerations. Laboratory work will emphasize the practical aspects of radiation detection using an array of radioactive sources, detectors, and associated signal processing electronics. Through a series of laboratory experiments, students will learn to configure and operate instrumentation used in a wide range of radiation detection applications that are of interest to nuclear power, nuclear medicine, radiochemistry, and other scientific disciplines.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ME 2100 or ENGR 2100; PROG: Swanson School of Engineering

ENGR 2115 - HEAT TRANSFER AND FLUID FLOW IN NUCLEAR PLANTS

Minimum Credits: 3
Maximum Credits: 3
This course provides advanced knowledge to promote understanding and application of thermal and hydraulic tools and procedures used in reactor plant design and analysis. It assumes that the student has a fundamental knowledge base in fluid mechanics, thermodynamics, heat transfer and reactor thermal analysis. The focus of the course is on physical and mathematical concepts useful for design and analysis of light water nuclear reactor plants. Applications of mass, momentum, and energy balances are combined with use of water properties to analyze the entire reactor plant complex as a whole.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2120 - MATHEMATICAL MODELING OF NUCLEAR PLANTS

Minimum Credits: 3
Maximum Credits: 3
Graduate students will develop the graphics/simulation framework and the underlying mathematical models for simulating nuclear power plants in ME/ENGR 2120 mathematical modeling of nuclear plants. Models will be developed in Matlab/Simulink(tm) and configured to run on a PC so that students can both examine the mathematical models on which the simulation is based and use the simulation program in laboratory-like sessions to study the effect of design changes on plant behavior. The simulation model fidelity developed is suitable for educational purposes and provides students with a desktop tool to realistically model and better understand reactor performance under various conditions. While it would not be intended to replace or duplicate the high-fidelity dynamic simulation used in major accident analysis codes such as Relap, Trac, and Trace, the course will provide the student with an introduction and a working knowledge what is embodied in these industry standard codes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2122 - MANAGEMENT PRINCIPLES IN NUCLEAR POWER

Minimum Credits: 3
Maximum Credits: 3
This course will teach management theory and best practices associated for a successful manager in the nuclear industry. The following

topics presented and discussed: management theory and practice; ethics; generation economics across the U.S.; dispatch curves; implications of economic factors for existing and new nuclear plants and likely future changes; compensation theory and best practices; labor law issues and challenges common to the nuclear industry; contract law issues and challenges in the nuclear industry; management techniques for dealing with the diverse age groups; change management techniques and best practices in corporations; ethics challenges and issues in the nuclear field; management interactions with inpo and the nrc; project management techniques and practices; management's role in nuclear safety and security culture. Case studies of actual business situations will be studied.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2125 - CASE STUDIES IN NUCLEAR CODES AND STANDARDS

Minimum Credits: 3
Maximum Credits: 3
Presentation of major issues associated with systems and component engineering relative to the nuclear power industry and the industry's consensus codes and standards. The course provides an explanation of the necessity of consensus codes and standards, a high-level view of codes and standards organizations, and shows how codes and standards promotes the safe operation of nuclear power plants. The course discusses how the NRC adopts and makes use of consensus codes and standards. It covers codes and standards for current, advanced and next generation, and high-temperature reactors, including global conformity assessment requirements. Relevant codes and standards from other communities, including nuclear quality assurance, are also summarized.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2130 - THE NUCLEAR FUEL CYCLE

Minimum Credits: 3
Maximum Credits: 3
Studies the entire nuclear fuel cycle, beginning with the mining of uranium ores and progressing through the chemical and physical processes supporting enrichment, subsequent chemical conversion to uranium dioxide, and design and fabrication of fuel assemblies for use in a power reactor core. Aspects associated with fuel core management, operation and utilization in the reactor core along with the regulatory licensing requirements are presented. Following fuel operation the areas of fuel onsite handling, transportation of spent nuclear fuel and options for diverse long term secure storage are reviewed and evaluated. Reprocessing and recycling are discussed which includes fuel resource utilization, proliferation control, and waste volume minimization. Discussion of regulatory issues completes the picture, enabling the student to understand not only the processes, economics and industry drivers, but also the benefits and issues that have been addressed with nuclear power generation. In all phases of the cycle, the student is acquainted with the quantitative techniques and methods employed in the nuclear fuel cycle.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (ENGR 2100) or (ME 2100); PROG: Swanson School of Engineering (PENGR)

ENGR 2131 - SPECIAL TOPICS IN NUCLEAR ENGINEERING, METAL COOLED REACTORS

Minimum Credits: 3
Maximum Credits: 3
This course is intended to provide you with an understanding of the technology associated with high-energy neutron reactors (most often called fast reactors). The course materials consist primarily of archival papers from literature, the GENIV International Forum materials, my slides, and the time we spend together during lectures; a bibliography of papers relevant to these reactors is provided in the course syllabus. Although many nations' sodium-cooled reactor programs continue to be based on oxide fuel, there is a better way metal fuel. In this course, the student will become more aware of the state of high-energy neutron reactor technology. Moving nuclear power from low-energy neutron fission (water-cooled reactors) to high-energy neutron fission (metal-, salt-, or gas-cooled reactors) will revolutionize fission, just as jet engines and fracking revolutionized commercial air transportation and oil/gas production, respectively. We will focus on

metal-cooled high-energy neutron reactors, but you can easily transpose this knowledge to salt or gas systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2132 - BOILING WATER REACTOR SYSTEMS AND SAFETY

Minimum Credits: 3
Maximum Credits: 3
This course will review the fundamentals of boiling water reactor systems and operations as they apply to analysis, design, selection and application of power generation. The course will cover the evolution of BWR systems including BWR features and characteristics and containment configurations. With successful completion of the class students will understand how BWRs operate through the fundamental principals of reactor power flows and core flow."
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2210 - UNDERSTANDING BRAZIL-PREPARATIONS FOR RESEARCH AND STUDY IN BRAZIL

Minimum Credits: 2
Maximum Credits: 2
This seminar is specifically designed for students who will be doing research and/or studying in Brazil. It introduces the economic, political, social, and cultural aspects of Latin America in general and brazil in particular. The seminar is organized and conducted by the center for Latin American studies, and features guest lectures from on brazil, readings from current popular literature and news sources (available from the Eduardo Lozano Latin American collection, a library resource of over 340,000 volumes spanning 30 years), and contemporary films (such as decade of destruction: killing for land and Brazilian populations: stories and myths). The first half of the course will introduce students to day-to-day life in brazil, as well as its current socio-economic situation, the influence of politics and ethnic relations, and the many aspects of Brazilian culture. The second half will focus on disciplinary perspectives that allow students to explore regional issues from a variety of viewpoints. The final seminars in the semester will be used for the presentation of individual student reports on a topic related to Brazilian life, such as the governmental structure, university system, or integration of technology with indigenous lifestyles and traditions. This course is required for all Igert fellows.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2230 - PORTUGUESE 3 FOR ENGINEERS

Minimum Credits: 3
Maximum Credits: 3
This third semester of Brazilian Portuguese is specifically designed for engineering students who will be doing research and/or studying in brazil. The course covers technical and educational terminology through examination of Brazilian sustainable engineering case studies while further advancing the students' knowledge and ability in Brazilian Portuguese. The course will further enhance the cognitive skills of engineering students, and give them an appreciation of the interrelation of career paths, language skills, and cultural awareness. This course is required for all fellows.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2232 - MATHEMATICS OF DATA-ENABLED SCIENCE AND ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
Fundamental mathematical skills as required for data-enabled science and engineering. Topics covered encompass linear algebra, probability theory, convex and nonconvex optimization, multi-variable calculus, linear and non-linear regression, kernel regression, neural networks and multi-layer perception. Applications will be drawn from basic problems in dynamical systems, including electrical circuits, hydraulics, thermal systems, and vibrations. Basic knowledge of computer programming is necessary.

ENGR 2283 - EXPLORATION ENERGY AND ELECTRIFICATION- GRAD

Minimum Credits: 3
Maximum Credits: 3
This international GRADUATE experience course will explore energy conversion, conservation, delivery, and end-use in Brazil. Students will learn about the history of Brazilian energy infrastructure, and how it has driven Brazil's strategy to generate and use renewable energy. There will be a heavy focus on hydropower which makes up the largest percentage of Brazil's energy generation. In addition, students will explore new and emerging technologies which take advantage of other means of renewable energy. Additionally, the concept of electrification in Brazil will be explored. Electrification is the conversion of devices which classically use fossil fuels or other non-electrical energy sources to devices which use electricity as their source of energy. This phenomenon is taking place all over the world at different rates and Brazil is no exception to that. Students will visit companies who are active in electrification to study electrification in Brazil. Students will make comparisons of electrification Brazil and the United States.
Academic Career: Graduate
Course Component: Independent Study

ENGR 2300 - INTRODUCTION TO MACHINE LEARNING FOR ENGINEERS

Minimum Credits: 3
Maximum Credits: 3
This course will provide an introduction to Machine learning (ML). Emphasis will be on understanding the high-level theoretical intuitions and principles underlying the ML algorithms that we discuss, as well as developing a concrete understanding of how to implement and apply ML algorithms to engineering applications. The course will first review core concepts of linear algebra and probability theory that are key for understanding and creating ML algorithms. Then we will build a toolbox by discussing essential unsupervised and supervised machine learning algorithms. Topics include modern regression and classification techniques, dimension reduction, techniques for scalable data processing, compressive sensing, stochastic optimization, and deep neural networks. Evaluation will consist of mathematical problem sets and programming projects. This course is intended for graduate students and qualified undergraduate students with a strong mathematical and programming background. While the aim is to make this class widely accessible, we require the following (or equivalent)

prerequisites: (i) Programming: Background in python programming (e.g., for loops, lambdas, debugging, and complexity) that will enable us to focus more on the concepts of Machine Learning and less on the details of programming in python. (ii) Math: Background in linear algebra and multivariable calculus (e.g., basic concepts like linear operators, norms, orthogonality, projections, eigenvectors, derivatives, and integrals).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2300 - LINEAR ALGEBRA FOR MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
Core concepts from linear algebra that are key for understanding and creating applied machine learning algorithms. Topics include least square approximation, neural networks, and matrix factorization for dimension reduction.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2450 - ENGINEERING- THE GERMAN WAY

Minimum Credits: 1
Maximum Credits: 18
This course highlights the German approach to engineering from various perspectives. It is designed as mixture of in-class lectures and industrial experience in the form of factory tours. Four broad topics are addressed from the German perspective: (1) R&D management, (2) production and manufacturing systems, (3) digital factory layout and factory simulation, and (4) product-ergonomics and ergonomic aspects in manufacturing. In addition students select one of two additional options dealing with unique aspects of the German business economy: (1) the nature of cooperation between trade unions and employers or (2) the impact on technology law and harmonization on engineering in Europe.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Attributes: Pitt Class

ENGR 2451 - EXPLORATORY DATA SCIENCE

Minimum Credits: 3
Maximum Credits: 3
In this course, we will learn data science and analysis approaches to identify statistically significance relationships and better model and predict the behavior of these systems. We will assemble and explore real-world datasets, perform clustering and pair plot analyses to investigate correlations, and logistic regression will be employed to develop associated predictive models. Results will be interpreted, visualized and discussed. We will introduce basic elements of statistical analysis using R Project open source software for exploratory data analysis and model development. R is an open-source software project with broad abilities to access machine-readable open-data resources, data cleaning and munging functions, and a rich selection of statistical packages, used for data analytics, model development and prediction. This will include an introduction to R data types, reading and writing data, looping, plotting and regular expressions, so that one can start performing variable transformations for linear fitting and developing structural equation models, while exploring for statistically significant relationships.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2453 - DATA SCIENCE: STATISTICAL LEARNING, MODELING & PREDICTION

Minimum Credits: 3
Maximum Credits: 3
In this course, we will use an open data science tool chain to develop reproducible data analyses useful for inference, modeling and

prediction of the behavior of complex systems. In addition to the standard data cleaning, assembly and exploratory data analysis steps essential to all data analyses, we will identify statistically significant relationships from datasets derived from population samples, and infer the reliability of these findings. We will use regression methods to model a number of both real-world and lab-based systems producing predictive models applicable in comparable populations. We will assemble and explore real-world datasets, use pair-wise plots to explore correlations, perform clustering, self-similarity, and logistic regression develop both fixed-effect and mixed-effect predictive models. We will introduce machine-learning approaches for classification and tree-based methods. Results will be interpreted, visualized and discussed. We will introduce the basic elements of data science and analytics using R Project open source software. R is an open-source software project with broad abilities to access machine-readable open-data resources, data cleaning and assembly functions, and a rich selection of statistical packages, used for data analytics, model development, prediction, inference and clustering. With this background, it becomes possible to start performing variable transformations for linear regression fitting and developing structural equation models, fixed-effects and mixed-effects models along with other statistical learning techniques, while exploring for statistically significant relationships. The class will be structured to have a balance of theory and practice. We'll split class into Foundation and Practicum a) Foundation: lectures, presentations, discussion b) Practicum: coding, demonstrations and hands-on data science work.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2460 - ADVANCED SCIENTIFIC VISUAL COMMUNICATION

Minimum Credits: 3
Maximum Credits: 3
This fast-paced course will train students to produce professional scientific visual work, suitable for publications, presentations, and communicating to the public. Advanced topics, such as 3d modeling & animation, handling and visualizing large datasets, interactive displays, and 3d printing will be covered. The course will emphasize the importance of producing high quality artwork in scientific communication. The primary tools used will be gimp, inkscape, and blender, all of which are open source, and the python programming language for large dataset visualization. PowerPoint for presentations and limited figure production will also be used.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ENGR 2600 - GLOBAL ENGINEERING TECHNOLOGY: INNOVATION AND LEADERSHIP

Minimum Credits: 3
Maximum Credits: 3
Globalization and innovation will be studied with a particular emphasis on china in conjunction with the Innovate 2011 conference. As such the course provides both the preparation for the conference and the post-conference synthesis of what was learned during the conference. The course will be jointly taught by University of Pittsburgh and rice University faculty exclusively for those students who will be delegates to the innovate conference. Guest lecturers will be invited from the two participating universities who will discuss the history, government, religion, business climate and culture of china. This course requires participation in the Innovate 2011 symposium that will visit Beijing, Suzhou, Hangzhou and Shanghai China from March 3 - 13.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2607 - SUSTAINABLE ENGINEERING IN ICELAND: CULTURE, HISTORY, AND INNOVATION

Minimum Credits: 3
Maximum Credits: 3
Sustainable Engineering in Iceland: Culture, History and Innovation (Grad). Study abroad course.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

ENGR 2625 - ENGINEERING BUSINESS COLLABORATIONS IN INDIA

Minimum Credits: 3
Maximum Credits: 3
This course will focus on the studying modern engineering and business principles, methods, and tools, within the context of the Indian environment. The three focal areas of study are: manufacturing systems, service engineering operations, and call centers. A visit to India will showcase challenges and opportunities available at the corporate level and at the individual level in this rapidly growing economy. It will also focus on the societal impacts of new technologies and rapid expansion of engineering industries in India. Students can utilize this forum to analyze and visualize service manufacturing engineering challenges and opportunities around the world. Plant visits and interfaces with engineering students and practicing engineers will allow students to appreciate the following professional characteristics: ethics, the ability to work with others, an appreciation for other disciplines, adaptability, and an appreciation for life-long learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2630 - DESIGN FOR CIRCULAR ECONOMY

Minimum Credits: 3
Maximum Credits: 3
The current linear consumption model of raw material extraction, production, use, and disposal has dominated the global economy for hundreds of years. While an extremely wasteful approach to resource management, the linear model was tractable so long as it was employed by a small fraction of the global population, namely the developed world, so that both raw material acquisition and waste management remained economically viable. Today, we clearly see that this linear model has led to serious unintended global consequences. Circular economy (CE) offers promising solutions. CE principles are based on efficient use of resources and eliminating waste from product life cycles through clever design. Valuable material either moves in loops through the economy, or, if biologically derived, returns to the ecosystem to serve as nutrients; a truly circular economy thus keeps material in continuous use by design. The goal of this course is to provide students a thorough introduction to circular economy, along with integrating design. This course will provide students with skills and knowledge related to CE. Through experiential and project-based learning, the students will develop circular economy affinity groups that will tackle a pressing challenge including design for degradation solutions for ocean plastics and design for reuse of construction materials.

ENGR 2631 - INTRODUCTION TO MINING ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
The course introduces students to: 1) the history and importance of mining, 2) the exploration and development of surface and underground mines, 3) modern mining methods and operations, 4) common mining equipment, 5) fundamentals of mine ground control and ventilation, 6) elements of coal preparation and mineral processing plants, and 7) mine health and safety management. It is designed to provide students with basic understanding of the primary elements of a mining operation and the engineering issues associated with operating a mine in a safe, effective, and sustainable manner. The mining industry is replete with technical jargon and specialized processes and machinery that require mastery by students prior to exploration of more technically complex engineering coursework. Introductory lectures and field trips help to prepare students for the rigos of studying the other mining engineering courses offered within the Swanson School of Engineering. The course introduces students to: 1) the history and importance of mining, 2) the exploration and development of surface and underground mines, 3) modern mining methods and operations, 4) common mining equipment, 5) fundamentals of mine ground control and ventilation, 6) elements of coal preparation and mineral processing plants, and 7) mine health and safety management. ENGR 2634 - ENVIROMENTAL CONTROLS IN MINING

Minimum Credits: 3
Maximum Credits: 3
The course is designed to study the environmental impact of coal, stone, and other mining operation and examine the engineering controls used to mitigate these impacts. The examination begins with the exploration and permitting of the mine site, emphasizing important environmental issues. Next, the impacts of active mining on land and water use are outlined. Most of these issues are related to subsidence impacting surface structures and water movement both at the surface and underground. To complete the mine's life cycle, closure and remediation issues are investigated. Lastly, a detailed examination of the issues associated with abandoned mined-lands, i.e. Acid-mine drainage, mass-wasting, fires, etc., Are studied. Throughout the course, engineering controls that focus on mitigating the environmental impacts of mining are acknowledged and assessed.

ENGR 2686 - SPACE ORBITAL MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This course presents rigorous treatment of classical mechanical systems pertaining to spaceflight and orbital dynamics. Students will be able to apply mathematical treatments to Newtonian systems and in the process appreciate both physical nature and engineering feats achieved in the successful completion of space missions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2811 - INNOVATING FOR PUBLIC IMPACT

Minimum Credits: 3
Maximum Credits: 3
This course will teach students how to build products and services using lean methods. This will be done by solving real-world military and intelligence community problems. The course uses the lean launchpad platform for entrepreneurship. This is a highly customer-centered hypothesis-test approach to developing a mission modes, and is particularly well-suited for technology startups. It incorporates customer needs and user testing to build a minimum viable prototype. At the conclusion of the course, students will be able to understand the problems/needs of searching for product-market fit; understand all the stakeholders, deployment issues, costs, resources, and ultimate mission value; deliver minimum viable products that match customer needs in an extremely short time; produce a repeatable model that can be used to launch other potential technology solutions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2870 - SOLIDS PROCESSING AND TRANSPORT

Minimum Credits: 3
Maximum Credits: 3
Particle technology affects as much as 80% of the chemical process industry, yet is often omitted from the undergraduate curriculum of chemical engineers. This course is designed to give advanced undergraduates as well as early-term graduate students an introduction to this rich and diverse field. Topics will range from fundamentals (particle classification, properties, and flow) to applied (hopper design, mixing, etc. Industry related examples and designs with be presented.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 2901 - INTRODUCTION TO ENGINEERING COMMUNICATION

Minimum Credits: 1
Maximum Credits: 1
in this course, students will learn the fundamental tools and skills for effective technical communication at the graduate level. Students will be introduced to citation tools (e.g. Mendeley, EndNote) and paper-writing tools (e.g. Word, LaTeX) during this course. Students will also learn how to produce high-quality graphics, conduct a literature review, and give a qualifying exam presentation. This course will be one credit, the old course is three credits.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

ENGR 2905 - CURRENT ISSUES IN SUSTAINABILITY

Minimum Credits: 3
Maximum Credits: 3
This course will introduce the core principles of sustainability (i.e. Social, economic, and environmental) from the perspective of several disciplines and research fields. Covering a variety of topics such as urban infrastructure, energy policy and the environment, sustainable water-use, habitat sustainability and biodiversity, the curriculum and schedule are updated annually to reflect advancements in the field of sustainable engineering and science, and to continually incorporate current topics. While the course is primarily taught by the sustainability faculty fellows it will also consist of various guest lectures by sustainability faculty and senior practitioners working throughout the Pittsburgh region. Course assignments will consist of a series of essays and assignments and culminate in a team term project. This is a required course for the undergraduate sustainability certificate and the M.S. in Sustainable Engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: MCSI - Sustainability Focused, MCSI - Sustainability Related

ENGR 3000 - PREPARATION FOR AN ACADEMIC CAREER

Minimum Credits: 1
Maximum Credits: 1
This is seminar series designed for Ph.D. students interested in pursuing an academic career and within 1.5 years of graduating. Experienced faculty provide seminars and discussions on two areas: getting the desired academic position and how to be successful during the early years. Topics include, but not limited to: how to apply for academic positions, preparing for the interview, supervising graduate research, balancing service obligations, the promotion and tenure process, funding avenues, publishing and intellectual property, teaching expectations, and balancing work-life issues.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

ENGR 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1
Maximum Credits: 1
This seminar series is designed for Ph.D. students and post-doctorate fellows interested in pursuing an academic career and wish to gain didactic knowledge and skills related to teaching in a science, technology, engineering and mathematics (STEM) classroom. Experienced faculty provide topics and discussion based seminars.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: Swanson School of Engineering

ENGR 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1
Maximum Credits: 1
Designed for graduate students and postdocs preparing for academic careers in the stem disciplines, this course provides an introduction to the scholarship of teaching and learning (SOLT). This is the second course in a series; however, the former course (3001) is not a required prerequisite. The course will utilize material presented in a massive open online course (MOOC) available through coursera.org and sponsored by the center for the integration of research, teaching and learning (CIRTL). Participants will learn about effective teaching strategies and the research that supports them in addition to learning how to collect, analyze, and act upon their own evidence of student teaching. Topics include but are not limited to: 1. Learning through diversity, 2. Cooperative learning/peer instruction, 3. Inquiry-based labs, 4. Problem-based learning, 5. Flipped classroom pedagogy. Further, participants will learn the process for developing a teaching as research plan as well as the role of human subjects consent for classroom based research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering
Course Attributes: Hybrid

ENGR 3004 - ADVANCED PREPARATION FOR FUTURE STEM FACULTY

Minimum Credits: 1
Maximum Credits: 1
This seminar series is designed for Ph.D. students and post-doctorate fellows interested in pursuing an academic career. Specific topics can vary depending on interest, but may include preparing for faculty job applications and interviews, research mentoring practices, and advanced best practices and pedagogy in STEM teaching. Experienced faculty provide topics and discussion based seminars.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis
Course Requirements: PREQ: ENGR 3001 and ENGR 3002 or EQUIVALENT; PROG: PENGR

ENGR 3100 - ENGINEERING RESEARCH LEADERSHIP AND MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
This course teaches the necessary skills to be a successful researcher including skills in research formulation, funding, proposal writing, peer-review, and research management. Topics include project management, team leadership, professional communication, and professional expectations for independent researchers. A peer-review aspect of the course actively teaches the editorial and review process, and how to take a critical view of writing. This course is intended for students who intend to be independent researchers and engineering research leaders.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGR 3210 - ENGINEERING SUSTAINABILITY CAPSTONE REALIZATION

Minimum Credits: 3
Maximum Credits: 3
A two-semester, interdisciplinary, team-based Ph.D.-Level capstone design course sequence required by IGERT students and other interested graduate students. The courses will require the application of rigorous analytical thinking and research investigation techniques in order to address a real-world, complex problem. The first term of the course will be at Pitt with the second term at unicamp. Project topics will be developed in combination with recommendations from various stakeholders. Research will be firmly rooted in industrial needs. The problem will build upon the combined students' acquired engineering knowledge and will require collaboration to resolve. The capstone courses will reinforce the community-building aspect of the IGERT, since students will work in teams both at Pitt and unicamp.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGCMP 0510 - NARRATIVES OF THE WORKPLACE

Minimum Credits: 3
Maximum Credits: 3
What do you want to be when you grow up? This course takes the cliche "You are what you do" as a starting point to investigate the intersection of narrative, work, identity, and social structure. We will read and respond to academic and literary writing and media representations of forms of labor ranging from truck driving to housekeeping to managing nuclear power plants. Along the way, we will explore questions such as, What counts as meaningful work, to whom, and why?, How do new technologies influence the organizing of work and professional identity?, and How are forms of labor intertwined with cultural ideas about gender, race, class, ability, sexuality, and age? The course also invites students to study the kinds of work and workplace cultures they hope to enter when they graduate, and to explore the connections between education and the professions.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212 or 0213 or 0214) or FP (0003 or 0006) *Applies to all WRIT Courses*

ENGCMP 0515 - PERSAUSIVE WRITING IN ADVERTISING

Minimum Credits: 3
Maximum Credits: 3
Advertising is everywhere and producing ads that are successful, memorable, and persuasive requires a specific set of tools and no small amount of creativity. This course introduces students to the art and science of persuasive writing in advertising contexts. Students will explore foundational theories of persuasion and rhetorical strategy, analyze real-world advertising campaigns across a range of media, and develop practical writing skills for print, broadcast, digital, and social media platforms. Working from an understanding of brand identity and target audiences, students will learn to craft compelling copy tailored to specific rhetorical contexts and client needs. The course balances theory with hands-on practice, culminating in an original advertising campaign.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212) or ENGCMP 0213 or ENGCMP 0214 or ENGFLM 0210 or FP (0003 or 0006) or (ENGR 0012 or 0712 or 0715 or 0716 or 0718)

ENGCMP 1906 - PROFESSIONAL EXPERIENCE: WRITING, EDITING, OR PR

Minimum Credits: 3
Maximum Credits: 3
This course offers an exciting opportunity for students who have taken at least a couple of PPW or Writing courses: Professional Experience at Sampsonia Way, the literary journal of City of Asylum/Pittsburgh. http://www.sampsoniaway.org The PPW program is

teaming up with City of Asylum to produce the magazine. The course is for responsible students who are interested in writing for this journal or running social media to promote the journal. The team will work with a teacher who will serve as managing editor and also faculty member in charge of the project. The group will learn about writing, editing, and PR while producing the online literary magazine. You can also expect to learn more about free speech and social justice while working with writers who are under threat in their home countries. Weekly meetings on campus will focus on learning about the context for the work, learning good practices for professional writing, editing, and PR, reading work by writers in exile, and workshopping your articles for publication. Interviews for articles will be in-person or via Skype. Expect to spend 10-12 hours a week working on this project. You will also need to attend class. A monthly meeting will be held at City of Asylum on the Northside (easily accessible by bus).

English Film Studies

ENGFLM 1190 - BRITISH FILM

Minimum Credits: 3
Maximum Credits: 3
This course explores the status of British film as a national cinema. It examines the forms and styles indigenous to British cinema; the relationship of British cinema to British social reality; the changes in film language, production and forms as they relate to the development of British cinema. This is a Critical Studies course and counts for Category I towards the Film and Media Studies major and minor.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis

ENGFLM 2000 - CREATIVE SCHOLARSHIP: THE FILM ESSAY

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the film and video essay as a form of both creative expression and critical inquiry. Through a series of short video projects, students will develop foundational production skills while experimenting with diverse audiovisual styles, strategies, and modes of address. The course invites students to approach their scholarship and research in ways that are more expansive and imaginative than traditional written work, encouraging them to explore diverse modes for expressing ideas and engaging theoretical questions. The course engages a wide range of practices, drawing on the work of filmmakers such as Agnes Varda, Chris Marker, Harun Farocki, Trinh T. Minh-ha, John Akomfrah, Arthur Jafa, and Larissa Sansour, as well as more recent critics and scholars who use the audiovisual to expand/challenge text-based scholarship.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2425 - BLACK TIME: AFROFUTURISM, AFROPESSIMISM, AND BEYOND

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2451 - FILM HISTORY/THEORY

Minimum Credits: 3
Maximum Credits: 3
This course will explore issues relating to film theory, history and research methodology. We will discuss dominant modes of film criticism and explore the creation of "cinema history". We will examine different formulations of this history, tracing how certain explanations of events in cinema have come to prevail, and how certain methods of writing about film have become institutionalized.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies, Global Studies

ENGFLM 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3
Maximum Credits: 3
This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g. Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2453 - FILM HISTORY AND THE NON-THEATRICAL

Minimum Credits: 3
Maximum Credits: 3
Over the past three decades, film studies has witnessed a substantial increase in published research into the production, circulation, and uses of motion pictures distinct from the international commercial cinema that emerged at the beginning of the twentieth century. The term "non-theatrical" now describes a widely recognized but unwieldy array of film materials and practices that encompasses the histories of experimental cinema, amateur film, educational and sponsored films, medical imaging, media installations, porn, home movies, military reconnaissance, and law-enforcement surveillance. Scholars' attention to the histories of the non-theatrical has made it clear that our standard film histories were, and continue to be, highly restricted in their consideration of moving-image culture, privileging the type of object that is the basis of what Christian Metz identified as "going to the movies," the fictional narrative film. This seminar surveys the emergence and development of "the non-theatrical" within film and media studies to consider if and how this research has challenged the guiding assumptions and objectives of our discipline, and to study the ways in which the study of non-theatrical moving images might contribute to a radical rethinking of the commercial cinema and its place.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ENGFLM 2454 - THE MARXIST LEGACIES OF FILM HISTORY AND THEORY

Minimum Credits: 3
Maximum Credits: 3
The international cinema emerged during a moment when the political-economic analyses of Karl Marx and Friedrich Engles were already dramatically shaping world events. Not only would cinema document these transformations, but it would quickly be enlisted in various projects shaped by modern materialist understandings of social class, historical consciousness, imperialism, class struggle, revolution, and ideology. Moreover, Marxism provided the earliest theorists of moving images a productive means of describing and instantiating modernity itself as more or less commensurate with cinematic forms and practice, While it is now a commonplace to be amused by Eisenstein's desire to make Marx's Das Capital into a motion picture, such an ambition was in no way whimsical in the early to mid-twentieth century, when the cinema became one of the most contested sites of cultural politics across ideological and disciplinary

spectrums. This seminar considers the indebtedness of film and media studies today to a long history of marxist thought and practice that remains inextricable from our histories of film and filmmaking. Readings and screenings will include key works by Marx, Engles, Lenin, Eisenstein, Vertov, Luxemburg, Lukacs, Brecht, Kracauer, Benjamin, Cai, Ivens, Ferguson, Adorno, Arendt, Mao, Gramsci, Fanon, Solanas, Rocha, Marker, Godard, Sembene, Maldoror, Althusser, Ranciere, Negri, and Hardt.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2455 - FILM AND MEDIA HISTORIOGRAPHY

Minimum Credits: 3
Maximum Credits: 3
This course will look into theories of film history exploring philosophies behind their social, political, economic, technological, and textual stakes. We will analyze how various forms of film history, intellectual and popular, assert their truth and credibility, and discuss how these kinds of claims might be supported and contested. We will explore the problems of writing film history, particularly in eras where little material survives for any kind of study or where language becomes a major barrier.

ENGFLM 2457 - ETHNOGRAPHIC FILM AND MEDIA

Minimum Credits: 3
Maximum Credits: 3
This course will engage the visual and narrative strategies of the "ethnographic imagination" addressing issues of cultural representation, truth, visuality, and epistemological implications of how anthropologists and documentary filmmakers construct other cultures. We will start with the history of ethnographic cinema so as to stage a broader inquiry into forms of popular and everyday ethnography that have accompanied anthropological practice since its inception. In addition to problematizing distinctions such as science and entertainment, authenticity and hybridity, non-fiction and fiction, and self and other.

Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2458 - ESSAY FILM/DOCUMENTARY FILM

Minimum Credits: 3
Maximum Credits: 3
This course will explore documentary from critical and creative vantage points. Key theoretical texts from the interdisciplinary field of documentary studies will address the pertinent ethical, formal and thematic concerns.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2459 - DOCUMENTARY THEORY & PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This course will explore documentary film and video from critical and creative vantage points. Students will be introduced to key discussions from within the interdisciplinary field of documentary studies while also working on individual and collaborative short documentary projects and exercises. Hands-on training in audiovisual recording and editing techniques will be provided. No prior production experience is required.

Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2464 - LOW LIGHT: NARRATIVE AESTHETICS OF FILMING DARKNESS

Minimum Credits: 3
Maximum Credits: 3
What narrative considerations does filmed darkness have on visual storytelling? The art form of cinema has been described as "the art of light". Within idealized conditions, the luminous expressions of color and volume of space have the ability to be transportive via illusion, or as Plato understood cinema's precursor, painting, having the ability to conceal and obfuscate. From cinema's early experiments to construct storytelling, the filmic space brimmed with possibility to control the capture of light, either in abundance or very little, enveloping audiences and extending the film frame with variations of darkness. What French new wave reintroduced through developments in soft lighting, the dynamic range of industry tools today, have allowed for an expansion in practical lighting techniques that can bathe a scene and all its filmic accouterments in projected blackness. How might the cinematics of darkness create, manipulate, and apply an alternative language for visual obscurity? Do self-imposed limits of film's exposure obfuscate narrative matters of race, sexuality, gender, and subjectivity of character(s), and the alienation of audience(s)? Can contemporary cinema be a forum for reconciling the visual politics of filming darkness? This inquiry within film and media studies can only be properly negotiated through a comprehensive catalogue of film screenings and scholarship encompassing critical theory, media theory, film analysis, cultural studies, and selected excerpts from literary fiction. The goal of this film and media seminar will be to use a combination of media scholarship and practical experiments with lighting production to draw new conclusions through critical analysis and produce additional lines of inquiry on the matter of visual evolutions in cinema today.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2467 - CINEMA AND TRAUMA

Minimum Credits: 3
Maximum Credits: 3
Trauma studies now stands at the forefront of contemporary cultural theory, straddling such disciplines as history, psychology, philosophy, and literary criticism. This seminar encourages graduate students to examine and contribute to the rapidly emerging sub-field of cinema/trauma studies. We will focus on the two mid-twentieth century events that continue to anchor many definitions of historical trauma: the Holocaust and Hiroshima. What do films that address these events teach us about the politics and ethics of representing experiences often referred to as unrepresentable'? How does cinema force us to refigure debates about the "limits of representation" and the nature of "the event" itself? Is cinema an agent of memory or memory's eraser? A broad range of films will inform our discussion of such questions - documentary and fiction, tragedy and comedy, mass cultural successes and lesser-known art films or genre films, films from the past and present.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2491 - FILM SOUND: HISTORY, THEORY, AESTHETICS

Minimum Credits: 3
Maximum Credits: 3
Questions framing the course include the relation of sound and image, aural and visual pleasures, soundscapes and theories of shock and modernity, the relation of voice and body to subject formation, sound in silent cinema, the aesthetics of analog and digital sound in cinema, sound technologies and imperialism, theories of non-cinematic audio technology such as radio and gramophone, debates over the ontological status of recorded sound, film sound and space, sound in documentary cinema, and culturally specific theories of sound.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2493 - MEDIA/ECOLOGY

Minimum Credits: 3
Maximum Credits: 3
This seminar with explore media theory and practice through the lens of ecology. From the late twentieth century to the present, ecology as a scientific discipline and set of cultural narratives has risen to the forefront of knowledge production as a way to study and understand complex biological systems, their environments, and their internal dynamics. During the same period, media systems have grown exponentially in complexity until they too have begun to exhibit some of the behaviors of ecological systems, including self-organization, feedback, evolution, and emergent properties. The term "media ecology" captures both this new, nonlinear systems approach to understanding media itself as well as the intersection between natural ecosystems, the technological assemblages with which they are intertwined, and the human (and non-human) subjects that are produced molded within these structures. This seminar will explore both media that interface with natural ecosystems as well as works and theory that approach mediation from an ecological and systems theoretical perspective. The secret life of information, contagious media, and the post-natural ecologies of our present and future will challenge us to conceive of Media and Ecology as a single coupled system: the emblem of our contemporary environment and an important frontier in media studies of the present. Graduate students from all disciplines are welcome. Participants may optionally produce creative projects in lieu of a seminar paper, in any medium.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2496 - MEDIA AND MOBILITY

Minimum Credits: 3
Maximum Credits: 3
Mobility has been one of the central functions and consequences of media technologies, from papyrus in ancient history to mobile phones in the digital era. This seminar seeks to conduct a thorough theoretical mapping between media and mobility, creating a productive framework in which media can be examined through the ways in which they facilitate, mediate, and regulate various modes of mobility of humans, things, and ideas.

ENGFLM 2550 - SIEGFRIED KRACAUER AND THE ORGINS/FUTURES OF FILM AND MEDIA STUDIES

Minimum Credits: 3
Maximum Credits: 3
Siegfried Kracauer (1889-1966) is now widely regarded as one of the most important and innovative theorists of film and media studies. But this was not always the case, as he was overshadowed for decades by his more famous German Jewish contemporaries Theodor Adorno and Walter Benjamin. What Kracauer offers us now is a unique bridge between the classical origins of film and media theory in the 1930s-1960s and the possible futures for those theories today. Kracauer's remarkable career included fleeing Hitler's Europe and eventually arriving in New York to establish himself as a fellow traveler with major intellectual figures such as the film critic Robert Warshow, the art historian Meyer Schapiro, and the political theorist Hannah Arendt. In this milieu, Kracauer's work blazed trails across topics as varied as spectatorship, experience, genre, aesthetics, history, and realism, as well as media forms as diverse as film noir, fascist propaganda, animation, documentary, and photography. In this seminar, we will explore Kracauer's texts and contexts in order to grapple with urgent questions in film and media studies now.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2662 - GENDER AND SEXUALITY IN ARAB FILM

Minimum Credits: 3
Maximum Credits: 3

This seminar pries open a window into the ways that gender and sexuality are understood, imagined, embodied, and practiced in the Arab-majority region. Rather than arriving at totalizing definitions, the seminar explores, through a transnational approach, how filmmakers from Arab-majority countries and their diasporas have adopted, throughout different periods, a multitude of approaches and strategies in tackling questions of gender and sexuality in realist, allegorical and experimental ways. We will unpack diverse film and video works to see how these filmmakers have responded to major political, social, and religious events and contexts, such as the Arab Spring and the Arab Israeli conflict.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2695 - HORROR FILM

Minimum Credits: 3
Maximum Credits: 3
This seminar will investigate the key films and critical discussions surrounding the genre from its beginnings to the present, but not merely to perform a genre survey- instead we will use horror as a lens to ask wide-ranging questions about spectatorship, theory, history, aesthetics, and politics that have shaped and continue to transform film studies in profound ways.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

ENGFLM 2705 - THE (RE-) ANIMATED HUMAN

Minimum Credits: 3
Maximum Credits: 3
What is the human? What are the inclusions and exclusions of this category? How is it imagined with, through, and against mechanical technologies? This seminar considers these questions and more through a pairing of humanist and post-humanist theories alongside scholarship in new media studies with particular emphases on the broadly defined field of animation studies. We will look at how films and new media technologies animate and give body to changing understandings of the human and/as a cultural, biological, and mechanical entity. We will also look at how discourses of mechanical technologies inflect and draw from imaginings of non-Human and para-Human Others through theories of Blackness and Asianness. The course takes a transnational scope with key nodes in the U.S. and Japan. Lessons will span and juxtapose topics in cybernetics, artificial intelligence, speculative fiction, the gendering of machines, the history of race sciences, animation as medium and metaphor, and global media ecologies. The seminar will require works of scholarly writing as well as facilitate experimental and creative exercises to encourage students to think about the cross-section of theory and praxis in their approach to the critical project of the human.
Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

English Literature

ENGLIT 0618 - WAR

Minimum Credits: 3
Maximum Credits: 3
This course explores literary and cultural texts variously engaged with war. Global in scope and perspective, the course considers the relationship between violent conflict and representation across a range of particular wars at different moments in history. Students will explore diverse views of war, such as those of artists and governments, civilians and veterans, survivors and victims. Along the way, the course will address such questions as: How do writers and artists respond to war? What is war's relationship to other forms of conflict, such as terrorism or revolutionary violence? What distinguishes times or war from times of peace?
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

ENGLIT 1009 - J.R.R. TOLKIEN AND COUNTERCULTURE

Minimum Credits: 3
Maximum Credits: 3
This course studies the persona, work, and critical and popular reception of J.R.R. Tolkien (1892-1973) from his initial publication of The Hobbit in 1937 through today. In the 1960s and '70s, people were scribbling "Frodo Lives" on subway walls and getting married dressed like Aragorn and Arwen. Less than half a century later, The Lord of the Rings repeatedly beat out the Bible as "best-loved" book in British polls, and Peter Jackson's adaptations made history both for their box-office earnings and for their groundbreaking contributions to film-making. Widely recognized as the father of modern fantasy and touted as the "Author of the [Twentieth] Century" by scholars, Tolkien continues to exert a panoramic influence on culture, particularly in his ability to speak to and for the marginalized. From Comic Con to Elder Scrolls to Game of Thrones, his sub-creation of Middle-earth embodies and fuels "nerd" culture now just as it did for the hippies of the previous century. Yet, Tolkien " war veteran, Oxford professor of Medieval languages and literature, devout Catholic " was a man of his time and quite conservative, at least publicly. While he famously said that his wife "should be satisfied by devotion to her children" and not "enter the intellectual side of life," the female characters in his stories, while small in number, are arguably great in power, assertiveness, and heroism. Tolkien's writing argues for the importance of a community where all cultures coexist: Elves, Dwarfs, Men, Hobbits go to war against Sauron and the "One Ring" designed to "rule them all." In this course we will read Tolkien's major works, The Hobbit and The Lord of the Rings in their entirety, as well as excerpts from what he considered to be his master work, The Silmarillion. We will explore Tolkien materials housed in Special Collections at Hillman Library and online. Our reading list will include reviews and scholarship on Tolkien's life and work, as well as on the ways in which his mythology continues to resonate and be reimagined in the twenty-first century. Ultimately, we will analyze the relationship between Tolkien and the counterculture as a way of understanding the ways in which myth, fantasy, and literature more broadly represent, shape, and interrogate complex social and political systems.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212 or 0213 or 0214) or ENGFLM 0210 or FP (0003 or 0006) or (ENGR 0012 or 0712 or 0715 or 0716 or 0718)

ENGLIT 1135 - LITERATURE, MEDIA, AND SCIENCE IN THE AGE OF SHAKESPEARE

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to the broad range of styles, genres, and concerns of literature written in English in the early modern period, particularly the 17th century. The designation "early modern" is capacious enough to straddle the renaissance as well as the early enlightenment. Readings could include English writers, writers from the Americas, and writers who composed in English but wrote about countries other than England, Ireland or new England.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis

ENGLIT 1360 - TOPICS IN 20TH CENTURY LIT

Minimum Credits: 3
Maximum Credits: 3
Considers thematic, formal historical or cultural topics in late 19th and 20th century literature. It ties these issues to critical and social concerns in international modernism and post modernism.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis

ENGLIT 1600 - DIGITAL METHODS FOR HUMANISTIC RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Texts hide secrets from us humans that are manifestly obvious to computers: all we need to do is crack the code. This course teaches students with zero coding experience to use computers to reveal hidden insights from digitized texts. Students will learn to make those texts

"speak" by transforming them into dynamic visuals and interactive websites: in this manner, Hamlet becomes a chart of gender-coded language; a history of Rome becomes a map of the empire's most frequently referenced battles; and much more. Over the course of the semester, students will apply digital methods to a research project of their own choosing. In addition to adding a valuable tool to their research repertoire, students will leave with coding and web design skills highly sought after in other career contexts.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

ENGLIT 1910 - SENIOR SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Intensive study of a single topic or figure that assumes previous work in related literary historical and critical areas. Each seminar moves toward a final paper that integrates earlier literary study with the specific critical perspective developed in this course.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212 or 0213 or 0214) or FP (0003 or 0006) *Applies to all WRIT Courses*

ENGLIT 2003 - LITERARY STUDIES

Minimum Credits: 3
Maximum Credits: 3
This course examines topics in literary studies in relation to current developments in the field of literary studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2004 - INTERDISCIPLINARY METHODS IN LITERARY STUDIES

Minimum Credits: 3
Maximum Credits: 3
A recent trend in literary studies is balancing our consideration of the textual and discursive elements of literature with attention to various aspects of its materiality, as well as its relationship to questions of ontology, embodiment, and lived experience. An exciting part of this development is increased integration of interdisciplinary methodologies, especially archival work and ethnography, into literary research. In this course, we'll learn about the scholarly movements and theoretical conversations shaping this turn, while learning practical ways to engage the material and embodied in our own scholarship. We will be inspired by work in various fields, including book history, childhood studies, Black studies, gender studies, global/postcolonial studies, and American studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2005 - SPECIAL TOPICS IN LITERARY STUDIES

Minimum Credits: 3
Maximum Credits: 3
This seminar studies the most important recent developments in the fields of literary and cultural criticism. It both introduces students to a range of topics, methods, and theories and explores deeply the historical, conceptual, and societal significance presented by all these. The course introduces students to, and helps them learn to evaluate, the most important contemporary work in English studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2041 - PUBLIC HUMANITIES

Minimum Credits: 3
Maximum Credits: 3
This course has two goals: 1.) to explore what the term "public humanities" means; and 2.) to help graduate students in the humanities connect their academic work to public spaces and organizations. With regard to the first goal, our readings and discussions will focus on questions such as: What are the humanities? Are they publicly valuable? If so, are they publicly valuable in ways that differ from other academic disciplines? With regard to the second goal, the course will involve frequent guests and site visits to cultural institutions that will allow students to see the humanities at work in local spaces. Students will also be responsible for designing and executing a public humanities project during the term. The projects will require that students engage with public spaces in developing their work, but will depend on students' prior experience with public humanities for their specific content. Students with a significant degree of public humanities experience may wish to create and implement a collaborative humanities- or arts-based project with a local cultural institution. Those just beginning to think about the relationship between their academic work and non-academic spaces may wish to explore opportunities for public engagement that fit their research interests and methods. Whatever the case, students will work to better formulate the relationship between their academic work and public spaces, and design and/or execute projects based on these formulations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2046 - SCIENCE, HUMANITIES, AND PUBLIC ENGAGEMENT

Minimum Credits: 3
Maximum Credits: 3
The current pandemic seems a good time to consider the relationship between science and democratic decision-making. In this course, we will explore theories, methods, challenges, and challenges of public deliberation, especially with respect to science and technology. The course will be offered in conjunction with an art exhibition called Art's Work in the Age of Biotechnology that will take place online in spring 2021. By presenting works in which artists appropriate tools and techniques that have until recently been the exclusive purview of scientists, the exhibit invites viewers to consider what they want from genomic technologies, and why. Similarly, the course invites students to articulate what they want from community engagements, and then put their ideas into practice. We will draw on the exhibit as an opportunity to experiment with a variety of models of interdisciplinary collaboration and public scholarship.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2122 - AUTOMATING WRITING FROM AMANUENSES TO ARTIFICIAL INTELLIGENCE

Minimum Credits: 3
Maximum Credits: 3
This course counts as a DSAM elective and for the Composition Certificate We swim in a sea of writing, much of it written by algorithms rather than humans. Automated Writing Systems (AWS) that employ natural language processing techniques are currently used to amplify political messages on social media, to convey sports and financial statistics, to generate click-worthy headlines, as smartphone chatbots, and as creative writing aids. Whether or not we use them ourselves, AWS are shaping the circulation of our writing and the environment in which we read. This course is a historical and technical dive into why people have developed AWS, what challenges AWS offer, and how to implement AWS using natural language processing and public data sets. The course brings histories of gender and race in writing automata, office automation, and amanuenses in conversation with contemporary questions in artificial intelligence to ask: whose intelligence is being automated or simulated and how? We will explore: what writing is; power dynamics in writing; the limits of what computers can do; and the relationship of human consciousness to computation. Hands-on work in AWS-related systems include basic programming; Tracery (using Javascript) and InferKit (using GPT-2); Twitterbots; Conway's game of life; the Leibniz cipher machine held by ULS. Readings include historical studies of writing automata such as the Maillardet Automaton, creative work with AWS such as Lillian-Yvonne Bertram's Travesty Generator, and theoretical work in AI by Alan Turing and Joy Buolamwini. Assignments include reading histories of AWS, writing short blog posts analyzing different historical and contemporary AWS or their products, and playing with algorithms and datasets such as GPT-2 (an AWS that uses machine learning and which is publicly available in a scaled-down version). The final project for the course asks students to break the boundaries of the class: develop a unit to teach something you learned here in Pitt undergrad English courses such as Composing Digital Media or Narrative and Technology; an online creative project using automated writing; a public art project; or a workshop for others. Students will get both a theoretical and practical introduction to automated writing

systems in this course. No prior technical expertise is required, though a willingness to play around with technical systems is.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2124 - WRITING IN GLOBAL CONTEXTS: TRANSLINGUAL AND MOBILITY PERSPECTIVES

Minimum Credits: 3
Maximum Credits: 3
The global flows of capital, information, artifacts, and people have increasingly made us aware of our multilingual reality. Simultaneously, enactments of physical and imaginary "borders" have permeated discourses that seek to restrain such movements. Although language use in classrooms and communities has always been multilingual, increasing linguistic and cultural heterogeneity of students enrolled in US institutions of education has renewed research interests in understanding students' literacy repertoires as mobilized and negotiated. In writing studies particularly, a conceptual turn toward translingualism has shifted our view of language and cultural differences as assets for student learning and objects of scholarly inquiry. Such attention indexes broader moves in literacy studies to conceptualize literacy as implicated with global and local forces, mobilized across languages, genres, and modes, and dynamically negotiated across life worlds. This course will introduce research that theoretically and methodologically explores a phenomenon that is rapidly changing: acts of geographical, linguistic, cultural, and disciplinary border-crossing as an important dimension of our literacy lives. How do writers make sense of their experiences and life worlds across languages, modalities, and spaces? How do researchers follow literacy practices on the move? What do principles of translingualism and mobility theories suggest about pedagogy? These are some of the questions that we inquire by way of readings across rhetoric and composition, literacy studies, and applied linguistics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2125 - GAME STUDIES

Minimum Credits: 3
Maximum Credits: 3
This interdisciplinary seminar will explore the key relationships between play, social and technological mediation, narrative, and visual culture. It will provide a wide-ranging survey of game studies, from foundational texts in play studies through the central debates in video game studies to the most recent scholarship on gamification, tabletop gaming, identity, and scale in the rapidly expanding field of game studies. Topics covered will include the history of gaming and ritual, play and childhood, emergent and environmental narrative, gamification and capital, game theory, artificial intelligence, video games, tabletop games, gaming and scale, gaming and gender, games and empire, agency, gaming and environment, cooperative gaming, and game design as an artistic medium. We will explore why games are not only a key form of cognitive mapping in digital control societies, but also significant sites of creative expression, and perhaps most significantly, a vital paradigm to critically engage agency, identity, and decision making in the twenty-first century. The underlying argument will be that we cannot understand how power, capital, or media more generally function today without a critical theory of play and games. It is no accident that capitalism has gamified itself, nor that games have become the dominant form of narrative media on a global scale. Students from all disciplines are welcome. Final projects can be analytical (a paper or other form of media) or creative (a game or interactive fiction). Regardless of whether your goal is to engage games as cultural objects within your scholarship, to work creatively within a modality of play, or to broaden your critical methodology, my intent is that as a group we will all think, play, and create together.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2141 - MAKING AND UNMAKING THE BOOK

Minimum Credits: 3
Maximum Credits: 3
This course is a historical, practical, and creative introduction to one of the most important media forms in human history-the codex book. You will have the chance to design your own books and to create the various components of books, including making paper, setting movable type, inking and printing on a letterpress printer, and learning to stitch and glue book bindings. You'll have lots of support along

the way, including working with the wonderful staff in Pitt's Text and Context Lab. At the same time, we will study and discuss the material and cultural history of books, including a process of Western canon-formation that moved from the publication of the first printed bibles to the treatment of certain English literary works as quasi-sacred texts. After tracing how this influential view of the book was formed, we will turn to various modes of "unmaking" the book, from artists' books to poetry such as M. NourbeSe Philip's Zong! As we trace the material history of books, another central theme will be the relationship between words and images: Are different processes used to produce them, as when movable type would be combined with woodblock printing in the first European printed books? Or are they combined, as with William Blake's illuminated printing or graphic novels such as Alison Bechdel's Fun Home? Other case studies will include literary, artistic, and political examples of many kinds of print publications, including medieval illuminated manuscripts, early modern poems and plays such as Shakespeare's, illustrated religious and political broadsides, pop-up and other children's books, and many other of modern forms-such as zines, chapbooks, and art books. Students from all departments and programs are welcome, and you will have a chance to develop independent projects on topics of personal interest to you.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2161 - CARIBBEAN WATERS: POLITICS AND POETICS IN THE ANTHROPOCENE

Minimum Credits: 3
Maximum Credits: 3
This seminar will pursue two related lines of inquiry: First, it will study the contemporary planetary water crisis through the lens of the Caribbean. What concepts does the Caribbean yield that might provide useful alternatives to some dominant approaches to the Anthropocene? How do contemporary struggles around water fit with longer histories of extractivism? What dialogues can we create between Critical Ocean Studies and the study of the politics of freshwater? What genres of history, reportage, and art shape our imagining of Caribbean waters--and how do we respond to generic and archival absences? For example, what representational alternatives might we find to the spectacularization of both beauty and disaster that is familiar from so many representations of the global south? Second, as scholars located in the global north, we will ask what forms of allyship, documentation, witnessing, and amplification can we practice in support of the global south? What does public engagement or the engaged humanities look like when the site of engagement is not local (a particularly resonant question for Global or Transnational Studies)? How does one practice an immersive scholarship from across an ocean? What affordances and pitfalls do the digital humanities offer in such a project? Our seminar will engage several Caribbean archives and artistic and activist practices--both born-digital ones and ones that have resisted digital mediatization. A workshop with visiting artists or poets will be woven into the course, and we will experiment with various poetic and visual forms, playing at the meeting point of case-study, data, and art.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2187 - DATA AND DISCIPLINE

Minimum Credits: 3
Maximum Credits: 3
What does it mean to "join a discipline," and what methods or evidence can we marshal to find out? What does a disciplined approach to data-gathering or analysis look like in a humanistic context? In the first part of the course, we will use these and related questions to interrogate the two key terms of the title in relation to one another. Readings will be drawn from Rhetoric, Composition, and Writing Studies (e.g. Mueller;¿Kynard; Malencyk et al), Digital Humanities (e.g. D'Ignazio and Klein; Goldstone and Underwood; Sugimoto and Weingart), and critical theory (e.g. Foucault; Ferguson), but the methods are applicable to any disciplinary self study, and all are welcome. The final project for the course is a draft of a data-supported article investigating questions about a discipline or subdiscipline, which we'll develop together starting around midterm. Students are encouraged to work on these article drafts in groups, depending on shared interest. In the second part of the course, we'll work through data labs and writing studios to develop the skills to translate questions into analyses and outputs into arguments. Students will leave the class with a better understanding of how datasets are constructed, with what ethical trade-offs; how to filter, sort, merge, and summarize rectangular datasets using R and/or OpenRefine; how to visualize and summarize simple networks in Gephi and/or Cytoscape; and how to visualize various aspects of textual corpora using VoyantTools. No prior experience with any of these tools or platforms is necessary.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ENGLIT 2237 - CATASTROPHE NARRATIVES: NATURE AND EMPIRE IN AMERICA

Minimum Credits: 3
Maximum Credits: 3
This course will explore the relationship between imperial expansion and ecological catastrophe in the Americas. Rather than reading eco-apocalypse as a future possibility, we will instead attend to the legacy of land theft, environmental degradation, and mass extinction that has been central to the American settlement project from its origins in the seventeenth century to the present. We'll begin the course by grounding our analysis in critical work on environmental crisis by critics such as Kathryn Yusoff, Tiffany Lethabo King, and Leanne Betasamosake Simpson to attend to the following questions: What is the relationship between human-made catastrophe and natural disaster? How do writers grapple with, and address, the different scales of environmental trauma - structural, generational, and individual? And what tools for survival and subsistence can we draw on in the wake of these large-scale events? By drawing on work in critical race studies, settler colonial studies, indigenous studies and eco-criticism, we'll develop a theoretical background in narratives of crisis, identifying catastrophe narratives as one of the main genres of American writing. Our case studies may include writing on pollution and environmental racism in contemporary American cities, conversations about land conservation and indigenous sovereignty at the founding of the National Park System, Protestant theology and Christian "land stewardship" in early colonial writing, and accounts of indigenous resistance such as Nick Estes' Our History is the Future (2019). We'll conclude with utopic visions of eco-apocalypse and land reclamation in the novels of Cherie Dimaline and Octavia Butler. By reading catastrophe as its own genealogy of modernity from the early modern period to the present, we'll consider the ways that writers have grappled with the large-scale shared and unshared crises of America's contemporary settlement moment. This course is inherently interdisciplinary, featuring work from scholars in the fields of geology, political science, literature, sociology, cultural studies, and anthropology. Students from across the humanities and humanistic social sciences are welcome and may conduct research that is relevant to their ongoing work in their home departments as they respond to the larger conceptual and thematic engagements of the course. Students will also be able to focus on the genre of writing, and critical or disciplinary framework, that is most relevant to their work in the final weeks of the course. There will be many opportunities throughout the semester for constructive feedback and one-on-one mentorship.

ENGLIT 2238 - TELL/IN' THEORY: BLACKNESS IN THE DIASPORA

Minimum Credits: 3
Maximum Credits: 3
Destabilizing boundaries between creative and analytical, performative Black thought demonstrates means by which Black(ened) peoples challenge ways intellectual acts might be conceived. Notions of diaspora, similarly, blur static markers of identity to question claims of place-based belonging. In this course, participants will engage texts from across the Black diaspora that theorize through telling. We will, as they, explore and meld rhetorical possibilities of autoethnography, memoir, poetry, academic criticism, and more, blurring conceptions of received genre in generative knowledge making.
Academic Career: Graduate
Course Component: Seminar

ENGLIT 2239 - BLACK CRITIQUE AND THE BLACK RADICAL TRADITION

Minimum Credits: 3
Maximum Credits: 3
This seminar will explore the advent and unfurling within modernity of a distinctive set of critical practices and thought that have over the centuries given expression to radical political events, such as the Haitian Revolution, as well as political movements, such as the Black Panther Party, and Black Lives Matter. In other words, we shall engage two questions: that of critique, asking whether it is an activity essential to the continued pertinence of the concept of revolutionary republicanism. Second, whether at this current conjuncture, radicalism is the best purchase from which to engage critique. In taking up this interrogation, we shall engage a wide array of texts, from political theory and social critique to literary representation, across multiple media, including those of image and sound.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2260 - BLACK WOMEN'S PRINT CIRCUITS

Minimum Credits: 3
Maximum Credits: 3
Whether described as a flourishing, an explosion, or a blossoming, the renaissance of African American women's writing that began in the 1970s is now commonly accepted as the starting point, if not a signature feature, of what we consider the long era of contemporary African American literature. Engaging in bibliographic, archival, and critical work situated at the intersection of textual scholarship and African Americanist criticism, we will examine the gendered dimensions of late-twentieth-century African American print culture by studying the conditions of publication and distribution of black women's novels, short stories, poetry, drama, manifestos, periodical work, anthologies, and essays.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2261 - QUEER WOMEN OF COLOR RADICALISM

Minimum Credits: 3
Maximum Credits: 3
What if we approached the historical and theoretical traditions of activism, feminism, and Marxism using queer women of color as our starting point? We will address intersectional theory derived from Kimberly Crenshaw's legal discourse and how questions of subjectivity have been raised by scholars such as Jennifer Nash and Maria Lugones. However, the course takes its departure from earlier writings by queer women of color in the 1970s and 1980s that resisted multiple oppressions and placed class struggle as a central to social change, including Audre Lorde, Cherrie Moraga, Alice Walker, Gloria Hull, Patricia Hill Collins, and the collective writings from This Bridge Called My Back, the Combahee River Collective Statement, The Black Woman Anthology, and Keeanga-Yamahtta Taylor's How We Get Free. Using this collection of voices as our starting point, we will then look at recent issues and debates in activism studies, contemporary Marxist theory, and the crises of global capitalism, privileging indigenous and grassroots approaches to social change.

ENGLIT 2262 - THE ART AND PHILOSOPHY OF TONI MORRISON

Minimum Credits: 3
Maximum Credits: 3
Toni Morrison has passed but her voice will remain with us for eternity. The ambition of this course is to read with care and precision Morrison's iconic prose for their insight, power, resonance, and perhaps most of all their beauty. There is material here that is shocking, triggering, angering, funny, hopelessly sad, and confusing but also thick with philosophical import. We will study these novels as literature that has much to say about philosophical questions like freedom, self-making, death, race, gender, and the beautiful and the sublime.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2263 - SYLVIA WYNTER'S CONCEPT OF HOMO NARRANS: STORYTELLING AS SPECIATION

Minimum Credits: 3
Maximum Credits: 3
In this seminar, we will read widely across Sylvia Wynter's writings from early works such as "Beyond Miranda's Meanings: Un/silencing the 'Demonic Ground' of Caliban's 'Woman,'" "The Pope Must Have Been Drunk, the King Of Castile a Madman: Culture as Actuality, and the Caribbean Rethinking Modernity," and "On How We Mistook the Map for the Territory, and Re-Imprisoned Ourselves in Our Unbearable Wrongness of Being, of Desetre: Black Studies Toward the Human Project" through to Black Metamorphosis. Our focus will be on her concept of homo sapiens as a hybrid storytelling species, which she designates interchangeably as bios / mythoi and homo narrans. In the course of carefully analyzing the centrality of that concept to her theory of indigenization, we will study it comparatively in relation to other accounts of the black radical tradition, such as Frantz Fanon's poetic invention, C.L.R. Jame's concept of the artist as

revolutionary, Edouard Glissant's poetics of relation, and George Lamming's radical imagination.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2264 - BLACK RHETORICAL HISTORY:SEMINAR IN RHETORIC

Minimum Credits: 3
Maximum Credits: 3
This course takes shape around varied perspectives on the history, influence, and perseverance of the African American rhetoric tradition. Our exploration, while historical in focus, will underscore how Black rhetoric functions through its cultural expressions, and how these expressions are grounded in African American cultural values, rhetorical and literary transactions, and literacies of the world. While we will read scholarship on Black rhetoric, our endeavor will also explore primary and archival texts and the use of public mediums, such as in the epideictic tradition and newspapers. Thus, this course is interested in how Black Africans and their descendants operationalized English in their efforts to stake claims of agency, citizenship, justice, and humanity. These efforts will help shape our understanding of Black rhetoric as a generative rhetorical praxis that's about making lives better throughout the United States' history. Our engagement is organically multidisciplinary as we will engage a variety of themes in Black rhetoric history; thus, our exploration will be useful to students in composition and rhetoric, literature, communication studies, education, history, and film and media studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2265 - DIGITAL RHETORIC

Minimum Credits: 3
Maximum Credits: 3
This course introduces graduate students to the joys, thrilling possibilities, and frustrations of producing rhetoric and composition scholarship in digital formats. We will read/watch/listen to/engage with scholarship that theorizes the creative and intellectual processes behind the blending of digitality and research. We will also engage with peer-reviewed article-and-book-length projects that push at the boundaries of what rhetoric and composition is and can become as it embraces digitality. As the semester progresses, students will work on their own digital projects in a studio-style creative environment where we pool our knowledge and ideas to help projects emerge in ways that suit the author's vision while meeting (and/or knowingly subverting) its target audience's expectations. You do not need to have any experience with or knowledge of digital production to enroll in this class. We will develop those skills together as we enact and experience the theoretical issues we're learning about through course texts. Final projects will be aimed at publication in a digital journal in our field selected by each author-Kairos, Enculturation, constellations, Computers and Composition Online, Present Tense, Peitho, and more. As students craft their projects, we will analyze (and follow) the instructions their selected journal provides for submissions in their chosen medium. At once experiential and theoretical, this course aims to help build a community of digital producers who collaborate in future projects for years to come.

Grade Component: Grad Letter Grade

ENGLIT 2266 - PICTURING THE BLACK BODY: ARCHIVE, INVENTION, HISTORY, AND PUBLIC

Minimum Credits: 3
Maximum Credits: 3
This seminar will consider the Black lived experiences as the praxis for doing visual rhetoric-the study of how images mean, act, and sound-through the Black body. This consideration stems from the claim that 'rhetorical contingency', a condition for knowing what images mean and do in rhetorical studies, often excludes the Black ways of being. This exclusion suggests that the Black body almost always already means what is assigned to it without its lived experiences. We will reflect on the tension between the Black body and visual rhetoric, noting its implications for rhetoric: That rhetoric's view of the Black body is often predetermined, and that rhetoric as such is not always a reasoned practice and discipline. We will explore colonial archives and photographic camera inventions to account for these exclusionary practices. First, colonial archives will be regulated repositories of Black photographs which reaffirm or recreate the Black body as capital, void, obsession, and in zoological terms for public consumption. Second, we acknowledge that the invention of the digital and analog/manual photographic cameras does not accommodate the diverse Black skin tones, an exclusion that often depicts the cameras

as inherently biased technologies. We will introduce colonial, postcolonial and decolonial theories that center on Black ontology for two reasons: i) to explain the exclusionary practices in visual rhetoric and ii) to restore the Black body to its agentive human subject. To accomplish these goals, we will implement multiple projects and activities: develop visual grammar from our readings and photographs, apply this grammar to analyze a wide range of archival photographs and their corresponding camera devices, collaborate with an art historian/tech professional/photographer to compose a persuasive proposal on the inclusive photographic cameras for dark skin tones, design a visual agentive Black human subject, and write a short essay that offers new directions for visual rhetoric. Through this seminar, graduate students will learn how to do rhetorical history, theory, and criticism, and familiarize themselves with the interdisciplinary conversation between Africana studies and rhetorical discipline in a transnational and transcontinental context.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2270 - AI CULTURES

Minimum Credits: 3
Maximum Credits: 3
This interdisciplinary seminar will grapple with the cultural histories and futures of Artificial Intelligence as it has been represented in fiction, influential texts by the pioneers of AI, media corporations, and popular culture. We'll study the history of AI as a cultural imaginary, as a research program, and as a corporate paradigm. We'll examine the relationship (historically and in the current moment) between labor and AI. How does AI function simultaneously as a tool for humanity, a replacement of humanity (as affect, as creativity, as labor), and as a speculative end of humanity? Can AI be truly creative? In an AI saturated media ecology, what will be the role of human-created art, literature, and thinking? Does AI challenge what it means (philosophically or pragmatically) to be human? The meaning or status of knowledge? The nature of agency? How will AI reconfigure identity categories such as race, gender, class, and sexuality? How does the loss of media dynamics such as verifiability, authenticity, and provenance effected by AI challenge the role of authorship, citizenship, the ethics of media production, and the future of democracy? We will also discuss professional concerns, such as how AI will transform the humanities and social sciences, universities in general, and students' commitments to values such as originality, critical thinking, and long-form information processing (reading). We'll consider the relationships between AI and misinformation, neofascism, and political futures. An overarching question will be how AI challenges or even forces the humanities to function at different scales in order to retain a place for its core values. How might the human (and the humanities) need to evolve and adapt as AI colonizes more and more functions of the human? Beyond corporate techno-optimism, is there a version of AI that could enhance human agency and experience in a meaningful way? For primary sources, I'll draw upon my extensive research in the history of AI, as well as published texts from AI practitioners, as well as critics of AI. We'll read short stories and novels that have given voice to humanistic concerns about AI, as well as watch a number of films that have prominently and influentially featured AI characters, shaping our collective narrative of what AI is or can be. My goal is to mount a multi-disciplinary study of AI as a cultural paradigm that has already radically transformed our cultures over the past 75 years, to help us understand the past and chart our way through its radical futures. I welcome students from all disciplines who wish to incorporate an understanding of or a response to AI in their academic and creative work.

ENGLIT 2320 - CARIBBEAN ENVIRONMENTAL IMAGINATIONS

Minimum Credits: 3
Maximum Credits: 3
What do our postcolonial and global solidarities invite us to learn about places in the global south? How might we situate our scholarship in dialogue with such places and with their cultural and intellectual histories? How can thinking about the specificities of place deepen our theoretical generalizations? And how does postcolonial studies itself change if we think from the perspective of islands and archipelagoes rather than subcontinents and continents? Since the Caribbean (and the New World more broadly) were key to the making of capitalist modernity, we will address the above questions by exploring the environmental imaginations of Caribbean literature as it responds to the inextricably linked (post)colonial histories of extractivist, environmental, and epistemic violence. Caribbean writers have found extraordinarily inventive and wide-ranging ways to navigate both archival erasures and dominant representations of the Caribbean as picturesque paradise or as place of tragedy or disaster. We will study their environmental maneuvers across several different genres and forms--from realism to speculative fiction to epic to satire, from theater to literary essays to allegory to "small" forms such as the vignette, the fragment, patwa proverbs and creole voicings, short ekphrastic poems, and postcards. We will explore the affordances of each genre for framing and resolving environmental considerations: what vocabularies for environmental witnessing and repair do particular genres offer? How do they approach problems of representation, knowledge, agency, and political desire? For example, how might the politics of water

be treated differently in a realist novel, a found poem drawn from a newspaper article, a postcard, and a visual poem? Our readings will focus on the Anglophone Caribbean, Puerto Rico, Haiti, the Atlantic, and the Caribbean diaspora. Writers will include Nobel laureate Derek Walcott; Jamaican poet laureates Lorna Goodison and Olive Senior; Kei Miller; Marlene NourbeSe; Jacques Roumain; and Aliyah Khan. Our theoretical interlocutors include Michel-Rolph Truillot, Rob Nixon, Isabel Hofmeyr, Elizabeth DeLoughrey, Yarimar Bonilla, Deborah Thomas. Assignments will include a presentation; exploratory, academic, and public writing; and short writing exercises in different genres.

Grade Component: Grad LG/SNC Basis

ENGLIT 2321 - TRANSLATION AND WORLD LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This seminar will examine the role of translation in the construction of world literature, defined for our purposes as a mode of circulation and of reading (David Damrosch). We will operate with an expanded concept of translation, not limited to issues of linguistic or cultural equivalence and attuned to multiple contexts of literary production and reception. Drawing on the work of Damrosch, Lefevere, Casanova, Venuti, and Apter (among others), we will trace key debates and consider factors that shape the global politics of translation today. We will discuss selected case studies and pursue our own translation-based scholarly projects.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

ENGLIT 2385 - POSTCOLONIAL DISCOURSE AND CULTURAL CRITIQUE

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to current debates and directions in Postcolonial Studies. Students will spend 1-2 weeks contextualizing these debates by reading some of the core texts and early debates within the field (such as the Marxism vs post-structuralism debates and the tensions amongst nationalist, subaltern, and post-nationalist frameworks). But the bulk of our time together will be spent exploring what kinds of re-thinking of earlier postcolonial models are necessary and adequate to this moment. Thus, we will explore such topics as: Postcolonial Studies¿ relationship to indigenous, subaltern, and decolonial frameworks. What does each of these frameworks bring into view? How do they shift debates about sovereignty? Post-Cold War frameworks for place-based studies. How does ¿place¿ shape our understanding of the postcolonial? How have traditional Area Studies models been reconfigured? What alternative regionalisms, geographies, landscapes and waterscapes have emerged and what do they offer? How might attending to Palestine, Iran, China, the Caribbean, the planet¿s oceans, and to planetartity rather than globalization productively redirect postcolonial studies? How do we continue to understand the specificities of place across different scales? Postcolonial engagements with the Anthropocene, Ecocriticism, and Environmental Justice. What insights emerge into the multiple and diverse histories of extractivism and development? How is the field now articulating different ecologies of belonging and agency? How does revolution relate to other models of insurgency? In our moment of planetary precarity, what do such models as withdrawal, refusal, and conviviality offer? Postcolonial Studies¿ practices of Memory Studies and Archival Studies. How might these practices shift our understanding of sources of knowledge, genres of study, and agents of action? The negotiations between between Postcolonial Studies and related rubrics such as world literature, Global English, and Comparative Literature. What should Postcolonial Studies bring to the study of non-Anglophone literatures, literatures in translation, ¿rotten English,¿ ¿broken English,¿ and patwa? Postcolonial forms and genres: We will often take up the aforementioned topics by studying how they are worked out in different literary texts and forms from the global south. We¿ll shift from Postcolonial Studies¿ historical emphasis on the Anglophone novel to pay particular attention to archival fragments, ¿minor¿ genres, small poems, and vernacular forms such as dub poetry. Of course, there will be space for critique of the field of Postcolonial Studies, but our focus will be on discovering and advancing together its most vibrant, creative, and transformative energies. Readings will likely include such writers as Sunil Amrith, Pascale Casanova, Dipesh Chakrabarty, David Damrosch, Tao Leigh Goffe, Isabel Hofmeyr, Yogita Goyal, Walter Mignolo, Gayatri Spivak, Deborah Thomas, and Sylvia Wynter as well as poets such as Kei Miller and Jean Binta Breeze.

ENGLIT 2500 - SEMINAR IN PEDAGOGY

Minimum Credits: 3
Maximum Credits: 3
This course provides the opportunity for graduate students to develop strategies for teaching, to reflect on those strategies, and to consider the larger social, historical and institutional contexts that shape their teaching. The seminar will place teaching practices in dialogue with texts that focus on current critical questions and pedagogical theory and practice across English studies curricula.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2525 - COMPOSITION STUDIES

Minimum Credits: 3
Maximum Credits: 3
This course will provide a general introduction to composition as an area of professional study. The purpose of the course is to introduce key texts (and forgotten texts) since the turn of the century, and to situate those texts in the development of English studies, the history of post-secondary education, and history of related work on writing. We will be looking at how the field has represented the subject as its own and at how the field has constituted itself as a "discipline".
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2526 - QUALITATIVE RESEARCH METHODS IN LITERACY AND WRITING STUDIES

Minimum Credits: 3
Maximum Credits: 3
This seminar will offer an introduction to qualitative research methods for understanding writing as a phenomenon, exploring literate practices, and assessing the efficacy of writing and literacy pedagogy. Framing our conversations around epistemological and research paradigms (e.g. positivist, critical, constructivist, ecological, social network) that have guided collective efforts to understand writing, writers, and writing pedagogy, we will engage with seminal writing research scholarship from diverse theoretical and epistemological positions. Following this overview, the course focuses on a single methodology to show how it is simultaneously grounded in epistemological commitments while also enabling a flexible range of research methods or practices. Building on short projects that encourage students to survey exemplary research studies aligned with their research interests, the final project will be a research design, with students proposing a design for a research project, discussing the rationale for such a design, practicing and assessing one or two research methods, and experimenting with preliminary analysis of relevant data.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2547 - CRITICAL LITERACIES AND PEDAGOGIES ACROSS URBAN EDUCATION AND HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course examines historical, theoretical, and practical relationships among reading, writing, language, culture, and schooling. Specifically, these connections are explored across urban education and higher education learning sites, both in-school and out-of-school. Ultimately, students will be expected to examine the curricular, pedagogical, and theoretical contexts that shape teaching and learning as a bridge to the continued development of their own pedagogical identities.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2548 - CULTURAL RHETORICS

Minimum Credits: 3
Maximum Credits: 3
This course introduces graduate students to cultural rhetorics theories and methodologies. Cultural rhetorics focuses on scholarship that values storytelling and personal experience, as well as building and honoring relationships. Because cultural rhetorics sees all cultures-not just the Western tradition-as rhetorical, it tends to foster scholarship centering around populations and experiences that have until now been underexplored in mainstream academia. In this course students will: Read/watch/listen to and analyze work that inspired the emergence of cultural rhetorics and contemporary cultural rhetorics publications in book, article, and multimodal formats. Through engaging with these texts and exchanging ideas about them during class discussions, students will develop a sense of how cultural rhetorics came about and an understanding of the various methodological moves that cultural rhetoricians make. Get a sense of the biographies and trajectories of some of the scholars whose work we'll be reading so students can begin to connect their stories with their research. Apply what they've learned about cultural rhetorics methodologies to crafting their own scholarship. Although this course will center around texts produced within the fields of rhetoric and composition and literature, the experiences students garner will be useful to students in creative writing, film studies, communications, and other fields in the humanities and the social sciences.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2549 - RHETORICAL METHODS IN COMPOSITION STUDIES

Minimum Credits: 3
Maximum Credits: 3
"Rhetorical Methods in Composition Studies" is an advanced introduction in rhetorical techniques for performing scholarship and creative work in and around English departments. Participants will read recent and anti/canonical works of rhetorical scholarship and public-facing work (drawn from composition studies as well as poetry, public address, critical media studies, queer of color critique, fiction, and other textual fields) to build an archive of methods for composing rhetorical criticism and theory in University and other institutional contexts. Course assignments invite students to practice critical contributions to the question of what it means to do rhetoric work in and around University composition programs. Writers across all modes and disciplines are welcome.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2551 - TRANSLINGUALISM AND MULTILINGUALISM

Minimum Credits: 3
Maximum Credits: 3
This graduate seminar explores translingualism and multilingualism from the perspective of composition, rhetoric, and literacy studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2571 - FEMINISM AND CRAFTWORK

Minimum Credits: 3
Maximum Credits: 3
This interdisciplinary seminar will examine the intersection of feminism and craft. We will approach domestic, professional, individual, oppositional, and coalitional labor as rhetorical, working from the assumption that these categories are not static but fluid and subject to ongoing persuasive negotiation. The first part of the course will blend scholarly investigation and practical experimentation with writing, computing, horticulture, fiber artistry, laboratory practices, and other forms of embodied knowledge to consider the entangling of labor, identity, and social positioning. Building on these explorations, we will develop and carry out research and/or creative projects rooted in feminist epistemologies and methodologies. Students will have ample opportunity to adapt their course experiences in relation to their research agendas, working individually and in partnership with classmates, guest speakers, and local organizations, museums, and archives.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2608 - GENRES AND GENRE THEORY

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: English (MFA) or Department Consent

ENGLIT 2800 - CHILDREN'S LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the critical study of children's literature at the graduate level. Sometimes the syllabus will be centered on a particular historical period or genre; other times, around a specific theme or critical controversy. But the course will inevitably engage with theoretical issues raised by a genre whose practitioners inhabit a different subject position than its intended readers, as well as focusing on literary, philosophical, and cultural constructions of childhood.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2802 - CRITICAL APPROACH TO CHILDREN'S LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course examines a variety of children's books from a number of theoretical perspectives; historical, feminist, transactional, structuralist, etc. The implications of theory will be emphasized. We will place children's books and reading in the wider context of the emotional, cognitive, and moral development of the child, the popular culture of childhood, and contemporary multicultural society.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2804 - CITY AND THE YOUNG

Minimum Credits: 3
Maximum Credits: 3
This course examines children's and adolescents' experiences within and navigation through both constructively organized and devastatingly deprived urban structure to reveal that their perceptions of subjectivities and social justice are stratified by race, class, gender, sexuality, and nation, which, in turn, is historically and systematically rooted in place. Spanning material and institutional spatial scales (e.g., the young body, city infrastructure, nation) and processes (e.g., representation, migration, globalization), we will explore theoretical and methodological ways in unveiling young people's experiences and responses towards the injustices and violence across urban geographies. Particular attention will be paid to debates surrounding competing roles of young people (e.g., the neglected children, delinquent youth, youth activists, youth migration) in the city as being shaped by relations of power. Course readings span across disciplines including literary and media studies on the contradictive fantasies of Russian adolescence and unaccompanied American child, historical studies on the lives of young black women in segregated New Orleans and Tokyo young people's traumatic experiences and practiced behaviors after the Great Kant¿ Earthquake in 1923, and ethnographical works investigating adolescents' experiences navigating urban schools and neighborhoods
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2811 - MINOR SUBJECTS: CHILDHOOD, LITERACY, AND MARGINALITY

Minimum Credits: 3
Maximum Credits: 3
Grounded in children's literature/childhood studies, this course focuses on texts and cultural practices involving those considered "minor" or "marginal." As we will explore, the age-based marginalization of children and youth does not equal but complexly overlaps with larger processes and experiences of marginalization across other identity categories, with shared mechanisms including social isolation, institutionalization, criminalization, and control of reproduction. Assuming a readership defined by (inter)dependency and relationality, texts designed for or by young readers (understood intersectionally) frequently perform their initiation into and regulation within public, collective, stratified, and ordered social worlds via literacy, raising ethical questions about these rituals of textual socialization and what it means to write for/as people not considered fully literate, fully agential, or fully rights-bearing. Taking cues from literacy studies and children's lit/childhood studies scholarship that emphasizes the embeddedness of texts and reading within larger cultural and material practices/structures, as well as the ways that literacy involves interdependency and multimodality, we will consider how children's textual and material inclusion or exclusion within the public sphere is enacted in books for and by youth, with attention to how young people navigate this process, individually and collectively. We will also investigate cross-written texts for adults and children to explore forms of activism and solidarity organized around minoritarian practices and discourses. The course will involve significant training in and practice of close reading and archival research practices. We will work closely with archival collections at the University of Pittsburgh (especially our signature collection of children's materials from the Black Arts Movement as well as a new collection of Dick and Jane readers) and the American Antiquarian Society (especially their Historical Children's Voices digital library of diaries, newspapers, and books created by young people). Students will be encouraged to identify and bring in materials related to their own areas of focus for us to discuss together. Anyone with an interest in any aspect of the course is welcome and the course will give guidance about how students can develop larger projects, or smaller pieces of projects, that involve some consideration of childhood/youth, education, literacy/reading, marginalization, socialization, and/or literary/textual initiations into the public sphere.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2862 - BOOK HISTORY AND ITS USES

Minimum Credits: 3
Maximum Credits: 3
This seminar examines printed books as material, commercial, and expressive objects. We will investigate some ways that historical practices of book making have mediated the production, circulation and reception of writing. Much of the course will involve hands-on work with materials housed in Special Collections at Hillman Library, where we will examine a broad range of printed materials, including variously formatted literary editions, children's books, broadsides, artists books, and facsimiles. We will be considering such topics as exchanges between the printed word and the printed image; the conditions and goals of textual editing at the present moment; the uses of digital archives for book history; and the political economy of publication practices. There will also be several opportunities to experiment with making printed artifacts with a small proof press.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2902 - DIRECTED STUDY FOR MA AND MFA STUDENT

Minimum Credits: 1
Maximum Credits: 6
In exceptional circumstances a student who wishes to pursue a topic for which no course is available can arrange for directed study.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

Grade Component: Grad LG/SNC Basis

ENGLIT 2920 - WRITING CENTER PRACTICE

Minimum Credits: 1
Maximum Credits: 1
This experiential course, for graduate students who are part of the Writing Center Scholars Program, allows students to tutor undergraduates, graduate students, faculty, and staff at the Writing Center and administer a project that serves the Writing Center community.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ENGLIT 2921 - WRITING CENTER THEORY

Minimum Credits: 1
Maximum Credits: 1
This course allows participants to read and discuss relevant scholarship and engage with guest speakers who have experience as writing program administrators.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ENGLIT 2925 - CREATING A CULTURE OF ACCESS

Minimum Credits: 1
Maximum Credits: 1
This seminar features guest speakers, readings, discussion, and writing focused on disability studies and creating a culture of access.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ENGLIT 2926 - PREPARING FOR PUBLICATION

Minimum Credits: 1
Maximum Credits: 1
This seminar will help to contextualize the publication process, support writers in drafting and submission processes, and offer workshop opportunities.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ENGLIT 2960 - ENGLISH GSA

Minimum Credits: 3
Maximum Credits: 3
This course provides credits for English department graduate students who have been appointed as a graduate student assistant.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

ENGLIT 2980 - PROFESSIONAL DEVELOPMENT FOR GRADUATE STUDENTS

Minimum Credits: 1
Maximum Credits: 1
This professional development seminar has a two-part focus: it will help you prepare your materials for the academic job market, from the cover letter to the teaching portfolio, and it will also offer resources for exploring diverse careers beyond the academy. It is primarily designed for graduate students who have finished coursework, but others are welcome to join if they are interested in beginning to work on their application materials. The seminar will include workshops of student materials along with discussions of select readings and sample job materials. We will have several guest speakers during class time as well as attending one event outside of class time. Writing assignments will include various job application components as well as critical reflections on the writing process and the readings.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
In order to register for this course a student must work with a faculty member under one of the following circumstances: a) faculty-graduate student shared research project; b) special study in relation to pedagogical problems; c) defined areas of study in relation to comprehensive examinations.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ENGLIT 2991 - PUBLISHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This workshop will help English graduate students to prepare previously-drafted seminar papers for journal publication. Students will read and workshop each other's manuscripts and discuss journals in relevant fields, the politics of publishing, the submission and publication process, and other relevant topics.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis

ENGLIT 2993 - INTRODUCTION TO GRADUATE STUDIES

Minimum Credits: 1
Maximum Credits: 1
This course will introduce MA and Ph.D. students to important practices and genres of graduate studies and to department programs and resources.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis

ENGLIT 2995 - PHD WRITING WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
This writing workshop is designed for graduate students on all PhD tracks in English - Comp, Lit, and FMS - and will provide structure and support for larger writing projects. Students will draft toward their most relevant program deadline depending on their stage, using workshop feedback to develop either their project papers or a dissertation chapter. There will be opportunities to draft and receive feedback on job materials and/or grant application materials for early career graduate students. The workshop will provide a supportive, seminar-style environment with accountability check-ins each week. It will not require extra reading, although we will occasionally read style models for the various genres of professional writing that we will undertake together. This workshop can be retaken multiple times post coursework to help students maintain momentum and meet program benchmarks for progress toward degree. The hybrid designation

accommodates grad students who may be on fellowship or out of state
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ENGLIT 2996 - TEACHING PRACTICUM 1

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level teaching. Topics will include: the relationship of reading and writing, writing conventions, social contexts for writing, digital modes of composition, assignments and sequences, evaluation and assessment of writing.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

ENGLIT 2997 - TEACHING PRACTICUM 2

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level teaching. Topics will include: the relationship of reading and writing, writing conventions, social contexts for writing, digital modes of composition, assignments and sequences, evaluation and assessment of writing.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

ENGLIT 3000 - DISSER RES FOR THE PH.D. DEGREE

Minimum Credits: 1
Maximum Credits: 12
For advanced doctoral students who have completed or nearly completed their formal course work and are pursuing independent research leading to the dissertation.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

ENGLIT 3902 - DIRECTED STUDY FOR PH.D. STUDENT

Minimum Credits: 1
Maximum Credits: 6
In exceptional circumstances a student who wishes to pursue a topic for which no course is available can arrange for directed study.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

ENGLIT 3910 - COMPREHENSIVE EXAM

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

English Writing

ENGWRT 1915 - PROFESSIONAL DEVELOPMENT IN WRITING

Minimum Credits: 1
Maximum Credits: 1
This one-credit seminar invites Writing majors to deepen and expand their understanding of professional life and options. Professional Development will allow students to explore the ways their academic work has prepared them for life after graduation, allow them to identify next steps in their career planning, and help them learn about practical aspects of professional life. They will have the opportunity to work on crucial career documents and an online portfolio.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: Satisfactory/No Credit

ENGWRT 2000 - LIFE OUTSIDE OF THE MFA: PUBLISHING, TEACHING, AND FELLOWSHIPS

Minimum Credits: 1
Maximum Credits: 1
While creative writing classes offer students time to engage in close reading, deep listening, and intensive creative and critical writing, this practical course will facilitate hands-on sessions which tackle professional techniques and strategies for publishing (submitting creative work to literary journals and magazines), teaching opportunities (application materials such as cover letters, CVs, and teaching portfolios), and applying for fellowships/residencies (application materials such as project proposals, creative samples, etc.). Students will explore varied approaches to these topics and develop their own methodology unique to them; non-creative writing and forms don't have to be devoid of personality, verve, and character! Regardless of your standing in the Writing Program, this course will help you draft materials you'll need in the immediate or approaching future; these are skills you can adapt and apply to a wide array of professional opportunities. This one-credit course is open to any student in any major and program (as long as they are interested in creative writing professional development).
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad SN Basis

ENGWRT 2010 - FICTION WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
This course enables students to master the particular prose fiction forms they are working in. It helps them focus on their manuscript--either a short story collection or a novel-- and to work seriously on it. Close examination of student writing and revision of submitted work are essential parts of the course.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2094 - READINGS IN CONTEMPORARY FICTION

Minimum Credits: 3
Maximum Credits: 3
This course acquaints students with a variety of contemporary writers. This study helps students raise questions about their own developing esthetics as they are reflected in form and take into account their dual roles as creative writers and critics. It also helps students access their relationship to reviewing and criticism, including its benefits to a creative writer developing a career, and to discover techniques of reviewing and criticism which aid and do not transgress upon their esthetics and its expression.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2110 - NARRATIVE AUDIO WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2200 - HYBRID WORKSHOP

Minimum Credits: 1
Maximum Credits: 1
This one-credit graduate workshop seminar will meet periodically, throughout the semester, as an intensive consideration of student poems and fiction writing, both first drafts and revisions. This will act as a dedicated space for MFA students in the poetry and fiction tracks to workshop poems, fiction forms, and thesis manuscript excerpts with their peers five times over the course of the spring semester.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2210 - POETRY WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
This graduate seminar emphasizes an intensive consideration of student poems, both first drafts and revisions, in an informal workshop setting.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2290 - READINGS IN CONTEMPORARY POETRY

Minimum Credits: 3
Maximum Credits: 3
This course focuses on American poets who have come to prominence since 1963. We will read widely in the poetry of this period to understand its unique contribution to the development of poetic form and its relationship to the culture that produced it.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2310 - NON-FICTION WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
A workshop in non-fiction reporting for magazine publication. Students will research, write, revise and re-write articles. Emphasis will be placed on style, fluidity, organization, suitability for market, and ultimately, on publication.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2390 - READINGS IN CONTEMPORARY NON-FICTION

Minimum Credits: 3
Maximum Credits: 3
This course familiarizes students with a number of different forms of and approaches to contemporary non-fiction writing.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2399 - TOPICS IN NONFICTION: NEW YORK TRIP

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2403 - STRUCTURES AND TECHNIQUES IN NONFICTION

Minimum Credits: 3
Maximum Credits: 3
This is a grad level course required for NF MFAs. The course is designed to examine and develop advanced research skills for the nonfiction writer, and to explore and practice story structure through required readings and creative exercises. Students will design and participate in immersion research projects, produce one long-form narrative or research-based essay using field research, interview and textual sources. The classwide project will be produced in digital form.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2405 - PUBLISHING PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
This practicum is for nonfiction M.F.A.S in their third year of study. We will survey current trends in book, magazine, journal, and online publishing, as we design a trip to New York City to meet editors and agents. Students must have manuscripts and/or other completed work ready for publication in order to be accepted into the class, which is offered by special permission only.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Attributes: Hybrid

ENGWRT 2501 - TOPICS IN CREATIVE WRITING

Minimum Credits: 3
Maximum Credits: 3
This course concerns itself with matters of interest in creative writing: form and technique, contemporary production, issues in teaching and pedagogy, and/or the relation of the creative writer to society.
Academic Career: GRAD
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2502 - INTRO TO THE MFA AND THE WRITING LIFE

Minimum Credits: 3
Maximum Credits: 3
This course will focus on essentials to thrive as a professional writer. We will learn how to navigate various resources within and beyond

the university, including archives and literary journals. Readings and guest visitors from across the field will support our in-class discussions that will cover a wide range of topics such as, working with editors, publishing, how to apply for funding to support projects, interviewing practices, writing an artist statement, time management, performing your work, organizing your research materials, etc.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2503 - INTRO TO THE MFA AND THE WRITING LIFE

Minimum Credits: 1
Maximum Credits: 1
This mandatory course focuses on essentials to thrive as a professional writer in a graduate program. We will learn how to navigate various resources within and beyond the university, including archives and literary journals. Readings and guest visitors from will support in-class discussions, coverings topics such as: publishing, grant funding, time management, sharing your work, and more.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2505 - THESIS WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
This cross-genre course for 3rd-year MFA students focuses on the development of the thesis manuscript. Together we will consider the particular challenges and excitements of writing a first book of poetry, nonfiction, or fiction, and various concrete strategies for approaching this task. We will discuss writing schedules, revision methods, sequencing/ordering, when and how to seek out feedback, how best to make use of the feedback one receives, how to balance forward momentum with reworking, etc. Short readings will be drawn from published first books-novels, short story collections, memoirs, essay collections, and poetry collections-and craft essays, and guest visitors who work in these genres will share their wisdom. In addition to discussion, each class will incorporate dedicated work-time for students to move forward on their own thesis projects; this will allow us to consider individual writers' questions as they arise.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2506 - PROJECT WORKSHOP

Minimum Credits: 1
Maximum Credits: 1
This cross-genre course for both thesis year MFA students as well as students working with a specific project in mind (novel, short story collections, memoir, collection of essays, collection of poems, and so on). Together we will consider the particular challenges and excitements of writing a first book of poetry, nonfiction, or fiction, and various concrete strategies for approaching this task. We will discuss writing schedules, revision methods, sequencing/ordering, when and how to seek out feedback, how best to make use of the feedback one receives, how to balance forward momentum with reworking, etc. Short readings will be drawn from published first.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGWRT 2900 - MANUSCRIPT WRITING FOR THE MFA

Minimum Credits: 1
Maximum Credits: 9
For advanced MFA students who have completed or nearly completed their coursework and are completing the MFA manuscript. Can be taken only once toward the 36 credits required for the degree, only in the last year of study, and counts as elective credits.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

ENGWRT 2905 - PRACTICUM IN COMMUNITY TEACHING

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

ENGWRT 2907 - WRITING INTERNSHIP

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad LG/SNC Basis

ENGWRT 2960 - ENGLISH GSA

Minimum Credits: 3
Maximum Credits: 3
This course provides credits for English department graduate students who have been appointed as a graduate student assistant.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

ENGWRT 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
In order to register for this course a student must work with a faculty member under one of the following circumstances; a) faculty-graduate student shared research project; b) special study in relation to pedagogical problems; c) defined areas of study in relation to comprehensive examinations.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ENGWRT 3009 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
In exceptional circumstances a student who wishes to pursue a topic for which no course is available can arrange for directed study with a member of the graduate faculty willing to supervise the work.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

Environmtal & Occupatnal Hlth

EOH 2004 - OCCUPATIONAL HYGIENE

Minimum Credits: 3
Maximum Credits: 3
The course will provide the students with a comprehensive overview of the current technologies in terms of real-time monitors for

occupational hygiene. The course is organized around real-time monitors for different hazards and health endpoints. Common concepts related to mode and principle of operations of various real-time monitor will be discussed, along with issues such as sensitivity, reliability, and reproducibility. In addition to the technical and scientific aspect of the monitors, the course will expand to data analysis; transformation of data to information; risk communication; and workers empowerment. This course will also present the concept of work safety and the roles of NIOSH and OSHA in conducting on-site investigations and promoting safety and health of workers. The course will be conducted by in class lectures, hand-on practices for real-time monitors and data analysis, and paper discussions. No pre-requisites are required for taking this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2013 - ENVIRONMENTAL HEALTH AND DISEASE

Minimum Credits: 2
Maximum Credits: 2
This is the school of public health core curriculum course in environmental and occupational health. The world health organization defines environmental health as "those aspects of human health, including qualities of life that are determined by physical, biological, social, and psychosocial factors in the environment." The discipline of environmental and occupation health refers to the "theory and practice of assessing, correcting, controlling, and preventing those factors in the environment that can adversely affect the health of present and future generations." This course will familiarize the students with current issues and practice in environmental and occupational health, as well as assessment of the risk of environmental exposures. It is designed to introduce the students to knowledge basic to public health focusing on chemical and physical environmental factors affecting the health of the community.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restriction by Program Plan: - BCHS-MPH - EOH-MPH - EPIDEM-MPH - HPM-MPH - PHGEN-MPH - IDM-MPH - MULMPH-MPH

EOH 2021 - SPECIAL STUDIES

Minimum Credits: 1
Maximum Credits: 15
Properly qualified students may undertake advanced study under the guidance of a faculty member.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

EOH 2022 - SPECIAL TOPICS

Minimum Credits: 1
Maximum Credits: 3
Properly qualified students may undertake advanced study under the guidance of a member of the faculty.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

EOH 2024 - MPH ESSAY/THESIS

Minimum Credits: 1
Maximum Credits: 15
MPH students have the option to complete an essay or thesis that is designed to provide the student with an opportunity to integrate the major components of the learning experience.
Academic Career: Graduate
Course Component: Thesis Research

Grade Component: Grad HSU Basis
Course Requirements: PLAN: EOH-MPH

EOH 2025 - MS THESIS

Minimum Credits: 1
Maximum Credits: 15
Research credits for the master's thesis.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad HSU Basis
Course Requirements: PLAN: EOH-MS

EOH 2108 - ENVIRONMENTAL AND OCCUPATIONAL HEALTH PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
This practicum provides an opportunity for EOH MPh students to demonstrate integration and application of knowledge in the area of environmental and occupational health, through a culminating experience. This is a faculty supervised applied research or problem solving project in consultation with a health environment related agency or organization. Student participates after completion of course work. The practicum includes preparation, contribution to field work, and a final written report which may be the basis for a master's essay.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

EOH 2109 - ENVIRONMENTAL AND OCCUPATIONAL HEALTH SCIENCES JOURNAL CLUB

Minimum Credits: 1
Maximum Credits: 1
This course is for students to gain experience in the presentation and discussion of topics of current interest in the fields of industrial and environmental health sciences and toxicology. The format is journal club presented by the students. Our goals are to expose students to the most exciting research in our field of interest. Secondly, to provide a forum to hone skills in organizing and presenting scientific data, as well as critically discussing published work.
Academic Career: Graduate
Course Component: Colloquium
Grade Component: Grad LG/SU3 Basis

EOH 2110 - ROTATION/PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
This course is designed to be a practical research experience for Ph.D. students, goals of which are for students to gain research experience within laboratories of faculty within the molecular toxicology training program. Each laboratory rotation will be eight (8) weeks in duration with 2 rotations. Students will be required to write a report on their research project upon completion of the laboratory component.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

EOH 2122 - TRANSPORT AND FATE OF ENVIRONMENTAL AGENTS

Minimum Credits: 3
Maximum Credits: 3
This course presents in a quantitative fashion the movement, transformation, bioaccumulation, and fate of various physical, biological, and chemical agents through the environment, home, and occupational settings. Chemical degradation, atmospheric transport, surface and

groundwater transport, deposition on terrestrial surfaces and in sediments, and concentration by biological systems are described, including movement through food chains; also indoor transport and ventilation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EOH 2309; PLAN: For EOH-MPH; MS: PHD (Instructions: Instructor Consent as some students from Engineering apply.)
Course Attributes: Global Studies

EOH 2140 - CLIMATE CHANGE AND HUMAN HEALTH

Minimum Credits: 3
Maximum Credits: 3
Climate change is increasingly recognized as the single biggest threat to the environment and human health, affecting the physical environment as well as natural and human systems. This course features trans-disciplinary science, practice, and policy approaches examining the interconnectedness between climate change, the environment and health. Students will gain a comprehensive understanding of climate science, its impact on the environment and human health, including health inequities, relevant policies, and strategies for climate adaptation and mitigation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2150 - ENVIRONMENTAL SAMPLING AND MONITORING

Minimum Credits: 2
Maximum Credits: 2
Environmental sampling is essential to our understanding of toxicant contamination in our environment. The course will provide an opportunity for the students to participate in field location sampling for practical environmental sampling for air and water. Furthermore, the course will go over the process of working with a community partner, an essential part of public health practice. The course will be conducted by in class lectures and hands-on practices for determining concentrations of contaminants in environmental media. Some field sampling will be conducted but will not require travel outside of Oakland.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad Letter Grade
Course Requirements: PLAN: EOH-MPH, EOH-MS, or EOH-PHD

EOH 2175 - PRINCIPLES OF TOXICOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to the principles governing the interaction of chemicals within the human body. Major organ systems will be described with regard to anatomy, physiology and effects from interactions with chemicals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2180 - INTRODUCTION TO RISK SCIENCES

Minimum Credits: 1
Maximum Credits: 1
Course will explore issues surrounding environmental and occupational risks with focus on adverse human health effects. Will provide overview of risk sciences including: risk assessment, risk perception, risk communication and risk management. Detailed attention to methods for qualitative and quantitative characterization of risks to human health. Qualitative and quantitative approaches for risk assessment will consider methods for assessment of cancer and non cancer health risks using four step paradigm by national academy of sciences

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: CREQ: EOH 2181; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2181 - RISK ASSESSMENT PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
Practicum will provide the student opportunity to conduct a quantitative risk assessment for human health endpoint (either cancer or non-cancer) from an environmental or occupational exposure. Students will learn to identify human health hazards, characterize dose response relationships and site and mechanisms of action, conduct an exposure characterization dose response relationships and site and mechanisms of action, conduct an exposure characterization and use that data to characterize risks to human health.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: CREQ: EOH 2180; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2260 - ENVIRONMENTAL JUSTICE AND HEALTH EQUITY: REGULATIONS, POLICIES, AND PRACTICES

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to introduce students to national regulatory and policy frameworks that seek to mitigate environmental risks and hazards. In addition, this course places an emphasis on the social determinants of health that lead to environmental injustices and the strategies that have been deployed to try and addresses these concerns. This course starts with theoretical foundations, moves to applied research efforts and concludes with practice approaches for each unit covered. The course builds upon the public policy framework and explores areas of falter in the framework, and how environmental practitioners can address those deficits. Students are exposed to a variety of analytic tools that can help identify environmental health disparities across populations. Students will also be expected to connect with environmental health professionals at different levels of governance (local, state, and federal) to gain insight on policy challenges faced and strategies to achieve policy goals. This course will culminate in student presentations of proposed position papers that address a current environmental hazard with national impacts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2309 - ENVIRONMENTAL HEALTH CHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
The organic, inorganic and mechanistic biochemical details of interactions of toxins and biological systems will be presented. Emphasis on chemical understanding of potential toxicological sequelae of such interactions. Students present one lecture on bioorganic toxicological topic synthesized from recent scientific literature.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2310 - MOLECULAR FUNDAMENTALS

Minimum Credits: 3
Maximum Credits: 3
Course is designed to be a review of the fundamentals of biochemistry, molecular biology, and cell biology. There is significant time devoted to techniques, with the goal of providing background for Ph.D. students beginning their research careers, and a perspective for mph students on the availability and utility of modern biological research methods.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EOH 2504 - PRINCIPLES OF ENVIRONMENTAL EXPOSURE

Minimum Credits: 3
Maximum Credits: 3
This course introduces concepts inherent in recognition of sources, contaminant generation, transport and uptake of chemical, biological and physical stresses in the context of potential environmental exposures related to human health. This course prepares students to understand exposure assessment in anticipation, recognition, evaluation and intervention as utilized in risk assessment and composition of matter, exposure pathways, pathway assessment methods including measurement, analogy and exposure modeling.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EOH 2605 - MOLECULAR ENVIRONMENTAL BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course is designed to provide a foundational understanding of how biological principles explain the functioning of organisms triggered by environmental stimuli, at the molecular and cellular levels. The topics covered align with the core scientific training required for graduate students in pre-health and biological research fields. Topics will include the genetic code, genome structure, and the complex regulation of gene expression, focusing on both genomic and epigenomic control mechanisms upon exposure to environmental factors (chemical and non-chemicals). The course will also explore the molecular basis of fundamental cell functions, including cell signaling, the cell cycle, DNA damage and repair, and mechanisms of cell death. Furthermore, it will cover the molecular basis of the body's defense systems, including stress responses and immune mechanisms, in reaction to environmental toxicants. Finally, the course will present recent advances in biotechnology and techniques used to study environmental diseases, including genomic editing, stem cell biology, next-generation sequencing and exposomics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 2609 - CHEMICAL TOXICOLOGY IN THE AGE OF GREEN CHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
The design of safer chemicals is vital to reduce environmental and occupational health diseases. Molecular designers, toxicologists, chemists, and engineers require knowledge about the biochemical mechanisms of toxicity, predictive toxicology, and how chemical structures and properties impact toxicity and the environment. Green chemistry has been widely incepted into the curriculum in higher education to provide students with adequate skills in the fundamental principles of toxicology and structure-activity relationships for the design of safer chemicals. This course will present the concept of designing chemicals for reduced toxicity to promote synthesis of less hazardous chemical substances that possess little or no risks to human health and the environment. Students will be provided with fundamental understanding of how to apply in-silico modelling and QSARs, etc. to identify novel replacements for the generation of hazardous chemicals (such as forever chemicals) already persisting in the environment and also create the next generation of safe chemicals and products. This course will also present the concept of designing chemical products to preserve efficacy of the function while reducing toxicity so that at the end of their function they do not persist in the environment but instead breakdown into safe products. The course will be conducted by in class lectures, hands-on practices for in-silico modeling, and paper discussions. A college level background in chemistry or toxicology will be required for taking this course. A college level background in chemistry or toxicology will be required for taking this course. Courses such as: Environmental Health Chemistry (EOH 2309), Principles of Toxicology (EOH 2175), Transport & Fate of Environmental Agents (EOH 2122), Principles of Environmental Exposures (EOH 2504), Fate & Transport in Environmental Engineering (CEE 1522); OR Chemistry in Environmental Engineering (CEE 1504) are suggested
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: A college level background in chemistry or toxicology will be required for taking this course.

EOH 2805 - EPIGENETICS AND EPIGENOMICS OF ENVIRONMENTAL HEALTH

Minimum Credits: 3
Maximum Credits: 3
Gene environment interactions are important determinants of disease risks. This course will present how environmental stressors (such as chemicals, microbiota or lifestyle) modulate the epigenetic regulation of gene transcription and chromosome stability, which ultimately produce an array of unique phenotypes controlling cell differentiation, growth and cell death. Students will be provided with a fundamental understanding of basic epigenetic processes related to the mechanisms by which exposure to environmental stressors causes environmental diseases not limited to neurological dysregulation, cardiopulmonary and inflammatory diseases, metabolic diseases and cancer. This course will present the concept of epigenetic modulation of cellular signal pathways involved in protection from effects of environmental stressors, including responses to stress and oxidative damage. In addition, we will present the most recent and advanced genetic and epigenetic techniques to study the impact of the environmental stressors on disease pathogenesis, which includes microarrays, next-generation-sequencing and genetic models. The course will also discuss how to apply the 'omic' data and pathway analysis tools for the identification and validation of disease biomarkers and exposure markers from environmental and occupational health research. Course will be conducted by in class lectures, hand-on practices for epigenomic data analysis and paper discussion. A college level background in the molecular biological sciences is required for taking this course. Course of Molecular Fundamentals (EOH 2310) or Principles of Toxicology (EOH 2175) is suggested.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EOH 2310 OR EOH 2175; PROGRAM: Graduate School of Public Health A college level background in the molecular biological sciences is required for taking this course.

EOH 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Includes doctoral study under the various programs within the department.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: EOH-PHD

EOH 3110 - SCIENCE COMMUNICATIONS AND PROFESSIONAL DEVELOPMENT

Minimum Credits: 2
Maximum Credits: 2
This experiential course provides graduate students in the environmental health sciences an introduction to major skills in professional development and effective science communication including strategic planning, goal setting and prioritization, network building, building collective resilience and self-accountability practices. These skillsets, while vital for success in a graduate program, are increasingly important in hiring processes and we aim to prepare participants for success in their chosen career path whether in academia or beyond. Students will gain skills in organization and time management, developing a strategic career plan, enhancing their network of sponsors and mentors, and communication. Through experiential learning, students will craft long- and short-term personal and professional goals, aided by their Individual Development Plan (IDP). They will map their networks of support, including identification of any gaps and develop plans to address those gaps.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 3111 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 2
Maximum Credits: 2
This experiential course provides graduate students in the public health sciences an introduction to major skills in professional development and effective science communication including strategic planning, goal setting and prioritization, network building, building collective resilience and self-accountability practices. These skillsets, while vital for success in a graduate program, are increasingly important in hiring processes and we aim to prepare participants for success in their chosen career path whether in academia or beyond. Students will gain skills in organization and time management, developing a strategic career plan, enhancing their network of sponsors and mentors, and communication. Through experiential learning, students will craft long- and short-term personal and professional goals, aided by their Individual Development Plan (IDP). They will map their networks of support, including identification of any gaps and develop plans to address those gaps.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

EOH 3210 - PATHOPHYSIOLOGY OF ENVIRONMENTAL DISEASE

Minimum Credits: 3
Maximum Credits: 3
This graduate level course focuses on the etiology and pathogenesis of human disease and how the disease process affects normal physiologic function. The course will include a didactic component covering the normal anatomy and function of the major organ systems and a series of student-led presentations and discussions of the nature and cause of commonly encountered diseases and or injuries. Students will be expected to apply basic mechanistic physiologic principles of each organ system in current public health and environmentally relevant topics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EOH 3305 - GENOME INSTABILITY AND HUMAN DISEASE

Minimum Credits: 3
Maximum Credits: 3
Mechanisms that maintain genome stability allowed the origin of species. DNA damage is omnipresent and DNA repair and DNA damage tolerance mechanisms are interwoven in systems that control transcription, replication, cell division, signal transduction, cell death and evolution. More than 40 distinct human diseases are caused by defects in DNA repair, including syndRomes of impaired development, immunodeficiency, cancer predisposition, neurodegeneration, and premature aging. This course will emphasize the molecular biology and biochemistry of DNA repair, placing these mechanisms into the context of other cellular processes as they pertain to health and disease. Environmental, clinical and endogenous sources of DNA damage will be discussed. An understanding of the fundamental role of DNA repair mechanisms in immunology, oncology, neurology, and aging will be central to all lectures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Envrl Influence Management

BENV 2115 - MARKET MANIPULATIONS

Minimum Credits: 3
Maximum Credits: 3
Market Manipulations is a course about the forms of market failure and the generalizations we can draw to understand market behavior in the future. The course compares financial panics in U.S. business history: 1792, 1819, 1837, 1857, 1873, 1893/95, 1907, 1929, and 2008. How can we generalize to understand future panics? We look at major forms of market scams, including bubbles (Tulipomania, South Sea Bubble, Dot Con Bubble), Ponzi schemes, and typical behaviors of con artists (e.g., Gregor MacGregor) and generalize their common patterns. We consider the origin of the modern business firm (joint stock trading company) as the solution to the general agency problems of managing risk and providing assurance. We examine how Carnegie, Rockefeller, and Westinghouse built their companies, seeking

monopoly, and identify the "monopolist's playlist," generalizations about patterns of monopoly-building. These tactics surprisingly remain as relevant today as they were during what Mark Twain called the "Gilded Age." We shift to the Progressive Era, and pushback. Coxey's Army was the first march on Washington, anticipating the New Deal 40 years later. The "stunt journalists" and "muckrakers," including Nellie Bly, Jacob Riis, Ida Tarbell, Lincoln Steffens, and Ray Stannard Baker, sought to influence repair of market defects via journalistic investigation. We look at the Triangle Shirtwaist Factory Fire of 1911 and the career of Frances Perkins. We review causes of the Crash of 1929/Great Depression. Thus, this course is highly unusual in using events in business history to generalize about our expectations of business behavior today and in the future.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Epidemiology

EPIDEM 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4
Maximum Credits: 4
This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2012 - WRITING IN POPULATION NEUROSCIENCE

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to write a manuscript or grant proposal related to population neuroscience. Population neuroscience consists of the application of state of the art population science and neuroscience to better understand the pathogenesis and etiology of a given disease of the central nervous system. This course provides a practical opportunity to write a proposal or a manuscript using neuroepidemiological methods that focus on a specific CNS disease/condition. Emphasis is placed on factors that influence vulnerability to onset, progression and response to treatment of neurological diseases, including geographic variations. This course is designed to reach pre- and postdoctoral trainees in epidemiology, neuroscience, neurology, psychiatry, rehabilitation and data sciences. Students are expected to be proficient in scientific writing. This course is part of the curriculum in Population Neuroscience of Alzheimer's Disease and Related Dementias (https://www.ebrain.pitt.edu/training/), together with EPIDEM 2017 Population Neuroscience Seminar (Fall) and EPIDEM 2019 Introduction to Multimodal Neuroimaging (Spring).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2017 - POPULATION NEUROSCIENCE SEMINAR

Minimum Credits: 1
Maximum Credits: 1
This seminar focuses on the methods and current literature in population neuroscience. Population neuroscience draws from multiple fields, including epidemiology, neuroimaging, and cognitive psychology, to understand the intrinsic (e.g. genetic) and extrinsic (e.g. environmental) factors that contribute to brain structure and function in various populations (healthy, aging, and diseased).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EPIDEM 2019 - INTRODUCTION TO MULTIMODAL NEUROIMAGING AND APPLICATIONS IN POPULATION NEUROSCIENCE

Minimum Credits: 2
Maximum Credits: 2
There have been great advances in neuroimaging techniques, which allow neuroscientists to visualize molecular, cellular and system physiology and functions. The Introduction to Multimodal Neuroimaging course will teach the underlying principles of neuroimaging techniques, including data modeling and visualization. Special emphasis will be on the discussion of the strengths and limitations of each technique, and on novel approaches to utilize complementary imaging modalities. The course will teach the principles and research applications of neuroimaging modalities via basic lectures and workshops that emphasize the integration of multiple imaging modalities.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

EPIDEM 2022 - SPECIAL TOPICS IN EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 3
Properly qualified students may undertake advanced study under guidance of a faculty member(s).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PROG: Public Health (permission from instructor required for no-Public health students)

EPIDEM 2110 - PRINCIPLES OF EPIDEMIOLOGY

Minimum Credits: 3
Maximum Credits: 3
Epidemiology is a scientific discipline which seeks to identify and describe patterns of disease occurrence, identify determinants of disease, and evaluate disease prevention and health care treatment efforts. With its focus of study in human populations, epidemiology is directly linked with public health research, policy, and practice. This course provides an introduction to the fundamental definitions, terminology, concepts, methods, and critical thinking used in epidemiology. The material presented in this course is designed to lay the foundation for future study and practice in public health activities.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EPIDEM 2130 - FOUNDATIONS IN SOCIAL EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This semester-long course provides students with a foundation in social epidemiology. It will cover the theory and framing that underpins the ways in which social structures and environmental factors shape public health outcomes. Students will learn how to develop research questions and public health interventions around social, political and economic determinants of health, including understanding how socioeconomic position, race/ethnicity, place, and social networks contribute to the distribution of population health. The premise of the course is that health and disease are shaped by social, economic, political, and commercial factors operating at multiple levels of influence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2141 - BEHAVIORAL LIFESTYLE INTERVENTION TRAINING - THEORY OF PREVENTION EFFORTS

Minimum Credits: 2
Maximum Credits: 2
Translating the findings of clinical trials of lifestyle intervention for disease prevention into community settings is increasingly important. This course will provide the conceptual foundation needed for such public health initiatives and serves as a key component of the Prevention, Lifestyle Intervention, and Physical Activity Area of Emphasis within the Department of Epidemiology. The background and rationale for behavioral lifestyle intervention will be covered in this course, as well as the relationship of lifestyle behaviors to chronic disease, with a focus on diabetes and cardiovascular disease. By attending this lecture-style course, students will receive behavioral lifestyle intervention training based upon a modified version of the Diabetes Prevention Program intervention protocol, called the Group Lifestyle Balance (DPP-GLB) program, which was adapted for use in the community setting. Upon successful completion of this class, each student will also receive a Certificate confirming that he/she was officially trained as a coach for the DPP-GLB intervention program.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate Sch of Public Health
Course Attributes: Hybrid

EPIDEM 2142 - LIFESTYLE INTERVENTION PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
This course follows the lifestyle intervention training theory course. The foundation for this practicum is the group lifestyle balance (GLB) program, a behavioral lifestyle intervention training based upon a modified version of the diabetes prevention program intervention protocol. The GLB has already been developed and evaluated by the course instructors. The lifestyle intervention training practicum will provide students with the opportunity to utilize their theoretical knowledge for behavioral lifestyle intervention with hands-on application in the field. This course will be a key component in the new prevention/ lifestyle intervention area of concentration within the department of epidemiology, providing the practical experience needed to deliver the group lifestyle balance program independently.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis
Course Requirements: PREQ: EPIDEM 2141

EPIDEM 2143 - SOCIAL EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course is designed to introduce students to a broad overview of the field of social epidemiology related to the history and development of the field including the theoretical underpinnings, conceptual approaches, current topic areas, and research methods. Social epidemiology reveals how social processes are intrinsically linked to the health of populations and individuals. Social epidemiology takes into account the social, psychological, biological, and medical determinants of disease and health and uses a multidisciplinary approach to analyzing and solving complex contemporary social issues. This course will emphasize the role of social determinants of health in relation to health equity. Teaching methods include lectures, readings, class discussions, and written assignments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2144 - AGENT-BASED EPIDEMIOLOGICAL MODELING OF SOCIAL DETERMINANTS OF HEALTH

Minimum Credits: 2
Maximum Credits: 2
This course is an introduction to agent-based models (ABMs) as a technique for understanding how the dynamics of social, biological, and other complex systems arise from the characteristics and behaviors of the agents making up these systems. Students will learn using the Epistemix software platform that was spun out of Pitt Public Health. The course will emphasize simulation applications in public health, including infectious disease transmission and control measures, and health behaviors such as vaccine refusal, drug and tobacco use, and

birth control. Students will focus on modeling effects of the Social Determinants of Health. While this course is intended primarily for students in public health, graduate students in other disciplines, including social sciences, engineering or computer science, are welcome to enroll in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2150 - CARDIOVASCULAR EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
In this course, students will gain knowledge about cardiovascular disease and its epidemiology and develop critical and presentation skills. Students will be expected to critically analyze scientific journal articles, present orally, and write a term paper.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2151 - PHYSICAL ACTIVITY EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
Physical inactivity is a major risk factor for many chronic diseases as identified in the Surgeon General's Report. This course will provide an up-to-date overview of the area of physical activity epidemiology, from the evidence of the relationships between physical activity and/or sedentary behavior and various chronic diseases, to methodological issues pertaining to the assessment of physical activity and/or sedentary behavior, to lifestyle efforts that includes physical activity in population studies, all of which will have a special emphasis on minority groups.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 OR 2041)

EPIDEM 2152 - STUDENT WORKSHOP IN CARDIOVASCULAR DISEASE EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course is designed to be a supplement to the standard epidemiology coursework. It is a "hands on" workshop that will provide the opportunity for students to practice many of the concepts that they learn in class in the context of CVD epidemiology. It will also cover some areas which are not covered by the current curriculum, including an introduction to subclinical CVD, professional development, reliability analyses, and formal presentations of analysis results.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

EPIDEM 2153 - ANALYTICAL METHODS ACROSS PHYSICAL ACTIVITY DATA COLLECTION MODES

Minimum Credits: 1
Maximum Credits: 1
Data for epidemiologic research is now being collected using many modes of data collection from direct observation and clinical assessment, to self-report questionnaires and electronic wearables. Using examples from physical activity data collection, students will become familiar with the different categories of data (e.g. continuous, categorical: ordinal and binary), data collected across a wide range of measurement instruments (e.g. questionnaires, body-worn monitors), and common data-related issues associated with different methods of collection. They will also gain experience cleaning, analyzing, and comparing data from across data categories that were collected from

different instruments. Although the issues discussed and the methods demonstrated in this course use physical activity data, skills learned should be applicable to non-physical activity data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110; CREQ: BIOST 2049 or 2142

EPIDEM 2154 - INTRODUCTION TO BEHAVIORAL AND PHYSICAL ACTIVITY EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
Modifiable habitual behavioral factors including physical activity/inactivity are important determinants in the development of many health outcomes. This course will provide an up-to-date introduction to understanding what these types of behavioral factors are (eg. physical activity/ sedentary behavior, smoking, eating habits), how they fit into the web of causation with other types of factors (such as genetic and environmental factors), and how they can be targeted for prevention efforts as "modifiable" risk factors. There will also be a brief introduction to evidence-based lifestyle interventions including those involving physical activity and sedentary behavior and a discussion of issues related to collecting data on these factors in special populations. This will lay the foundation for a more in-depth exploration of physical activity epidemiology in the second half of the semester including research design methods, measurement and reporting of physical activity in epidemiology studies. Students will gain practical experience through in-class exercises with physical activity measurement and reporting.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2160 - EPIDEMIOLOGY OF INFECTIOUS DISEASES

Minimum Credits: 2
Maximum Credits: 2
The goal of this course is to provide students with a basic understanding of epidemiologic techniques used to describe patterns of infectious disease transmission and risk for infection. In addition, students will learn about the epidemiology, public health impact, and prevention and control measures for selected infectious diseases. This course includes a series of lectures and practical exercises to introduce students to both the application of epidemiologic skills pertaining to infectious diseases and the public health concepts associated with specific infectious diseases.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110
Course Attributes: Global Studies

EPIDEM 2161 - METHODS INFECTIOUS DISEASES EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 1
Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases epidemiology. Course includes lectures, readings, and mid-term (take home) and final examinations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Attributes: Global Studies

EPIDEM 2162 - INFECTIOUS DISEASES AND GLOBAL HEALTH

Minimum Credits: 2
Maximum Credits: 2

This course will deal with the epidemiology, pathogenesis, and control aspects of infectious diseases of global health impact including malaria, HIV, tuberculosis, COVID-19, anti-microbial drug resistance, etc. State-of-art knowledge of the natural history, biology, virology or microbiology, epidemiology, clinical and public health, and vaccine efforts will be reviewed. Descriptive, analytic, and experimental epidemiologic studies will be critically reviewed to provide a synthesis of our current understanding of the topical global infectious diseases. The format will include didactic lecture, interactive discussion, small work groups and home-assignments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2160

EPIDEM 2163 - GLOBAL EPIDEMIOLOGY OF VACCINES AND VACCINATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide students with knowledge and skills related to the study of vaccines and vaccination programs in the US/EU and in low- and middle income countries. This course will prepare students for entry-level positions in vaccine research or programming for academic, government, or private sector institutions. This course will provide a broad introduction to a wide range of vaccine related topics ranging from biological mechanisms of vaccines to vaccine financing. Within this range of topics, the course will focus heavily on the epidemiological study of vaccine efficacy, safety, effectiveness, and impact. The course is organized around four themes: 1) introduction; 2) vaccines; 3) research and development; and 3) vaccination programs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2166 - GLOBAL CONTROL OF AIDS/HIV AND TUBERCULOSIS

Minimum Credits: 1
Maximum Credits: 1
This course will deal with the epidemiology of infection with human immunodeficiency virus (HIV) and Tuberculosis (TB). Current knowledge of the natural history, biology, virology or microbiology, epidemiology and clinical aspects of AIDS as well as treatment and vaccine efforts against HIV and TB will be reviewed. Descriptive, analytic and experimental epidemiologic studies will be critically reviewed to provide a synthesis of our current understanding of the pathogenesis of these infectious diseases.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2170 - CHRONIC DISEASE EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will reinforce epidemiological concepts, research skills and public health concepts in the context of the study of chronic diseases and associated risk factors. The course will provide an overview of the prevalence, incidence and risk factors for major chronic diseases that face the U.S. population and the population around the world.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2171 - CANCER EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
The course reviews basic cancer biology, reviews classic descriptive cancer epidemiology, considers the role for modern biomedical

techniques in studies of cancer etiology, and reviews the active hypotheses regarding the etiology of common and uncommon human cancers. Specific topics include biomarkers and intermediate endpoints, tobacco and alcohol associated cancer, viral associated cancer, endocrine related cancer, and nutrition related cancer.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2180 - FUNDAMENTALS OF EPIDEMIOLOGICAL METHODS

Minimum Credits: 3
Maximum Credits: 3
This intermediate epidemiology methods course will focus on the use of standard study designs and statistical methods for answering research questions, the interpretation of results obtained from these methods, and consideration of these issues from a causal inference perspective. Students are expected to have some statistical knowledge and will use SAS, a statistical software package, to analyze data sets. Students will be expected to participate in class discussions that extend and apply the topics covered in lectures to epidemiology research articles and to exercises involving epidemiology in practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041; PLAN: EPIDEM-DPH, EPIDEM-PHD, EPIDEM-MS, or EPIDEM-MPH

EPIDEM 2181 - DESIGN AND CONDUCT OF CLINICAL TRIALS

Minimum Credits: 2
Maximum Credits: 2
The course surveys methods in the design and conduct of clinical trials. Clinical trials require successful collaboration of clinical, organizational and statistical skills. This course will focus on clinical and organizational issues, such as patient selection, recruitment, endpoint definition and protocol development. Throughout the semester, students develop a clinical trial proposal that emphasizes the application of the concepts learned. The course will complement courses in biostatistics on the statistical analysis of clinical trials.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2185 - INTRODUCTION TO SAS

Minimum Credits: 2
Maximum Credits: 2
This course is an introduction to SAS, a statistical software package commonly used to perform data preparation, statistical analysis, and graphical presentation of results. The course consists of lectures and four lab sessions, where students will practice in a guided manner what was taught during the preceding lectures. The aim of this course is to teach students how to write basic SAS programs to import data, export data, create data sets within SAS, clean data, prepare data sets for analysis and apply statistical, as well as graphical, procedures. Students will also learn to make informed decisions regarding the appropriate SAS commands and options to use for these tasks and will be asked to use SAS for solving a set of simple specific research questions. Upon completion of this course students will feel comfortable using SAS as a tool to conduct research and know how to subsequently further develop their own SAS programming skills.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Epidemiology (MS or MPH or PHD or DPH)

EPIDEM 2186 - INTRODUCTION TO R

Minimum Credits: 2
Maximum Credits: 2
This introductory course will help students become familiar with the R software for data management and statistical analysis in public health. The R software is widely used in a broad range of scientific disciplines and has a large, active user community. Many resources exist online to learn R, but few are focused on the public health domain. This course will combine lectures and extensive hands-on exercises to guide students in learning R for a wide variety of tasks, including data import/export, data preparation and management, basic statistical analyses, and visualizations. Students will also learn how to create their own functions in R, how to manage their code, and how to make their work reproducible.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2189 - EPIDEMIOLOGICAL METHODS OF LONGITUDINAL & TIME-TO-EVENT ANALYSES

Minimum Credits: 3
Maximum Credits: 3
This course will introduce the students to advanced regression methods used to address research questions involving longitudinally collected data from an epidemiological perspective. It serves as the second epidemiological methods course in the Department of Epidemiology following EPIDEM 2180. The course content includes an introduction to standard analytical methods of longitudinal data and time-to-event outcomes as well as missing data in this study setting. Sample size and power calculations involved when using these methods will be presented. Causal inference framework within the longitudinal study setting will be briefly introduced late in the course. SAS, a statistical software package, will be used in all presented examples and class notes. This course will not cover statistical theories of longitudinal data and survival analyses. It is an applied course of those two methodological approaches.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2180 and (BIOST 2049 or 2142); PLANS: EPIDEM-DPH; EPIDEM-PHD; EPIDEM-MPH; EPIDEM-MS

EPIDEM 2191 - ADVANCED THEORY AND METHODS FOR THE ANALYSIS OF EPIDEMIOLOGICAL DATA

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to advanced epidemiologic and statistical methods. The focus of the course is on the fundamental theoretical and applied aspects of using data to answer research questions. Students will be introduced to the causal inference framework and how it relates to standard (e.g., linear and logistic regression) and novel (e.g., inverse probability weighting, g computation, double robust) analytic methods. Students will learn how to use various machine learning (random forest, gradient boosting, support vector machines) approaches for causal effect estimation and predictive analytics. Student will learn how to apply these methods using R.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Pre-reqs: BIOST 2049 AND EPIDEM 2180 AND EPIDEM 2189

EPIDEM 2192 - CAUSAL INFERENCE IN EPIDEMIOLOGIC RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The focus of this course is on the fundamental theoretical and applied aspects of using data to attempt to answer causal questions in epidemiologic research. Students will be introduced to formal causal inference frameworks, including the concept of target trials, causal diagrams, and counterfactual theory. Using these frameworks, students will learn to articulate well-defined causal questions for point interventions and sustained treatment strategies, describe conditions sufficient for identifying causal effects, and apply appropriate data analyses for estimating causal effects.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2180 and 2189 and BIOST 2041 and (BIOST 2049 or 2142)

EPIDEM 2193 - MACHINE LEARNING IN EPIDEMIOLOGICAL RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Machine learning methods are a set of tools for analyzing epidemiologic data with complex interactions or high dimensions. This course focuses on application of supervised and unsupervised learning techniques used in Epidemiology. Sample topics include penalized approaches for regression, decision trees and random forests, dimension reduction, and clustering. The computing package R will be used in all examples and class notes. This class focuses on applications, ensuring that students can appropriately manipulate datasets, apply and interpret these methods. The class will be reading manuscripts using these methods to understand how and when they are used within epidemiology as well as to identify strengths, weaknesses and ethical issues in the techniques and the author's interpretation of them.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2180 and 2186 and 2189

EPIDEM 2210 - SPECIAL STUDIES - ESSAY

Minimum Credits: 1
Maximum Credits: 15
Research credits for master's essay.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: EPIDEM-MPH

EPIDEM 2213 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12
Properly qualified students may undertake special study or research which does not apply to the master's essay or doctoral dissertation. This study must be done with permission of the specific faculty member who will supervise the work.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis

EPIDEM 2214 - PUBLIC HEALTH INTERNSHIP

Minimum Credits: 1
Maximum Credits: 4
This internship provides an opportunity to gain valuable knowledge and experience that would not normally be available through coursework. Placements may be outside of the University of Pittsburgh (e.g., in health services organizations, clinics, health departments, community based organizations working with "at risk" populations) or within the University. Each specific placement is to be agreed upon by each student and his/her faculty advisor, based on the strengths, needs and career/academic goals of students. Internship sites should provide a minimum of 200 hours of public health oriented work (generally 20 hours/week for 10 weeks). Students are encouraged to pursue placements beyond the online list and to think creatively about the domestic and international possibilities. Students are encouraged, but not required, to develop their master's essay based on their internship experience.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis
Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041

EPIDEM 2215 - TEACHING PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide doctoral students with opportunities to develop practical skills in teaching and mentoring students taking epidemiology courses. As teaching assistants, students may lecture, grade homework and exams, lead review sessions, hold office hours or maintain course blackboard sites. They may also help plan, update or expand course syllabi or teaching materials. Course goals include improvement in oral and written communication skills and exposure to the process of planning and implementing a course.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

EPIDEM 2221 - GEOSPATIAL MAPPING AND SPATIAL ANALYSIS IN EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to provide a conceptual understanding of the field of environmental epidemiology and to provide the spatial statistical tools for geospatial analysis. The course will provide "hands on" training in software and tools for analysis of spatio-temporal variations in health and disease with respect to demographic, environmental, behavioral, socioeconomic, genetic, and infectious risk factors. Basic tutorials in Arc GIS (10.3) and Geoda freeware will be provided. There will be 7 assignments over the term and 1 final project. The course is meant for all interested master's and doctoral students who have taken an introduction to Biostatistics and Introduction to Epidemiology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BIOST 2041 and EPIDEM 2110

EPIDEM 2223 - INTRODUCTION TO ENVIRONMENTAL EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This is an introductory course in which we outline fundamental principles specific to environmental epidemiology as a subdiscipline of epidemiology. The evolution of environmental epidemiology studies, including refinement of exposure assessment and outcome measurements, will be provided. This course will provide understanding of routes of exposure to environmental contaminants, and how to quantify these exposures. Example reports of environmental epidemiology studies and cluster investigations from various government agencies, as well as peer reviewed literature, will be discussed. Publicly available datasets for both environmental agents as well as relevant health outcomes will be made available and discussed. Another topic will be the potential for exposure misclassification, including confounding social factors. Students will gain appreciation and understanding of how environmental agents contribute to disease and how epidemiologists study these associations in human populations. Students will begin to understand the benefits and disadvantages of relevant study designs, and will develop topical preliminary expertise on specific environmental agents.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or BIOST 2041)

EPIDEM 2230 - SECONDARY DATA ANALYSIS: A CAPSTONE COURSE

Minimum Credits: 2
Maximum Credits: 2
This course covers methods for obtaining and presenting data from existing sources. Classes will cover data management, effective practices for statistical programming when analyzing data, and presenting results of a research project in the context of large public-use datasets. Students will work in groups on a secondary analysis research project that will be presented in seminar format.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2180

EPIDEM 2250 - SEMINAR IN EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 1
Areas of current epidemiology interest in research are presented. Often a general theme such as epidemiology of aging, women's health issues, disorders of immunity, is chosen. All departmental majors are expected to take this course.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

EPIDEM 2260 - EPIDEMIOLOGICAL BASIS DISEASE CONTROL

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to gain understanding of the principles underlying disease prevention and develop the ability to apply these principles to the design, implementation, and evaluation of prevention interventions for chronic and infectious diseases. The first part of the course will be devoted to learning the principles of surveillance and risk assessment and their applications in epidemiologic practice, including prediction modeling. The second part will focus on application of observational data and efficacy and effectiveness studies to populations in the development of evidence-based practices. The third part will focus on the implementation and evaluation of prevention strategies for chronic and infectious diseases. Throughout the course, there will be an emphasis on the interaction of biologic and clinical information with epidemiologic data and analysis as well as the impact of prevention interventions on health policies and health equity.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2261 - APPLIED EPIDEMIOLOGY FIELD INVESTIGATION METHODS

Minimum Credits: 2
Maximum Credits: 2
This course introduces students to the methods of applied field epidemiology used in applied epidemiology settings such as federal, state, local and tribal government agencies. Upon completion of this course, students will be prepared to conduct urgent public health investigations and write reports for public consumption. This course will also introduce students to applied epidemiology topic areas and their respective analytic methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180; PLAN: EPIDEM - MS or MPH

EPIDEM 2310 - PSYCHIATRIC EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will review the classification systems, research methods, methodological issues in psychiatric epidemiology, and the distribution of common child, adolescent, and adult psychiatric disorders.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2340 - PEDIATRIC EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will focus on epidemiologic approaches to the study of disorders that occur during childhood and will provide an overview of common physical and psychiatric childhood disorders. In addition to describing the epidemiology of the disorders, consideration will be given to the risk factors, research methods, and methodological issues in pediatric epidemiology.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2400 - PSYCHOSOCIAL FACTORS IN DISEASE

Minimum Credits: 2
Maximum Credits: 2
This course focuses on psychosocial and behavioral factors that influence the development and course of physical disease. Some of these factors can be modified, so identification can lead to improved health. This course is directed towards students who want to learn about the most common psychosocial factors implicated in disease, how they are measured, psychometric issues, and how to incorporate them into studies of disease and physical health. Students will also learn how to analyze and evaluate the strengths and limitations of studies that include psychosocial factors.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2450 - EPIDEMIOLOGY WITH ELECTRONIC HEALTH CARE DATA

Minimum Credits: 2
Maximum Credits: 2
This course focuses on the application of epidemiologic principles and methods to electronically stored data originating from the documented interactions of individuals with health care delivery organizations. Such data are primarily drawn from electronic health records (EHR) and insurance claims. EHRs and insurance claims are important data sources for epidemiologic research on diagnosis, treatment, and outcomes. The course will address common methodological issues in epidemiologic analyses of EHR and claims datasets. Topics to be covered include study designs using electronic health care data, validation of case definitions based on diagnosis code algorithms, data missingness, linking datasets across data sources, etc. A growing interest in this field has emerged over the last decade with the proliferation of EHRs across the United States, combined with a growing realization of the importance of real-world data for understanding disease burden and the effects of treatments in non-clinical trial populations. The course will provide valuable knowledge for careers in several job sectors such as traditional academia, health care organizations, government organizations such as the Food & Drug Administration, pharmaceutical & medical device companies, departments of public health, and health care consulting firms.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2600 - INTRODUCTION TO MOLECULAR EPIDEMIOLOGY

Minimum Credits: 3
Maximum Credits: 3
To provide students with an introduction to the key concepts in genetics and molecular biology, and the diverse ways they are used to solve practical problems in the epidemiology of disease and risk identification. This course will deliver the working knowledge of genetics and molecular biology necessary for critical assessment of molecular epidemiological studies. It will provide suitable preparation for more advanced and specialized study in molecular epidemiology. The student will develop familiarity with the ways molecular epidemiology is used to determine susceptibility to disease and response to interventions. The main topics covered are: genetic susceptibility, the use of biomarkers, and molecular association studies.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2602 - APPLICATION OF MOLECULAR BIOMARKERS IN EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will advance the learning of students interested in molecular epidemiology by teaching practical aspects of measuring, quantifying and modeling levels of RNA and protein in human biological specimens (blood, tissue,etc). Some topics will include: selecting and validating biomarkers of RNA and protein for application in epidemiologic study design, candidate molecule vs. omics (high-dimensional) approaches, basic know-how in the design and execution of bioasssays, and statistical issues in biomarker data analysis. Students will observe the work of a molecular epidemiology laboratory, and have opportunities for hands-on learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PREQ: Undergraduate Biology, more than one EPIDEM course, one BIOST course, and EPIDEM 2600.

EPIDEM 2670 - INJURY EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide an introduction to and understanding of the epidemiology of injuries. The class will review the fundamentals underlying injury data and the methods used in injury research studies. Research in major injury topics; motor vehicle crash, violence, sports injury, and other topics will be discussed in depth. Through instruction and practice with data, participants will become familiar with the importance of injury as a public health problem, the strengths and weaknesses of injury data sources and injury surveillance systems, and injury research methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2709 - EPIDEMIOLOGY OF WOMEN'S HEALTH

Minimum Credits: 1
Maximum Credits: 1
This overview course on women's health is designed to introduce the student to a variety of health conditions that are unique to, more common in, or more severe in women. We present these features within a health equity lens. A range of health topics will be covered including reproductive outcomes, maternal outcomes, cardiovascular disease, depression, and ageing. This course will also introduce to students the concept of life course epidemiology and its implementation in women's health research. A life course approach assesses the biological and social factors at each stage of life that affect health during adulthood. This course will review study designs appropriate for a variety of life course research questions related to women's health and health equity.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2719 - REPRODUCTIVE EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course first presents a solid background of critical approaches and methodologic challenges unique to reproductive epidemiology, an overview of maternal physiology, equity in sexual and reproductive health, and availability and application of data sources and dashboards for the study of reproductive epidemiology. The course subsequently covers special topics in gynecologic and sexual health and prenatal health including sexually transmitted infections and infertility, contraception, intimate partner violence and reproductive coercion, preterm birth, infecti

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or BIOST 2041)

EPIDEM 2725 - REPRODUCTIVE DEVELOPMENT FROM MODEL ORGANISMS TO HUMANS

Minimum Credits: 2
Maximum Credits: 2
This course focuses on the molecular aspects of the transition from gamete to a reproductive organism. The course progresses through the building of germ cells, fertilization and stem cell participation to sex determination, gonad morphogenesis, puberty, menopause and pregnancy. This course highlights both human and model organisms to bring together diverse aspects of the cell and developmental biology of reproductive tissues and their impact on disease pathology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: PUBHLT 2015 or EPIDEM 2004

EPIDEM 2850 - PHARMACOEPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to provide an introduction to the field of pharmacoepidemiology, which uses epidemiologic methods to examine the benefits or risk of medications in the population. This course will: explain what pharmacoepidemiology is and what types of study designs are used within this methodology, discuss the roles that pharmacoepidemiology studies have regarding drug use and health outcomes; describe the threats to validity that are possible in pharmacoepidemiologic studies and the variety of solutions available to avert or control for these threats. This information will prepare students to both interpret and critique, in writing and through presentations, studies from the pharmacoepidemiology literature.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

EPIDEM 2900 - ADVANCED EPIDEMIOLOGY OF AGING

Minimum Credits: 2
Maximum Credits: 2
This is an advanced course targeted towards Epidemiology PhD students. The purpose of this course is to understand in depth the current epidemiologic research findings regarding common health conditions and geriatric syndromes in the aging population. The course will focus on the common age related processes and chronic health conditions that contribute to disability and frailty and on enhancing successful aging and preventing disability. Advanced research methods will be reviewed as part of each class.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110 and 2981 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2921 - GRANT WRITING

Minimum Credits: 3
Maximum Credits: 3
During this course, students will develop a grant proposal on a research topic that should be their dissertation topic. The proposal will be written in the format of the National Institutes of Health (NIH) R01 grant application. The application will include specific aims and a research plan that includes significance, innovation, and approach. Students will participate in small-group discussions to provide and receive peer feedback. Students must receive approval to enroll in the course from their academic advisor or dissertation chair and the course instructor.
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: EPIDEM 2110 and 2180 and 2183. RECOMMENDED: EPIDEM 2160 and 2170.

EPIDEM 2923 - SCIENTIFIC WRITING IN EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
The focus of this course will be learning how to organize, write, and review a primary research paper with an emphasis on writing skills through hands-on experience. Through a combination of in-class lectures and independent work, the students will learn how to organize and write a publishable research paper. By the end of the course, students will have a completed manuscript suitable for submission and peer review. Students will become aware of the common problems associated with each section including Introduction, Methods, Results, and Discussion. Students will learn about current issues surrounding the ethics of publication and authorship. Students will review each others' completed manuscripts and discuss the critiques in the format of a journal editorial review board. Students are expected to bring a work in progress for this course. If not actively working on a manuscript, students should seek a project through their advisor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EPIDEM 2950 - EPIDEMIOLOGY OF AGING WORKSHOP

Minimum Credits: 1
Maximum Credits: 1
The workshops are designed as practical professional skill development to supplement to the additional coursework for the Epidemiology of Aging trainees and students. The workshop will include sessions on: presentations by the students from their research, journal article reviews, longitudinal analyses techniques, and professional skills sessions. The presentation sessions provide an opportunity for students to present and refine their interim research and data analyses by obtaining feedback from peers, faculty and mentors on their work in progress. Journal article review sessions will provide an opportunity for students to identify and share current articles relevant to the epidemiology of aging and develop proficiency in the critical review of scientific literature. Emphasis will be placed on understanding emerging and novel methods in the field, particularly longitudinal statistical analyses techniques (e.g. handling missing data longitudinally; interpreting changes in slopes over time; joint modeling). A faculty member will help student leaders select articles (distributed before the meeting) and will work with students to encourage questions and discussion among the group. Professional skill sessions will vary by semester and cover topics such as post-doctoral career development, grant and professional medical writing, and longitudinal data analysis.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad HSU Basis

EPIDEM 2981 - EPIDEMIOLOGY OF AGING-METHODS

Minimum Credits: 2
Maximum Credits: 2
This course will introduce the methodological aspects of epidemiologic research in the field of aging and to critically evaluate research in older adults. The course will focus on: demography, study design, sampling, recruitment, retention, measurement of key variables and special populations. Students will write a critical review of a published article and comment on proposed future directions for epidemiologic studies addressing these questions in older populations. Throughout the course, a Problem Solving Learning Method will be applied by prompting the students to solve pragmatic issues. Examples include: How to measure a specific outcome? What type of chronic health conditions may be related to the research question? How to operationalize specific measures of interest (e.g.: how to create a composite score for co-morbidity assessment?). The course has been formulated to provide the students with the building blocks of the epidemiological study of aging. By the end of the course, the students will be able to critically evaluate various components of a study to further address the research questions in aging populations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110

EPIDEM 3100 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Research and dissertation for the doctoral degree after passing preliminary exams.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: EPIDEM-PHD

EPIDEM 3140 - TARGET TRIAL EMULATION

Minimum Credits: 2
Maximum Credits: 2
For many types of public health and medical decision-making, we rely on analysis of observational data in order to inform the effects of treatment strategies or interventions. The target trial framework provides a rigorous and grounded guide for such analyses, by encouraging researchers to specify the protocol of the hypothetical randomized trial that would have answered the question of interest and then emulating that protocol in how available data are analyzed. This course introduces the target trial framework. Through readings, discussions, guided exercises, and development of the students' own research ideas, students will understand the strengths and limits of the target trial framework and put the framework into practice. Students must either have taken EPIDEM2192 previously or be concurrently enrolled in EPIDEM2192. The course is designed for students in the School of Public Health who are in the planning phase of proposing an analysis to emulate a target trial using data available to the student. The student must either already have access to their data source or have detailed knowledge of the data source. Advisor permission is required to enroll to ensure the student meets these requisites.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2192

EPIDEM 3183 - READING, ANALYZING, AND INTERPRETING THE PUBLIC HEALTH AND MEDICAL LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course provides the opportunity to analyze, interpret and critique original research articles. Topics covered include types of review articles, library searches and bibliographic database development, assessing study validity, subject selection in reference to the target population, bias, confounding, appropriateness of statistical analyses and results presentation, and interpretation of findings with consideration for study limitations. The course also includes detailed instructions on how to conduct a targeted systematic review. Additionally, students will be introduced to meta-analysis methodology and learn how to judge when a meta-analysis is and is not appropriate. Assignments consist of oral and written reviews of published papers, a targeted systematic literature review on a topic chosen by the student that follows published reporting guidelines, and peer editing. Discussions and small group work are used to apply concepts covered in lectures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180 and BIOST 2041 and (BIOST 2049 or 2142), or equivalent; PLAN: EPIDEM-DPH or EPIDEM-PHD

Experiential Learning - ARTSC

EXLA 1990 - UNDERGRADUATE SUMMER RESEARCH

Minimum Credits: 1

Faculty Development

FACDEV 2200 - PRACTICUM ON UNIVERSITY TEACHING

Minimum Credits: 1
Maximum Credits: 3
This course in university teaching is designed for people who are teaching independently for the first time, or who have the flexibility in a recitation to design course materials and teach subject matter. It features the application of instructional principles to course development and materials.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

Family Medicine

FM 5316 - FAMILY MEDICINE CLERKSHIP

Minimum Credits: 0
Maximum Credits: 0
Family medicine clerkship is a four week experience in primary care discipline that deals with comprehensive care of individuals and families with special focus on preventive medicine, addressing psychological and social determinants and consequences of illness. Clerkship has five goals: 1) improve and evaluate student clinical skills; 2) provide students with fundamental knowledge of diagnosis and management of common problems; 3) provide rational and scientific approach to preventive medicine; 4) learn unique aspects of family medical care; 5) economic influences of health care delivery and care of patient.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

FM 5317 - FAMILY MEDICINE CLERKSHIP 3RC

Minimum Credits: 0
Maximum Credits: 0
The Family Medicine Clerkship is a 4-week rotation that encompasses the comprehensive and longitudinal care of patients with a special emphasis on care of individuals in the context of families and communities.
Academic Career: Medical School

Course Component: Clinical
Grade Component: H/HS/S/LS/U

FM 5401 - FAMILY MEDICINE ACTING INTERN

Minimum Credits: 0
Maximum Credits: 0
Four week experience which fulfills the acting internship requirement in which students participate in a family practice teaching service at the level of a first year resident under direct supervision of senior residents and attending physicians. Students are responsible for initial patient evaluation and implementation of care, including writing orders and following up on evaluations. Students participate in night call and weekend coverage as well as all conferences. This is primarily an inpatient experience.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5406 - EXTRAMURAL ACTING INTERNSHIP

Minimum Credits: 0
Maximum Credits: 0
Students will register for this course when participating in a family medicine acting internship at an institution outside of the university of Pittsburgh school of medicine. This experience will not fulfill the required acting internship experience to meet graduation requirements.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5420 - INDIAN HEALTH SERVICE

Minimum Credits: 0
Maximum Credits: 0
This clerkship is offered at hospitals on the Navajo and other Indian reservations. Each student participates in a project, using clinical epidemiology or health survey techniques. Students may also have some clinical experience at hospitals or clinics; and opportunities to observe various aspects of the IHS field program. Students live in government quarters and work under the direct supervision of us public health service physicians. Overall coordination and research supervision is provided by clinical epidemiology and preventive medicine faculty.
Academic Career: Medical School
Course Component: Independent Study
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5422 - 2-WEEK INTEGRATIVE MEDICINE ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
UPSOM has offered an integrative medicine elective for medical students for 20+ years. Students work with Dr's. Michelle Thompson and Ronald Glick, in their practices. Dr. Thompson is the Medical Director for the UPMC Lifestyle Medicine Program, is on the faculty of the Center for Mind-Body Medicine, and sees patients for integrative holistically oriented primary care at Hermitage Community Medicine, in Hermitage PA. Dr. Glick is the Medical Director of the Center for Integrative Medicine, is trained in psychiatry and physical medicine and rehabilitation, and sees patients for integrative medicine consultations for mental health and pain conditions that have not responded to conservative approaches. Additionally, students are exposed to a broad range of complementary and alternative medicine (CAM) modalities, with the opportunity to shadow practitioners of acupuncture, various forms of bodywork, integrative and pelvic floor physical therapy, and nutritional experts. Students spend time at the Center for Integrative Medicine at UPMC Shadyside and at Hermitage Community Medicine, which is a 1 hour 15 min drive. Monday and Tuesday with Dr. Thompson is via telemedicine, which students can do from home. Wednesday is in office, but can be done in reverse technology where the learner is not onsite if transportation is an issue and

they follow virtually while Dr Thompson is in person. Commonly, there is an opportunity to attend a virtual class or "group medical visit" highlighting mind-body medicine, weight management, integrative and lifestyle changes for individuals with various health conditions. Time is set aside to allow for independent reading of pertinent articles and texts, exploration of internet-based resources, and viewing educational videos. Informal case-oriented discussions and didactics occurs through the week. There is at least 1 formal didactic session weekly on an integrative health topic of interest. Since this is a 2-week option, the goal will be getting a taste of Integrative Medicine and there will be no presentation requirement.
Academic Career: Medical School
Course Component: Clinical
Grade Component: S/U Basis

FM 5448 - COMMUNITY BASED FAMILY CENTERED MATERNITY CARE

Minimum Credits: 0
Maximum Credits: 0
This elective is intended to offer medical students exposure to a wide variety of Family Centered Maternity Care models through a series of inpatient and outpatient clinical experiences including: 1) INPATIENT AND OUTPATIENT OBSTETRICAL CARE: Routine prenatal care Routine deliveries Post-partum care (4th trimester care) Complications in prenatal and obstetrical care Interconception care (ICC) Women's Health (Contraception & LARC procedures) ALSO (Advanced Life Support in Obstetrics) hands-on training Multi-team based obstetrical care Centering Pregnancy group visits Contact with newborn and children
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5450 - COMMUNITY FAMILY MEDICINE

Minimum Credits: 0
Maximum Credits: 0
This elective is intended to offer medical students opportunity to experience family medicine in a remote community setting which is realistic to how family physicians practice. The student will focus on developing the skills necessary to evaluate and treat patients in a community office setting. The student will participate in a SWPA AHEC community or practice project during the elective. The student will choose one SWPA AHEC family practice site for the duration of the elective. The SWPA AHEC preceptor will be responsible for clinical evaluation of the student.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5455 - PRIMARY CARE SPORTS MEDICINE

Minimum Credits: 0
Maximum Credits: 0
This four-week elective is for the student who is interested in learning more about sports medicine. The musculoskeletal system, its exam and their treatment. Students will be ex posed to a variety of sports/musculoskeletal injuries in a multi-provider outpatient sports medicine team approach. The course objectives are: to improve the student's musculoskeletal system exam skills; to assess and manage the various musculoskeletal injuries encountered frequently in a sports medicine/musculoskeletal outpatient setting; to develop an appreciation of the roles of surgeons.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5456 - EVIDENCE-BASED MEDICINE ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
his elective course will challenge future physicians to develop and strengthen their information mastery skills through discussion and application of evidence-based medicine (EBM). Evidence-based medicine is defined as the conscientious, explicit, and judicious use of current best evidence in making decisions about the care of individual patients. EBM requires healthcare professionals to stay up to date with current literature, aids in effective communication across the healthcare team, and makes best use of information alongside specific patient factors. EBM does NOT mean something is in a guideline or has been shown in one trial. Rather, EBM is a critical appraisal of these sources to examine any nuances and how they can influence single patients and not populations. This course is virtual and allows for flexibility with student's schedules. Students will participate in several topic discussions about EBM principles, lead critical appraisal of articles, and write an article reviewing a recently published study. This course may be taken by students with any future specialty interests to improve their diligence in practicing EBM.
Academic Career: Medical School
Course Component: Seminar
Grade Component: S/U Basis

FM 5460 - FAMILY PRACTICE

Minimum Credits: 0
Maximum Credits: 0
Clinical experience, intensive exposure to comprehensive primary care. Multiple sites, general association with community hospitals, family practice residency program. 50-100% Clinical ambulatory, variable inpatient. Emphasis on development of problem-oriented interview and exam, formulation of cost-effective diagnostic approach, and establishment of comprehensive management plans. Knowledge of diagnostic and management strategy, presenting symptoms and chronic problems in office practice stressed.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5461 - EXTRAMURAL FAMILY PRACTICE

Minimum Credits: 0
Maximum Credits: 0
Clinical experience, intensive exposure to comprehensive primary care in primarily outpatient office settings. These family practice experiences will take place in community settings or medical schools away from the university of Pittsburgh but within the United States.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5462 - COMBINED FAMILY MEDICINE AND FAMILY PSYCHIATRY

Minimum Credits: 0
Maximum Credits: 0
This four-week elective focuses on psychiatric and general medical problems in a variety of patients. Student will work on the consultation/liaison service at St. Margaret's Hospital where the student will respond to requests from physicians for psychiatric evaluation of patients on inpatient units. The student conducts the clinical evaluation, investigates any ward management difficulties, assesses the role of the patients family in the clinical problem, makes treatment recommendations and when appropriate does follow up during the patient's hospital stay. The multi disciplinary team on the service attempts to integrate the biological with the psychosocial perspective to achieve a comprehensive view of patient care. Students will participate in family medicine case conferences, attend outpatient experiences at primary care clinics, participate in palliative care interventions and work on the medical care of the psychiatry patient (MCPP) service at WPIC. Learning opportunities include: supervised clinical assessments; hospital rounds; case conferences and seminars. This elective can prepare a student for combined family medicine/psychiatry residency programs.
Academic Career: Medical School
Course Component: Clinical

Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5465 - INTEGRATIVE MEDICINE

Minimum Credits: 0
Maximum Credits: 0
This elective is designed to give students a broad exposure to complementary & alternative medicine (cam) modalities & a more in-depth exposure to somatic oriented approaches and pain management. Students will be exposed to practitioners and physicians in clinical settings covering disciplines including: acupuncture, chiropractic, osteopathic manipulative treatment, integrative medicine, integrative pain management and mind-body approaches. Students are expected to pick one clinical problem and explore the evidence-basis for cam modalities that may offer benefit in treatment.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5468 - 2-WEEK LIFESTYLE MEDICINE

Minimum Credits: 0
Maximum Credits: 0
Implementation of the 6 pillars of Lifestyle medicine (sleep, exercise, nutrition, stress management, substance use, connection with others) in a primary care setting, or as the basis of any medical specialty. This elective will be primarily a clinical experience under the leadership of Lifestyle Medicine Certified Physicians. There will be an opportunity to sit in on group medical visits. There will also be a small amount of reading and didactic experiences. We will discuss how Lifestyle Medicine can be used for prevention along with reversal of disease. The goal of the two-week option is for students to get a taste for the practice of Lifestyle Medicine.
Academic Career: Medical School
Course Component: Clinical
Grade Component: S/U Basis

FM 5470 - PRACTICE-BASED PHARMACOTHERAPY

Minimum Credits: 0
Maximum Credits: 0
This is a 4-week elective where students will participate in a variety of activities (direct patient care, group/individual case-based discussions, chart reviews, and projects to improve skills in prescribing and management of medications. Special emphasis will be placed on obtaining a thorough medication and history and using evidence-based drug information databases. The student will learn rational prescribing strategies based on cost, formulary guidelines, effectiveness and individual patient characteristics. Contact will be with clinical pharmacists and family physicians.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5471 - INTERPROFESSIONAL PREVENTATIVE MEDICINE ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
This rotation takes place at the Pitt Vaccination and Health Connection Hub on the University of Pittsburgh's Main Campus. Students will have the opportunity to interact with patients from the Pitt Community including faculty, staff, students, and community members through vaccination education, vaccine administration, and wellness screenings. In addition, students will contribute to protocols, policies, and quality improvement projects surrounding vaccination of adults and children over the age of 3. Students will assist with travel health consultations by developing treatment plans focused on vaccinations and appropriate prescription and over the counter medications. Travel consultations are done in collaboration with pharmacists and physicians at the Hub. Periodically, the Pitt Vaccination and Health Connection Hub provides "pop up" vaccination events in the community. Students on this rotation will contribute to the planning and

execution of these events including training volunteers, developing educational materials, and collaborating with site personnel. The Hub is an interprofessional practice with students from all 6 schools of the health sciences at Pitt including: School of Nursing, School of Pharmacy, School of Medicine, School of Dental Medicine, School of Health and Rehab Sciences, and the School of Public Health. Students will learn to work effectively with each profession and develop an understanding of each person's role on the health care team. Students will also have the opportunity to teach other students from each of the health professions about various topics and skills based on their experience. The teaching philosophy at the Hub is to foster independent critical thinking and judgment through encouraging students to lead the patient care process with patients with clinician oversight. Additionally for discussions, simulation, presentations, role play, and small group work, whenever possible interprofessionalism is encouraged. The Hub teaching staff seek to pair and group students across disciplines to learn alongside and from one another through the planned learning activities and patient care.
Academic Career: Medical School
Course Component: Clinical
Grade Component: S/U Basis

FM 5485 - CULTURAL COMPETENCY

Minimum Credits: 0
Maximum Credits: 0
Course objectives: to create better understanding of different health beliefs in different culture, resulting in students with facility in operating in a multicultural environment; foster an understanding of the challenges to physicians and the health care system of varying cultural beliefs and practices; improve the recognition of health beliefs and practice as they present in the clinical setting. The medical student will be introduced to a variety of cultural issues as they relate to medical care. Directed readings will be assigned to expose students to major health beliefs, disparities, challenges and practices of members of a variety of culture groups, including native Americans, African Americans, Arab Americans, eastern European immigrants, Latino Americans, and Asian Americans. Students will spend time with UPMC medical translators, attending to inpatients and outpatients, both in clinics and on house calls, learning both from the medical reasons for the patient seeking care, and the background health belief. Students will also attend health education events as available in community settings, including steps to a healthy community programs, center for minority health programs, Jewish community center programs, and other opportunities. The student will be expected to do a complete family health belief study on a selected patient's family, including recommendations for improvement of the quality of their health experience. Students will have a weekly meeting with the course director to discuss suggested readings and how the content applied to the clinical experiences.

FM 5486 - MASS VACCINE ELECTIVE

Minimum Credits: 0
Maximum Credits: 0
This rotation takes place at the Pitt Vaccination and Health Connection Hub on the University of Pittsburgh's Main Campus. Each fall, the faculty, staff, and students at The Hub are responsible for conducting mass vaccination events for the University of Pittsburgh community. During this two-week rotation, students will have the opportunity to work with experts in the field of mass vaccination and public health. They will help with the ongoing design and implementation of mass vaccination events at locations such as the Peterson Event Center, The Pitt Student Union, and the University of Pittsburgh Community Engagement Centers. Students will help to lead Health Sciences nights at The Hub where they will educate and vaccinate colleagues from the Health Sciences schools. Students on this rotation will also be responsible for helping to recruit volunteers, train colleagues from other allied health professions, and discuss quality improvement related to mass vaccination events. The Hub is an interprofessional practice with students from all 6 schools of the health sciences at Pitt including: School of Nursing, School of Pharmacy, School of Medicine, School of Dental Medicine, School of Health and Rehab Sciences, and the School of Public Health. Students will learn to work effectively with each profession and develop an understanding of each person's role on the health care team. Students will also have the opportunity to teach other students from each of the health professions about various topics and skills based on their experience. The teaching philosophy at the Hub is to foster independent critical thinking and judgment through encouraging students to lead the patient care process with patients with clinician oversight. Additionally for discussions, simulation, presentations, role play, and small group work, whenever possible interprofessionalism is encouraged. The Hub teaching staff seek to pair and group students across disciplines to learn alongside and from one another through the planned learning activities and patient care.

FM 5500 - INTERNATIONAL FAMILY MEDICINE

Minimum Credits: 0
Maximum Credits: 0
This elective is intended to give some structure and guide lines for students wishing to experience medical care in other countries. Although the department has some contacts in other countries, students are strongly encouraged to pursue their own interests and contacts. Students should focus on the practice of medicine in other countries as well as the epidemiology and public health issues within the country.

FM 5505 - FAMILY MEDICINE IN HONDURAS

Minimum Credits: 0
Maximum Credits: 0
This is a four week elective to expose the student to a global health experience in a community based project working with shoulder to shoulder San Jose in Honduras. It will consist of 2 weeks in Pittsburgh and 2 weeks in San Jose del Negrito, Honduras, under the direction of shoulder to shoulder Pittsburgh and the UPMC family medicine global health (GH) team. In select situations a student with fluency in Spanish and prior international travel experience may construct a four week rotation entirely in Honduras. Each student will have an opportunity to practice clinical medicine and preventative care in a low resource setting in rural Honduras. There will be structured educational objectives in public health, tropical medicine and community oriented primary care. The team traveling to San Jose will work with the local nurse and physician in the local clinic setting as well as the various community projects. Each student will be active not only in the clinic setting but in the wider community as the project focuses on community development and community health.

Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5815 - BIOETHICS CONFERENCE AND READINGS IN BIOETHICS AND FAMILY MEDICINE

Minimum Credits: 0
Maximum Credits: 0
The student will attend at his/her own expense, two (2) weeks of conference (s) in bioethics that is accredited (one week option can be discussed). The rotation is offered for four (4) weeks of credit. Independent readings, writings and discussion with Dr. Zimmerman or other faculty of the readings will be needed to complete the course. The student is encouraged to attend any lectures by the center for bioethics and health law. Objectives: use various ethical theories to analyze bioethical issues related to family medicine; understand perspectives on bioethical issues at the beginning of life and/or the end of life; interact with other professionals from a variety of backgrounds on bioethical issues; identify resources for understanding bioethical issues.

Course Attributes: School of Medicine Year 4

FM 5910 - LEADERSHIP/MANAGEMENT/ADMINISTRATION

Minimum Credits: 0
Maximum Credits: 0
This elective will offer the opportunity to develop a wide view of medical leadership and management. Through a series of directed readings, guided experiences, and a "mini-project," students will extend their understanding of clinical managerial sciences: quality management and improvement; utilization management; the us health care system; cost benefit analysis and the distribution of the health care dollar; medical staff administration and function; managed care systems, incentives and trends; measuring physician performance; and introductory accounting and financial management concepts. The student will be evaluated by various faculty members and the course director based on oral examination of the knowledge of the readings, the "mini-project," and engagement in the topic.

Film and Media Studies

FMST 1898 - TELEVISION NEWS PRACTICUM: PITT TO THE POINT

Minimum Credits: 3
Maximum Credits: 3
Television News Practicum: Pitt to the Point is a hands-on course practicum that produces one live hour-long, television news/magazine program per week, incorporating every facet of broadcast television. The course incorporates news writing, feature writing, research, formatting, pre-production, live production, as well as public speaking and direct interaction with broadcast industry professionals. The course covers news, sports, entertainment, and politics across the University of Pittsburgh campuses, as well as the city of Pittsburgh. This is a production course and counts for a Category III for the Film and Media Studies major and minor. It is part of the Television and Broadcast Arts Certificate and the Media and Creative Industries certificate. The course may be taken a maximum of two times, but it can only count once towards Film and Media Studies major and minor and the Television and Broadcast Arts Certificate requirements.

FMST 2152 - FILM HISTORY/THEORY 2

Minimum Credits: 3
Maximum Credits: 3
This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g. Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

FMST 2153 - PROSEMINAR IN FILM AND MEDIA STUDIES

Minimum Credits: 1
Maximum Credits: 1
All students in the Film and Media Studies Ph.D. program are required to complete a one credit proseminar in film and media studies prior to taking their comprehensive examinations. Enrolled students attend a designated lecture by invited scholars, as well as an associated ninety-minute seminar conducted by a Film and Media Studies faculty member concerning the work of the speaker or the topic addressed. The faculty member conducting the seminar will typically choose pertinent readings to be completed prior to the lecture and seminar. The proseminar is usually offered twice a year: once during the fall term and once during the spring, with a lecture and its associated seminar scheduled each term. Invited scholars may or may not participate in the seminar meetings. Dates and times of visiting speakers and the associated seminars will be announced well in advance so that students may plan their schedules accordingly. A student in the program may repeat the proseminar for up to three credits. The proseminar in film and media studies seeks to expand and enhance our graduate students' experience of the critical exchange of ideas, by involving them more fully in the contemporary research being conducted by film and media scholars from around the world.

FMST 2250 - SIEGFRIED KRACAUER AND THE ORIGINS/FUTURES OF FILM AND MEDIA STUDIES

Minimum Credits: 3
Maximum Credits: 3
Siegfried Kracauer (1889-1966) is now widely regarded as one of the most important and innovative theorists of film and media studies. But this was not always the case, as he was overshadowed for decades by his more famous German Jewish contemporaries Theodor Adorno and Walter Benjamin. What Kracauer offers us now is a unique bridge between the classical origins of film and media theory in the 1930s-1960s and the possible futures for those theories today. Kracauer's remarkable career included fleeing Hitler's Europe and eventually arriving in New York to establish himself as a fellow traveler with major intellectual figures such as the film critic Robert Warshow, the art historian Meyer Schapiro, and the political theorist Hannah Arendt. In this milieu, Kracauer's work blazed trails across topics as varied as spectatorship, experience, genre, aesthetics, history, and realism, as well as media forms as diverse as film noir, fascist propaganda, animation, documentary, and photography. In this seminar, we will explore Kracauer's texts and contexts in order to grapple with urgent questions in film and media studies now.

FMST 2327 - NEW EAST SYMPOSIUM

Minimum Credits: 3
Maximum Credits: 3
Participants collaborate over four months to stage a post-semester, multi-day media event with two simultaneous components. First, the Cinema component trains participants in film rights acquisition, event introductions, screenings, and discussions; film writing (program notes, press releases, poster design); social-media dissemination; and logistics. Second, the Academic component, focusing on the REEES region (Russia, East Europe, and Eurasia), combines relevant theory assignments with a CFP (selection, shaping, implementation) to design the event's two research panels, comprising national and international presenters, supported in part by major partner universities. By the semester's end, participants are trained to organize an intellectual multi-day event in potential collaboration with Pittsburgh's annual cycle of three local festivals (New East in May; ScreenShot Asia in October; Europe's Moving Images in February). Weekly readings in cultural politics and relevant artistic texts are part of the seminar.

FMST 2416 - CINEMA AND TRAUMA

Minimum Credits: 3
Maximum Credits: 3
Trauma studies now stands at the forefront of contemporary cultural theory, straddling such disciplines as history, psychology, philosophy, and literary criticism. This seminar encourages graduate students to examine and contribute to the rapidly emerging sub-field of

cinema/trauma studies. We will focus on the two mid-twentieth century events that continue to anchor many definitions of historical trauma: the Holocaust and Hiroshima. What do films that address these events teach us about the politics and ethics of representing experiences often referred to as unrepresentable'? How does cinema force us to refigure debates about the "limits of representation" and the nature of "the event" itself? Is cinema an agent of memory or memory's eraser? A broad range of films will inform our discussion of such questions - documentary and fiction, tragedy and comedy, mass cultural successes and lesser-known art films or genre films, films from the past and present.

FMST 2420 - CINEMA AND COUNTER-HISTORY

Minimum Credits: 3
Maximum Credits: 3
This graduate course focuses on visual media's connection to historicizing. It is concerned with theoretical writings that can be understood as offering versions of the past that run counter to received perceptions about historical forms through visual media. The readings and the films pay specific attention to various, often conflicting, theories, forms, and styles to identify the philosophic, aesthetic, and political stakes in activating the past. Among the texts to be studied that are related to philosophies of history are those of Walter Benjamin, Michel Foucault, Gilles Deleuze, Jacques Rancire, Hayden White, Carlo Ginzburg, and Fredric Jameson as well texts on Andr Bazin, Jean-Luc Godard. Philip Rosen, Mary Ann Doane, Robert Rosenstone, and Vivian Sobchack. The films proposed for screening are Cabiria, Abel Gance's Napoleon, Scipione Africanus, Roberto Rossellini's the Rise to Power of Louis XIV, Pasolini's Mamma Roma, Kubrick's Paths of Glory, Carry on up the Khyber, Monty Python and the Holy Grail, The Camp at Thiaroye, Hyenas, Morfia, a History of Violence, the White Ribbon, and Il Divo.

FMST 2421 - GLOBAL FILM STARDOM

Minimum Credits: 3
Maximum Credits: 3
Historically, film stardom was examined from an American perspective (where it originated in Hollywood in the first decades of the last century), and theories of stardom emerged from an implicitly Hollywood-based understanding of cinematic fame. Instead, while not ignoring the American cinema, this course will take a global perspective on stardom, in terms of performers, films, and theories. Our approach to stardom will be a combination of the historical, the theoretical, and the textual. This means that in addition to studying individual stars, we will also 1) consider the phenomenon of stardom in terms of its origins and the cultural and national institutional conditions that support it, 2) analyze stardom as a public phenomenon to be understood in the context of specific cultures and audiences, 3) discuss various theories of stardom, celebrity, and public fame, 4) consider the manner in which issues of gender and sexuality impact notions of stardom, and 5) consider the relationship between stardom and spectator subjectivity. Although the course will be focused on cinema stardom, we will also briefly consider theoretical overlaps with the broader category of celebrity studies. In general, when we look at individual stars in the course, we will consider their broad "star text" which involves the interrelationship of screen roles, off-screen information, publicity material, and cultural context. Questions raised will include: what constitutes a "star text" in different historical contexts and ideas about the public and the private? What specifically do the media of photography and film bring to public fame? How does stardom presume and shape norms of identity pertaining to gender, sexuality, social class, race/ethnicity, bodily norms, and other cultural values? What does stardom mean in old and new transnational contexts? What is the relation between stardom, nation, and politics?

FMST 2485 - FILM AND ETHNOGRAPHY

Minimum Credits: 3
Maximum Credits: 3
This course will engage the visual and narrative strategies of the "ethnographic imagination" addressing issues of cultural representation, truth, visuality, and epistemological implications of how anthropologists and documentary filmmakers construct other cultures. We will start with the history of ethnographic cinema so as to stage a broader inquiry into forms of popular and everyday ethnography that have accompanied anthropological practice since its inception. In addition to problematizing distinctions such as science and entertainment, authenticity and hybridity, non-fiction and fiction, and self and other.

FMST 2508 - TELEVISION STUDIES

Minimum Credits: 3
Maximum Credits: 3
This course will examine the emergence of television studies out of film studies during the 1980s and beyond. We will read key texts and examine approaches that have characterized this new orientation to the study of television: theories of television spectatorship, program and audience history, genre studies, and others. There will be screenings of key texts that have been considered crucial to the development of these ideas. The main emphasis will be to distinguish the televisual from the cinematic.

FMST 2520 - FILM COMEDY

Minimum Credits: 3
Maximum Credits: 3
Since the earliest days of the cinema, film comedy has been one of the most profitable, prevalent and persistent genres-ranging from the primitive burlesques of Edison or Lumiere to the popular features of today. While comedy appeals to a viewer's sense of pleasure, it also addresses her intellect, for as Ousmane Sembene once said, comedy "makes people laugh but it also makes them think." That is precisely what we will do in this course: think through comedy. Here, it is interesting to note that, in 2010, the academic journal comic studies began

publication.

FMST 2524 - GENRE AND FILM MELODRAMA

Minimum Credits: 3
Maximum Credits: 3
Course will interrogate the cultural impact of melodrama through the media. We will explore the various expressions of melodrama in gothic narratives, the "woman's film", historical films, "tragic" melodramas, family melodramas, and TV docudramas. Topics addressed include questions about common sense/folklore and the nature of mass and popular cultural representation, the problematic nature of genre, the relation between melodrama, history, and the construction of narratives of national identity in relation to race, gender and sexuality.

FMST 2570 - KEY CONCEPTS IN NEW MEDIA

Minimum Credits: 3
Maximum Credits: 3
What exactly is "information"? What is an "interface"? What does it mean when we speak of a "media platform"? These terms and concepts form the backbone of the major theories and discourses in new media, which produce a rich vocabulary that has yet to be rigorously defined. This course aims to provide a theoretical map to navigate the rapidly expanding fields of media studies by critically interrogating a set of key concepts that have been extensively used to deal with the technologies, forms, materials and cultures of new media. We will discuss the meaning, usage, and genealogy of such concepts as "network," "cybernetics," "hardwire," "infrastructure," and "system," which have animated a wide range of researches and debates. By critically engaging with these key concepts, we hope to not only reconstitute a framework for theorizing contemporary media, but to explore the very notion of "media" as a discursive formation.

FMST 2662 - GENDER AND SEXUALITY IN ARAB FILM

Minimum Credits: 3
Maximum Credits: 3
This seminar pries open a window into the ways that gender and sexuality are understood, imagined, embodied, and practiced in the Arab-majority region. Rather than arriving at totalizing definitions, the seminar explores, through a transnational approach, how filmmakers from Arab-majority countries and their diasporas have adopted, throughout different periods, a multitude of approaches and strategies in tackling questions of gender and sexuality in realist, allegorical and experimental ways. We will unpack diverse film and video works to see how these filmmakers have responded to major political, social, and religious events and contexts, such as the Arab Spring and the Arab Israeli conflict.

Grade Component: Grad LG/SNC Basis

FMST 2760 - THEORY/TECH/MEDIA PLATO-GAMES

Minimum Credits: 3
Maximum Credits: 3
This course will examine a number of key theoretical debates in the history of visual and verbal media, beginning with the technology of writing itself and moving into the invention of the codex, the printing press, and 19th and 20th century forms of imagistic production. Of particular concern will be modes of competition and symbiosis among various technologies of representation at particular historical moments, such as the relations between speech and print, poetry and theater, painting and photography, and cinema and digital media. Although case studies will be drawn from a number of historical periods, special attention will be paid to the Renaissance and to recent decades, when media of all kinds have come under increasing technological and theoretical pressure. Students will have the opportunity to extend the seminar's concerns to their own areas of research.

Film Studies - Graduate Program

FILMG 2451 - FILM HISTORY/THEORY 1

Minimum Credits: 3
Maximum Credits: 3
This seminar will focus on the history and theory of cinema up to 1960, taking up such topics as: the origins of cinema; the development of narrative; the rise of Hollywood and its global appeal; national and international cinemas; the relation between film and the other arts; the coming of sound; arguments between realist and modernist movements; the avant-garde; and the technological and social history of cinema. These topics will be addressed through consideration of major film movements and significant films. Students will also be introduced to key theorists from this time, including Kuleshov, Vertov, Eisenstein, Balzs, Mnsterberg, Lindsay, Epstein, Kracauer, Benjamin, Arnheim, Bazin, and others.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FILMG 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3
Maximum Credits: 3
This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g., Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

FILMG 2905 - PROSEMINAR IN FILM AND MEDIA STUDIES

Minimum Credits: 1
Maximum Credits: 1
All students in the Ph.D. Film studies program are required to complete a one credit proseminar in film and media studies prior to taking their comprehensive examinations. Enrolled students attend a designated lecture by invited scholars, as well as an associated ninety-minute seminar conducted by a film studies faculty member concerning the work of the speaker or the topic addressed. The faculty member conducting the seminar will typically choose pertinent readings to be completed prior to the lecture and seminar. The proseminar is usually offered twice a year: once during the fall term and once during the spring, with a lecture and its associated seminar scheduled each term. Invited scholars may or may not participate in the seminar meetings. Dates and times of visiting speakers and the associated seminars will be announced well in advance so that students may plan their schedules accordingly. A student in the program may repeat the proseminar for up to three credits. The proseminar in film and media studies seeks to expand and enhance our graduate students' experience of the critical exchange of ideas, by involving them more fully in the contemporary research being conducted by film and media scholars from around the world.

Course Requirements: PLAN: Business Administration (EMBA-MBA)

BFAE 3001 - MICROECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This is a Ph.D. level course in microeconomics with special emphasis on business applications. We will use decision and game theoretic models to analyze the decision making process of business firms. Both the neoclassical and industrial organization theories of the firm will be analyzed. Special attention will be devoted to issues of incomplete information as they pertain to signaling in markets, to the internal organization of the firm and to models of regulation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

French

FR 0256 - WRITING FRENCH: ATELIER D'EXPRESSION ECRITE

Minimum Credits: 3
Maximum Credits: 3
Question: What do Samuel Becket, Edith Philips, and Oscar Wilde have in common? Answer: they are all exophonic writers, writers who wrote in languages that were not their native tongues. And they were all English-speakers who wrote some or most of the their work in French. You can too! What are the secrets to writing well in a language that is not your first? How can you leverage all you know about writing in your native language to improve your written expression in French? "Writing French: Atelier d'expression Ecrite" will teach you how to cultivate exophonic writing skills through a writing-as-process approach that is keyed to the challenges of foreign language composition. Class work and written assignments will include writing effective professional and personal correspondence, composing a CV or job resume, writing journal articles and critiques as well as creative pieces (such as fables, poems, or song lyrics for a Francophone audience). Through textual modeling, cooccurrence analysis (words that go "together"), and comparative vocabulary and grammar review, you will learn techniques needed to write in a variety of genres and to "sound French." Recommended prerequisite: FR 0004 or 0104 or 0021/0221 or 0027/0227 or 0055/0255.
Academic Career: Undergraduate

FR 2648 - CONTEMPORARY FRENCH CINEMA

Minimum Credits: 3
Maximum Credits: 3
This seminar examines the history of recent French cinema and/or emerging trends in contemporary French film production. Topics covered vary greatly with instructor and term.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

FR 2649 - CINEMA, TELEVISION, AND STREAMING PLATFORMS IN FRANCE

Minimum Credits: 3
Maximum Credits: 3
This seminar will examine the relationships between cinema, television, and platforms in France from StudioCanal's early efforts at making "Quality TV" series like ~Spiral~ and ~Mafiosa~ in the mid 2000s up to more recent collaborations between French studios and American streamers such as ~Lupin~ and ~Becoming Karl Lagerfeld.~ While there has been a wealth of research on global television in the age of streaming over the past several years, French television remains an underappreciated object of study both in France and the US. France's strong sense of cultural and linguistic identity as embodied in the protectionist regulations that historically structure its film and media industry make it one of the best case studies to investigate new struggles over localization and internationalization in the age of global streaming platforms. This course will introduce students to recent scholarship in streaming and television studies, especially subfields like platform studies, localization studies, and media industry studies, and it will help them apply these emerging approaches to the French context. It will enable students to understand the extent of which older debates about national and regional identity do and do not matter in the contemporary media ecology. While the producers and companies we will study come from France and often develop series in the French language, students from other departments are welcome to develop final research projects that draw on series, producers, companies, or platforms in other regional areas so long as their project is in dialogue with the research approaches studied in the seminar. The seminar will be taught in English, series will have English subtitles, and the vast majority of readings will be available in English.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FR 2703 - SEMINARS: TOPICS, GENRES, THEMES

Minimum Credits: 3
Maximum Credits: 3
These seminars are subject - rather than author - or century - specific. Examples might be Vichy France, Baroque religious poetry, or Don

Juan in French literature.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FR 2710 - INTRODUCTION TO LITERARY AND CULTURAL THEORY: LANGUAGE, GENDER, HISTORY

Minimum Credits: 3
Maximum Credits: 3
How do language arts and practices live within a social and cultural context? What is the place of the critic and scholar of literature in the Humanities both as researcher and pedagogue? What kind of theoretical, wider perspective, can help us frame the context and different meanings of a work of art? Focused on the relation between language arts and historicity, the class will address issues concerning representation, gender, politics, education, and the psychology of language rules and infractions. Among the thinkers helping us in our discussions, we will study pragmatic linguists such as Emile Benveniste, social critics of hegemony such as Antonio Gramsci, psychoanalytic approaches to language and power in Jacques Lacan and Franz Fanon, the social critique of literary elitism in Pierre Bourdieu, the redefinition of cultural agency in postcolonial critics such as Gayatri Spivak and Achille Mbembe, the contemporary critique of gendered discourse in the works of Judith Butler, Sara Ahmed and Paul Preciado, and the ecocriticism of Stephanie Posthumus. The class will be organized thematically rather than according to a strict chronology of different approaches. The professor will try to insert workshopping exercises in the classroom, in order to alleviate and share the burden of understanding the contemporary tenets of our field. Seminar taught in English.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Russian & East European Studies, West European Studies

FR 2715 - TOPICS IN LITERARY AND CULTURAL THEORY

Minimum Credits: 3
Maximum Credits: 3
In this course, students will examine a special topic in literary and cultural theory. The course may be organized around a given theoretician, a theoretical movement, or a problematic. Students are expected to have some background in literary and cultural theory.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FR 2761 - FRENCH STUDIES GENDER STUDIES

Minimum Credits: 3
Maximum Credits: 3
What does it mean to put gender/sexuality studies and French studies into productive dialogue? This course treats selected topics related to gender and sexuality in French/Francophone studies. Texts studied might include film, theater, news media, literature, autobiography, and others. Texts may come from a variety of time periods from the meddle ages to the twenty-first century. Gender/sexuality will be understood in a broad sense, including women/feminism, masculinity, queer and trans*.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Gender, Sexuality & Women's St

FR 2765 - COMPARATIVE FRANCOPHONE CULTURE

Minimum Credits: 3
Maximum Credits: 3
This seminar examines `Francophonie' through the juxtaposition of francophone cultural production and theory from different areas of the

world
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FR 2767 - AFRICAN FEMINISMS

Minimum Credits: 3
Maximum Credits: 3
"We Should All Be Feminist," claimed Nigerian writer and feminist activist Chimamanda Adichie, but what does it mean to be feminist in Africa? How do African writers, cultural critics, and activists relate to feminism? What does "gender" mean in this context? African feminism(s) is an interdisciplinary seminar at the intersection of Cultural studies and Gender and Women's studies that uses a transmedial approach to reflect on Feminism in Africa. The seminar centers African perspectives to investigate the socio-political and cultural implications of feminist discourse and practice on the African continent and its diaspora. We will engage theoretical texts, examine authors whose work embraces feminist politics, and discuss the praxis of feminist activism to contextualize feminist studies in Africa.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FR 2794 - LE FRANCAIS PEDAGOGIQUE

Minimum Credits: 1
Maximum Credits: 1
Qu'est-ce que la grammaire au juste ? Quelle place doit-elle occuper dans les cours de français langue seconde ou étrangère ? Comment trouver la clef secrète qui permettra de mieux connaître et, partant, de mieux expliquer aux apprenants, la logique cognitive de la grammaire française ? Comment déceler les façons dont l'interaction de la grammaire et du lexique représente, chez les francophones tant totaux que partiels, la construction des pensées et leurs mises en communication éventuelles ? Pour répondre à ces questions, ce cours offre une introduction à la grammaire dite "pédagogique" ou "didactique" aux étudiants de cycle supérieur qui enseignent le français à l'Université de Pittsburgh. Axant nos efforts sur les questions que nos élèves nous posent le plus souvent en classe, nous examinons de près: 1) les idées reçues sur la grammaire française; 2) le(s) piège(s) des règles "empiriques" ou "générales"; 3) les métaphores conceptuelles qui sous-tendent les structures lexico-grammaticales du français; et 4) la pragmatique et l'importance du contexte dans les échanges écrits et oraux.

FR 2795 - TEACHING IN THE MODERN LANGUAGES DEPARTMENT

Minimum Credits: 1
Maximum Credits: 1
This one-credit course in teaching will focus on issues related to advanced teaching in modern language courses that integrate language and disciplinary questions such as literary studies, media analysis, cultural history, public-facing scholarship, among others. Topics covered may include advanced-level syllabus design; scaffolding techniques for different types of textual and media objects; designing and mentoring for undergraduate research experiences; modern language program curriculum analysis and design; writing teaching statements; teaching for diverse students; assessment design; responding to OMETs and class visit reports; and teaching in study abroad programs. The course will be run as a workshop drawing on the resources and expertise of faculty within and beyond the department. Outputs and assessments for the one-credit course will operate on a menu model, allowing each student to determine what would be most helpful for their ongoing teacher training in conjunction with their departmental mentors and teaching supervisors. Course will be taught in English.

Grade Component: Grad SN Basis

FR 2796 - FRENCH FOR THE HUMANITIES

Minimum Credits: 1
Maximum Credits: 3
This course is intended for graduate students in the humanities seeking to improve their professional French reading, writing, and translation skills in academic fields such as French literature, theory, social sciences, and philosophy. The course is composed of three different five-week modules: 1) comprehension of complex novelistic prose from the 18th to the 21st centuries; 2) comprehension of complex theoretical, philosophical, and social science texts likely to appear in one's career; 3) translation into English of both kind of texts, as one often needs to translate less-known references in one's professional writing. This course offers variable enrollment, meaning that students can enroll in one, two, or three credits to take the module(s) most relevant for their professional goals. While especially useful for non-French native speakers, everyone will benefit from learning the specific lexicon, syntactic structures, and ironic registers necessary for the humanities scholar working with texts coming from the Francophone tradition. The class will be workshop-based and will use a variety of short literary, theoretical, and social science texts written in French. Assessment will be based on regular, short assignments that take a hands-on approach. Prerequisites: Graduate Status in the French Program or proven graduate proficiency in the French language.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis

FR 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
This course enables M.A. Candidates to do research under the direction of a faculty member, on a topic of mutual interest.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

FR 2903 - MA RESEARCH PAPER DIRECTED STUDY

Minimum Credits: 3
Maximum Credits: 3
MA students write a research paper (6000-8000 words), typically during their final semester in the program.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

FR 2910 - COMPREHENSIVE EXAMINATION MA

Minimum Credits: 1
Maximum Credits: 3
This course is intended for ma candidates in their last term of study when they present themselves for the ma comprehensive examination.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FR 2970 - TEACHING OF FRENCH

Minimum Credits: 3
Maximum Credits: 3
This course provides graduate student teaching assistants/fellows/instructors with the knowledge and skills needed to teach an elementary- or intermediate-level foreign language class in an institution of higher education (i.e., language and literature departments at the University of Pittsburgh). Students will learn about contemporary theories and research on foreign and second language learning and acquisition, but much of the course content will focus on praxis and strategies related to classroom-based language teaching. Topics will include contextualized language instruction, communicative and task-based instruction, content-based instructional methods, equitable and inclusive teaching practices, and strategies for teaching grammar, vocabulary, and linguistic competencies (reading, writing, listening,

speaking). Students will be assessed via practice-based projects and self and peer evaluations. This course is taught in English, but speakers of all linguistic backgrounds are welcome, and examples will be taken from a wide variety of languages offered at Pitt. Pre-requisites: None, but students should have graduate standing in a language and literature department at the University of Pittsburgh. Other students interested in this course should contact the instructor directly.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

FR 2975 - ADVANCED TOPICS IN FOREIGN LANGUAGE LEARNING AND TEACHING

Minimum Credits: 3
Maximum Credits: 3
In this course intended for experienced foreign language teachers, students will focus on pedagogical issues encountered in advanced-level teaching in the areas of language, literature, and culture.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

FR 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12
This independent course is for ma students who have completed, or are completing in their last term of study, all course requirements for the ma degree.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FR 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Students register for this course while doing research for their Ph.D. Dissertations.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FR 3902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
This course enables Ph.D. Students to do research under the direction of a faculty member, on a topic of mutual interest.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

FR 3905 - TEACHING APPRENTICESHIP

Minimum Credits: 1
Maximum Credits: 12
Available to Ph.D. students who will work with a faculty member in teaching an upper level literature, language or civilization course.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

FR 3910 - COMPREHENSIVE EXAMINATION

Minimum Credits: 1
Maximum Credits: 12
This course is intended for Ph.D. Candidates the term they present themselves for their Ph.D. Comprehensive examination.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

FT Dissertation Study LAW

FTDO 0000 - FULL-TIME DISSERTATION STUDY

Minimum Credits: 0
Maximum Credits: 0
Doctoral candidates who have completed all credit requirements for the degree, including any minimum dissertation credit requirements, and are working full time on their dissertations may register for this course. While the course carries no credits and no grade, students who enroll in "full-time dissertation study" are considered by the university to have full-time registration status.

Gender, Sexuality, and Women's Studies

GSWS 1403 - GENDER, SEXUALITY, AND RELIGION IN SOUTH ASIA

Minimum Credits: 3
Maximum Credits: 3
When it comes to gender and sexuality, South Asia is subject to a variety of stereotypes. Some say it has always been home to rigid gender hierarchies and heteronormativity, while others claim that such restrictive norms were all but absent before the arrival of Islam or British colonialists. This course aims to help students understand the complex realities that these stereotypes miss. Our focus will be on marginalized genders and sexualities and their relationships to Hindu and Islamic traditions, although students will study other traditions in a group research project. Literary and historical sources from both traditions demonstrate a range of views on gender and sexuality before colonialism. Colonial law enforced much narrower range of gender and sexual expressions, but women and queer folks in South Asia and diaspora still find ways to flourish within existing cultural and religious frameworks.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

GSWS 2058 - FEMINIST SOCIAL WORK

Minimum Credits: 3
Maximum Credits: 3
This course focuses on gender and social work, beginning with a critical examination of the concept of feminist practice, with attention to oppression, power, and privilege in helping relationships and in women's lives more broadly. It explores meanings of gender as it intersects with race/ethnicity, class, sexuality, age, and ability in the lives of women in general and specifically as social workers and clients. Taught in a seminar format, this course examines topics such as work, welfare, family, violence, justice system involvement, health, mental health, and women as agents of change and is appropriate for students concentrating in micro or macro levels of practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Attributes: Gender, Sexuality & Women's St

GSWS 2240 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
This graduate course addresses a current topic in gender, sexuality, or women's studies. Topic varies by instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Gender, Sexuality & Women's St

GSWS 2252 - THEORIES OF GENDER AND SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
This course provides an overview of important current topics and controversies in gender and sexuality studies, emphasizing emerging directions in scholarship and the foundational readings that have prepared the way for them. Gender and sexuality studies are interdisciplinary fields in conversation with feminist theory and queer theory as well as a host of academic disciplines. Drawing on readings from a variety of disciplines and sampling a range of methodologies, this course works through some of the key moments, movements, and problems that shape contemporary thinking about gender and sexuality. The course invites students to think through materials and ideas in relation to their own research, interests, and commitments.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Attributes: Gender, Sexuality & Women's St

GSWS 2902 - DIRECTED STUDY

Minimum Credits: 3
Maximum Credits: 3
Individual study on a topic related to gender, sexuality, or women's studies under supervision of a faculty member from the program. A variety of individual research and reading projects not covered in other courses may be undertaken.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Attributes: Gender, Sexuality & Women's St

Geology

GEOL 1314 - PEOPLE, PLACE AND CULTURE: ENVIRONMENTAL DEBATES IN AUSTRALIA, NEW ZEALAND AND THE PACIFIC

Minimum Credits: 3
Maximum Credits: 3
This course explores the multi-faceted dimensions of human interaction with diverse environments in Australia, New Zealand and the Pacific to illuminate the origins of environmental concerns and current debates in these regions from pre-European contact to now. From the peopling of the Pacific to the challenge of climate change, this course is broad in its scope while concentrating on selected issues such as the impact of mining, clean energy futures, our vulnerability to 'natural' disasters and increasing urbanization. In so doing, the intersection of culture and nature is explored. The course is embedded in the environmental humanities, but uses the approaches of environmental history, as well as insights from the disciplines of science, politics, sociology and cultural studies.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

GEOL 1334 - ENVIRONMENTAL POLICY

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to environmental policy choices made by various stakeholders. These choices span a wide range of issues, including when and how to regulate; the real-world impacts of regulation; the roles of non-governmental actors; the politics of environmental policy; and the ethical reasons for environmental protection. Students will connect real-world environmental policy outcomes to foundational ideas that guide decision-making. The course emphasizes practical, interdisciplinary thinking and will help students develop the skills needed to understand and evaluate contemporary environmental policy debates across multiple domains.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PLAN: Environmental Geology (BS, BPH) or Environmental Studies (BA, BPH) or Geology (BS, BPH) or Environmental Science (BS)

GEOL 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1
Maximum Credits: 12
This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a master's degree in geology.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Geology and Planetary Science (MS) or Geology and Environmental Sci (MS)

GEOL 2001 - SCIENTIFIC COMMUNICATION

Minimum Credits: 3
Maximum Credits: 3
The Scientific Communication course is required for all new MS and PHD students in Geology and Environmental Science. It is designed to introduce students to the department and develop communication skills. The goal of the class is to provide a foundation for students to develop a proposal and research strategy for their thesis project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Geology and Planetary Science(PHD or MS) or Geographical Information Sys (MS) or Geology and Environmental Sci (PHD or MS)

GEOL 2002 - MINEROLOGY/PETROLOGY

Minimum Credits: 3
Maximum Credits: 3
In this course, the student will gain an understanding of the basics of mineralogy and petrology, including crystal structure, optical mineralogy using a petrographic microscope, mineral chemistry, mineral associations in different rock types and soil, and the processes and conditions under which igneous, metamorphic and sedimentary rocks and minerals form and are altered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: GEOL 0800 or 0820 or 0860

GEOL 2015 - GEOLOGY COLLOQUIUM

Minimum Credits: 1
Maximum Credits: 1
Geology colloquium is a required course for MS and PhD students in geology and planetary science each term. It is a formalization of the seminar series with weekly guest speakers from industry, academia, and government. Each seminar will focus on a different research topic in the earth sciences and describe active and on-going projects of immediate interest to students.
Academic Career: Graduate
Course Component: Colloquium
Grade Component: Grad SN Basis

GEOL 2025 - ADVANCED VOLCANOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will provide an in-depth discussion of the generation of magma beneath the Earth's surface, the processes by which different volcanic eruptions occur and the deposits that are left behind. We will also discuss the monitoring and mitigation of volcanic hazards, through remote sensing and modelling techniques, as well as the volcanic processes that occur and have occurred on other planetary bodies in our solar system.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2045 - STATISTICS FOR EARTH SCIENCE

Minimum Credits: 3
Maximum Credits: 3
A statistics course geared toward environmental science and geology majors with an emphasis on applying data analysis and statistical techniques to environmental data. Topics will include: visualizing data, summary statistics, correlation, selected parametric statistics (t-tests, general linear models), selected non-parametric methods, statistical inference, and experimental design.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2049 - PALEOCLIMATOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course presents the different types of data used to study the earth's climatic history and long-term climatic variability. Particular emphasis is given to the climatic changes during the last Cenozoic -- the so called glacial ages. Topics of discussion include time scales of climatic change, types of paleoclimatic records and their limitations, numerical climate models, the causes of climatic change, and the importance of paleoclimatic research in forecasting the future.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2054 - SOILS: GEOBIOCHEMICAL LANDSCAPES

Minimum Credits: 4
Maximum Credits: 4
An overview of soils with a strong emphasis on landscape scale process. The course consists of lecture and laboratory/field work. The lecture will include description of physical and chemical soil properties and processes, discussion of major soil classifications and description of ramifications at the landscape scale.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2060 - GEOMORPHOLOGY

Minimum Credits: 4
Maximum Credits: 4
This course is a survey of the major landform features found on the earth's surface. Each landform type is first described qualitatively and then examined in terms of the processes, such as stream flow or glacial activity, which cause its development. The purpose of the course is to familiarize students with geomorphic principles.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2110 - PLATE TECTONICS

Minimum Credits: 3
Maximum Credits: 3
The geometry and kinematics of plate tectonics are developed together with the geophysical evidence for plate motions in the first half of the course. The second half involves a geological examination of convergent, divergent, and transform-dominated terranes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2120 - BASIN ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
The integrated study of sedimentary basins as geodynamic entities, including tectonic environment, geologic history and associated strength of the lithosphere, rock weathering and erosion, and sediment transport. The class will give students a background in driving mechanisms for basin formation and subsidence, sedimentary record preservation and alteration, sedimentary geometry, facies and petrology and provide a basic understanding of the continuum mechanics equations that approximate basin formation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: GEOL 1100 and GEOL 1020; LVL: Graduate or PhD

GEOL 2150 - SURFACE WATER HYDROLOGY

Minimum Credits: 4
Maximum Credits: 4
This course shall provide an Earth systems science overview of the processes that govern the hydrologic cycle including precipitation, evapotranspiration, runoff and discharge, infiltration, and groundwater. The course shall emphasize the movement of water through the atmosphere, over the land surface, and within the unsaturated and saturated zones.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2151 - GROUNDWATER GEOLOGY

Minimum Credits: 4
Maximum Credits: 4
This course focuses on physical and chemical processes controlling water movement and composition in sub-surface environments. The lab focuses on practical field methods for the characterization of groundwater.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2309 - LIMNOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will explore the physicochemical and geological aspects of inland waters (lakes, rivers, springs, and wetlands). Specifically, the course will examine the origin and evolution of lakes, the physical and chemical properties of fresh and saline waters, watershed hydrology, and the biogeochemical cycling of major elements and nutrients.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2312 - ENVIRONMENTAL LAW AND POLICY

Minimum Credits: 3
Maximum Credits: 3
The survey course will examine the role of law and policy in regulating human impact on the environment. topics include the history and development of U.S. environmental law; theoretical approaches to environmental protection; mechanisms employed in environmental laws and regulation; the roles of the legislative, executive, and judicial branches of government in developing and implementing environmental law and policy; an overview of the principal environmental laws at the federal and state levels; the role of citizens in development and enforcement of environmental law; and constitutional constraints on government authority.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2316 - ENVIRONMENTAL JUSTICE

Minimum Credits: 3
Maximum Credits: 3
What is Environmental Justice (EJ)? How does this change our approach to the environment and environmental issues? This seminar course will introduce students to environmental justice (EJ) theory and frameworks for analyzing environmental inequities. We will explore the historical, social, political, and economic causes for disproportionate environmental burdens. The course is organized into seven topic modules. The first three will focus on the history of the environmental movement, EJ theory, and intersectional environmentalism to situate EJ within US environmentalism. Four to six will examine specific EJ issues - housing, food security, air, and water quality - and focus on SWPA and Pittsburgh communities as case studies, learning how communities are impacted and the actions being taken to promote the wellbeing of communities. The seventh and final module will address the current state of the environmental movement and EJ initiatives.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2410 - EARTH SYSTEM MODELING AND ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course will equip you with the fundamental knowledge to construct numerical models for your own research applications. We will work through classical problems involving differential equations, focusing on their numerical approximation and application to Earth Systems problems (e.g., mass balance, population dynamics, orbital dynamics, isotopic exchange, heat transfer, contaminant flow and transport). This analysis will require using linear algebra and computational tools (e.g., MATLAB®, R, Python) to solve and visualize solutions to differential equations. Students will work on a self-guided, semester-long project that involves the construction of a numerical model for a system of their choosing.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2446 - ADVANCED GEOGRAPHICAL INFORMATION SYSTEM

Minimum Credits: 3
Maximum Credits: 3
Using advanced geographical information systems technologies and geospatial analysis techniques students will extend their knowledge of geographical information systems to include raster, geostatistical, network, model, and 3d/4d based analysis completing complex analysis of real world data sets.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: GEOL 2449

GEOL 2449 - GIS, GPS, AND COMPUTER METHODS

Minimum Credits: 3
Maximum Credits: 3
The goals of this course are to gain expertise in spatial analysis and geographical information systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

GEOL 2461 - ADVANCED REMOTE SENSING

Minimum Credits: 3
Maximum Credits: 3
This course is offered in conjunction with the introduction to remote sensing (geol-1460) - this course provides a foundation in the theory and techniques of remote sensing and geospatial data visualization spanning the electromagnetic spectrum from the ultraviolet to microwave wavelength region. Topics will include light/matter interaction, optics and sensor design, image analysis using commercial software, as well as current applications of remote sensing to science and engineering problems. The course and integrated image-processing laboratory are designed to provide you with an appreciation of current remote sensing issues, the geologic and human processes that impact remotely-gathered data, and how those processes can be measured using remote sensing. Students taking this course will participate in an independent research project involving remote sensing theory/data analysis. Students with no prior remote sensing background will also be required to participate in the geol-1460 lecture and computer labs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2462 - GEOMORPHOLOGY: DYNAMIC EVOLUTION OF EARTH'S SURFACE

Minimum Credits: 4
Maximum Credits: 4
This course aims to introduce students to the geomorphologic processes that shape the surface of Earth, the physical mechanisms by which they operate, and the landforms they create. It will combine qualitative and quantitative descriptions of land-shaping processes such as river erosion, glaciers motion, and landslides. The course builds on in class discussions and assignments to train students in applying basic physical and mathematical tools to explore geomorphological processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2468 - QUANTITATIVE RESEARCH METHODS IN EARTH SCIENCE IN MATLAB

Minimum Credits: 4
Maximum Credits: 4
Quantitative methods are essential for solving problems in Geologic and Environmental Sciences and are often implemented by programming in specialized software. This course focuses on methods for quantitative data exploration and hypothesis testing with Mat lab. The course will introduce students to programming with Mat lab, and use Mat lab to implement and explore a variety of quantitative methods, including: uni- and multi- variate statistics, dimensional analysis, signal processing, spatial extrapolation, and numerical modeling. Classes will include lectures and group assignments that will use various methods to detect patterns in data, pose hypotheses regarding these patterns, and test them.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2469 - TOPOGRAPHIC ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Topographic analysis: Landscape topography can reveal valuable information about the processes, evolution, and external conditions that formed a landscape. This class will introduce students to different methods of topographic analysis and the information they can provide. It will include examination of algorithms for analysis of digital elevation models (DEMs), ways for filtering DEMs for features of interest, and analysis of different topographic attributes and how they relate to factors such as climate, tectonics, and anthropogenic modifications. Methods will be executed and developed using Matlab and ArcGis. The class will focus on the analysis of a specific environment (the specific environment/s will vary from year to year and may include: urban areas, mountain-ranges, Arctic vs Tropical topography etc.). It will use the analyses methods we will learn, together with literature on this specific environment to explore questions regarding the topographic characteristics and environmental conditions that prevail in this environment. Knowledge of Arc GIS and Matlab required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2501 - ORGANIC AND STABLE ISOTOPE BIOGEOCHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
This is mainly a lecture course that will examine the carbon cycle and the life cycle of the organisms that are responsible for the eventual accumulation of organic materials in sediments. The processes involved in the simultaneous preservation and transformation of organic materials into coal, petroleum, natural gas, kerogen and other dispersed organics will be reviewed in light of modern concepts of thermal maturation processes. The structures of naturally-occurring organic materials in sediments will be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2510 - AQUATIC AND SEDIMENTARY GEOCHEMI

Minimum Credits: 3
Maximum Credits: 3
THIS COURSE WIILL EXAMINE THE CHEMISTRY AND GEOCHEMISTRY OF MODERN AND ANCIENT AQUATIC AND SEDIMENTARY SYSTEMS, INCLUDING OCEANS AND FRESH WATERS. STUDENTS WILL GAIN AN UNDERSTANDING OF THE BIOGEOCHEMICAL PROCESSES OCCURING IN AQUATIC SYSTEMS, AND THE GEOCHEMICAL SIGNATURES THEY LEAVE IN THE SEDIMENTARY RECORD.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (CHEM 0110 and GEOL 0055) or GEOL 0800 or 0860

GEOL 2518 - INTRODUCTION TO ATMOSPHERIC CHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
This course will apply the basic principles of physics and chemistry to describe the complex system of the Earth's atmosphere. We will cover fundamental concepts such as atmospheric structure, transport, chemical kinetics, and photochemistry to address topics including stratospheric ozone, the oxidizing capacity of the Earth's atmosphere, and air pollution via tropospheric ozone, aerosols, and acid rain. We will also study the role of atmospheric composition and chemistry in mediating Earth's climate through topics such as the greenhouse effect, and feedbacks between chemistry, air quality, and climate. The course will familiarize students with the current state of the research through interactive projects and is open to both graduate students and advanced undergraduates.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2520 - RADIOGENIC ISOTOPE GEOLOGY AND GEOCHRONOLOGY

Minimum Credits: 3
Maximum Credits: 3
Introduction to isotope systematics (including mass dependent fractionation, radioactive decay, generation of cosmogenic nuclides, and nucleosynthesis), and application of isotope systems to problems in geochronology, geology, hydrology, oceanography, biology, and Cosmo chemistry.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2525 - STABLE ISOTOPE BIOGEOCHEMISTRY

Minimum Credits: 3
Maximum Credits: 3

This course focuses on stable isotope biogeochemistry and their use in understanding Earth and environmental systems, including lab-based sample preparation and analysis, and a research-oriented project. The curriculum includes both theoretical knowledge and hands-on experience with techniques like mass spectrometry, sample preparation for different matrices (water, tissues), data analysis, and presentation. Students will gain skills in designing sampling strategies and interpreting results in the context of ecological, geological, and hydrological processes. The course will provide students with an introduction to the stable isotope systematics of light elements including hydrogen, carbon, nitrogen, oxygen, and sulfur.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: CHEM 0110 and GEOL 2520

GEOL 2700 - INTRODUCTION TO SPACE SCIENCE

Minimum Credits: 3
Maximum Credits: 3
Introduction to Space Science is cross-disciplinary course created as a foundation for students interested in space research in the natural sciences and the new Space Science Certificate Program. The course will encompass multiple subject areas of the science of space and the natural phenomena that occur there. It is intended to provide an overview of the current state of the art, link with similar courses/programs in Space Engineering and Space Medicine, and focus on the themes of Astrophysics, Planetary Geoscience, and Astrobiology within the broader discipline of Space Science.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 2750 - VOLCANOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course focuses on a specific but different topic of volcanology each time it is offered. The course is offered dependent on student demand. Courses that have been offered in the past include: describing and interpreting pyroclastic rocks, exploring explosions and glaciovolcanism. All the courses include discussion in the classroom, especially of recent volcanological literature, study of hand samples and microscope study of thin-sections.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2960 - FIELD CAMP

Minimum Credits: 6
Maximum Credits: 8
Graduate geology summer field camp is six to eight weeks long and includes a substantial component of geologic mapping and report writing. Graduate students should enroll at an accredited field camp offering at least six semester units of credit and transfer the credits to the University of Pittsburgh.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

GEOL 2961 - WATER IN A CHANGINGTOPICS: WATER IN A CHANGING WORLD WORLD

Minimum Credits: 1
Maximum Credits: 1
This course is a forum for learning about water in a rapidly changing world. The course features weekly speakers from industry, academia, and government. Each meeting will center on a distinct water topic, include student-centered interaction, and discussion. Readings, software or other workshops, data discussions, and field trips may be included dependent on the semester
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12
This course permits graduate students to explore specific topics in the geological sciences. The course is designed in a more flexible format than a directed study, stressing a higher degree of independent library research.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

GEOL 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 12
This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a PhD degree in geology.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Geology and Planetary Science (PHD) or Geology and Environmental Sci (PHD)

GEOL 3410 - EXPLORATION GEOPHYSICS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on exploration geophysics including reflection seismic, well log, gravity, electromagnetic, magnetic, electrical, and other methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3853 - ECOSYSTEMS: LAND-WATER-ATMOSPHERE INTERACTIONS

Minimum Credits: 3
Maximum Credits: 3
Understanding the science of watersheds is critical to improving water quality. This course will examine surface water hydrology, biogeochemistry, and management of watersheds. In addition, we will focus on how varying land uses influence the dynamics of hydrology and biogeochemistry across these systems. Student will develop an understanding of the biogeochemistry of various major elements in watersheds, including nitrogen, carbon, sulfur, and mercury, and how these elemental fluxes are exchanged through atmospheric-terrestrial-aquatic interactions. Students will be expected to demonstrate critical thinking, communication, and analytical skills through student-led lectures, journal discussions, and projects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

GEOL 3902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
This is a course designed to permit graduate students an opportunity to explore facets of research possibly leading to project/thesis/dissertation topic.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

GEOL 3904 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
This is a course designed to permit graduate students an opportunity to explore facets of research possibly in the area of information science systems related to their project/thesis/dissertation topic.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

GEOL 3908 - TOPICS GEOLOGY

Minimum Credits: 3
Maximum Credits: 3
This is a course designed to permit the teaching of new and significant developments in the field of geology. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3923 - TECTONIC GEOMORPHOLOGY SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Participants read and discuss recent and foundational literature in tectonic geomorphology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3931 - TOPICS IN PALEOENVIRONMENTAL

Minimum Credits: 1
Maximum Credits: 1
This is a course designed to permit the teaching of new and significant developments in the field of paleo environmental analysis. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3946 - PYTHON SCRIPTING

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to gain expertise in programming methods using environmental systems research incorporated arcobjects and the visual studio .net programming environment of microsoft. Arcobjects is a software technology based on the com protocol and can be used within any com-compliant programming language. Our goal in this class is to gain fundamental skills in visual basic programming using the microsoft developers studio visual basic environment through applied examples and homeworks. After students have gained some programming expertise they will immediately begin programming the arcgis desktop using arcobjects technology.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PREQ: GEOL 2449

GEOL 3949 - ANALYTICAL APPLICATIONS IN THE GEOSCIENCES

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis
Course Requirements: LVL: GRAD

GEOL 3951 - TOPICS IN GEOCHEMISTRY 2

Minimum Credits: 1
Maximum Credits: 1
This is a course designed to permit the teaching of new and significant developments in the field of geochemistry. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3952 - TOPICS IN BIOGEOCHEMISTY & GEOBIOLOGY

Minimum Credits: 1
Maximum Credits: 1
This is a course designed to permit the teaching of new and significant developments in the field of geochemistry. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 3953 - TOPICS IN GEOCHEMISTRY

Minimum Credits: 3
Maximum Credits: 3
This course will focus on environmental and water resource issues related to energy extraction in the Appalachian Basin. Topics will include the environmental effects of oil and gas drilling, hydraulic fracturing, coal mining, waste from coal fly ash and abandoned mine discharges, and other topics of interest to students. The course will involve readings from the literature, guest lectures from local professionals, and student-led discussions and presentations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: GEOL 1030 and 1641

GEOL 3956 - TOPICS IN NITROGEN BIOGEOCHEMISTRY

Minimum Credits: 1
Maximum Credits: 1
This is a course designed to permit the teaching of new and significant developments in the field of nitrogen biogeochemistry. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3958 - TOPICS IN GEOCHEMISTRY: CURRENT RESEARCH

Minimum Credits: 1
Maximum Credits: 1
This course will focus on recent research in the area of near-surface biogeochemistry, element cycles, and sustainable resource recovery. Classes will consist of readings and student-led discussions and presentations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

GEOL 3970 - REMOTE EXPLORATION OF THE MOON AND MARS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the theory, technology and science of the recent remote sensing data sets from the moon and mars. Numerous missions from rovers to orbiters have produced datasets that span the electromagnetic spectrum, and these will be the focus of this graduate-level, seminar-style class. Students should have had a remote sensing course and will also complete an independent study utilizing either lunar or mars remote sensing data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GEOL 3974 - TOPICS IN VOLCANOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will provide an in-depth analysis of different volcanology topics each time it is offered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

German

GER 1550 - DIGITAL METHODS FOR HUMANISTIC RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Texts hide secrets from us humans that are manifestly obvious to computers: all we need to do is crack the code. This course teaches students with zero coding experience to use computers to reveal hidden insights from digitized texts. Students will learn to make those texts "speak" by transforming them into dynamic visuals and interactive websites: in this manner, Hamlet becomes a chart of gender-coded language; a history of Rome becomes a map of the empire's most frequently referenced battles; and much more. Over the course of the semester, students will apply digital methods to a research project of their own choosing. In addition to adding a valuable tool to their research repertoire, students will leave with coding and web design skills highly sought after in other career contexts.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

GER 2000 - MA THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Thesis Research

Grade Component: Grad SN Basis
Course Attributes: West European Studies

GER 2882 - TOPICS IN GERMAN CINEMA

Minimum Credits: 3
Maximum Credits: 3
This course will use the German cinema to examine the relationship between films, social change, and questions of national identity and to assess the emergence of certain artistic movements, film genres, and models of authorship along these lines. Depending on the semester in which it is taught, the course will address these issues through topics like the representation of the masses, gender anxieties, film and the other arts, the historical film, film auteurs, images of the other, or war and cinema.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies, West European Studies

GER 2892 - APPARATUS THEORY

Minimum Credits: 3
Maximum Credits: 3
Apparatus Theory was central to the debates that generated contemporary film studies. This seminar will review the history of those debates and engage contemporary efforts to reinvigorate discussions of the full apparatus that brings the moving image to the screen.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

GER 2902 - DIRECTED M.A. STUDY

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

GER 2904 - MA PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This practicum is for students involved in organized graduate coursework (not independent or directed study) that is less than a 3-credit seminar, but that merits academic credit (i.e. Mini-seminars, lectures, films, or similar events).
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

GER 2970 - TEACHING OF GERMAN

Minimum Credits: 3
Maximum Credits: 3
This course examines and evaluates current pedagogical theories in language teaching and gives practical information on subjects such as teaching the four basic skills, lesson planning, vocabulary building, pattern drills, games, student-teacher interaction, textbook evaluation, testing, grading, visual aids, and culture. Theoretical discussions are augmented by practical sessions devoted to micro teaching demonstrations.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

GER 2975 - ADVANCED TOPICS IN FOREIGN LANGUAGE LEARNING AND TEACHING

Minimum Credits: 3
Maximum Credits: 3
In this course intended for experienced foreign language teachers, students will focus on pedagogical issues encountered in advanced-level teaching in the areas of language, literature, and culture.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GER 2990 - M.A. INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

GER 3000 - PH.D. DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate

Gerontology

GERON 2000 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
A student initiated educational experience, guided by a faculty member, that significantly supplements the core curriculum of the certificate and provides specialized, focused training in aging.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2001 - ETHICS AND AGING

Minimum Credits: 3
Maximum Credits: 3
This course offers an overview of ethical issues in aging. Early sessions will explore the ethical implications of stereotypes and myths regarding aging. Turning to the context of health care, students will identify and analyze moral dilemmas that arise in the long-term and end-of-life care of older adults. Concepts and topics to be critically examined include: autonomy, dependency, elder abuse, and just resource allocation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2002 - PREVENTION AND HEALTHY AGING

Minimum Credits: 3
Maximum Credits: 3
Prevention and healthy aging is an online course that provides the guidance and rationale for promoting health, prevention, and effective risk factor management in the adult population (50+) in respect to rising health care costs, decreasing benefits, and the aging of our population. This course offers a general overview of various aging issues (physical, cognitive, social, cultural, and economic) that impact the individual, community, and society. This course will prepare students to integrate optimal preventive practice into their professional context and translate evidence-based strategies into community outreach services that are designed to prevent or delay the common conditions of aging and ones that emphasize the importance of healthy behaviors throughout the lifespan.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2003 - INTERGENERATIONAL STUDIES

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2004 - MENTAL HEALTH AND MENTAL ILLNESS IN LATE-LIFE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2005 - PERSPECTIVES IN AGING

Minimum Credits: 3
Maximum Credits: 3
Designed as an upper level course for students to learn about the aging process in our society.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2006 - MULTI-DISCIPLINARY ASPECTS OF DEMENTIA

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2008 - HUMAN PERFORMANCE, NUTRITION AND AGING

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GERON 2009 - AGING AND COMMUNICATION

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GERON 2010 - SEMINAR IN AGING

Minimum Credits: 1
Maximum Credits: 1
This course allows for critical review and discussion of current scientific literature. Assigned readings will focus on a topic that is of interest to the students enrolled, with application to their particular professional roles. The teaching methods used by the instructor will include directed review and discussion of specific research and/or review articles. On designated Mondays, each student in the course will be asked to select an article of interest and submit it for critique by the rest of the class. Following the guidelines provided by the instructor, the students will post to the discussion board a critical review and discussion of these assigned readings on/or before the Sunday of the following week.
Academic Career: Graduate

GERON 2012 - ETHICS AND AGING FOR SCHOOL OF HEALTH AND REHABILITATION SCIENCES STUDENTS

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

GERON 2013 - EVIDENCE-BASED APPROACHES TO SUPPORT FAMILY CAREGIVERS

Minimum Credits: 3
Maximum Credits: 3
Evidence-Based Approaches to Support Family Caregivers, is an online course that provides a more in-depth look at research-informed approaches and interventions in supporting family caregivers. By delving into these approaches, which is based on the most recent research, helping professionals will be better equipped to assist family caregivers in providing care, maximizing self-efficacy, and infusing increased knowledge to family caregivers who are the primary source of support for older adults with chronic illness and disability. By

investigating evidenced-based interventional approaches, students will examine psychosocial, psychotherapeutic, technologically-based interventions, as well as coordination care services & resources. Our study will also focus on the experiences of family caregivers and walking the journey alongside them, while also being able to assist in interventional approaches and tools for best care practices. In this work, students will envelope a view of holistic approaches of caring for the caregiver, but also in giving voice to the care recipient and understanding their needs during this journey of being cared for. The exploration of several dimensions and approaches to caregiving will include psychological and physical health, as well as social relationships and support. In focusing on these areas, we will not only look at risk factors for adverse outcomes but also positive aspects of caregiving. This course will briefly touch on special populations for caregiving which will include looking at families who care for their children due to illness or disability. The information attained in this course will enable helping professionals to apply approaches and concepts learned to carers and care recipients in comprehending the multi-faceted dynamics that come along with the role of caregiving.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GERON 2013 - EVIDENCE-BASED APPROACHES TO SUPPORT FAMILY CAREGIVERS

Minimum Credits: 3
Maximum Credits: 3
Evidence-Based Approaches to Support Family Caregivers" is an online course that provides a more in-depth look at research-informed approaches and interventions in supporting family caregivers. By delving into these approaches, which is based on the most recent research, helping professionals will be better equipped to assist family caregivers in providing care, maximizing self-efficacy, and infusing increased knowledge to family caregivers who are the primary source of support for older adults with chronic illness and disability. GERON 2014 - CAREGIVING IN AGING

Minimum Credits: 3
Maximum Credits: 3
This course is designed for students to learn about the evolving role of caregiving in our society. This course will examine the challenges and responsibilities associated with caring for an older adult in the home setting, and the supportive options and resources that are available.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GERON 2015 - DIGITAL INEQUALITY IN OLDER ADULTS

Minimum Credits: 3
Maximum Credits: 3
As the world population ages, older adults comprise a growing proportion of current and potential Internet users. Yet outdated attitudes about older adults prevent markets and institutions from seeing them as worthy and relevant consumers and citizens. This course will examine the state of research on Internet use among older adults including how social inequalities have both evolved and remain in relation to who goes online and what they do once connected. We will explore generational differences in the ways people use the Internet as well

as examine the relationship between Internet use and well-being. The goal is for students both to gain exposure to this area of work and identify aspects of Internet use among older adults that warrant further inquiry.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

GERON 2016 - DIVERSITY IN AGING

Minimum Credits: 3
Maximum Credits: 3
This course provides an overview of diversity in aging from a multidisciplinary perspective. Key concepts, current research findings, and important polices concerning older adults are discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

Greek

GREEK 2202 - ADVANCED READINGS IN GREEK TRAGEDY

Minimum Credits: 3
Maximum Credits: 3
In this course students undertake close study in the area of Greek tragedy. The course may be repeated for credit provided the specific material covered is different.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

GREEK 2217 - ADVANCED READINGS IN GREEK HISTORIANS

Minimum Credits: 3
Maximum Credits: 3
In this course students read selected works by Greek historians. The specific authors and works vary from term to term; the course may be repeated for credit when the material covered is different.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

GREEK 2219 - GREEK SEMINAR: ORATORS

Minimum Credits: 3
Maximum Credits: 3
In this course students undertake close study in the area of Attic oratory. The course may be repeated for credit provided the specific material covered is different.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

GREEK 2220 - GREEK SEMINAR: PHILOSOPHERS

Minimum Credits: 3
Maximum Credits: 3

In this course students undertake close study in the area of Greek philosophy. The course may be repeated for credit provided the specific material covered is different.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

GREEK 2902 - DIRECTED STUDY FOR M.A. STUDENTS

Minimum Credits: 1
Maximum Credits: 9
Directed study on classical topics for students in the M.A. Program.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

GREEK 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
In this course a student undertakes study in Greek in consultation with a member of the faculty.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

GREEK 2992 - PHD READING EXAMINATION

Minimum Credits: 0
Maximum Credits: 0
Permits graduate students from other departments to demonstrate competence in the reading of ancient Greek through examination.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

GREEK 2995 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
Directed study on Greek topics for students in the graduate program.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

Health Informatics

HI 2011 - CLINICAL SCIENCES FOR HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
This course (formerly known as A&P, Pathophysiology, Medical Terminology and Pharmacology) has multiple topics, including an introduction to the structure of human cells, tissues, organs and organ systems, and functions associated with them; a general overview of the predisposing factors and direct causes of disease, as well as their effects on the human body; an introduction to pharmacology; and word construction, pronunciation, spelling, definition and use of terms related to all areas of medical science, hospital service and health related professions.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2021 - PRACTICAL STATISTICS AND PROGRAMMING USING R

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to statistical methods and computer programming in R that are essential for data scientists. This course covers practical statistics from the perspective of data science in health care and how to apply various statistical methods to data analytics projects. In addition, this course introduces the most widely used statistical programming tools in data science: R. Prior experience in R is not expected in this course, however, familiarity with basic statistics concepts and modern programming language will be very useful. The approach of this course is practical, hands-on and project oriented.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2022 - INTRODUCTION TO PYTHON FOR HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to Python for students in health informatics. It aims to provide students with an understanding of the modern computer programming and to help students learn how to use computer programs to solve real-world problems in health sciences. Students will be guided to write Python programs to process multiple types of data in health informatics, such as electronic health records, clinical data, and clinical texts. In addition, this course practices basic concepts and applications of artificial intelligence, machine learning, and natural language processing in health care using Python. The approach of this course is practical, hands-on and project oriented.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2210 - HEALTH INFORMATION AND THE HEALTH CARE SYSTEM

Minimum Credits: 3
Maximum Credits: 3
This course will introduce the student to the healthcare system and health information management as well as the integrity of the health data that is used by healthcare organizations. It will also introduce the student to the importance of the quality of healthcare and health information and the need for risk management and patient safety in healthcare organizations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2230 - FINANCIAL MANAGEMENT AND HEALTH CARE REIMBURSEMENT

Minimum Credits: 3
Maximum Credits: 3
This course introduces key principles of financial management and reimbursement in the health care industry. The aim is to provide an understanding of financial and reimbursement language, concepts, and processes to enhance the daily management performance of current and future leaders in healthcare. Students will be offered tools to develop a working knowledge of financial statements, dashboard metrics and industry financial issues. Students will learn reimbursement methodologies, health care compliance regulations and tools for managing all aspects of the revenue cycle. Course modules and exercises offer insight into the development of operational budgets, understanding financial trends and variances, developing financial negotiating strategy, quantifying productivity, interpreting reimbursement analytics, ensuring compliance, understanding healthcare reimbursement, and managing the revenue cycle.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2231 - TALENT MANAGEMENT AND HUMAN RESOURCES

Minimum Credits: 3
Maximum Credits: 3
This course is a practical guide to human resource management in health care, and covers topics such as recruitment, compensation and benefits, training, discipline, termination, legal issues, labor unions, and multi-human interactions that emerge in the workplace. It is also an overview of the laws and regulations that guide every decision related to managing people in the complex society that we exist in today.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2236 - QUALITY AND PERFORMANCE IMPROVEMENT IN HEALTHCARE: METHODOLOGIES, CORE SKILLS, AND LEAN GREEN BELT C

Minimum Credits: 3
Maximum Credits: 3
In this course, you will examine healthcare's quality movement over the last 20-25 years and survey the major methodologies for performance improvement. These methodologies include: the IHI Improvement Cycle, Lean (the Toyota Production System), Six Sigma, High Reliability, Positive Deviance, and the Baldrige and Shingo frameworks. In the second part of the course, you will do a deeper dive into the philosophy and tools of Lean Healthcare. This online course includes workshop exercises that allow you to practice core improvement skills like problem definition, process mapping, root cause analysis, setting target conditions, selecting appropriate metrics, and driving rapid cycles of experimentation. The course culminates in a final project in which you will document an actual improvement project of your choice. You can also earn a Green Belt in Lean Healthcare if you earn at least a B grade in the course and pass an optional final lean competency exam.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2250 - FOUNDATIONS OF HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
This course introduces health informatics, providing an overview of the important topics and a foundation for other courses in the master's and certificate programs in health informatics. Students will learn what health informatics is, the challenges in health informatics, career in and profession of health informatics. Students will be briefly introduce to important concepts in health informatics including computing and networking in health informatics, digital health, data analytics and machine learning, data science, health technology intervention, electronic health record, healthcare standard, privacy and security, and bioinformatics and digital imaging.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2251 - HEALTHCARE ANALYTICS, MACHINE LEARNING, AND DATA VISUALIZATION

Minimum Credits: 3
Maximum Credits: 3
Healthcare data has been generated constantly from various sources, such as government offices, hospitals, research organizations, and patients themselves. This course is a tool-based data analytics and visualization that teaches students how to analyze and visualize large data using software such as Excel, SPSS, Tableau, and Orange. These tools allow us to conduct desired data analysis and machine learning

without programming. This course will provide an introduction to descriptive and predictive data analytics and visualization methods using those tools, along with a number of solid examples in healthcare.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2310 - INTRODUCTION TO ARTIFICIAL INTELLIGENCE IN HEALTHCARE INNOVATION & CLASSIFICATION

Minimum Credits: 3
Maximum Credits: 3
This course examines how AI is transforming the healthcare data lifecycle from intake and documentation to imaging, coding, and registries. Students will explore the integration of classification systems (ICD, CPT) with AI tools like NLP and machine learning to streamline workflows and support data-driven care. Through case studies and hands-on use of no-code platforms, learners will design and evaluate AI solutions while addressing ethical and equity challenges in healthcare AI adoption.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2411 - REVENUE CYCLE ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to familiarize the student and prepare the learner to analyze revenue cycle data. In this course, we will explore available public healthcare data sets and the data mining process. We will examine data through the 4P (patient, provider, payer, population) perspective and introduce methods and tools for integrating and analyzing data. We will also explore both business and research options for interpreting data through visualizations and predictive analytics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2450 - SECURITY, PRIVACY, LEGAL, AND ETHICAL ISSUES IN HEALTH INFORMATION SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to introduce basic knowledge of security, privacy, legal and ethical issues in health information systems. In the first half of the course, the major focus will be on security techniques, including basic concepts, encryption and decryption methods, program operating systems, databases, and network security. In the second half of the course, we will shift our attention to the application of the concepts of privacy and security in the healthcare industry. Legal and ethical issues around the privacy and security of health information will also be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2451 - DATABASE DESIGN AND BIG DATA ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
The ability to capture, organize, and analyze data is critical to healthcare organizations and to biomedical research. Database is arguably the most important tool in supporting data capture, organization, and analysis of outcomes, both for regular, transactional data as well as big data. This course will provide students with opportunities to learn data and big data management skills: principles in database, approaches

to manage data, as well as provide a place to discuss and analyze key issues in data management. The course will have two sections. The first section will emphasize on the theoretical and technical aspects of database, specifically in data modeling, design of database, as well as learning the 'language' to manage database. The second section will address advanced topics in database and big data, including transforming data, data warehousing and data mining, as well as analysis and visualization of data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2452 - DIGITAL HEALTH AND ARTIFICIAL INTELLIGENCE

Minimum Credits: 3
Maximum Credits: 3
The advancement of informatics in health has allowed a convergence of digital technologies with health and healthcare, with the goal of improving the efficiency and effectiveness of health services as well as making medicines more personalized and precise. These technologies include solutions for both healthcare providers and patients, ranging from Electronic Health Records, Telemedicine, Mobile Health, Wearable Devices, as well as many emerging Internet-of-Things devices and sensors. Interventions through digital health require a multi-disciplinary domain team involving both informatics and social sciences. This course will provide students with opportunities to explore, analyze, and discuss key issues, principles (both from technical and social science perspectives), approaches, and policies surrounding digital health. The final assignment of this course will task student to work with key health service stakeholders (who would actually share their knowledge throughout the course as well) to investigate and propose a practical digital health solution to tackle a specific health issue.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2453 - MACHINE LEARNING IN HEALTH SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course is designed for students who want to learn data analytics and machine learning, and their applications in health science. Data analytics tools and methods, machine learning procedure and tools, and their applications in health science will be discussed in this course. Students who finish this course should be able to use statistical and machine learning methods and tools to analyze various types of data sets in health science, and make predictions and recommendations according to the obtained results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (HI 2020 or HI 2022) and HI 2454; PLAN: Restricted to Health Informatics students only; SUBPLAN: HDA-TR or OHDA-TR or HIC-TR or OHIC-TR or RCM-TR or ORCM-TR or LHI-TR or OLHI-TR

HI 2454 - DATA SCIENCE IN HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course to data science. Data sources, types, data collection methods, data processing and analysis methods, and analysis result interpretation will be covered in this course. Students will learn these skills by finishing several assigned projects. By finishing the course, students will have the skills to analyze various types of data sets using different methods and have the ability to interpret the meaning the results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2455 - DATABASE DESIGN AND MANAGEMENT FOR HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This course covers two main topics. The first topic is on database design and data modeling in a relational database environment, and database manipulation using structured query language (SQL). The second topic is on data analytics that includes transformation of transactional database into analytical database (data warehouse), and data analytics and visualization. This course does not require Python programming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2456 - HEALTHCARE IT TRENDS AND INNOVATION

Minimum Credits: 3
Maximum Credits: 3
This course discusses current trends in modern healthcare, as well as innovations that can be used in providing better patient treatments, medical research, and outcome analysis. The introduction of innovative new healthcare technologies will have a major impact on the industry. AI, Big Data, Novel Medicines, and Cloud infrastructure will provide environments where both clinical medicine and research can reside and flourish. With emerging technologies, data management needs will grow. We will discuss keeping data safe, available, and usable for analytics to facilitate innovation and improve healthcare and patient outcomes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2457 - APPLIED AI & DESIGN THINKING FOR HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
Creativity and innovation remain essential for tackling healthcare's toughest challenges: reducing inefficiencies, improving outcomes, and advancing equity. Applied AI and Design Thinking for Health Informatics blends an empathy driven design thinking cycle (from empathizing to defining to ideating to prototyping to testing) with the practical power of modern artificial intelligence tools. Students learn to use applied AI tools and no code wireframing platforms as creative collaborators, generating insights, concepts, and rapid prototypes that keep human needs at the center. The group design project culminates in a proof of concept and portfolio ready deliverables that showcase each student's ability to unite human centered design with practical, hands on AI expertise to produce impactful health informatics solutions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2458 - GENERATIVE ARTIFICIAL INTELLIGENCE IN HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This graduate course provides a comprehensive overview of the foundational theories underlying Generative Artificial Intelligence (GenAI) and its transformative applications in healthcare. Designed for students with prior exposure to data science and machine learning, the course begins with an introduction to large language models (LLMs) and explores a broad range of GenAI technologies. Through a combination of lectures, demonstrations, and critical discussions, students will examine how GenAI tools can be leveraged to advance healthcare delivery, research, and decision-making, while also addressing ethical, legal, and social considerations. By the end of the course, students will be equipped to evaluate and select appropriate GenAI tools for specific healthcare tasks and to apply these technologies responsibly and ethically in professional practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2459 - ARTIFICIAL INTELLIGENCE FOR MEDICAL IMAGING INFORMATICS

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the foundational concepts and cutting-edge applications of AI in medical imaging informatics. Topics include medical image formation, deep learning architectures for radiology and pathology, multimodal imaging analysis, image quality and annotation challenges, privacy-preserving AI (e.g., federated learning), and regulatory frameworks such as HIPAA, GDPR, and FDA standards for Software as a Medical Device (SaMD). Through hands-on labs, students will work with real-world imaging datasets (plain radiographs, MRIs, and WSIs) and open-source AI frameworks to build, train, evaluate, and interpret AI models for diagnostic purposes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (HI 2020 or HI 2022); PLAN: Restricted to Health Informatics students only; SUBPLAN: HDA-TR or OHDA-TR or HIC-TR or OHIC-TR or RCM-TR or ORCM-TR or LHI-TR or OLHI-TR

HI 2460 - DATA SCIENCE AND MACHINE LEARNING IN HEALTH SCIENCES

Minimum Credits: 3
Maximum Credits: 3
This course introduces data science and machine learning in health informatics. Students will learn methods and tools for health data preprocessing, data visualization, exploratory data analysis, statistical modeling, and machine learning algorithms. The course will include advanced machine learning techniques such as neural networks and deep learning. Students will grasp these skills by finishing several assignments and a few projects. By finishing the course, students will have the skills to analyze various types of data sets using different methods and have the ability to interpret the meaning of the results. They will also be able to make predictions and recommendations according to the obtained results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (HI 2020 or HI 2022); PLAN: Restricted to Health Informatics students only; SUBPLAN: HDA-TR or OHDA-TR or HIC-TR or OHIC-TR or RCM-TR or ORCM-TR or LHI-TR or OLHI-TR

HI 2461 - NATURAL LANGUAGE PROCESSING AND LARGE LANGUAGE MODELS IN HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This course introduces natural language processing (NLP) and large language models (LLMs) with an emphasis on their applications in healthcare. Students will learn key concepts in computational linguistics, machine learning, and deep learning, alongside core NLP techniques such as information extraction, information retrieval, and question answering using biomedical texts and electronic health records (EHRs). The course will cover recent advances in LLMs and their transformative role in clinical and biomedical contexts. It also offers hands-on exercises (using Python) and projects, enabling students to build both theoretical knowledge and practical skills to develop and evaluate NLP applications in real-world healthcare scenarios.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (HI 2020 or HI 2022); PLAN: Restricted to Health Informatics students only; SUBPLAN: HDA-TR or OHDA-TR or HIC-TR or OHIC-TR or RCM-TR or ORCM-TR or LHI-TR or OLHI-TR

HI 2462 - ETHICAL, LEGAL, AND SOCIAL ISSUES (ELSI) OF AI IN HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This course examines the ethical, legal, and social implications of artificial intelligence (AI) and generative AI in healthcare. Students will explore key concepts such as bias, fairness, transparency, and trustworthiness in clinical AI systems, as well as the ethical challenges that arise when deploying AI in patient care, public health, and administrative settings. The course also addresses legal and regulatory considerations, including privacy, confidentiality, data governance, accountability, and liability. This course incorporates case studies, current research, and relevant policy frameworks. Students will examine how AI influences clinical decision-making, health equity, patient

autonomy, and broader societal expectations. Students will be prepared to critically assess AI technologies and contribute to responsible, ethical, and socially informed AI practices in healthcare.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HI 2632 - LEADERSHIP AND PROJECT MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Leadership and Project Management is a course designed to introduce and develop leadership behaviors as well as manage the project management process. The goal of this course is to advance the capabilities in meeting current healthcare organizations challenges through both leader and leadership development. It is not intended to provide a background on the evolution of thought on leadership or leadership theory. The course takes a developmental "not training" approach by providing a leadership development framework that helps guide one in acquiring the characteristics and behaviors associated with good leadership. This course will study how technology, people, and economics of software projects interact and the impact these elements have on managing software projects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2650 - PRACTICAL RESEARCH AND EVALUATION METHODS

Minimum Credits: 3
Maximum Credits: 3
The ability to measure and describe issues in health informatics is vital in the process of decision making in healthcare. The process of evaluation itself depends on the questions and the contexts in which the issue arises. This course will study the methods of evaluation in health informatics, specifically the practical application of well-established research and evaluation techniques to problems in health informatics. Different situations in healthcare will necessitate the use of different evaluation methods, therefore in this course students will be exposed to approaches to develop measurement instruments, design study, analyze result, as well as presenting the result of the study in health informatics evaluations. Case studies will be used to facilitate active learning, including conducting usability evaluation and cost evaluation of health informatics resource. By the end of the course, students will be able to develop a working evaluation 'contract', which can be used to guide the evaluation process as well as to validate the result of the evaluation process itself -that the result is indeed what the stakeholders want/need to know to make a decision.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2670 - INTERNSHIP

Minimum Credits: 3
Maximum Credits: 3
Supervised practical experience providing an opportunity for students to learn new skills and to apply previously learned skills and theories in the analysis, design, implementation, and evaluation of health information systems.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

HI 2680 - CAPSTONE

Minimum Credits: 3
Maximum Credits: 3
This course serves as the culminating academic experience for students in the Health Informatics program, bringing together the skills,

knowledge, and competencies acquired across all courses in the curriculum. Students will demonstrate integrated mastery of the professional competencies developed throughout the program. Working in teams under faculty supervision, students will identify, analyze, and propose a solution to a defined problem in a health informatics context. The project requires students to establish clear requirements, a realistic timeline, and defined deliverables in line with professional practice expectations. The final solution will be presented in a format determined by the program, challenging students to synthesize, apply, and articulate their full academic preparation. Upon completion, students will have a tangible project to represent their work in job applications and interviews.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

HI 2902 - DIRECTED STUDIES

Minimum Credits: 1
Maximum Credits: 9
Under the direct supervision of a faculty member, the student carries out specific research pertinent to the student's and/or faculty member's interests.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis
Course Requirements: Restricted to Health Informatics students only

HI 2999 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: Restricted to Health Informatics students only

Health and Human Development

HHD 2003 - REFLECTIVE CONSULTATION

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

HHD 2005 - INFANT DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2006 - INFANT MENTAL HEALTH INTERVENTIONS I

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2007 - FOUNDATIONS OF INFANT MENTAL HEALTH 1

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2008 - FOUNDATIONS OF INFANT MENTAL HEALTH 2

Minimum Credits: 3
Maximum Credits: 3
This course in the second part of the introduction and overview of Infant Mental Health (IMH). Core theoretical concepts related to the practice of IMH will be examined. Emphasis will be placed on understanding how IMH principles provide a foundation for working with infants, toddlers, and families across cultural, setting and discipline contexts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2009 - INFANT MENTAL HEALTH INTERVENTIONS 2

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2011 - IMH INTERVENTIONS 2

Minimum Credits: 3
Maximum Credits: 3
You will learn Principles of infant and early childhood mental health. Develop skills to support the social-emotional development of very young children and their families. Learn about the scope of infant-mental health practice and opportunities for advocacy and action. Learn with researchers and community-based faculty engaged in the early childhood workforce. Learn how to apply infant mental health theory into practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2023 - DEATH AND DYING

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the study of death and dying as well as the value of human life. Students will examine theories and concepts of death education and demonstrate the ability to accurately apply them to grief and coping. In addition, cultural and religious perspectives will be discussed. Particular emphasis will be given to strategies for working with children and adolescents as well as those who are terminally ill. These strategies include coping and preparation for the funeral, burial, and end of life-process. Students will also be encouraged to share their own experiences with death, dying and coping.

Academic Career: Graduate
Course Component: Lecture

HHD 2024 - FAMILY DYNAMICS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2040 - HEALTH AND WELLNESS FOR INFANT, TODDLERS AND YOUNG CHILDREN

Minimum Credits: 3
Maximum Credits: 3
This class provides the future pre-k ' grade 4 classroom teacher with a knowledge base in motor development, health and physical education curriculum planning, and appropriate selection of health knowledge and skills and physical activities for infants, toddlers, and young children. Included are labs and field experiences in the pre-k-grade 4 classroom setting.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2113 - DEVELOPMENTAL PSYCHOPATHOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course explores the emergence and progression of psychological disorders from a developmental perspective. Emphasizing the interplay of biological, psychological, and environmental factors, students will examine how risk and protective influences shape mental health outcomes across childhood and adolescence. Key topics include the classification and diagnosis of disorders, trajectories of atypical development, and the implications for prevention and intervention. Through an integrative and research-based approach, the course encourages critical thinking about the complexity of mental health in developmental context.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2127 - HUMAN LEARNING

Minimum Credits: 3
Maximum Credits: 3
Presents students with an understanding of various learning theories and their application in a wide variety of settings. Consideration is given to current research focusing on biological aspects of learning, classical and operant conditioning, social cognitive theory, information processing and selected cognitive concepts in learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2143 - CHILD AND YOUTH DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This course expands and deepens on themes introduced in Child and Youth Work I. Topics include the challenges of ecological approaches to learning and development; the roles of decision-makers at multiple levels (government, program directors, youth workers, youth themselves); and the benefits and challenges of youth-adult partnership approaches to child and youth work.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2197 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
Independent study for students in psychology in education.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

HHD 2198 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 3
Student pursues study of various topics under the direction of faculty.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

HHD 2233 - COMMUNITY-BASED ACTION RESEARCH 1

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate

HHD 2261 - ADOLESCENT DEVELOPMENT 1

Minimum Credits: 1
Maximum Credits: 1
The adolescent development course sequence for teacher education students covers developmental pathways from middle childhood through adolescence across multiple contexts (e.g. Individual, family, peers, school, community, and cultural) and the important considerations and relationships in these contexts. This first course in the sequence for teacher education students focuses on the importance of and considerations for forming authentic, meaningful relationships with all adolescents and the vital role such relationships play in promoting positive outcomes. Students will learn about developmental theories and concepts that are important in forming such relationships and will apply the concepts in their work with adolescents in educational settings. Key developmental tasks for adolescents are introduced in the context of understanding adolescent thinking and behavior. In addition to reading about development from a variety of sources, students will have the opportunity to apply the new information in their practice settings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2262 - ADOLESCENT DEVELOPMENT 2

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Instruction and Learning (MAT, MED, MA, or ND)

HHD 2263 - ADOLESCENT DEVELOPMENT 3

Minimum Credits: 1
Maximum Credits: 1
The adolescent development course sequence for teacher education students covers developmental pathways from middle childhood through adolescence across multiple contexts (e.g. individual, family, peers, school, community, and cultural) and the important considerations and relationships in these contexts. This class is the third course in the sequence for teacher education students. The course focuses on the nature and types of atypical development, especially as they relate to educational settings. Topics covered include learning, emotional, developmental, and behavioral disabilities, as well as psychological difficulties, with a continuing focus on the importance of positive relationships and the particularly vital role such relationships play in promoting positive outcomes for youth with disabilities. Students will learn about the ways in which 'typical' development is impacted by a disability and the potential implications of these impacts on adolescents' educational, social, and psychological functioning and development. Using a developmental framework, students will analyze and evaluate current interventions and/or teaching methods and apply knowledge of development to improve these approaches. Students will have the opportunity to apply the concepts in their work with adolescents in applied settings
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2265 - ATTENTIONAL TEACHING PRACTICES 1

Minimum Credits: 1
Maximum Credits: 1
Attentional teaching practices (ATP) aims to train pre-service teachers to cultivate a safe psychological space for learning, so students can make the greatest academic gains possible. In ATP I, preservice teachers will (1) learn to recognize the psychological dynamics that occur in classrooms and that may enhance the effectiveness of instruction, will (2) learn principles of adolescent development to improve their ability understand adolescent perspectives, and will (3) begin to build a toolbox of strategies to improve their psychological competence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

HHD 2266 - ATTENTIONAL TEACHING PRACTICES 2

Minimum Credits: 1
Maximum Credits: 1
Attention teaching practices (ATP) aims to train pre-service teachers to cultivate a safe psychological space for learning, so students can make the greatest academic gains possible. In APT II, preservice teachers will (1) learn how to shift the psychological dynamics in the classroom when needed, will (2) practice interacting with adolescents in ways that build on knowledge of adolescent development, and will (3) continue to strengthen their toolbox of strategies to improve their psychological competence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HHD 2267 - PHYSIOLOGICAL BASIS-FITNESS AND SPORT CONDITIONING

Minimum Credits: 3
Maximum Credits: 3
This course is aimed at developing an understanding of the physiological adaptations to fitness or long term physical training with emphasis on metabolic, strength and conditioning principles. Through the awareness of the body's responses to chronic and acute exercise. The student will be able to organize and design a physical training or fitness program for young adults, athletes and special populations. This course provides preparation for the American college of sports medicine health fitness instructor or national strength and conditioning exams.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2268 - PHYSICAL ACTIVITY AND HEALTH

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to expose the student to the topics related to the role of physical activity in the prevention and treatment of chronic diseases and additional health-related outcomes according to the most current literature. Students will become aware of all aspects of physical activity epidemiology, including the different methods to measure physical activity, evaluating the strengths and weaknesses of each, and understanding the analysis of physical activity data and research. In addition, this class will cover the physiology and mechanisms through which physical activity and exercise may affect the primary and secondary prevention and/or treatment of various health conditions, and will examine the risks and benefits associated with physical activity participation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2269 - OBESITY PREVENTION AND TREATMENT

Minimum Credits: 3
Maximum Credits: 3
This course will provide students opportunities to understand issues related to obesity. Topics may include prevalence rates, dietary considerations, exercise considerations and special population considerations. Behavioral strategies to enhance obesity treatment outcomes will also be addressed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2316 - ADP PROFESSIONAL SEMINAR 1

Minimum Credits: 1
Maximum Credits: 1
This course, taken concurrently with Community-Cased Practice Learning I, engages students across all specializations in their practice learning placements. The ADP professional seminar will develop students' sense of identity as an applied developmental scientist and will help them to actively develop professional ethics and standards in this process. As part of the ADP professional seminar, students will collaborate with faculty, agency supervisor, and master student colleagues to progress with completion of the master's written capstone project.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HHD 2317 - ADP PROFESSIONAL SEMINAR 2

Minimum Credits: 1
Maximum Credits: 1

This course, taken concurrently with community-based practice learning ii, engages students across all specializations in their practice learning placements. The ADP professional seminar will develop students' sense of identity as an applied developmental scientist and will help them to actively develop professional ethics and standards in this process. As part of the ADP professional seminar, students will collaborate with faculty, agency supervisor, and master student colleagues to progress with completion of the master's written capstone project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2320 - PSYCHOSOCIAL ASPECTS OF HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course will increase students' understanding of the diverse personal, socio-cultural, and institutional factors that influence health, physical activity, and nutrition-related behaviors, and ultimately intervention design and approach. The course will cover the social determinants of health and health disparities, theoretical models of health behavior change, and intervention/behavior change strategies and tools. Students coming away from this course will have a better understanding of how to apply health behavior change models to promote physical activity and healthy eating in diverse populations through tailored interventions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2322 - EVIDENCE BASED HEALTH PROGRAM PLANNING

Minimum Credits: 3
Maximum Credits: 3
Team based course designing health promotion programs at local large, medium and small organizations. The course presents students an opportunity to design a real health promotion program that has the potential to impact their career trajectory. Students are encouraged to seize the opportunity with enthusiasm. To maximize the opportunity students need to be flexible and demonstrate initiative to travel to the organizational site to meet according to staff schedules. The course is linked with the HPA 2990 course offered in the Spring.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2349 - CHILD LIFE PRACTICE IN HOSPITALS

Minimum Credits: 3
Maximum Credits: 3
This seminar identifies important concepts and practices to working as child life specialists in medical/hospital settings. Given the complex interdisciplinary nature of the child life specialist's role, and the need for ongoing consultation and collaboration with a variety of professionals involved in a child's care, this course will cover a range of practical and professional topics. These topics include family coping strategies, hospital policies and practices (e.g. charting, notes, supervision, etc.), death and dying, medical terminology, and interdisciplinary consultation and communication. Students will gain an understanding of the theories and concepts underlying practices, the necessary and important day-to-day practices in hospital settings, and strategies for successful collaborations with medical professionals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2371 - ADVANCED EXERCISE PHYSIOLOGY

Minimum Credits: 3
Maximum Credits: 3
Theory experiences relating to the mechanisms by which the body adapts physiologically to selected conditions of muscular performance

within the context of (1) physical education and sport, (2) work environments and (3) disease prevention and rehabilitation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2373 - INTRODUCTION TO EXERCISE ASSESSMENT AND PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
This course examines exercise therapy for the cardiac patient and individuals with chd risk factors. Topics include functional capacity assessment (central and peripheral adaptations, graded exercise testing, electrocardiography), exercise prescription (dosage, format, energy cost, case studies), exercise supervision (phase 1, 2 and 3, practical leadership experiences, emergency procedures, nutritional counseling, psychological considerations) and factors that influence the exercise responses are presented.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2374 - EXERCISE TESTING, PRESCRIPTION, AND SUPERVISION

Minimum Credits: 3
Maximum Credits: 3
An introductory lecture, laboratory course in cardiac rehabilitation. Topics presented include: the pathophysiology and epidemiology of coronary artery disease, coronary anatomy, basic and advanced electrocardiography, principles of graded exercise testing, exercise prescription and supervision, nuclear diagnostic techniques, current considerations in pharmacological treatment of coronary artery disease and cardiac rehabilitation in a clinical setting.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 2375 - RESEARCH AND EXPERIMENTAL DESIGN IN EXERCISE PHYSIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the development of experimental design and methodologies in exercise physiology research. The designs are explored within the context of ergogenic aids, training strategies, selected disease states, temperature regulation, and isokinetic strength and energy metabolism.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (NCDEG, MS, PHD) or Health Physical/Recreation Ed (MED)

HHD 2380 - BEHAVIOR CHANGE AND HEALTH COACHING

Minimum Credits: 3
Maximum Credits: 3
This course focuses on applying evidence-based behavioral strategies to interactions with health-fitness participants and patient populations to enhance engagement, adherence, and sustainability of lifestyle behaviors related to health. The course will include interaction strategies with patients, listening skills of health coaches, strategies to enhance compliance, strategies for working with non-compliant patients, and application to specific health-fitness and healthcare setting.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2381 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 1

Minimum Credits: 3
Maximum Credits: 3
This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in exercise physiology for the healthy adults as well as for special populations across the lifespan. Emphasis will be placed on mechanisms underlying metabolic and cardiorespiratory responses and adaptation to exercise and on the metabolic determinants of human adaptation and performance under normal conditions as well as during various environmental and physiological changes. Additional emphasis will be on taking in depth look at the acute and chronic responses to exercise in children and adolescents, pregnancy, and older adults. Instruction includes both didactic and laboratory experiences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2382 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 2

Minimum Credits: 3
Maximum Credits: 3
This course is an extension of the Clinical Exercise and Physical Activity Physiology 1 course. This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in the application of exercise physiology to clinical populations. Particular emphasis is placed on the acute and chronic responses to exercise in patients at risk for or having cardiovascular, endocrine, pulmonary, and metabolic diseases. Additional topics include clinical exercise physiology for cancer, disorders of the bone/joints, and neuromuscular disorders. Instruction includes both didactic and laboratory experiences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2383 - ADVANCED CLINICAL HEALTH AND PHYSICAL ACTIVITY ASSESSMENT

Minimum Credits: 3
Maximum Credits: 3
This course includes training on advanced assessment of fitness and health-related measures that can be implemented across various settings including clinical, public health, health-fitness, worksite, etc. Measures will include fitness, physical activity and sedentary behavior, body composition, and a variety of health-related measures. Instruction will include both didactic and laboratory-based experiences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2384 - MOVEMENT SCIENCE IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3
Maximum Credits: 3
This course examines human movement across the lifespan (youth, adults, older adults), health conditions, and exercise-related activities. Student will learn how to assess movement patterns and how to apply this knowledge to prevention, treatment, and rehabilitation situations. This course will be a combination of classroom and laboratory experiences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2385 - INTERNSHIP IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3
Maximum Credits: 3

Supervised experience for the master's degree student. Student placement is to a clinical setting, applied health-fitness setting, or health promotion setting that is appropriate to the pursuit of the intended degree. Students are also required to attend didactic and online course-related sessions with the instructor throughout this experience. Students intending to take this course need to coordinate the placement with the supervising faculty instructor at least 1 term in advance of registering for this course to allow for appropriate placement.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

HHD 2386 - HEALTH AND PHYSICAL ACTIVITY PROMOTION AND MARKETING

Minimum Credits: 3
Maximum Credits: 3
This course provides students with the conceptual background and practical skills necessary to address how to introduce and market health and physical activity programs and initiatives, and how to identify and implement channels of distribution of these programs and initiatives. This course will include both didactic and practical experiences for students to obtain and apply the necessary knowledge.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2387 - MEDIA AND TECHNOLOGY IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3
Maximum Credits: 3
This course address the application of media and technology in health and physical activity program implementation. Examples include the application of video, audio, online programming, etc. Students will have opportunities to uses the various technologies across various applications related to health and physical activity programming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HPRED-MS

HHD 2390 - NUTRITION IN SPORT AND EXERCISE

Minimum Credits: 3
Maximum Credits: 3
A lecture and laboratory class in which the principles of nutrition are applied to sports performance and exercise. Topics presented include energy release and substrate utilization, energy metabolism during exercise, fluid intake and athletic performance, body composition, ergogenic aids, vitamins and minerals, the pre-game meal, sports anemia, nutritional considerations for the diabetic individual, lipid metabolism and coronary heart disease.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2410 - STATISTICS IN HPA RESEARCH

Minimum Credits: 3
Maximum Credits: 3
A general knowledge of computer hardware/software and its use in physical education research is the major focus of this class. Software packages are examined for word processing and statistical analysis. An introduction to basic programming is given.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS)

HHD 2490 - SUPERVISED RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 18
The student demonstrates ability to apply research skills by planning and completing a research project under direction of an appropriate faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

HHD 2503 - DEVELOPMENT: CONCEPTION THROUGH EARLY CHILDHOOD

Minimum Credits: 3
Maximum Credits: 3
Focuses on developmental pathways from conception through early childhood within contexts of family, daycare/school, community and culture. Pathways are considered with regard to developmental changes in transactions between individuals and social life conditions, with focus on patterns of change in participation in social-cultural practices. Besides a review of current literature, students will be engaged in qualitative investigations of the social lives of young children.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HHD 2504 - DVLP: MIDDLE CHLHD/ADOLESCENCE

Minimum Credits: 3
Maximum Credits: 3
You will be teaching adolescents, or youth ages 11 - 18 years old. How your students think, feel, and experience the world around them will be unique to their own life histories and perspectives, but developmental psychology can provide some helpful insights into typical and normal thoughts, feelings and experiences during adolescence. This hybrid course (focuses on the cognitive, social, and biological changes from middle childhood, youth ages 6 - 10 years old through adolescence within the contexts of family, peers, community, school, and culture. Assignments will focus on observing in your field placements and applying theory to practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2510 - ASSESSMENT OF CHILDREN'S DEVELOPMENT IN REAL WORLD CONTEXTS

Minimum Credits: 3
Maximum Credits: 3
The course is intended for interdisciplinary graduate students (masters and doctoral) from such programs as applied developmental psychology, developmental psychology, social work, early childhood special education, health and rehabilitation sciences, and nursing. The course content and applied group activities will help prepare graduate students as emerging leaders to understand 'best practices' in the measurement of both children's development and the quality and impact of services and interventions that are applied to them and to their families. These 'best practices' are both professionally sanctioned by the major national early childhood professional organizations and many also have a research evidence-base that supports their use. Thus, this course will help students to understand and use various applied assessment strategies that can: (1) describe the development and progress of children (birth to adulthood) and families in functional ways; (2) sensitively monitor children's progress in intervention programs; (3) be applied by teachers and other direct care professionals; (4) collect evidence of children's daily functioning in natural everyday settings; (5) be selected to conduct applied program evaluation research for schools, agencies, and human service programs; and (6) document the impact and outcomes of intervention programs. The course will help students who are interventionists, but is not primarily clinical in orientation. Rather, it is designed to prepare future leaders-researchers, program administrators, program evaluators, and policy specialists-in best practices and their implications. It is a required course in the ADP MS course sequence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HHD 2520 - INTRODUCTION TO COUNSELING

Minimum Credits: 3
Maximum Credits: 3
This course will include theoretical models of counseling; units on crisis intervention, family support and intervention, home based models of support and intervention, the reflective practitioner; and counseling skills for child and youth care practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2521 - THEORY, MEANING AND PRACTICE OF PLAY AND ACTIVITY

Minimum Credits: 3
Maximum Credits: 3
This course provides a comprehensive overview of the role of play and activity in human development, with a particular focus on ways of utilizing play and activity to promote positive growth in social, emotional, physical, and cognitive domains; and on interpreting the meaning of individual and group play and activity. Play and activity in the lives of persons of all ages will be considered with some emphasis on the early and school years. While academic learning is essential in this course, the focus will be on hands-on, real play as the ideal way to learn about it, and encouragement of a life-long playful spirit.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2524 - BEHAVIORAL ASSESSMENT AND INTERVENTION

Minimum Credits: 3
Maximum Credits: 3
This course helps graduate students respond to the needs of K-12 students with emotional and behavioral problems in school settings. These problems include disruptive, oppositional and aggressive behaviors, limited interpersonal and study skills, and behaviors caused by learning difficulties, mental illness and stressful life events. The emphasis of the course is on research-based positive behavioral supports and interventions. In addition, students learn consulting strategies to assist those who teach challenging youth.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2530 - APPLIED DEVELOPMENTAL PSYCHOLOGY (ADP): PROFESSIONAL IDENTITY AND LEADERSHIP

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to introduce the field of applied developmental psychology (ADP). This course focuses on helping students to develop a professional identity, ethical reasoning skills, and leadership skills that align with ADP. Students will gain knowledge of the overall field, reading an advanced textbook and related literature, while getting to know how developmental thinking is being applied in our local community of practice. Attention will focus on the relations and partnerships that are necessary for the development, implementation, and evaluation of programs and policies that effectively support the positive biopsychosocial & spiritual development of children and youth in contexts of their families, schools and communities. The course introduces students to local experts who apply developmental thinking in different systems of practice, including education, juvenile justice, child welfare, and behavioral health. In this process, students will frame their own professional development, considering their goals in relation to needed competencies and opportunities in the field, and think critically about ethical principles and their applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2532 - PSYCHOSOCIAL ASPECTS OF ILLNESS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to enable students to understand the nature of and dynamics of pediatric illness, appreciate the impact an acute or prolonged health care experience may have upon children throughout the developmental process, better understand a family health care philosophy and gain an understanding of the multi-faceted role child life specialists play in today's health care environment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HHD 2538 - ADVANCED COUNSELING SKILLS

Minimum Credits: 3
Maximum Credits: 3
Course will teach indirect communication techniques, methods for dealing with secondary gains, methods to help clients develop a sense of empowerment and the therapeutic use of visual imagery. The course will emphasize hands-on practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: PSYED or HHD 2520

HHD 2542 - EVIDENCE-BASED INTERVENTIONS IN REAL WORLD CONTEXTS I

Minimum Credits: 3
Maximum Credits: 3
Evidence-based interventions (EBIs) are the foundation of effective and high-quality prevention and intervention programs in education, human services, and healthcare. Both pre-service and continuing education of interdisciplinary professionals must emphasize the acquisition of knowledge and applied competencies about diverse EBIs in this continuously evolving area. Many forms of prevention and intervention are used in education, human services, and healthcare, but few such practices have 'practice-based evidence' conducted in real-world settings which validate their continued use. Thus, in this course, students will gain knowledge and skills in evidence-based contextual and individual interventions, their content, methodology, implementation, and evaluation. The course will help students who are interventionists but is not primarily clinical in orientation. Rather, it is designed to prepare future leaders ' practitioners, researchers, program administrators/directors, program evaluators, and policy specialists - in best practices and their implications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2543 - EVIDENCE-BASED INTERVENTIONS IN REAL WORLD CONTEXTS 2

Minimum Credits: 3
Maximum Credits: 3
Evidence-based interventions (EBIS) are the foundation of effective and high-quality prevention and intervention programs in education, human services, and healthcare. In this second part of a 2-course sequence, students will: learn about and apply qualitative and quantitative data-based decision-making techniques and measures to collect evidence of child/youth daily performance and to assess the dimensions of various home, school, and community contexts which hinder or promote progress; create EBI plans for individuals and groups to promote progress in real-world settings; apply a short-term EBI in a real-life case situation; and evaluate the quality, impact, or outcomes of the data-based decision making methods and process.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2557 - COGNITIVE-BEHAVIOR THERAPY

Minimum Credits: 3
Maximum Credits: 3
This course introduces the theory and practices of cognitive-behavioral therapy (CBT) to help students develop a basic therapeutic skill set.

The CBT approach applies to a variety of clinical problems and practice settings. CBT is a flexible approach and is used in diverse settings such as inpatient, outpatient and partial hospital programs as well as in schools and community-based programs. Students will learn about how CBT may be used to address issues such as depression, anxiety, attention-deficit/ hyperactivity disorder, and other emotional and behavioral disorders. In addition to clinical practice, many people find the principles of the cognitive-behavioral model useful in maintaining a healthy emotional outlook in their own lives. This course will emphasize both theory and practice of cognitive-behavioral skills.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2562 - PLAY THERAPY AND FIELD WORK

Minimum Credits: 3
Maximum Credits: 3
Supervised experience in direct interaction with children on an individual basis in play interviews with concomitant consideration of children's developmental dynamics as revealed in a one-to-one relationship. An ongoing weekly seminar is a part of the course.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

HHD 2565 - PROGRAM DESIGN AND EVALUATION

Minimum Credits: 3
Maximum Credits: 3
An integration of child development theory and research in the design of programs for children, youth, and families. Focus is on skills in designing developmentally appropriate and interventive programs, structure of service models, and program evaluation. The major paper for the graduate program will be part of this course's requirements.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: PSYED or HHD 2540

HHD 2589 - SPECIAL TOPICS

Minimum Credits: 1
Maximum Credits: 3
This is a special topics course for the ADP Program at the graduate level.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

HHD 2590 - MASTER'S RESEARCH TEAM

Minimum Credits: 1
Maximum Credits: 1
This weekly course is designed for students who are pursuing a research project as their option for their master's program. Topics include discussions and hands-on support for how to design, conduct and write-up results for a research project.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

HHD 2596 - INTERNSHIP IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 6
A university-approved agency based supervised internship in developmental/interventive practice with and/or for children, youth and families.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HHD 2598 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
Directed study provides an opportunity for focused work with faculty supervision. The student must present a plan for the independent study for approval by the supervising faculty member prior to registration for the course.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

HHD 2599 - THESIS

Minimum Credits: 1
Maximum Credits: 6
Designed to help the student to carry out his or her research or creative project and to write an acceptable thesis. This course is subject to repeated registration.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HHD 2622 - CHILD LIFE PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
Credits for approved hospital-based child life practicum experience.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HHD 2632 - APPLIED RESEARCH DESIGN

Minimum Credits: 3
Maximum Credits: 3
This introductory methods seminar focuses on applied research design including developing conceptual definitions, applying models of theory testing and theory building, and developing relevant policy and practice research questions. This course will cover key debates occurring in the field of applied research in terms of producing evidence to support policy, practice, and program development, and is designed to encourage practical skill development; experiential learning opportunities are integrated into course content. Students will gain an understanding of applied research design and an improved skill set in proposing, designing, and evaluating applied studies of interventions and programs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 2722 - CHILD LIFE INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
Credits for approved hospital-based child life internship placement.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

HHD 2765 - COMMUNITY-BASED PRACTICE LEARNING 1

Minimum Credits: 1
Maximum Credits: 3
This course provides students with the opportunity to participate in an individual community-based practice learning experience with a partner agency. As part of the placement, students engage in activities that lead to the production of an agreed-upon, tangible product to meet an identified need for the agency. This product will also meet the requirements for the student written capstone project for the master's program and will serve as the presentation topic for the master's comprehensive exam. This course is taken concurrently with the ADP Professional Seminar I & II.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

HHD 2766 - COMMUNITY-BASED PRACTICE LEARNING 2

Minimum Credits: 1
Maximum Credits: 3
This course provides students with the opportunity to participate in an individual community-based practice learning experience with a partner agency. As part of the placement, students engage in activities that lead to the production of an agreed-upon, tangible product to meet an identified need for the agency. This product will also meet the requirements for the student written capstone project for the master's program and will serve as the presentation topic for the master's comprehensive exam. This course is taken concurrently with the ADP Professional Seminar 1 & 2.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

HHD 2990 - RESEARCH SEMINAR IN HPA

Minimum Credits: 3
Maximum Credits: 3
This course is required of all non-thesis master's degree candidates and includes the development and presentation of an original research paper. The student works in cooperation with a graduate advisor in their area of content specialization. The nature of acceptable projects includes the following: data based research; expanded literature review; development of software and/or hardware, development of instructional materials (i.e., Video tapes, slide series, films, etc.); Journal article.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

HHD 2996 - CLINICAL INTERNSHIP

Minimum Credits: 3
Maximum Credits: 3
Supervised clinical experience for the master's degree student. The student is placed in a clinical setting appropriate to his/her degree interests and career goals and must complete a minimum of 25 hours of clinical work per credit hour. Supervision is provided by the cooperating clinical supervisor and the university clinical advisor.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

HHD 2997 - CLINICAL EXERCISE PHYSIOLOGY PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
This course will provide practical shadowing and hands-on experiences in clinical exercise physiology settings.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

HHD 2998 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis

HHD 2999 - MASTER'S THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 9
He student prepares a proposal for an original research project, has that project approved by an appropriate faculty thesis committee, completes proposed project, and defends the completed report in a thesis final oral examination.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HHD 3001 - MAJOR TRANSITIONS IN CONTEXT

Minimum Credits: 3
Maximum Credits: 3
This class focuses on understanding the interplay of social, physical, cognitive changes within shifting cultural systems that limit and create affordances for change. In particular, the course involves an exploration of four foundational oppositions: 1) learning and development is highly differentiated by developmental phase vs. all learning and development has underlying regularities; 2) learning is fundamentally cognitive vs. learning is fundamentally social; 3) learning and development are slow and continuous vs. subject to large changes in the face of major transitions/life events; 4) learning and development proceed similarly across contexts vs. learning and development critically involve complex interplay of formal and informal learning. These themes and oppositions are explored through a deep dive on three foundational transitions: early childhood -> middle childhood; middle childhood -> adolescence; adolescence -> young adulthood. Students will also critically examine methods and challenges to such methods to understand contextual effects and longer-term developmental patterns in learning.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HHD 3002 - COMMUNITY ENGAGED SCHOLARSHIP

Minimum Credits: 3
Maximum Credits: 3
In this course, students will be exposed to multiple research design principles that center community engagement and foster research collaborations with individuals outside of the academy. Students will have the opportunity to create mini-proposals that are guided by specific research design and informed by real-world contexts. This course takes a case-study approach to broaden and deepen student understanding and engagement with research conceptions, design, and implementation. Class experiences will also employ experts (scholars and community partners) within varying research designs to dialogue with students about the promises and challenges of using

each design with existing projects.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HHD 3006 - FUTURE OF OUT OF SCHOOL LEARNING

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3022 - ORGANIZATIONS, NETWORKS, AND POLICY IN INFORMAL LEARNING

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HHD 3023 - YOUTH DEVELOPMENT IN OUT-OF-SCHOOL SETTINGS

Minimum Credits: 3
Maximum Credits: 3
Organized activities for children and youth that occur outside of school are a big deal. A bigger deal than they used to be. Participation rates are soaring, innovative programs are thriving, and research shows that, in many cases, attendance can benefit young people. In this course, we'll apply a developmental lens to the vibrant and growing out-of-school learning field. We'll explore the current realities and future promise of organized activities as important settings for child and youth development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3024 - INFORMAL LEARNING: THEORY AND FOUNDATION

Minimum Credits: 3
Maximum Credits: 3
This course is an overview of how we have thought about and address learning in and out-of-school learning settings. How do we define it? How do we know when it happens? What's the time scale? How do we support it? The course will highlight contemporary trends as well as trace the historical foundations of the field, paying particular attention to how the field connects with research on learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3114 - EVIDENCE BASED LIFESTYLE PROGRAM DESIGN AND EVALUATION

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3115 - HEALTH PROMOTION POLICY AND PROGRAM IMPLEMENTATION

Minimum Credits: 3
Maximum Credits: 3
This course investigates the impact of legislation, policies, and implementation on individuals' and populations' physical activity (pa) and nutrition. Centering on students' conceptualizations of their problem of practice, this course will explore: a) pa and nutrition program implementation and challenges to implementation, b) evidence-based policies, practices, interventions, and services and c) advocacy partnerships and organizations. This course will also integrate discussions of social justice and diversity in pa and nutrition policy and program implementation. Students will analyze these problems and their causes with the goal to craft and advocate for policies that promote pa and nutrition health equity for individuals and populations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-EDD)

HHD 3116 - RESOURCE AND FUNDING ACQUISITION FOR HEALTH PROMOTION PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
The course presents the process of developing and submitting extramural grants related to health, physical activity and nutrition. Students develop an idea and write a grant proposal linked to a funding source with the aim of providing higher quality, more efficient and less expensive health promotion and health care to populations. The potential funding sources are public sector, private sector, and non-profit sector. Furthermore, students incorporate into the grant proposal alternative funding strategies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HPRED-EDD (Health and Physical Activity)

HHD 3117 - HEALTH PROMOTION PROGRAM TRANSLATION AND SUSTAINABILITY

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: MCSI - Sustainability Related

HHD 3190 - RES SEM IN PSYCHOLOGY IN EDUC

Minimum Credits: 3
Maximum Credits: 3
Advanced seminar in research for doctoral students in psychology in education.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HHD 3197 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 3
Independent study for doctoral students in psychology in education.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

HHD 3374 - ADVANCED LABORATORY TECHNIQUES

Minimum Credits: 3
Maximum Credits: 3
This course provides a framework that aids the advanced graduate student in acquiring knowledge and technical laboratory skills pertinent to exercise physiology research. Content includes: cardiac output, maximal oxygen uptake, isokinetic exercise testing, hydrostatic weighing, techniques for assessing core and skin temperature and plasma volume changes, combined arm and leg exercise and water immersion exercise.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HHD 3377 - CHRONIC DISEASE CASE STUDIES

Minimum Credits: 3
Maximum Credits: 3
His course integrates selected elements of the knowledge base in the areas of exercise science, graded exercise testing electrocardiography, pharmacology and exercise prescription in order to develop an effective and realistic therapeutic plan for individuals who have coronary disease or are at risk for its development. The principal learning experiences for the course will center on the development, interpretation and presentation of cardiovascular case studies for intervention.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS or PhD)

HHD 3400 - ADVANCED RESEARCH METHODS IN MOVEMENT SCIENCE

Minimum Credits: 1
Maximum Credits: 1
Provides the Ph.D. student with a team oriented process to develop, implement, present and publish experimental research in exercise physiology and health-fitness.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HHD 3402 - ADVANCED RESEARCH METHODS IN PHYSICAL ACTIVITY EPIDEMIOLOGY

Minimum Credits: 2
Maximum Credits: 2
Provides the Ph.D. student with a team oriented process to analyze, develop, implement, present and publish experimental and epidemiological research in exercise physiology, physical activity epidemiology, and related disciplines.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HHD 3404 - COLLEGE TEACHING PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level teaching. Teaching methodology and theory is part of this course.
Academic Career: Graduate

Course Component: Practicum
Grade Component: Grad Letter Grade

HHD 3405 - GRANT WRITING IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to provide guidance to doctoral level students on the process of developing a grant proposal for extramural funding. This course will be modeled from the NIH submission and review process.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3406 - PROFESSIONAL WRITING IN HPA

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to expose the student to the process of developing professional abstracts and manuscripts that can be submitted for peer-review related to health and physical activity. This course will focus on developing empirically-based abstracts, manuscripts, the submission process, the peer-review process, and considerations for resubmission. The culminating experiences will include the submission of an abstract and manuscript for professional presentation and publication.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3450 - INTRO TO EDUCATIONAL EVALUATION

Minimum Credits: 3
Maximum Credits: 3
Issues relevant to doing evaluation and utilizing results are addressed. Both evaluation "theory" and practical experience are utilized to prepare people who will be providing or using evaluation information. Special emphasis is given to: a) differences between evaluation and research; b) problems in using quantitative or qualitative methods when assumptions are not met; and c) issues that affect the usefulness of information in decision making.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3531 - FAMILY INFLUENCE ON CHILD DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This course provides an analysis of the multiple pathways through which parents, siblings, and families shape child development. Each of several pathways--the determinants of parenting, parental influences, marital influences, and sibling influences--is examined and discussed across three developmental periods: infancy, early childhood, and middle childhood. Primary attention will be paid to the unique impact of parental care on early development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3535 - CULTURE AND COGNITION

Minimum Credits: 3
Maximum Credits: 3
This course will examine cultural influences on children's cognition. Students will be introduced to thinking and research in cross cultural

psychology. The implications of this work for the assessment of children's learning and development will be discussed. A multicultural perspective on the education of minority children in the United States will be presented and evaluated.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3587 - SPECIAL TOPICS 2

Minimum Credits: 3
Maximum Credits: 3
This course has two aims: (1) to understand how risk and resilience processes and competence develop in social contexts and (2) to explore how preventions and interventions based on this developmental information can enhance competence. The course will emphasize how developmental processes of risk and resilience are affected by social contexts. Contexts to be studied range from the small-group, organizational, and community contexts up to the level of public policy and culture. The course will review strategies and systems of prevention and intervention that target change in these social contexts, and thereby reduce risk or increase adaptation. The course will also draw on multidisciplinary content from the fields of human development, education, developmental and community psychology, psychiatry, public health, and public policy. The first part of the course will focus on developmental theories relevant to a contextual approach to risk, resilience, and competence. The second part will explore, in depth, a range of strategies for prevention, intervention, and social change that show evidence of positive impacts on child and youth development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Psychology in Education (PHD)

HHD 3589 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
This course will provide a psychologically safe place to develop professional writing skills that are specific to our field. We will work on refining writing that students are working on already (manuscripts, conference proposals, revise and resubmit letters, CVS, dissertation proposals, etc.). This will include self-reflection and analysis, peer-review, and whole group discussion. Weekly topics will include grammar/APA style, tone, and flow, integrating evidence, and staying motivated and engaged in your writing. Students will have many opportunities to give and receive feedback.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis
Course Requirements: PLAN: Psychology in Education (PHD)

HHD 3590 - SPECIAL TOPICS 3

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

HHD 3591 - SUPERVISED RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 18
Students will pursue selected topics under the guidance of a faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

HHD 3592 - PRACTICUM IN COLLEGE TEACHING

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level teaching.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HHD 3598 - DIRECTED STUDY IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 6
Federal and state reforms in recent decades have focused on the establishment of standards and assessments as means of improving teaching and learning and closing the achievement gap between more and less privileged students. Reforms such as no child left behind, the common core state standards, and the federal race to the top competition have resulted in a proliferation of standards and high-stakes tests, and have been accompanied by both desirable and undesirable changes in school and district practices. In this course we will explore the debates surrounding these various standards and assessment reforms. The topics this course will address include the use of assessments to lever instructional change, the assumptions about learning that underpin different types of assessments and test-based accountability, and research investigating the influence of high-stakes testing on instruction and learning. This course also will consider research pertaining to high-stakes teacher evaluation including value-added models, pay for performance, and direct assessment of teaching quality.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

HHD 3599 - DISSERTATION RESEARCH IN APPLIED DEVELOPMENTAL PSYCHOLOGY

Minimum Credits: 1
Maximum Credits: 18
Student registers for this course while conducting research for a doctoral dissertation.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HHD 3632 - APPLIED RESEARCH DESIGN

Minimum Credits: 3
Maximum Credits: 3
This introductory methods seminar focuses on applied research design including developing conceptual definitions, applying models of theory testing and theory building, and developing relevant policy and practice research questions. This course will cover key debates occurring in the field of applied research in terms of producing evidence to support policy, practice, and program development, and is designed to encourage practical skill development; experiential learning opportunities are integrated into course content. Students will gain an understanding of applied research design and an improved skill set in proposing, designing, and evaluating applied studies of interventions and programs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HHD 3995 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within either developmental movement and sport studies or exercise physiology.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity

HHD 3998 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis

HHD 3999 - DOCTORAL DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 15
The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

Health and Rehabilitation Scs

HRS 1000 - INTRODUCTION TO RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The study of the nature of research and the applications of the scientific approach in the research procedures. The course focuses on concepts, design techniques and interpretations, as well as limiting factors and ethical considerations.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PROG: Sch Hlth & Rehabilitation Scs; PLAN: Clinical Dietetics -Nutrition (BS, BOH, BS-H) or (NDNUTR-ND) or (NS-BS)

HRS 1006 - INTRO TO HUMAN NUTRITION

Minimum Credits: 3
Maximum Credits: 3
This course will cover an overview of the scientific principles of nutrition and application of these principles to humans throughout the life cycle. Major focuses of the course are the classification and function of the six major nutrients, review of current nutrition standards, safety of the food supply, and nutrition misinformation.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

HRS 1020 - ANATOMY AND PHYSIOLOGY

Minimum Credits: 4
Maximum Credits: 4

Introduces the structure of human cells, tissues, organs and organ systems, and functions associated with them. Range of topics extends from gross anatomical features to considerations of chemical processes that serve as the basis for cellular controls, gene expression and energy metabolism. Emphasis on relationship of structure to function and on understanding how structural or functional disturbances can become the basis for disease processes.
Academic Career: UGRD
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 1023 - HUMAN PHYSIOLOGY

Minimum Credits: 4
Maximum Credits: 4
This course has been designed in an effort to provide pre-clinical students with a foundational scientific knowledge base and conceptual understanding of physiological processes. Each organ system, and its contribution to the maintenance of homeostasis, will be discussed. Further, the essential components of each system will be explored, to the extent that life is supported. Some disease states will be discussed, in order to exhibit certain processes.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade
Course Requirements: PLAN: Clinical Dietetics-Nutrition(BS or BSH or BPH)

HRS 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4
Maximum Credits: 4
This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2020 - ANATOMY AND PHYSIOLOGY

Minimum Credits: 2
Maximum Credits: 2
Introduces the structure of human cells, tissues, organs and organ systems, and functions associated with them. Range of topics extends from gross anatomical features to considerations of chemical processes that serve as the basis for cellular controls, gene expression and energy metabolism. Emphasis on relationship of structure to function and on understanding how structural or functional disturbances can become the basis for disease processes.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2034 - ADVANCED PHARMACOLOGY ACROSS THE LIFESPAN

Minimum Credits: 3
Maximum Credits: 3
This is a basic science course covering the principles of drug action for several important classes of drugs. A basic knowledge of principles of chemistry and biochemistry will be used to explain the chemical basis of drug receptor interactions. The course begins with the fundamentals of pharmacodynamics, pharmacokinetics and pharmacogenomics, and then covers the pharmacology of the central nervous system, respiratory system, gastrointestinal system, renal/cardiovascular system, endocrine system, immune suppression and antibiotic, antifungal, antiviral therapies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HRS 2071 - ADVANCED GRANT WRITING PART 1

Minimum Credits: 3
Maximum Credits: 3
The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. Mentor must be identified prior to enrollment.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HRS 2074 - ADVANCED GRANT WRITING PART 2

Minimum Credits: 1
Maximum Credits: 1
The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. Mentor must be identified prior to enrollment.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HRS 2084 - SPECIAL TOPICS IN OSTEOARTHRITIS

Minimum Credits: 1
Maximum Credits: 2
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2089 - CHILDREN W/DISABILITIES: CLIN 2

Minimum Credits: 2
Maximum Credits: 2
Course provides an interdisciplinary clinical training experience to graduate students from nursing, medicine, public health, psychology, social work, education, early intervention, nutrition, physical therapy, speech/language pathology, occupational therapy, and audiology. Students have the opportunity to learn about the impact of disabilities on children, families, schools, communities, and society thru clinical activities as part of the university, community leaders for individuals with disabilities (UCLID) center's leadership training program.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2092 - MATERNAL AND CHILD HEALTH LEADERSHIP 2

Minimum Credits: 2
Maximum Credits: 2
This interdisciplinary leadership course addresses specific knowledge, skills, personal characteristics, and values necessary for maternal and child health (MCH) leadership. There is a primary focus on leadership development and styles through examination of public policy, advocacy, ethics, and social determinants of health across systems of care with diverse populations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2310 - ADVANCED MUSCULOSKELETAL DISSECTION ANATOMY

Minimum Credits: 2
Maximum Credits: 2
This course will provide students with an opportunity to study and dissect specified anatomical regions of the human musculoskeletal system and present their dissection to the class with particular emphasis given to clinical applications of that anatomy. Students will be given guidelines and basic instruction in the dissection process and will then work independently throughout the semester to complete their dissections. Through this experience students will gain a mastery of select regions of musculoskeletal anatomy and a greater understanding of the clinical applications of that anatomy.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2312 - SEMINAR IN NEUROLOGIC PHYSICAL THERAPY

Minimum Credits: 2
Maximum Credits: 2
A series of papers will be presented with interactive discussion related to novel interventions. Students will be responsible for reviewing the paper and presenting the case to the class. Each student will "teach" the class once and lead the discussion. Topic areas will be assigned by the instructor.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2314 - FUNDAMENTALS OF NEUROSCIENCE FOR THE ORTHOPEDIC CLINICIAN

Minimum Credits: 4
Maximum Credits: 4
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2315 - ADVANCED MUSCULOSKELETAL DISSECTION ANATOMY

Minimum Credits: 1
Maximum Credits: 1
This course will provide students with an opportunity to study and dissect specified anatomical regions of the human musculoskeletal system and present their dissection to the class with particular emphasis given to clinical applications of that anatomy. Students will be given guidelines and basic instruction in the dissection process and will then work independently throughout the semester to complete their dissections. Through this experience students will gain a mastery of select regions of musculoskeletal anatomy and a greater understanding of the clinical applications of that anatomy.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

HRS 2317 - SHRS INTERPROFESSIONAL HEALTHCARE IN ST. KITTS: BRIDGING DISCIPLINES FOR GLOBAL HEALTH EQUITY

Minimum Credits: 2
Maximum Credits: 2
This program is an interdisciplinary service-learning and global and local learning experience for SHRS graduate students. The students would register for a semester long learning travel course. The start of the learning travel course would include enriched learning in the culture of St. Kitts and Pittsburgh; it's history and health care needs. The course would include a cultural emersion of these populations, land, and environment. The middle portion of this course would include a weeklong excursion to the island of St. Kitts during the spring break week. Once on the island, the students and the clinical educators would assess and evaluate the needs of the people of St. Kitts, perform the recommended assessments and evaluations, commence in facilitator training (as requested and needed) for the family members and caregivers of the identified underserved population. Clinical therapy interventions will then be provided and/or taught to facilitate carryover after the trip has ended for the students. Once students are back stateside, reflective assignments and projects will be expected to address future needs for the populations that were seen during this study abroad course experience. Additionally, opportunities for local interprofessional clinical care will be facilitated at the Community Engagement Center with in the SHRS Wellness Pavillion in Homewood, PA. Future global and local learning experience courses will be planned based on requested information and learned understanding of the needs of the people of St. Kitts and Pittsburgh.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: OT-MS or OT-OTD or OT-CSD or CSD-MA/MS or CSD-PHD or AUDIO-AUD or ND-MS or PAS-MS or PAS-DMSC

HRS 2364 - EVIDENCE BASED MEDICAL AND PHYSICAL THERAPY INTERVENTIONS FOR PERSONS WITH NEUROMUSCULAR DISEASE

Minimum Credits: 3
Maximum Credits: 3
This course will focus on an evidence based comparison of newer vs. Older `techniques' used in the field of neurologic rehabilitation. Students will be asked to explore the evidence basis that supports or refutes use of these various approaches and techniques currently in use. Newer approaches to neurological rehabilitation will also be discussed-these include: constraint induced movement therapy, virtual reality, robotics, and deweighting. Lab and clinic visits will be incorporated into this course so that students will be able to see some of the techniques `in action'.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2365 - CASE STUDIES OF PERSONS WITH NEUROMUSCULAR DISORDERS

Minimum Credits: 3
Maximum Credits: 3
A series of cases will be presented with interactive discussion related to interventions that have been shown to demonstrate evidence and efficacy to address the person's functional limitations and impairments. Students will be responsible for preparing for the case prior to each session and will bring 'evidence' to support ideas for intervention. Innovative physical therapy and medical interventions will be discussed. Lecture and interactive discussion are the teaching methods of choice. Advanced clinicians will participate in the course to bring 'real life' cases to the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2374 - CLINICAL ROUNDS AND CASE PRESENTATION

Minimum Credits: 1
Maximum Credits: 1
Weekly rounds will be presented by various speakers/clinicians/researchers in both the fall and spring terms. These presentations will consist of case presentations, relevant clinical and/or research updates pertaining to the clinical practice of physical therapy.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2380 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS FOR CERVICAL AND THORACIC SPINE

Minimum Credits: 3
Maximum Credits: 3
This course will include evaluation and treatment of musculoskeletal conditions involving the cervical spine, the tempoRomandibular joint, the thoracic spine and rib cage. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills into the plan of care for the patient. Classes will consist of lecture, laboratory, and clinical experiences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2403 - MEDICAL TERMINOLOGY, PHARMACOLOGY, & PATHOPHYSIOLOGY

Minimum Credits: 1
Maximum Credits: 1
This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition, and use of terms related to all areas of medical science, hospital service, and health related professions. This ONLINE course is designed to give the student a knowledge of words frequently used in the medical field and provides examples through the review of basic anatomy, physiology, surgical procedures, diagnostic procedures, and symptomatology. Coverage of the pathology of each body system is will take place along with an introduction to pharmacology, and the pharmacological treatment of frequently occurring conditions of each body system.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2475 - DISABILITY RELATIONS AND SERVICES INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2501 - FUNCTIONAL ASSESSMENT

Minimum Credits: 3
Maximum Credits: 3
Course focuses on functional assessment from the perspective of body structures and functions, activity and participation as defined by the international classification of functioning, disability, and health of the world health organization. Students may focus on infants, children, adults, or older adults.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2503 - HUMAN PRFORMANCE: ADAPTATION

Minimum Credits: 3
Maximum Credits: 3
Course focuses on locating and synthesizing evidence supporting rehabilitation interventions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2504 - DIRECTED READINGS IN OT

Minimum Credits: 3
Maximum Credits: 3
This course focuses on research design for evidence hierarchies in the context of occupation therapy research.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2510 - FUNDAMENTALS EVIDENCED-BASED OT

Minimum Credits: 3
Maximum Credits: 3
Course focuses on the skills for asking occupational therapy clinical questions, searching for the best evidence to answer questions, and critically appraising the evidence. It emphasizes the research methodologies associated with hierarchies of evidence.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2514 - HUMAN PERFORMANCE: COMPENSATION

Minimum Credits: 3
Maximum Credits: 3
Course examines the interface between functional impairment, activity, and societal participation. Emphasis is on person-task environment analysis and adaptation to compensate for dysfunction during self-care, home management, school/ work, and play/leisure occupations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2525 - SPECIAL TOPICS SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Course focuses on the principles and practices of therapeutic use of self, clinical reasoning, and evidence-based practice as they are applied in diverse practice environments (e.g., Hospital, school systems, community agencies).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2555 - BIOMECHANICS OF BALANCE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PROG: Sch Hlth & Rehabilitation Scs or School of Medicine or Swanson School of Engineering; LEVEL: Graduate

HRS 2579 - OT AND HEALTH POLICY

Minimum Credits: 2
Maximum Credits: 2
Course content focuses on healthcare trends, reimbursement regulations, legislative policies, practice environments, strategies for maintaining continued competence, and emerging professional issues.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2582 - ANAL CLIN DATA/EVDNC FUNCT CHNG

Minimum Credits: 3
Maximum Credits: 3
Course focuses on how to design and carry out single-subject design studies and use quantitative methods of analysis (celeration line, 2 SD band, c-statistic) to document functional changes in client performance.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2583 - OT MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2590 - SPECLZD PRECEPTORSHIP: CLINICAL

Minimum Credits: 1
Maximum Credits: 6
Course provides experiential learning in a specialized area of occupational therapy practice (e.g., pediatrics, assistive technology, home healthcare, hand therapy, case management) for the purpose of developing advanced skills related to a specialty practice area.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

HRS 2591 - SPECLZD PRECEPTSHIP: EDUCATION

Minimum Credits: 1
Maximum Credits: 6
Course provides experiential learning in the teaching-learning process applied to entry-level professional education, distance education, client/patient education, consumer education, or knowledge application to clinical settings.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2592 - SPECIALIZED PRECEPTORSHIP: MANAGEMENT

Minimum Credits: 1
Maximum Credits: 6
This course addresses the role of the occupational therapist as manager of occupational therapy services. The focus is on the principles and practices of administration and supervision as they are applied in diverse practice environments (e.g., hospital, school systems, and community agencies).
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2594 - SPECLZD PRECEPTORSHIP: RESEARCH

Minimum Credits: 1
Maximum Credits: 6
Course provides experiential learning in coordinating occupational therapy research, including obtaining IRB approval, getting informed consent, participating in data collection, and managing data quality.
Academic Career: Graduate

Course Component: Credit Laboratory
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2612 - ADVANCED MEDICAL NUTRITION THERAPY 2

Minimum Credits: 3
Maximum Credits: 3
This is the second of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from her/his undergraduate coursework and HRS 2623 and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology and treatment, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions, including nutrition support, for acute and chronic diseases based on evidence-based research and guidelines. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class discussions, and problem-based learning through case studies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ND-MS;

HRS 2623 - ADVANCED MEDICAL NUTRITION THERAPY 1

Minimum Credits: 3
Maximum Credits: 3
This is the first of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from their undergraduate coursework and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions for acute and chronic diseases based on evidence-based guidelines. Teaching approaches for the course include lectures, assigned readings, in-class discussions and activities, and problem-based learning through case studies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ND-MS

HRS 2625 - COUNSELING METHODS

Minimum Credits: 3
Maximum Credits: 3
This is an advanced course that emphasizes counseling as a supportive process, characterized by a collaborative counselor-patient relationship that involves behavior and attitudinal change. It will focus on the conceptual foundations and philosophy of behavior change theories, with an emphasis on motivational interviewing, including application in practice to provide the learner with a collection of evidence-based strategies and counseling skills to promote behavior change in patients/clients.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2629 - DIETARY SUPPLEMENTS FOR HEALTH AND PERFORMANCE

Minimum Credits: 3
Maximum Credits: 3
This course will integrate classroom lecture and discussion to help students learn how research evidence supports or negates the use of dietary supplements for health and performance. Emphasis of course will be interpreting research evidence on dietary supplements, ergogenic aids and other performance enhancing methods, and adapting the evidence into clinical practice recommendations/guidelines.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2631 - NUTRITION FOCUSED PHYSICAL EXAMINATION

Minimum Credits: 3
Maximum Credits: 3
Introduction to professional knowledge and skills in nutrition focused physical examination. The course is based on the knowledge/application of the NCP and Model in professional practice. Learning experiences will include formal class presentations, class discussions, case-based problem solving and simulation laboratory sessions. Knowledge based learning leading to examination technique simulations for anthropometric measurements for body composition, nutrition focused physical examination for malnutrition diagnosing and examination techniques, e.g., vital signs, head and neck exam, intra and extra-oral exams, heart and lung auscultation, as well as, abdominal auscultation and palpation are included. At the completion of the course competency in application of nutrition focused physical examination techniques will be assessed on an individual basis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2633 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This course provides students with opportunities to explore through study, discussion and practical application, the issues and trends that are affecting food and nutrition professionals and the profession of dietetics. Included is an introduction to the history and structure of the profession of dietetics and to existing and emerging roles.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2639 - ADVANCED MATERNAL AND PEDIATRIC NUTRITION

Minimum Credits: 3
Maximum Credits: 3
This seminar course provides students with an evidence-based understanding of the anatomical, physiological, and biochemical changes that occur during pregnancy, human lactation, and development from infancy to adolescence. Students will learn about nutritional and lifestyle factors associated with fertility, pregnancy outcomes, and other high-risk groups in the pediatric population. Students will obtain advanced knowledge on the medical nutrition therapy for management of diseases specific to these life-stages. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class activities and discussions, and site visits.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2646 - INTRODUCTION TO FUNCTIONAL NUTRITION WITH LAB

Minimum Credits: 3
Maximum Credits: 3
This introductory course to functional nutrition is based on a food first approach to promotion of optimal health. Lectures and class activities will explore the scientific basis of medicinal foods and herbs used in cooking. Students will demonstrate practical application by incorporating 'health promoting foods and herbs' into meal planning and preparation with the goal of optimizing health for the prevention and treatment of diet and lifestyle related diseases.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PLAN: Nutrition and Dietetics (ND-MS)

HRS 2649 - QI RESEARCH PROJECT DEVELOPMENT

Minimum Credits: 1
Maximum Credits: 1
During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2652 - EXPERIENTIAL PRACTICE 3

Minimum Credits: 3
Maximum Credits: 3
The experiential practice experience activities for HRS 2652 are planned to provide the student with the opportunity to assume increased responsibility for the management of nutrition care to hospitalized patients. In this course, the student will function as a clinical dietitian at the clinical site and will independently conduct all phases of the nutrition care process.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2653 - QI RESEARCH PROJECT

Minimum Credits: 1
Maximum Credits: 1
During this course the student will complete their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the students specialty rotation.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Nutrition and Dietetics MS

HRS 2655 - RESEARCH METHODOLOGY AND APPLIED STATISTICS

Minimum Credits: 3
Maximum Credits: 3
This introductory course in research methods and applied statistics will address research study design and descriptive and inferential statistics related to the research process. Inferential statistics will include one-sample, two-sample and multi-sample inference. Topics covered will include issues related to measuring variables (reliability/validity), an introduction to epidemiology and measures of association, and interpreting scientific literature. The course will include hands-on practice in running statistical tests previously taught in class. This course provides awareness about research methods and statistical analysis considerations needed by health sciences students. There are no pre-requisites.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2658 - CAPSTONE PROJECT

Minimum Credits: 2
Maximum Credits: 2
This is part one of a two-semester course sequence (HRS 2658 Fall Term and HRS 2674 Spring Term), fulfilling a student-directed capstone project by developing a research question and grant proposal. This course sequence will coordinate online lectures and discussions on the basic research skills and concepts needed to develop a grant proposal as part of a quality improvement research initiative. Students will develop a quality improvement research question, perform a literature review, and develop defined components for the proposal for the Final Grant. Citations and references should follow the Journal of the Academy of Nutrition and Dietetics (JAND) formatting guidelines.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

HRS 2659 - PRACTICUM IN DIETETICS 2

Minimum Credits: 2
Maximum Credits: 2
This self-guided course prepares students for their planned, experiential practicums completed at an assigned clinical facility. Online teaching approaches include quizzes, lectures, group discussions, student presentations, and problem-based learning through case studies. Active participation in the online components is a requirement of the course. This course includes planned supervised experiential learning (SEL) hours. Each student is expected record their hours in our CBE portal.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad Letter Grade

HRS 2672 - EXPERIENTIAL PRACTICE 2

Minimum Credits: 7
Maximum Credits: 7
This course provides advanced experiential practice experience in clinical nutrition and long-term care setting. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

HRS 2674 - CAPSTONE PROJECT

Minimum Credits: 3
Maximum Credits: 3
This is part two of a two-semester course sequence (HRS 2658 Fall Term and HRS 2674 Spring Term). This course sequence will coordinate online lectures/discussions on the basic research skills and concepts needed to develop a grant proposal as part of a quality improvement research initiative. Students will develop a quality improvement research question, perform a literature review, and develop defined components for the proposal for the Final Grant. Citations and references should follow the Journal of the Academy of Nutrition and Dietetics (JAND) format.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

HRS 2675 - PRACTICUM IN DIETETICS 1

Minimum Credits: 2
Maximum Credits: 2

This self-guided course prepares students for their planned, supervised experiential practicums completed at an assigned clinical facility. Online teaching approaches include quizzes, lectures, group discussions, student presentations, and problem-based learning through case studies. Active participation in the online components is a requirement of the course. This course includes planned supervised experiential learning (SEL) hours. Each student is expected record their hours in our CBE portal.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad Letter Grade

HRS 2676 - EXPERIENTIAL PRACTICE 1

Minimum Credits: 11
Maximum Credits: 11
This course will provide experiential practice experience in the area of food service management and clinical nutrition. The purpose of the learning activities and assignments is to provide the student with the opportunity to apply knowledge and skill in food service management and clinical nutrition in a health care setting.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

HRS 2680 - EVIDENCE BASED PROFESSIONALISM IN DIETETICS

Minimum Credits: 2
Maximum Credits: 2
This course will provide students with the tools and resources to facilitate personal and professional development. It will expose students to systems and processes to develop professionally throughout their career, to stay current with research and developments that take place within the profession. Students will gain an understanding of what it means to be a competent professional in the field of nutrition and dietetics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HRS 2705 - PRACT REHAB ENGR & ASSISTV TECHN

Minimum Credits: 3
Maximum Credits: 3
Develop the clinical skills needed to apply at and re solutions to help persons with disabilities achieve their goals in the area of productivity, education, employment, communication, and environmental access. Students will match knowledge of at products gained in HRS 2704 to the needs of individuals. Taught using a model for assessing the individual, the context, the technology-user interface and an interdisciplinary team approach. A 3 hour a week commitment to serving learning & a journal is integrated with lectures, guide learning and semester case-based learning project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2709 - MANUAL WHEELCHAIR DESIGN

Minimum Credits: 2
Maximum Credits: 2
Covers the basic nomenclature used to describe and order wheelchairs. Wheelchair adjustment, assembly, training and operation will be covered. Students will be introduced to wheelchair standards and government controls. The focus on manual wheelchairs. Various types of manual wheelchairs will be used during the course. Students will participate in lectures and laboratory experiences.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2718 - PROJECT BASED TECHNOLOGY DESIGN

Minimum Credits: 3
Maximum Credits: 3
This course is the second course in a two-course sequence on Rehabilitation Engineering Design. HRS 1706/2706 is in the Fall, and 1718/2718 is in the Spring. HRS 1718/2718 is a project-based design course in which students use design methods and tools learnt in 1706/2706, follow an iterative design and testing process with clients and experts, and develop assistive technology device prototypes for their clients.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2719 - FUNDAMENTALS OF REHABILITATION ENGINEERING & TECHNOLOGY 1 LAB COMPONENT

Minimum Credits: 1
Maximum Credits: 1
This is the 1-credit lab component associated with HRS 2704. It is optional, for those who wish to get the hands-on experience in a clinic setting. Do not register for this course if you have not also registered for HRS 2704. Introduction to fundamental principles and practices related to multiple areas of assistive technology. Technology areas include: seating and wheelchair mobility, augmentative communication, environmental control, computer access, transportation safety, prosthetics, worksite ergonomics, and man/ machine modeling. In addition, common terminology, disability ethics and models of service delivery related to assitive technology are discussed.
Academic Career: Graduate
Course Component: Credit Laboratory
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2748 - ASSISTIVE TECHNOLOGY PRACTICUM

Minimum Credits: 1
Maximum Credits: 6
Practicum involves a minimum of 100 clock hours of super vised assistive technology experience including assessment, development, training, evaluation and follow-up regarding rehab technology. Practicum designed to provide specific experience and supervision in the provision of assistive technology to rehab consumers.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2778 - RESEARCH SEMINAR IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1
Maximum Credits: 1
This course includes reading and discussion of research related to the practice of orthotics and prosthetics. Case studies, along with the evidence for the chosen or alternative orthotic or prosthetic treatments, will be presented by students and faculty. Students will formulate a research or scholarly paper topic related to orthotics and prosthetics, identify a mentor, and begin research on the topic.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2828 - STUDY ABROAD PROGRAM IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1
Maximum Credits: 1
The objectives of the course are to let the students to observe and practice prosthetics and orthotics techniques of fabrication and clinical assessment in the treatment of patients with limited sources in Ecuador. Review of conditions and symptoms indicating treatment with lower extremity prosthetics below and above the knee as well as upper extremity prosthetics below and above the elbow, lower extremity orthotics for the foot, ankle, knee and hip as well as spinal orthoses. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of spinal orthoses, upper and lower extremity prostheses and ortheses. Impressions, measurements and fabrication of the prosthetic and orthotic devices. Fitting, delivery and evaluation of effectiveness. A local prosthetics and orthotics company in that country will provide the logistic support of equipment and tools during the program. This experience will reinforce the concepts and knowledge acquired during the past terms in prosthetics and orthotics, and also prepares those who decide to take advantage of this opportunity with better tools of experience before their residence.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2906 - HIST MED AND HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
This course examines the origins and evolution of both traditional medical systems and alternative health-care patterns in West civilization from the earliest society to the present. Particular attention is placed on the impact of religion, warfare, and other societal factors on the development of medicine. Special sessions cover the role of the physician in defining society's treatment of women, minorities, and the mentally retarded.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.
Course Attributes: Global Studies

HRS 2920 - ADMINISTRATIVE INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
Supervised practical experience providing an opportunity to learn new skills in administration of a service or facility and permitting the application of previously learned skills and theories.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2921 - CLINICAL INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2922 - TEACHING INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
Supervised experience in a health-related educational program permitting the student to develop and present instructional materials, to experiment with innovative methods of instruction, and to evaluate the effectiveness of the presentations.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2924 - GRADUATE RESEARCH PROPOSAL

Minimum Credits: 1
Maximum Credits: 6
Graduate student writes thesis proposal, receives committee approval and institutional review board (IRB) approval for thesis study.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2925 - GRADUATE RESEARCH

Minimum Credits: 1
Maximum Credits: 6
An original in-depth investigative study of a selected area of professional interest. A research report suitable in format and content for publication is required.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2926 - SCHOLARLY PAPER

Minimum Credits: 1
Maximum Credits: 6
A research oriented paper based on work the student has done in his or her area of study. Students will be encouraged to submit honors papers for publication or presentation at a national or state professional meeting. The adviser and an appropriate faculty reader will supervise the student's work on the scholarly paper.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2927 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 1

Minimum Credits: 3
Maximum Credits: 3
Statistical methods for health science research i. This is the first of a two-course series in statistical methods. Topics covered include measurement, frequency distributions, histograms, bar graphs, stem-and-leaf displays, boxplots, scatterplots, measures of central tendency, measures of variability, point estimation, interval estimation, sampling distributions, one and two-sample tests of hypotheses for means and an introduction to non-parametric tests.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2928 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 2

Minimum Credits: 3
Maximum Credits: 3
This is the second of a two-course series in statistical methods. Topics covered include one and two way analysis of variance, multiple comparisons for main effects and interactions, analysis of co-variance, multiple comparisons for adjusted means, correlation, simple linear regression, multiple regression, and meta-analytic methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2930 - ADVANCED TOPICS IN STATISTICAL METHODS

Minimum Credits: 3
Maximum Credits: 3
Advanced topics in statistical methods. This course focuses on applied longitudinal data analysis. Topics include: the multilevel model for change, with an emphasis on individual change over time; applied data analysis using the multilevel model with random and fixed effects; evaluation of model fit; and the discrete-time hazard model.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: REHSCI-PHD or CSD-PHD

HRS 2999 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3000 - DOCTORAL SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Faculty and students in the rehabilitation doctoral program will participate in this seminar series. Research will be presented and critiqued by faculty and students. Topics related to grantmanship, ethics in research, and issues related to survival in an academic/research environment will be addressed in this seminar series. Doctoral students must present their research for critique by faculty prior to their dissertation defense.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3001 - DISSERTATION RES PHD DEGREE

Minimum Credits: 1
Maximum Credits: 12
Students will formulate, design, propose, carry out, analyze, interpret, and write up an approved research project, under the direction of a dissertation committee, and in particular the chairperson.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3002 - METHODS OF INQUIRY FOR REHABILITATION SCIENCES I

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3003 - CORE CONCEPTS IN DISABILITY AND REHABILITATION 1

Minimum Credits: 2
Maximum Credits: 2
This course is the first course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this first course, we will review models of disability and rehabilitation. We will focus on aspects of concepts of functioning and disability, including body structures, body functions, activities and participation. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. Students will learn through faculty presentations (from among the various research programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3004 - METHODS OF INQUIRY FOR REHABILITATION SCIENTISTS II

Minimum Credits: 1
Maximum Credits: 1
Course focuses on foundational knowledge regarding methods of inquiry for rehabilitation science. The first segment emphasizes outcome measures and the second segment emphasizes prognostic studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HRS 3002 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3005 - CORE CONCEPTS 2

Minimum Credits: 2
Maximum Credits: 2
This course is the second course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this

second course, we will focus on individual and contextual factors that influence disability and rehabilitation, and implications for research. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. We will also synthesize concepts and principles and discuss their application in individual student research programs. Students will learn through faculty presentations (from among the various research programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HRS 3003 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3006 - ADVANCED NEUROMUSCULAR PHYSIOLOGY

Minimum Credits: 3
Maximum Credits: 3
At the turn of the twentieth century, the pioneering neuroscientist and Nobel Laureate Charles Sherrington said that "To move things is all that mankind can do... for such the sole executant is muscle, whether in whispering or felling a tree". The smooth and effortless movements we produce in everyday life are the result of exquisite neuromuscular interactions that we are only beginning to understand. The goal of this course is to develop a working knowledge of neurophysiological principles and techniques fundamental to successful movements in health and disease. The course will begin with a basic overview of the anatomical components of voluntary movement followed by three modules. Module 1 will cover neurophysiological principles of movement. Module 2 will provide knowledge about non-invasive techniques used to study neuromuscular function in humans. Module 3 will convey new perspectives on pathologies of the neuromuscular system based on the integration of course concepts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: ACADEMIC PLAN: REHSCI-PHD (Rehabilitation Science) ACADEMIC SUBPLAN: PHDSMN-TR (Sports Medicine and Nutrition)

HRS 3325 - FEMALE PHYSIOLOGY SPORT

Minimum Credits: 3
Maximum Credits: 3
This course provides an in-depth examination of female physiology as it relates to sport, exercise, and physical performance. Emphasis is placed on sex-based physiological differences and the unique biological, hormonal, and metabolic factors influencing exercise response, training adaptation, health, and athletic performance in females. Topics include endocrine function and the menstrual cycle, reproductive physiology, musculoskeletal health, and energy metabolism. The course also addresses physiological considerations across the female lifespan, including puberty, pregnancy, postpartum, and menopause, as well as the impact of hormonal contraceptives and endocrine disorders on performance and health. Applied perspectives will include training, recovery, injury risk, and performance optimization for female athletes, along with evidence-based strategies for research design and clinical practice involving female participants. Students will critically evaluate current scientific literature and discuss implications for coaching, clinical exercise physiology, sports medicine, and public health.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HRS 3702 - SOFT TISSUE BIOMECHANICS

Minimum Credits: 3
Maximum Credits: 3
Soft tissue responses to external mechanical loading are of interest in the prevention and treatment of pressure-related tissue injuries. These injuries include ulcers occurring on the plantar surface of diabetic feet, wounds at the inter face between a PROSTHeses and a residual limb and pressure ulcers over the bony prominences of immobile individuals with neuromuscular impairments.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3705 - WHEELCHAIR BIOMECHANICS

Minimum Credits: 1
Maximum Credits: 1
Discuss all areas of wheelchair biomechanics including stability of wheelchairs and propulsion biomechanics. Students will use kinetic and kinematic analysis to determine the forces and moments occurring in upper extremity joints during the propulsive stroke. Clinical correlates to the biomechanical studies will be presented.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3710 - CLINICAL APPLICATIONS AND SEATING

Minimum Credits: 4
Maximum Credits: 4
Course will cover the clinical aspects of seating and mobility intervention for four diverse populations. First, the special needs of children will be addressed. Include various disability specific goals of intervention. Second are people with acquired spinal cord lesions. Seating and mobility intervention from the time onset - through rehab to independent living. The final two populations are people with musculoskeletal disorders and the elderly.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HRS 2704 and 2705; PROG: Sch Hlth & Rehabilitation Scs

HRS 3713 - REHABILITATION ENGINEERING DESIGN

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3895 - RDG NEUROMUSCLR ASPCT SPRT INJRY

Minimum Credits: 3
Maximum Credits: 3
The course contains in depth study, readings, and critical discussion related to the role of the sensorimotor system in providing joint stability and how these sensorimotor mechanism are altered with orthopedic sport injury.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3998 - CLINICAL TRIALS IN REHABILITATION: INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 2
The clinical trials independent study is for students who want to learn more about the design and analysis of clinical trials in rehabilitation. The trainee must choose which path of the independent study they will pursue; option 1: an introduction to clinical trials methodology or

option 2: in depth study of a particular aspect of clinical trial designs or methods relative to rehabilitation research. If option 1 is chosen, the student must have an idea for a randomized controlled trial even if hypothetical. The trainee will follow a structured set of learning objectives on research questions, justification, methodological procedures, data management, ethics, safety, monitoring, statistical considerations, and dissemination of clinical trials. The student will develop a clinical trial protocol during the independent study, applying the concepts learned during the readings and meetings with the instructor. If option 2 is chosen, each trainee is encouraged to work with an experienced clinical researcher (investigator) who agrees to provide the trainee mentorship. The investigator must be planning a clinical trial, conducting a clinical trial, or have conducted a clinical trial. Trainees are expected to become part of the research team and learn how studies or trials are designed, implemented, managed, and analyzed. Trainees are expected to provide an outline of readings relevant for the independent study objectives and at the end provide summaries of their experiences and reading materials.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PREQ: Option 1: completion of HRS 3002 with a B or better OR Option 2: completion of CLRES 2800 and 2810 and 2820, OR BIOST 2062, each with a B or better

HRS 3999 - DOCTORAL INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

Health Policy and Management

HPM 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3
Maximum Credits: 3
The core course is designed to give students an overview of the disciplines and competencies associated with the field of health policy and health care management. Understanding the role of leadership in a public health environment is a unifying theme in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2005 - CURRENT ISSUES IN HEALTH LAW

Minimum Credits: 1
Maximum Credits: 1
Current Issues in Health Law is an interdisciplinary course for students of public health and law. In this course, students will be introduced to cutting-edge issues in public health law, health law and policy. The course focuses on developments in health care and public health, particularly as they affect medically under-served populations, with implications for lawyers and public health practitioners as policy makers. It will also introduce students to the variety of settings in which lawyers and public health practitioners are involved in law. Classes will be taught by leading experts in the field as well as student led discussions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2010 - ORGANIZATION STUDIES: THEORY AND APPLICATIONS TO HEALTH CARE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Focus on the understanding and application of fundamental concepts, principles and models associated with organization theory within healthcare, rehabilitation, and long-term care. Content will encompass the traditional foci of organization theory, e.g. Structure and functions, authority relationships, coordination and control processes, as well as constructs associated with related disciplines of organization behavior e.g motivation theory, leadership, etc. Emphasis on real-world applications. Organization design discussed in contemporary organization structures and processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2012 - FINANCIAL MANAGEMENT FOUNDATIONS HEALTH CARE AND PUBLIC HEALTH

Minimum Credits: 3
Maximum Credits: 3
Introduction to selected finance and accounting topics of health care professional, supervisor and department head. No previous knowledge of accounting or financial management required. First half emphasis on basic financial accounting concepts to provide organization-level understanding language, concepts, processes and functions of financial management. Second half emphasizes managerial accounting principles and techniques including cost accounting and budgeting. Focus shifts to departmental level financial management and role of supervisor process including budget development and control.
Academic Career: Graduate

Grade Component: Grad Letter Grade
Course Requirements: PROG: PPBHL; PLAN: HPM-MHA or HPM-MPH

HPM 2014 - APPLICATIONS AND ISSUES IN FINANCIAL MANAGEMENT OF HEALTH CARE INSTITUTIONS

Minimum Credits: 3
Maximum Credits: 3
This curriculum is designed to expand on the concepts presented in the financial management foundations for health care and public health course (HPM 2012). The focus of the instruction will be less book-learning and, instead, primarily be comprised of real-life, practical situations faced in today's healthcare industry. Teachings will be a mix of guest speakers from the local area's leaders and the instructor's experiences. The first part of the semester will revolve around understanding what's behind the data contained in an organization's financial statements. The course will also cover alternative revenue opportunities, such as philanthropic initiatives and investment earnings. Once these concepts have been presented, the instruction will change its focus to managing within a healthcare organization concentrating on budgeting, determining how/what programs to invest in or implement, and balance sheet management.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2017 - QUANTITATIVE METHODS: DECISION TECHNOLOGIES AND OPERATIONS MANAGEMENT IN HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
This course gives an introduction to decision technologies and to the art of successfully using them in practice. Part i: focus on methodologies for optimizing and for predicting the consequences of decisions. Health care applications are considered: resource allocation, scheduling, project management. Part ii: focus on operations management issues in health care. Topics include: forecasting, inventory management and quality control.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy & Management (MHA or MPH) or Health Services Res and Policy (MS)

HPM 2020 - PROFESSIONAL DEVELOPMENT SEMINAR 1

Minimum Credits: 1
Maximum Credits: 1
The Professional Development Seminar is designed to optimally prepare students to enter the health industry workforce. The primary goal of the Professional Development Seminar is to help ensure that all students fully leverage the career services provided by the university, are exposed to the broad array of settings and roles within the health industry, and gain exposure to health industry professionals from our key external stakeholder organizations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2021 - PROFESSIONAL DEVELOPMENT SEMINAR 2

Minimum Credits: 1
Maximum Credits: 1
The Professional Development Seminar is designed to optimally prepare students to enter the health industry workforce. The primary goal of the Professional Development Seminar is to help ensure that all students fully leverage the career services provided by the university, are exposed to the broad array of settings and roles within the health industry, and gain exposure to health industry professionals from our key external stakeholder organizations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2025 - HPM PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
The student may register for the HPM practicum upon approval of the faculty of the department of health policy and management. The HPM practicum is designed to provide the student already employed in a healthcare organization with exposure to executive management, leadership, and policy- making processes and activities. Typically, the student will complete the practicum at their employing organization.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2028 - MICROECONOMICS APPLIED TO HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to microeconomics, the study of resource allocation with particular emphasis on the role of markets. The course focuses on the competitive model. Examples of the use of economic concepts are drawn primarily from the health and medical care delivery systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2029 - HEALTH MANAGEMENT INFORMATION SYSTEMS

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to provide future health care managers and policy-makers a conceptual framework for understanding and managing an integrated health management information system (HMIS). Primary attention will be given to the overall architecture of HMIS and issues related to health information management. The course focuses on the health care manager's role in the design, implementation and control of an effective HMIS. Instructional methods include lectures by regular faculty and guest resources, class discussion, case analyses and an applied field site study.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2037 - ESSAY-HA

Minimum Credits: 1
Maximum Credits: 3
The essay is designed to provide the student with an opportunity to integrate the major components of the health administration learning experience. The student is expected to demonstrate analytical ability and technical proficiency in expository writing.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2049 - HUMAN RESOURCES MANAGEMENT FOR HEALTH CARE AND PUBLIC HEALTH PROFESSIONALS

Minimum Credits: 2
Maximum Credits: 2
This course encompasses both personnel administration and labor relations concepts, processes and issues presented within a broad human resource management perspective. The emphasis of the course is on behavioral implications of legal-regulatory, economic, cultural, and technical forces affecting the management of people in health care organizations viewed as an open system. Perspectives of organization theory and behavior, personnel and labor law will be applied to the analysis of human resource/labor relations problems and effective management and supervisory practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2050 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 1
Maximum Credits: 1
The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2051 - HEALTHCARE APPLICATIONS OF OPERATIONS RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The Healthcare Applications of Operations Research course provides students with an understanding of operations research concepts and how to appropriately apply those concepts in healthcare settings. Students will develop skills in analyzing and improving healthcare systems and processes through the application of health systems engineering and operations research techniques. The course will feature a mix of didactic instruction followed by small group breakouts using primarily healthcare-related examples to apply concepts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BIOST 2011 or BIOST 204. HSEPH-ACM students only. COREQ: Must be enrolled in IE 2000

HPM 2055 - MANAGING HEALTH PROGRAMS AND PROJECTS

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to prepare students to effectively manage health programs and projects. The course is lecture/discussion based, but with ample analytical and written assignments. Extensive use is made of internet resources. A conceptual model of core (strategizing, designing, and leading) and facilitative (communicating, managing quality, marketing, and decision-making) management activities is used to structure the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2063 - THE POLITICS OF HEALTH POLICY

Minimum Credits: 2
Maximum Credits: 2
This 2-credit course is designed to provide an understanding of the key political dimensions of the health policy-making process in the united states. The course is designed for students with an interest in health policy, although no previous formal training in policy or politics is required. We will examine the roles of government institutions and political actors both inside and outside government in developing and implementing health policy. Past and present health care policy debates will be used to illustrate the concepts and theories discussed in class. Students will acquire an understanding of the political processes in which health policies are considered, and gain practical experience executing political strategies in the context of health policy campaigns.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2064 - HEALTH POLICY ANALYSIS

Minimum Credits: 2
Maximum Credits: 2
The aims of this course are to provide students with 1) an overview of the U.S. Health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. Pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2075 - NAVIGATING THE PHYSICIAN-ADMINISTRATOR RELATIONSHIP

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide the student with an introduction to the role of physician administrators in the emerging healthcare matrix based organizational model. Physicians, by virtue of their training and clinical experience, bring a background and orientation to administrative roles that differs significantly from the traditional orientation of the non-physician administrator. This often results in a clash of cultures which if not properly managed can negatively impact organizational efficiency. It is imperative that non-physician administrators develop the skill sets that will facilitate the merging of the physician's primarily clinical culture with the non-physician administrator's more traditional business and operational culture in support of an organization's overall mission. The course will emphasize the physician administrator's approach to C-Suite management and provide the student with exposure to and practical knowledge of the administrative and operational issues which commonly engage physician administrators. This course should prepare the student to function within a C-Suite environment that is led or populated by physicians in either a combined clinical and administrative or purely administrative role. Additionally, the student will gain exposure to the myriad of regulatory, quality/safety and patient centric issues for which physician administrators commonly assume overall responsibility. Commonly, while these issues are championed by the physician administrator, the day to day responsibility for the design and implementation of focused resolution strategies becomes the responsibility of the non-physician administrator. This mandates the development of the ability to prioritize, for strategic planning purposes, and to have sufficient competency with the identification and analysis of relevant metrics and the ability to utilize this type of data to formulate effective action plans. This course focuses upon this skill set and is structured to afford the student the opportunity to develop project specific strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence. The student will also be provided the opportunity to develop resolution strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2081 - PUBLIC HEALTH AGENCY MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
The course public health agency management focuses on the areas of knowledge and skills necessary to manage public health agencies. The course covers topics such as core functions and public health practice, legal basis for public health, public health interventions, configuring health departments, fundamentals of management theory and application, agency budgeting and public health constituencies. Classes include a lecture and class discussion of a case study or related question. The class ends with a final group report and group presentation of a class project relative to the development of a county health department.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2082 - PUBLIC HEALTH AGENCY MANAGMENT

Minimum Credits: 2
Maximum Credits: 2
The course Public Health Agency Management focuses on the areas of knowledge and skills necessary to manage public health agencies. The course covers topics such as core functions and public health practice, legal basis for public health, public health interventions, configuring health departments, fundamentals of management theory and application, agency budgeting and public health constituencies. Classes include lecture and class discussions of a case study or related questions. The class ends with a final group report and group presentation of a class project related to the development of a county health department.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HPM-MPH

HPM 2090 - INNOVATION IN THE BUSINESS OF HEALTH

Minimum Credits: 2
Maximum Credits: 2
This course will introduce students to the discipline of innovation and how it may apply in future healthcare leadership roles. Students will draw on a wide range of academic and real-world content, including texts, case studies, web sites and industry publications. We will examine innovation in both the business and care delivery aspects of healthcare, setting a foundation by understanding market forces in policy and payment that may constrain or accelerate innovation in consumer adoption, new technologies and business models. The course will feature a mix of didactic instruction followed by small group breakouts using healthcare examples and case studies to apply concepts. The course will culminate with student-led presentations in which they 'think like an innovator' on a health innovation opportunity of interest, provided by the instructor or selected by student(s), to demonstrate the utilization of design thinking research methods to propose a solution to the identified need. Innovation is an oft-discussed yet poorly understood discipline in the business vernacular. Throughout this course we will provide operating definitions and examine how both established healthcare institutions and new market entrants respond to evolving markets, consumer needs and scientific discoveries. Students preparing to become successful healthcare leaders will benefit from understanding how regulatory and market dynamics drive or hinder change and how to identify and adopt innovations at the right time for their business.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HPM-MHA; SUBPLAN: MHAMBA-TR

HPM 2091 - VALUE-BASED MODELS OF CARE DELIVERY: THE INTERSECTION BETWEEN POLICY AND PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This course will provide a fundamental understanding of the evolution of changing models of payment, clinical interventions, and best practices needed to simulatively reduce healthcare costs, improve health, and tackle health disparities. It will allow students to articulate the drivers for change and acquire the skills necessary for adopting the kind of large-scale transformations needed to succeed in a value-based model of care delivery.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Master of Health Administration Program

HPM 2100 - HEALTH ANALYTICS

Minimum Credits: 2
Maximum Credits: 2
This course provides future health care managers and policymakers with a conceptual framework for understanding and engaging in analytics work. Primary attention will be given to the interactions between information technology infrastructure, data sources, and the various analytical domains common to healthcare. The course focuses on the health care manager's role in the design, implementation, and utilization of common analytical methods and processes. Instructional methods include lectures by regular faculty and guest resources, class discussion, case analyses and conducting analytical exercises.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2101 - ADVANCED HEALTH ANALYTICS

Minimum Credits: 2
Maximum Credits: 2
This course will build on the concepts introduced in Health Analytics and will provide additional detail and practical experience for students seeking an advanced understanding of the role of analytics and its application to the various aspects of the health policy and industry. Students will draw on a wide range of academic and real-world content, including texts, case studies, web sites, data sets, BI tools, and interactions with industry leaders. This course will prepare students to conduct analytics projects in their roles including problem structuring, common analytical methods, available data sets, feature engineering, the use of analytical tools, and the visualization and

presentation of findings for an executive audience.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2105 - INTRODUCTION TO THE US HEALTHCARE DELIVERY SYSTEM 1

Minimum Credits: 1
Maximum Credits: 1
Introduction to the US Healthcare Delivery System 1 is a required course for first year HPM MHA and MPH students. This course is the first of a two part sequence that will: provide an historic and current overview of basic elements of the US healthcare delivery system, review HPM practical experiences in the context of professional and leadership competencies, and include current perspectives provided by selected guest healthcare executives.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (HPM-MHA or HPM-MPH) or Health Services Res and Policy (MS or PHD)

HPM 2106 - HEALTH SYSTEMS LEADERSHIP AND PROFESSIONAL DEVELOPMENT 2

Minimum Credits: 1
Maximum Credits: 1
This is a required spring course for the first year MHA that covers additional elements of us healthcare system. Review in great depth of the management residency process, expectations and opportunities continues in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA or MPH) or Law (LAWMPH-JD)

HPM 2108 - LEADERSHIP

Minimum Credits: 1
Maximum Credits: 1
This is a required course for MPH and MHA students related to the fundamentals of three areas: leadership, which focuses on teamwork, managing and leading people, and communication best practices. The second, professionalism, focuses primarily on principles of etiquette, professional dress, communication best practices and setting oneself apart in the professional setting. Finally, career development principles are covered and this touches on career paths, decision making for career success, and optimizing various work and professional organization experiences for professional growth. The course is primarily interactive in lectures and also requires the students to keep a journal for self-reflection on the topics. A dinner etiquette consultant joins the class as well as an executive from the field to give their perspectives on the three main principles. Accountability, communication, leadership, self-development, and professionalism are the competencies covered in the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2114 - ADVANCED LEADERSHIP PHILOSOPHY

Minimum Credits: 1
Maximum Credits: 1
This course is a transformative journey into the identity and impact of the individual leader within the healthcare ecosystem. Building upon previous courses focusing on leadership theory and application, students will engage in deep reflective practice to uncover their unique leadership style and strengths. Students will explore the intersection of their personal values and the professional demands of health administration. Key topics include mastering emotional intelligence, developing an authentic communication style, and managing the

conflict between personal ethics and organizational policy. The course culminates in the creation of a formal Personal Leadership Philosophy-a comprehensive roadmap for guiding teams and making principle-based decisions in a volatile, complex industry.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Grad SN Basis

HPM 2115 - HEALTH POLICY AND MANAGEMENT RESIDENCY

Minimum Credits: 1
Maximum Credits: 1
The course is designed to provide the student with an educational experience in the student's field of interest. It is a field experience performed under the supervision of a preceptor (i.e., A respected professional manager in the health field). Potential sites include a broad range of organizations such as hospitals, multi-unit systems, HMO's, consulting firms, insurance organizations, health policy and planning agencies, and health divisions of corporations.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: Plan: HPM-MHA or HPM-MPH or HPMLAW-MPH

HPM 2123 - ADVANCED TOPICS IN DECISION AND COST-EFFECTIVE ANALYSIS IN HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This is an intermediate/advanced level course on using simulation models in health decision sciences and cost-effectiveness analyses. Simulation models have been used widely in healthcare to address important policy questions, such as cancer screening recommendations and efficient organ allocations among transplant patients. The emphasis of this course is on applications and methods that are particularly applicable to issues of medical decision making and public health. Students will learn how to choose a model that best fits their applications. They will learn how to construct, parameterize, and analyze complex decision models, including calibration and validation. In addition, the student will be introduced to state-of-the art methods in uncertainty analysis, value-of-information analysis, and diagnostic test evaluations. Although advanced topics will be discussed, the focus will not be on programming and mathematical notations will be kept to a minimum. Some familiarity with programming and linear algebra are helpful, but not required. Class sessions will be a combination of lecture format, case discussion, and computer labs with expectations of class participation. It is expected that all students will keep up with the required readings and homework assignments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2124 - AN INTRODUCTION TO SIMULATION MODELING IN PUBLIC HEALTH

Minimum Credits: 2
Maximum Credits: 2
This is an introductory level course on introducing simulation models in public health. Simulation models have been used widely in healthcare to address important policy questions, such as cancer screening recommendations, the spread of social behavior, and the dynamics of infectious disease transmission.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2130 - HEALTH LAW AND ETHICS

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to introduce students to the legal and ethical issues which impact the administration and delivery of health

services. This course is designed to provide students with the practical knowledge needed to identify legal issues inherent in health care and public health administration and to understand the legal ramifications of administrative and management decisions. Through lecture and class discussion four main subject areas are presented: an introduction to the legal system, legal issues in managing health care organizations, regulating quality of care and public health legal authority. Specific course topics include: sources of law, the court system and legal procedures, professional and institutional liability, governmental regulatory methods, antitrust law, corporate compliance programs, emergency care, and issues concerning informed consent, credentialing of medical professionals, confidentiality of health information, and termination of care, family planning, and public health law.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2131 - PUBLIC HEALTH LAW AND ETHICS

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to introduce students to public health law and policy and the legal environment in which public health is practiced. The course is designed to familiarize students with the process by which laws are created, interpreted and enforced, and to introduce them to the substantive areas of law most relevant to the field of public health. Through lecture, case analysis, class discussion and student presentations, five main content areas will be presented. 1) The legal basis for public health practice; 2) the law and core public health functions; 3) the law and controlling and preventing diseases, injuries, and disabilities; 4) public health emergency law; and 5) the ethical issues impacting public health practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2134 - HEALTH CARE FRAUD, ABUSE, AND COMPLIANCE

Minimum Credits: 2
Maximum Credits: 2
As one of the most highly regulated industries in the United States, health care entities are required to comply with numerous statutes and regulations, including those related to fraud and abuse. These laws are increasingly complex, thereby exposing health care entities to liability for non-compliance. Thus, individuals involved in the administration and delivery of health care and lawyers who wish to practice health law must be well-versed in the laws and regulations that govern health care fraud, abuse, and compliance, as well as the strategies health care entities employ to address these concerns. In this experiential course, public health and law students will explore the major federal civil, administrative, and criminal laws that have been used to combat health care fraud and abuse, including the False Claims Act, the Anti-Kickback Statute, the Physician Self-Referral Law, and the Civil Monetary Penalties Law. Related compliance strategies and the practical compliance issues faced by health care providers will also be covered, including the seven elements of effective compliance programs, governance and accountability, repayments and disclosures, and corporate integrity agreements. Students will work in teams comprised of a mix of public health and law students to complete real-world projects directly with the UPMC Compliance Department, culminating in a final presentation and project deliverables.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2141 - MANAGERIAL EPIDEMIOLOGY

Minimum Credits: 3
Maximum Credits: 3
Epidemiology is concerned with the measurement of the health of populations and understanding the determinants of that health. It is one of the fundamental disciplines of public health, and provides the basis for much of what we know about health and disease. As a required MHA course managerial epidemiology takes a broad view of the definition of, population, and will include the study of multiple populations of interest, such as the population: cared for in the service area of a hospital, covered by a particular insurance carrier, and

larger populations such as a state, nation and the world. The course provides students with the knowledge and skills required to analyze, understand and interpret the data produced by health care organizations and identify the managerial implications of the data by summarizing data appropriately, understand the characteristics of mechanisms (methodologies) that created the data, and know when data observed is a common/expected or rare occurrence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2145 - MARKETING HEALTH SERVICES STRATEGY AND BUSINESS PLANS

Minimum Credits: 3
Maximum Credits: 3
Analysis of concepts vital to the creation of superior competitive marketing planning strategies for health services providers. Emphasis, using principles of epidemiology, on effective measurement of need in service area.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA)

HPM 2150 - STRATEGIC MANAGEMENT OF HEALTH SERVICE ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
This "capstone" course for the program stresses the application and integration of knowledge and techniques learned in the context of specific functions and disciplines focuses on identifying strategic issues in complex environments, and formulating realistic responses. The emphasis throughout is on understanding how to improve the major patterns of resource allocation within the organization in order to create lasting value.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HPM-MHA; OR SUBPLAN: MHAMBA-TR

HPM 2160 - MARKETING AND STRATEGIC MANAGEMENT OF HEALTH INDUSTRY ORGANIZATIONS

Minimum Credits: 4
Maximum Credits: 4
This 'capstone' course for the MHA program stresses the integration and application of knowledge and techniques focused on understanding strategic issues in complex market environments to formulate realistic plans of action to achieve organizational goals. This course combines market analysis, business plan development, and strategic problem solving based on empirical data, resulting in the creation of superior competitive marketing and strategic plans for health industry organizations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2205 - INDEPENDENT STUDY-HA

Minimum Credits: 1
Maximum Credits: 3
Students with major interests in specialized areas participate in individual study, research activities, or advanced readings with a specified faculty member.
Academic Career: Graduate
Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2207 - QUALITY ASSESSMENT AND PATIENT SAFETY

Minimum Credits: 3
Maximum Credits: 3
Examines the definition of quality in healthcare from the perspectives of providers, health plans and consumers. Healthcare standards of JCAHO, NCQA, and HEDIS are reviewed. The role of clinical pathways, outcome measures, technology and the internet are explored as they impact the quality of healthcare.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2215 - COMPUTER METHODS IN DECISION AND COST-EFFECTIVENESS ANALYSIS

Minimum Credits: 1
Maximum Credits: 1
This course expands on topics introduced in cost-effectiveness analysis in health care and in clinical decision analysis and provides additional guidelines for using decision sciences in larger, more complex applications. Topics include modeling clinical processes and systems; discrete event simulation; advanced sensitivity analysis and confidence limits; controversies surrounding the use of cost-effectiveness analyses; and multi attribute utility theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2216 - HEALTH INSURANCE: FINANCING HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3
Course examines the concerns and practices of private health insurance; the relationships and activities established by the insurance contracts among the insurer, insured, and providers; the insuring process of marketing, underwriting and pricing; the interrelationships of private and public insurance programs; and the varied government activities related to insurance. The objective of this course is to increase understanding of the access, funding, and insuring issues surrounding health care and to explore the alternate strategies being pursued in response to environment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2217 - CLINICAL DECISION ANALYSIS

Minimum Credits: 1
Maximum Credits: 1
This course provides an introduction to the use of decision sciences in health care. In addition to developing a conceptual understanding of medical decision-making, the course will develop technical skills in decision analysis including the creation/evaluation of decision trees, the use of sensitivity analysis, and the incorporation of specific patient preferences through the use of utility analysis. The advantages and disadvantages of formal mathematical models for the analysis of clinical conditions will be presented. Examples from current medical literature will be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2220 - COST EFFECTIVENESS ANALYSIS HEALTH CARE

Minimum Credits: 1
Maximum Credits: 1
Provides an introduction to and develops technical skills in the economic evaluation of health care programs. A brief introduction to the economic foundation of cost effectiveness and cost benefit analysis is followed by an examination of the methodologies involved in performing cost effectiveness analyses. Topics include: definitions of cost and benefits, effect of the perspective of the analysis, calculation of cost-effectiveness ratios, performance of sensitivity analysis, discounting of costs and benefits, and discussions of current controversies in conduct of cost-effectiveness analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2240 - CASE STUDY ANALYSIS AND PRESENTATION IN HEALTHCARE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to foster crucial skills for healthcare leaders including persuasive public speaking, assessment and analysis skills of case studies, as well as the ability to work in teams to solve problems. This course focuses not only on the ability to increase skill in these areas but also develop professionally by presenting in front of healthcare executives and conveying messages effectively and creating buy-in on their proposed solutions to problems. The course is a prep course for the students to also attend the University of Alabama at Birmingham case competition in the winter, a prestigious competition of most mha programs in the country. The course will include three cases, analyzed and prepared by students broken into teams, where after preparation and analysis will present to executives in the community for scoring and judging. The team will be selected based on student performance from the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA or MPH)

HPM 2275 - HPM SPECIAL STUDIES

Minimum Credits: 1
Maximum Credits: 3
Properly qualified students may undertake advanced study under the guidance of an HPM faculty member(s).
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Policy and Management (MHA,MPH) or Health Services Res and Policy (MS,PHD)

HPM 2700 - SEMINAR IN HEALTH SYSTEMS LEADERSHIP

Minimum Credits: 1
Maximum Credits: 1
This course will consist of a series of cased-based examinations of specific managerial and leadership problems and decisions that have faced local health systems leaders in Western Pennsylvania. Health care reimbursement, licensing and accreditation, and measuring health care quality has become both more complicated and more important as pressures to reduce expenses and improve quality increase. Simultaneously, there has been a steady increase in the number of clinicians who have assumed managerial positions, such as medical directors of clinical units, directors of quality measurement and improvement programs, utilization review and many others, as well as the appearance of clinicians in the "c-suite" of many hospitals and health care organizations. Utilizing adjunct faculty who are currently (or very recently have been) executive leaders in health systems, this course will examine a series of collaborations, problems, conflicts and solutions that developed between health system administrators and clinical leadership in health care organizations in the Western pa area. The mechanics of the course will be a series of cases, based on an actual recent issue in health care management in which the senior adjunct faculty member was involved. Students (individually or in groups) will evaluate the case, prepare a response, and make a short presentation of their 'solution' to the problem to the health system executive and clinical leader involved in that case. An interactive discussion will

follow. This is a required course for students in the certificate in health systems leadership and management program, and can be used as an elective course by other students with permission of the instructor.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: Plans: HPM-MHA or HPM-MPH or HPMLAW-MPH or HSRP-MS or HSRP-PHD

HPM 2905 - QUASI-EXPERIMENTAL DESIGN FOR HEALTH SERVICES RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to provide students with the research design skills drawn from the social science tradition as applied to the delivery of health services. This course provides a survey of research design, selection and development of research questions, conceptualization, measurement, and data collection/acquisition. The focus is on the application of quasi-experimental and observational approaches to research in applied health care settings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Services Res and Policy (MS or PHD), or instructor permission

HPM 3000 - DOCTORAL RESEARCH AND PROFESSIONAL DEVELOPMENT SEMINAR PART 1

Minimum Credits: 1
Maximum Credits: 1
The purpose of this two-term Doctoral seminar is to provide a forum for HPM Doctoral and MS students to (a) gain exposure to current research in the field of health services research and policy and closely related disciplines, (b) develop and enhance professional competencies in preparation for post-graduate job search and career pathing, and (c) critically review and present topical articles in the field to faculty and peers. Doctoral and MS students will be required to enroll for two terms (3 credits) of this seminar, typically during their 1st year in the Program.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: PLAN: Health Services Res and Policy (MS or PHD), or instructor permission

HPM 3001 - DOCTORAL RESEARCH AND PROFESSIONAL DEVELOPMENT SEMINAR PART 2

Minimum Credits: 1
Maximum Credits: 1
The purpose of this two-term Doctoral seminar is to provide a forum for HPM Doctoral and MS students to (a) gain exposure to current research in the field of health services research and policy and closely related disciplines, (b) develop and enhance professional competencies in preparation for post-graduate job search and career pathing, and (c) critically review and present topical articles in the field to faculty and peers. Doctoral and MS students will be required to enroll for two terms (3 credits) of this seminar, typically during their lst year in the Program.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: Plan: HSRP-PHD, or instructor permission

HPM 3010 - SEMINAR ON ORGANIZATIONAL STUDIES: HEALTHCARE ORGANIZATIONS AND ENVIRONMENTS

Minimum Credits: 3
Maximum Credits: 3
This seminar is intended to facilitate the mastery of conceptual approaches to health care organizations. Through a combination of in-class

discussions, self-directed research, written analyses, and oral presentations, students will clarify complex issues and evaluate innovative ideas. The course content will include such topics as organizational design, organizational behavior, and organizational environments. The primary approach to analyzing organizational phenomena will be the theoretical basis of causality, and the level(s) of analysis addressed by the theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 3064 - HEALTH POLICY ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course is the doctoral version of HPM 2064. Doctoral students have supplemental reading and writing requirements for this course. The aims of this course are to provide students with 1) an overview of the U.S. Health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. Pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Services Res and Policy (PHD), or instructor permission

HPM 3065 - ADVANCED HEALTH POLICY ANALYSIS: IMPLEMENTATION, EVALUATION, AND TRANSLATION

Minimum Credits: 2
Maximum Credits: 2
This course is designed to build on the principles learned in HPM 3064: health policy analysis. It is an advanced course for doctoral students in health policy and other disciplines with a focus on policy evaluation, translating the results of policy research for policy makers, and challenges to implementing health policies. Students will be expected to examine four current health policy topics in depth by examining the challenges to policy implementation, critiquing large-scale evaluations of health policies, and tracking the influence of research evidence on the policymaking process. The perspectives of policy analysts, practitioners implementing (or responding to) policies, and policy makers will be examined for each of four topics. The course format will include a combination of student-led discussions and formal presentations, lectures by the instructor, and guest lectures.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HPM 3066 - CURRENT TOPICS IN AGING, DISABILITY, AND LONG-TERM SERVICES AND SUPPORTS POLICY

Minimum Credits: 2
Maximum Credits: 2
This course is seminar in policy issues related to aging and disability. The focus will be on financing, organization and delivery of long-term services and supports to the elderly and people with disabilities. Topics include LTSS settings, financing, quality of care, quality of life, and proposals for reform. The COVID-19 pandemic exposed weaknesses in care systems for the elderly and people with disabilities; we will use this issue as a lens through which to understand long-standing challenges and opportunities for reform. Weekly discussions will be student led.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: Plan: HSRP-PHD, or instructor permission

HPM 3125 - INTERMEDIATE HEALTH ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to expand on intermediate microeconomic principles and apply these more sophisticated dynamics to the health care market, both domestic and international. Familiarity with introductory economics and calculus is assumed. Course time will be spent on a combination of lectures and discussions of seminal papers to explore theoretical frameworks and their empirical applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plan: HSRP-PHD, or instructor permission

HPM 3501 - SEMINAR IN HEALTH SERVICES RESEARCH METHODS 1

Minimum Credits: 3
Maximum Credits: 3
This is part one of a two-part course for doctoral students enrolled in health services research and policy. Other doctoral students may register with permission of the instructor. The course will cover two related competencies: research design and writing skills. The second part of the course will continue with grant proposal writing skills. The purpose of the course is to cover basic aspects of research design, selection and development of research questions, conceptualization, measurement, and data collection/acquisition. Students will also gain experience conducting literature reviews, critically reviewing manuscripts and grant proposals, and writing research questions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: Plan: HSRP-PHD, or instructor permission

HPM 3502 - SEMINAR IN HEALTH SERVICES RESEARCH METHODS 2

Minimum Credits: 3
Maximum Credits: 3
This is part two of a two-part course for doctoral students enrolled in health services research and policy. Other doctoral students may register with permission of the instructor. The course will cover two related competencies: research design and writing skills. The second part of the course will continue with grant proposal writing skills. The purpose of the course is to cover basic aspects of research design, selection and development of research questions, conceptualization, measurement, and data collection/acquisition. Students will also gain experience conducting literature reviews, critically reviewing manuscripts and grant proposals, and writing research questions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health Services Res and Policy (PHD), or instructor permission

HPM 3505 - ADVANCED EMPIRICAL MICROECONOMICS METHODS WITH APPLICATIONS FOR HEALTHCARE RESEARCH

Minimum Credits: 3
Maximum Credits: 3
This course is designed to cover applied econometrics and regression methods at a fairly advanced level. The course reviews the fundamentals of econometrics, summarizes empirical microeconomics methods and discusses the applications for unique issues in healthcare research. This course will provide students with advanced tools necessary to evaluate and conduct empirical research using existing datasets. The focus is on the 'hands-on' use of economic and health data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: STAT 2131 and STAT 2132 and BIOST 2046, PLAN: HSRP-PHD, or instructor permission

HPM 3506 - DISSERTATION GRANT WRITING CAPSTONE

Minimum Credits: 1
Maximum Credits: 1
This course will provide a structured environment in which PhD students in Health Services Research & Policy can prepare competitive dissertation grants and/or fellowship applications to the National Institutes of Health (NIH), or other funders to support health services research. The class will include 3 core components: (1) Understanding the major components of dissertation grants and fellowship applications, how these grant applications are scored, and reviewing recent examples of funded grants in health services research from students at Pitt and peer institutions (2) Giving students structured writing "milestones" to facilitate progress on writing their own applications (3) Providing targeted feedback about students' grant applications, focused on "grantsmanship" Weekly written assignments will be structured to pace students through the preparation of a grant. The class will culminate in a 'mock' study section in which students and faculty reviewers critically discuss and score students' grant applications following the format of an NIH study section.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad HSU Basis

HPM 3508 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Research credits for qualified doctoral students in the department of health policy & management.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: Plan: HSRP-PHD, or instructor permission

HPM 3510 - DOCTORAL TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This course is designed to provide doctoral students with opportunities to develop practical skills in teaching and mentoring students taking Health Policy and Management courses. As part of the teaching practicum, students may lecture, grade homework and exams, lead review sessions, hold office hours, or maintain course websites. They may also help plan, update, or expand course syllabi or teaching materials. Course goals include improvement in oral and written communication skills and exposure to the process of planning and implementing a course.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis
Course Requirements: PLAN: HSRP-PHD; PREQ: HPM 2905 and HPM 3501

HPM 3511 - DOCTORAL TEACHING PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
This course is designed to provide doctoral students with opportunities to develop practical skills in teaching and mentoring students taking Health Policy and Management courses. As part of the teaching practicum, students may lecture, grade homework and exams, lead review sessions, hold office hours, or maintain course websites. They may also help plan, update, or expand course syllabi or teaching materials. Course goals include improvement in oral and written communication skills and exposure to the process of planning and implementing a course.

Hearing and Vision Sciences

HVS 2001 - THE NEUROSCIENCE OF HEARING AND VISION

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to discuss the neurobiology of hearing and vision, starting from the cochlea and retina to cortex and back.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HVS 2002 - METHODS FOR ASSESSING HEARING AND VISION

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to cover fundamental concepts and basic methods pertaining to quantify and assess hearing and vision in animal models and humans.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HVS 2003 - RECENT ADVANCES IN THERAPY IN HEARING AND VISION

Minimum Credits: 3
Maximum Credits: 3
This course is designed to introduce students who have no significant clinical experience to the recent advances in treatment and cures in hearing and vision pathology. Surgeon- and physician-scientists along with our basic scientist faculty teach this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HVS 2004 - JOURNAL CLUB

Minimum Credits: 1
Maximum Credits: 1
In this course, students will present a recent research article from a range of topics in hearing and vision sciences selected by the student in consultation with a faculty advisor. Emphasis is placed on careful analysis and critical evaluation of the manuscript as well as the development of teaching and speaking skills needed for scientific presentation. The student is expected to elucidate issues relevant to the topic and to answer questions from other graduate students and faculty during this course, which meets weekly.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

Hindi

HINDI 0200 - HINDI 1

Minimum Credits: 3
Maximum Credits: 3
This course is designed for students who have completed HINDI 0100: Hindi 1 and/or have prior knowledge of the Devanagari writing system, very basic vocabulary, and essential grammatical structures of Hindi. In Hindi 0200, students will build on these foundational skills and continue to develop their proficiency and cultural competence in Hindi. Classroom activities and assignments continue to emphasize the use of Hindi for real-world communication and the cultural context in which Hindi is used. By the end of this course, students should be

able to use memorized phrases and short simple sentences to complete basic social communication tasks, manage a number of uncomplicated communication tasks in everyday situations, and converse at a basic level on topics that are necessary for day-to-day survival. This course, when taken in sequence with HINDI 0100 fulfills the two-course General Education language requirement. The course also counts towards the minor in Hindi.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HINDI 2909 - SPECIAL TOPICS IN HINDI

Minimum Credits: 3
Maximum Credits: 3
This course will be a topics course, meaning that the specific content of the course will change each time the course is offered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

History

HIST 1030 - DIGITAL METHODS FOR HUMANISTIC RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Texts hide secrets from us humans that are manifestly obvious to computers: all we need to do is crack the code. This course teaches students with zero coding experience to use computers to reveal hidden insights from digitized texts. Students will learn to make those texts "speak" by transforming them into dynamic visuals and interactive websites: in this manner, Hamlet becomes a chart of gender-coded language; a history of Rome becomes a map of the empire's most frequently referenced battles; and much more. Over the course of the semester, students will apply digital methods to a research project of their own choosing. In addition to adding a valuable tool to their research repertoire, students will leave with coding and web design skills highly sought after in other career contexts.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HIST 1095 - SPORT AND GLOBAL CAPITALISM

Minimum Credits: 3
Maximum Credits: 3
The history of sport and global capitalism is designed for students seeking to make their way as professionals and/or for those interested in global sport as a social and political force both in the US and around the world. Focusing on the evolution of sport as a global industry and the creation of an imposing scholastic, community, and non-profit infrastructure, it equips students to understand and navigate those arenas. If, after graduation, students venture into the sports industry, scholastic sport, or sport for development, they should do so with their eyes wide open.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HIST 1655 - LABOR HISTORY 1

Minimum Credits: 3
Maximum Credits: 3
This course examines American working class formation, development, and recomposition during the nineteenth century, and workers' impact on American economic, political, and cultural development.
Academic Career: Undergraduate

Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HIST 1725 - DISEASE AND HEALTH IN MODERN AFRICA

Minimum Credits: 3
Maximum Credits: 3
This course explores the history of health, healing, and disease in modern Africa, focusing on the social, political, economic, and environmental aspects of illness and health. The course also provides an orientation to the changing burdens of disease in Africa in the past 300 years. Seeking to understand change and continuity in Africans' experiences of health and healing, how have historical processes shaped understandings of disease, misfortune, and illness? Within what contexts should health interventions be understood? How and when did health in Africa become a global issue?
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

HIST 2000 - PROFESSIONALIZATION SEMINAR

Minimum Credits: 1
Maximum Credits: 1
This one hour one-credit course introduces graduate students to the discipline of history and to Pitt's graduate program in history. In addition, the course will enable students to commence work on their MA essays. Our main goals are to gain a better understanding of: a) the principal intellectual strengths of the history department; b) degree requirements such as the MA thesis and the comprehensive exams; c) various methodological approaches, such as social and gender history; d) fundamental analytical skills, such as how to write a historiographical essay, how to use databases, and how to edit your own work; and e) professional issues, such as participation in conferences and academic associations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

HIST 2009 - GRADUATE TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
The History Department's Program for Graduate Training in Pedagogy aims to prepare graduate students for the job market by assuring that they have the most complete qualifications possible, including a rich teaching portfolio, the badge in pedagogy offered by the University, and specialty training provided by the History Department. This program capitalizes upon the expertise of our Department's most experienced classroom instructors as well as the offerings of the Center for Teaching and Learning. It integrates these resources in a way that is tailored to the changing obligations and dynamics of the graduate students first three years in the program. It expects students to integrate pedagogical skills and effectiveness throughout their graduate education, recognizing that the study and practice of pedagogy is best done over an extended period of time and through a variety of methods. In order to reflect this sustained effort in skill-building, students will earn one hour of independent-study credit per year for three years.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History; LEVEL: 3rd year

HIST 2010 - GRADUATE TEACHING SEMINAR

Minimum Credits: 1
Maximum Credits: 1
The History Department's Program for Graduate Training in Pedagogy aims to prepare graduate students for the job market by assuring that they have the most complete qualifications possible, including a rich teaching portfolio, the badge in pedagogy offered by the University, and specialty training provided by the History Department. This program capitalizes upon the expertise of our Department's most experienced classroom instructors as well as the offerings of the Center for Teaching and Learning. HIST 2012 - GRADUATE WRITING SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar provides graduate students, particularly Master's students, with the opportunity to design, research and write a research paper based on primary sources that will form the basis for the research paper that is required for one's Master's degree. Students will work with the instructor and another faculty member who is a specialist in their area of interest to design the topic and to discuss issues relating to researching the paper. Students are expected to write a proposal explaining the topic and justifying its importance; and to submit periodic drafts.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History (MA and PhD)

HIST 2020 - INFORMATION ECOSYSTEMS: INTERDISCIPLINARY USES OF DIGITAL METHODS

Minimum Credits: 3
Maximum Credits: 3
This advanced graduate course unites students from widely varying disciplines to share the work of learning new disciplines. It explores humanities, social and natural sciences. Specific course objectives are: (1) to introduce students to a wide range of disciplines, theories, and methods; (2) to enable individual students to develop substantial strength in a new discipline and method of their choice; (3) to emphasize the historical discipline and the factor of time; and (4) to compare and contrast the various disciplines in topic, framework, data, method, analysis, and philosophy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2022 - PUBLIC-FACING HISTORY LABORATORY

Minimum Credits: 3
Maximum Credits: 3
The Public-Facing History Laboratory is a multidisciplinary graduate seminar that provides a space for experimental and collaborative student-led research designed to create historical products and tools for the public. Students from a range of disciplines will learn techniques from oral history, digital history, material history, and videography as they grapple with how to make the past speak to the present. By definition, Public-Facing History Laboratory projects cannot be limited to the academic world. We will deliberately engage with public partners, such as museums, libraries, archives, advocacy groups, non-profits and historical societies, as well as local residents and organizations whose voices have yet to be heard. However, our goal need not be to speak for others. Projects that create toolkits to enable non-academics to create their own histories would be as welcome as polished documentary films, original exhibitions, or definitive oral histories. This is a project-oriented course that requires skill building and collaboration with public-facing outcomes. We will combine well developed pedagogies for oral history with innovations in digital history. Of course, critical reflection on process and product are essential. We will analyze selected cases of public-facing history to gain an understanding of how and why these projects were created as well as the ethical, social, and cultural ramifications these projects have had. Because this course is project-based, we will begin the process of project definition immediately, followed quickly by team building, then connecting with public partners and resources before launching into structured project development, assessment, and delivery. Skill development will occur simultaneously in learning modules that will be required regardless of whether or not they are actually deployed in the student's project this term.
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2023 - HISTORICAL METHODS AND APPROACHES

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2025 - TEACHING WORLD HISTORY

Minimum Credits: 3
Maximum Credits: 3
This course provides training for teaching world history surveys. Students will engage with the content of an existing world history survey and learn about available resources for the teaching of world history. Simultaneously, an ongoing dialogue between the existing survey, the analysis of the teaching resources, and the student's own ideas will result in the formulation of new world history surveys by each student based on their evolving understanding of the field, strengths, and preferences. History and education students are warmly welcome to join this workshop.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2043 - SOCIAL MOVEMENTS

Minimum Credits: 3
Maximum Credits: 3
Various theories and models to study social movements are examined. Emphasis is placed on structural conditions that contributed to the emergency of the movements. Their development over time and what changes, if any, are brought about to the social system in which the movements occurred.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies, Latin American Studies, Russian & East European Studies, West European Studies

HIST 2046 - HISTORICAL INJUSTICES AND THE POLITICS OF MEMORY

Minimum Credits: 3
Maximum Credits: 3
Is it possible to repair wrongs of the past? How have different societies dealt with traumatic pasts? How are those pasts being memorialized (or de-memorialized) and reenacted in the world of art, entertainment and tourism in ways that potentially reinforce discriminatory practices? How have claims based on the past led to the creation of structures of transitional justice? What are the moral, legal and historical bases for claims for reparations and restitutions? With no intention to exhaust those questions, this seminar aims to discuss the concepts of traumatic pasts and historical injustice through philosophical, legal, political and historical lenses, discussing the role and the moral responsibility of intellectuals in this process, and analyzing and comparing specific cases, such as the Armenian genocide, the Holocaust, the enslavement of Africans, military dictatorships in Latin America, European colonialism in Africa, and the Japanese-American incarceration in the United States.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2047 - PUBLIC NARRATIVES

Minimum Credits: 3
Maximum Credits: 3
Students in this course will examine monuments, cultural centers, and museums as sites of discourse, of inclusion and exclusion, and of nation-building. Using case studies from across North America and exploring both the elements of public history sites as well as the contested histories that informed their creation, this course calls into question the ideas of indigeneity, memory, victimhood, and national identity that inform the sites we consider. Specific questions that will shape students' readings of the following sources include: Who should decide which (and whose) perspectives shape a public history site? Can and should a public history include every perspective on a narrative/event/group of people? How do public history narratives include and exclude certain people in their scope? How do nations use public history to build consensus and unity, but also to justify or expunge wrongdoing?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2048 - PUBLIC HISTORY

Minimum Credits: 3
Maximum Credits: 3
The course will introduce students to Public History's theory, methodology, and practice. Public History is the employment of professional historical methods by public and private agencies to engage communities in shaping the presentation of the past into usable histories. Through the course, students will be able to analyze how public historians and the Public collaborate to explain individual and collective human behavior through various methods and mediums, such as digital projects and websites, historical scholarship, movies, TV series, games, memorials, monuments, museums, and tourism. Moreover, students will learn how Public Historians and the Public create and express historical meaning for their local, state, national, and global communities. This course will also take a "hands-on" and experiential approach to learning about Public History, in which students will be able to develop career development skills.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2240 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
This graduate course addresses a current topic in gender, sexuality, or women's studies. Topic varies by instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HIST 2400 - APPROACHES TO ASIAN HISTORY

Minimum Credits: 3
Maximum Credits: 3
This course approaches Asia not as a geographic place but as a malleable object of study. In exploring "Asia," each week will adopt a different guide. One week will ask about the map of Asia that various Asian religions would create, depending on which religion did the mapping. Another week will ask how various modern pan-Asian movements imagined Asia. What happens to our conception of Asia if we adopt Confucianism as our guide? Or the Chinese writing system, the Devanagari writing system, the Arabic alphabet, or non-Latin alphabets put together? What happens if we think of Asia in terms of its physical environment? How have the ways in which we understand environmental history changed our understanding of what Asia might, or might not, consist of? What about early modern empires, old and new trade networks, or Asian diasporas? In this way, this course will explore a multiplicity of Asias, each of which is created as much by Asia as an object of study as by the position from which we approach it. Classes will consist of two parts. The first will discuss key works of recent scholarship and the second will think critically about primary sources. This will include thinking about what types of primary sources each of the readings has used, where these sources might be found, what they reveal, and what they obscure. But it will also encourage students to think about what other sources, whether textual, visual, quantitative, or otherwise, could provide alternative perspectives. This will include looking for datasets that can be used to think about each approach to Asia systematically. What datasets could help us map languages in Asia? How have scholars used big data to trace Confucian networks? How could data provide a different approach to Asian diasporas. In addition to weekly readings and short response papers, students will write a final paper that will seek to

integrate into their own research some of the approaches discussed in the course.

Course Attributes: Asian Studies

HIST 2409 - THE FORGOTTEN ASIANIST METROPOLISES: AN ASIAN INTELLECTUAL RENAISSANCE

Minimum Credits: 3
Maximum Credits: 3
Asian metropolises today are ostensibly multicultural. But there was a time when they were even more intensely multinational and international, a time when Asian intellectuals found sanctuaries to invent lofty new concepts of their nationhood and nationalisms, even as they crossed boundaries, engaged in cultural translation, and sought political and ideological affinities among co-religionists, co-continentals, and co-miserater of imperial domination. This course introduces the emergent field of inter-Asian studies, focusing on a critical moment of high imperialism, when the idea of Asia leapt off the pages of Marco Polo and Marx and began to find a vibrant new life among intellectuals of Asia's own. The course treats students to themes of inter-Asian mobility and connectivity during the late 19th century and early 20th century, enabled by the rivalry among high imperialism, coproduction of Eurasian Communism, Islamic modernism, as well as the political and intellectual energy of decolonization, Socialist revolutions, and Pan-Asianist solidarity. The course uncovers some of the untold aspects of colonial modernity in Asia, where the word "Asia" began to gain unprecedented intellectual currency. Concretely, course participants could expect to learn both the history of inter-Asian cultural exchanges and the methodology of conducting such studies. An examination of the immediate decades before the arrival of the post-colonial order in Asia, which ushered in an initial moment of jubilant triumph, invites the course participants to ponder Asia's march to the nation-state system mirroring Euramerica - as formerly dominated peoples (re)gained their monoracial, and sometimes monocultural group sovereignty, and erected tight territorial, political and cultural boundaries, has "Asia" regained itself or was it lost?

HIST 2410 - CHINA INNER ASIAN REGIONS-ETHNIC FRONTIPHERIES AT THE EDGE OF EMPIRE & ASPIRATIONAL NATION-STATE

Minimum Credits: 3
Maximum Credits: 3
Long description: By the year 1884, the Manchu Qing Empire (1644 - 1912) had formally turned China into a manifestly inter-Asian state. Under the aegis of one royal household and one imperial capital, three theocratic traditions - Confucianism, Islam, Tibetan Buddhism - and cultures embedded and transmitted by five different scripts - Sinitic, Perso-Arabic, Tibetan, Mongolian, Manchu - were demanded to recognize each other as belonging to one political entity. This acquired character made inter-Asian China of the 19th and the 20th centuries incommensurate with the largely Christian, and largely alphabetic Europe. It also made China in the first half of the 20th century a fertile ground for ethnonational aspirations and state-making attempts, which left socialist China (1949-1976) and post-socialist China with the daunting task of reining in the political energy for autonomist movements and de jure recognition of ethnonational difference in the ethnic frontipheries. This seminar introduces the historiography on the military and political processes by which inter-Asian China were formed in the 18th and 19th centuries, and the political and cultural governance methods by which the weak central state of the early and mid-20th century coped with the demands and movements for national self-determination (in the emphatic plural form). Additionally, students will learn the debates between ethnofederalism and ethnic fusionism in more recent decades of the People's Republic of China (1949-). The seminar will benefit those who have keen interests in the political and military expansion of overland empires, the regulation and control of culturally heterogeneous frontiers, and the political and cultural project of monoculturalism in so-called post-colonial nations.

HIST 2420 - HISTORIES OF SCIENCE AND TECHNOLOGY IN ASIA

Minimum Credits: 3
Maximum Credits: 3

What does Asia bring to the study of science and technology? On the other hand, what does science and technology studies (STS) bring to our understanding of Asia? This course explores these two questions through a close reading of some of the latest and most influential works on STS in Asia. The first hour of every class is about the readings, while the second hour helps students develop their own research. Students will come away from the course with a grasp of the field of STS and a paper or dissertation chapter that they wrote and revised based on feedback from their classmates and the instructor.

Grade Component: Grad LG/SNC Basis

HIST 2440 - ENVIRONMENTAL HISTORY AS WORLD HISTORY

Minimum Credits: 3
Maximum Credits: 3
This reading seminar will provide an introduction to the field of in environmental history in world historical perspective. In order to ground our understanding of environmental history, the course will begin with a review of foundational works written since the birth of the field in the mid-1970s. After establishing this intellectual foundation, we will spend the rest of the semester reading more recently published books and articles that focus on the most important themes within the field of environmental history today. We will consider how these themes have been shaped by, and shape, ongoing discussions of globalization and world historical perspectives. We will consider traditional historical categories such as race, class, and gender, but will also examine more global themes including migration, imperialism and colonialism, the spread of epidemic diseases, and global capitalism, among others.

HIST 2500 - LATIN AMERICAN READING

Minimum Credits: 3
Maximum Credits: 3
Readings in Latin American historiography.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Latin American Studies

HIST 2509 - WOMEN, GENDER AND BLACK INTERNATIONALISM

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the complex dynamics of black internationalism, focusing on the global visions; transnational activities; and transracial political alliances of people of African descent in the United States and in other parts of the globe. Highlighting the writings, speeches, activism, and overseas travel of a diverse group of men and women, this course employs a gender analysis and moves black women from the margins to the center of the black internationalist story. The seminar examines varied expressions of black internationalism in the United States and abroad from the late 19th century to the Civil Rights-Black Power era. It engages two key questions: how was black women's engagement in internationalism similar to and/or different from their male counterparts? And to what extent did black women merge internationalism with issues of women's rights and/or feminist concerns? Course readings will represent a combination of primary and secondary sources that reflect the geographical breadth of the African Diaspora including Africa, the Americas, and Europe.

HIST 2515 - DEMOCRACY, AUTHORITARIANISM, AND HUMAN RIGHTS IN MODERN LATIN AMERICA

Minimum Credits: 3
Maximum Credits: 3
This graduate seminar will explore the politics and culture of democracy, authoritarianism, human rights, and memory in modern Latin America. Focusing on a variety of countries, it will consider such topics as the experience of diverse sectors of society under democratic and authoritarian rule; movements for human rights; efforts to forge truth, justice, and reparations in the aftermath of authoritarianism; and struggles over competing ideals of democracy in the twentieth and twenty-first centuries.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2516 - LATIN AMERICAN REVOLUTIONS

Minimum Credits: 3
Maximum Credits: 3
This course examines the origins, course, and consequences of social revolutions in 20th century Latin America. We begin with the Mexican Revolution (1910-40) to better understand the key role peasants play in promoting revolutionary change. Next, we consider the role of indigenous peoples and mineworkers in the Bolivian Revolution (1952-64). We then turn to the Cuban Revolution of 1959, focusing on the origins and impact of its communist project. We end with the Chilean Revolution (1970-73) and Nicaragua's Sandinista Revolution (1979-90) in order to consider the complicated relationship between revolution and democracy.

HIST 2530 - TRANSNATIONAL LABOR AMERICAS

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the transnational history of labor in North America, Latin America, and the Caribbean across the 19th and 20th centuries. How have geopolitical shifts and international capital flows remade local communities and regional economies? How have the actions of workers and potential workers shaped investors' possibilities? What role have ideologies of race and gender played in labor control -or struggle? To what extent have different states been able to impact outcomes within this supranational system? How different is the "globalized" present from this past?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2541 - RACE IN THE AMERICAS

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to key concepts and critical discussions about race in the Americas from the 16th through the 21st centuries. It examines the historical development and theoretical foundations of racial ideologies, as well as the role of colonialism and slavery in constructing racial hierarchies, and the emergence and sustenance of concepts of whiteness and racism. Additional topics include racial silence and the myth of racial democracy. Students will explore how race has shaped views of religion, citizenship, and immigration over time. The course also explores the persistence of racial inequalities and the diverse forms of strategies and public policies aimed at confronting racial injustices across historical periods.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2690 - IDENTITIES AND MOVEMENTS IN 20TH CENTURY NORTH AMERICA

Minimum Credits: 3
Maximum Credits: 3
Why have some social movements succeeded where others have failed? Have identity politics represented a liberatory force in the American past, or merely a "neoliberal alternative" to socially transformative politics? In this graduate seminar, we will consider the history of social movements in the "long 20th-century" United States and the role that identity politics have played in shaping social and political attitudes, strategies, and responses across the political spectrum, examining both historical narratives and competing interpretations of them. Readings will cover broad themes, diverse perspectives, and provocative interpretations. Students will be asked to think and write synthetically, critically, and analytically about the histories and historiographies of U.S. social and identity movements, with a particular focus on the last one hundred and fifty years.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2699 - POWER AND INEQUALITY IN AMERICAN HISTORY

Minimum Credits: 3
Maximum Credits: 3
"Power and Inequality in American History" is a readings course that covers the full sweep of American history from early Native America to the near-present. The course will concentrate on four themes within the broader rubric of power and inequality: race, class, gender, and capitalism. We will pay special attention to transnational approaches and to the ever-shifting politics of American historical writing. We will read classic and newer works to demonstrate how historical practice has changed over time. The course will serve as a broad survey for graduate students in any department or discipline who study any period or theme in American history.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2705 - HISTORY OF STATE SOCIALISM

Minimum Credits: 3
Maximum Credits: 3
This course is intended as an introduction to the historiography of socialist societies in the twentieth century. In addition to the works on the Soviet Union, the seminar will cover scholarship on socialist countries in Eastern Europe, Asia, and Latin America. The seminar seeks to put into dialogue historiographies of very different societies with distinct visions of socialism in order to understand the power and limits of ideology to shape economic, political and social life. The students will also examine the role state socialist societies played on the global stage.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2707 - CAPITALISM AND ITS SOCIALIST CHALLENGERS

Minimum Credits: 3
Maximum Credits: 3
Capitalism seems to be in crisis. Wealth disparities between but also within societies threaten the social fabric that makes modern life possible. Many young people in the US but also in other countries believe that they will not be better off than their parents' generation. This crisis of trust in capitalism is amplified by the looming environmental disaster. This development is astonishing since capitalism seemed to enter the new millennium victoriously and reinvigorated, having survived the many challenges posed to its existence in the 20th century. What has gone wrong? Did the rot set in recently or was the capitalist system hopelessly flawed since its inception? Do its challengers deserve a new lease of life or is capitalism reformable? In our seminar, we will try to find answers to these questions by delving deeply into

the history of the 20th century. The 20th century is often understood as a fight between capitalism and socialism embodied by the USA and the Soviet Union. There is a grain of truth to this. However, such a view is shortsighted. The terms capitalism and socialism are multi-faceted and the capitalist system in the US and the state-socialist system in the Soviet Union were just one variant of capitalism and socialism. Furthermore, such a view is too static and underestimates the ability to adapt to differing environments both of socialism and capitalism. Therefore, we will analyze the dynamic development of capitalist thinking and practice as well as the development in theory and practice of its main challengers in the 20th century. Finally, we will ask how a profound understanding of the past can contribute to present economic debates.

Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2709 - AGE OF REVOLUTION IN GLOBAL CONTEXT

Minimum Credits: 3
Maximum Credits: 3
The Age of Revolution has long been considered the beginning of western, and therefore of global, political modernity, the period in which liberal democracy declared victory over absolute monarchy, citizens over subjects, and imperial nation-states over composite empires, the bourgeoisie over the nobility, industrialists over landowners, and capitalism over feudalism, and wage-labor over slavery. But the rise of world history has complicated this view, drawing attention to the worldwide dimensions of many of these processes on the one hand, while questioning the utility of potentially Eurocentric frameworks within this broader global context on the other (for example, "democratic, "Atlantic," "bourgeois, " or "Industrial" Revolution). This course plans to engage with these debates by probing the conceptual, geographic, and chronological boundaries of this so-called "Age of Revolution." It is designed to appeal to students from across multiple thematic and regional fields, including power and inequality, Atlantic, world, Europe, US, Latin America, and East Asia.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2710 - GLOBAL CAPITALISM

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2711 - TEXTS AND CONTEXTS

Minimum Credits: 3
Maximum Credits: 3
Texts and contexts links aspects of the history of ideas (historical, political, religious, scientific, legal and cultural) to the modes of their transmission (objects, concepts, languages; spoken, manuscript and printed texts). This course relates a wide variety of texts to the cultural as well as historical circumstances of their generation, while also introducing methodological issues of more general importance to history as a discipline.

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2724 - RETHINKING THE 20TH CENTURY BLACK ATLANTIC: CIRCUITS, SPHERES, SOCIAL MOVEMENTS

Minimum Credits: 3
Maximum Credits: 3
How has the African diaspora shaped the modern world? What role did afro-diasporic intellectuals and social movements play in the post-emancipation Atlantic world? Recent scholarship in multiple disciplines has traced how men and women from the Caribbean, North

America, Brazil, West Africa, and beyond remade 20th C. politics and culture on an international as well as national level. Exploring performance, ritual, literature, social movements, and everyday life, we trace evolving ideas of race and nation, ancestry and authenticity, belonging and rights.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: African Studies

HIST 2729 - SEAS, PEOPLES, AND EMPIRES

Minimum Credits: 3
Maximum Credits: 3
This course focuses on interactions between seas, peoples, and empires in historical and comparative contexts. Using maritime history as its point of departure, the course explores the multiple ways in which contact with the sea shaped the lives of peoples and empires across the world. Beginning with Braudel's pioneering regional study of the Mediterranean and the Mediterranean World, the course moves into the Atlantic, Indian, and Pacific Oceans. In each of these contexts, students will consider how the lives of people across social hierarchies were mediated through the interpenetration of empires and maritime regions. The course also considers the extent to which enclosed maritime worlds make sense historically - as the voluminous literature on specific basins suggest that they do - and if so, what distinguished one such world from that of another? Students will explore these lines of inquiry through readings that concentrate predominantly, though not exclusively, on the early modern and modern periods.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2736 - WORLD HISTORY METHODS SEMINAR: DIGITAL METHODS FOR SPATIAL ANALYSIS OF THE PAST

Minimum Credits: 3
Maximum Credits: 3
Over the past two to three decades, scholars in the humanities and social sciences have increasingly referred to a "spatial turn" of increasing attention to the place of geography and landscape in understanding society and culture. At the same time, historians have taken up the term spatial history to describe the ways in which they articulate geographical perspectives from their particular disciplinary approach. The reach of approachable desktop GIS and database design platforms, accessible satellite imagery, and online spatial visualization has amplified these trends. This seminar is an introduction to exemplary projects, applied methods, and techniques and tools for spatial analysis of the human past. At the same time, it is an effort to bring together several approaches that are not yet frequently joined. For instance, spatial history theory, method and exemplar are not well integrated, and we will approach the field from all three of these perspectives. Moreover, spatial history is seldom practiced at the global scale. World historians have not yet "put the world in world history." This class combines reading in theory and exemplars, interaction with online projects, and hands-on work with digital archives and tools. By the end of the class, students will understand the state of the art and possible future trajectories of spatial history as a field and its relationship with the field of world history. They will also be able to plan a spatial history project at the global scale, articulate its significance and scholarly contribution, and identify the sources, tools and expertise needed to complete it. Student work will include reading responses and archive and website assessments throughout the semester, and will culminate in a large-scale project prospectus.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2737 - HISTORY FROM BELOW

Minimum Credits: 3
Maximum Credits: 3
"History from Below" - also called Peoples' History and Radical History - has been an important part of the appearance and spectacular growth of social history over the past half century and one of the most important developments in the discipline and profession of history. This course is designed to introduce graduate students in a broad variety of disciplines, departments, and programs to the key theories, methods, and issues in history from below, from its origin in the 1930s, through the New Left of the 1960s and 1970s, to the present. The course will concentrate on four major themes: race, class, gender, and capitalism. We will read classic and newer works to demonstrate

how historical practice has changed over time. Special emphasis will also be given to sources, especially archival research, and to writing.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2738 - TIME KITCHEN

Minimum Credits: 3
Maximum Credits: 3
This course is a deep exploration of one of the central concepts and materials shaping the work of the historian: time. It is open to students writing about or with the past in any discipline or department. Together, we will bring together the crafts of history and creative writing in order to explore a number of key questions: How does time inhere in materials and material experience? How do material and conceptual technologies and our relations with them produce and constrain our experiences of time? How do particular conceptions of time determine particular kinds of historical experience? How do they constrain us into particular kinds of historical practice? How might thinking time differently create opportunities for us to experience time differently, and thus to expand our craft as storytellers?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2741 - MIGRATION AND CHALLENGES OF MOBILITY AND BELONGING

Minimum Credits: 3
Maximum Credits: 3
Migration has been a main feature throughout human history. The recent arrival of hundreds of thousands of refugees from the Middle East and Africa in the European Union, and the discussions on the treatment of thousands of people fleeing violence and poverty in Central and South America on the US-Mexican border are only the latest examples of its enduring occurrence. The main emphasis of the course will be on the movement of people, with a regional focus on Europe and with strong comparative views on Asia and the Americas. We will look into changing mobility patterns of the nineteenth and twentieth centuries, and how such changes transformed ways of migration and migrants' identities. Another emphasis will be on the development of the modern state border as an emerging obstacle for migrations and the closely related discussions on inclusion and exclusion. While the course is historical in scope, we will compare past processes with more recent occurrences of migration and the related debates on the issue.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2742 - EUROPEAN EMPIRES: IMPERIAL FORMATIONS AND POST-IMPERIAL SPACES FROM 1848 TO THE PRESENT

Minimum Credits: 3
Maximum Credits: 3
This course is designed to complement both chronologically and geographically the course Seas, Peoples, Empires. If the latter focuses on Western and Northern Europe's maritime empires and their expansion into the Atlantic and Pacific worlds, European Empire and Post-Imperial Spaces is mostly interested in the land empires of Central and Eastern Europe (German Reich, Austria-Hungary, Russian Empire/Soviet Union) as well as their post-imperial spaces from the March Revolution of 1848 to Russia's current war against Ukraine. The course goes beyond the established canon of the history of empire by also discussing imperial formations at unexpected places, such as the imperial ambitions of smaller nations like Poland and Czechoslovakia, or the imperial legacy that might shape the European Union and its politics in Africa and Eastern Europe.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2804 - HISTORIES OF GENDER AND SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to foundational and evolving theories of gender and sexuality, and then explores the varied array of approaches that historians have taken to writing histories of and with gender and sexuality, and the findings their research has uncovered. How have patterns of continuity and change with regard to gender and sexuality interacted with other critical dimension of social, political, economic, and cultural change? These are questions scholars have pursued at varied scales, and readings allow students to explore microhistorical, national, regional, transnational, and global approaches to histories of gender and sexuality.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2805 - HISTORY OF SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
This course is intended as a general introduction to the historiography on the history of sexuality. Students will familiarize themselves with the most influential works from the previous decades as well as recent significant publications in the field so that students get a sense of the evolution of history of sexuality as a field. The readings are organized thematically. There will be no particular geographical focus so students will have the opportunity to read about history of sexuality in different contexts. Students will also propose themes/readings for the last two sessions so that the course also reflects their own research interests.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
M.A. candidates wishing to do independent reading with a professor on a subject not dealt with in a seminar may take this course, as May M.A. candidates who wish to do one of their papers independently, rather than in a seminar.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

HIST 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 12
Candidates with M.A. degrees who are preparing for their Ph.D. Comprehensive examination may register for HIST 2990, a course of independent reading and study with one faculty member.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

HIST 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 12
Ph.D. candidates who have passed their comprehensive examination may register for HIST 3000 with their advisor as they undertake their research for the doctoral thesis.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

HIST 3902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
History 3902 is a special course designed only for one type of student and one type of work. Candidates for the Ph.D. degree who have entered this program with a M.A. from another institution register for HIST 3902 when they undertake individual study with a faculty advisor to complete the research paper required for them.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

History and Phil of Science

HPS 2000 - TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This is a survey course designed specifically for teaching assistants and fellows. The focus will be on practical teaching methods and techniques used in classroom recitations and lectures.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

HPS 2101 - PHILOSOPHY OF SCIENCE CORE SEM

Minimum Credits: 3
Maximum Credits: 3
This seminar is an intensive and advanced introduction to some of the main themes and problems in philosophy of science including the nature of evidence, theory comparison, and the theory-observation distinction, the meaning of theoretical terms, scientific explanation and scientific change.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History and Philosophy of Science (MA, PHD) or Philosophy (PHD)

HPS 2102 - HISTORY OF SCIENCE (CORE)

Minimum Credits: 3
Maximum Credits: 3
This is a core seminar for History and Philosophy of Science graduate students, surveying the historical development of scientific thought and providing a background in the methodology of history of science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History and Philosophy of Science (MA, PHD)
Course Attributes: West European Studies

HPS 2103 - HISTORY AND PHILOSOPHY OF SCIENCE CORE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will consider the nature of integrated history and philosophy of science. Through key exemplars, we will critically explore different strategies for researching and writing history and philosophy of science.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2110 - HISTORIOGRAPHY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course will consider major trends in the writing of the history of science. Possible topics include intellectual histories of science, the difference between internalist and externalist approaches, and the turns to scientific practice and global and transnational histories.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2115 - HISTORY OF SCIENCE IN GLOBAL CONTEXT

Minimum Credits: 3
Maximum Credits: 3
Science has never been an exclusive practice of any one society or region. In this seminar, we will explore science as a global phenomenon by considering how different practices and traditions of science developed in disparate global contexts, how science travelled and was transformed through global circulation, and how a global and comparative perspective can inform our understandings of science, its history and its philosophy. Regions and time periods considered may vary from offering to offering. Every course offering will include a comparative component which considers how the circulation of materials, texts, technologies, and people have shaped the historical development of science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2116 - COLONIALITY AND THE DECOLONIZATION OF SCIENCE: HISTORY, PHILOSOPHY, RESPONSIBILITIES

Minimum Credits: 3
Maximum Credits: 3
This course explores questions concerned with Western science and its philosophy in light of the decolonization aspirations emerging in contemporary debates about Western colonialism, such as: Is Western science colonialist and racist? Is it possible to recover a genuine indigenous knowledge? What are the epistemological responsibilities of the Western colonialist powers? Can Western scientific modes of thought which, according to some theorists, have been affected by colonialism and racism be decolonized? Is a reparative science possible and desirable? More broadly, should scientists commit to a universal declaration of epistemic responsibility towards coloniality?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2117 - MODERN WOMEN PHILOSOPHERS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on women philosophers in the modern period spanning the late Middles Ages to the nineteenth century. The pedagogy of the seminar is student-centered and promotes intellectual and identity emancipation. Participants are welcome from all academic fields and perspectives. We will debate visibility, oppression, objectification, seclusion, the denial of sexuality, violence, institutional racism, and the role of hierarchies in marking disciplinary boundaries [place holder for participant suggestions]. We will read women scholars who have contributed to women science studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2118 - HUMAN/ANIMAL IN WESTERN CIVILIZATION

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the liminality that has continually demarcated the frontier between human and animal in the history of Western civilization. We will engage diverse historical-philosophical approaches to the question of what constitutes human as opposed to animal, beginning with ancient Greek philosophy, and tracing contemporary ideas back to their origins in the Graeco-Christian worldview. We will investigate the shifting human/animal frontier during the Renaissance and the scientific revolution of the seventeenth-century, in the Enlightenment and Romanticism, and in contemporary thought. By reconstructing the genesis of human/animal debates, we will transgress the bounds of sectarian divisions between styles of thinking and become more self-conscious about history and philosophy of science as an intellectually multi-faceted form of inquiry open to pluralism and diversity.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2121 - ARISTOTLE'S PHILOSOPHY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This seminar explores Aristotle's views on the nature of science, such as explanation, causation, demonstration, and necessity. We will study a number of Aristotle's works, including the analytics and physics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2122 - ORGANA: ANCIENT AND NEW

Minimum Credits: 3
Maximum Credits: 3
Aristotle's Organon served as foundational orienting texts for much of early Greek, Roman, Arabic, and medieval European natural philosophy. The decline of scholastic Aristotelian orientation in natural science is epitomized in Francis Bacon's pointedly named New Organon. This course compares and contrasts Aristotle's Organon with Bacon's New Organon together with additional scholastic and early modern writings on scientific method.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2123 - THE DEATH OF NATURE

Minimum Credits: 3
Maximum Credits: 3
This course traces the history of the scientific revolution from feminist and ecological perspectives. We will learn how to ask historically and philosophically informed questions from feminist perspectives regarding the emergence of modern science, the transformation of the premodern organic worldview into a mechanistic one (the death of nature), and the mutual relations of science and medicine and magic. We will value feminist perspectives, according to which the mechanistic worldview sanctioned the exploitation of nature, unrestrained commercialism, ecological risk, and the subordination of women. Finally, we will memorize narratives in outline concerning broader historical and philosophical problems raised by feminist history and philosophy in regard to magic, medicine and science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2124 - SCHOLASTICISM

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the intellectual movement known as European Scholasticism, comparing and contrasting its nature with the debates it spawned. Scholasticism inherited ancient Greek philosophy and recast it in the framework of Christianity, shaping a worldview that laid the philosophical foundations of Western civilization. History and philosophy of science, analytic philosophy, and higher education institutions such as the university have their roots in Scholasticism, which spanned the late Middles Ages to the end of the seventeenth century. We investigate the scholastic origins of fundamental philosophical categories such as method, reality, essence, science, causality, demonstration, substance, order, analysis and synthesis.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2125 - EARLY MODERN NATURAL PHILOSOPHIES

Minimum Credits: 3
Maximum Credits: 3
In this seminar we will explore the emergence of early modern natural philosophies. We will examine competing conceptions of the natural world that rose to prominence in the aftermath of the religious reforms of the sixteenth century, the Renaissance, the modern state and the formation of capitalistic economies. Our investigations will be based upon the works of major figures such as Galileo, Descartes and Newton, who referred to their style of inquiry as 'natural philosophical'. What was natural? What was philosophical? How did natural philosophy become mathematical and experimental? In sharp contrast to, or in harmony with medieval scholasticism? Was natural philosophy unified or dis-unified? What was the epistemic status of natural philosophical principles? Questions such as these will torture and nurture our minds during the seminar.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2130 - TELEOLOGY: HISTORY & THEORY

Minimum Credits: 3
Maximum Credits: 3
This course traces debates about the validity, nature and scope of teleological explanation in the study of the living world. Topics may include teleological reasoning in Ancient Greek science and philosophy, in Plato's Phaedo and Timaeus, Aristotle's biological works, the Epicurean criticism and Galen's defense of teleology; the debate between vitalism and mechanism in the 18th century; teleo-mechanism in the 19th century; debates about the place of teleology within evolutionary and developmental biology; and debates about the goal-directedness of development and behavior in the 20th century.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2150 - SCIENTIFIC REPRESENTATION

Minimum Credits: 3
Maximum Credits: 3
It is often claimed that scientific theories, when true, provide a "mirror of nature" in its representations. What counts as scientific representations (mathematical, linguistic, visual, etc.) and in what relationships do they stand to the natural world? Topics that may be considered are the variety of characterizations of the model-world relationship, including forms of similarity, structuralism, perspectivism, fictionalism and inferentialism.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2151 - CAUSALITY

Minimum Credits: 3
Maximum Credits: 3
Consideration of various theories of causality and how the theories relate to questions of metaphysics, epistemology and explanation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2152 - REALISM

Minimum Credits: 3
Maximum Credits: 3
What, if anything, makes scientific claims true or false? Is scientific language about anything? If it is, can we know which scientific claims are true, or can we arrange our beliefs to converge towards the truth? If not, what purpose can the enterprise of science serve? This seminar will examine these and related questions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2153 - MODELS AND MODELING IN SCIENCE

Minimum Credits: 3
Maximum Credits: 3
The use of models and modeling strategies in science is ubiquitous. There is, however, no generally accepted, or received view about the nature and role models play in scientific theorizing. Models are sometimes said to represent scientific targets of interest. How do they do this? Models are sometimes said to be explanatory of behaviors of targets of interest. How do they do this? Is the representative function of models related to their explanatory capabilities? If so, how? This course considers questions of these sorts, examining as well, the fact that models (almost by definition?) appear to involve idealizations of various kinds. What role do idealizations play in modeling contexts? Are they essential? Are they eliminable? . . .
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2154 - THEORIES OF CONFIRMATION

Minimum Credits: 3
Maximum Credits: 3
Survey of accounts of the confirmation of scientific hypotheses, including both Bayesian and non-Bayesian approaches.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2155 - EXPERIMENT & SCIENTIFIC PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This will be a course on the epistemology of science. An honest way to do epistemology of science is to ask, given a theory and a set of evidence: to what extent does this evidence support this theory? In this course we will not investigate the topography of evidential warrant so directly. We will turn instead to some recent studies of the experimental practices through which particular pieces of evidence emerge as evidence.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2156 - EMPIRICISM IN SCIENCE

Minimum Credits: 3
Maximum Credits: 3
In the early twentieth century, influential empiricist philosophies of science were introduced by Carnap and the logical positivists and Reichenbach and logical empiricists. This seminar will survey the earlier history of these philosophies, their early twentieth century expressions, their later developments and consequences.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2157 - EXPLANATIONS, CAUSES, AND MECHANISMS

Minimum Credits: 3
Maximum Credits: 3
The seminar will examine some recent philosophical writings on these three topics. Specifically, we will analyze the nature of explanations by mechanisms in a variety of domains and fields, including social science, cognitive science, and neuroscience. We shall also consider multi-level explanations, such as those that relate persons to sub-personal states and environments. Along the way we shall discuss the issues of reduction, emergence, the space of reasons, and the nature of information as used in some sciences. If there is interest and time we may spend a session or two on discovery of mechanisms.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2158 - REDUCTION AND EMERGENCE

Minimum Credits: 3
Maximum Credits: 3
Hierarchical and mereological relationships are often used to describe natural ontological structures. We will consider both the characterization of such structures and reductive and more holistic approaches to their explanation. Topics may include 19th century 'levels of being' and a 20th century revival of emergence with the expansion of computational technologies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2159 - FEMINIST PHILOSOPHY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
If there is a legitimate role for political values in scientific knowledge production, why should those values be feminist? In this course, we will explore the ways that feminist epistemologists and philosophers of science have characterized a positive role for feminist values in scientific theory and practice. We will ask what this means for traditional accounts of science as objective and value-free, and consider possible consequences of feminist arguments for how science ought to be done, and by whom. In particular, we'll examine feminist critiques of essentialism, biological determinism, and reductionism in science, using examples from sex differences research. We'll then consider how political values might play a role in so-called ``good science,'' focusing on underdetermination and the argument from inductive risk. We will examine arguments about the particular role(s) of feminist values in science by attending to the traditions of feminist empiricism and feminist standpoint theory. We will evaluate the consequences of these arguments for concepts of objectivity, for the structure of scientific communities, and for the authority and trustworthiness of scientific explanation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2160 - SCIENCE AND VALUES

Minimum Credits: 3
Maximum Credits: 3
This course will examine values as they appear in scientific reasoning and practice. It will deal with issues such as the distinction between

cognitive and social values, and how values enter into the selection of theories and research projects, and their subsequent applications. It will also take up the ethical assumptions and implications of scientific judgments and policy decisions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2162 - SCIENTIFIC METHODS AND DISCOVERY

Minimum Credits: 3
Maximum Credits: 3
This course will examine the rich history of attempts to describe the methods of science and the processes of scientific discovery. We may consider, seventeen century defenses of inductivism, nineteenth century attempts to codify Newtonian methods by Herschel, Whewell, and Mill , twentieth century empirico-logical methods, and twenty-first century data-driven and automated methodologies. We will consider whether and how processes of discovery and innovation can be captured by such methodological investigations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2163 - SCIENTIFIC CHANGE

Minimum Credits: 3
Maximum Credits: 3
The aim of this seminar is to examine the various attempts made by philosophers, historians, cognitive scientists and sociologists to understand the nature of historical changes in the concepts, methods and theories of the natural sciences. We will consider a range of claims regarding the causes of change, the tempo and scale of scientific change, whether scientific change entails incommensurability, and in what ways it may be progressive or degenerative
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2164 - PRAGMATISM AND SCIENTIFIC PRACTICE

Minimum Credits: 3
Maximum Credits: 3
Adopting a pragmatist stance is increasingly invoked in critiquing fundamentalism, representationalism, and unificationism in epistemology and metaphysics. Is the new pragmatist stance comprised of a set of basic doctrines, or a set of methods, or a set of problems? What are the varieties of pragmatism on offer? What are the relationships between pragmatism with pluralism, perspectivalism and the social nature of scientific practice? In this seminar we will consider recent work on pragmatism in the philosophy of science by Kitcher (2012 Preludes to pragmatism) Chang (2022 Realism for Realistic People), The Pragmatist Challenge (2023 Andersen and Mitchell eds.) and others.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2166 - EMBODIED AND EMBEDDED EPISTEMIC NORMS IN SCIENTIFIC PRACTICES

Minimum Credits: 3
Maximum Credits: 3
The debate about whether or not science is or should be value free invites a deeper investigation into how and where normative values might contribute to scientific judgments. This course will take a naturalist perspective to investigate two situational aspects to scientific judgments: embodied norms as psychological dispositions for judgment, and embedded norms as localized rules of social practices. This will include discussions of pragmatism in relation to scientific practice and the contrast between ideal and non-ideal epistemology in analytic philosophy.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HPS 2170 - LAWS OF NATURE

Minimum Credits: 3
Maximum Credits: 3
The purpose of this seminar is to critically survey recent accounts of the concept of a law of nature, including the origins of the concept of law, regularity accounts, necessitarian accounts, pragmatic and 'no laws' accounts. Depending upon the interests of participants, more specialized topics concerning the role of laws in the social, biological and physical sciences will be taken up.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2171 - THE UNITY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This seminar focuses on the changing conceptions of the structure and unity/disunity of science as a whole in the modern era. The seminar explores how these conceptions relate to questions regarding the proper domain of the sciences, the notion of method, skepticism and foundationalism. We will read fundamental philosophical texts from antiquity through modernity to the logical positivists.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2172 - TECHNOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will address topics in the history and philosophy of technology. Possible topics may include the relationship between technology and science, the place of design in technology, technological determinism in the history of science, the role of instrumentation in science, and the ethics of various technologies, including issues of bias, fairness, and surveillance
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2175 - SCIENCE AND METAPHYSICS

Minimum Credits: 3
Maximum Credits: 3
The appropriate relationship between science, philosophy of science, and metaphysics has recently been a topic of considerable controversy. This course will selectively examine the changing historical relationship between these fields in the 20th century before turning toward contemporary debates. Our focus will be on both the broad methodological dispute(s) and certain special topics, such as causation, laws of nature, or modality, where one can see this debate play out.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2180 - TOPICS IN THE HISTORY OF PHILOSOPHY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected topics in the history of the philosophy of science. This course may focus on particular individuals, groups, eras, traditions, or themes in the history of the philosophy of science. The contents of the course may vary from one offering to the next.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2190 - METHODS IN HPS

Minimum Credits: 3
Maximum Credits: 3
This course will address different qualitative and quantitative methods that are useful for research in HPS. This may include formal methods, such as game theory, and computational methods, such topic modeling, and methods for oral history and archival research. The contents of the course may vary from one offering to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2222 - DARWIN AND DARWINISM

Minimum Credits: 3
Maximum Credits: 3
Charles Darwin wrote The Origin of Species at a time when John Herschel, William Whewell and John Stuart Mill were attempting to articulate the inductive method of Newtonian science. This seminar explores this major revolution in biology in both philosophical and historical context examining both Darwin's texts, notebooks and letters as well as the intellectual, social and political contexts of the 19th century. We will also consider the content and contexts for subsequent developments of Darwinism in the 20th and 21st centuries.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2233 - MODERN EVOLUTIONARY BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
Twentieth and twenty-first century evolutionary biology have been fertile ground for historians and philosophers of biology. This seminar will address historical and philosophical issues arising from the theory and practice of modern evolutionary biology. Topics may include the levels of selection debate, adaptationism and its alternatives, the place of chance and drift in evolution, species concepts and speciation processes, the challenges of phylogenetic inference, and the relationships between evolutionary and ethical accounts of altruism.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2244 - HISTORY OF GENETICS: MENDEL TO METHYLATION

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HPS 2245 - EUGENICS AND SOCIAL DARWINISM

Minimum Credits: 3
Maximum Credits: 3
This seminar will address efforts to manage human heredity and evolution. We will consider the origins social Darwinism and eugenics in the nineteenth century and its global rise in popularity in the early twentieth century. We will critically examine claims regarding the decline of eugenics in response to its uses in Nazi Germany, and consider late twentieth century efforts of population control, genetic

counseling, genetic engineering, and gene editing as forms of eugenics. We will also grapple with issues regarding the ethics of eugenics
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2260 - THE MOLECULARIZATION OF BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
The rise of molecular biology stands as one of the landmarks of twentieth century biology. In this seminar, we will come to terms with the transformative impact of molecular biology on biology in general. After reviewing different approaches to the history of molecular biology, we will consider how concepts, data, practices, and technologies from molecular biology have altered the fields of genetics, evolutionary biology, systematics, and developmental biology. This seminar will address fundamental questions about scientific change, and how it should be characterized and assessed.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2269 - OMICS AND DATA IN BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
The genome projects of the 1990s transformed biology by drawing together biological research with computer automation and a deluge of new data. This seminar will examine historical and philosophical issues surrounding "data-centric" biology, including changes in scientific practice that move it away from experimentation, the rise of model organisms, the explosion of a variety of -omics approaches, the reinscription of identity in genomic terms, and the ownership, regulation, and control of biological data.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2270 - PHILOSOPHY OF BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This seminar will consider foundational conceptual issues in biology including the nature and structure of biological explanation, the possibility of laws in biology and the relationship of biology to other sciences, natural kinds and the classification of species, teleology and biological function. In addition we will explore cutting edge topics of robustness in complex biological systems and the challenges raised for causal inference, emergence and multi-level organization as well as the relationship between unity of science and pluralism.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2275 - CAUSATION AND EXPLANATION IN BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
What is the character of explanation in biology? We will consider mechanistic vs. difference making approaches to causation as well as the way functional (teleological) and structural (network or systems models) explain evolved, adapted systems. What is the role of biological laws, complexity and robustness in shaping causal understanding and explanation in biology?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2276 - BIOLOGICAL COMPLEXITY

Minimum Credits: 3
Maximum Credits: 3
Biological systems are multi-level, historically contingent, robust and evolved structures. What are the special complexities of biological organization and dynamics? Some have identified biocomplexity as the reasons there are no laws of biology, others have defended reductionist strategies to explain the complexity, and others have founded new disciplines, like systems biology, as a response to bio complexity. This seminar explores topics related to ontological and methodological challenges for scientific approaches to knowledge of biological systems.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2278 - RACE: HISTORY, BIOLOGY, PSYCHOLOGY & PHILOSOPHY

Minimum Credits: 3
Maximum Credits: 3
This seminar will critically examine the intersection of race and science from a number of different disciplinary perspectives. Topics may include philosophical reflection on the biological reality of race, historical accounts of the rise of modern race concepts and their use in scientific research, and the psychology and ethics of race and racial discourse.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2279 - SCIENCE, SEX, AND SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
This seminar will critically investigate scientific theories of biological sex, sex determination, sex difference, and their intersections with scientific approaches to gender and sexuality. We will explore the interplay between science and society with regard to the theories of sex and sexuality that we consider. Specific case studies may include how gender verification criteria were established for the Olympics, how research on sex-gender-sexuality systems has changed over time, and how sex determination research became framed as a balance of male and female factors, on the one hand, and under the control of "master molecules," on the other.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2290 - SPECIAL TOPICS IN HISTORY AND PHILOSOPHY OF BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected special topics in the history and/or philosophy of biology. The exact contents of the course vary from one occasion to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2330 - HISTORY AND PHILOSOPHY OF NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3
Maximum Credits: 3
This seminar will survey historically important episodes or influential scientists in the neural, behavioral, and cognitive sciences, potentially spanning, ancient and modern approaches to brains and behavior, or focusing more specifically on the context in which particular scientific approaches such as the neuron doctrine or behaviorism gained (or lost) influence within the sciences themselves, and how these scientific developments influenced and were influenced by contemporary philosophy of mind. According to the instructor's

preference, this focus could also be directed towards a particular subarea or approach, such psychophysics, psychometrics, or comparative cognition, towards a method such as electrophysiology, MRI, optogenetics, or lesion studies, or towards a topic such as memory, personality, or rationality.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2353 - PHILOSOPHICAL FOUNDATIONS OF NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3
Maximum Credits: 3
This course will broadly survey several of the main philosophical assumptions underlying current approaches in the neural, behavioral, and cognitive sciences. Students will acquire a comprehensive grasp of issues such as the status of computational and representational theories of mind, the nature of explanation in these sciences, modularity of mind, the significance of embodied and situated theories of cognition, the scientific status of folk-psychological notions such as concepts, beliefs, and consciousness, the relevance of neuroscience to psychology, and vice versa, cognitive ontology, and the possibility of defining cognition.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2354 - ARTIFICIAL INTELLIGENCE AND PHILOSOPHY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This seminar will consider artificial intelligence and machine learning (AI/ML) from the perspective of philosophy of science. Issues addressed by the course may vary from year to year, but they will require critical engagement with several of the following themes: the role of AI/ML in the historical and philosophical foundations of cognitive science and robotics; AI/ML as models of nervous system function, cognitive capacities, and psychological phenomena such as consciousness; explain ability or transparency of AI/ML systems; ethical and other value issues relating arising in scientific and commercial applications of AI/ML; the prospects for automating scientific discovery and scientific reasoning through AI/ML.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2355 - COGNITIVE AND NEURAL SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This course will examine the theoretical foundations of neuroscience, with a special focus on systems neuroscience, asking what progress has been made towards a general account of neural processing and discussing obstacles to theoretical unification. Example seminar topics are; the neuron doctrine, information theory and the brain, network science, the Bayesian brain, dynamic representation, understanding intrinsic activity, and cognitive architecture.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2356 - MORALITY AND THE MIND- BRAIN SCIENCES

Minimum Credits: 3
Maximum Credits: 3
This course will examine the issues that the behavioral, cognitive, and brain sciences raise in relation to morality. The topics to be covered may be tilted towards ethical issues in these sciences (aka "neuroethics"), or the role of these sciences in understanding and explaining human morality ("moral psychology"). Topics in neuroethics may include neurological and brain enhancement, ethical and policy issues

related to neuroimaging, mind control and "mindreading", and the neuroscience of free will and responsibility as these relate to criminal culpability. Examples of topics in moral psychology and moral cognition include neurodevelopment and the emergence of personhood, agency and the self, and the neural basis of moral judgements
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2358 - ISSUES PERCEPTION AND CONSCIOUS AGENCY

Minimum Credits: 3
Maximum Credits: 3
This course will examine how developments in the behavioral, cognitive, and brain sciences bear on questions about perception, concepts, reasoning, memory, attention and consciousness, which touch on longstanding issues in philosophy such as epistemology, rationality, agency, selfhood, and subjectivity. This course examines recent work on one or more of these topics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2359 - METHODS, MODELS, AND MEASUREMENTS IN THE NEURAL, BEHAVIORAL, AND COGNITIVE SCIENCES

Minimum Credits: 3
Maximum Credits: 3
Mathematical, and statistical treatments of behavior and cognition were central to the emergence of psychology as scientific discipline in the late 19th C., were a driving force for developments in statistical testing, in measurement theory, and in computational modeling during the 20th C., and continue to be important for ongoing debates about the so-called replication crisis in psychology, and different views about the value of formal, mathematical, and computational models in cognitive science. Other topics of interest to philosophy of science include the interplay between statistical models and experimental design, particularly where the latter rely on methods that generate large amounts of noisy data, such as EEG or fMRI. Bayesian, information theoretic, dynamical, and mechanistic approaches to explanation all have different implications for understanding the relationship between cognition and nervous systems
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2360 - SOCIAL, CULTURAL, AND EVOLUTIONARY APPROACHES TO THE COGNITIVE SCIENCES

Minimum Credits: 3
Maximum Credits: 3
Methodological individualism has been the predominant approach within the cognitive sciences. And while the importance of social, cultural, and evolutionary factors in the explanation of individual behavior has frequently been acknowledged, it is only recently that the degree to which these factors contribute to experimental results has begun to be systematically investigated. Topics to be covered in this course may include whether there are any cognitive universals, evidentiary gaps in evolutionary psychology, anti-individualism and approaches to group cognition, and other topics related to social, cultural, and evolutionary psychology and neuroscience.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2365 - ANIMAL COGNITION

Minimum Credits: 3
Maximum Credits: 3
This course examines current issues in the science of animal cognition. Specific topics may include whether animals have beliefs, semantically meaningful communication, episodic memory, the capacity to track the mental states of others, the capacity for reasoning,

causal cognition, emotions, and consciousness. The course may also consider the different roles played by laboratory and field studies of animal behavior in the discussion about the tractability of animal minds as a target of scientific investigation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2390 - SPECIAL TOPICS IN HISTORY AND PHILOSOPHY OF NEUROSCIENCE AND COGNITIVE SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected special topics in the history and philosophy of neuroscience and / or cognitive science. The exact contents of the course vary from one occasion to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2410 - HISTORY AND PHILOSOPHY OF MODERN CALCULUS

Minimum Credits: 3
Maximum Credits: 3
This seminar explores historical, cultural and philosophical questions concerning the history of the calculus. These questions include: Indivisibles quantities vs. infinitesimal quantities, the problem of tangents, fluxions vs. differentials, analysis/synthesis, limits/ integration, discovery/ emergence/ justification in mathematics, the roots of modern mathematics in ancient classical Greek culture, the cultural significance of modern mathematics and the evolution of the disciplinary boundaries that define the structure of science and the way it is taught and practiced in the modern universities. No prerequisites.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2421 - PHILOSOPHY OF MATHEMATICS

Minimum Credits: 3
Maximum Credits: 3
Historical perspectives in philosophy of mathematics, by historical study of philosophical views about mathematics or by philosophical analysis of episodes in the history of mathematics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2422 - PROBABILITY AND STATISTICS

Minimum Credits: 3
Maximum Credits: 3
We shall review the development of the notion that uncertainty and the chaos of chance may be tamed by the application of numbers. We trace its birth in the 17th century as a device for bloodlessly resolving gambling disputes; its growth through statistical theory into one on science's most important analytic tools; and its ascendance in the work of philosophically minded Bayesians as the framework of all belief.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2460 - PHILOSOPHY OF SOCIAL SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This seminar explores issues in social ontology (social objects and social actors) , social causation (methodological individualism and meso- and macro-causes), social explanation (mechanisms, middle-range theories, and laws) and methodology (case-study methods, participant-observer methods, laboratory and statistical methods). We will consider unique issues and resources for sciences of society (rational choice theory, normativity and intentionality).
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2490 - TOPICS IN HISTORY AND PHILOSOPHY OF MATHEMATICS

Minimum Credits: 3
Maximum Credits: 3
This seminar will examine recent work at the cutting edge of the history and philosophy of mathematics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2505 - PHILOSOPHICAL FOUNDATIONS OF COGNITIVE SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course will survey the main philosophical questions raised by cognitive science. Students will acquire a comprehensive grasp of the main issues in this field. We will discuss questions such as: Is the mind a computer? Are we rational? What is consciousness?
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2509 - SPECIAL TOPICS IN THE HISTORY OF THE PHILOSOPHY OF SCIENCE`

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected special topics in the history of the philosophy of science. It is an intermediate to advanced graduate seminar, usually taken by students in the doctoral program. The exact contents of the course vary from one occasion to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2522 - SPECIAL TOPICS IN THE HISTORY OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected special topics in the history of science. The exact contents of the course vary from one occasion to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2559 - THERMDYNMC AND STATISCAL MECHANC

Minimum Credits: 3
Maximum Credits: 3
This course will treat topics in the history and foundations of thermodynamics and statistical mechanics, such as the nature of entropy and irreversibility.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2590 - EINSTEIN 1905

Minimum Credits: 3
Maximum Credits: 3
1905 was the year for Einstein the patent examiner. In papers in Annalen der Physik, he proposed the special theory of relativity, e=mc2, the molecular account of Brownian motion and that light energy came in quanta. In preparation for the centenary of 1905, we will study these papers which laid the foundations of modern physics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2622 - RECENT TOPICS IN PHIL OF SCIENCE

Minimum Credits: 3
Maximum Credits: 3
In this seminar we will read and discuss recent works in the philosophy of science. The choice of authors and topics will depend on who is doing the most interesting new work in the field.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2634 - SPECIAL TOPICS IN PHILOSOPHY OF NEUROSCIENCE AND COGNITIVE SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course deals with selected special topics in the philosophy of neuroscience and / or cognitive science. The exact contents of the course vary from one occasion to the next.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2643 - PHILOSOPHY OF CLIMATE SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course will explore philosophical questions about climate science. It will begin with central epistemological questions that arise in distinctive ways for climate science: e.g. questions concerning evidence in the historical sciences; the use of simplifying models of complex systems; and the interpretation of computer simulations. It will then broaden the picture by considering the interplay between perspectives emerging from difference sciences (e.g. ecology vs physics) and different varieties of expertise and practical knowledge; the place(s) and problems of values in climate science; choices concerning geoengineering and adaptation research; and scientific thinking about existential risk.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HPS 2667 - PHILOSOPHY OF QUANTUM MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to the philosophical problems of quantum mechanics. Topics covered may include: the quantum

measurement problem; non-locality, ¿EPR, and Bell's inequality; the no-go results of Bell/Kochen/Specker, Gleason, and PBR; alternatives to quantum mechanics (such as dynamical-collapse theories and the de Broglie-Bohm theory); the Everett (many-worlds) interpretation and the role of decoherence; operationalist and psi-epistemic approaches to quantum theory. (Not all topics will be covered in all years.)
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2687 - THE EPISTEMOLOGY OF EXPERIMENTAL PRACTICES

Minimum Credits: 3
Maximum Credits: 3
Observation and experimentation have long been taken as central to the legitimacy of scientific claims. This seminar examines the assumptions and inferences involved in reasoning about experimental results.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2705 - HISTORY OF MEDICINE

Minimum Credits: 3
Maximum Credits: 3
This course explores recurring themes in the history of medicine from ancient Greece to the present. These themes include the nature of health and disease, the relation between science and medicine, the evolution of clinical medicine, and the development of medical institutions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2710 - HISTORY OF PSYCHIATRY

Minimum Credits: 3
Maximum Credits: 3
This seminar course will study the history of psychiatry using an integrated history and philosophy of science approach. We will explore ideas and practices in psychiatric research and clinical psychiatry. Topics may include: psychiatry and the asylum, mental disorder and normality, Freudian psychoanalysis, biological psychiatry, the DSM, and the relationship between psychiatry and medicine.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2725 - HISTORY OF PUBLIC HEALTH

Minimum Credits: 3
Maximum Credits: 3
This seminar course will study the history of public health science and practice. Topics may include: public health and epidemics, public health and noncommunicable diseases, the history of epidemiology in relation to public health, public health in particular regional contexts, global public health, and public health and colonialism.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2730 - PHILOSOPHY OF MEDICINE

Minimum Credits: 3
Maximum Credits: 3

This seminar course provides a graduate level introduction to the philosophy of medicine. We will explore both classic and recent work. In line with the orientation of the field, we will examine metaphysical/conceptual and epistemic questions in medicine and medical research rather than the kinds of questions traditionally asked in the field of bioethics. Also following the contemporary focus of philosophy of medicine, readings are situated in the philosophy of science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2740 - PHILOSOPHY OF PSYCHIATRY

Minimum Credits: 3
Maximum Credits: 3
This course examines conceptual, methodological, and some historical issues in psychiatry. General analyses of psychiatric disorders and classifications, and their reliability and validity, will lead to a consideration of the DSM and ICD. The function of etiological, reductive, and mechanical dimensions (including genetic and neuroimaging research) will be discussed. Historical topics include the contrast between and transition from psychoanalytical, narrative approaches to the rise of bio-chemical psychiatry. Extended consideration of schizophrenia and depressive disorder will be course themes. The seminar closes with a discussion of legal and ethical issues in psychiatry.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2750 - PHILOSOPHY OF EPIDEMIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This seminar course provides a graduate level introduction to the philosophy of epidemiology, the study of the distribution and determinants of health and disease in populations. Topics may include: epidemiological causal inference, statistics in epidemiology, epidemiological study design, theory in epidemiology, prediction and explanation in epidemiology, the social determinants of health, race in epidemiology, population health, and public health policy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2785 - PHILOSOPHY OF MIND AND MEDICINE

Minimum Credits: 3
Maximum Credits: 3
This seminar course will explore problems at the intersection of philosophy of mind and philosophy of medicine. Topics may include: abnormal states of consciousness, death, medical disorders and identity, empathy and the explanatory gap, pain, mental disorder versus neurological disorder, brain imaging, and free will and medical disorders.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2790 - TOPICS IN HISTORY AND PHILOSOPHY OF MEDICINE

Minimum Credits: 3
Maximum Credits: 3
This seminar will examine recent work at the cutting edge of the history and philosophy of medicine.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2810 - GALILEO AND ALL THAT

Minimum Credits: 3
Maximum Credits: 3
This seminar focuses on Galileo's contributions to the cultural revolution of the seventeenth century, including the astronomical discoveries, the physics of falling bodies, the philosophy of nature, the harmony of religion and science. The seminar approaches Galileo in the broader humanistic, philosophical, mathematical and religious context of early modern Europe. His ingenious experiments are really or virtually re-enacted in order to illuminate his creative pathways towards. The seminar traces Galileo's lasting legacy in the controversies that shaped the history and philosophy of modern science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2812 - NEWTON

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the life, work, and legacy of Isaac Newton. It will balance readings from primary texts such as the Opticks and the Principia, and secondary sources covering debates over topics such as: Newton's experimental, mathematical, and philosophical methods; his philosophical conception of space; what exactly about the Principia made it revolutionary; and the further development and reception of Newtonianism as a mode of the scientific enterprise.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2813 - HELMHOLTZ

Minimum Credits: 3
Maximum Credits: 3
Hermann von Helmholtz (1821-1894) played a major role in the history of science and philosophy. This seminar will explore Helmholtz's fundamental contributions especially to the neurophysiology of hearing (including topics such as perception of sound, frequency analysis, harmony) and vision (including topics such as color and depth perception). We will examine Helmholtz's influential idea of perception as unconscious inference and we will also consider his work in physics and the popularization of science. We will place Helmholtz in the intellectual and cultural context of the nineteenth century, investigate the debates that informed his philosophy of science, and look at the lasting influence that he had on twentieth-century science and philosophy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2814 - EINSTEIN

Minimum Credits: 3
Maximum Credits: 3
This seminar covers Einstein's work in physics and his philosophical entanglements, with topics selected according to the interests of the seminar participants. Suitable topics include the papers of Einstein's annus mirabilis of 1905 (the special theory of relativity, e=mc2, the molecular account of Brownian motion and that light energy came in quanta), his discovery of general relativity and its development into modern cosmology and the theory of gravitational waves; his pursuit of a unified field theory; and his more general pronouncements in philosophy of science
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2815 - HISTORY OF OLD QUANTUM THEORY

Minimum Credits: 3
Maximum Credits: 3
This course surveys the development of the old quantum theory from its origins in Planck's work on black body radiation, through Bohr's

atomic model to the emergence of modern quantum theory in the mid 1920's.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2816 - THE MAKING OF MODERN QUANTUM THEORY

Minimum Credits: 3
Maximum Credits: 3
This course covers the major historical developments in modern quantum mechanics from the mid 1920's to the 1960's. Topics may include: Heisenberg's matrix mechanics, Schrodinger's wave mechanics, their theoretical equivalence, von Neumann's axiomatization, the discovery of spin, evidence for wave-particle duality, the rise of the Copenhagen interpretation, the incorporation of group theory representations, quantum logic, the EPR paper, Bell's theorem, and the Everett interpretation.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2817 - HISTORY OF PARTICLE PHYSICS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2820 - PHILOSOPHY OF SPACETIME AND SYMMETRY

Minimum Credits: 3
Maximum Credits: 3
This course explores the interpretation of spacetime theories (past, present, and perhaps future) and the role of symmetries (spacetime and otherwise) in the development and interpretation of physical theories. Topics covered may include: the debate over the reality of space and spacetime (that is, the debate between relationism and substantivalism); the relation between geometry, coordinate systems and reference frames; the modal, conceptual, and epistemic status of symmetry transformations; the relation between spacetime geometry and gravity. (Not all topics will be covered in all years.)
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2821 - GENERAL RELATIVITY AND GRAVITATION

Minimum Credits: 3
Maximum Credits: 3
Over a period of eight years, 1907 to 1915, working almost single handedly, Einstein made the greatest discovery of his scientific life, the general theory of relativity. We have a detailed record of his process of discovery in both published papers and private notebooks. After the initial excitement, work in general relativity stagnated until the 1960s when a new cohort of mathematical physicists revived work in general relativity with geometrical methods and celebrated singularity theorems. Modern topics include the physics of black holes and gravitational waves
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2826 - PHILOSOPHY OF QUANTUM FIELD THEORY

Minimum Credits: 3
Maximum Credits: 3
This course covers quantum field theory (QFT) and its applications in particle physics and beyond. Topics covered will vary but may include: algebraic and Lagrangian formulations of QFT; the Interpretation of effective field theories; the relation between particles and fields; spontaneous symmetry breaking; the gauge principle.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2828 - PHILOSOPHY OF QUANTUM GRAVITY

Minimum Credits: 3
Maximum Credits: 3
This course covers the conceptual and foundational issues that arise in attempting to create a quantum theory of gravity. Topics covered will vary but may include: canonical quantum gravity and the problem of time; string theory; the AdS/CFT correspondence; black hole thermodynamics; the emergence of spacetime.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2830 - PHILOSOPHY OF THERMODYNAMICS AND STATISTICAL MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This course covers foundational issues in thermodynamics and statistical mechanics. Topics covered may include: the interpretation of the Laws of Thermodynamics, and of central concepts in thermodynamics like equilibrium and reversibility; the Boltzmannian and Gibbsian approaches to statistical mechanics; the relation between thermodynamics and statistical mechanics; the origin of time-asymmetry and irreversibility; Maxwell's demon. (Not all topics will be covered in all years.)
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2840 - PHILOSOPHY OF COSMOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course covers the philosophical challenges posed by modern cosmology. Topics covered will vary but may include: the development of the modern (Big Bang) synthesis; dark matter; dark energy and the cosmological constant problem; the distinctive epistemic and methodological problems thrown up by cosmology; inflation, the horizon problem, and the flatness problem; cosmological fine-tuning.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2844 - MODERN COSMOLOGY

Minimum Credits: 3
Maximum Credits: 3
In 1917 Einstein asked his new general theory of relativity how the universe might look on the largest scale. So was born the modern tradition in cosmology--rich in wild speculation, technical physics and controversy. We shall review its history and philosophy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2850 - PHILOSOPHY OF GAUGE THEORY

Minimum Credits: 3
Maximum Credits: 3
This course studies conceptual and foundational issues in gauge theories. Topics may include: the geometrization of gauge theory, surplus structure and gauge freedom, the Aharonov-Bohm effect, the holonomy interpretation, locality, gauge symmetries and the interpretation of associated physical quantities.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2865 - MATHEMATICS FOR FOUNDATIONS OF PHYSICS

Minimum Credits: 3
Maximum Credits: 3
This course is designed for students specializing in philosophy of physics who would like additional training in the mathematical aspects of foundations of physics. The course will survey mathematical objects most frequently used in foundations of physics (e.g. manifolds, vector spaces, operator algebras, fiber bundles, etc.), together with the philosophical debates that rely heavily upon the relevant areas of mathematics. The approach will be project based: students will choose a topic of philosophical interest and sequentially develop the appropriate mathematical skillset for their chosen project.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2880 - HISTORY AND PHILOSOPHY OF MUSICAL SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This seminar explores historical and philosophical questions concerning music as a form of knowledge in the history of Western civilization (with some ethno-musicological excursuses relatively beyond). These questions include (but are not limited to): The emergence of music theory in antiquity; the role of music in the scientific revolution of the seventeenth century; the relation between music as a science and musical aesthetics; music and mathematics; music and cognition in humans and animals; the foundations of modern psychoacoustics; the nature of harmony. We will engage in both theoretical and empirical inquiry and design experiments in the domain of sound and music perception and esthetics
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2890 - TOPICS IN HISTORY AND PHILOSOPHY OF PHYSICS

Minimum Credits: 3
Maximum Credits: 3
This is a survey course for the study of any collection of topics in the history and philosophy of physics, to be determined on the basis of student and faculty interest.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2900 - PRE MA DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides credit for supervised research on an approved master's thesis topic.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

HPS 2910 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
This is an opportunity for a student and instructor to determine a topic in history and/or philosophy of science which is of special interest. Reading assignments are established by individual instructors.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

HPS 2980 - COMPREHENSIVE RESEARCH PAPER

Minimum Credits: 3
Maximum Credits: 3
Students may enroll for up to 3 credit hours in any term immediately preceding or overlapping with submission of the final paper(s) for the Comprehensive Requirement.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2999 - PROSPECTUS RESEARCH

Minimum Credits: 1
Maximum Credits: 6
This course is intended for students who are preparing for their prospectus meeting.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

HPS 3000 - DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 12
Students work on a dissertation topic guided by dissertation director.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HPS 3900 - ADVANCED DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 12
Topics to be selected by students in consultation with faculty advisors.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

History of Art & Architecture

HAA 1025 - HISTORY AND ETHICS OF COLLECTING

Minimum Credits: 3
Maximum Credits: 3

This course will critically examine the history of public and private collecting practices, the cultural and scholarly rationales behind collecting, and the legal and ethical challenges that collections face. Case studies will include the british museum and the louvre, Pittsburgh's private collectors frick and mellon, the fate of art in Europe during World War II, the antiquities trade, and ethnographic collections. Using these and other examples, we will evaluate the arguments for and against universal art museums, the repatriation of works to source nations or original owners, and the protection of cultural heritage during times of conflict.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HAA 2000 - RESEARCH AND THESIS MA DEGREE

Minimum Credits: 1
Maximum Credits: 6
Independent research for m. A. Paper.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2005 - METHODS RESEARCH AND SCHOLARSHIP

Minimum Credits: 3
Maximum Credits: 3
This is the introductory seminar for entering graduate students in the history of art and architecture. As such it has two goals; 1) to explore, through use, the bibliography of reference works central to the history of art; 2) to consider the intellectual history of the discipline, with the various approaches to the work of art revealed in art historical literature.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HAA 2006 - ART HISTORY WRITING PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
This graduate seminar will give students the opportunity to think critically about the process of art-historical writing and to get constructive, detailed feedback on their own written work.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2007 - HISTORIOGRAPHY

Minimum Credits: 3
Maximum Credits: 3
This class examines the history of analytic approaches to art objects, doing so with an eye to the department's array of research constellations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HAA 2008 - CONSTELLATIONS OF ART HISTORY

Minimum Credits: 3
Maximum Credits: 3
This is a graduate reading course tied to HAA's constellations. Readings will address one of the constellations from multiple perspectives. In lieu of a research paper there will be a series of shorter response papers that vary in format and goals, from brief "blog" entries on a particular reading to longer essays that compare several readings to exploratory papers that apply readings to the interpretation of specific works of art.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2009 - PRESEMINAR FOR GRADUATE STUDIES IN ART HISTORY

Minimum Credits: 3
Maximum Credits: 3
This course will familiarize students with the professional landscape they will confront as art historians, and give them tools they will need to succeed as they do so. Together, we will co-create a gateway into PhD-level education by focusing on three areas of professional praxis: forms of academic writing, thinking through possible career outcomes and the teaching of art and architectural history.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HAA 2011 - PITTSBURGH NEIGHBORHOODS

Minimum Credits: 3
Maximum Credits: 3
Pittsburgh Neighborhoods is a course where students learn about people, culture, history, and current issues that confront under-represented communities and neighborhoods in Pittsburgh. Throughout the semester, with direction from the instructor, students learn about and employ ways to see, document, and interpret a neighborhood by engaging the built environment, historical documents, and community members in storytelling. They approach the built environment as a cultural product, explore place as a fusion of material culture and human perceptions and practices, and frame questions of power around the politics of the built environment. In this class, we will employ methods that help us transcend the realm of the visual and explore the experiential and ephemeral. We will learn to observe with all our senses, listen to community members, and document life when in the field, and excavate and explore visual and textual records when in the archive. In doing so, we will adopt theories and methodologies from multiple fields, including urban/architectural history, cultural geography, anthropology, public history, and material culture studies.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC B

HAA 2019 - CURATORIAL DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This museum studies course draws on the University Art Gallery collection to develop an exhibition that will be realized in the Fall by students in the Exhibition Presentation Seminar. Within a defined thematic or collection-area focus, students will survey the holdings of the gallery to develop an exhibition concept and conduct in-depth research into a single work of art to contribute to a catalogue for the exhibition. Students will explore the key texts related to the subject of the exhibition and identify potential loans to complement its storyline.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2021 - INSIDE THE MUSEUM

Minimum Credits: 3
Maximum Credits: 3

This course will enable students, particularly those who are pursuing the Museum Studies Minor, to gain behind-the-scenes knowledge of museum practices with sessions taught on location at the various Carnegie Museums of Pittsburgh. The course will provide students interested in museum careers with a rich variety of hands-on, practical, and experience-based learning in addition to theoretical exploration and connect students to professionals working in these institutions. Specific topics will vary depending on the opportunities provided by initiatives and projects that are underway at the time the class is offered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2022 - EXHIBITION PRESENTATION

Minimum Credits: 3
Maximum Credits: 3
This course teaches museum practice through practical experience with the permanent collection and with special exhibitions. Students will help in all aspects of exhibitions, from writing labels and/or catalogue copy, deciding how to best display the works, participating in the actual installation of exhibitions and planning related events such as tours.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2025 - HISTORY AND ETHICS OF COLLECTING

Minimum Credits: 3
Maximum Credits: 3
This course will critically examine the history of public and private collecting practices, the cultural and scholarly rationales behind collecting, and the legal and ethical challenges that collections face. Case studies will include the British museum and the Louvre, Pittsburgh's private collectors Frick and Mellon, the fate of art in Europe during World War II, the antiquities trade, and ethnographic collections. Using these and other examples, we will evaluate the arguments for and against universal art museums, the repatriation of works to source nations or original owners, and the protection of cultural heritage during times of conflict.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2026 - EXHIBITIONS: FROM WORLD'S FAIRS TO GLOBAL BIENNIALS

Minimum Credits: 3
Maximum Credits: 3
This course surveys the Western origins of museums, world's fairs, and biennials in the 19th century and traces the increasingly global development of exhibitions of visual and material culture up through the present day. Our focus in this long and varied history will be on those shows that have sought, not without controversy, to shape viewers' knowledge of the past, while also structuring their sense of self and relationship to others in national, international, universal, and/or global terms. We'll critically assess the motivations behind these exhibitions and the changing "world picture" each presented in relation to modernizing and globalizing tendencies of the past two centuries. We'll also take a close look not only at what these shows presented, but also how and for what purpose(s) our chosen exhibitions were organized. Whose worldview, ideology, and/or political interests did they serve? How in each case did the very arrangement of objects and the physical context of their presentation seek to articulate those interests? What sort of public did they envision and attempt to create? We'll also address how and to what extent the achievements and shortcomings of earlier exhibitions have informed the character of subsequent shows down to today. Throughout the course, we'll measure our understanding of this history against local examples of Pittsburgh's rich and extensive museum culture. Written assignments will involve students in exploring these and other local installations as we assess what role museums can and should continue to play in fostering understanding of ourselves and others now and into the future.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2027 - HERITAGE SITES

Minimum Credits: 3
Maximum Credits: 3
According to the United Nations Educational, Scientific and Cultural Organization (UNESCO), heritage sites encompass sites of "outstanding universal value from the historical, aesthetic, ethnological or anthropological point of view." This course will develop the fundamental themes, ideas, and case studies required to analyze, understand and critically engage with heritage sites in a comparative and global perspective. We will begin charting the European origins of the western understandings of heritage and exploring the development of national and international heritage legislation, charters and organizations. The course will then explore emerging trends that challenge Eurocentric notions of heritage: from critical heritage studies to approaches that specifically focus on minorities, women, and indigenous groups, and the broader issues of human rights and development. Starting from the second third of the semester, case studies from different geographic areas, time periods and themes will be discussed: heritage sites and national identity; heritage sites and tourism; heritage sites and sustainable development; threats to heritage; negative and difficult heritage; heritage and human rights; heritage futures. Finally, we will discuss the increasing interest in bottom-up initiatives that focus on grassroots, people-centered approaches to foster community engagement and participation in the management, programming and interpretation of heritage.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2028 - EXHIBITIONS AND MUSEUMS IN AFRICA

Minimum Credits: 3
Maximum Credits: 3
Popular culture and politics are addressing displays of African objects with greater regularity than ever before--from French President Emmanuel Macron's 2017 promise to restitute African art from French museums' collections, to the provocative museum scene in the film Black Panther (2018), to the ongoing viral growth of museum activism on social media accounts like DecolonizeThisPlace. Yet, despite this growing awareness of the dilemmas surrounding the collection and display of African art in the West, most U.S. audiences still know little about the presence of museums and exhibitions throughout Africa today. Exhibitions have played a critical role in the continent's histories, whether instrumentalized to uphold colonialism, deployed to strengthen independence struggles, or used as tools to manipulate local and global economies. In this class, a historically- and geographically-diverse array of African exhibitions, museums, and displays will offer the materials through which students become familiar with African histories while grappling with broad theoretical topics, including approaches to memory, coloniality, nationalism, resistance, and reparations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2030 - SPECIAL TOPICS: MUSEUM HISTORIES

Minimum Credits: 3
Maximum Credits: 3
This course will discuss specific subjects in museum studies.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

HAA 2031 - SPECIAL TOPICS: MUSEUM PRACTICES

Minimum Credits: 1
Maximum Credits: 3
This course will discuss specific subjects in museum studies.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

HAA 2040 - INFORMATION ECOSYSTEMS: INTERDISCIPLINARY USES OF DIGITAL METHODS

Minimum Credits: 3
Maximum Credits: 3
This collaboratively taught seminar exposes graduate students to interdisciplinary and evolving digital methods for discovery and knowledge construction in the humanities and allied social sciences. In particular, it focuses on how information flows in and out of sociotechnical systems, the ways that researchers access, arrange, organize and describe information for use in their disciplinary context and how that shapes thoughtful, expansive inquiry. Students will do hands-on work with data and methods and interrogate their affordances and limitations. Mini-units in this course will be led by faculty from a variety departments, including History, Political Science, Economics, English, Sociology, Information Science, and History of Art and Architecture.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2045 - DIGITAL STUDIES AND METHODS: SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar addresses the relationships between digital computing and the humanities and allied social sciences, both as a subject of both historical interest and contemporary practical concern. We engage in ongoing theoretical discussions but also fully engage with what it takes to implement interpretive research in the digital environment. Students leave this class having gained a personally significant understanding of current debates in the field of digitally-oriented interpretive research as well as having built a digital project of their own. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HAA 2051 - WORLD ART: CONTACT AND CONFLICT

Minimum Credits: 3
Maximum Credits: 3
This course, an advanced undergraduate seminar, is a counterpart to the introductory core course Introduction to World Art and invites students to think more critically about 'World Art' as a disciplinary enterprise as it emerged in the last several decades with the `global turn', post-colonialism, and a call for art history to be more inclusive. Students will be introduced to key terms that are employed by this discourse (contact zones, planetarity, world-picturing, cosmopolitanism). The course works through these ideas by focusing its attention on specific sites and art objects, case studies that explicitly circulate within or take as their subject the meeting point of different cultures and groups. First and foremost, this course regards `the contact zone' as a messy and complicated place. To inhabit the earth as a human being, people encounter, perceive, collaborate with and often resist others. Through the spaces and material objects humans create, boundaries are established and individuals and communities are defined and circumscribed. Art objects and constructed spaces not only arise from but define the contact point of individuals or groups occupying different worlds. By studying these works as a space of encounter, students will learn that boundaries between people are porous, with cultural contact a zone of potentially productive collaboration but also power inequity and strife. How do works of art and built spaces incite, mediate, or instantiate such strife? How have people traditionally perceived to reside at the periphery employed artistic expression or rhetorical strategies to subvert existing power structures (the center) and formulate identity? Students who have taken the HAA 0010 Introductory version of this course are encouraged to take this more advanced version, but it is not necessary to have had HAA 0010 to enroll in HAA 1050
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2060 - SPECIAL TOPICS PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
Practicum courses will focus on critical skills, cognitive competencies or disciplinary topics central to advancing the professional expertise of students
Academic Career: Graduate

Course Component: Practicum
Grade Component: Grad Letter Grade

HAA 2061 - SPECIAL TOPICS WORKSHOP

Minimum Credits: 1
Maximum Credits: 3
Workshops will focus on critical skills, cognitive competencies or disciplinary topics central to advancing the professional expertise of students.
Academic Career: Graduate

Course varies from term to term.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2103 - RELIGIONS OF ANCIENT EGYPT

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to ancient Egyptian religious thought and practices with its massive temples, multitude of gods and goddesses, and fascinating funeral rites. The course includes a group project to design a hypothetical Egyptian exhibit for a museum and sessions at the Carnegie museum of natural history.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2107 - JERUSALEM HISTORY AND IMAGINATION

Minimum Credits: 3
Maximum Credits: 3
Jerusalem was and remains both a magnet for cultic devotion and an epicenter of religious conflict. This course examines the political, religious, and cultural history of Jerusalem, focusing primarily on Jerusalem as a concrete and conceptual phenomenon in the premodern period. Beginning our story in the bronze age, we will explore a wide range of sources-literary, archaeological, and iconographical-that bear witness to the remarkable transformation of a small, backwater village in the hills of Canaan to a sacred center for millions of Jews, Christians, and Muslims today. We will study the political, physical, and conceptual development of this urban space through its multiple destructions and reconstructions, considering the emergence of Jerusalem as a sacred space, an apocalyptic space, and a contested space.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2111 - GREEK ART

Minimum Credits: 3
Maximum Credits: 3
The study of Greek art begins ca. 3000 B.C. In the so-called "age of bronze" and traditionally ends in 30 B.C. With the completion of the roman conquest of the eastern Mediterranean. The course will trace the development of architecture, sculpture and painting in mainland Greece and to a lesser extent in the Greek colonies of Asia minor and Italy, emphasizing the changes in style and taste which took place

over this period.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2200 - SPECIAL TOPICS-MEDIEVAL

Minimum Credits: 3
Maximum Credits: 3
Special topics in medieval art.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Attributes: Medieval & Renaissance Studies

HAA 2300 - SPECIAL TOPICS-RENAISSANCE

Minimum Credits: 3
Maximum Credits: 3
Special topics in Renaissance art.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HAA 2400 - SPECIAL TOPICS-MODERN ART

Minimum Credits: 3
Maximum Credits: 3
Special topics in modern art.

HAA 2404 - SPECIAL TOPICS: MODERN-LECTURE

Minimum Credits: 3
Maximum Credits: 3
Special topics in modern art.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2451 - ART IN THE WEIMAR REPUBLIC

Minimum Credits: 3
Maximum Credits: 3
The course will examine art and architecture in Germany from the end of World War I to the rise of the national socialist dictatorship in 1933. Emphasis will be on a chronological study of the ways in which art developed in Germany under democratic social concepts and a new internationalist outlook in the early years of the republic, and the ways art became embedded in the political structures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2455 - ART OF THE THIRD REICH

Minimum Credits: 3
Maximum Credits: 3
This course examines national socialist art and the fate of modernism under Hitler in the years between 1933 and 1945. As we will explore, Hitler's regime enlisted the arts and architecture, through party rallies, art exhibitions, building programs, and film, in enforcing its dictatorial policies on everything from the extermination of the Jews to sexuality and the war effort. We shall also consider the impact of the purge of modern art under Hitler on the work of such noted modernists as Otto Dix and Kite Kollwitz, who chose to remain in Germany, and on the art of those who fled into exile, among them John heart field, George Grosz, and Max Beckmann. The final weeks of the course will consider critical issues involved in recent--and invariably controversial--attempts in museum building, sculpture, and site-specific installations to memorialize the holocaust and examine Germany's Nazi past.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2491 - ART SINCE 1945

Minimum Credits: 3
Maximum Credits: 3
This course will present a review of art movements in America and Europe form 1905 - 1945 in the introduction, followed by a more intensive study of post-World War II art movements in Western Europe and America from 1945 to the 1980's. We will give special attention to: a) different styles of art which fit into the label "abstract expressionism" b) different styles under "pop(ular) art" c) conceptual art movements d) issues in critical evaluations of contemporary art.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2520 - BLACK BUILT AMERICA: ARCHITECTURES OF BLACK RESISTANCE IN THE UNITED STATES

Minimum Credits: 3
Maximum Credits: 3
This course offers a critical history of the Black labor, creativity, craftsmanship, engineering, and activism that built the United States of America. It is undeniable that Black Americans and African Americans have been brutally marginalized by the instruments of systemic racism including segregation, redlining, eviction, and more recently gentrification. In this class, however, that very real and continuing history of oppression is studied as the fuel for the creative agency of Black individuals and communities. Appropriating, intervening, and shaping the built environment became one of the many forms of Black resistance to racism and systemic injustices. In doing so, Black hands and Black minds shaped the very fabric of America's landscape. Our class begins and ends in Washington DC, posing important questions about the hidden and overt symbols of Black heritage in the nation's capital.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HAA 2612 - SPECIAL TOPICS-ASIAN

Minimum Credits: 3
Maximum Credits: 3
Special topics in Asian art.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2630 - CHINA: VILLAGE & URBAN ARCHITECTURAL SPACE

Minimum Credits: 3
Maximum Credits: 3
The design of Chinese cities is guided by philosophical principles established in the early dynastic period. Imperial cities follow a regular grid pattern that faces south, and includes an inner city, open only to the imperial leaders and aristocrats, and an outer city in which the business is carried out. The design and use of the city is guided by Confucian and Daoist ideals. Religious centers follow palace designs, but are tied to Buddhist, Confucian and Daoist practice. Village centers are arranged according to Daoist ideas about nature called Fengshui.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2641 - MODERN AND CONTEMPORARY CHINESE ART

Minimum Credits: 3
Maximum Credits: 3
This course examines art in China since ca. 1900, a period of major cultural transformation. Beginning with the collapse of the 2000-year-old imperial system and ending with the globalized nation-state, students will analyze works in a wide range of media, including ink and oil painting, printmaking and photography, architecture, and video and performance art. Modes and movements range from "national painting" (guohua) and modernist design to socialist realism and state propaganda, contemporary craft, and experimental calligraphy.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2692 - BUDDHISM CIVILIZATION ALONG THE SILK ROAD

Minimum Credits: 3
Maximum Credits: 3
This class serves as an introduction to Buddhism from its origins through the seventh century CE as it moved along the Silk Road, the ancient EurAsian trading network that is considered one of the earliest and most important super highways of trade and culture. Concomitantly, it serves as an introduction to the silk road as the scenario for contact and exchange. The emphasis is on religious praxis, the actors and places that transformed Buddhism and were transformed by it. We will examine archaeological remains and art and discuss how they complement or sometimes contradict textually-based historical narratives. Through the examination of four case studies we will discuss questions related to religious interaction as embodied in material culture and analyze it in context.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2901 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
Directed study for M.A. Students.
Academic Career: Graduate
Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
Directed study for M.A. Students.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2903 - GRADUATE INTERNSHIP

Minimum Credits: 3
Maximum Credits: 3
Academic credit is awarded for experience gained through a directed internship. The internship is arranged by the student in consultation with the director of graduate studies in the history of art and architecture department.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

HAA 2905 - COMPREHENSIVE EXAM PREPARATION

Minimum Credits: 1
Maximum Credits: 9
This course is an independent study for Ph.D. students who are actively preparing for their comprehensive exams. The student works under the supervision of a dissertation advisor, with the assistance of other members of the dissertation committee. Committee and student agree on bibliographies in advance, and the student is encouraged to discuss the readings on a regular basis with his or her advisor and other members of the committee if necessary.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2906 - DISSERTATION PROSPECTUS

Minimum Credits: 1
Maximum Credits: 9
This course is an independent study for Ph.D. students who are preparing their dissertation prospectus. Working under the supervision of a dissertation advisor, the student writes a prospectus that summarizes the dissertation topic, its original contribution to the field, and its methodology. The prospectus should also include a brief chapter outline, a research plan, and a bibliography-the whole document totaling approximately 10 to 20 pages.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2951 - MENTORING INTERNSHIP

Minimum Credits: 1
Maximum Credits: 3
This course provides an opportunity for graduate students to mentor undergraduates under the supervision of a faculty instructor. The

course is designed to enable graduate interns to mentor individual undergraduates, or small groups, who are engaged in advanced research or other projects in the University art gallery or digital media workshop or elsewhere under faculty supervision. Supervising faculty will meet regularly with the graduate intern to design and monitor the mentoring experience, and to discuss the practice of mentoring.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

HAA 2970 - TEACHING OF ART HISTORY

Minimum Credits: 1
Maximum Credits: 3
Taken simultaneously with independent teaching by graduate students.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 9
Dissertation research for Ph.D.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 3901 - INDIVIDUAL RESEARCH

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

Honors

HONORS 0011 - CHANCELLOR SCHOLARS SEMINAR 2

Minimum Credits: 1
Maximum Credits: 1
This is the second course in a two-semester informational seminar sequence for first-year Chancellor Scholars. Students will gain a better understanding of an issue from a multi-disciplinary perspective through discussions with faculty and experiential learning activities. Students will also learn about the services, functions, policies, and opportunities available through the David C. Frederick Honors College.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: Satisfactory/No Credit

HONORS 1905 - BPHIL THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 6
Undergraduates pursuing the bachelor of philosophy degree through the honors college may register for this course only after their thesis

proposal has been approved and they have been admitted to honors college candidacy.
Academic Career: Undergraduate
Course Component: Thesis Research
Grade Component: Satisfactory/No Credit

Human Behavior

SWBEH 2008 - HUMN BHVR: URBAN ENVIRONMENT

Minimum Credits: 3
Maximum Credits: 3
This course deals with collective behavior and societal values relative to key urban issues, particularly race, gender, and poverty. Guest experts will lecture, with the course drawn together, coordinated, and enriched by a single instructor of wide experience, both in teaching and in running a large innovative agency.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063

SWBEH 2060 - HUMAN BEHAVIOR: HEALTH & AGING

Minimum Credits: 3
Maximum Credits: 3
This Human Behavior in the Social Environment course examines how people age within real world health and social systems. It introduces core theories of human development and behavior across the lifespan and applies them to the experiences of children, adolescents, adults, and older adults who must navigate complex and often fragmented systems of care. Grounded in a biopsychosocial spiritual cultural framework, the course emphasizes that aging is a lifelong process shaped by biological, psychological, social, environmental, cultural, and spiritual factors. Students explore typical and atypical aging, including cognitive, emotional, physical, and social changes, and examine how system fragmentation contributes to unmet needs, preventable suffering, and significant health disparities. The course also introduces integrated behavioral health models in primary care that aim to improve access, coordination, and quality of care for older adults and their families. Students critically examine how older adults are conceptualized within society and how ageism, racism, sexism, heterosexism, poverty, and other forms of oppression influence the experience of aging and the design of care systems. Themes of heterogeneity, resilience, continuity, and competency inform discussions of diverse later life pathways, including healthy aging, multimorbidity, caregiving, and end of life. Within an integrated gerontological context, the course highlights the roles of social workers as behavioral health providers on primary care teams. Students build competencies in engagement, screening, assessment, brief intervention, treatment planning, interdisciplinary collaboration, and culturally responsive practice. Case based activities support the application of HBSE concepts to real world scenarios involving older adults, caregivers, and health and social service teams.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

SWBEH 2062 - HUMN BHVR: CHLD FMLY AT RISK

Minimum Credits: 3
Maximum Credits: 3
Building upon generalist Human Behavior in the Social Environment (HBSE), this course examines the concepts of risk and resilience in relation to individual and family functioning within broader social, cultural, political, and economic contexts. It explores developmental issues and life challenges facing children and families through a multidimensional framework that incorporates biological, psychological, and social variables. Emphasis is placed on issues of race, ethnicity, class, culture, religion, sexual orientation, gender, and other intersecting factors in understanding child and family functioning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063

SWBEH 2063 - HUMAN BEHAVIOR & SOCIAL ENVRNMNT

Minimum Credits: 3
Maximum Credits: 3
This course analyzes theories of human behavior in the social environment from a lifespan developmental approach. It is designed to build students' understanding of the ramifications of the person-in-environment framework, which considers the social, biological, and psychological influences of the environment. Students will explore how social structures, social policies, and cultural patterns affect individuals at all stages of life.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Social Work students only.

SWBEH 2065 - HUMAN BEHAVIOR: MENTAL HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course addresses the etiology, nature, course and treatment of mental disorders across the life cycle. Some mental illnesses begin early in life, and may continue throughout life, being modified by growth and development; others begin later in life or are specific to a particular stage in the life cycle; while others occur in response to environmental circumstances and stressors. Furthermore, gender, race, culture, ethnicity, socioeconomic status and other aspects of diversity shape how symptoms of mental illness are experienced, interpreted and expressed. A selection of the major categories of mental disorder and abnormal behavior will be addressed although it will not be possible to examine all of them in class. Understanding and applying the DSM-IV-TR manual as a clinical assessment tool, an introduction to psychopharmacology, and the nature and role of risk and protective factors associated with suicidal and violent behavior will also be addressed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063

SWBEH 2066 - HUMAN BEHAVIOR: HEALTH/MENTAL HEALTH

Minimum Credits: 3
Maximum Credits: 3
Building upon generalist HBSE, this course explores physical and mental health issues throughout the life course, using multiple theortical frameworks. Students become famillliar with evidence based and culturally responsive inteventions and approaches with a focus on the physical and behavioral health aspects of well-being. The course reviews environmental contexts of health care including the role of community, organizational, regulatory, financial, and cultural factors. Students gain knowledge about social work practice in various physical and mental health care settings, including hospital and community.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063

SWBEH 2077 - HUMN BHVR: ADLT DVLP AGING

Minimum Credits: 3
Maximum Credits: 3
This course focuses on substantive content during adulthood (early and middle age) and old age. This course offers a framework for understanding mid-life and old age from a life-span developmental perspective and examines physical, social (environmental), and personal factors that influence the developing personality. The knowledge is integrated and appraised for its usefulness in working directly with and/or in behalf of middle-aged and older persons.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWBEH 2063

Human Genetics

HUGEN 2010 - BIOINFORMATIC RESOURCES FOR GENETICISTS

Minimum Credits: 1
Maximum Credits: 1
The focus of this course is the online bioinformatic resources available to geneticists. Students will learn to locate and use such resources and interpret the data therein to inform the development of research questions, aid in clinical decision-making, and enhance the understanding and contextualization of research results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Human Genetics or Public Health Genetics or Genetic Counseling

HUGEN 2011 - SCIENTIFIC WRITING IN HUMAN GENETICS

Minimum Credits: 1
Maximum Credits: 1
Writing and communication skills are amongst the most important assets for any human genetics researcher and/or public health genetics professional. Scientific Writing in Human Genetics is designed to empower Human Genetics students to establish the communication mindset to write clear and compelling scientific narratives and to complete a solid draft of the Background/Introduction and Specific Aims sections of their Thesis or Dissertation research proposal document (or another academic work document with permission of the instructor).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2012 - WRITING IN CLINICAL AND PUBLIC HEALTH GENETICS

Minimum Credits: 1
Maximum Credits: 1
This course promotes development of written communications skills through facilitated discussions, readings, writing exercises, constructive peer-reviewing, input from the instructor, and scientific review from content experts. Further, this course provides a structured format for students to make progress on their MPH essay, MS thesis, or other academic work. By the end of this course students will be able to write clear scientific narratives in plain language and will have completed major sections of their essay, thesis, or other scholarly work.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: GNCSLG-MS or PHGEN-MPH

HUGEN 2020 - INTRODUCTION TO POPULATION GENETICS AND GENETIC EPIDEMIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This survey course covers the principles of population genetics as applicable to human populations, including (1) the laws of inheritance that govern the organization of the genomes in populations, (2) the evolutionary forces and phenomena that impact genetic diversity in human populations, and (3) the foundational concepts of genetic epidemiology and gene discovery.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HUGEN 2021 - SPECIAL STUDIES

Minimum Credits: 1
Maximum Credits: 15
Qualified students may undertake advanced work or research with the approval and under the guidance of a member of the staff.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

HUGEN 2022 - HUMAN POPULATION GENETICS

Minimum Credits: 2
Maximum Credits: 2
This survey course covers the principles of population genetics as applicable to human populations, including (1) the laws of inheritance that govern the organization of the genomes in populations, (2) the evolutionary forces and phenomena that impact genetic diversity in human populations, and (3) the foundational concepts of genetic epidemiology and gene discovery.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HUGEN 2025 - HUMAN GENETICS SEMINAR

Minimum Credits: 0
Maximum Credits: 0
Human genetics seminars present current genetics methodology, theory, and data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

HUGEN 2026 - SPECIAL STUDIES HUMAN GENETICS

Minimum Credits: 3
Maximum Credits: 3
This course is designed to provide advanced undergraduates and graduate students with directed, intensive training in laboratory, statistical or clinical research methods relevant to human genetics. These specialized skills are not available in regularly taught courses in the university. Each special study is designed in consultation with an individual member of the human genetics faculty.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2028 - HUMAN GENETICS JOURNAL CLUB AND PEER REVIEW

Minimum Credits: 1
Maximum Credits: 1
Human genetics journal club provides students and faculty with an opportunity to present and discuss exciting research in an informal format. The purpose of the course is to hone students' oral and written critical evaluation skills.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2029 - INTRODUCTION TO GENE MAPPING

Minimum Credits: 3
Maximum Credits: 3

This course presents a literature-based approach to understanding and interpreting results from gene mapping papers in the field of human genetics. Traditional and state-of-the-art genetic mapping methodologies will be explored.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2020 and 2040 and BIOST 2041

HUGEN 2032 - GENETIC TECHNIQUES

Minimum Credits: 2
Maximum Credits: 2
Students participate in laboratory exercises to become acquainted with cytogenetics laboratory procedures including cell culture, chromosome preparation, chromosome banding, and karyotyping. Chromosome analysis and karyotype interpretation are practiced.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: PLAN: HUGEN-MS or HUGEN-PHD or PHGEN-MPH or GNCSLG-MS or GENBINF-MS

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3
Maximum Credits: 3
This course addresses fundamental concepts important to genetic counseling principles and practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3
Maximum Credits: 3
This course addresses fundamental concepts important to genetic counseling principles and practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: GNCSLG-MS or MPHMSG-TR or instructor permission

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3
Maximum Credits: 3
This course addresses fundamental concepts important to genetic counseling principles and practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: GNCSLG-MS or MPHMSG-TR or instructor permission

HUGEN 2036 - GENETIC COUNSELING INTERNSHIP

Minimum Credits: 4
Maximum Credits: 4
For this course, students will participate in supervised genetic counseling clinical rotations in a variety of specialty areas. The lectures that are part of the course will address topics relevant to clinical genetics and counseling.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2037 - GENETIC COUNSELING PROFESSIONAL DEVELOPMENT AND RESEARCH SERIES

Minimum Credits: 2
Maximum Credits: 2
This course is participatory with opportunities to engage in activities that promote the acquisition of skills and knowledge in the areas of professional development and research. The completion of several thesis project milestones is an important outcome of the research module. The research module of the course examines various research methodologies, the ethical conduct of research, and the dissemination of research findings such as writing abstracts and constructing posters. The professional development module addresses items related to transitioning into and succeeding within the workforce.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PREQ: HUGEN 2035 and HUGEN 2038

HUGEN 2038 - INTERVENTION SKILLS FOR GENETIC COUNSELING

Minimum Credits: 3
Maximum Credits: 3
Focuses on the understanding of theories of intervention, skill development and application to genetic counseling. The course aims at sensitizing students to the ethical dilemmas faced by affected families and health-care providers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2039 - GENETIC COUNSELING RISK ASSESSMENT AND APPLICATION

Minimum Credits: 1
Maximum Credits: 1
Genetic risk can influence patient decision making, management, and adaptation. Consequently, accurate risk assessment is a fundamental skill of genetic counseling. Genetic counseling sessions often involve calculating risk using a variety of probability and risk models and the process can incorporate clinical and laboratory information to accurately tailor risk assessment for a patient. This course provides hands-on training in assessing risk in a variety of genetic counseling situations, and understanding clinical elements that can influence risk interpretation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2035 and 2038; CREQ: HUGEN 2020; PLAN: GNCSLG-MS or MPHMSG-TR

HUGEN 2040 - MOLECULAR BASIS OF HUMAN INHERITED DISEASE

Minimum Credits: 3
Maximum Credits: 3
This course will provide an overview of selected human inherited disorders and integrate clinical descriptions with recent genetic, molecular genetics and biochemical insights. Current state of the art molecular genetics methodologies will be integrated into the overviews.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2047 - CLINICAL GENETICS CASE CONFERENCE

Minimum Credits: 1
Maximum Credits: 1
With clinical cases and specimens from various clinical genetics service units, this seminar illustrates and provides insights into the biologic, medical, ethical, and emotional aspects of genetic disorders.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

HUGEN 2049 - INTRODUCTION PUBLIC HEALTH GENETICS

Minimum Credits: 3
Maximum Credits: 3
This course provides a framework in which to assess how advances in genomics may be applied to public health practice and policies that affect both individuals and society. In addition, the ethical, legal, and social consequences of historical, current, and future interventions are considered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HUGEN 2050 - PUBLIC HEALTH GENETICS PRACTICUM

Minimum Credits: 1
Maximum Credits: 6
The practicum is a short term field placement (minimum 200 hours of public health oriented work) with an organization or agency that is relevant to the student's area of interest. Each placement must be agreed upon by the student and the MPH program advisor.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: PLAN: Public Health Genetics (MPH or CERT)
Course Attributes: Community Element -General Community Impact

HUGEN 2051 - INBORN ERRORS OF DEVELOPMENT

Minimum Credits: 2
Maximum Credits: 2
This course focuses on the connections between human development and inherited disease. The course will include core principles of development of the body plan and signaling pathways involved in development and differentiation. These biological processes will be used to categorize inherited human diseases, understand disease mechanisms, and the current efforts to develop targeted treatments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2052 - ETHICAL ISSUES IN GENETIC COUNSELING

Minimum Credits: 1
Maximum Credits: 1
Advances in genomic technology have the potential to benefit patients and their families and will likely provide novel approaches to the management and treatment of genetic conditions. Since the early days of clinical genetics, ethical challenges relating to the use of genetics emerged and will continue to persist as technological advances continue to impact clinical care. This course provides an opportunity to explore ethical challenges in clinical genetics and genetic counseling and to examine these issues within the context of genetic counseling practice. Throughout the course a broad range of historical, contemporary, and emerging ethical issues in genetics are addressed. The format of the course includes lectures, discussions, and group work to provide a framework for analyzing arguments in the literature and to

encourage students to assume responsibility for engaging in ethical analysis as they enter the genetic counseling profession.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis
Course Requirements: CREQ: HUGEN 2035 or 2049; PLAN: HUGEN-MS or GNCSLG-MS or MPHMSG-TR or PHGEN-CR4 or PHGEN-MPH

HUGEN 2053 - APPLICATIONS IN PUBLIC HEALTH GENETICS AND GENOMICS

Minimum Credits: 2
Maximum Credits: 2
This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BIOST 2041 or BIOST 2011; CREQ: HUGEN 2049; PLAN: Human Genetics or Genetic Counseling or Public Health Genetics

HUGEN 2054 - APPLICATIONS IN PUBLIC HEALTH GENETICS AND GENOMICS

Minimum Credits: 3
Maximum Credits: 3
This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2056 - GENETIC CONDITIONS AND PUBLIC HEALTH PROGRAMS

Minimum Credits: 2
Maximum Credits: 2
This graduate level course focuses on teaching genetic conditions that are being addressed by public health genetics programs. The goal of this course is to educate students on the natural history, available screening and/or genetic testing, and prevention strategies of these genetic conditions as well as the influencers of access to genetic services by at-risk individuals in the population.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2057 - INTERNSHIP IN HUMAN GENETICS

Minimum Credits: 1
Maximum Credits: 1
This internship course offers experiential training in real-world research settings including industry and private research institutions. Students earn academic credit for research and related professional activities pertaining to the field of human genetics. Students, in conjunction with a University of Pittsburgh faculty member and optionally with an internship preceptor, will formulate individualized learning objectives and academic deliverables originating from the internship experience.
Academic Career: Graduate

Course Component: Internship
Grade Component: Grad HSU Basis

HUGEN 2058 - SPECIAL STUDIES IN HUMAN GENETICS

Minimum Credits: 1
Maximum Credits: 15
This course provides students with directed training in laboratory, computational, statistical or clinical methods and theory relevant to human genetics. These specialized skills and specific concepts are not available in regularly taught courses in the university. Each special study is designed in consultation with an individual member of the human genetics faculty.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis

HUGEN 2059 - CURRENT TOPICS IN PUBLIC HEALTH

Minimum Credits: 1
Maximum Credits: 1
This seminar-style course focuses on current topics in the field of Public Health Genetics. Students and instructors will discuss current issues as presented in journal articles, news media, and other resources within the field.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2049

HUGEN 2060 - CHROMOSOMES - STRUCTURE AND FUNCTION

Minimum Credits: 2
Maximum Credits: 2
Chromosomes are the primary means of biologically organizing and manipulating nuclear DNA within the cell, across cell generations, and across sexual generations. In this course we will investigate how differences in chromosome structure and function affect the roles chromosomes play as dynamic "megamolecules" in reproduction, development, health and disease.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2061 - CANCER GENETIC COUNSELING

Minimum Credits: 1
Maximum Credits: 1
This course is designed to provide students with the knowledge and skills fundamental to the practice of cancer genetic counseling. The overall goal of the course is to allow students to apply cancer genetics knowledge to clinical situations. The course will cover hereditary cancer syndromes, cancer risk assessment models, and germline and somatic genomic testing.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2035 and COREQ: HUGEN 2060; PLAN: HUGEN-MS, HUGEN-PHD, PHGEN-MPH, GNCSLG-MS, or PHGEN-CR4

HUGEN 2062 - ETHICAL ISSUES IN PUBLIC HEALTH GENETICS AND RESEARCH

Minimum Credits: 1
Maximum Credits: 1
This course introduces and assesses a broad range of contemporary issues in public health ethics and policy, with particular emphasis on

genetics in research and population health. The course begins with an exploration of normative frameworks and concepts to which ethicists and policy-makers commonly appeal when addressing public health issues and justifying public health interventions. The course then surveys a number of public health ethics and policy issues, particularly those tied to population genetics and genetics/genomic research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: PLAN: PHGEN-MPH

HUGEN 2063 - GENETIC COUNSELING IN PRACTICE: SIMULATION AND SKILL BUILDING

Minimum Credits: 1
Maximum Credits: 1
This course provides genetic counseling students with structured opportunities to apply and refine the foundational counseling skills. Through a series of progressive patient simulation experiences, students practice initiating and conducting genetic counseling sessions across different specialties. Emphasis is placed on client assessment, communication of genetic concepts, and the integration of counseling interventions in a supportive, skills-based learning environment.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad SN Basis

HUGEN 2071 - GENOMIC DATA PROCESSING AND STRUCTURE

Minimum Credits: 3
Maximum Credits: 3
Bioinformatics involves an in-depth understanding of data and a substantial amount of data processing. This course focuses on the manipulation and management of human genetic and genomic data via two platforms: the R statistical computing environment and the Unix operating system. The course will also cover the major data formats and structures used to store human genetic and genomic data. A key component of the course will be hands-on analyses of example data sets in a variety of formats.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2022; CREQ: HUGEN 2020 and BIOST 2041; PLAN: GENBINF-MS

HUGEN 2072 - GENOMIC DATA PIPELINES AND TOOLS

Minimum Credits: 3
Maximum Credits: 3
This course will teach the analytical methods and tools used for genotype data quality control, sequencing read alignment, base calling, genotype calling, quantitative sequencing methods, data harmonization, genotype imputation, and statistical analysis and meta-analysis through the development and implementation of next-generation whole genome sequencing and RNA-Seq pipelines.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2071

HUGEN 2073 - GENOMIC DATA VISUALIZATION AND INTEGRATION

Minimum Credits: 3
Maximum Credits: 3
This course will teach principles of data visualization and data visualizations that are specific to genetic and genomic analyses. It will also delve into the integration of data from multiple resources to appropriately annotate genetic associations with relevant information from a variety of repositories of genetic, genomic and other "omic" data.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PREQ: BIOST 2041 and HUGEN 2020

HUGEN 2074 - GENOME BIOINFORMATICS CAPSTONE

Minimum Credits: 6
Maximum Credits: 6
The capstone course provides students in the Master of Science in Genome Bioinformatics with the opportunity to expand their repertoire of analysis and professional skills and communicate results of their internship to faculty and fellow students. As part of this course, students will develop final analyses based on their internship data or use other (faculty-provided) data if the results of their summer internship project are not appropriate thesis material. The capstone course will ensure that the thesis project demonstrates the student's competency in genome bioinformatics as well as communication skills in general.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2075 - GENOME BIOINFORMATICS THESIS AND WRITING

Minimum Credits: 2
Maximum Credits: 2
The thesis writing course provides students in the Master of Science in Genome Bioinformatics with skills requisite for writing documentation covering project and analysis relevance, scientific gaps, describing research opportunities to address those gaps, and summarizing and contextualizing research project results. It will improve their general scientific writing skills. Coming into the course, the students will have completed their research project analysis. At the end of the course the students will have completed their thesis document describing that analysis for review by the MSGB thesis committee.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

HUGEN 2076 - GENOME BIOINFORMATICS CAPSTONE

Minimum Credits: 2
Maximum Credits: 2
The capstone course is a directed and mentored bioinformatics data analysis project course that results in completed thesis project for students in the Master of Science in Genome Bioinformatics. Students will develop a research question, create an analysis plan, and implement that plan while presenting milestone updates on the status of their research project. The project results will be the basis for the project's thesis report in HUGEN 2075.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Genome Bioinformatics(GENBINF-MS)

HUGEN 2077 - GENOME BIOINFORMATICS PROFESSIONAL SKILLS

Minimum Credits: 2
Maximum Credits: 2
This course prepares students with skills for future roles as bioinformatics professionals such as public speaking, project management, budgeting, negotiation, and working with principles of data ethics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Genome Bioinformatics(GENBINF-MS)

HUGEN 2078 - GENOMIC DATA ADVANCED TOPICS IN BIOINFORMATICS

Minimum Credits: 2
Maximum Credits: 2
This course introduces students to advanced topics in genome bioinformatics programming, DNA and RNA sequencing, data visualization, variant and gene annotation, and integration of molecular phenotypes (omics) into analyses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2071 and 2072 and 2073

HUGEN 2079 - GENOMIC DATA ANALYSIS WITH MACHINE LEARNING AND ARTIFICIAL INTELLIGENCE

Minimum Credits: 2
Maximum Credits: 2
This course introduces students to methods and approaches employing machine learning and artificial intelligence (AI) in DNA and RNA sequencing, exploratory data analysis, variant and gene annotation, and the integration of molecular phenotypes (omics) with genomics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: GENBINF-MS

HUGEN 2080 - STATISTICAL GENETICS

Minimum Credits: 3
Maximum Credits: 3
This advanced course discusses the principles and practice of statistical genetics in the area of genetic epidemiology of human diseases and complex traits, with emphasis on the statistical modeling and methodology used in the analysis of genetic data in contemporary research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HUGEN 2020 and BIOST 2041

HUGEN 2081 - ANALYZING HEALTH DATA WITH THE ALL OF US RESEARCH PROGRAM

Minimum Credits: 2
Maximum Credits: 2
This course introduces students to the All of Us Research Program, a biobank established by the National Institutes of Health in 2018, which provides a rich resource for generating thesis topics and exploring diverse U.S. population data to address gaps in health equity and precision medicine research. Students will use All of Us data to explore a wide range of research questions in public health, with an emphasis on genome-wide association studies (GWAS) and phenome-wide association studies (PheWAS). Students will learn about the structure of the All of Us database, covering topics such as onboarding, cloud computing, example research applications, and the scope of the available data, which includes surveys, electronic health records, and short-read whole genome sequencing. Additionally, the course introduces Python and R, focusing on data manipulation and cleaning techniques specific to the All of Us Researcher Workbench.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis
Course Requirements: PREQ: BIOST 2041

HUGEN 2090 - MOLECULAR BASIS OF COMPLEX DISEASES

Minimum Credits: 2
Maximum Credits: 2
This course will provide an overview of genetic and molecular basis of complex human diseases with primary focus on immune-mediated conditions, autoimmune diseases, common eye disorders, and psychiatric/behavioral health disorders. Common human diseases largely

contribute to the public health burden of diseases and are influenced by a complex interplay of genetic, epigenetic, demographic, and environmental risk factors. Selected examples will be used in the classroom to illustrate the multifactorial nature of complex human diseases. Identifying multiple genetic loci/variants involved in common disease susceptibility and understanding the biological functions/pathways impacted by complex interactions of these genetic factors with other risk factors/exposures constitute an essential step towards improving the prevention, diagnosis, and management of these common conditions, hence improving the public health. This course will also provide an overview of the epigenetic regulation, immune system, and microbiota/microbiome as related to their increasingly recognized important roles in influencing the development and/or progression of a diverse array of complex human diseases.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2091 - GENETICS OF COMPLEX DISEASES

Minimum Credits: 1
Maximum Credits: 1
This course provides students with an understanding of the biochemical and molecular genetic approaches to understand genetically determined susceptibility to common diseases. This will be presented using selected examples of complex human diseases, including cardiovascular and neurodegenerative diseases. Risk of common, complex diseases is determined by genotypes at multiple genetic loci and a complex interaction of genetic variation and environmental exposures. Risk of almost every common disease is influenced by genes, but the relationship between genotype and disease phenotype is weak compared to that observed with rare Mendelian traits. However, understanding the contribution of genes to common disease susceptibility is important to public health.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: COREQ: HUGEN 2090; PLAN: HUGEN-MS; HUGEN-PHD; PHGEN-MPH; GNCSLG-MS; GENBINF-MS; or PHGEN-CR4

HUGEN 3010 - RESEARCH AND DISSERTATION PH.D.

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

HUGEN 3020 - DOCTORAL RESEARCH AND PROFESSIONAL SKILLS DEVELOPMENT

Minimum Credits: 1
Maximum Credits: 1
This course provides an opportunity for Human Genetics doctoral students to learn about specific genetics research projects being carried out in the Human Genetics department and across the Schools of the Health Sciences and enhance their professional skills. The format of the course includes seminar presentations by continuing doctoral students of in-progress genetics research projects and short talks by established investigators within and outside academia offering diverse perspectives on professional development and career trajectories. Students will have the opportunity to showcase their own in-progress research, develop and hone their oral presentation skills, provide and receive constructive written feedback on genetics research, discuss applications of novel methodologies and research approaches, and learn about career opportunities in genetics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HUGEN 3030 - GRANT WRITING FOR DOCTORAL STUDENTS IN HUMAN GENETICS

Minimum Credits: 2
Maximum Credits: 2
This doctoral-level course will provide a structured program for students to hone their scientific writing skills through the process of

developing an original NIH grant application. The course will cover the format of NIH grants generally, the peer review system, good grantsmanship strategies, and best practices in scientific writing. Students will both produce their own NIH grant materials and critically review the materials developed by their classmates.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 3040 - DOCTORAL TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
This course provides experiential training opportunities for doctoral students to develop skills in practical aspects of teaching and peer mentorship within the Human Genetics and related curriculum. As part of the teaching practicum students will engage in a variety of educational activities under the close supervision of a faculty member, typically the director and primary instructor of the pertinent course. These activities may include developing class session-level learning objectives; designing and delivering lectures; leading in-class discussions and activities; leading review, laboratory, and recitation sessions; designing assessments and grading rubrics; grading assignments and exams; managing course websites; and holding office hours. The scope of these duties will be determined by the student and faculty sponsor commensurate with the number of credits (typically 1-3). All educational materials generated by the student will be critically evaluated and approved by the faculty supervisor prior to incorporation into the course. Alongside hands-on engagement with the course, students will explore resources related to effective teaching, reflect on their teaching experience, and debrief with their supervisor, in the furtherance of producing a written report of their practicum.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

Hungarian

HUN 0200 - HUNGARIAN 2

Minimum Credits: 3
Maximum Credits: 3
This course builds upon HUN 0100: Hungarian 1 to increase students' proficiency in spoken and written Hungarian at the beginner's level. It is geared toward students who have completed Hungarian 1 and/or have basic knowledge of Hungarian word formation, sentence structure and vocabulary. The course deepens and expands upon this knowledge by introducing students to further elements of grammar and vocabulary. You will expand your familiarity with the language and culture of Hungary. We will continue focusing on communicative competence and conversational proficiency while developing your Hungarian grammar and writing skills, as well as your listening and reading comprehension skills. You will be expected to memorize vocabulary and utilize it in both speech and writing. This course, taken in sequence with Hungarian 1, fulfills the two-course General Education language requirement. The course also counts towards the minor in Hungarian.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

HUN 2615 - OUTSIDERS ON THE MARGINS: THE AFTERMATH OF SOCIALISM ON FILM

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the aftermath of Socialism, focusing on East Germany and Hungary through movies. We will look at issues that have been specific to societies in the Eastern Bloc taking these two areas as examples, and thus offer insight into the development of these societies after the fall of Socialism all the way up to the present. A deeper understanding of this development will encourage students to think about current historical-political events from a broader comparative perspective, promote their knowledge about the region of East Central Europe, and help discuss these events in an informed manner. Film as an art reflects the struggles and preoccupations of the time and society it emerges from. The selection of films in this course provides students with a representative sample of issues that take center stage in movies about the shift from Socialism to Capitalism and the aftermath of this transition. Course readings

and class discussions illuminate the historical and cultural background to the cinematographic pieces watched and discussed in the course. The movies, readings and class discussions provide insight into how Socialism shaped society and what ramifications it has for the further course of history after its collapse in 1989. More than thirty years after the official end of Socialism, the repercussions of the "cursed forty years" are still palpable in people's lives, their collective memory, societal issues and the way they influence domestic and foreign politics. Under Socialism, inhabitants of the Eastern Bloc largely remained isolated from the Capitalist world and thus remained outsiders to it, quasi-exotic beings who were often regarded with curiosity, pity or suspicion by those in the West. These sentiments are still echoed despite the collapse of Socialism in 1989 and the EU's Eastern Enlargement in 2004, as inhabitants of both the former Eastern Bloc countries and the Western world are still coming to terms with East Central Europe's transformation into democratic societies with a free market economy and the free movement of labor. Historical and cultural differences that had existed before the creation of the Iron Curtain did not cease to be in the Post-Socialist era; on the contrary, they precipitate in discussions and policy-making in the EU and at a global level, where members of the Visegrad countries and their former Eastern Bloc neighbors are yet again often regarded as the nonconformist outsiders on the margins of Europe. In an era of globalization, would we not expect mutual understanding of each other to be less problematic than before the change in 1989? What is the connection between forty years of Socialism and our current day in a Post-Socialist era? We will investigate issues of economic disparity, gender, sexuality, race, ethnicity, ability difference and criminality through a selection of cinematographic works made after 1989 presenting the effect of the change on people's lives from various perspectives. Some of these include the perspective of women, homosexuals, Jews, migrants, people with disabilities, and criminals (if they indeed are criminals), all in addition to the "average" person under Communist rule living on what was perceived by many "the margins" of Europe. The course thus looks not only at the Socialist and post-Socialist citizen as an outsider, but also groups that find themselves in an even more marginalized position - we might as well call them double outsiders because of their position in a society already disadvantaged to more developed Capitalist ones.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HUN 2909 - SPECIAL TOPICS IN HUNGARIAN

Minimum Credits: 3
Maximum Credits: 3
This course will be a topics course, meaning that the specific content of the course will change each time the course is offered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Immunology

MSIMM 2000 - PRINCIPLES OF MICROBIOLOGY AND IMMUNOLOGY

Minimum Credits: 6
Maximum Credits: 6
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSIMM 2200 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a thesis for a master's degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

MSIMM 2210 - COMPREHENSIVE IMMUNOLOGY

Minimum Credits: 2
Maximum Credits: 2
This is a lecture course that will introduce the students to the fundamental concepts of modern immunology. The course will cover cells, tissues and organs of the immune system. Furthermore in-depth analysis of the development, activation, effector functions and regulation of immune response will be presented in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MSIMM 2230 - EXPERIMENTAL BASIS OF IMMUNOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will expose the students to classical and con temporary literature in modern immunology. Emphasis will be on paper analysis and critical evaluation of primary data. This course will parallel the topics presented in comprehensive immunology lecture course which must be taken before or simultaneously with experimental basis of immunology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: MSIMM 2210

MSIMM 2240 - INTRODUCTION TO IMMUNOBIOTHERAPEUTICS

Minimum Credits: 2
Maximum Credits: 2
This course will provide a comprehensive overview of the principles and the technology upon which immunobiotherapeutics are based. The course will focus on the overall aims of using small molecules, antibodies, genes and cells as immunotherapeutic agents. It will cover the use of viral and non-viral agents as gene delivery vehicles, cells as therapeutic agents and small molecules as delivery and therapeutic vehicles. The course will also cover diseases and disorders in which immunobiotherapy has proven safety and demonstrated successful outcomes like cancer, Mendelian disorders and autoimmunity. Lectures and student presentations will cover: genes and cells as drugs, peptides, antibodies and small molecules as therapeutics and delivery vehicles, viral and non-viral vectors, stem cells, and specific diseases where immunotherapy has shown safety and efficacy. Students may also be educated on bioethical issues and existing laws governing biotechnology and molecular medicine approaches.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MSIMM 2250 - TEACHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
Hands-on teaching practicum course for graduate students to learn about university-level teaching.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Immunology (PHD)

MSIMM 2260 - IMMUNOLOGY SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Graduate students and faculty present their current research in a seminar format.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

MSIMM 2290 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in immunology.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: Immunology (PHD) or Interdis Biomedical (UNK)

MSIMM 3200 - PHD DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 14
After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of 40 credits of this course are required for the Ph.D. degree in the school of medicine.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Immunology (PHD)

MSIMM 3220 - CONTEMPORARY TOPICS - IMMUNOLOGY

Minimum Credits: 1
Maximum Credits: 1
This is an advanced level course in which students will read, present and evaluate the primary literature in immunology. Each semester will feature an integrated set of papers addressing a current issue of interest to modern immunologists. The course may be taken more than once by each student, since the topic addressed will change each semester.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

MSIMM 3230 - IMMUNOLOGY AND HUMAN DISEASE

Minimum Credits: 2
Maximum Credits: 2
This course surveys basic immunological principles as they impact our understanding of the causes or treatments of human disease. The course consists of a series of lecture blocks. Background reading is required and the course relies heavily on the reading of original articles. Classes are regularly devoted to paper discussions, and each student will be responsible for introducing one paper.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MSIMM 3260 - IMMUNITY AND THE NEUROENDOCRINE AXIS

Minimum Credits: 2
Maximum Credits: 2
This course will consider the interaction among the immune, nervous and endocrine systems. It will prepare the students for a critical understanding of how endocrine organs and the hormones they produce affect immune cell function, how the nervous system and nEuropeptides/neurohormones and neurotransmitters modify immunity and how the immune system (cells and their secreted molecules) affect the endocrine and the nervous system. The course will also permit the students to critically appraise and understand how drug therapy aimed at immunostimulation or immunosuppression may be affected by, and affect the neuroendocrine axis and how pharmacologic manipulation of the neuroendocrine axis can affect the immune system and the outcome of immunotherapies.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: MSIMM 3230

MSIMM 3270 - INNATE IMMUNITY

Minimum Credits: 2
Maximum Credits: 2
This course will focus on the several aspects of host innate immunity against infection. Topics will include the conceptual basis for innate versus adaptive immunity, induction of innate immunity by pathogens, signaling by innate immune receptors, effector cells of the innate immune system, secreted effectors of innate immune signaling, and subversion of innate immune signaling by pathogens. Courses like molecular virology and comprehensive immunology are highly recommended but not a prerequisite for the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSIMM 3280 - IMMUNOLOGY OF INFECTIOUS DISEASE

Minimum Credits: 2
Maximum Credits: 2
This course examines the immune responses to pathogens, as well as on immune evasion of microbes. The organisms studied include bacteria, parasites, and viruses. Topics focus on host-pathogen interaction and include innate immunity, modulation of antigen processing and presentation, pathogenic strategies for subversion of immune responses, effector functions of immune cells, and immunopathology.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: MSIMM 2210

MSIMM 3290 - AUTOIMMUNITY & IMMUNPATHOLOGY

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: MSIMM 2210 and 2230

MSIMM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2
Maximum Credits: 2
Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Industrial Engineering

IE 2001 - OPERATIONS RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The operations research method; linear programming; network flows; CPM/pert; integer programming formulations. A group project is required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2002 - M.S. ENGAGING INDUSTRY COLLOQUIUM

Minimum Credits: 1
Maximum Credits: 1
This 1 credit course is designed to provide beginning graduate students with the skills needed to navigate the corporate workplace that they will soon enter. The colloquium will focus on topics such as work ethics, professionalism, communication, and presentation skills. The lectures will consist of a mix of pedagogy, guest speakers and in-class discussions and assignments.
Academic Career: Graduate
Course Component: Colloquium
Grade Component: Grad HSU Basis

IE 2003 - ENGINEERING MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Concepts and processes of qualitative engineering management applied to the management of technical and scientific organizations. Topics include: (1) general systems theory; (2) management and the systems concept; (3) strategic planning and management systems; (4) systems analysis; (5) project management systems; (6) organizational design; (7) evaluation and control of systems; and (8) managing technical professionals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2004 - DATA BASE DESIGN

Minimum Credits: 3
Maximum Credits: 3
This course introduces the fundamental aspects of database design and management within the context of a relational data base management system (DBMS). Covered topics include: relational model, database design life-cycle, database design optimization, client/server architecture, data modeling, SQL, database security, database management, data warehousing, internet database environment. Students will gain hands-on experience in analysis, design, implementation, and management of relational data base systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2005 - PROBABILITY AND STATISTICS FOR ENGINEERS 1

Minimum Credits: 3
Maximum Credits: 3
Probability, random variables, common discrete and continuous probability distributions, expected values, central limit theorem, distributions derived from the normal distribution (x2, t and f), estimation of parameters and fitting of probability distributions, testing hypothesis and assessing goodness of fit, comparing two samples.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2006 - INTRO TO MANUFACTURING SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to provide students that have a background in advanced manufacturing technologies with an opportunity to learn about fundamentals of micro and Nano machining processes. The course represents a good balance between theoretical problems and practical considerations related to the advanced manufacturing processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2007 - STATISTICS AND DATA ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Analysis of variance, experiments with one factor, experiments with two or more factors, regression analysis, multiple linear regression, response surface methods, analysis of categorical data, nonparametric statistics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2011 - FUNDAMENTAL OF MICRO AND NANOMANUFACTURING

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2013 - MOLECULAR MANUFACTURING

Minimum Credits: 3
Maximum Credits: 3
You often hear in the news about the potential societal impact of nanotechnology, which is simply described as the science and technology of manipulating matter in the 10-100 nm length-scale. However, with the continued miniaturization of material building blocks approaching the atomic scale, a paradigm shift is needed in the way of thinking about how to synthesize and assemble atomically precise units that integrate various different components, which eventually build a functioning device or material. This bottom-up approach to fabrication with atomic level precision is the focus of this course. The course will include molecular fabrication methods such as DNA origami, protein assembly, chemical synthesis of carbon materials, block copolymer self-assembly, and scanning probe methods that are capable of atomic level manipulation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2014 - MANUFACTURING PROCESS ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to instill a fundamental understanding of manufacturing processes by focusing on the processes, metallurgy and mechanics of deformation in metal forming. To this end, analysis techniques will be developed from solid mechanical principles (stress-strain relationship, deformation and failure) which would then be applied bulk deformation and material removal processes. The course assumes no prerequisites except basic concepts of stress, strain and strength of materials.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2023 - INTRODUCTION TO MEDICAL PRODUCT DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This is an undergrad/grad level course in medical product development covering fundamentals, regulatory processes, intellectual property management, and commercialization strategies. This course will provide basic knowledge on the development of medical devices including designing, manufacturing and testing medical devices. This course will also provide an overview of the medical product commercialization (i.e., bench to bedside). This course will develop the students ability to select and properly use the biomaterials and manufacturing processes for developing medical devices, instruments, biomedical sensors and artificial organs. Students will also learn how to commercialize the medical products to the market through intellectual property management and regulatory processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: IE 1055, IE 1081, and IE 1082

IE 2025 - FACILITY LAYOUT AND MATERIAL HANDLING

Minimum Credits: 3
Maximum Credits: 3
Introduction to facility layout and location. Topics including activity relationships, space and personnel requirements, computer algorithms for constructing layouts, and both single and multiple facility location methodologies; material handling methods and equipment including conveyors, lift trucks, carousels, automated guided vehicles, and automated storage and retrieval systems are also discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (MIE)

IE 2045 - TRANSPORTATION PLANNING METHODS: OR APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
This course will focus on modeling and optimization of a wide range of systems in the field of transportation. It will cover quantitative techniques of Operations Research with emphasis on applications in transportation systems analysis and planning: Operations, Management, Transportation technologies and evaluation of passenger and freight transportation systems, Implementation of the Decision Support Systems, Data Envelopment Analysis (DEA) and Heuristic Algorithms.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2050 - SOCIAL NETWORKS & HEALTH

Minimum Credits: 1
Maximum Credits: 1
This course is an introduction to the theory, methods, and procedures of network analysis with emphasis on applications to health and

social behavior. The goal of the course is to provide a working knowledge of concepts and methods used to describe and analyze social networks so that professionals and researchers can understand the results and implications of this body of research. The course also provides the training necessary for scholars to conduct network analysis in their own research and practice careers. The course consists of readings, class discussions, analysis assignments, and a final project. Assignments are designed to build components of a full network study, culminating in the final project. Individual projects will use data that the student collects him/herself. The data collection and entry process will be quite simple and consist of identifying a group (a class, a club, organization, etc.) that students can ask to complete a simple questionnaire. Other electronic or observational sources of data may also be used.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2060 - COMPUTER METHODS FOR SOCIAL NETWORKS

Minimum Credits: 1
Maximum Credits: 1
This course provides hands-on training in social network analysis using 3 different software packages: UCINet, R, and Gephi. It is intended for those students who are interested in conducting their own social network studies using the latest available software. It is a time-intensive lab and project course. Topics to be covered include: - How to use UCINet to conduct intermediate and advanced SNA - How to use R to use custom SNA packages - How to use Gephi to conduct basic SNA and generate descriptive network graphs
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2062 - DATA ANALYTICS FUNDAMENTALS

Minimum Credits: 3
Maximum Credits: 3
This is a course in the fundamentals of data analytics that requires probability as a prerequisite. The objective is to prepare students to effectively collect and analyze data and to teach data-driven thinking, problem-solving and decision-making. In this class, we will cover various statistics and data mining methodologies and use them to analyze real-world problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2005; PROG: Swanson School of Engineering

IE 2064 - APPLIED DATA ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to applied data analytics. The first part of the courses focuses on practical skills: datawrangling, visualization, data processing, exploratory data analysis and scoping projects. The second and main part of this course focuses on building predictive models for regression and classification: linear models, support vector machines, kernel methods, nearest neighbor, and tree-based models. The primary assessment is a project where students will apply their acquired skills on a real dataset. All course work will be done using R. While not required, it is suggested that IE 2062 is taken concurrently with this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005 or (IE 0015 and 1071)

IE 2065 - STATISTICAL ANALYSIS AND OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2007 or 2064 or 1072 or STAT 1152

IE 2072 - PROBABILITY

Minimum Credits: 3
Maximum Credits: 3
Interpretations of probability, counting methods, conditional probability, Bayes theorem, random variables and distributions, functions of random variables, expectations, special discrete and continuous univariate distributions, law of large numbers and central limit theorems, multivariate distributions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2079 - LOGISTICS & SUPPLY CHAIN ENGRNG

Minimum Credits: 3
Maximum Credits: 3
Modern supply chains are based on networks with a number of actors from manufacturer to distributor to retailer. This course covers the use of modeling for coordinating production, inventory, distribution, and transportation across a supply chain network.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2081 - NONLINEAR OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
Necessary and sufficient conditions for an optimal solution to the non-linear programming problem; convex sets and functions; numerical solution of non-linear equations; search methods; unconstrained optimization including gradient, metric and penalty methods; algorithms for constrained optimization; quadratic and geometric programming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2082 - LINEAR OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
Review of linear algebra, matrices and the simplex methods; revised simplex method; generalized bounds; product form of inverse; pricing and pivot selection; duality and sensitivity analysis; separable programming; linear complementarity; Dantzig-Wolfe decomposition; column generation; generalized LP; semi-infinite LP, stochastic LP; interior point methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2084 - STOCHASTIC PROCESSES

Minimum Credits: 3
Maximum Credits: 3

Reviews probability theory; conditional probability and expectations; discrete-time and continuous time Markov chains; Poisson process and exponential distributions; renewal theory and its applications; queueing theory; stochastic systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering

IE 2086 - DECISION MODELS

Minimum Credits: 3
Maximum Credits: 3
Decision making under uncertainty is the key to understanding a variety of problems from industry, including inventory control, revenue management, energy, healthcare, and logistics. This course covers the fundamentals of stochastic (sequential) decision models, including data-driven and risk-averse methods, with applications to real-world problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: CREQ: IE 2005; PROG: Swanson School of Engineering

IE 2088 - STOCHASTIC SIMULATION

Minimum Credits: 3
Maximum Credits: 3
This course covers theoretical foundations of modeling and analysis of stochastic, dynamical systems using computer simulation in a general-purpose language. Topics include rigorous design of simulation experiments with applications drawn from service, manufacturing, healthcare, and financial systems. The course focuses on preparing students to utilize simulation to advance their research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2005 or IE 1071 or ENGR 0021; PROGRAM: SSOE

IE 2090 - M. S. PROJECT

Minimum Credits: 3
Maximum Credits: 3
This is the capstone project course for M.S. Students. Students working in teams of 3 or 4 will solve a real world problem in conjunction with a company liaison and a faculty advisor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2100 - SUPPLY CHAIN ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
An overview of supply chain management with an emphasis on operations and strong quantitative orientation. Supply chain strategies; sourcing decisions; demand forecasting; aggregate planning; managing supply and demand; production and inventory control systems including MRP and JIT; dealing with uncertainty; distribution networks; coordination and integration.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2001 & 2005

IE 2102 - LEAN SIX SIGMA I (GREEN BELT)

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to lean and six sigma principles with an emphasis on the application of statistics to quality control. Topics include value stream mapping, various lean tools, DMAIC methodology, data collection and measurement, and applications of ANOVA and doe. A project is required and the student should be prepared for green belt certification at the end of the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2103 - LEAN SIX SIGMA II (BLACK BELT)

Minimum Credits: 3
Maximum Credits: 3
This is a follow up course in lean and six sigma covering topics such as influence principles and techniques, systems analysis, design for six sigma, lean enterprise analysis and response surface methods. Several projects are required and the student should be prepared for black belt certification at the end of the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2102; PROG: Swanson School of Engineering

IE 2104 - FRUGAL ENGINEERING & VALUE ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course will focus on the principles of frugal design of products and processes. Foundational skills in Value Engineering/Analysis including tools such as Functional Analysis will be detailed. Additionally, topics such as Customer Needs Identification, Quality Engineering, Operational Excellence and Lean Process Engineering will be integrated into developing frugal product and process designs. Students in the course will have taken the first step towards certification as Value Methodology Associates (VMA) offered by the SAVE International.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2105 - GEOGRAPHIC INFORMATION SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Explore the concepts and history of geographic information systems and learn to effectively use the most utilitarian GIS software, ArcGIS.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2106 - OPERATIONS IMPROVEMENT IN HEALTHCARE

Minimum Credits: 3
Maximum Credits: 3
This course leads students to apply basic industrial engineering tools to healthcare operations, with a focus on healthcare providers. This includes data gathering, process mapping, system analysis and modeling, work sampling, work study and workflow improvement. This course will provide an overview of the differences between healthcare and other more traditional industrial engineering settings (e.g.,

manufacturing, retail), and the opportunity to apply industrial engineering techniques, while developing and understanding basic healthcare operations and systems in the United States. (This class is designed to be a complement to IE 1108/2108.)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering

IE 2108 - HEALTH SYSTEMS ENGINEERING: QUANTITATIVE ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
This course leads students to apply basic industrial engineering tools to healthcare, with a focus on the financial aspect of healthcare (payers and reimbursement, revenue cycle, and other financial analytics). This course familiarizes students with healthcare financial data, demographic and population health information, quality ratings, and other key data and measures. Students will access data from commercial payers, government healthcare programs and/or hospitals, and utilize data analysis and industrial engineering tools to better understand the financial aspect of healthcare systems in the United States. (This class is designed to be a complement to IE 1106/2106.)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering

IE 2110 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 0
Maximum Credits: 0
The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

IE 2117 - FOUNDATIONS OF STATISTICS

Minimum Credits: 3
Maximum Credits: 3
This course equips first year PhD students with essential tools for statistical modeling and analysis. The main focus of this course is on mathematical statistics and bringing out different features of Frequentist, Fisherian and Bayesian approaches to statistical inference, as well as foundations of modern statistics as it interfaces with machine learning and other data-driven paradigms. Students will also get exposure to decision theory and related paradigms for evaluating statistical procedures. Strong background in probability theory and undergraduate statistics is assumed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2122 - FUNDAMENTALS OF SYSTEMS ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
This course will focus on the fundamentals of systems engineering, including technical processes (e.g., requirements definition, architecture design, system verification), technical management processes (e.g., project planning, risk management), agreement processes (acquisition and supply) and project-enabling processes (e.g., life-cycle model management, quality management). Key systems engineering techniques and methods (e.g., system modeling and simulation, function-based systems engineering) will also be discussed.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2123 - PROJECT MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
This course provides a comprehensive introduction to modern project management, integrating both traditional and agile approaches. Students develop the skills required to initiate, plan, execute, and monitor projects while addressing key considerations such as scope, schedule, cost, risk, and stakeholder management. Throughout the course, students will learn how to use practical tools and techniques, including scheduling methods, resource planning, and project management software. In addition, students will learn about the evolving role of project managers in dynamic environments and the impact of emerging trends such as digital tools and artificial intelligence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2003; PROG: Swanson School of Engineering

IE 2144 - DISCRETE OPTIMIZATION: MODELING AND COMPUTATION

Minimum Credits: 3
Maximum Credits: 3
Discrete optimization is a powerful modeling and computational tool in decision making, especially for critical industrial systems (e.g., transportation, energy and healthcare systems). In this course, we focus on learning various modeling techniques, classical and popular models (including location, scheduling and material handling problems), and solution techniques (including exact and heuristic algorithms) for these models that lead to millions of dollars savings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2164 - INTRODUCTION TO MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course is a graduate-level introduction to machine learning. The focus is on foundational principles, models, and algorithms. Specific topics include estimation, regression, classification, kernel methods, neural networks, and graphical models. Background knowledge in linear algebra and probability is required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2184 - STOCHASTIC MODELING AND DATA ANALYTICS IN HEALTHCARE OPERATIONS MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
The purpose of this course is to introduce stochastic modeling methods and data analytics tools for analysis, design, and decision support for healthcare delivery systems. The aim is to expose students to various application areas related to hospital workflow and operations management in healthcare systems. Emphasis is placed on rigorous model formulation to solve system performance evaluation and decision-making questions in healthcare delivery systems. The application of Markov process, systems modeling, simulation, and data analytics methods are discussed through papers and case studies in different care settings and areas (e.g., hospital workflow, patient safety, clinical diagnosis and decision process, prediction and intervention).
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (IE 1070 and IE 1071 or IE 2005) and (IE 1081 or IE 2001)

IE 2187 - OPTIMIZATION FOR MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
Modern machine learning involves fitting predictive models on huge data sets using optimization methods. The choice of optimization method is critical in these problems. For example, using traditional (factorization based) methods to perform regression with ten thousand data points and features will fail - a tiny problem by modern standards. Moreover, modern machine learning methods such as stochastic gradient descent are not plug-and-play: they require user expertise to select tuning parameters and interpret results. The goal of this course is to teach students how to use modern first-order methods to solve large-scale machine learning problems. Coding will be done in python using pytorch. Topics covered: Convexity, nonconvexity, critical points and saddle points. Gradient descent descent. First-order methods vs second-order methods. Training vs test error. Stochastic gradient descent. Hyperparameter tuning. Explicit and implicit regularization. Batch sizes, parallelization, and GPUs. Transfer learning. It is complementary but not required that students have taken an applied data analytics course (e.g., IE 1062 or IE 2064) prior to taking this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2188 - SIMULATION MODELING AND APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
Introductory graduate course to the concepts, technology and applications of discrete-event and hybrid simulation. Covers the foundational concepts of simulation and the application of those concepts using commercial software. Topics include simulation, modeling, validation, input/output analysis, animation, and project success skills. Students will learn to use the Simio commercial simulation product as well as how to conduct/manage simulation projects. Practical experience will be gained in a simulation project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2001 and 2005; PROG: Swanson School of Engineering

IE 2203 - WAREHOUSE OPERATIONS

Minimum Credits: 3
Maximum Credits: 3
In both manufacturing and service, transportation and logistics have become increasingly important. A principal component of many logistics systems are warehouses and distribution centers. Companies in the retail sector, healthcare related fields, and manufacturing all have significant distribution networks that utilize warehouses and distribution centers to supply their products. The aim of this course is to study and analyze key factors affecting the productivity of logistics operations and material flows in facilities. In particular, the course focuses on warehouse and distribution center design and operations including material handling equipment and system design, order picking, sortation systems, and cross docking.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: IE 2025, IE 2001 or IE 2082, and IE 2084.

IE 2301 - INTRODUCTION TO SAFETY ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
Introduction to safety engineering" provides a basis to assist students in understanding and applying the scientific and engineering principles associated with the field of safety engineering. Specifically, the course will provide a background in, information on and

application exercises in the natural, chemical and physical laws and forces associated with safe design and implementation of work-related tasks and industrial and construction projects. These involve soils and excavation, trenching and shoring, permanent and temporary work platforms and scaffolding, cranes, rigging, ropes, slings and chains, fall protection, pressure vessels, confined space entry, energy isolation and preparation of equipment, hot work, welding, personal protective equipment and non-destructive testing. The course will also address safety related issues associated with building and facility design and layout, job, task and work setting layout. The course will stress the importance of safety engineering as part of both the corrective process and the design process.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2302 - ENGINEERING FOR PROCESS SAFETY

Minimum Credits: 3
Maximum Credits: 3
Engineering for process safety provides for a basic understanding of the quantitative and qualitative analysis methods of process safety engineering and process safety management. The course also provides guidance in planning, implementing and managing an overall process safety management program. It includes coverage of such applicable science and engineering principles as risk, human reliability, fault logic, failure modes, incident cost and prediction. The course is presented in an applied format where several different types of industries are discussed such as oil and chemical, pharmaceuticals, defense, nuclear, aerospace, paper, information technology and manufacturing industries. Regulatory influence on process safety is discussed. Quantitative aspects of the course include application of risk analysis, fault tree analysis, hazard and operability analysis, vapor-cloud dispersion modeling, human reliability analysis, failure modes and effects analysis, etc. This course is also intended to provide a background in managing an overall system safety program and its application to several industries, therefore, cost and effectiveness measurement are covered in the material.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 2303 - WORK DESIGN

Minimum Credits: 3
Maximum Credits: 3
This course is designed to provide students the opportunity to learn and use standard industrial tools commonly used in analyzing, troubleshooting, and designing work spaces and work processes. It includes the concepts of cost effectiveness, functional effectiveness, human interface design and characterization, analysis and improvement of productivity. These tools and design methodologies include human information processing, basic auditory and visual displays, cost models, facility layout and network transportation and delivery systems, cognitive engineering, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and time and motion analysis. Students taking this course should be familiar with basic engineering economics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering; PLAN: Industrial Engineering (IE-MIE, IE-PHD)

IE 2609 - LIFE CYCLE ASSESSMENT METHODS AND TOOLS

Minimum Credits: 3
Maximum Credits: 3
Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1
Maximum Credits: 1
This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad SN Basis

IE 2997 - RESEARCH, M. S.

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

IE 2998 - GRADUATE PROJECTS/PRACTICUM

Minimum Credits: 1
Maximum Credits: 12
This course is granted as part of the curriculum for work that is done on well-defined projects on campus or in the form of an internship in a company, the end result will be a final technical report and a presentation.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

IE 2999 - M. S. THESIS

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

IE 3051 - COMPUTATIONAL OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This course addresses issues arising in the implementation of optimization algorithms. Computational strategies and techniques will be explored. A major emphasis will be placed on implementing various algorithms for large- scale linear, nonlinear, and integer programs. Such algorithms include benders' decomposition, Dantzig-Wolfe decomposition, Lagrangian relaxation and algorithms for specially-structured problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3055 - ROBUST OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
Today the modeling of uncertain phenomena in both theory and practice is done via probability theory, the foundation of which is based on the axioms set forth by Kolmogorov in 1933. While it offers insights into understanding uncertainty, probability theory (in contrast to optimization) has not been developed with computational tractability as an objective when the dimension increases. Correspondingly, some of its major areas of application remain unsolved when the underlying systems become multidimensional. The goals of this course will be to propose an alternative via robust optimization (RO) for modeling uncertain phenomena, to develop RO as a tractable methodology for solving optimization problems under uncertainty, and to expose students to a large number of applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 3056 - OPTIMIZATION UNDER UNCERTAINTY

Minimum Credits: 3
Maximum Credits: 3
In this course, students will learn popular formulations and algorithms for stochastic programming, robust optimization, chance constrained optimization, stochastic dual dynamic programming, and VaR and CVaR based models, as well as some interesting applications. Students should have knowledge of Matlab, Python, C, or C++ programming languages, a doctoral level linear programming background, good mathematical reasoning ability, and a good understanding of integer programming and computational optimization.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 3057 - BILEVEL OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This is a course on the theory, algorithms and applications of bilevel optimization. Bilevel optimization models are motivated by various real-life settings (e.g., in transportation, energy, defense, network design) that involve independent decision-makers, referred to as the leader and the follower, who interact in a hierarchical manner. Specifically, the leader (the upper-level decision maker), whose perspective is modeled, needs to take into account the decisions of the other (lower-level) decision-maker, i.e., the follower, who solves his/her own optimization problem that, in turn, also depends on the decisions of the leader. In this class we will overview basic modeling concepts of bilevel programming, computational complexity issues, solution algorithms and several notable applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 3078 - CONVEX OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This course develops a modern framework for convex optimization. The topics covered in this course include concepts of convex analysis, smooth convex optimization, non-smooth convex optimization, structural optimization, duality theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3080 - ADV TOPICS IN OPERATIONS RES

Minimum Credits: 3
Maximum Credits: 3
May cover various topics at the leading edge of technology in the area of operations research. Course content is announced by the professor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3087 - NETWORK-BASED OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This course covers graphs, digraphs and related concepts, node and edge covering problems, Euler tours, Hamiltonian cycles, tsp, set covering and matching problems, shortest path problems, maximum flow problems and minimum cost network flow problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3088 - INTEGER PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
Polyhedral theory, computational complexity, super additive duality, and integral polyhedral.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3089 - REPAIRABLE SYSTEMS MODELING AND ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
A repairable system is a system that can be restored to a satisfactory condition through some intervention by a decision maker. In a manufacturing setting, such actions might include inspections, part replacements or setting adjustments; in a medical context, such actions might include disease screening, surgery or drug therapy. In this course, we consider applications of probability, simulation and optimization in the: (a) mathematical modeling of the performance of repairable systems, and (b) designing of optimal inspection and maintenance policies for repairable systems. In each case, we compare and contrast
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3093 - STOCHASTIC PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
This course considers stochastic programming, a technique for making optimal decisions under uncertainty. Will consider theory, algorithms and applications. Extensions to multi-stage problems and stochastic integer programs will be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3094 - MARKOV DECISION PROCESSES

Minimum Credits: 3
Maximum Credits: 3
Introduces the fundamentals of discrete sequential models when outcomes are uncertain. Covers formulation and analysis of stochastic dynamic programs under several objective criteria; developing and enhancing solution algorithms; applications in the areas of inventory control, vehicle routing, and resource allocation; development of approximate solution techniques.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3095 - GRADUATE SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Speakers from universities and industry discuss research topics and state-of-the-art material in the areas of operations research, engineering management, and manufacturing systems. Enrollment in this course is mandatory for all full-time Ph.D. students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

IE 3097 - ALGORITHMS FOR ENGINEERS

Minimum Credits: 3
Maximum Credits: 3
This course will develop students' ability to understand algorithms and use them appropriately for real-world and theoretical problems. Our discussion will be geared towards topics and example arising in IE applications, in particular, in the context of optimization problems. Topics covered will include introduction to complexity theory, running times and performances measures, common ideas in algorithmic design including randomized algorithms, approximation algorithms, and heuristics..
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3186 - APPROXIMATE DYNAMIC PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the theory and application of large-scale dynamic programming with emphasis on a broad spectrum of applications in finance, revenue management, and health policy. The first part of the course emphasis more on approximate dynamic programming algorithms. The second part of the course is devoted to the recent advances in reinforcement learning. Topics include Markov decision processes, dynamic programming algorithms, simulation-based algorithms, q-learning, theory and algorithms for value function approximation and policy search methods, stochastic approximation, r-max algorithm, online learning and regret minimization, and posterior sampling method.

Infct Disease & Microbiology

IDM 2001 - MOLECULAR BIOLOGY OF MICROBIAL PATHOGENS

Minimum Credits: 3
Maximum Credits: 3
Students will develop a comprehension of (1) bacterial anatomy, metabolism, regulation of gene expression, genetics, and the action of anti-microbial agents at the molecular level; and (2) the relevance of this knowledge to understanding microbial pathogenesis and the host response. In addition, prokaryotic and eukaryotic model system of gene regulation will be compared to emphasize the conceptual aspects and application of molecular biology to infectious disease.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

IDM 2002 - MOLECULAR VIROLOGY

Minimum Credits: 3
Maximum Credits: 3
The intent of this course is to provide a comprehensive coverage of molecular virology including basic concepts on structure and replication as well as more detailed information on the families of viruses that infect humans. The instruction will provide an in-depth coverage of the molecular virus structure as it relates to the viral life cycle including mode of replication and transmission, host range, antigenicity, treatment, and vaccine control.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: IDM 2001 or INTBP 2000

IDM 2004 - VIRAL PATHOGENESIS

Minimum Credits: 2
Maximum Credits: 2
The goal of this course is to integrate the lectures given on a particular virus in the comprehensive virology course with two additional lectures which expand the basic biology of the virus life cycle to the level of virus-host interactions. The first lecture will address the

pathogenic properties of the virus from the perspective of disease manifestations, immunology, and the natural history of infection. This will be followed by a second lecture which will address the molecular basis of viral pathogenesis and current advances in antiviral research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: LEVEL: Second Year Graudate Students and above

IDM 2007 - PUBLIC HEALTH COMMUNICABLE DISEASE PRACTICUM

Minimum Credits: 1
Maximum Credits: 3
The practicum, through structured and educationally super vised assignments at an approved site with an experienced professional, is aimed at providing a means to identify and to apply a variety of theories and skills discussed and demonstrated in the classroom to the real life experiences to which the student is assigned in the field under professional supervision. The assignments and choice of site are determined by the director of the program and the program requirements and career goals of the student.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Attributes: Community Element -General Community Impact

IDM 2010 - PATHOGEN BIOLOGY

Minimum Credits: 2
Maximum Credits: 2
The goal of this course is to teach the basic biology and pathogenesis of many of the most important infectious diseases that are public health challenges in the 21st century. It is intended for students with a background in biological sciences, and will review those features that make these pathogens so successful as agents of disease. Topics covered will include: the interaction between the pathogen and the host genome, the strategies used by each pathogen to evade the host response, and the ways in which the pathogen defends itself against treatments and vaccines. The course will be taught using a combination of didactic lectures and paper discussions based on the current primary research literature.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2014 - FUNCTIONAL GENOMICS OF MICROBIAL PATHOGENS

Minimum Credits: 3
Maximum Credits: 3
Functional genomics involves the systematic study of genes and their function. This course will introduce many of these innovative technologies for the systematic analysis of gene function including gene discovery, transcriptome analysis, random and targeted gene disruption strategies, proteomics, metabolomics, and integrative systems approaches with a particular emphasis on their application to infectious disease pathogens and their interaction with their host cells. We will also examine the genomes of well-studied pathogens and explore how these technologies have been used to study their biology and pathogenesis and the application of these techniques for drug and vaccine targeting and development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IDM 2001

IDM 2019 - THE EMERGENCE AND GLOBAL SPREAD OF COVID-19

Minimum Credits: 2
Maximum Credits: 2

In this course of IDM 2019, students will learn about the emergence of the SARS-CoV-2 virus in November 2019, and its global spread to the present date. This course will be taught with an infectious disease prevention and control focus, but will cross-cut each major discipline within public health, including modules related to epidemiology; statistical modeling of the COVID-19 pandemic; health policy; behavioral and community health; genetics; and occupational health.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2021 - SPECIAL STUDIES IN MICROBIOLOGY

Minimum Credits: 1
Maximum Credits: 15
Properly qualified students may undertake special study, experience in a clinical laboratory, or research with the approval and under the guidance of a member of the faculty. Part or all of such study may be used as the basis for the essay or dissertation requirement for the master's and doctoral degrees.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

IDM 2022 - SPECIAL TOPICS

Minimum Credits: 1
Maximum Credits: 3
Properly qualified students may undertake special study under guidance of a faculty member to acquire knowledge and skill to use independently a specific laboratory research tool, e.g., Gene cloning, DNA sequencing, cell sorting, oligonucleotide synthesizer, polymerase chain reaction, statistical analysis with pc.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

IDM 2023 - MICROBIOLOGY LABORATORY

Minimum Credits: 2
Maximum Credits: 2
A series of laboratory exercises introduces the student to microbiological procedures, especially as they apply to virology and bacteriology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2024 - PRINCIPLES OF MOLECULAR METHODS

Minimum Credits: 2
Maximum Credits: 2
Purpose of the course is to provide an introduction to the theory and use of common molecular and immunological laboratory methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: IDM-PHD or IDM-MS

IDM 2025 - MICROBIOLOGY SEMINAR

Minimum Credits: 1
Maximum Credits: 1
In this course students are going to present scientific journal articles dealing with virology, immunology, molecular biology, and

epidemiology and drug therapy of viral diseases. In addition, students will present similar aspects of bacterial diseases. In some sessions students may be shown video presentation of diagnosis and clinical management of a particular viral or bacterial disease.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

IDM 2032 - HUMAN DIVERSITY AND PUBLIC HEALTH

Minimum Credits: 2
Maximum Credits: 2
This course will provide a theoretical framework for designing policy, research, and programs for diverse populations. Opportunities for expanding understanding and examining attitudes about human diversity will be presented. Community organizing and marketing methods related to program design and recruiting and sustaining volunteer or patient participation in programs will be a major focus of the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2034 - CONTROL AND PREVENTION OF HIV/AIDS

Minimum Credits: 2
Maximum Credits: 2
This graduate level course on HIV disease prevention and control is aimed at providing an in-depth study of the HIV disease. The course goal is to provide advanced knowledge base of information on the complex clinical, preventive, treatment, and policy issues on HIV/aids.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)
Course Attributes: Global Studies

IDM 2037 - ADVANCED VECTOR-BORNE INFECTIOUS DISEASES

Minimum Credits: 3
Maximum Credits: 3
This is a graduate level course that will familiarize students with endemic and emerging vector-borne diseases (VBD), disease surveillance, diagnostic, disease notification and VBD control measures. The students will receive information on a) vector and disease surveillance at local and global levels; b) overview of the disease notification system and databases; c) identification of new pathogens circulating in urban environment; d) case definition and diagnostic approaches of new or re-emerging VBD; e) community-based approaches for disease surveillance and prevention, f) immunization and vector control strategies, g) policies to mitigate exposure and susceptibility to VBD, and h) preparedness for future VBD outbreaks.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2038 - PREVENTION, TREATMENT, AND CONTROL OF GLOBAL INFECTIOUS DISEASES

Minimum Credits: 3
Maximum Credits: 3
This course is aimed to prepare the student to demonstrate knowledge of the prevention, treatment, and control of infectious diseases throughout the world. Students will develop knowledge in the pathogenesis, treatment, individual, and environment intervention in prevention and spread of infectious diseases.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)

IDM 2041 - RESEARCH ETHICS AND SCIENTIFIC COMMUNICATION

Minimum Credits: 1
Maximum Credits: 1
This course will introduce students to ethical considerations associated with public health research. Topics will include research on human and animal subjects, conflicts of interest, data management and transparency in reporting, authorship and peer review, and mentorship. Students will also learn how to improve their communication skills by identifying their target audience, refining their technical writing and graphics preparation skills, and developing their oral presentation skills. Classes will include lectures and small group discussions on assigned readings. Class attendance and participation are required. Satisfactory letter grades will be contingent upon the student's in-class contributions, completion of out-of-class homework assignments and projects, and performance on quizzes based on the course topics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: IDM [IDM-PHD; IDM-MS--(IDMSEA-TR); IDM-MPH--(IDMBID-TR; IDMCHID-TR; IDMMICA-TR; IDMPELA-TR)]

IDM 2051 - INFECTION PREVENTION IN COMMUNITY SETTINGS

Minimum Credits: 2
Maximum Credits: 2
The goal of this course is to provide an in-depth examination of the problem, approaches, and interventions for controlling infectious diseases in community settings and post natural or man-made events with implication for the spread of infectious diseases. This course will prepare graduate students with knowledge and skills in responding, plan for potential infectious disease outbreaks to enhance preparedness for infectious diseases in a range of community settings. The course will also address the complex clinical, psychosocial, preventive, clinical treatment, community intervention, and policy issues confronting public health practitioners, health professionals, and policy makers. This is an interactive course that involves some didactic lectures with foundational content. The emphasis will focus on case based learning and interactive group activities utilizing current and previous domestic or world events involving infectious disease outbreaks. Lecturers with a variety of expertise and backgrounds will provide students with multifaceted perspectives on infectious disease prevention. The course will include lectures, writing assignment(s), and in-class discussions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2068 - INFECTION PREVENTION AND CONTROL PRACTICUM/INTERNSHIP

Minimum Credits: 3
Maximum Credits: 3
This course in infection control practice is a clinical and institutional experience within a hospital or other clinical settings aimed at providing the student practice experience and skills to potentially function as an infection preventionist within a health care setting. Students in this course must take Infection Prevention Course (IDM 2069) as a prerequisite for this practicum/internship. Students may complete a minimum 200 hours within a clinical setting within an infection control department which also meets the requirements for the MPH program in the School of Public Health. This internship aims at assisting students to become proficient in addressing hospital-acquired infections, patient isolation practices, infection surveillance, documentation, reporting, medical record review and collaboration with the infection control practitioners through on-site, experiential learning. Acceptance into the practicum will be competitive and include an application process with the course directors and selected infection prevention specialists. Students who complete the 2 credit course, IDM 2069, Infection Prevention and Control in Healthcare Settings will be considered for this internship and accepted by permission only.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

IDM 2069 - INFECTION PREVENTION AND CONTROL IN HEALTH CARE SETTINGS

Minimum Credits: 2
Maximum Credits: 2

This course in infection control is aimed at building knowledge and skills as well as critical thinking through evidenced-based and case-based learning to provide students with a foundation in infection prevention and control in a healthcare settings. As the end of this course, successful students will have current knowledge of hospital acquired infections, patient isolation practices, infection surveillance, documentation, monitoring, reporting, and outbreak investigations. The course will be taught by expert practitioners, researchers, and clinicians in infection prevention. Students may enroll in this course only or they may combine it with an optional practicum/internship of a minimum of 200 hours within a clinical setting if accepted into IDM 2068 (Infection Prevention and Control Practicum/Internship)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2103 - HOST RESPONSE TO MICROBIAL INFECTION

Minimum Credits: 3
Maximum Credits: 3
Students will develop a comprehension of the concepts and knowledge of resistance and immune responses of humans to microbial infection. The role of phagocytic cells; complement; lymphocytes; the development of humoral and cell mediated immunity at the molecular, cellular, and organ level; and the consequences in controlling and enhancing disease and how these concepts are applied to public health are covered
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2134 - PREVENTION AND CONTROL OF SEXUALLY TRANSMITTED INFECTIONS

Minimum Credits: 2
Maximum Credits: 2
The goal of this graduate level course is to provide students with an in-depth overview of sexually transmitted infections (STIs) from a public health and infection prevention perspective. The course focuses on the prevention, diagnosis, and treatment of key bacterial and viral STIs that impact individual and population health. Emphasis is placed on understanding the pathogenic mechanisms, clinical management, treatment and preventive strategies, as well as the social, behavioral, biological, and structural factors that influence STI transmission and control. Implications for community-based programs, public health interventions, and policy development will also be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2161 - METHODS OF INFECTIOUS DISEASE EPIDEMIOLOGY

Minimum Credits: 1
Maximum Credits: 1
Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

IDM 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 15
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

IDM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2
Maximum Credits: 2
Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: IDM 2003; PROG: School of Public Health

IDM 3441 - EPIDEMIOLOGY AND CONTROL OF SEXUALLY TRANSMITTED INFECTIONS

Minimum Credits: 1
Maximum Credits: 1
The purpose of IDM 3441 is to provide students with an understanding of the major sexually transmitted infections (STIs) in the U.S. This course will focus on the underlying transmission dynamics, history, risk factors, public health impact and current strategies for control. The method of teaching will be to provide STI-specific lectures and promote critical discussion about the strategy and control limitations thereof. Approximately 50% of class time will be lecture and the remaining 50% will be devoted to a critical review of the assigned papers (2) for each class period.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

Information Science

HIM 1405 - MEDICAL TERMINOLOGY LAB

Minimum Credits: 1
Maximum Credits: 1
This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition, and use of terms related to all areas of medical science, hospital service, and health related professions. This ONLINE course is designed to give the student a knowledge of words frequently used in the medical field and provides examples through the review of basic anatomy, physiology, surgical procedures, diagnostic procedures, and symptomatology. Coverage of the pathology of each body system is will take place along with an introduction to pharmacology, and the pharmacological treatment of frequently occurring conditions of each body system.
Academic Career: UGRD
Course Component: Mass Media
Grade Component: Letter Grade
Course Requirements: PLAN: Health Information Management (BPH or BS or BS-H)

INFSCI 0017 - FUNDAMENTALS OF OBJECT-ORIENTED PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3
First programming course for is majors, designed for students with little or no programming experience. Basic principles and concepts of object-oriented programming using java. Classes, interfaces, operators, program control, arrays, testing, debugging, inheritance, polymorphism, and event handling. Techniques for simplifying the programming process and improving code quality. Activity-based learning.
Academic Career: Undergraduate
Course Component: Lecture

Grade Component: LG/SNC Elective Basis
Course Requirements: CREQ: INFSCI 0010

INFSCI 0201 - INTERMEDIATE PROGRAMMING WITH PYTHON

Minimum Credits: 4
Maximum Credits: 4
This is an intermediate Python programming course that provides fundamental skills needed to understand, design, and maintain information systems. While this course does not have formal programming prerequisites, it is not designed to be the first course in a computing sequence and it is very helpful for students to understand the basic concepts of programming (variables, conditional statements, loops) prior to taking this course. The course introduces object-oriented programming and functional programming paradigms, as well as software engineering best practices using Python programming language. This is an active learning course where students complete a realistic sequence of programming assignments using command line Python, as well as integrated development environments (IDE) such as Visual Studio Code and Jupyter Notebooks.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

INFSCI 0505 - AI AND CRITICAL THINKING

Minimum Credits: 3
Maximum Credits: 3
This course introduces students from all backgrounds to essential AI concepts. No technical experience is required, and students from all backgrounds are encouraged to join this course. Students will explore how human cognition and AI differ, learning to distinguish tasks suited for each. Through discussions, case studies, and hands-on work with AI tools, students will examine AI's presence in different areas of society, such as education, government, media, and daily life. The course emphasizes aligning AI use with personal values and ethical considerations, preparing students to critically evaluate AI and communicate its possibilities and limitations to a general audience.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

INFSCI 1430 - USER EXPERIENCE ENGINEERING

Minimum Credits: 3
Maximum Credits: 3
This course presents the fundamental principles of user experience (UX) engineering across three broad categories of designs and products - digital products, virtual worlds, and physical spaces. This course will cover a broad range of topics, including specifying, designing, and evaluating user experiences, understanding the role of user experience in the design of digital products, virtual environments, and physical spaces, and the roles of psychology, sociology, and psychometrics in user experience design. This is an active learning course where students will be expected to read research papers, participate in class discussions, and work with external stakeholders.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: (INFSCI 0410 or INFSCI 1044) and (INFSCI 0510 or INFSCI 0419 or INFSCI 0019); Minimum C grade or Transfer

INFSCI 1450 - GAME DESIGN

Minimum Credits: 3
Maximum Credits: 3
Games have become ubiquitous in our modern world. In addition to entertainment, elements of games are present in everything from promotional advertisements to university classrooms. This course focuses on the exploration of game design in its many permutations. Join us as we critique and design all manner of entertainment and serious game. The class itself is designed as a multiplayer game experience to immerse and engage the student in game design on a fundamental level. One of the final goals of this class is for each student to have designed two separate games in their entirety. These games may be useful in the follow-up course, Immersive Media Technologies.

Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: INFSCI 0410 or INFSCI 1044; Minimum C grade or Transfer; and Enrollment not permitted if currently or previously completed INFSCI 1060

INFSCI 1470 - IMMERSIVE MEDIA TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to the design and development of immersive media technologies, such as interactive narratives, digital games, augmented/mixed reality and virtual reality experiences. Students will develop skills in user experience design, user interface design, storytelling, and animation, as well as gain technical knowledge required to program, optimize, and deploy media experiences for multiple platforms/devices.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: (INFSCI 0410 or INFSCI 1044) and (INFSCI 0510 or INFSCI 0419 or INFSCI 0019) and (INFSCI 0610 or INFSCI 1070); Minimum C grade or Transfer; and Enrollment not permitted if currently or previously completed INFSCI 1061

INFSCI 1499 - SPECIAL TOPICS: HUMAN-CENTERED

Minimum Credits: 3
Maximum Credits: 3
Advanced class focusing on a current or specialized topic in the Human Centered Computing and Systems areas in Information Science.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: LVL: Jr or Sr; PROG: Sch Computing and Information

INFSCI 2020 - MATHEMATICAL FOUNDATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course introduces the primary mathematical foundations underlying principles of information science, particularly the concepts, representations, and functions associated with the mathematically-intensive information science areas such as data mining, information retrieval, machine learning, cloud computing, and network science. Topics include, but are not limited to, probability, matrix operations, graph theory, logic, combinatorics, and information theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced) -AND- Enrollment not permitted if previously enrolled in INFSCI 2710 or INFSCI 2591

INFSCI 2040 - RESEARCH DESIGN

Minimum Credits: 3
Maximum Credits: 3
Beginning research design with emphasis on the basic process of inquiry. Identifying and articulating research problems, determining and describing procedures for conducting research, designing data collecting procedures, formulating testable hypotheses, interpreting and drawing conclusions from data analysis, and reporting research findings and implications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or School of Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2120 - INFORMATION AND CODING THEORY

Minimum Credits: 3
Maximum Credits: 3
Includes measures of information, information sources, joint and conditional uncertainty, noiseless and deterministic channels, reliable messages through unreliable channels, channel capacities, properties of codes, minimal codes, and error-detecting and error-correcting codes. Examines entropy as a measure of semantic content.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2125 - NETWORK SCIENCE & ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course explores networks as a primary metaphor and mechanism for a variety of information-related phenomena. The advancement of interconnected information and communication technologies has made networks one of the dominant ways of analyzing the use and flow of information among individuals, institutions, and societies. We will frequently turn to a diverse array of applications and problem areas to motivate and understand the use of networks for analyzing real-world networked systems. The course starts with the basics of graph theory and moves to studying network structures and how they emerge through various network models. We begin with the traditional random graph model and we move to more realistic, socially-inspired models such as preferential attachment. We will further explore processes in a network such as diffusion of epidemics and network search. Additional topics might include attacking the power grid, measuring systemic resilience to attack, and understanding the structure of collaboration in science.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDAL-ACG, SAISYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2130 - DECISION ANALYSIS AND DECISION SUPPORT SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduction to decision analysis with elements of human cognition under uncertainty, including structuring decision problems and developing creative decision options, quantifying uncertainty and preferences, and combining uncertainty and preferences to arrive at optimal decisions. Foundations needed for applying the methods of decision analysis in decision support systems. Note: can also be used to fulfill distribution requirement in cognitive science area.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2135 - PROBABILISTIC METHODS

Minimum Credits: 3
Maximum Credits: 3
This seminar provides an introduction to computational approaches for probabilistic modeling and inference. A particular focus is placed on Bayesian networks, although other probabilistic models also will be studied. Medical applications are emphasized, however, the principles are general and no medical knowledge is needed to take the course. The course does not require knowledge of a computer

programming language. An understanding of basic probability theory would be helpful, but is not required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2140 - INFORMATION STORAGE AND RETRIEVAL

Minimum Credits: 3
Maximum Credits: 3
Problems and techniques related to storing and accessing unstructured information with an emphasis on textual information. Overview of several approaches to information access with a primary focus on search-based information access. Covers automated retrieval system design, content analysis, retrieval models, result presentation, and system evaluation. Examines applications of retrieval techniques on the web, in multimedia and multilingual environments, and in text classification and event tracking.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2149 - INTRODUCTION TO INFORMATION SECURITY

Minimum Credits: 3
Maximum Credits: 3
Introductory information security and privacy course for non-SCI students enrolled in the Graduate Certificate Program in Cybersecurity, Policy and Law. Covers fundamental issues and first principles of security and information assurance, including security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. The course will introduce students to risk management, security assurance, secure design principles, organizational security policy, legal and ethical issues in security, and standards and methodologies for security evaluation and certification.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Plan = CPL-ACG or CSPL-ACG or CSPL-MN or PLAW or PGSPA

INFSCI 2150 - INFORMATION SECURITY AND PRIVACY

Minimum Credits: 3
Maximum Credits: 3
Fundamental issues and first principles of security and information assurance. Security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. Basics of cryptography such as key management and digital signatures, etc. And network security such as PKI, IPsec, intrusion detection and prevention. Risk management, security assurance and secure design principles. Issues such as organizational security policy, legal and ethical issues in security, standards and methodologies for security evaluation and certification.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: TELCOM 2000 or INFSCI 1070; PROG: School of Information Science or Sch Computing and Information

INFSCI 2160 - DATA MINING

Minimum Credits: 3
Maximum Credits: 3
Introduction to data mining techniques, including data preprocessing, data mining primitives, association rules, decision trees, cluster analysis, classification and machine learning, data visualization, and data warehousing. Detailed applications from a wide variety of domains.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2020 (B or greater) or INFSCI 2725 (B or greater) or INFSCI Exemption-Analytics Component (Test Score 6 or higher);

INFSCI 2165 - ADVANCED TOPICS IN DATA MINING: SOCIAL & HETEROGENEOUS GRAPH MINING

Minimum Credits: 3
Maximum Credits: 3
This course will cover a number of advanced topics in data mining, with special attention to graph/network mining, recommender systems, and techniques for analyzing large-scale, heterogeneous, high-dimensional, and multi-relational data in various domains -- e.g., web science, social science, and health and natural sciences. A mix of lectures, readings, and homework assignments will be offered to familiarize the students with recent methods and algorithms in these topics, as well as the basic concepts and theoretical foundations of these advanced techniques. The course is for students with prior background in data mining or machine learning techniques. It is a good option for graduate students who are interested in gaining in-depth knowledge or research experience in the field, or students from other disciplines who need to develop data mining systems to analyze large amounts of heterogeneous data. Hands-on experience in data analytics and machine learning with large datasets is required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2595 and PLAN = ISCl-MSl, ISCl-AC, BDAL-ACG, SAISYS-ACG, SAIS-ACG, ISCl-PHD,INFSCl-MSI, INFSCl-AC, INFSCl-PHD

INFSCI 2170 - CRYPTOGRAPHY

Minimum Credits: 3
Maximum Credits: 3
Principles of number theory, cryptographic algorithms and cryptanalysis. Steganography, block and stream ciphers, secret key encryption (DES, res, re-n), primes, random numbers, factoring, and discrete logarithms. Public key encryption (RSA, Diffie-Helman, elliptical curve cryptography, n'tru); key management, hash functions (md5, sha-1, ripemd-160, HMAC), digital signatures, certificates and authentication protocols. Cryptanalytic methods (known, chosen plaintext etc.) For secret and public key schemes (linear and differential cryptanalysis, pollard's rho method, number field sieve, etc.).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2185 - FATE: FAIRNESS, ACCOUNTABILITY, TRANSPARENCY, AND ETHICS IN AI

Minimum Credits: 3
Maximum Credits: 3
Data-driven models are increasingly used in many domains to assist in human decision-making with a significant impact on people's lives -- from hiring and promotion, college admissions, and judicial decisions to business or public services delivery. Industry, government, and nonprofit sections recognize data and AI ethics as essential capabilities for future Data Scientists. Will offer students the knowledge and tools to apply ethics to data and AI applications. Focuses on both concepts and practice to understand ethical challenges in data science and data-driven decision-making. Introduces the core concepts of fairness and interpretability mechanisms, and analytical and technical tools to mitigate emerging problems in the real world.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2205 - TECHNICAL COMMUNICATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3
Maximum Credits: 3
An English language support course for international students in SIS who are non-native speakers of English. Helps develop students' strategies and skills for comprehension and production in academic English contexts. Also addresses issues of academic integrity and plagiarism.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

INFSCI 2300 - HUMAN INFORMATION PROCESSING

Minimum Credits: 3
Maximum Credits: 3
Introduction to research and theory in human cognition, including perception, attention, pattern recognition, memory, representation of knowledge, language, problem solving, reasoning, and decision making, with emphasis on modeling human cognition and implications for user interface design and design of intelligent systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2350 - HUMAN FACTORS IN SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduces principles for analysis of human performance in human-machine systems. Emphasis on principles of human factors as applied to the design of systems other than the graphical user interface (GUI) that is covered in interactive systems INFSCI 2470.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2410 - INTRODUCTION TO NEURAL NETWORKS

Minimum Credits: 3
Maximum Credits: 3
Introduces mathematical and computer techniques used in constructing models of information processing by parallel distributed processing (PDP) networks; principles of input-output functions and adaptation (learning) functions in single units and in networks; examines the relation between PDP networks, neurobiology, artificial intelligence, and cognition.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2415 - INFORMATION VISUALIZATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the visual design, structure, and organization of information as applied to library and information environments and web site design. Topics include visualization literacy, usability research, theories of visual perception and cognition, visualization models, visual analytics, and data graphics. The emphasis is on user and task-centered design for developing and evaluating visualization-based tools for various types of data. Practical work with visualization technologies will be included.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

INFSCI 2420 - INTRODUCTION NATURAL LANGUAGE PROCESSING

Minimum Credits: 3
Maximum Credits: 3
Overview of computational approaches to natural language processing. Issues in syntax, semantics, and pragmatics, as well as overall system architectures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2300 and (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PROG: School of Information Science or Sch Computing and Information

INFSCI 2430 - SOCIAL COMPUTING

Minimum Credits: 3
Maximum Credits: 3
Introduction to key theories and technologies of social computing. Reviews major types of social computing systems. Several social computing systems are explored and used throughout the course. Final group project focuses on designing and implementing a social web system.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2440 - ARTIFICIAL INTELLIGENCE

Minimum Credits: 3
Maximum Credits: 3
With the focus on the machine intelligence technologies around processing, representing, modeling, and learning from large quantity of data in the current web context, this course serves as a broad introduction to students of the theories, algorithms and applications of modern Artificial Intelligence (AI). Taking a data science oriented perspective, this course aims to help students to develop a broad theoretical knowledge and practical experience in AI. With the understanding that modern AI is actually a discipline of theories and techniques around the idea of data driven model-based machine intelligence, this course consists of four broad modules: 1) representation of knowledge, 2) uncertainty-based modeling and reasoning, 3) improvements with machine learning, and 4) communication with natural language processing, all of which are necessary components for an intelligent agent to engage intelligently with other agents or people in the real world. The goal of this course is to prepare students to work creatively and productively in current data-driven and intelligence-rich environment, and it is ideal for students who would like to be introduced to the techniques of modern AI. Topics include: search, logic and deduction, knowledge representation and memory organization, production systems, expert systems, planning, language understanding, and machine learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2591 PROG: Sch Computing and Information

INFSCI 2470 - INTERACTIVE SYSTEM DESIGN

Minimum Credits: 3
Maximum Credits: 3
The environments that can or should be provided for interactive use of computers. Necessary hardware, software, and behavioral components of an interactive system; data structure considerations for various types of interactive applications; operating system fundamentals, functions, and characteristics. Emphasis on interactive operating systems, human machine dialogues, interactive graphics, programming languages, and application(s) design.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Information Science (MS or PHD); SUB: Digital Libraries & Info Mgmt

INFSCI 2480 - ADAPTIVE INFORMATION SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduces key principles of adaptive information systems and modern techniques for user modeling and personalization. Covers the construction of user models and user profiles. Examines the use of various personalization techniques such as adaptive search, recommendation, and navigation support. Reviews major types of adaptive information systems and explores important application areas.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2710 or 2470; PROG: School of Information Science or Sch Computing and Information

INFSCI 2500 - DATA STRUCTURES

Minimum Credits: 3
Maximum Credits: 3
Theory and application of data structures. Data and file structures and their appropriateness to various applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: (ISCI-MSI, ISCI-AC, SAISYS-ACG, BDAL-ACG, ISCI-PHD, NDSCIG-ND, TCOMM-AC, TCOMM-MST) -AND- ANTI-REQ: Enrollment not permitted if previously enrolled in INFSCI 2710 or INFSCI 2591

INFSCI 2510 - INFORMATION SYSTEMS ANALYSIS AND DESIGN

Minimum Credits: 3
Maximum Credits: 3
The focus of this course is on studies of specifications of the information systems development process. The course covers fundamental topics on two main stages of information systems development life cycle: analysis, and design. Students will become familiar in techniques to investigate, collect, organize, and structure requirements for an information system as well as understanding how to design different component of the information system to satisfy the requirements. The course hands-on experiences such as working directly with real-world clients to address an information need challenge. Students are evaluated through regular assignments, quizzes, and a course project
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information ; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2511 - INFORMATION SYSTEMS DESIGN

Minimum Credits: 3
Maximum Credits: 3
Object-oriented design best practices; principles of system architecture; design patterns; requirements traceability; construction of uml-compliant models (class, sequence, communication and package diagrams); refactoring; iterative development of system prototype. Requires knowledge of fundamental of programming concepts including abstract classes, interfaces, inheritance, polymorphism, and message passing.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2510; PROG: School of information Science or Sch Computing and Information
Course Attributes: Global Studies

INFSCI 2560 - NETWORK AND WEB DATA TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
Covers core technologies and standards for distributed systems, especially web-based distributed systems. Includes an overview of the standardization process and the standards organizations. Looks at network and data standards with significant attention to HTML, XML, HTTP, URL and other web technologies including APIS to programming with them. Topics covered include: Web and Restful protocols (HTTP, COAP), Publish-Subscribe protocols (MQTT), Web services (SOAP, etc.), and Web programming with CSS, JS, and HTML5.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2591 - ALGORITHM DESIGN

Minimum Credits: 3
Maximum Credits: 3
Fundamentals of algorithm design including greedy algorithms, divide-and-conquer algorithms, dynamic programming, heuristics and approximate algorithms, parallel and distributed algorithms, multi-dimensional data structures, time complexity of algorithms, and development of programs from algorithms.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science or Sch Computing and Information

INFSCI 2595 - MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
Introduction to machine learning, includes algorithms of supervised and unsupervised machine learning techniques, designing a machine learning system, bias-variance tradeoffs, evaluation metrics; Parametric and non-parametric algorithms for regression and classification, k-nearest-neighbor estimation, decision trees, discriminant analysis, neural networks, deep learning, kernels, support vector machines, ensemble methods, regularization techniques; Dimensionality reduction, principle component analysis, LDA, t-SNE; Clustering methods such as k-means, hierarchical clustering, spectral clustering, DBSCAN; Mathematical foundations including linear algebra, probability theory, statistical tests, statistical learning theory; Best practices and application to real-world problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2620 - DEVELOPING SECURE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Design and implementation of secure systems. Principles and practice of trustworthy computing, secure and high assurance software development process and lifecycle models. Secure software design using UMLSEC, secure design of operating systems and network services, database and applications. Secure webs services, cots-based and service-oriented systems. Software assurance tools and techniques such as code analysis and testing, evaluation and certification of software. Secure programming techniques.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2150 or TELCOM 2810; PROG: School of Information Science or Sch Computing and Information

INFSCI 2621 - SECURITY MANAGEMENT AND COMPUTER FORENSICS

Minimum Credits: 3
Maximum Credits: 3
This course covers issues related to the administration and management of the security of enterprise information systems and networks. Topics include intrusion detection systems, vulnerability analysis, anomaly detection, computer forensics, application logging, auditing and data management, risk management, contingency planning and incident handling, cyber defense/operations, and security program management and lifecycle. The course will detail the principles and tools related to these topics. The course will also cover security standards, evaluation, accreditation and certification process, security planning, compliance issues, ethical and legal issues in information, privacy, traceability, and cyber-evidence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: (INFSCI 2150 or TELCOM 2810) and TELCOM 2821; PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2622 - NETWORK SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the principles, technologies, and best practices for protecting data and communications across modern networked environments. The course explores the design and operation of secure network architectures, threat models, and defense mechanisms that safeguard confidentiality, integrity, availability, and authenticity. Topics include cryptographic foundations, secure network protocols, authentication and access control, firewalls, intrusion detection and prevention, and emerging issues in network security.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2710 - DATABASE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Basic graduate course on database systems. Centralized relational database systems with emphasis on database design, implementation, and administration. Comprehensive coverage of SQL, data modeling, normalization, storage management, transaction management, and query evaluation. Students will develop practical skills in building and maintaining realistic medium-scale database systems. Also covers more advanced topics including data warehousing and OLAP.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: INFSCI 2500orINFSCI 2500 Exemption(Test Score=1);PLAN:IIS-MS orINFSCI-AC or INFSCI-MSI orINFSCI-PHD or IISCI-MS or ISCI-AC or ISCI-MSI or ISCI-PHD or SAISYS-AC or SAISYS-ACG or TCOMM-MST or TCOMM-AC)or(SUBPLAN:MLISDL-TR or MLISDLI-SP or MLIDLIM-SP)

INFSCI 2711 - ADVANCED TOPICS IN DATABASE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Advanced graduate course on database systems. Key issues that typically arise in the context of large-scale enterprise database management in heterogeneous wide-area environments including distributed and non-relational database systems, networK-centric data management, web-based information systems, heterogeneous databases, information integration, and wireless data management.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2710; PLAN ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2725 - DATA ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
Introduction to fundamental technologies underlying distributed storage and efficient analysis of very large amounts of data. An overview of approaches to extracting information and knowledge from data, verification, testing, and presentation of results.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2730 - E-BUSINESS

Minimum Credits: 3
Maximum Credits: 3
Conceptualization of e-business in the context of markets, business practices, and information theory. Implementation of e-business websites and services via various programming languages. Examines various models for online consumer systems, business-to-business systems, and enterprise computing--e.g., Supply chain models. Covers related technologies in document processing, telecommunications, and security.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2560 and 2710; PROG: School of Information Science or Sch Computing and Information

INFSCI 2731 - SECURITY IN E-COMMERCE

Minimum Credits: 3
Maximum Credits: 3
Covers the technology, concepts, issues and principles that are important in the design and implementation of secure e-commerce systems. Examines technology for protecting electronic commerce. It will include discussion of basic security principles, as well as the issues, policy and standards particular to e-commerce applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2560; CREQ: (INFSCI 2150 or TELCOM 2810); PROG: School of Information Science or Sch Computing and Information

INFSCI 2739 - WEB SERVICES AND DISTRIBUTED COMPUTING

Minimum Credits: 3
Maximum Credits: 3
Looks at advanced techniques to client server computing. Covers design techniques necessary for organizing very large web sites. Integrates the knowledge and skills from e-business and web technologies to develop a functioning distributed application using web services, RMI, RSS, AJAX, etc.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: INFSCI 2550 and 2730; PROG: School of Information Science

INFSCI 2750 - CLOUD COMPUTING

Minimum Credits: 3
Maximum Credits: 3
This course provides an overview of the concepts and design principles behind existing cloud solutions. Topics include large scale data processing techniques such as mapreduce/hadoop and its related ecosystem, overview of virtualized commercial cloud models, system virtualization, hypervisors and virtualized platforms. Design of cloud storage systems such as key-value stores and geographically distributed storage systems. Introduction to security and privacy issues in cloud computing, issues of data and execution privacy in modern commercial cloud services.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PLAN: School of Information Sciences

INFSCI 2801 - GEOSPATIAL INFORMATION SYSTEMS (GIS)

Minimum Credits: 3
Maximum Credits: 3
Introduction to geographic information system (GIS) concepts and technology including spatial data sources, spatial data models and structures, spatial database management, map projection systems, geocoding and Georeferencing, spatial analysis, spatial data visualization (maps), GIS applications (e.g., Address-location finding, navigation, routing), and commercial GIS software packages.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2809 - SPATIAL DATA ANALYTICS

Minimum Credits: 3
Maximum Credits: 3
Geospatial data collection, geospatial data structures and indexing, geospatial analysis, data quality, geospatial data structures and algorithms for surfaces, spatiotemporal databases, and digital terrain modeling.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: School of Information Science or Sch Computing and Information

INFSCI 2872 - E-BUSINESS

Minimum Credits: 3
Maximum Credits: 3
Conceptualization of e-business in the context of markets, business practices, and information theoretic contexts. Implementation of e-business websites and services via various programming languages. End-user e-commerce, business-to-business e-commerce, and enterprise computing--e.g., supply chain models. Related technologies in document processing, telecommunications, and security.
Academic Career: GRAD
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science

INFSCI 2910 - INDEPENDENT STUDY: FOUNDATIONS

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

INFSCI 2915 - SPECIAL TOPICS: FOUNDATIONS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2930 - INDEPENDENT STUDY: COGNITIVE

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

INFSCI 2935 - SPECIAL TOPICS: COGNITIVE

Minimum Credits: 3
Maximum Credits: 3
An independent study intended to cover advanced material outside of or beyond the scope of current course offerings, specifically within the Cognitive Science or Cognitive Systems academic area.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2950 - INDEPENDENT STUDY: SYSTEMS

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

INFSCI 2955 - SPECIAL TOPICS: SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

INFSCI 2970 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 3
Independent studies are intended to cover advanced material outside of or beyond the scope of current course offerings.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

INFSCI 2980 - PRACTICUM

Minimum Credits: 3
Maximum Credits: 6
For students who desire experience in applying the knowledge and skills acquired in their course work and laboratory sessions. Students are responsible for arranging a practicum with a business or organization.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

INFSCI 2982 - INFORMATION SCIENCE COOPERATIVE PROGRAM

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis

INFSCI 2995 - THESIS

Minimum Credits: 3
Maximum Credits: 3
The thesis is a report of original, theoretical, or laboratory work suitable for publication.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

INFSCI 3005 - INTRODUCTION TO THE DOCTORAL PROGRAM

Minimum Credits: 3
Maximum Credits: 3
An introduction to the purpose and nature of doctoral studies in information science, theories and processes in scholarly research and the current state of research in the discipline. Graduate faculty in the program will present and discuss their current interests with students.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Information Science (PHD) or Library and Information Sci (PHD) or Intelligent Systems (PHD)

INFSCI 3150 - SEMINARS: SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Analysis of journal articles, books, and conference proceedings involving issues in information science. Techniques for preparing for the preliminary and comprehensive examinations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: Plan: Information Science (PhD)

INFSCI 3250 - RESEARCH SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

INFSCI 3350 - DOCTORAL SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: Plan: PhD students in Information Sciences, Library & Information Science, or Intelligent Systems

INFSCI 3975 - DOCTORAL SEMINAR: SYSTEMS AND TECHNOLOGY - SYSTEMS DESIGN, DEVELOPMENT, AND IMPLEMENTATION

Minimum Credits: 3
Maximum Credits: 3
This course aims to provide doctoral students with a semester long academic discussion on a range of advanced topics in information science. It will explore the current and future challenges facing the specific topics in emerging information science paradigms. Through reviewing literature and developing their own hypothesis and solutions, students will gain familiarity with latest developments, and develop problem identification and solving capabilities.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PROG:School Computing and Information or School of Information Science

INFSCI 3990 - DISSERTATION

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Information Science (PHD); CUM GPA: 3.25

Integrative Molecular Biology

IMB 2000 - LABORATORY RESEARCH ROTATIONS

Minimum Credits: 1
Maximum Credits: 9
Students are required to perform three distinct four-week laboratory rotations in the summer term of the first year. These rotations provide students with an opportunity to perform experimental research in three different scientific areas, while experiencing diverse laboratory environments and practices. They also facilitate selection of the dissertation laboratory and advisor. Students select the laboratory rotations based on their research interests and in consultation with their academic advisor. To capitalize on the cross campus nature of the program, students are required to distribute the rotations between participating laboratories in the Department of Biological Sciences and the School of Medicine.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

IMB 2050 - PIMB RESEARCH SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Students are required to attend a weekly research seminar. Students may attend seminars hosted by the School of Medicine and/or Department of Biological Sciences.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

IMB 2080 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides the student an opportunity to carry out a specific research project in the dissertation laboratory prior to admission to candidacy for the doctorate.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: Integrative Molecular Biology (PHD)

IMB 2090 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a thesis for a master's degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

IMB 3090 - PHD DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a dissertation for a doctoral degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Integrative Molecular Biology (PHD)

Integrative Systems Biology

ISB 2000 - LABORATORY RESEARCH ROTATION

Minimum Credits: 1
Maximum Credits: 9
Students are required to perform three distinct four-week laboratory rotations in the summer term of the first year. These rotations provide students with an opportunity to perform experimental research in three different scientific areas, while experiencing diverse laboratory environments and practices. They also facilitate selection of the dissertation laboratory and advisor. Students select the laboratory rotations based on their research interests and in consultation with their academic advisor. Grade Component: Grad Letter Grade

ISB 2020 - SYSTEMS BIOLOGY 1

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2025 - INTRODUCTION TO BIOINFORMATICS PROGRAMMING IN PYTHON

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to a selection of popular python packages used in bioinformatics and computational and systems biology. Students will be graded on programming assignments. Each assignment will explore a different sub-discipline of computational biology and introduce students to a new python package. There will be two 1.5 hour lectures a week which will often include an in-class practical exercise. There are weekly programming assignments and a final project and presentation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2035 - SYSTEMS BIOLOGY II

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to the use of model organisms and cell systems as research models. General and specific imaging approaches and imaging tools used to study these models will be covered. Model systems to be discussed include mouse, zebrafish, cell culture, yeast and C. elegans. Emphasis will be placed on the strengths that specialized techniques of each organism provide to the biomedical research community
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2045 - CELLULAR BIOLOGY OF NORMAL AND DISEASE STATES

Minimum Credits: 4
Maximum Credits: 4
This one-term course will explore the cellular basis of multiple disease states. The course, which meets twice a week (two hours each session), will be taught through both lecture and in class discussion of primary literature. Each of seven modules will examine normal cell biology and function and then define how defects in these processes lead to the spectrum of pathologies associated with each disease. Discussion of how bench top findings can be translated to treatments in the clinic will be facilitated by a diverse faculty that includes both basic and physician scientists. The seven modules are as follows: the first examines insulin secretion and signaling and how these events are perturbed in diabetes mellitus. The second module focuses on cell-cell adhesion and its role in cancer progression and epithelial barrier function. The third module defines how defects in endocytosis of the low-density lipoprotein receptor leads to hypercholesterolemia. The fourth analyzes the cellular basis of hypertension and how altered internalization of the epithelial sodium channel leads to elevated blood pressure. The fifth module investigates the role of apical membrane recycling and how defects in aquaporin-2 traffic leads to nephrogenic diabetes insipidus. The sixth module appraises the current state of our understanding of cystic fibrosis and how degradation of defective cystic fibrosis transmembrane conductance regulator by the quality control machinery in the endoplasmic reticulum and cell periphery leads to disease. The last module examines cell migration in wound healing and angiogenesis. At the end of the course students will have an increased understanding of normal cellular function and how research in cell biology can lead to a deeper understanding of diseases that impact millions of people each year.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2050 - ISB RESEARCH SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Students are required to attend a weekly research seminar. Students may attend seminars hosted by the School of Medicine and/or Department of Biological Sciences.
Academic Career: GRAD
Course Component: Seminar
Grade Component: Grad HSU Basis

ISB 2055 - SCIENCE WRITING

Minimum Credits: 1
Maximum Credits: 1
This course will help students prepare to write their comprehensive exam proposals and will address other essential science communication skills, including research papers, oral and poster presentations, pitching ideas to industry, and web-based communication platforms.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2060 - ISB CONFERENCE

Minimum Credits: 1
Maximum Credits: 1
This course will present an opportunity for students to become familiar talking about critical aspects of being a researcher that they deem important including but not limited to, current scientific literature, biological, biostatical, or computational principles, laboratory techniques, and research-in-progress (RIP) reports. Each week, two students will lead 30 minute discussions either on their own primary research, or on topics of their choosing. For each presenter, time is allocated for questions and discussion of the relevant conclusions to allow development of presentation skills.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

ISB 2061 - PRACTICAL TRAINING COURSE

Minimum Credits: 1
Maximum Credits: 3
This course introduces graduate students to training in applied, real-world studies. Course topics can include any of the following: renal-electrolyte, cardiology, cancer, computational biology, bioinformatics, systems biology, pulmonology, infectious disease, endocrinology, neurology, rheumatology and immunology, hepatology and liver disease, gastroenterology, geriatrics and/or hematology/oncology. Course work includes practical studies and additional work that will be developed and approved by the course instructor.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

ISB 2070 - THE BEDSIDE TO BENCH

Minimum Credits: 2
Maximum Credits: 2
This course introduced graduate students to biomedical research in a comprehensive format integrating organ system biology and clinical medicine with critical developments in the basic science research literature. Course topics include renal-electrolyte, cardiology, cancer, pulmonology, infectious diseases, endocrinology, neurology, rheumatology, and immunology, hepatology and liver disease, gastroenterology, geriatrics, and hemetology/oncology. Course work includes an overview of each biomedical field, clinical tours, discussions with leading physicians on the current challenges in patient care, and analysis of the basic science literature in a journal club

forum.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

ISB 2075 - EVOLUTIONARY BIOLOGY OF HUMAN DISEASE

Minimum Credits: 3
Maximum Credits: 3
Evolution is a fundamental unifying principle of biology. This class takes a broad approach to illustrate how an evolutionary perspective augments medical research and practice. Topics covered range from the evolution of human populations, to antibiotic resistance, and include medical conditions as diverse as diabetes, cardiovascular disease, cancer or aging.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISB 2080 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides the student an opportunity to carry out a specific research project in the dissertation laboratory prior to admission to candidacy for the doctorate.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: Integrative Systems Biology (PHD)

ISB 2090 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a thesis for a master's degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

ISB 3090 - PHD DISSERTATION RESEARCH

Minimum Credits: 1
Maximum Credits: 14
A directed research project which results in a dissertation for a doctoral degree.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Integrative Systems Biology (PHD)

Intelligent Systems

ISSP 2000 - MS RESEARCH

Minimum Credits: 1
Maximum Credits: 9
Research and thesis MA degree.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2016 - FOUNDATIONS OF BIOMEDICAL INFORMATICS 1

Minimum Credits: 3
Maximum Credits: 3
This course serves as an introduction to core methods and topics in biomedical informatics using the context of the Learning Health System (LHS). A LHS combines data and information managements, discovery, and application of discoveries to clinical and population health. Discussion of the challenges associated with the construction of a LHS will be used to contextualize and motivate content to be covered in the course (people, data and knowledge, and evaluation).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: BIOMEDICAL INFORMATICS

ISSP 2017 - FOUNDATIONS OF BIOMEDICAL INFORMATICS 2

Minimum Credits: 3
Maximum Credits: 3
This course serves as an introduction to core methods and topics in biomedical informatics using the context of the Learning Health System (LHS). A LHS combines data and information managements, discovery, and application of discoveries to clinical and population health. Discussion of the challenges associated with the construction of a LHS will be used to contextualize and motivate content to be covered in the course (challenges and analysis and interpretation to create knowledge).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: (CS 1501 Algorithm Implementation; MIN GRADE C or TRANSFER) and (CS 2710 Foundations of Artificial Intelligence; MIN GRADE B or TRANSFER)

ISSP 2020 - TOPICS IN INTELLIGENT SYSTEMS

Minimum Credits: 1
Maximum Credits: 1
This course is an immigration course for intelligent systems students, focusing on preparing them to conduct research in artificial intelligence . As part of the course, students will attend ISP Forum research talks and work with their advisors on developing detailed plans for their first ISP research projects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2030 - ADVANCED TOPICS IN INTELLIGENT SYSTEMS

Minimum Credits: 1
Maximum Credits: 1
This course is the second part of the immigration course sequence for the intelligent systems students. Students continue by attending ISP Forum research talks and carrying out their projects developed in ISSP 2020. At the end of the course, they are expected to present the first results of their projects at the ISP Forum.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2071 - HUMAN LANGUAGE TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to the field of natural language processing (NLP) - the creation of programs that can understand, generate, and learn languages used by humans. It will expose students to applications by means of computational techniques including dynamic programming, hidden markov models, grammars, and machine learning algorithms.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2078 - INTRODUCTION TO DEEP LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course will cover the basics of modern deep neural networks. The first part of the course will introduce neural network architectures, activation functions, and operations. It will present different loss functions and describe how training is performed via backpropagation. In the second part, the course will describe specific types of neural networks, e.g. convolutional, recurrent, and graph networks, as well as their applications in computer vision and natural language processing. The course will also briefly discuss reinforcement learning and unsupervised learning, in the context of neural networks. In addition to attending lectures and completing bi-weekly homework assignments, students will also carry out and present a project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2083 - BIOMEDICAL INFORMATICS JOURNAL CLUB

Minimum Credits: 1
Maximum Credits: 1
This course meets once each week for one hour. The research being presented will be taken from recent journal papers.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: SUBPLAN: Bioinformatics

ISSP 2090 - PRACTICUM IN ADV BIOMEDICAL IT

Minimum Credits: 1
Maximum Credits: 6
This course is designed for people who want a practicum experience in working with advanced information technology in the center for biomedical informatics.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2120 - DATA MINING

Minimum Credits: 3
Maximum Credits: 3
Introduction to data mining techniques, including data preprocessing, data mining primitives, association rules, decision trees, cluster analysis, classification and machine learning, data visualization, and data warehousing. Detailed applications from a wide variety of domains.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2130 - INFORMATION STORAGE & RETRIEVAL

Minimum Credits: 3
Maximum Credits: 3
Problems and techniques related to storing and accessing unstructured information with an emphasis on textual information. Overview of several approaches to information access with a primary focus on search-based information access. Covers automated retrieval system design, content analysis, retrieval models, result presentation, and system evaluation. Examines applications of retrieval techniques on the web, in multimedia and multilingual environments, and in text classification and event tracking.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2160 - FOUNDTNS OF ARTIFICIAL INTELLGNC

Minimum Credits: 3
Maximum Credits: 3
The principal topics of AI are: representation knowledge, reasoning and problem solving, knowledge acquisition and machine learning, robotics, and natural language understanding. This course surveys these areas in order to provide an understanding of artificial intelligence methods and research problems. Specific topics include: action and object-centered representations, the search paradigm, planning and constraint satisfaction, qualitative reasoning, analogical reasoning, default reasoning, induction, other methods of learning, and knowledge engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2170 - MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course will give an overview of many techniques and algorithms in machine learning, beginning with topics such as linear and logistic regression, multi-layer neural networks and ending up with more recent topics such as boosting and support vector machines. The basic ideas and intuition behind modern machine learning methods, as well as, a more formal understanding of how and why they work will be covered. Students will have an opportunity to experiment with various machine learning techniques or apply them to a selected problem or domain in the context of a term project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2180 - COMPUTER VISION

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS or PhD)

ISSP 2185 - FATE: FAIRNESS, ACCOUNTABILITY, TRANSPARENCY, AND ETHICS IN AI

Minimum Credits: 3
Maximum Credits: 3
Data-driven models are increasingly used in many domains to assist in human decision-making with a significant impact on people's lives -- from hiring and promotion, college admissions, and judicial decisions to business or public services delivery. Industry, government, and nonprofit sections recognize data and AI ethics as essential capabilities for future Data Scientists. Will offer students the knowledge and tools to apply ethics to data and AI applications. Focuses on both concepts and practice to understand ethical challenges in data science and data-driven decision-making. Introduces the core concepts of fairness and interpretability mechanisms, and analytical and technical tools to mitigate emerging problems in the real world.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2221 - HUMAN INFORMATION PROCESSING

Minimum Credits: 3
Maximum Credits: 3
Introduction to research and theory in human cognition, including perception, attention, pattern recognition, memory, representation of knowledge, language, problem solving, reasoning, and decision making, with implications for user interface design.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2230 - INTRO NATURAL LANGUAGE PROCSSNG

Minimum Credits: 3
Maximum Credits: 3
Overview of computational approaches to natural language processing. Issues in syntax, semantics, and pragmatics, as well as overall systems architectures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2240 - DECISION ANAL & DECISN SUPRT SYS

Minimum Credits: 3
Maximum Credits: 3
Rationality and rational behavior; uncertainty, probability, decision making. Psychology of decision making. Decision theory and decision analysis, structuring decision problems, elicitation of probabilities and utilities. Conflicting objectives, multi-attribute decision theory. Probabilistic methods in artificial intelligence. Group and team decision making. Decision support systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2280 - ADAPTIVE INFORMATION SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduces key principles of adaptive information systems and modern techniques for user modeling and personalization. Covers the construction of user models and user profiles. Examines the use of various personalization techniques such as adaptive search, recommendation, and navigation support. Reviews major types of adaptive information systems and explores important application areas.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS or PHD)

ISSP 2430 - SOCIAL COMPUTING

Minimum Credits: 3
Maximum Credits: 3
Introduction to key theories and technologies of social computing. Reviews major types of social computing systems. Several social computing systems are explored and used throughout the course. Final group project focuses on designing and implementing a social web system.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS or PHD)

ISSP 2440 - ARTIFICIAL INTELLIGENCE

Minimum Credits: 3
Maximum Credits: 3
With the focus on the machine intelligence technologies around processing, representing, modeling, and learning from large quantity of data in the current web context, this course serves as a broad introduction to students of the theories, algorithms and applications of modern Artificial Intelligence (AI). Taking a data science oriented perspective, this course aims to help students to develop a broad theoretical knowledge and practical experience in AI. With the understanding that modern AI is actually a discipline of theories and techniques around the idea of data driven model-based machine intelligence, this course consists of four broad modules: 1) representation of knowledge, 2) uncertainty-based modeling and reasoning, 3) improvements with machine learning, and 4) communication with natural language processing, all of which are necessary components for an intelligent agent to engage intelligently with other agents or people in the real world. The goal of this course is to prepare students to work creatively and productively in current data-driven and intelligence-rich environment, and it is ideal for students who would like to be introduced to the techniques of modern AI. Topics include: search, logic and deduction, knowledge representation and memory organization, production systems, expert systems, planning, language understanding, and machine learning.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2630 - FOUNDATIONS OF COGNITIVE PSYCHOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will introduce core issues, theories, and experimental findings in cognitive psychology. Topics to be covered include history of cognitive psychology, sensory perception, attention, memory, imagery, language, reasoning, learning and expertise, problem solving, decision making, and individual difference in cognition. The goal is to understand foundational theories and issues as well as research methods used in this area. (In other words, how human cognition can be be studied scientifically, and why the results of experimental investigations support particular theories.)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

ISSP 2756 - PRINCIPLES OF DATA MINING

Minimum Credits: 3
Maximum Credits: 3
Data mining is the process of efficient supervised or unsupervised discovery of non-trivial and useful knowledge and patterns from collections of data. This proposed course aims to provide a discussion of multiple common tasks in data mining, including association rules/sequential patterns, classification, anomaly detection, avoiding false discoveries, and clustering. Besides, this course will also introduce the latest advances in data mining and provide extensive hands-on experience via programming projects. Non-CS students

interested in enrolling must suggest project ideas and obtain the instructors written permission to override the enrollment requirements.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ISSP 2900 - GRADUATE INTERNSHIP

Minimum Credits: 1
Maximum Credits: 3
A professional internship may be taken at any time during the course of graduate study. Ph.D. students may take this course up to two times for credit, MS students may take it at most once.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
Directed study.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
Independent study.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1
Maximum Credits: 9
Research and dissertation Ph.D.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 3120 - ADV TOPCS NATURAL LANG PROCSSNG

Minimum Credits: 3
Maximum Credits: 3
Natural language processing (NLP) is primarily concerned with creating computer programs that interact with human languages. The objective of this course is to continue the studies of natural language processing (NLP), to explore selected topics among syntax, semantics, and pragmatics more deeply, and to discuss recent advances in (NLP).
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: ISSP 2230 or CS 2731 or INFSCI 2420; PLAN: Intelligent Systems (MS, PHD)

ISSP 3535 - ADV TOPICS IN MACHINE LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course will survey advanced topics in machine learning, for example, inductive learning, reinforcement learning, and neural network learning.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: ISSP 2170 or CS 2750; PLAN: Intelligent Systems (MS, PHD)

ISSP 3565 - ADV TOPICS ARTIFICIAL INTELLGNC

Minimum Credits: 3
Maximum Credits: 3
This course will survey current topics in artificial intelligence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: ISSP 2160 or CS 2710; PLAN: Intelligent Systems (MS, PHD)

Interdis Biomed Grad Prog

INTBP 2001 - FOUNDATIONS OF BIOMEDICAL SCIENCE STRUCTURAL BIOLOGY

Minimum Credits: 7
Maximum Credits: 7
Primary objectives of the course are to convey knowledge of the molecular and cellular mechanisms controlling cell, tis sue and organ function, and to develop an understanding of the experimental evidence supporting these concepts through an integrated presentation of material from biochemistry, cell biology, molecular genetics, pathology, pharmacology, and physiology. The development of critical thinking skills will be emphasized through an evaluation of experimental evidence and reading of the primary literature.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

INTBP 2011 - LAB RESEARCH ROTATION SUPPLEMENT

Minimum Credits: 2
Maximum Credits: 4
Course supplement to INTBP 2010 for those students initiating their first rotation in summer.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

INTBP 2013 - D2K: FROM DATA TO KNOWLEDGE- BIOMEDICAL EXPERIMENTAL DESIGN AND ANALYSIS

Minimum Credits: 3
Maximum Credits: 3

Experimental biologists formulate hypotheses and models, design experiments, collect data and conduct analyses to draw conclusions. Deep understanding on biological principles requires D2K- the translation of data into knowledge that transcends first-order conclusions. This course for first year Ph.D. students in the biomedical sciences will examine basic principles of experimental design, together with measurement and sources of experimental error. The course will provide practical 'hands on' introduction to the quantitative tools required for experimental research using cellular, molecular, and systems based methods. Topics will include: goals of experimental design, making measurements, principles or parametric and non-parametric statistical inference, use of MS excel, graphpad prism and R, design of publication graphics and a brief introduction to big data approaches. Students will work in small groups to construct capstone projects by making 'you tube' style videos to illustrate key principles of experimental design and analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

INTBP 2090 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in degree-granting programs under the interdisciplinary biomedical graduate program.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

INTBP 2100 - BIOLOGY OF VISION

Minimum Credits: 3
Maximum Credits: 3
This course is being designed to meet the requirements of the t-32 training grant (t32 ey017271-01 interdisciplinary visual science training program) from NIH. The target students are the graduate students, fellows and residents in the department of ophthalmology. In addition, the post-doctoral fellows working in the department of ophthalmology will be encouraged to take this course. We are planning to cover a wide array of subjects including the ocular anatomy, embryology, biochemistry, pharmacology, immunology, microbiology and genetics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

INTBP 2290 - SCIENTIFIC ETHICS AND THE RESPONSIBLE CONDUCT OF RESEARCH

Minimum Credits: 1
Maximum Credits: 1
The course is an introduction to the basic ethical issues which arise in the course of conducting scientific research. It is intended for graduate students and fellows in the biomedical sciences who have completed at least one year of graduate work. The course will be composed of informal lecture presentations followed by discussion of issues in small groups.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Computational Biology (PHD) or Molecular Biophy & Struct Bio (PHD) or Computational Biology (PHD) or Integrative Molecular Biology (PHD) or Interdis Biomedical (UNK)

INTBP 3000 - FOUNDATIONS OF BIOMEDICAL SCIENCE

Minimum Credits: 6
Maximum Credits: 6
Primary objectives of the course are to convey knowledge of the molecular and cellular mechanisms controlling cell, tis sue and organ function, and to develop an understanding of the experimental evidence supporting these concepts through an integrated presentation of material from biochemistry, cell biology, molecular genetics, pathology, pharmacology, and physiology. The development of critical thinking skills will be emphasized through an evaluation of experimental evidence and reading of the primary literature. Fundamentals of

Systems Biology will also be discussed. The course will include both lectures and small group workshops.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

INTBP 3005 - FOUNDATIONS JOURNAL CLUB

Minimum Credits: 2
Maximum Credits: 2
Contemporary approaches to problem-solving in biology, as well as principles underlying modern methods of biomedical research will be integrated with the lecture component of the course through an analysis of mechanisms underlying bio logical phenomena. Students will present papers, critically analyze data and develop skills for identifying state-of-the-art experimental approaches to solve biomedical problems.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad Letter Grade

INTBP 3010 - LABORATORY RESEARCH ROTATION

Minimum Credits: 3
Maximum Credits: 3
This lab is designed to introduce the student to relevant laboratory methods as well as the layout and conceptualization of experiments. The course will serve to acquaint the student with the laboratory process, and to facilitate his/ her selection of a lab for dissertation research. Students are required to register for and complete rotations through three different laboratories, thereby ensuring broad exposure to method and practice.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

INTBP 3240 - GRANT WRITING FOR GRADUATE STUDENTS

Minimum Credits: 2
Maximum Credits: 2
This course teaches fundamental grantmanship skills using actual NIH training grant submissions. Students construct a competitive research training grant and are instructed on methods to identify funding sources. This course consists of introductory lectures followed by a series of workshops staffed by the IBGP training faculty. Workshops cover peer scientific review and study section operation, avoidance of common pitfalls in grant writing, grant writing ethics and scientific community service.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Cell Biol & Molecular Physio or Mol Genetics & Dev Biology or Mol Genetics & Dev Biology or Molecular Pharmacology or Cellular & Molecular Pathology or Integrative Systems Biology or Interdis Biomedical

Interdisciplinary

BIND 2024 - CONSULTING FIELD PROJECT

Minimum Credits: 3
Maximum Credits: 3
This course teaches management consulting in a real-world environment. Students are provided a unique opportunity to apply the analytical tools and concepts taught by katz, and do so in a practical manner. Each project includes three to five students assembled as a team. Each project involves a single "client" organization, which may be a profit, non-profit, or governmental. Each client provides its assigned study team with a project of immediacy and an executive dedicated to working with the team. A faculty advisor is assigned to each team. Students schedule their own time, dovetailing with client schedules and that of their faculty advisor. Students are further supported three

Saturday consulting workshops led by consultants from the Pittsburgh office of McKinsey & company, management consultants. An end-of-term competitive competition is also held, the winner being awarded the McKinsey cup.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Joseph M. Katz Grad Sch Bus

BIND 2060 - INDEPENDENT STUDY BUSINESS ADMININISTRATION

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2061 - INDEPENDENT STUDY ENTREPRENEURSHIP/SMALL BUSINESS

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2063 - INDEPENDENT STUDY INTERNATIONAL BUSINESS

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2064 - INDEPENDENT STUDY ENTREPRENUERSHIP

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2065 - INDEPENDENT STUDY IN BUSINESS ADMINISTRATION 2

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2066 - KATZ EXCHANGE: WHU

Minimum Credits: 3
Maximum Credits: 3
The WHU MBA European Summer Program comprises a two-week course on "The Changing Environment for International Business in Europe" on the attractive campus in Vallendar, located just outside of Koblenz in the valley of the Rhine River. The program is designed for MBA students of WHU's partner schools in their second year who are interested in International Business, Finance, and Corporate Strategy. Students who successfully complete the course will be able to transfer back three (3) credits. In order to be eligible for consideration, students must apply through the Pitt Study Abroad website, www.abroad.pitt.edu.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

BIND 2067 - KATZ EXCHANGE: KEDGE BUSINESS SCHOOL 1

Minimum Credits: 3
Maximum Credits: 3
Katz Exchange: Kedge Business School 1
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

BIND 2068 - KATZ EXCHANGE: KEDGE BUSINESS SCHOOL 2

Minimum Credits: 1
Maximum Credits: 1
Katz Exchange: Kedge Business School 2
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

BIND 2069 - KATZ EXCHANGE: KEDGE BUSINESS SCHOOL 3

Minimum Credits: 6
Maximum Credits: 6
Katz Exchange: Kedge Business School 3
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

BIND 2070 - HEALTH CARE LAW FOR MANAGERS

Minimum Credits: 1
Maximum Credits: 1
This course will introduce students to legal, ethical, and policy issues relevant to those in management roles in the health care system. Topics explored will include an overview of the U.S. legal system and policymaking, health care ethics, public health law, liability of health care providers and their institutions, health care reform and access to care, health care fraud and abuse, antitrust, consent for treatment and withholding of consent, fraud and abuse, and health privacy in the digital age.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

BIND 2073 - BUSINESS DEVELOPMENT IN THE LIFE SCIENCES

Minimum Credits: 1
Maximum Credits: 1

This intensive course is designed for students seeking an in depth understanding of the management challenges inherent in life science firms. We will examine molecules and medical devices as well as cutting edge IT services in the health care sector. We will cover the major strategic issues facing investors, entrepreneurs, and managers of small companies as well as global medical entities. This is not a science course per se and it does not require a background in medicine or molecular biology. The only prerequisites are a strong interest in the field and a willingness to learn about this important and dynamic sector of the global economy.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BIND 2101 - PRACTICUM FOR EMBA HEALTHCARE STUDENTS

Minimum Credits: 1
Maximum Credits: 6
Students prepare a major research project on an actual healthcare business problem to demonstrate the knowledge, tools and skills learned through the program. This experience-based learning opportunity challenges students to solve a real business issue at a healthcare organization. At the end of the program, students present their findings and recommendations to a panel of faculty and healthcare leaders.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

BIND 2105 - PRACTICUM FOR EMBA STUDENTS

Minimum Credits: 1
Maximum Credits: 3
Students prepare a major research project on a business problem to demonstrate the knowledge, tools and skills learned through the program. This experience-based learning opportunity challenges students to solve a real business issue within their company or industry. At the end of the program, students present their findings and recommendations to a panel of faculty and business leaders.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

BIND 2111 - LANGUAGE ASSESSMENT WORKSHOP

Minimum Credits: 0
Maximum Credits: 0
This 12 week workshop is designed to enhance international students speaking and comprehension abilities. Students will engage in various exercises and real life scenarios.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad HSU Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2123 - CONSULTING FIELD PROJECT 2

Minimum Credits: 3
Maximum Credits: 3
This course is to provide MBA students with a meaningful and measurable business experience. Students should view projects as providing a unique opportunity to apply the various analytical tools and concepts taught at KATZ, in such a way as developing creating and useful business solutions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: BIND 2024; PROG: Joseph M. Katz Grad Sch Bus

BIND 2163 - GLOBAL ISSUE WORKSHOP

Minimum Credits: 0
Maximum Credits: 0
This number will serve as a billing course for the Global Issue Workshop (BIND 2263). May also serve as billing course for (BIND 2164 and BIND 2165).
Academic Career: Graduate
Course Component: Workshop
Grade Component: Non-Graded Component

BIND 2200 - INTEGRATED PROJECT FOR MBA/MS IN ENGINEERING PROGRAM

Minimum Credits: 1
Maximum Credits: 1
All students in the MBA/MS in engineering joint degree program are required to complete an integrated project for a company or some other facility. Oversight of this project will be the joint responsibility of a faculty member from KGSB and one from the student's engineering department. It is the student's responsibility to identify these faculty members; program advisors will assist the student in this effort. Students must present a one or two page proposal prior to the start of the project outlining what they plan to do over the course of the project. Ideally, the project should blend skills learned from the business and engineering components of the program. The proposal must be approved by the business and engineering faculty members overseeing the project.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2203 - ORGANIZATIONAL TRANSFORMATION

Minimum Credits: 1
Maximum Credits: 1
This course recognizes the interrelated web of economic, social, political, and technological forces in the global economy that require organizations to transform their systems and processes--continuously and radically--if they wish to survive and succeed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: BOAH 2401 or 2409; PROG: Katz Grad School of Business(PKATZ)

BIND 2231 - GLOBAL CONSULTING PROJECT

Minimum Credits: 3
Maximum Credits: 3
Intent of the course is, through experiential learning, to guide students in addressing global business problems. This is accomplished by providing students with a real corporate problem or issue whose roots are cross-functional, and whose solution requires global research and a global perspective. Students should expect global travel. The course is conducted across the fall and spring terms, providing the student with travel time during the various breaks during Thanksgiving, the Christmas holidays, and at other times as agreed.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

BIND 2263 - GLOBAL ISSUE WORKSHOP

Minimum Credits: 3
Maximum Credits: 3
Students conduct an extensive analysis of a structural or external issue affecting an organization or industry abroad. A student team carries out in-depth international business research in the U.S. and travels abroad to conduct field research and speak to industry and organization

experts.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad LG/SNC Basis

BIND 2404 - QUANTITATIVE FUNDAMENTALS: STATISTICS

Minimum Credits: 0
Maximum Credits: 0
The 0.5 credit "Probability & Statistics: Fundamentals of MBA Quantitative Methods" course is designed to cover fundamental quantitative methods that are critical to an MBA students' academic success. The course provides a refresher to students who already have a relatively strong foundation in statistics, and provides support to those students who may not yet be familiar with the concepts. The material will be delivered both synchronously and asynchronously. (co-requisite BQOM 2401)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

BIND 2406 - QUANTITATIVE FUNDAMENTALS: BUSINESS MATH

Minimum Credits: 0
Maximum Credits: 0
The 0.5 credit "Business Math: Fundamentals of MBA Quantitative Methods" course is designed to cover fundamental quantitative methods that are critical to an MBA students' academic success. The course provides a refresher to students who already have a relatively strong math foundation, and provides support to those students who may not yet be familiar with the application of mathematical concepts in a business context. The material will be delivered both synchronously and asynchronously. (co-requisite BECN 2401)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

BIND 2421 - INTEGRATED LEARNING ACADEMY

Minimum Credits: 3
Maximum Credits: 3
The Integrated Learning Academy (ILA) is an executive-level, seminar-style course in which students engage in analysis, synthesis, and evaluation of contemporary business issues in a specific industry/sector. This engagement is both in-depth within the specific industry/sector as well as comprehensive across the breadth of business functional subject areas that form the Katz MBA core. ILA contemplates the overarching industry structure as well as the role of non-profits, privately-held firms, publicly-traded firms, and government/regulatory bodies within that same industry context. Throughout the course, students gain direct exposure to Katz faculty experts, executive-level industry experts, contemporary case studies, and self-directed research. In turn, students memorialize their learnings in an executive-level white paper on the implications of their learnings for their future career paths.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

BIND 2454 - INTEGRATED MBA CAPSTONE

Minimum Credits: 1
Maximum Credits: 1
The Integrated MBA Capstone (IMC) is a capstone experiential learning course in which students engage in comprehension, analysis, and synthesis of contemporary business issues clustered around a specific theme and US location/region. As the MBA capstone, the course integrates the knowledge and skills developed throughout the MBA core, focusing on developing a horizontal (rather than vertical) mindset across business functional areas.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BIND 2458 - INTEGRATED MBA CAPSTONE FEE - PITTSBURGH

Minimum Credits: 0
Maximum Credits: 0
Students enrolled in BIND 2454 Integrated MBA Capstone who will participate in an integrated learning experience in the Pittsburgh area will be assessed a fee to cover expenses specific to the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: No Grade Required

BIND 2459 - INTEGRATED MBA CAPSTONE FEE - TRAVEL

Minimum Credits: 0
Maximum Credits: 0
Students enrolled in BIND 2454 Integrated MBA Capstone who will participate in an integrated learning experience which includes travel outside the Pittsburgh area will be assessed a fee to cover expenses specific to the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: No Grade Required

BIND 2505 - TIME VALUE OF MONEY: FUNDAMENTALS OF MBA QUANTITATIVE METHODS

Minimum Credits: 0
Maximum Credits: 0
The 0.5 credit "Time Value of Money: Fundamentals of MBA Quantitative Methods" course is designed to cover fundamental quantitative methods that are critical to an MBA students' academic success. The course provides a refresher to students who already have a relatively strong foundation in time value of money concepts, and provides support to those students who may not yet be familiar. The material will be delivered both synchronously and asynchronously. (co-requisite BFIN 2409)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

BIND 2506 - QUANTITATIVE FUNDAMENTALS: FINANCE

Minimum Credits: 0
Maximum Credits: 0
The 0.5 credit "Time Value of Money: Fundamentals of MBA Quantitative Methods" course is designed to cover fundamental quantitative methods that are critical to an MBA students' academic success. The course provides a refresher to students who already have a relatively strong foundation in time value of money concepts, and provides support to those students who may not yet be familiar. The material will be delivered both synchronously and asynchronously. (co-requisite BFIN 2409)
Academic Career: Graduate
Course Component: Lecture

BIND 2533 - ACCELERATED INTERMEDIATE FINANCIAL REPORTING

Minimum Credits: 3
Maximum Credits: 3
Accelerated Intermediate Financial Reporting fulfills the prerequisites of Intermediate Financial Reporting 1 and Intermediate Financial Reporting 2 for students who are entering the MACC program. This course studies the preparation, communication, interpretation and analysis of financial data with emphasis on the information needs of users of financial information prepared under USGAAP. General topics covered in this course include revenue recognition, inventory accounting, long term assets and impairment, investments, current liabilities and contingencies, long term liabilities, capital and retained earnings, leases, pensions and postretirement benefits, income taxes, and preparation of the statement of cash flows. Students are expected to have an accounting background. This course is designed to sit on

top of an existing foundation in accounting and will assume students already have taken several financial accounting courses or knowledge obtained through work experience. It is expected that students are fluent with accrual accounting and the accounting cycle and that they have already studied some of the topics in the course in depth. The course will move quickly.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

BIND 2554 - ENTERING FOREIGN MARKETS 1

Minimum Credits: 1
Maximum Credits: 1
This course is designed to enhance students' awareness of the operational and legal challenges associated with three types of market-entry strategies: exporting, licensing/ franchising, and foreign direct investment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2603 - INTERNSHIP

Minimum Credits: 1
Maximum Credits: 1
This course prepares the student for their internship opportunity and helps them to leverage the internship experience by focusing on career management, organization, and people skills, while requiring them to draw connections to the academic content of their degree program. Students are provided with a unique opportunity to apply the skills taught at Katz in a practical manner, and then to think reflectively about how the practical experience of their internship relates to the knowledge and skills discussed in their other courses. This course is for Katz students only.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad HSU Basis

BIND 2609 - BUSINESS DISRUPTION SERIES: INTEGRATED MANAGEMENT

Minimum Credits: 0
Maximum Credits: 1
A business disruption course allows students the opportunity to engage with emerging research, technology, and business innovations that may disrupt and revolutionize established business theories, markets, and products. The experience will take the form of a mini-course, experience, or activity and may be a 0.5-credit or 1-credit course, depending on the nature of the experience and stated outcomes of the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

BIND 2702 - GLOBAL RESEARCH PRACTICUM: LATIN AMERICA

Minimum Credits: 3
Maximum Credits: 3
This course is tied closely to field study abroad, providing a hands-on experience in a foreign culture. Main objectives are to challenge students to consider business issues from a global perspective and to expose them to actual business environments abroad. Requirements include a team research project and an individual cultural report. The course includes a 9-day trip to various businesses in Chile. Students develop a research question in areas of managerial specialization and draw evidence from the field study to support their project report. While abroad, students visit a number of selected organizations and/or companies, and explore current business practices/issues. The group meets for three, 3-hour class sessions prior to the trip. Portions of these classes will focus on developing the research project. Also, to help prepare for the trip, selected outside speakers will share their experiences and perspectives on Latin American business and culture. At the final class session after the trip, projects are presented in both written and oral forms.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2708 - GLOBAL RESEARCH PRACTICUM: SOUTH ASIA

Minimum Credits: 3
Maximum Credits: 3
This course is tied closely to field study abroad, providing a hands-on experience in a foreign culture. Deliverables from the practicum include a team research project and a professional portfolio designed to capture the international experience. The course includes a trip at the end of the fall semester to various businesses in the host country. Students develop a research question in areas of managerial specialization and draw evidence from the field study to support their project report. While abroad, students visit a number of selected organizations and/or companies, and explore current business practices/issues. Students will be required to attend a module preparing them for the class. This will be scheduled during the fall semester. During the spring semester, the group meets for 3-hour class sessions on Friday evenings as determined by the professors. Portions of these classes will focus on developing the research project. Selected outside speakers may also join the class to share their experiences and perspectives on business and culture.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

BIND 3013 - AI & HEALTHCARE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
This doctoral seminar provides a broad and interdisciplinary exploration of the strategic management and operational challenges inherent in the AI-enabled digital transformation of healthcare organizations and the broader health and life sciences industry sector. We consider the use of AI in its entirety, including classical machine learning, modern generative AI, and advanced data analytics approaches as a core driver of change. The course will examine the deployment of AI applications rooted in healthcare operations and strategic deployment of Health IT and analytics to achieve operational excellence in healthcare delivery. Throughout the course, we will analyze critical managerial issues and strategic trade-offs arising from the digital transformation of healthcare. The seminar emphasizes the managerial, organizational, and strategic dimensions of healthcare IT and digital transformation, including implementation challenges, workforce implications, regulatory considerations, and the evolving competitive landscape. We consider how AI reshapes healthcare operations, from resource allocation and workflow optimization to quality improvement and patient engagement strategies. We will dive into complex socio-technical dimensions, such as algorithmic bias, the need for interpretable and explainable AI, and the organizational and individual-level challenges in AI adoption and governance. Ethical, economic, and incentive misalignments that arise when advanced technologies are integrated into healthcare workflows will be a central focus of readings and discussions. Each session is dedicated to discussing key research papers that

shed light on those issues, with a strong focus on business and social science perspectives. Instructors will provide a brief overview to frame the conversation, but students are expected to lead the in-depth discussion of the assigned readings and develop high-impact research proposals.

Interpersonal Skills

SWINT 2004 - GRIEF AND LOSS: INTERVENTIONS, IMPLICATIONS & UNDERSTANDING

Minimum Credits: 3
Maximum Credits: 3
This course explores the various models used by social workers who are interested in meeting the complicated needs of grieving clients and their families. Knowledge based practice patterns rooted in the framework of the tasks of mourning, the mediators of mourning and a review of the dual processing model are provided across a wide range of populations and practice settings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ:SWGEN 2098 and SWGEN 2034 and SWBEH 2063 (Min grade B-)

SWINT 2007 - INTRO PSYPHMCLGY SOCL WRK PRACT

Minimum Credits: 3
Maximum Credits: 3
This course explores psychopharmacology from historical and socio-cultural perspectives, including pharmacokinetics, neurochemistry, and biological and psychosocial functioning. Students will develop knowledge, practice techniques, and intervention strategies to collaborate with clients, families, and other providers to support education, decision-making, and behaviors related to medication as part of recovery.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2011 - SOCIAL WORK PRACT WITH FAMILIES

Minimum Credits: 3
Maximum Credits: 3
This course explores various basic models used by social workers for examining, understanding, and intervening in family processes. Video, role play, and case material are used in developing skills for advanced practice in working with families.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2018 - CLINICAL SKILLS IN SOCIAL WORK PRACTICE FOR MENTAL HEALTH RECOVERY

Minimum Credits: 3
Maximum Credits: 3
The course teaches concepts and techniques employed in social work practice with individuals with mental illness and their families to promote recovery. Conditions addressed in this course include schizophrenia, other psychoses, bipolar disorder, personality disorders and co-occurring substance use and mental illness. The overall purpose is to equip the beginning practitioner with the knowledge, values, and skills requisite for working with the types of clients commonly seen at public mental/behavioral health services.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2020 - DIRECT PRACTICE WITH INDIVIDUALS

Minimum Credits: 3
Maximum Credits: 3
This course explores treatment theories and builds skills for providing culturally sensitive clinical social work with individuals. Students learn to use evidence-informed processes and offer evidence-based interventions as they engage, assess, plan, intervene, evaluate, and conclude work with diverse clients. The course also provides an introduction to and critique of the DSM.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: SWGEN 2098 and SWGEN 2034 and SWBEH 2063

SWINT 2021 - DIRECT PRACTICE WITH FAMILIES AND GROUPS

Minimum Credits: 3
Maximum Credits: 3
This course explores treatment theories and builds skills to provide culturally sensitive clinical social work with families and groups. Students learn how to provide evidence-based practice as they engage, assesses, plan, intervene, evaluate, and finish work with diverse families and in various types of treatment groups. Attention on interpersonal dynamics in families and groups and how evidence-based practices intersect with evidence-based interventions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2025 - SOCIAL WORK PRACTICE IN INTEGRATED HEALTH

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the clinical and administrative skills, roles and functions of social work practice which take place in a wide range of community based agencies and institutions at the primary, secondary and tertiary levels of intervention with and on behalf of a diverse population. Knowledge skills and ethics are integrated toward promoting readiness for employment in the healthcare field.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2030 - DIRECT PRACTICE WITH OLDER ADULTS

Minimum Credits: 3
Maximum Credits: 3
The range of interpersonal practice with, and on behalf of, older adults is defined in terms of primary, secondary and tertiary levels of preventive intervention. The social work roles and interventive skills used in case management are taught. Psychosocial/systems, cognitive/behavioral and other treatment approaches central to social work are examined and evaluated for their application to an eclectic-based intervention with older clients.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2031 - ADV DRCT PRAC: COGNITV/BEHVRL

Minimum Credits: 3
Maximum Credits: 3
The course focuses on the applicability of the cognitive-behavioral model to advanced direct practice with individuals, families, and small groups. Students learn skills in applying CBT assessment and treatment methods for a variety of mental and behavioral conditions. Particular attention is given to empirical methods for monitoring and evaluating client progress and outcomes. The course also emphasizes the relevance of cognitive-behavioral practice to advanced direct practice with populations experiencing marginalization and oppression.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2032 - ADV DRCT PRAC: SOCIAL SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Building on the student's knowledge of social systems theory gained in the prerequisite course in generalist practice and models of intervention, this course will focus on these theoretical frames of reference in terms of application to interpersonal practice with individuals, families and groups.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2033 - ADV DRCT PRAC: PSYCHODYNAMIC

Minimum Credits: 3
Maximum Credits: 3
In this course, students learn to apply advanced concepts in drive theory, ego psychology, object relations, self-psychology, and attachment theory to case studies, developing skills to critique these theories in relation to historical contexts and paradigms. The course also emphasizes the relevance of psychodynamic approaches to advanced direct practice with populations experiencing marginalization and

oppression
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2035 - INTIMATE PARTNER VIOLENCE

Minimum Credits: 3
Maximum Credits: 3
This course examines the dynamics and treatment implications of working with family members who have experienced various forms of physical and/or sexual maltreatment from other family members. Physical and sexual child abuse, spouse abuse and marital rape are topics of concern.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWGEN 2098 and SWGEN 2034 and SWBEH 2063 (Min grade B-)

SWINT 2040 - SOCIAL WORK DIRECT PRACTICE: HEALTH AND AGING

Minimum Credits: 3
Maximum Credits: 3
This course provides an in depth exploration of theoretical frameworks and evidence informed interventions for use in health care settings and in gerontological social work. Using a lifespan perspective and the social determinants of health framework, students will learn to assess, plan, implement, and evaluate interventions and strategies that address the complex needs of individuals in various health care settings and across the lifespan. The course emphasizes person in context and biopsychosocial spiritual cultural factors, and examines how medical and social models of aging and disability frame experiences of illness, health care use, wellness, and thriving. Students explore variables related to access to services and resources, continuity of care, coordination of benefits, and the cultural and structural barriers that shape health and aging. Particular attention is given to how structural inequities, systemic barriers, identity, and social location shape experiences of health care and aging and contribute to inequities across the lifespan. A strong emphasis is placed on the complex and important role of social work in interprofessional collaboration within both integrated and non integrated systems of care. Students participate in learning activities that build skills in holistic assessment, identification of biopsychosocial spiritual cultural factors, and the use of tools that enhance assessment and intervention in health and aging settings. The course supports students in developing SMART goals, selecting evidence informed practices, describing their use in intervention with a case, and evaluating outcomes for adults and older adults with consideration for diverse identities and lived experiences. Students also examine the psychosocial impact of acute and chronic illness, aging, and cognitive changes on individuals and their families, including the navigation of resources, ethical considerations, and barriers to treatment. Throughout the course, activities such as interprofessional team work, case assignments, reflections, and exploration of ethics at end of life help students apply concepts through a culturally responsive, anti oppressive, and justice oriented social work lens.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

SWINT 2042 - SOCIAL WORK WITH SUBSTANCE USE AND OTHER ADDICTIVE DISORDERS

Minimum Credits: 3
Maximum Credits: 3
This course offeres a comprehensive overview of substance use disorders, including etiology, diagnosis, evidence-informed treatment, and the impact on individuals, families, workplaces, and communities. Using recovery and biomedical models, students critically evaluate and apply skills to assess and treat substance use with an emphasis on psychosocial interventions and the impact of the sociopolitical context.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2046 - PLANNED SHORT-TERM TREATMENT

Minimum Credits: 3
Maximum Credits: 3
A pluralistic theoretical framework for planned short-term treatment, highlighting contributions from interpersonal and social learning orientations is examined, and major research studies supporting short-term intervention are reviewed. Attention is given to the goals and process of the initial interview and major change strategies (behavioral rehearsal, task assignment, skill training, and cognitive restructuring) are discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2049 - DIRECT PRACTICE WITH CHILDREN

Minimum Credits: 3
Maximum Credits: 3
This course prepares students to work directly with children in social work settings. A variety of teaching techniques are used to help students: utilize different theories and models of working with children; differentiate fact from inference and normal from deviant development; be comfortable with a variety of play media; and examine in-depth the theme of separation and its effect on the child.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2049 - DIRECT PRACTICE WITH CHILDREN

Minimum Credits: 3
Maximum Credits: 3
This course prepares students to work directly with children in social work settings. A variety of teaching techniques are used to help students: utilize different theories and models of working with children; differentiate fact from inference and normal from deviant development; be comfortable with a variety of play media; and examine in-depth the theme of separation and its effect on the child.
Academic Career: Graduate

Maximum Credits: 3
This course focuses on clinical assessment, evidence-informed models of intervention, and practice skills related to direct social work practice with children, adolescents, and their families. Utilizing neurobiological, developmental, ecological, and systems perspectives, it

examines factors that pose risks to the health and development of youth and families. Specific manifestations of developmental stress in childhood are explored within a competency- and strengths-based framework, including behavioral health problems commonly observed in children and adolescents.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2049 - DIRECT PRACTICE WITH CHILDREN & ADOLESCENTS

Minimum Credits: 3
Maximum Credits: 3
This course prepares students to work directly with children and adolescents in social work settings. A variety of teaching techniques are used to help students: utilize different theories and models of working with children and adolescents; differentiate fact from inference and normal from deviant development; be comfortable with a variety of play media; and examine in-depth the theme of separation and its effect on the child.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2050 - COUPLES THRPY: THRY & TECHNIQUES

Minimum Credits: 3
Maximum Credits: 3
This course concentrates on theory and techniques of treatment with the marital dyad. Emphasis is on empirically validated methods, with particular focus on developing an eclectic approach for advanced social work practice.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2053 - GROUP INTERVENTIONS WITH HIGH-RISK POPULATIONS

Minimum Credits: 3
Maximum Credits: 3
Theory and concepts related to advanced social work practice with groups, including knowledge of group types, processes, selection, and composition, as well as group leader roles and functions are all considered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2058 - SOCIAL WORK EDUCATIONAL SETTINGS

Minimum Credits: 3
Maximum Credits: 3
This course provides a knowledge base for the practice of social work in school or school-related settings. Focus is on application of knowledge, and values and skills of social work practice toward resolution of diverse problems encountered by pupils, schools and communities in the effort to achieve educational goals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWGEN 2098 and SWGEN 2034 and SWBEH 2063 (min grade B-)

SWINT 2063 - ISSUES IN CHILD MALTREATMENT

Minimum Credits: 3
Maximum Credits: 3
This course will provide a comprehensive examination of child sexual maltreatment issues at the micro, meso, and macro levels: etiology; identification; child welfare system response; treatment; the impact the maltreatment has upon individuals, families, groups, and the community (including those coming into contact with maltreatment in the course of their work) and resilience in the face of maltreatment. Emphasis will be on the student's development of assessment skills, knowledge of the therapeutic process of recovery, and the role and function of organizations. Social work interventions and treatment modalities, including outcome data, will be presented. Students will be offered information about maltreatment among diverse populations. All topics will be related to and examined in the light of the core values, ethical principles, and standards of the national association of social workers code of ethics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: SWINT 2020 or SWINT 2082 (MIN GRADE 'B-")

SWINT 2072 - SOCIAL WORK PRACTICE AND TRAUMATIC STRESS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on social work practice in treating trauma, exploring theories of primary and secondary traumatic stress, feminist and anti-racist perspectives, and the neurobiology of stress. Students learn trauma-sensitive assessment and intervention skills with individuals, families, and organizations. Additionally, students begin to develop evidence-supported strategies for self-care to sustain and thrive as practitioners engaged in direct trauma work.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWGEN 2098 and SWGEN 2034 and SWBEH 2063 (Min grade B-)

SWINT 2073 - INTEGRATED HEALTHCARE AND PHARMACOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course is designed to develop general knowledge of medical terminology and the social worker's role in medication management. Students learn how to educate and support patients in adhering to recommended medication treatment and in being knowledgeable about possible side effects. Social workers have an extremely important role to play in the patient's ability to adhere to medication requirements. They can support patient compliance with medication by providing information and education that allows that patient to have realistic expectations for what may be achieved with medication. In addition, they can also work with patients to achieve their goals for improving medication adherence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

SWINT 2074 - SPIRITUALITY AND SOCIAL WORK

Minimum Credits: 3
Maximum Credits: 3
This course explores the role, nature, and impact of spirituality in and upon social work practice and the populations that social workers serve. It builds upon an understanding of spirituality and religious practice as aspects of human diversity which occurs in the context of ecosystems theory, theories of human development, and models of helping. Students will gain spiritual assessment and intervention skills within the scope of social work practice including micro, mezzo and macro levels of practice. Course will highlight themes of cultural competence, variety of spiritual and/or religious practices and traditions, potential harms and benefits, professional development, and ethical considerations for practice.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWGEN 2098 and SWGEN 2034 and SWBEH 2063 (Min Grade B-)

SWINT 2076 - HUMAN SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
This course presents current research about human sexuality, discusses the range of sexual life-styles, and develops a treatment typology for therapists working with couples and individuals with sexual dysfunctions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: SWINT 2082 or SWINT 2020 (Min Grade 'B-')
Course Attributes: Gender, Sexuality & Women's St

SWINT 2082 - MODELS OF INTERVENTION

Minimum Credits: 3
Maximum Credits: 3
The course provides a framework for understanding and differentially using treatment models in interpersonal social work practice. It examines four basic treatment models: psychosocial, crisis intervention, behavior modification, and an interpersonal approach based upon either communication theory, the client-centered approach, or an experiential humanist approach. These basis models are compared and contrasted.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: SWGEN 2098 and SWBEH 2063 and SWWEL 2081

SWINT 2096 - CLIN SOCL WRK AFRCN AMERCN FMLY

Minimum Credits: 3
Maximum Credits: 3
The overall objective of this course is to provide a knowledge base on African-American families within a community context that is the basis for developing methods and skills relevant for clinical intervention with African American families. It will provide the student with the opportunity to expand on concepts, skills and assumptions about clinical transactions learned in basic clinical method courses. Conceptual models for assessment/intervention will assist students to clarify and become comfortable with theoretical and practice approaches with black families.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: SWINT 2082 or SWINT 2020 (Min Grade 'B-')

SWINT 2097 - DRCTD STUDY INTERPERSONAL SKILLS

Minimum Credits: 1
Maximum Credits: 3
A student-initiated educational experience, guided by a faculty member that significantly supplements the social work interpersonal skills curriculum and conforms to academic course content expectations.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

SWINT 2099 - FIELD WORK

Minimum Credits: 1
Maximum Credits: 8
The field practicum emphasizes the integration and application of social work values, knowledge and skills in practice settings. Placements are in community service delivery systems and are individualized to combine the student's choice of concentration area, certification program and specialized skills interest.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PREQ: SWGEN 2099; SBPLAN: Direct Practice (Social Work-MSW)

Irish

IRISH 2909 - SPECIAL TOPICS IN IRISH

Minimum Credits: 3
Maximum Credits: 3
This course will be a topics course, meaning that the specific content of the course will change each time the course is offered.
Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Italian

ITAL 0060 - LITERARY ITALIAN 1

Minimum Credits: 3
Maximum Credits: 3
An introduction to Italian literature and culture. The majority of readings are in the prose and poetry of modern Italian writers.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212 or 0213 or 0214) or FP (0003 or 0006) *Applies to all WRIT Courses*

ITAL 1078 - FULBRIGHT SEMINAR IN ITALIAN STUDIES

Minimum Credits: 3
Maximum Credits: 3
The Fulbright Seminar in Italian Studies is the spring-term undergraduate-level course offered by the Visiting Fulbright Distinguished Lecturer from Italy. This course is typically offered in the fields of art history, cultural studies, film, history, literature, museum studies, political science, or urban studies.
Academic Career: Undergraduate
Course Component: Seminar
Grade Component: LG/SNC Elective Basis

ITAL 1082 - ITALIAN RENAISSANCE LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the literature of Renaissance Italy. Readings include a mixture of poetry and prose.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

ITAL 1085 - DANTE'S DIVINE COMEDY

Minimum Credits: 3
Maximum Credits: 3
In this course, which covers the key episodes of Dante Alighieri's three-part epic poem, the Divine Comedy (with particular emphasis on Inferno), we will follow Dante's journey through the terrifying abysses of Hell to the luminous expanses of Heaven. We will consider works and phenomena inspired by Dante across a range of fields and genres. Students will gain an understanding of the remarkable cultural impact of Dante's work from his own time to today, in Italy, the U.S., and across the globe. No prerequisites. This class will be conducted in English and does not require knowledge of Italian. It satisfies the Literature General Education Requirement, and counts for the Italian minor and major tracks.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

ITAL 1089 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Period and literary topics are determined by the instructor.
Academic Career: Undergraduate

Grade Component: LG/SNC Elective Basis

ITAL 2000 - INTRODUCTION TO GRADUATE STUDIES IN MODERN LANGUAGES AND CULTURES

Minimum Credits: 1
Maximum Credits: 1
This one-credit course offers an introduction to graduate study in modern languages and cultures. It will help you adjust to your graduate program and will cover the nuts and bolts of how to take seminars, do readings, teach, balance your various obligations and meet the emotional and life challenges of graduate school. What matters most in teaching is not skills but a sense of personal identity and a strong relationship to the disciplinary knowledge. We will engage with the latest research in positive psychology, resilience, pedagogy, deep learning, creativity, sociology of work and executive coaching. The class will prepare you better to move among different kinds of professional situations within and outside academia.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2092 - ITALIAN TRANSLATION STUDIES

Minimum Credits: 3
Maximum Credits: 3
This course explores the field of Translation Studies from the Italian perspective. It may address any or all of the following issues: the history of translation as a literary practice, editorial projects that involve translation, the ethics of translation, translation between standard and dialect languages, translation and power relations, the relative primacy of source and target texts, the relationship between translation and global literatures. Students will develop and pursue final projects that involve commentary on published translation or new translation projects with annotation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

ITAL 2100 - INTER/VISTA: LA STORIA ORALE IN ITALIA

Minimum Credits: 3
Maximum Credits: 3
This graduate-level seminar explores oral testimony as a form of cultural and historical documentation, political praxis, and knowledge production. This course is designed to be both an introduction to the theories and methods of oral history, as seen through its practice in Italy, and an alternative history of Italy in the 20th and 21st centuries. Throughout, we will extend our discussions to the performance of self and the problems of memory.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2603 - REPRESENTATIONS OF THE HOLOCAUST

Minimum Credits: 3
Maximum Credits: 3
This course examines representations of the holocaust in literature and film, with particular attention to the stages of the testimonial process, the issues of guilt and the grey zone, and the interplay between the problem of ineffability and the use of "traditional" narrative models.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies, West European Studies

ITAL 2605 - BOOKS OF ISLANDS: MEDITERRANEAN NETWORKS AND TEXTS, 1300-1700

Minimum Credits: 3
Maximum Credits: 3
In this graduate-level seminar we will study a range of medieval and early-modern texts about islands, archipelagos, and maritime travel, with particular attention to what these texts can reveal about the networks that linked Italy to the broader Mediterranean world and the globe - networks of knowledge exchange, commerce, travel and migration. We will examine the rise and development of the books known as the "isolari" ("Books of Islands") - a popular genre between the fifteenth and seventeenth centuries that introduced readers to the world's islands and archipelagos through a curious blend of text and image. We will also study accounts of islands and travels by major medieval and early modern Italian authors including Marco Polo, Francesco Petrarca, Giovanni Boccaccio, and Tommaso Campanella. Relevant critical work in the areas of transnational and environmental studies, media and materiality (with attention to the material realities that shaped the production and circulation of books and maps, in manuscript and in print), and spatial theory will enrich our approaches to these texts. The class will include an introduction to digital tools that can fruitfully be used by humanists for geographically, spatially, and network-oriented work, and students will collaborate on a digital humanities project using the ArcGIS Online mapping platform.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

ITAL 2607 - CULTURES OF FASCISM

Minimum Credits: 3
Maximum Credits: 3
This graduate level seminar explores the cultural and political landscape that fostered Italian Fascism (1922-1945) and facilitated its progression from a revolutionary movement to a political party and finally a dictatorial regime. In particular, we examine the close connection between a Fascist national culture and political control, manifested in Fascism's ability to shape the ideal Fascist political subject and create broad and unlikely political consensus through a dizzying array of popular cultural forms and products. We will dedicate the last weeks of the semester to Italian Fascism's afterlives and the ways in which post-war culture has looked back on the period in complex and often contradictory ways.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

ITAL 2610 - SICILY WRITING AND WRITTEN

Minimum Credits: 3
Maximum Credits: 3
This graduate-level seminar provides a forum for the analysis of Sicilian cultural production and a laboratory for the production of new knowledge about this Mediterranean Island. The seminar's texts are chiefly drawn from narrative and poetic genres, but also considers cinema, theatre, journalism, essays, and the visual and plastic arts that seek to express and represent the Sicilian experience.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2620 - BORDERLESS ITALY?: POWER, MIGRATION, TRAVEL, AND MOBILITY

Minimum Credits: 3
Maximum Credits: 3
This graduate-level seminar approaches the study of post-Unification Italy from the perspective of Italy's various internal and external borders within national, transnational, colonial, and diasporic contexts, and the identities that are generated in their definition, enforcement, and crossing. Drawing on the fields of space and place, border theory, and geocriticism, our study will consider a selection of literary, cinematic, and historical/documentary texts from the Risorgimento; Italy's Fascist Empire; and periods of diasporic and internal migrations, from and to Italy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2630 - MEDIA OF ITALIAN COLONIALISMS

Minimum Credits: 3
Maximum Credits: 3
This graduate-level seminar examines the texts, sights, and sounds of colonial conquest, anti-colonial activism, and postcolonial hybridities in Italy. In histories of European imperialism, the Italian occupations of Libya and East Africa draw little attention. Outside scholars and Italians themselves have described Italy's belatedness (to unification, to industrialization, to the colonial contest) relative to northern European nations. These very anxieties drove the violence of Italy's eventual colonial conquest, as well as the subsequent amnesia surrounding it. We will explore how Italian media produce imperial ideologies, as well as possibilities of transnational solidarities, resistance, and belonging by examining the cinema of empire under the Italian Republic and Fascism, the midcentury activist media surrounding the Algerian struggle for independence, and the twenty-first century literature, documentaries, and music of contemporary postcolonial Italy.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2650 - ITALIAN HORROR CINEMA: INFLUENCE, TRANSNATIONALISM, ARCHIVES

Minimum Credits: 3
Maximum Credits: 3
The seminar focuses on three crucial figures of Italian horror cinema: Mario Bava (1914-1980), Lucio Fulci (1927-1996), and Dario Argento (1940). As a product of genre fiction, the cinema of Bava, Fulci and Argento is at once influenced by the transnational canon and yet influential on the themes, on the aesthetics, and on the language of horror cinema. The seminar is divided in two parts: the first section provides the students with a comprehensive knowledge of the three authors' works, filmic styles, influences, and impact. The second part of the seminar, instead, is conducted as an archival research laboratory: students are guided in a research project of their choosing as they collect and analyze archival materials in light of what they have learned during the first portion of the course. In particular, students will be encouraged to take advantage of the George A. Romero Archival Collection, the Archive of the National Cinema Museum in Turin, and the Archive of the Cineteca in Bologna.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

ITAL 2660 - TOPICS IN ITALIAN CINEMA

Minimum Credits: 3
Maximum Credits: 3
Italian films about people crossing borders express anxieties about this movement and Italy's position in a globalized world, and recent scholarship points to these films as a transnational Italian cinema. This course explores this migration cinema, but it also argues that Italian filmmaking from its inception has been transnational, from the role of European and American criticism in creating neorealism, to the era of Hollywood on the Tiber, to the multinational productions of genre cinema. In examining the processes of circulation, exchange, and adaptation inherent in the Italian film industry, we interrogate how the cross-border processes of cinema-making has in turn made Italy. How has Italian cinema shaped ideas about Italy and Italians, both domestically and internationally? How do genres circulate across porous national traditions of filmmaking? What imaginaries and anxieties about Italy as a nation are present in these films, as well as in how they are discussed by critics and audiences? This course has four main objectives: (1) to engage with a spectrum of Italian cinema; (2) to equip you to analyze the technical and thematic aspects of this filmmaking; (3) to practice framing Italian cinema as a product of transnational movement, adaptation, and exchange; and (4) to help you produce a final project-a conference paper, a video essay, or a project of your own design-that analyzes a film within this transnational frame. This course will be taught in Italian with materials in Italian and English.

ITAL 2701 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Period and literary topics are determined by the instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

ITAL 2710 - INTRODUCTION TO LITERARY AND CULTURAL THEORY: LANGUAGE, GENDER, HISTORY

Minimum Credits: 3
Maximum Credits: 3
How do language arts and practices live within a social and cultural context? What is the place of the critic and scholar of literature in the Humanities both as researcher and pedagogue? What kind of theoretical, wider perspective, can help us frame the context and different meanings of a work of art? Focused on the relation between language arts and historicity, the class will address issues concerning representation, gender, politics, education, and the psychology of language rules and infractions. Among the thinkers helping us in our discussions, we will study pragmatic linguists such as Emile Benveniste, social critics of hegemony such as Antonio Gramsci, psychoanalytic approaches to language and power in Jacques Lacan and Franz Fanon, the social critique of literary elitism in Pierre Bourdieu, the redefinition of cultural agency in postcolonial critics such as Gayatri Spivak and Achille Mbembe, the contemporary critique of gendered discourse in the works of Judith Butler, Sara Ahmed and Paul Preciado, and the ecocriticism of Stephanie Posthumus. The class will be organized thematically rather than according to a strict chronology of different approaches. The professor will try to insert workshopping exercises in the classroom, in order to alleviate and share the burden of understanding the contemporary tenets of our field. Seminar taught in English.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: Russian & East European Studies, West European Studies

ITAL 2752 - ITALIAN THEATER SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course discusses topics and themes in Italian theater.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ITAL 2801 - HISTORY OF ITALIAN LANGUAGE

Minimum Credits: 3
Maximum Credits: 3
This course will explore the historical roots of the modern Italian language, and the lively cultural debates around linguistic issues that have shaped Italian language and culture from the Middle Ages to the present day. Issues that we will examine include the relationship of the Italian language with Latin, and with the numerous regional languages (or dialects) spoken in Italy; the linguistic influence of Italy's "Three Crowns" and the dominance of Tuscan; the interplay between written and spoken varieties of Italian; and the political dimensions of language use in Italy. The course will be conducted in Italian. Advanced undergraduate Italian majors can enroll in this graduate-level course with the instructor's permission.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Medieval & Renaissance Studies, West European Studies

ITAL 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 3
This course enables M.A. Candidates to do research under the direction of a faculty member, on a topic of mutual interest.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

ITAL 2903 - MA FINAL PROJECT DIRECTED STUDY

Minimum Credits: 3
Maximum Credits: 3
This course involves developing and planning a faculty-guided MA Final Project selected by the student in consultation with the Italian faculty, and in alignment with the student's future plans beyond completion of the MA in Italian. Students may select from (but are not limited to) the following Final Project options: Presentation on previously executed teaching demo (cluster or module consisting of multiple lessons, planned in consultation with appropriate faculty); Syllabus development; Podcast; Digital Humanities project; Annotated translation; Conference paper (with reflections on expansion); Article of professional article quality and length (30 pp min.). In developing their projects, students must conduct research beyond the scope of any single graduate course, and are encouraged to develop and formulate their topic across the variety of courses and experiences that have made up their MA experience. Students will work closely with the faculty member whose field is most relevant to the chosen topic to identify appropriate areas for expansion, additional texts or case studies, and relevant methodologies and/or pedagogical approaches.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

ITAL 2910 - COMPREHENSIVE EXAMINATION MA

Minimum Credits: 1
Maximum Credits: 3
This course is intended for M.A. Candidates in their last term of study when they present themselves for the ma comprehensive examination.
Academic Career: Graduate
Course Component: Independent Study

Grade Component: Grad SN Basis
Course Attributes: West European Studies

ITAL 2970 - TEACHING PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level foreign language teaching.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis

ITAL 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 3
This independent course is for M.A. Students who have completed, or are completing in their last term of study, all course requirements for the M.A. Degree.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

Japanese

JPNSE 1055 - FOUNDATIONS OF JAPANESE LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the major works, authors, and genres of premodern Japanese prose, poetry, and theatre. Starting with Japan's first written mytho-histories written using the imported Chinese character set, we will trace the development of the vernacular writing system (kana) and the emergence of prose and poetic genres among aristocrats during Japan's classical era, then consider the emergence of performance genres and vernacular genres popular among the warrior class during the medieval period, before finally turning to works in all genres composed during Japan's urban early modern period. Over the course of the semester, we will explore individual works and their historical contexts as well as recurring themes, motifs, and aesthetic concerns that helped shape early Japanese literature and theatre, devoting attention as well to the problems and possibilities raised by reading works in English translation. Because this is an upper-level class, you will be expected to read and consider both primary texts and secondary literature every week. EALL suggests completion of EAS 0007 or JPNSE 0085 as solid preparation for this class.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: Letter Grade

JPNSE 1070 - WORLD OF JAPAN

Minimum Credits: 3
Maximum Credits: 3
Please see course description listed under "Class Notes."
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

JPNSE 2023 - ASPECTS OF THE JAPANESE LANGUAGE

Minimum Credits: 3
Maximum Credits: 3
This course introduces the student to the Japanese language through a study of its structure, vocabulary and cultural heritage. Some topics discussed include word order, basic structural patterns, particles such as Wa and Ga, sexism, and word formation. This course is useful for the Japanese studies student wishing to have a deeper understanding of the language as well as the linguistics student interested in gaining knowledge of a non-Indo-European language.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2030 - JAPANESE LANGUAGE TEACHING AND LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course is intended to introduce students to the field of Japanese language teaching and learning. Students will become familiar with how the Japanese language can be effectively taught, and with aspects of the Japanese language and culture that impact Japanese language pedagogy. Students will also become familiar with the methods used in language pedagogy research, and with some of the most recent research in the field.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2035 - PRAGMATICS OF JAPANESE

Minimum Credits: 3
Maximum Credits: 3
This course will provide an introduction to the usage aspects of Japanese by reading articles on pragmatic aspects of the language. The instructor will lecture on salient points and lead discussion on specific issues and the appropriate use of the language.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2040 - INTRODUCTION TO CLASSICAL JAPANESE 1

Minimum Credits: 3
Maximum Credits: 3
This classical Japanese language course is studied through readings of prose and poetry texts written during and immediately after the Heian period. Literary and linguistic techniques are discussed and points of contrast with the modern language are analyzed. Also introduced are reference materials dealing with classical Japanese language and literature. Students are encouraged, but not required, to complete JPNSE 1023 Aspects of the Japanese Language before enrolling in this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2055 - FOUNDATIONS OF JAPANESE LITERATURE

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the major works, authors, and genres of premodern Japanese prose, poetry, and theatre. Starting with Japan's first written mytho-histories written using the imported Chinese character set, we will trace the development of the vernacular writing system (kana) and the emergence of prose and poetic genres among aristocrats during Japan's classical era, then consider the emergence of performance genres and vernacular genres popular among the warrior class during the medieval period, before finally turning to works in all genres composed during Japan's urban early modern period. Over the course of the semester, we will explore individual works and their historical contexts as well as recurring themes, motifs, and aesthetic concerns that helped shape early Japanese literature and theatre, devoting attention as well to the problems and possibilities raised by reading works in English translation. Because this is a

graduate-level class, you will be expected to read and consider both primary texts and secondary literature every week, meet individually with the instructor every other week, and write a longer research paper than undergraduates taking JPNSE 1055. EALL suggests completion of EAS 0007 or JPNSE 0085 as solid preparation for this class.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

JPNSE 2056 - JAPANESE LITERATURE AND THE WEST

Minimum Credits: 3
Maximum Credits: 3
A critical study of modern Japanese works and selected modern Western literary materials with special emphasis on intensive analysis by means of modern Western criticism. The course is designed to encourage the student to examine significant similarities and differences between Japanese and non-Japanese materials and to judge the content from an oriental as well as a Western perspective.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2057 - JAPANESE CULTURE AND SOCIETY THROUGH CINEMA

Minimum Credits: 3
Maximum Credits: 3
This course provides a critical study of selected international prize winning Japanese films and compares these films with Western films dealing with similar themes. The student learns to analyze and interpret films; becomes familiar with particular genres of Japanese films compared with Western; studies the history of Japanese cinema and its place in international cinematography and exposes the inter cultural benefits of judging the content of the films from oriental and Western aesthetic perspectives.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Film Studies

JPNSE 2058 - WESTERNS AND SAMURAI FILMS

Minimum Credits: 3
Maximum Credits: 3
A focus on the critical comparative study of two filmic genres--the samurai representing Japanese cinema and the Western representing American cinema. The course demonstrates the analytical processes of the film leading to its structural unity; shows the significance of both genres with respect to the history of Japanese, American and European cinema; compares approaches to films of different countries and provides the overall benefits of approaching films from an intercultural standpoint.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2059 - JAPANESE LITERATURE ON SCREEN

Minimum Credits: 3
Maximum Credits: 3
This course will investigate how literature and film treat some major ideological and socio-cultural issues in Japanese society. Readings of pre-modern tales, modern fiction and contemporary novels. Film adaptations will represent the best of Japan's postwar cinematic tradition. The course is designed for the student interested in Japanese society, culture and intellectual currents through film and literature.

JPNSE 2065 - DETECTIVE AND MYSTERY FICTION IN JAPAN

Minimum Credits: 3
Maximum Credits: 3
This course is a one-semester introduction to Japanese literature in English translation. The course is designed for students interested in broadening their knowledge of Japan, as well as for students who wish to compare other literature they have studied with that ofjapan. No prior knowledge of Japan or Japanese is necessary to enroll.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2070 - WORLD OF JAPAN

Minimum Credits: 3
Maximum Credits: 3
Students will receive a grounding in basic principles of Japanese classical literature, poetry and aesthetics. They will read the entire text in English of the Tale of the Genji and examine important works in Japanese literature composed in later periods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2071 - THE WORLD OF JAPAN

Minimum Credits: 3
Maximum Credits: 3
This course covers the period between 1570 and 1870. Beginning with the unification of Japan under sixteenth century military war lords and ending with the collapse of the Tokugana Shoganate. Students will read selections from the major scholarly literature on the period.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Asian Studies

JPNSE 2080 - GHOSTS, MASKS AND ACTORS

Minimum Credits: 3
Maximum Credits: 3
A critical study of three major dramatic genres of Japan--noh, bunraku and kabuki--in cultural origins. Areas to be explored are the use of masks in the world of the noh theatre, the kabuki with its female impersonators and the near-lifesize puppets of the bunraku. Also discussed is the impact that noh and kabuki have had on modern Japanese and non-Japanese theatrical and film genres.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2081 - FORMS OF JAPANESE THEATRE

Minimum Credits: 3
Maximum Credits: 3
This course will provide a survey of various major forms of Japanese theatre using English language materials. Students will have access to relatively ancient forms of Japanese theatre such as kagura and no, kabuki drama and the bunraku puppet theatre through film and videocassette. The modern and avant-garde theatre are also accessible through translation and videocassette material. This course is designed for upperclass majors in theatre arts and non-majors in related fields.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2085 - INTRODUCTION TO EAST ASIAN CINEMA

Minimum Credits: 3
Maximum Credits: 3
This course investigates the ways in which film addresses and treats the major socio-cultural issues in modern society through a critical study of the works of Chinese and Japanese master filmmakers. The course focuses on changes in marriage and family patterns, women's roles and the plight of youth.
Academic Career: Graduate
Course Component: Lecture

JPNSE 2700 - INTRODUCTION TO THEORY AND PRACTICE OF TRANSLATION

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course that answers to a growing interest in the theory and practice of translation from Japanese to English. The genres of texts that will be dealt with include literary works of various kinds (novels, poems, children's books), magazine and newspaper articles, web posts, manga, subtitling of anime and other videos, and texts of technical nature. Students will first learn broadly about the discipline of translation studies, including a history of translation and issues in translation (invisibility of the translator, culturally specific translatability issues, etc.). Students will then learn specific types of translation issues that come up when translating Japanese into English, using excerpts from a variety of genres as case studies. Special attention is paid to the structural differences between Japanese and English, cross-cultural differences in stylistics, writing with clarity, reference work, etc.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

JPNSE 2902 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 6
The student undertakes a course of study under the direct supervision of a department faculty member.
Academic Career: Graduate

Grade Component: LG/SNC Elective Basis

Korean

KOREAN 1086 - NEW MEDIA CULTURE IN KOREA

Minimum Credits: 3
Maximum Credits: 3
This course examines Korea's rapidly evolving mediascape as one of the most striking examples of society's deep immersion in new media technology. The integration of media and everyday life has particularly been swift and intense in Korea, reshaping politics, the economy, social relations, and cultural practices. Students will explore how the new mediascape reflects, or catalyzes larger social and cultural transformations. Emphasis will be put on the political and economic conditions behind such developments and critical engagement with theoretical issues such as platformativity, algorithmization, datafication, post-broadcast democracy, and media expandability. Through this exploration, students will foster an in-depth, critical awareness of how new media ecology shapes our contemporary life and the global flow of culture.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

KOREAN 1700 - THEORY AND PRACTICE OF TRANSLATION

Minimum Credits: 3
Maximum Credits: 3
Contemporary Korean literature has gained recognition worldwide, thanks in part to English translations. While most readers have welcomed these translations, some have criticized them for being "bad"-for being "unfaithful" to the Korean original or for being difficult to read in English, among a host of other reasons. In this course, we will examine works of contemporary Korean fiction that have been instrumental in creating the global boom in Korean literature and the translation debates around it. We will read the English translations of these works alongside selections from the Korean original to assess the translations ourselves. In doing so, we will also consider what the criticisms of these translations are really trying to say. By the end of this course, you will have further developed your ability to read in the Korean language, honed your skills in producing English translations of Korean fiction, and strengthened your ability to craft expository essays based on close readings of literary texts.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

KOREAN 2070 - WORLD OF KOREA

Minimum Credits: 3
Maximum Credits: 3
This Special Topics course explores various topics related to the political, economic, and cultural developments in modern Korea. Topics include, but are not limited to, colonial rule and its legacy (colonial modernity), the Korean War (and the division system), military rule, state-led economic development, the democratization movement, gendered modernity, Korean diaspora, segehwa (or globalization), multiculturalism, new media culture, and hallyu (or Korean Wave). Topics may be explored using a variety of sources, including texts selected from a variety of different fields such as history, culture, and arts (literature, theater, music and film). Students are expected to develop skills in situating the questions at hand within broader contexts such as East Asia and the Pacific Rim.

Latin

LATIN 2200 - LATIN SEMINAR: EPIC

Minimum Credits: 3
Maximum Credits: 3
In this course students with advanced preparation in Latin undertake close study in the area of Roman epic poetry. The course may be repeated for credit provided the specific material covered is different.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

LATIN 2218 - APPROACHES TO ROMAN EPIGRAPHY

Minimum Credits: 3
Maximum Credits: 3
This seminar will study the theory and practice of Roman rhetoric in varying literary, philosophical and historical contexts. We will read key passages and orations from a selection of authors including Cicero, Seneca, and Tacitus, and analyze their rhetorical structure and argument. At the same time, we will approach the genre of rhetoric as a window into the social and cultural settings in which the authors wrote.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

LATIN 2902 - DIRECTED STUDY FOR M.A. STUDENTS

Minimum Credits: 1
Maximum Credits: 9
Directed study on classical topics for students in the M.A. Program.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

LATIN 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
In this course a student undertakes study in Latin in consultation with a member of the faculty.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

LATIN 2992 - GRADUATE READING EXAMINATION

Minimum Credits: 0
Maximum Credits: 0
Permits graduate students from other departments to demonstrate competence in the reading of Latin through examination.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

LATIN 2995 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9
Directed study on Latin topics for students in the graduate program.
Academic Career: Graduate

Law Criminal Justice & Society

LCJS 1531 - INTERNATIONAL ORGANIZED CRIME

Minimum Credits: 3
Maximum Credits: 3
Organized crime is no longer confined to a few countries such as Italy, the United States, and Japan. With the end of the Cold War and the immense technological advances that spread with globalization, organized crime has become much more pervasive, with a major impact in countries such as Russia, Mexico, and South Africa, and with increased operations (and especially co-operation) across borders. This course looks at the dynamics of transnational organized crime, explains why it develops in particular countries, the various forms it takes, and the responses of law enforcement agencies and international institutions.

Course Component: Lecture
Grade Component: LG/SNC Elective Basis

LCJS 1900 - PRESERVICE INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6

This course is a supervised placement with specific agencies in various areas of law and criminal justice. It is offered through the College of General Studies for student interns in the Law, Criminal Justice, and Society majors and minors. Students enrolled in this internship engage in formal and reflective writing, journaling, and analysis about their work experience and how it relates to their academic and career pursuits. Class workshops and group discussions provide further opportunities for debriefing and consolidation of ideas and skills. This is a hybrid course with three in-person workshops and faculty authorization is required. Students must be registered for the internship course at the time they are completing the internship in order to earn credit.
Academic Career: Undergraduate
Course Component: Internship
Grade Component: Satisfactory/No Credit

Law - JD course offerings

LAW 5020 - CONTRACTS

Minimum Credits: 4
Maximum Credits: 4
What promises are legally enforceable? Why does the law enforce those promises? What does it mean to enforce a promise? This course explores those questions, using the basic concepts, principles, and doctrines of contract law, sometimes called "the law of broken promises." Specific topics include the requirements for formation of a contract (such as offer and acceptance), justifications for enforcing promises (such as consideration or detrimental reliance), justifications for denying or limiting enforcement (such as unconscionability or mistake), interpretation of contract terms, and remedies for breach ofcontract.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5024 - PROPERTY

Minimum Credits: 4
Maximum Credits: 4
Property law, broadly defined, governs relationships among people with respect to "things." These "things" include land ("real property"), tangible objects such as a casebook ("personal property"), and intangibles such as a publisher's right to prevent others from reproducing the original content in a book ("intellectual property"). The property course examines how property rights may be limited, in situations where more than one person has rights to the same piece of property, and in situations where one owner's rights must be balanced against the rights of the owner of a separate piece ofproperty. Topics covered in the property course may include: modes of acquisition of property (e.g., Capture, find, creation), present possessory estates and future interests, co-ownership of property, marital property, landlord-tenant law, land sales, title recording systems, easements, restrictive covenants, nuisance, public land use regulation (including zoning, eminent domain, and the issue of regulatory takings), and global propertyissues.
Academic Career: Law

LAW 5038 - ENERGY LAW, POLICY & BUSINESS

Minimum Credits: 3
Maximum Credits: 3
This course covers a broad range of topics across law, policy, and business as they pertain to energy production, transmission, delivery, and consumption in the United States. Students will examine the legal/regulatory landscape and its impact on sustainable business against the policy backdrop of addressing climate change and maintaining the reliability of the U.S. energy system in the face of AI-driven demand for increased electricity supply. Given the prominence of energy production and the emerging technologies supporting that business in the local economy, lawyers practicing in and around Pittsburgh should have a solid foundation in the fundamentals of the industry - this course provides that foundation and gives students experience with critical practical skills, including policy presentation, legal advocacy, client communications, as well as contract negotiation and drafting.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5039 - MEDIA LAW

Minimum Credits: 2
Maximum Credits: 2
The course is designed to give students insight into representing media clients. The course covers representation of newspapers, television and radio stations in and out of court. The topics covered will include defense of libel and invasion of privacy suits, protection of confidential sources, access to courts and judicial records, access to legislative and executive branch proceedings and records, and government regulation, including net neutrality. Because "media" today includes the ever-expanding internet, the course will address how traditional legal concepts have been adapted to fit the reality of today's internet.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5043 - INTERNATIONAL COMMERCIAL ARBITRATION

Minimum Credits: 3
Maximum Credits: 3
This course will begin with coverage of basic aspects of the law of international commercial arbitration, including arbitral jurisdiction, arbitration procedure, choice of law, and enforcement of awards. This will include coverage of the new York arbitration convention and the

U.S. Federal arbitration act, along with a focus on the uncitral model law on international commercial arbitration and the uncitral arbitration rules. In order to provide a practical context for consideration of arbitration law and policy, we will work with the problem for the vis international arbitration moot that will become available the first week of October. After a review of the problem, we will catalogue the major issues and each student will be assigned a topic from that list for his or her course paper. We will work through all of the arbitration procedure issues as a class, using the contributions of each student to build the arguments and analysis for each side in the vis problem. We will also cover the basic substantive law issues raised under the united nations convention on contracts for the international sale of goods (CISG). Each student will also be assigned a position to be presented in a mock arbitration at the end of the semester, using the vis problem studied during the semester. The Pitt law vis moot team for the following year may be selected at the end of the semester from the J.D. students in the course, consistent with announcements made prior to the beginning of the semester.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5046 - CRIMINAL LAW

Minimum Credits: 3
Maximum Credits: 3
Traditional and contemporary doctrines of substantive criminal law are analyzed, with focus on such issues as: theories of punishment, the formal elements of criminal culpability, the theory and degrees of homicide, criminal causation, inchoate crimes, accessorial and vicarious liability, conspiracy, and defenses of excuse andjustification.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5047 - CRIMINAL PROCEDURE

Minimum Credits: 3
Maximum Credits: 3
The subject matter is supreme court decisional law and policy issues relating to the application and scope of the fourth, fifth, sixth, and fourteenth amendments to the United States constitution. Topics typically covered include: incorporation theory, right to counsel and related entitlements, the exclusionary rule, pretrial identification procedures, search and seizure law, and interrogation law. Students should gain both knowledge relating to constitutional law, which governs the permissible parameters of police conduct and defendants' rights, and an informal sense of how the criminal justice system actually operates.

LAW 5075 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 4
Maximum Credits: 4
Students in this first year course will begin to develop the art of analytical legal writing. In classes, students engage in discussions and practical exercises as they learn to analyze cases, statutes and other authorities. The course emphasizes student development in the following skills: organizing the analysis of legal issues logically and coherently; expressing written legal analysis clearly, concisely, and effectively; developing and defending legal arguments, both in writing and orally; performing basic legal research; drafting selected legal documents; and using proper citation form. Exercises and other assignments promote the students' awareness and appreciation of relevant ethical standards. Registration in this course is limited to spring term transfer students.

Grade Component: Grad LG/SU3 Basis

LAW 5082 - CLIMATE CHANGE AND THE LAW

Minimum Credits: 2
Maximum Credits: 2
This course examines the problems of climate change and how law and policy and corporate America are responding tothem. The course begins by describing what is encompassed under the current "climate change" debate; considering what science can tell us about the climate change issue, including the uncertainties in that science and the significance and role of descent from the mainstream view of the science. It then considers, given the current state of the science, how we should assess the actions that should be taken to respond to this problem. That assessment should take account mitigation vs.Adaptation. The course also considers the legal responses to the issue of climate change. This course will discuss the united nations framework convention on climate change (UNFCCC), the Kyoto protocol, and the likely future of both. This course will discuss the domestic federal legislation with regard to GHGS as well as certain regional initiatives and voluntary commercial GHG reductionschemes. This part of the course will be examining the "Boomlet" in global warming litigation in federal and state courts looking at the administrative and tort actions pending in U.S.Courts. Finally, the course will address sustainability issues for business, including green building, carbon neutral strategies, certain esoteric accounting issues, some carbon trading issues. Lectures will include voluntary and NGO-driven business initiatives (proactive approaches) as well as certain secondary effects caused by climate change that affectbusinesses.

LAW 5089 - PUBLIC HEALTH LAW

Minimum Credits: 3
Maximum Credits: 3
Public health law touches the lives and livelihoods of every person. Understanding the intent, basic structure, and methods for employing the local, state, and federal laws governing public health activities will facilitate legal practice in a variety of disciplines, including: municipal, healthcare, environmental, and judicial practice. This is a survey course, intended to introduce students to the most commonly encountered national and world public health law issues. Specific topics include: an overview of the epidemiologic principles underlying public health law; police powers; balancing public and private interests at stake; privacy and confidentiality of public health information, emergency preparedness; search, inspection, embargo and condemnation of private property; abatement of nuisances and dangerous conditions; and the major federal statutes affecting public health. In addition, material concerning world public health issues will be

presented to help students understand the community health benefit from comprehensive public health legislation. Finally, ongoing local public health law interventions will be analyzed using the basic principles introduced early in thecourse.

LAW 5090 - CONSTITUTIONAL LAW: FREEDOM OF RELIGION

Minimum Credits: 2
Maximum Credits: 2
This course will examine the Establishment and Free Exercise Clauses of the First Amendment to the United States Constitution. We will examine the history and purposes of the clauses. We will also examine the Supreme Court's doctrinal tests to analyze how the Court's theories regarding the clauses have changed over time and how to approach litigation strategy. Classroom discussion will focus on the application of these tests, the limitations of each test, and whether each test fulfills the purposes of the Religion Clauses. We will discuss majority, concurring, and dissenting opinions to flesh out the issues. Throughout the course, we will discuss how the requirements of the Establishment Clause and Free Exercise Clause can be reconciled and whether any of the current tests or theories can provide a workable solution and balance.

LAW 5105 - FEDERAL INCOME TAXATION

Minimum Credits: 4
Maximum Credits: 4
This course will introduce the basic concepts found in the internal revenue code, as interpreted by the internal revenue service and the courts. We will explore the concept of "income," and specifically consider the difference between ordinary income and capital gain, the timing of income inclusion, and the determination of a taxpayer's basis in property (which relates to the calculation of income). We will also explore exclusions and deductions that may reduce a taxpayer's income. This course has two primary goals: first, to give the students a basic familiarity with the internal revenue code so that they will be aware of tax issues that may arise in their practice, and second, to prepare students who have (or acquire) a deeper interest in tax for more advanced courses in taxation.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5110 - ESTATES AND TRUSTS

Minimum Credits: 3
Maximum Credits: 3
This course provides a survey of the gratuitous, post-mortem transfer of wealth, including the substantive law of wills and trusts. Topics in estate law include probate and non-probate property; intestacy; bars to succession; constructive trusts; mental capacity; disclaimers; will formalities; holographic wills; revocation; integration; republication; revival; incorporation by reference; acts of independent significance; payable on death provisions; and predeceased beneficiaries. Topics in trust law include formation; parties; beneficiaries; resulting trusts; constructive trusts; discretionary trusts; trust protectors; self-settled asset protection trusts; and powers of appointment.

LAW 5112 - BUSINESS ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
This elective course surveys the law of modern business organizations, including corporations, limited liability companies, and partnerships. The course covers topics such as business planning, corporate governance, fiduciary duties, shareholder liability and rights, as well as transactions in shares. The course also provides exposure to a variety of subjects, including agency, corporate finance, corporate taxation, mergers and acquisitions, and federal securities laws. No exposure to accounting, economics, or finance is necessary or presumed.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5125 - APPLIED APPELLATE ADVOCACY

Minimum Credits: 1
Maximum Credits: 1
This course is for students who will represent Pitt Law in an appellate-style external competition. The course will support and enhance both the brief-writing and oral argument aspects of competition participation. You will deepen your skills in identifying a theme for your case, crafting a compelling story, effectively teaching through your writing, and editing your own work product. You will also learn and practice oral advocacy skills with a focus on careful listening, persuasive response, and smooth transitions. Through class exercises, reflection, and self-assessment, you will prepare both for your competition and for the most exciting aspect of your legal career: continuous learning and growth.
Academic Career: Law

Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5112 or LAW 5141; PROG: School of Law (LAWSC)

LAW 5129 - FEDL COURTS & FEDL LITIGATION

Minimum Credits: 3
Maximum Credits: 3

One of the defining features of the American legal system is federalism, the division of powers between the national and the state governments. This course deals primarily with two recurring problems in civil practice that have their roots in this division of powers. First, do one or both litigants have a choice between federal and state court, and, if so, how can the litigants maximize the likelihood of securing the preferred forum? Second, when does federal law trump state law? A dominant theme of the course is the relationship between legal doctrines and the practical consequences of those doctrines in light of existing (and possible future) institutional arrangements. In particular, defendants in civil cases often prefer federal court; plaintiffs tend to prefer state court. But the rules and doctrines that determine which side gets its preferred forum will often be invisible to the average lawyer. One purpose of this course is to alert students to the pitfalls that can trap the unwary; here, more than in other areas of the law, a little learning can be a dangerous thing. Representative topics include: the prerequisites for Supreme Court review of state-court judgments; elements of federal question jurisdiction; removal of cases from state to federal court; and the power of the federal courts to apply rules of law different from those applied in state courts. Attention will be given to litigation strategy (especially the choice of forum) as well as to critical analysis of the doctrines and statutes.

LAW 5135 - COMMERCIALIZING NEW TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
The key challenge addressed in this joint project course between the Katz Business School and the Law School is how to commercialize new technologies. Commercialization is the process of transforming an invention (i.e. A new technique or artifact that performs a useful function) into an innovation (i.e. A product or service that creates value in a specific use). Whether a new technology originates in a university, in an established company, or with an individual inventor, several issues must be addressed in order to determine whether it is worth investing in further, and to decide how the technology can be commercialized for maximum long-term value. We will focus on four types of analyses as input to a commercialization strategy: (i) technology analysis, (ii) market analysis, (iii) competitive assessment, and (iii) business model evaluation. For each, you will be provided with one or two practical articles, which outline an analytical tool or approach, and we will discuss their application to one of the cases. Although we'll walk through these steps in the order listed, they will need to be conducted iteratively (e.g. As you learn more about market opportunities you may wish to revisit your initial assessment of the technology's core elements). Throughout the course, law students will have the opportunity to assist the team in assessing legal matters that impact commercialization (from intellectual property matters, to regulatory landscape impacts, to alliance considerations) while also gaining an understanding of key business goals, strategies and tactics.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5138 - FEDERAL APPELLATE ADVOCACY

Minimum Credits: 3
Maximum Credits: 3
This course in Federal Appellate Advocacy will select a recent case on appeal from a Circuit Court, where Certiorari has been granted by the U.S. Supreme Court. There will be an emphasis in the course on the Federal Rules of Appellate Procedure, an examination of jurisdiction and standards of review. Students will be paired up to write a brief, present oral argument, decide the case and write an opinion. Students who register for this course will automatically be registered for Pitt Law's Appellate Advocacy competition. By presenting the required oral argument for class, students will also participate in the first round of the competition. Participation after the first round of the competition is not required for the course, though it is encouraged. There may be an opportunity to view oral argument before the Third Circuit in Pittsburgh and arrangements will be made to allow students to visit the U.S. Supreme Court to hear oral argument on the selected case.

LAW 5139 - TRANSIT LAW

Minimum Credits: 2
Maximum Credits: 2
This is a course on the law and legal principles used to create, operate and maintain mass transportation infrastructure. The focus is on the legal functions and processes used in planning and operating mass transit and the rules and alternatives for spending government appropriated funds. This course gives an overview of regulatory, procurement and grant practice. Also covered are public/private collaboration as well as private sector participation in government assisted or sponsored projects, including the relationships between and among the federal government, state and local governments and the private sector. This course provides an introduction to basic government contracts and regulatory practice in the context of mass transportation.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5142 - LEGAL WRITING FOR THE TRANSACTIONAL LAWYER

Minimum Credits: 2
Maximum Credits: 2
This course will introduce students to the craft of drafting transactional agreements. This course is meant to fill a void that currently exists between formal law school education and actual work as a practicing attorney. Oftentimes, the first experience that young transactional lawyers have with drafting agreements follows a familiar pattern, the young lawyer is given a form as a starting point, then asked to make changes to the form to "draft" the needed document. The young lawyer may successfully edit the party names and dates, but usually has little understanding of the rest of the agreement or even the basic business terms that the agreement must memorialize. Unfortunately, the realities of modern law practice may preclude inexperienced drafters from taking the time to properly hone their craft. This course will prepare students for entering a transactional practice by allowing students to practice drafting and editing agreements, examine strategies for avoiding ambiguities by crafting precise language, and work in a fast paced, team-oriented environment.

LAW 5145 - SECTION 1983 LITIGATION & PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This course involves --42 U.S.C. §1983-- the federal statute unique in providing for a damages cause of action against state actors for the violation of citizens' constitutional rights. The cases covered are often ones "literally ripped from today's headlines" -- fatal police shootings, beating deaths of persons in custody, retaliation against whistleblowers and citizens engaged in political protest, a woman's right to choose-to mention just a few. While this "Reconstruction Era " statute lay dormant for nearly 100 years, it is now the source of thousands of cases litigated yearly in federal courts throughout the United States. Many end up on the Supreme Court docket. Thus, what is a constitutional right and how enforced-- is constantly in flux-- challenging the legal acumen of not only constitutional scholars but law students as well. Given the flood of reported federal actors allegedly violating citizens' constitutional rights, the course will also provide an all-important in-depth analysis of how to litigate damages claims against those agents under Bivens v. Six Unknown Named Agents, the Federal Tort Claims Act and pursuant to applicable state statutes. This course is critical to law students seeking a working knowledge of how to successfully bring or defend against constitutional rights claims for damages and particularly useful to students interested in judicial clerkships, employment with a local, state, or federal government or who aspire to a career in the increasingly lucrative role as a plaintiff's constitutional rights lawyer.

LAW 5146 - LANDLORD TENANT LAW

Minimum Credits: 3
Maximum Credits: 3

This course will examine issues relating primarily to the relationship between residential landlords and tenants, including the creation of the tenancy, the rights and duties of the parties, interpretation and application of critical lease provisions, and the framework for prosecuting and defending various types of eviction proceedings based upon a violation of law or breach of lease. Other topics may include discrimination in rental housing, rent regulation, public housing and housing-related public policy initiatives. There will be discussion and analysis of federal, state and local statutory authority and recent case law developments. Students will also have an opportunity to hear from lawyers and judges to get their "real-world" perspective on landlord-tenant practice.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5148 - THE LAWS OF INTIMACY

Minimum Credits: 2
Maximum Credits: 2
So much throughout the history of our nation, federal, state and local governments have attempted in various ways to regulate our society's most intimate relationships and decisions. Challenges to laws regulating marriage, sexual conduct, reproduction, health and other very personal decisions permeate our country's jurisprudence. These "laws of intimacy," provide a historical window through which one can view the evolution of some of America's greatest and most enduring societal and civil rights conflicts. This course will provide students with an overview of the history underlying various "laws of intimacy" and the legal principles that have come to shape the debates concerning these issues. Students will apply these legal principles in their own analyses of continued efforts to regulate the most personal of human behaviors and decision-making.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5149 - LAW OF ARMED CONFLICT

Minimum Credits: 2
Maximum Credits: 2
The Law of Armed Conflict (LOAC), also known as International Humanitarian Law (IHL), is an area of public international law. It is responsible for regulating the conduct of armed hostilities, and balances the desire of states to prevent unnecessary suffering and destruction on one hand with the need to permit the effective waging of battle on the other. LOAC makes special provision for the protection of civilians, prisoners of war, the wounded, sick, and shipwrecked. LOAC applies to international armed conflicts (conflicts between states) and to non-international armed conflicts (conflicts between states and certain non-state groups). This course will explore: how conflicts are characterized (as IACs/NIACs or purely "domestic"actions); the main rules underlying the conduct of hostilities; and how those rules are enforced. Real-world examples and case studies will be used to elucidate theory.
Academic Career: Law

LAW 5151 - HUMAN DIGNITY RIGHTS UNDER LAW

Minimum Credits: 1
Maximum Credits: 1
This class is an introduction to the substantive law of dignity rights, a new and important emerging field of law in the U.S. and throughout the world. Dignity is the root idea that every person, everywhere has human dignity and the human right to have their dignity respected and protected under law. Dignity is a foundational value and a legal right in international law (e.g. as reflected by the 1948 Universal Declaration of Human Rights), regional law (e.g., the American Declaration of Human Rights), in nearly 160 domestic constitutions throughout the world, and in thousands of juridical opinions spanning the globe. Dignity is also an emerging constitutional value in the United States, reflected in jurisprudence regarding equality, same sex marriage, reproductive rights, capital punishment, substantive and procedural due process, and climate crisis. Moreover, in August 2019 the 400,000-member American Bar Association adopted the advancement of human dignity as a core function and ingredient of the rule of law in the U.S. and around the globe. This course would be a rare opportunity to learn more about this important new area of law.

LAW 5152 - NEGOTIATION SKILLS (BUSINESS)

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to provide students with an understanding of current negotiation theory and practice. Students will study negotiation theories, research and techniques. As a result of taking this course, students will have an understanding of how to negotiate effectively in transactions, as managers, and to build effective teams. The materials for this course will consist of readings, negotiation scenarios, and real-life examples. Students will engage in skill-building exercises, actual negotiations, classroom and online discussions, individual presentations, self-reflection, self-assessment, giving and receiving feedback, and close reading of assigned texts and other materials. Students will have an opportunity to explore negotiation theory, practice different styles and techniques, and develop their own strategic approaches to negotiations.

LAW 5153 - GENDER LAW

Minimum Credits: 3
Maximum Credits: 3
This course will study various perspectives on theory and doctrine relating to gender in a number of different substantive areas of law. The course objectives are to: (1) integrate theory and practice in the study of law; (2) better understand how law both reflects and shapes understandings of gender in society; and (3) develop students' writing and analytical skills in addressing practical legal problems in areas relevant to gender and the law. The course is organized around several theoretical models of gender and feminism rather than by traditional subject matter categories. Within this framework, we will examine a number of different subject matter areas of law, including employment, education, athletics, work/family conflicts, the legal profession, sexual harassment, domestic violence, and the regulation of gender identity.

LAW 5156 - UNDERSTANDING COMMON BUSINESS CONTRACTS

Minimum Credits: 2
Maximum Credits: 2
Most 1L contracts courses give little attention to the structuring of actual contracts. While this is commonly remedied in upper level courses, even there the major focus tends to be on larger corporate deals (mergers and acquisitions, construction contracts, credit and financing arrangements, etc.). In fact, a large number of contracts in the world that lawyers negotiate and draft are smaller in dollar value, and yet extraordinarily important to understand and master. This class will introduce you to these contracts, and show you how they are structured and drafted. In so doing, we will discuss terms and conditions that are frequently subject to negotiation. We will also discuss different drafting alternatives to resolve such issues.
Academic Career: Law

LAW 5157 - HUMAN SKILLS FOR LAWYERS

Minimum Credits: 2
Maximum Credits: 2
In this course students will learn techniques and participate in exercises drawn from improvisational theater to develop and refine several core "human" skills that are essential to effective lawyering. The course will focus on several core skill sets, including listening nonjudgmentally, empathy, communicating with confidence and authenticity, adapting to changing information and circumstances, resilience, and collaborating with others. After learning the fundamental principles underlying improvisational performance, students will participate in improv exercises that target core skill sets in the context of three fundamental lawyering tasks: interviewing and interacting with clients, negotiating with other counsel, and arguing in court. Students will write a series of reflection papers based on assigned readings, will deliver one solo presentation, and will work on a group project and presentation. Regular attendance and full participation are essential.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5159 - STATE CONSTITUTIONAL LAW

Minimum Credits: 2
Maximum Credits: 2
This course explores the nature and significance of state constitutional law. We begin with a brief examination of the nature of our States and the historical role of their constitutions. Then we will consider the rights protected by the state constitutions and compare them to those protected by the federal constitution. This gives us the occasion to take up the most active debate in state constitutional law over the last several decades: the responsibilities of state courts when interpreting state constitutional provisions that live in the shadow of their counterparts in the federal Constitution, especially the weight to be given to the U.S. Supreme Court's interpretations of the federal provisions. Next we compare the constitutional structures of the state governments, both to one another and to the federal government. We finish up by covering issues of popular control over state governments, including the means of amending state constitutions and the methods for selecting state judges. While the course will provide a sampling of state constitutions nationwide, special attention will be paid to the Constitution of Pennsylvania.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5160 - THE LAW OF NIL DEALS

Minimum Credits: 2
Maximum Credits: 2
This course exposes students to the legal issues faced by college athletes engaging in name, image, and likeness ("NIL") deals. Students will learn about corporate, contract, transactional, and intellectual property law. Students will engage in case studies and hear from industry experts, including agents, athletic department administrators, and potentially college athletes/retired college athletes. The course is experiential, interdisciplinary and immersive. Experiential assignments will be simulation(s) including "client" interviews, negotiation exercises on behalf of the "client," and drafting and redlining a contract for the "client." Interdisciplinary classroom discussions will focus on creative, business and creative issues encountered in the entertainment and sports industries. Immersive experiences include meetings with entertainment professionals and their lawyers and legal assignments for entertainment organizations.

LAW 5161 - STARTUP LAW & VENTURE CAPITAL

Minimum Credits: 2
Maximum Credits: 2
This course addresses financial and legal challenges facing early-stage companies. In this way, it complements, and is distinct from, the existing course Business Planning, Entrepreneurship & Technology, which covers the life of a company from inception to public offering. The Start Up Law course will begin by examining various considerations involved with the formation of a company that anticipates seeking venture capital, including but not limited to corporate governance, restricted stock and stock incentive plans. The course then will shift to various aspects of venture capital, starting with seed financings through to preferred stock priced rounds; included within this examination will be an emphasis on how to read and build out pro forma capitalization tables, translating term sheets into long-form agreements,

negotiation tactics, and how to handle activist and angel investors. The course's primary form of assessment will be a final examination at the end of the semester based on a hypothetical growth stage company that seeks to raise capital. By the end of the course students will have encountered material that will advance all six of the Law School's Learning Outcomes. Specifically, students will be exposed to substantive law concerning early-stage companies and venture capital; as a result, they will be able to identify and articulate various legal issues surrounding these companies, as well as formulate and apply various legal rules and strategies. Students also will engage in problem solving and learn how to communicate their ideas in negotiation settings, with an awareness of the relevant standards for professionalism and ethics. Finally, students will develop competencies in numerous other professional skills, including but not limited to collaboration, document drafting, interpersonal communication, and self-evaluation.
Academic Career: Law
Course Component: Lecture

LAW 5164 - MARITIME LAW

Minimum Credits: 2
Maximum Credits: 2
The Pittsburgh region - home to Allegheny, Monongahela, and Ohio Rivers - is one of the busiest inland ports and waterways in the U.S. Each day, commercial towboats with their barges full of commodities and recreational boaters make their way up and down the three rivers, which are made navigable through a series of locks and dams. This course will introduce students to the unique law that applies to the activities on our local rivers. The topics addressed will include (i) the substantive law involving injuries and death of maritime workers and recreational boaters, property damage, limitation of liability, maritime liens, and salvage (ii) the basic requirements for admiralty jurisdiction over maritime claims, as admiralty jurisdiction does not apply to every accident occurring on a body of water.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5165 - COMPARATIVE LAW: THE US AND EUROPEAN UNION

Minimum Credits: 3
Maximum Credits: 3
Europe and the United States have shared close bonds for centuries. Russia's invasion of Ukraine is remaking the alliance. Other trends, such as competing with China in technology and developing green energy sources, were already moving the two allies toward greater cooperation. A basic understanding of legal differences between the US and EU will reward the problem-solving powers of future leaders. Indeed, the EU always offers an irresistible subject for lawyers as the most advanced legal experiment ever achieved, whose members have created institutions which control sovereign governments. This is a comparative law course that introduces students to selected areas of legal differences between the EU and US. The course begins with the key to unlocking its value, namely instruction in how to benefit most from comparative study. A brief introduction to EU law is provided, followed by examination of selected issues currently occupying the attention of business, government, and academia: privacy and data protection; trade and dispute resolution; and employment. Completion of the course should leave the student better equipped to seek opportunities in fields touching these issues.

Grade Component: Grad LG/SU3 Basis

LAW 5168 - CORPORATE & WHITE COLLAR CRIME

Minimum Credits: 3
Maximum Credits: 3
More today than ever before, the civil practitioner must be equipped with a working knowledge of issues in federal criminal law, specifically white collar crime. White collar crime has been called the growth industry of the next century. Its study reveals a unique interplay between ethics, policy, and enforcement. While it is based on traditional criminal law principles, it builds upon a complex interplay of institutional and individual responsibility. This course will examine the major federal statutes under which white collar crimes are prosecuted, including conspiracy, mail and wire fraud, Rico, criminal tax violations, bank fraud, currency transaction reporting requirements, money laundering, perjury, and false statements. Additional attention will be given to immunity, grand jury and penalties including restitution and forfeitures.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5169 - STATE & LOCAL GOVERNMENT

Minimum Credits: 2
Maximum Credits: 2
This survey course will explore the nature and significance of state and local government law, topics that often have lived in the shadow of federal government law, but have become increasingly relevant in recent years, especially given the increasing prominence of states like Pennsylvania on the national political stage. The course will examine the role of state legislatures and courts in protecting liberty and property rights under their own constitutions, and most notably whether they should construe these guarantees to offer protections that the federal courts have not provided in construing the federal constitution. Relevant examples include litigation involving voting rights and school funding as well as discussions involving such diverse topics as reproductive rights, property takings, and the free exercise of religion, among others. We also will consider the amendment procedures of state constitutions, the election of state court judges, and other structural issues. This course also will take a look at the law governing the powers and duties of local governments, mainly municipal entities such as cities, boroughs and townships (towns). The course will study the sources of municipal powers, the limits on those powers,

the relationship between municipalities and the state including the relationship between state and local law, and various examples of the relationship between the municipality and the state including home rule, as well as some issues in municipal finance and zoning power. Where possible, we also will consider the intersection of state and local government law and important current events both locally and nationally.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5170 - ELECTION LAW

Minimum Credits: 3
Maximum Credits: 3
Election law is a hot topic in the U.S. today. Opinions about what our federal, state and local election laws require -- and should require -- are sharply divided. This course introduces key issues in U.S. election law in historical, political and (to a limited extent) international contexts. Topics include voting qualifications and limits on voting (e.g., residency requirements, poll taxes and age qualifications), how race, gender and property have shaped voting rights and participation, the highly decentralized and diverse structures of U.S. election administration, how concerns and claims of fraud shape election law, districting and the concept of vote dilution, partisan gerrymandering, and limits on campaign spending and speech. We will look at some of the dramatic legal conflicts that emerged around the 2020 presidential election over election structures like voting by mail, extended voting time periods, and ballot counting procedures, and over the power of state legislatures, state courts and federal courts to shape voting structures and ratify or undermine election results. And we will consider how current concerns about election integrity and restricted voting access at once raise new legal issues and connect with longstanding legal and political schisms. This is an introductory course that surveys a wide range of election law issues and structures. We will do one in-depth case study, however, of laws that ban voting based on criminal conviction. Felony voting bans highlight the sharp differences in voting rights among different states, offer a telling example of the way U.S. voting qualifications interact with racial inequality, and reveal how election law on the books does not entirely define election administration or the bounds of political participation.

LAW 5171 - PRESIDENTIAL POWER

Minimum Credits: 2
Maximum Credits: 2
This course will use contemporary legal events to explore the question of what it is legal and not legal for a President to do. In this age of an explosion in Executive Orders, this course will delve deeper into Separation of Powers topics students may have begun to explore in Admin Law, Con Law, and/or Leg-Reg. We will cover executive orders, removal/appointment powers, independent agencies, and the President's powers vis-a-vis congressionally authorized (mandated?) spending. We will use contemporary cases generated from President Trump's first 100 days and prior Presidents to explore the developing legal understanding of what it is permissible for a President/Executive to do and how.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5172 - NON-PROFIT ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
This course provides a comprehensive introduction to the law governing nonprofit organizations, with emphasis on both state organizational law and federal tax-exempt status. Students will examine the formation, governance, and dissolution of nonprofit entities under state law, including nonprofit corporations, unincorporated associations, and charitable trusts. Topics include the roles and fiduciary duties of directors, officers, and members; constitutional documents; and the evolving standards of nonprofit accountability. A substantial portion of the course is devoted to federal income tax exemption under the Internal Revenue Code, with particular focus on section 501(c)(3) organizations. Students will analyze the requirements for obtaining and maintaining tax-exempt status, the distinctions among public charities, private foundations, and supporting organizations, and the rules governing private foundation excise taxes. The course also

surveys exemptions avail-able to other categories of nonprofit organizations, including social welfare organizations under section 501(c)(4), trade associations under section 501(c)(6), and other common exempt categories. By the end of the course, students will be equipped to advise clients on forming and structuring nonprofit entities, applying for tax-exempt status, and navigating ongoing compliance obligations. No prerequisite beyond the first-year curriculum is required.

LAW 5188 - GOVERNANCE OF HEALTHCARE ORGANIZATIONS

Minimum Credits: 2
Maximum Credits: 2
Leadership of healthcare organizations requires an understanding of organization governance processes. This experiential course will simulate meetings of healthcare organization boards of directors and medical executive committees. Each class meeting will include agendas, supporting materials, facilitated discussion, and simulated decision-making. Topics will include organizational structures, governance design principles, leadership responsibilities, governance documents/instruments, community collaboration, confidentiality, AI and other healthcare technologies, quality and performance metrics, compliance, fiscal oversight, human resources, enterprise risk management, quality control, discrimination and healthcare disparities, tax-exempt organizations, and professional scope of practice.

Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 5189 - HOW LAWYERS MADE AMERICA

Minimum Credits: 3
Maximum Credits: 3
This course examines the role of American lawyers as nation-builders from colonization to the present day. It explores not only how lawyers crafted the domestic legal and constitutional structure, but also how they shaped American settlement, politics, business, letters, education, rhetoric, race relations, immigration, communication, diplomacy, war-waging and peace-making over more than four centuries, allowing lawyers (not businessmen, not doctors, not professors, not clergy, not engineers) to largely define what it means to be an American. It considers how ordinary citizens and members of other professional groups have reacted to lawyers in their many social capacities, and it assesses how embracing and occasionally rejecting their self-appointed status as "essential Americans" has affected lawyers themselves. It concludes with an investigation of where lawyers stand in today's America, assessing whether they have succeeded or failed in their larger ambitions to build and to lead, and how they might better serve their country and themselves in uncertain times.

LAW 5198 - ANIMAL LAW

Minimum Credits: 2
Maximum Credits: 2
This course will examine the rapidly-growing and diverse field of animal law. Topics include the legal status of various non-human animal species, animals as property, animals in agriculture and food systems, animals in entertainment, animal protection laws, wildlife and endangered species, service animals, veterinary malpractice, and more. Applicable legal principles involve administrative law, contracts, torts, constitutional law, and civil and criminal procedure. Recent developments and current events in animal law will be discussed, including efforts to create and reform animal laws and the challenges faced when litigating and legislating on behalf of animals.

LAW 5200 - INTRODUCTION TO ACCOUNTING FOR LAWYERS

Minimum Credits: 1
Maximum Credits: 1
Introductory accounting for lawyers will provide students with a fundamental understanding of the principles underlying financial accounting. Additionally, students will gain an understanding of the development and analysis of financial statements including the balance sheet, income statement and statement of cash flow. Other topics will include a discussion of financial analysis and financial theory. The course is intended to equip students with the basic mechanics to review and analyze an entity's financial statements, identify significant issues and to form a general familiarity with financial statements to aid in preparing for litigation or assisting with business transactions.
Academic Career: Law

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROGRAM: School of Law

LAW 5201 - ADMINISTRATIVE LAW

Minimum Credits: 3
Maximum Credits: 3
It is next to impossible to practice law today without dealing with administrative agencies, federal or state, or the law they create. Indeed, more cases are adjudicated in administrative bodies than in the courts. The substantive law that is created and implemented by agencies is the subject matter of individual courses such as environmental law, securities regulation, taxation, and banking. It is the procedural/structural law that governs the creation and implementation of substantive law by agencies that is the focus of administrative law. We will discuss the different types of functions undertaken by agencies, for example, rulemaking and adjudication in all its forms and how those disparate functions determine the appropriate structure of decision-making. At the federal level, where we will focus our attention, the procedures that apply originate in a variety of sources, including the United States constitution, the administrative procedure act and other statutes, and agency rules. There is often a complex interplay among these sources of law, which will be one of the topics we will explore. Another is the relationship of agencies to the chief executive and the legislature, an area that implicates important constitutional doctrines, statutes, and executive orders. Finally, we will spend considerable time on the availability, timing, and scope of judicial review of agency action, including the doctrines of standing, ripeness, exhaustion of administrative remedies, and judicial deference to agency findings of fact, interpretations of law, and exercises of discretionary power.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5204 - COLONIALISM & INTERNATIONAL LAW

Minimum Credits: 3
Maximum Credits: 3
This seminar begins by exploring justifications for colonialism in international law. The course then turns to modern international law - students will be able to identify and analyze legacies of colonialism, the development of a racialized hierarchy of states, and the use of international law to produce, reproduce, and justify those hierarchies. Students will work on a major research paper throughout the course, and at the end of the semester will give a presentation on their research for the class.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5207 - ANTITRUST

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to the law of antitrust. The course examines practices by which firms allegedly eliminate competition among themselves (e.g., Cartels, conspiracies, horizontal mergers), as well as exclude actual or potential competition from their markets (e.g., Boycotts, price discrimination, tying arrangements, vertical integration). The course will cover the Clayton, Sherman, and Robinson-Patman acts. No exposure to corporate/securities law, economics, or finance is necessary or presumed.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5210 - PATENT LAW

Minimum Credits: 2
Maximum Credits: 2
For over two hundred years the united states patent system has stimulated innovation by conveying time-limited exclusionary rights to inventors who adequately disclose their novel and nonobvious inventions to the public. Throughout this time, technological advancements in various industries have repeatedly confronted the patent system with fascinating policy and doctrinal challenges. In a constant effort to keep up with the pace of innovation and ensure that the patent system fulfills its constitutional purpose to 'promote the progress of . . . Useful arts,' patent case law has become one of the most rapidly evolving and adapting areas of American law. Through study of judicial decisions and statutory provisions, this course will examine the substantive legal doctrine and policy underlying two primary aspects of united states patent law: (1) the requirements for obtaining a patent; and (2) the means by which an issued patent is enforced (and its validity challenged). Specific topics include patentable subject matter (including computer-implemented inventions and biotechnology), novelty, no obviousness, utility, loss of right, disclosure requirements, patent claim interpretation, literal infringement, the doctrine of equivalents, prosecution history estoppel, defenses to patent infringement resulting in invalidity and/or unenforceability, injunctive relief, damages, and the unique role of the united states court of appeals for the federal circuit in shaping patent law.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5212 - BUSINESS PLANNING, ENTREPRENEURSHIP AND TECHNOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will address key legal and business issues faced by entrepreneurs when establishing a commercial enterprise. Specifically it will address the protection and development of ideas, the commercialization of technology, and the legal and business aspects involved in forming, funding, operating, and managing the emerging business enterprise. The course will be taught from a business planning perspective. Through participation in the course students will be exposed to advanced business law concepts applicable to emerging companies in the business, technology, and medical fields.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5112 or LAW 5141; PROG: School of Law (LAWSC)

LAW 5213 - CONFLICT OF LAWS

Minimum Credits: 3
Maximum Credits: 3
Disputes between parties from different states or countries and disputes having contacts with multiple jurisdictions raise a host of challenging legal questions, including: (1) which jurisdiction's law will govern the dispute; (2) whether and in what circumstances a judgment rendered in one state or country will be recognized and enforced in other jurisdictions; and (3) how courts should make these determinations. State laws, the federal constitution, and international and foreign law all play a role in deciding these issues, which can have a profound impact on the ultimate resolution of the controversy.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5216 - EMPLOYMENT DISCRIMINATION

Minimum Credits: 3
Maximum Credits: 3
This course will examine federal statutory law as it applies to employment discrimination, with an emphasis on discrimination based on race, sex, color, ethnicity, national origin, religion and age. The most prominent statutes in this area are title vii of the civil rights act of 1964, the age discrimination in employment act, and an older civil rights statute from the reconstruction era, 42 U.S.C. 1981. The course will explore the substantive meanings of "discrimination" under these acts, the models of proof for establishing a claim, the theoretical underpinnings of the statutes, and some of the procedural and remedial issues relevant to employment discriminationlaw.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5218 - WHITE COLLAR CRIMES

Minimum Credits: 2
Maximum Credits: 2
This course will examine the prosecution and defense of federal white collar crimes, including mail and wire fraud, Rico, criminal tax violations, bank fraud, health care fraud, perjury, obstruction and false statements. Close examination will also be given to the law enforcement techniques used by federal prosecutors in white collar cases, including the grand jury, immunity, search warrants and subpoenas. The fifth amendment self-incrimination privilege and the attorney-client privilege will also be studied. Emphasis will be given to providing students with the background and tools to reason through practical problems faced by white collar practitioners.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5219 - FAMILY LAW

Minimum Credits: 3
Maximum Credits: 3
An introduction to the conceptual and practical issues involved in the modern practice of family law. Topics include: the legal definition of marriage, of family; the rights, powers, duties and obligations among family members; the extent and means of state involvement in the family's conduct of its own affairs; dissolution of the family, and the continuing obligations among family members thereafter; problems of jurisdiction and choice of law.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5221 - JURISPRUDENCE

Minimum Credits: 3
Maximum Credits: 3
"Jurisprudence -- philosophy of law -- explores the nature of law and its role in society. This course tackles classic jurisprudential questions, focusing around what is known as "theory of adjudication" - the theory of how judges actually do decide cases and how they should decide them. Do legal rules and doctrines really constrain legal decision making (and if so, how)? What makes something a legal rule? Is there some necessary connection between law and morality (perhaps inherent in the concept of rights)? Is judicial decision-making really different from political decision-making (and if so, how)? Most of our readings will be from twentieth- and twenty-first century writers: legal positivists (e.g., H.L.A. Hart), natural law theorists (e.g., Ronald Dworkin), legal realists (e.g., Felix Cohen and Karl Llewellyn), and critical theorists (e.g., Duncan Kennedy and Patricia Williams). But we will also dip into some older classics, e.g., William Blackstone and Jeremy Bentham. Some of the reading will be challenging, but no prior experience with either jurisprudence or philosophy will be assumed. What will be useful is the knowledge of legal doctrine and decision making that you've acquired in law school so far. We will look back at some of the classic cases that you read in con law, civil procedure, and property and see how they reflect different jurisprudential approaches. In fact, at some point in the semester you will probably find yourself thinking something like, "So that's what Professor X was trying to get at when we read that case"! We will also look at how jurisprudence informs current political and social issues in legal decision making. For instance, consider those driverless cars you see all around Oakland. Besides being programmed to avoid collisions, they must be instructed to follow traffic laws. Exactly what should those instructions entail? When you have finished this course you won't be writing briefs that say, "you should rule for me because the legal positivists say so." But in another sense jurisprudence is of immense practical use: Jurisprudence brings to the surface conflicting assumptions lurking within different legal arguments and conclusions. When you learn to recognize those ideas, you understand something about how legal decision making operates on a deep level, and that makes you a better lawyer."

LAW 5223 - ADVANCED TRIAL EVIDENCE

Minimum Credits: 2
Maximum Credits: 2
This course will focus on evidentiary issues that arise frequently in trials. Each week a vignette or series of vignettes, which address common trial evidence situations, will be assigned. The vignettes will be based on case files, in order to provide continuity throughout the course and for students to see the impact of evidentiary rulings on continuing cases. Each student will be responsible for weekly written assignments, which may include motions inlimine or outlines of direct and/or cross-examination of the witness(es) for vignettes(s). Each student will also be responsible for preparing to offer timely and well-stated objections to the evidence sought to be introduced. Students will be required to understand the rationale for both the introduction of evidence and the objections thereto.

LAW 5225 - INTERNATIONAL BUSINESS TRANSACTIONS

Minimum Credits: 3
Maximum Credits: 3
This course analyzes basic international business transactions and the effects of U.S. Law, specific foreign law, and treaties on the conduct of the parties involved. The course covers issues of commercial law, regulation of cross-border transactions, dispute resolution, tax considerations, and antitrust law. Although a basic understanding of each of the areas of the law in the domestic context is helpful, there are no course prerequisites. Students are expected to develop an understanding of the U.S. Laws applicable to private international transactions and an awareness of the risks inherent in doing business in or with other countries and theirnationals.

LAW 5226 - INTERNATIONAL LAW

Minimum Credits: 3
Maximum Credits: 3
This course explores how international law regulates, orattempts to regulate, relations between states, and between states and individuals. It therefore examines both classical and contemporary topics such as the sources of international law, rights and responsibilities of states, jurisdiction, the incorporation of international law into domestic law, individuals as bearers of rights and obligations at the international level (in particular human rights law and humanitarian law), the law of treaties, the law on the use of force and the role of the united nations and the international court of justice in the peaceful settlement of international disputes. Several specific topics will be examined to illustrate the increasing impact of international law on domestic legal practice, and the influence of the United States on the development of modern international law.

LAW 5232 - LAW & LEGAL PROCESS IN LATIN AMERICA

Minimum Credits: 2
Maximum Credits: 2
This is a two-credit introduction to the legal tradition, juridical institutions, and legal processes of the countries of Latin America. The first several weeks of the course will be devoted to the Roman origin of the Civil Law tradition (of which, of course, the countries of Latin America are part), the development of that tradition in Medieval Europe (with special attention to Spain), the growth of legal and governmental institutions in Spain's American colonies, and the influence of the U.S. and the French Revolutions and of German Legal Science on the newly-independent countries of Latin America and on the present-day legal systems of those countries. As the course proceeds, the students will be introduced to procedural devices created in Brazil, Mexico, and Argentina to adjust portions of those countries' Civil Law systems to the selective introduction of Anglo-American constitutional concepts. Finally, some time will be allocated for study and discussion of relevant special interests of students enrolled in the course.

LAW 5240 - PENNSYLVANIA PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This course covers the Pennsylvania rules of civil procedure and the rules of civil procedure for district justices. The course is intended to develop the student's understanding of the rules of procedure which govern civil litigation in the state courts of Pennsylvania, the manner in which claims and defenses are raised, the forms utilized to raise these claims and defenses, and petition, motion and discovery practice, and will focus on the procedural tactics and strategies that are used to advance a client's position.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5242 - PATENT LAW PRACTICE

Minimum Credits: 2
Maximum Credits: 2
A course designed for students with a special interest in patent law, and for those students preparing to take the patent bar examination. Students are taught claim drafting, rules of practice and procedure followed by the United States patent and trademark office, how to draft patent documents and how towrite a patentability search report.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5246 - SECURITIES REGULATION

Minimum Credits: 3
Maximum Credits: 3
This elective course surveys the legal and regulatory framework for publicly traded securities. The course covers the securities act of 1933, the securities exchange act of 1934, and state "blue sky" laws. This course focuses on procedural and substantive aspects of registration, distribution, and trading of securities. No exposure to accounting, economics, or finance is necessary or presumed. Students are not permitted to take this course unless they already have taken business organizations.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5247 - ENVIRONMENTAL POLICY, POLITICS, AND PRACTICE

Minimum Credits: 2
Maximum Credits: 2
In many areas of law, the daily practice is not black-letter analysis and trial practice, but interdisciplinary collaboration and policy development. This is particularly true of environmental law, which combines legal issues in the common law, statutory frameworks, administrative law, private governance, constitutional law, and other legal areas along with scientific understanding, public communications, political persuasion, and ethics. Focusing on environmental issues, this course will provide students with a chance to explore interdisciplinary policy practice through an open-ended semester-long simulation. The simulation is paired with a regular discussion to consider a variety of issues in environmental law and policy.
Academic Career: Law

Course Attributes: Global Studies

LAW 5251 - BIOTECHNOLOGY LAW

Minimum Credits: 2
Maximum Credits: 2
Virtually every aspect of our lives is touched by biotechnology, so this class is designed as an introduction to many of the critical issues related to biotech and society. Specific topics include genetically modified organisms (Franken foods), patenting life, vaccination laws, human and animal testing, bioterrorism, biological weapons laws, bio-prospecting, pharmaceutical pricing, FDA laws, as well as scientific (and investor) fraud in biotech. The class also focuses on the policy relationships between law and public health, as well as related underlying economic incentives that can create tension in the life sciences. The class includes a number of guest speakers from industry including biotech licensing professionals and an FDA practice attorney. This class will be useful for anyone planning to practice law related to the life sciences including patent law. The issues are presented in a non-technical manner so the class is accessible to anyone interested in the field. It may be helpful to have exposure to patent law in general but it is notrequired.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5258 - CAPITAL PUNISHMENT, THEORY AND PRACTICE

Minimum Credits: 2
Maximum Credits: 2
There are few areas of law whose jurisprudence has been fully developed within a period of the last forty years. Eighth amendment jurisprudence relative to the death penalty in the United States is such an area of law. We will explore how the United States supreme court has approached the development of this jurisprudence, and include within our examination some elements of due process as well, to see how the court, out of whole cloth, has created a practical jurisprudence for analyzing the constitutionality of capital punishment, and why the court was motivated to do so. This jurisprudence provides students with a window to the tug between justices who view the constitution as a 'living' document that adapts to the times and the society, and those who view the constitution as a static outline of the powers of respective governments within a federal system to be understood as the framers of the document would have understood it. Additionally, this jurisprudence provides students with a window to the strengths and weaknesses of a federal system in which the interplay between the power of the federal government and the power of the state governments must be understood and respected, even within the context of a constitutional jurisprudence that recognizes the imperative of the supremacy clause.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5259 - ESTATE AND GIFT TAX

Minimum Credits: 3
Maximum Credits: 3
This course involves a study of the federal transfer taxes imposed on gifts and estates. With respect to the gift tax, we will explore the transfers that are subject to tax as well as the annual exclusion and gifts to minors. With respect to the estate tax, we will explore the transfers (both during life and at death) that are included in a decedent's "gross estate," as well as certain of the deductions that are available to reduce the size of the gross estate (and, ultimately, the estate taxowed).
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5260 - INTELLECTUAL PROPERTY

Minimum Credits: 3
Maximum Credits: 3
In the information age, intellectual property (IP) law has taken on even greater significance. IP law is designed to encourage the production of certain forms of information by granting property rights to the producers, enabling them to appropriate the value of the information they produce. In this course, we survey state intellectual property law (e.g., Unfair competition and trade secrets) as well as federal intellectual property law including trademark, patent and copyright. We examine some of the ramifications of recent technological developments on intellectual property law and some of the problems of international protection of intellectualproperty.

LAW 5265 - LABOR LAW: PRIVATE SECTOR

Minimum Credits: 2
Maximum Credits: 2
This course, after a short review of American labor history, will focus almost exclusively on the national labor relations act, the nation's premier statute dealing with labor management relations in the private sector, and the model for many public sector state laws covering the field. The course deals with the rights of individual employees, employers, and unions with respect to concerted activity, unionization, the establishment of collective bargaining units, elections conducted by the national labor relations board, and the collective bargaining process. The course will also cover strikes, picketing and hand-billing by unions, the current restrictions or limitations on such conduct, and the administration of collective bargaining agreements, grievance processing, and the arbitration of disputes. We will study and critically examine procedural and substantive case law developed by the national labor relations board, and its impact upon labor-management relations in both unionized and non-union environments. The course concludes with a discussion of the future of labor relations. We will discuss more recent tactics employed by unions and management and engage in a debate as to whether and how the current labor laws should be amended. Classes will be a combination of both lecture and dialogue. We also will discuss critical issues with representatives from Pittsburgh's union and business communities.

LAW 5268 - CONSTITUTIONAL LAW 2: GOVERNMENT POWERS, FEDERALISM AND THE PRESIDENCY IN THE TRUMP ERA

Minimum Credits: 3
Maximum Credits: 3
This upper?level constitutional law course advances issues raised by the structural parts of the United States Constitution, as opposed to individual rights. Attention will be given to the relationships of the three federal branches of government, with emphasis on some of the powers and limitations of the executive, legislative and judicial bodies that arise from principles of separation of powers and national checks and balances. The course will also consider federalism and the respective roles of the national and state governments in some detail. These structural aspects of the Constitution will be discussed against the backdrop of the Trump Presidency, including, but not limited to, questions concerning judicial processes of indictment, Presidential pardons, the Emoluments Clause, the 25th Amendment, plenary powers over foreign affairs, the constitutionality of an international wall, congressional impeachment processes, and the legitimacy of sanctuary cities. Students will be expected to discuss the issues in a dispassionate, civil and academic fashion.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5272 - BANKRUPTCY

Minimum Credits: 3
Maximum Credits: 3

The study of bankruptcy law is the study of how the prospect and availability of bankruptcy affects legal relationships; therefore, bankruptcy attorneys must understand the full range of law, to determine the impact an insolvency proceeding has on the parties in interest and community atlarge. This course provides an introduction to federal bankruptcy law under the bankruptcy code of 1978 as amended, title 11 U.S.C.A. the code was substantially changed in 2005 and the course will deal with the revisions. The course focuses on substantive provisions of the bankruptcy code that apply in all varieties of bankruptcy proceedings and some of the associated rules of procedure. Covered topics include eligibility for federal bankruptcy relief; commencement of bankruptcy proceedings; jurisdiction and procedure; defining property of the bankruptcy estate; the automatic stay; adequate protection; discharge and discharge ability of debts; priorities; allowing, valuing and estimating claims; selected issues usually encountered in business, such as executory contracts and leases; the trustee's avoiding powers; set-off and recoupment; professionals. The course proceeds by analysis of problems and cases. Familiarity with the law of secured transactions (especially article 9 of the uniform commercial code) isnecessary.

LAW 5274 - COMPLEX LITIGATION

Minimum Credits: 3
Maximum Credits: 3
Complex litigation picks up where first-year civil procedure leaves off, going beyond basic concepts and rules to explore the unique procedural challenges posed by complicated civil actions in diverse areas of law, including civil rights, employment, mass tort, securities fraud, and environmental and institutional reform. Our focus will be on complex cases brought by lawyers seeking to promote social change. This is a course in advanced civil procedure examining the procedural aspects of civil litigation that involve multiple claims and parties, as well as multi-jurisdictional disputes. Procedural emphasis will be on class actions and multi-district litigation. Additionally, we will examine joinder, aggregated claims, preclusion, discovery, administration, settlement, and alternatives to litigation in the context of multi-party and multi-forum lawsuits.

LAW 5275 - INTERNATIONAL AND FOREIGN LEGAL RESEARCH

Minimum Credits: 1
Maximum Credits: 1
Finding the law of foreign places, knowing the resources produced by international entities, and searching within the variety of documents that govern our world can qualify you for some of the best jobs in the legal market. In this one credit course you will acquire those skills while completing five short research projects and compiling your own vade mecum for future reference.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: African Studies

LAW 5276 - PATENT LITIGATION

Minimum Credits: 2
Maximum Credits: 2
This is an advanced, participation-oriented course that addresses issues that arise in patent litigation. The participation activities will include preparation and argument of preliminary and procedural motions, discovery practice, for example, preparation of protective orders, written discovery, participation in mock depositions, and preparation and argument of pretrial and dispositive motions, and a brief introduction to trial and appellate work in patent cases. Class time will involve both lecture and discussion, with substantial time devoted to mock situations using an adversarial teamstructure.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5209 or 5242 or 5260; PROG: School of Law (LAWSC)

LAW 5283 - MENTAL HEALTH LAW

Minimum Credits: 2
Maximum Credits: 2
This course provides an introduction to the laws and issues that affect individuals with mental illness, many of whom find themselves in the criminal or civil justice systems. Emphasis will be on the issues surrounding civil commitment and the emerging use of treatment courts on the criminal side. This will require a review of Pennsylvania's mental health procedures act and other state and federal statutes, cases, and regulations. Students will be permitted to attend a session of mental health court.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5290 - EMPLOYMENT LAW

Minimum Credits: 3
Maximum Credits: 3
This course discusses select areas of employment laws and considers both legal principles and their applications. (The course will not cover labor law.)
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5291 - TRANSACTIONAL PRACTICE

Minimum Credits: 2
Maximum Credits: 2
This course will offer an experiential learning opportunity in that all students will observe and perform many "lawyering" tasks normally entrusted to legal counsel who work on complex corporate and financing transactions. These tasks often require execution of instructions from a client or senior lawyer. Some require bilateral bargaining and judicious compromise. Some require collaboration or teamwork. The course will be cast primarily in the setting of a proposed acquisition of a "target company", as a going concern, by a so-called "private equity" investment firm. Students will be exposed to, and will engage by simulated participation in, the legal and practical dynamics by which transactions in this milieu are created, including: Negotiation of terms and bargaining over allocation of risks and uncertainties. Disclosure processes and protocols, for fulfillment of one party's appetite for information and the other's protective needs. Choice of transaction structure. Preparation of contract documents and drafting techniques. Dealing with "stakeholder" needs.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5112 or LAW 5141

LAW 5295 - EXPERT WITNESS

Minimum Credits: 2
Maximum Credits: 2
In recent years, the use of expert witnesses has proliferated as both civil and criminal litigation have become more complex and technical. In this course, students will learn when expert testimony is needed; where to find appropriate experts; how to work with the expert to develop a theory of the case; and many more issues leading up to the actual trial of the case. Once the case reaches the courtroom, students will learn how to organize and present their own expert's testimony in a clear and concise fashion, and how to pursue the challenging task of "doing battle" with the opposing expert. In the end, students will achieve a greater appreciation for the subtleties of expert testimony, while at the same time acquiring the tools to deal with witnesses who speak in technical and unfamiliar language.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5296 - CORPORATE GOVERNANCE

Minimum Credits: 2
Maximum Credits: 2
This course will examine the internal structures, processes and standards of behavior that are required by law in the governance of corporate organizations, utilizing a series of hypothetical problems. Particular attention will be given to the corporate director's duties of oversight, care and loyalty, to the shareholders' ability to enforce those duties, and to the concept of fiduciary "independence." some features of the Sarbanes-Oxley act of July 2002 and related rules will also be considered.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5297 - WORKERS' COMPENSATION

Minimum Credits: 2
Maximum Credits: 2
This course deals with the law, theory and practice of workers' compensation under state and federal administrative programs, including the Pennsylvania and other state acts; longshore and harbor workers' compensation act (LHWCA); federal employees' compensation act (FECA); and the federal employers' liability act (FELA). The student will study the essential aspects of such laws, including their development and purpose, coverages, the various levels and varieties of benefits provided and how claims are established andenforced. Special emphasis is placed on how such laws affect the rights of individuals to other remedies such as the ability to sue in tort or assert discrimination claims; how compensation programs are implicated in contemporary efforts to reform healthcare coverage and delivery; and the role workers' compensation plays in occupational safety and health. The student will become familiar with the uniform policy of insurance for compensation coverage and how compensation coverage and other regulatory requirements are policed by governmentalauthorities. A pervasive theme of the course is the status of workers' compensation as a unique hybrid of administrative law and tort, with the consequent effects of such status on the law, theory and practice of thefield.

LAW 5298 - LAND, RACE AND PROPERTY RIGHTS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5301 - FIRST AMENDMENT: FREEDOM OF EXPRESSION

Minimum Credits: 3
Maximum Credits: 3
This course will address the history, theory, case law, and practice of the First Amendment's protection of freedom of expression. We will cover the history and origin of the First Amendment's Speech Clause and the various freedom of expression doctrines developed in the case law, including (but not limited to) prior restraints, vagueness and overbreadth, political speech, symbolic speech, "time, place, and manner" restrictions on speech, the distinction between content-based and content-neutral restrictions on speech, and categories of "unprotected" or "less-protected" speech. We will not be covering the First Amendment's Religion Clauses because they are covered in other courses. Given time constraints, we also will not be covering the First Amendment's Press, Assembly, or Petitions Clauses in any detail (although we will likely reference them in connection with other freedom of expression doctrines).

LAW 5303 - COMMERCIAL PAPER AND BANKING

Minimum Credits: 2
Maximum Credits: 2
This course will examine the law and practice concerning payment systems. The course examines the state and federal laws and cases governing negotiable instruments such as promissory notes and checks (articles 3 and 4 of the uniform commercial code, reg cc, and check 21), letters of credit (UCC article 5 and uniform customs & practices 600), electronic funds transfers and credit and debit cards (UCC article 4a, the federal electronic funds transfer act, expedited funds availability act, truth in lending act, the consumer credit protection act and the various applicable regulations, such as reg cc, reg e, reg z and regj).
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5304 - COMMERCIAL TRANSACTIONS

Minimum Credits: 3
Maximum Credits: 3
This course explores the primary U.S. Legislation governing agreements to transfer an interest in goods -- article 2 of the uniform commercial code. It emphasizes aspects of UCC article 2 that are not covered in the first year contracts course. Subjects covered include applicability of article 2, selected contract formation rules; warranties; acceptance, rejection and revocation of acceptance of goods; risk of loss; excuse for failure to perform; and remedies for breach.
Academic Career: Law

Course Attributes: Global Studies

LAW 5307 - FOREIGN AFFAIRS, INTERNATIONAL LAW AND THE CONSTITUTION

Minimum Credits: 3
Maximum Credits: 3
The course looks at the role that international and constitutional law play in conduct of United States foreign policy; the incorporation of international law into our domestic legal structure; presidential vs. congressional war powers; the respective role of the senate, the president, and the judiciary in making, interpreting, and terminating international treaties; the role of the judiciary in deciding cases involving foreign affairs; and individual rights and foreign affairs; and the role of international and constitutional law in combatting foreign terrorism. The course also addresses the concrete problems of litigating foreign affairs issues in U.S. courts.

Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5308 - EDUCATION LAW

Minimum Credits: 3
Maximum Credits: 3
Consists of detailed considerations of selected practical and theoretical legal problems in the area of education. Among the topics will be student discipline and student rights; the rights and duties of professional personnel under probationary and tenure appointments; selection of school board members; powers and duties of the board of education; internal and external authority with respect to such issues as curriculum, admission, and purpose. Involves extensive constitutional analysis of the appropriate balance among divergent need of the state, the family and the child.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5319 - LAWYERS IN AMERICAN CULTURE

Minimum Credits: 3
Maximum Credits: 3
Lawyers like to think of themselves as members of one of the most helpful and important professions in American society. All too often, however, we encounter suspicion, derision or open hostility, not to mention nasty jokes. Public and private criticism of lawyers in the United States has become noticeably more intense in recent decades, but we have rarely attempted to survey its range, explore its roots, assess its legitimacy, or evaluate our own responses to it. This course proposes to do these things by examining characterizations and representations of lawyers in American culture from colonial times to the present day. We will relate changing views of American lawyers and lawyering to shifting social and professional circumstances; we will also explore the impact of those circumstances on fictionalized depictions of lawyers in American plays, novels, films, radio and TV, humor, art and song. We will consider what members of other prominent groups in American society, from 17th Puritan clergy to 20th century businessmen ' have said or alleged about lawyers. We will also discuss how, where and with what effect lawyers have presented, promoted and defended themselves before the American public. We will conclude the course by considering how lawyers might learn from past experience and leverage the opportunities and challenges of 21st century law practice to restore or at least improve their public standing.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5320 - LITIGATION STRATEGY AND PLANNING

Minimum Credits: 2
Maximum Credits: 2
This course will focus on the planning that a litigator must do throughout the life of a case in developing strategies for the conduct of the litigation. It covers in part taking a case, anticipating pretrial procedures, preservation of evidence, deciding on causes of actions, obtaining expert witnesses, discovery strategy, motions practice, development of trial themes, demonstrative evidence, jury selection, order of witnesses, and settlementconsiderations.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5324 - INSURANCE

Minimum Credits: 2
Maximum Credits: 2
Among the topics to be covered are the nature and function of insurance, insurance contract formation and meaning, and insurance regulation. Some specific attention will be paid to particular types of insurance, including fire and first party insurance, life insurance, liability insurance, and automobile insurance. Additional issues considered include coordinating multiple coverages and the secondary markets. Some special emphasis is placed upon toxic tort and environmental coverage cases.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5325 - FEDERAL TAX PRACTICE AND PROCEDURE

Minimum Credits: 2
Maximum Credits: 2
This course will be conducted by two experienced practicing tax lawyers. The principal subject matter will be an examination of federal tax practice and procedure with particular emphasis upon issues of current importance and interest to tax counsel. The faculty will also cover material relevant and important to students who participate in the law school's low income tax clinic. In addition to procedural matters, the course will delve into matters of tax policy and issues of particular current interest in tax litigation and tax enforcement.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5105; PROG: School of Law (LAWSC)

LAW 5328 - COPYRIGHT

Minimum Credits: 3
Maximum Credits: 3
Copyright law deals with legal protection for certain kinds of expressive work -- literature, music, film, photography, and computer software, among other things -- which is an essential element of modern culture, knowledge, and communication. The copyright law course will teach you about the many roles that copyright law plays in constructing businesses, markets and other institutions for creating, distributing, and consuming that work. For authors and publishers, how does copyright law help them make money based on their creative works, or based on others' creative works? For readers and consumers and society as a whole, how does copyright law preserve the power to access and use knowledge? The course will teach those things in the context of teaching the skills of copyright lawyering. How do practicing lawyers work with clients? How do practicing lawyers develop and exercise professional judgment? How do practicing lawyers solve copyright problems? The course will put students in the role of practicing lawyers and teach them to think, write, and act as lawyer's generally and especially as copyright lawyers.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: Global Studies

LAW 5336 - LAND USE

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to provide students with a basic introduction to the mechanics and legal theories underlying land use controls. The course will strive to go beyond the theoretical by presenting a series of guest speakers (ranging from judges and zoning officials to land use planners and civil and transportation engineers) who deal with land use issues on a daily basis. Students will also be provided an opportunity to observe zoning board and court proceedings first hand and prepare class projects and papers based upon these proceedings. The course will emphasize the inter-relationship and conflict with environmental regulations. Class discussions and projects will focus upon recent judicial and legislative developments in land use law.
Academic Career: Law

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5339 - LAW OF DISABILITY DISCRIMINATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide in-depth analysis and discussion of the major federal disability discrimination statutes, including the Americans with disabilities act, the individuals with disabilities education act, and section 504 of the rehabilitation act. Readings and class discussions will focus on the application of these laws to issues such as employment, public accommodations, education, architectural barriers, transportation and insurance. The course will explore how disability discrimination statutes interact with other statutes, such as the social security act, the family and medical leave act, and the genetic information nondiscrimination act.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5340 - ENVIRONMENTAL LAW

Minimum Credits: 3
Maximum Credits: 3
This course focuses on domestic environmental law and, in particular, on federal law rather than state law. The diverse and technical nature of modern environmental law is such that, in practice, lawyers often specialize in very narrow areas. Nevertheless, the same or similar moral, scientific, and policy arguments familiar to one area of the law are found in many of the others and similar regulatory approaches have been adopted or proposed for adoption to deal with very different types of environmental hazards. This course will focus its attention on the clean air and water acts, the national environmental policy act, the resource conservation and recovery act, the comprehensive environmental response, compensation, and liability act, and wetland protection, with passing coverage of various federal public land management statutes. We will explore the basic regulatory and non-regulatory approaches currently in place, including market-based systems to achieve better environmental quality, as well as proposals for changes to those approaches. A significant portion of the course will also be devoted to exploring issues presented by government and citizen suit enforcement of environmental laws. While administrative law is obviously relevant to much of environmental law given the fact that it is agencies which make and administer the law involved, the course will offer students an overview of administrative law principles which will be sufficient background for the purposes of this course.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: Global Studies

LAW 5352 - LAW & ECONOMICS

Minimum Credits: 3
Maximum Credits: 3
This course introduces principles of positive and normative microeconomics to explore the extent to which they can explain the workings of the legal system and to examine the effect of legal rules on behavior. Covered topics include the Coase Theorem; the choice between property, liability, and inalienability rules; comparative liability rules (e.g., negligence versus strict liability); contractual damages; criminal liability; family law; game theory; and legal decision theory (e.g., risk, uncertainty

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5355 - NON-PROFIT ORGANIZATIONS

Minimum Credits: 2
Maximum Credits: 2

This class will survey the state and federal laws governing nonprofit tax exempt organizations. The course will examine the formation of nonprofit corporations under Pennsylvania law, principles of corporate management, and options for fundamental organizational change. In addition, the course will analyze the process of qualifying for tax exemption under the Internal Revenue Code and under the laws of Pennsylvania. Issues of private inurement, unrelated business income, charitable giving and fundraising regulations will be discussed. The course will include statutory and regulatory analysis, selected caselaw and case studies based on actual NPO's.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5359 - WORKERS' COMPENSATION PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
The student undertakes this practicum concurrently with the workers' compensation course taught by adjunct professor Torrey. The practicum is not a requirement of the workers' compensationcourse. The workers' compensation course provides the student with an exposure to the history and theory of the law, a survey of the different state and federal systems, and the manner in which employers insure for workers' compensation. The practicum works as a supplement, and provides the student with firsthand exposure to and activity in the field. The student will observe lawyers meeting with clients and evaluating their cases. In addition, the student will learn how lawyers communicate and/or work with physicians, and how employers contesting claims obtain and present rebuttal medical evidence. The student will be introduced to the practice of taking trial depositions of medical and other experts, and have the opportunity to attend a deposition to observe attorneys at work. The student will also have the opportunity to attend hearings and observe the procedures of the opposing attorneys and thejudge. In addition, the student will gain an understanding of the specific petitions that are advanced by the worker prosecuting the claim and the employer and/or insurance company that has contested entitlement. The participant in the practicum will be instructed in how to prepare written legal argument to the workers' compensation authorities, and briefs to the appeals courts. The student will also gain exposure to current practices surrounding evaluation of workers' compensation cases for possible lump sumsettlement.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5364 - ADVANCED BANKRUPTCY

Minimum Credits: 3
Maximum Credits: 3
Lectures on chapter 11 issues and procedures will set the stage for what is going to happen in the class. Practicing attorneys or other professionals will be invited when the issues involve direct participation with a client and decisions that must be made from the business or legal side of the case. Lectures will cover the theoretical underpinnings to the bankruptcy code and rules, as applicable, and illustrate the points with appropriate case law. Discussion will cover the nature of chapter 11 reorganization, kinds of relief available in business cases, need for cash, why certain motions are needed early in the case whereas others wait, how the business issues interplay with the bankruptcy case, pre and post filing issues, solicitation of creditors committee, plan negotiation process and more. Students will be required to read and analyze the relevant statutory text and rules and relevant cases. They will be assigned certain drafting work and/or papers to write regarding the issues involved. "Papers" may take the form of legal briefs. Each student will be required to argue on behalf of a "client" an assigned topic. To simulate the practice of law, students will file all assignments on the bankruptcy court's test data base for electronic filing.

LAW 5365 - INTRODUCTION TO RUSSIAN AND UZBEKISTAN LEGAL SYSTEM

Minimum Credits: 2
Maximum Credits: 2
This course is designed to introduce students to the legal systems of the Russian federation and Uzbekistan. The foundation of the legal systems of these countries is almost identical, and by comparing one country's system to another, students will become more familiar with civil law systems. Special attention will be given to constitutions, court systems, the role of judges, state prosecutors, courtroom advocates and lawyers, as well as to the important commercial laws and treaties. I will use examples from my professional experience to give my students a realistic view of the legal systems of these countries. The class is intended to enhance student awareness of the legal environment and issues that often result from a decision to engage in relations or do business across nationalboundaries. Students must be prepared to actively discuss the assigned reading or other material in class eachweek.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5386 - FOUNDATIONS OF LEGAL RESEARCH

Minimum Credits: 1
Maximum Credits: 1
Foundations of legal research is a one-credit practical skills course that builds on basic research skills learned in the first year legal writing program and emphasizes legal research as an integrated part of the practice of law. The course will integrate traditional print resources with online database resources and '"free"' internet resources, with emphasis on locating resources efficiently and cost-effectively.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5391 - ELDER LAW CLINIC

Minimum Credits: 7
Maximum Credits: 7
The Elder Law Clinic offers students who have completed three semesters of law school an opportunity to represent clients and develop practical lawyering. Students enrolled in the clinic are certified to practice law and take primary responsibility for client representation under the supervision of their faculty/supervising attorneys. Elder law clinic representation focuses on issues of capacity in medical treatment, mental health law, estate planning, contractual relations, and property management. Emphasis will be placed on long term planning, including estate planning and medical assistance (Medicaid) eligibility. Litigation skills focuses on practice in the orphans' court division, for example, guardianship proceedings. Students will develop practical skills such as interviewing, counseling, research, drafting, negotiation, and trial practice skills. Students may work in teams to represent their clients. The classroom component is an integral part of the clinic experience, consisting of a series of discussions focusing on substantive law, policy, and practical skills training. Experts in the fields of social work, psychology, psychiatry, and medicine will provide insights into interdisciplinary issues.
Academic Career: Law
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5393 - HEALTH LAW CLINIC

Minimum Credits: 7
Maximum Credits: 7
The civil practice clinics offer students who have completed three semesters of law school an opportunity to represent clients and develop practical lawyering skills. Students enrolled in the clinicsare certified to practice law and take primary responsibility for client representation under the supervision of their faculty/supervising attorneys. Health law clinic students represent their clients at all stages of seeking disability benefits through the social security administration. Students also represent clients in orphans' court in guardianship cases and in the US District Court on health related matters. They interview clients initially and if the case is accepted, proceed to gather and interpret evidence, develop case theory, prepare hearing memoranda, and represent clients at hearings or in court. The classroom component is an integral part of the clinic experience and consist of a series of lectures and discussions focusing on substantive law, policy, and practical skills training. Classroom simulations are designed to ready students for client work, and include an ADR exercise. The skills component of the course will be taught in tandem with the elder law clinic. Students may work in teams of two.
Academic Career: Law
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5395 - HEALTH LAW AND POLICY

Minimum Credits: 3
Maximum Credits: 3
This is a survey course of fundamental issues, covering a broad range of topics, in health law and policy intended both for students who merely wish to become acquainted with the field, and for those who plan on concentrating in the field. For those planning on concentrating, this course provides a foundation for in-depth courses such as health care business transactions, health care fraud and abuse, health care antitrust, and financing in the healthcare industry. For students not concentrating in health law, it provides an introduction to the multitude of issues with which lawyers working with clients in the health care industry need to be familiar. The course examines the role that law plays in achieving three societal goals: increasing access to health care, controlling health care costs, and assuring quality of health care. Specific topics are the structure of the health care system(including integrated health care delivery systems); regulating quality through licensing, staff privileges, and accreditation; labor and employment issues; the legal obligation to provide treatment, including Emtala); tax exemption and charitable purposes; health care reform; state and federal regulation of health insurance and managed care (including Erisa); federal initiatives to expand private insurance coverage(including HIPAA, COBRA and ADA); Medicare/Medicaid eligibility, benefits, and reform efforts; health care fraud and abuse (false claims act, anti-kickback statute, stark); and antitrust issues in the health care industry. This course does not examine issues of professional liability, and it does not cover ethical issues in health care (covered in, which is the subject of "bioethics and law").
Academic Career: Law
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5398 - FAMILY EMPOWERMENT & LEGAL ACCESS CLINIC

Minimum Credits: 4
Maximum Credits: 4
The Family Empowerment and Legal Access Clinic is a yearlong clinic. In the Family Empowerment and Legal Access Clinic, law students develop the knowledge, skills, and values necessary for a professionally effective - and satisfying - client representation practice. JD students provide brief advice and legal representation to clients experiencing family law issues in Allegheny County and represent families in Special Immigrant Juvenile matters. During their practice, students are supervised by clinical faculty and certified by the Supreme Court of Pennsylvania to provide legal services to pro se litigants.
Academic Career: Law

Grade Component: LG/SU3 Elective Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5402 - CRIMINAL PROCEDURE II

Minimum Credits: 3
Maximum Credits: 3
Criminal Procedure II (The Adjudication Process) -addresses all of the major federal constitutional issues that arise during criminal adversarial proceedings in the United States - in both the state and federal court systems. This course will provide a detailed, practical, and realistic understanding of what occurs in a criminal case from the time an accused is arrested until the time of conviction, sentence, and appeal. Procedures in both federal and state courts will be discussed including preliminary issues such as arrest procedure, prosecutorial discretion in determining what charges will be filed, bail concerns, preliminary hearings, and grand jury proceedings. The course will then address pre-trial matters such as discovery, Brady material, and pre-trial motions practice. This section will include but not be limited to joinder and severance, speedy trial, plea bargaining, and pre-trial habeas corpus. The "trial" section of the course will discuss jury issues including jury selection and a variety of procedural issues that arise at trial including confrontation clause, hearsay, double jeopardy, and Bruton issues. Supreme Court cases, such as Apprendi and Alleyne, will generate an important discussion of not only appropriate language in indictments, but verdicts and verdict slips as well. Time will also be spent on sentencing, both state and federal. We will also briefly cover the appellate and collateral attack post-conviction processes.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5404 - CYBERSPACE AND THE LAW

Minimum Credits: 3
Maximum Credits: 3
This course will examine legal and public policy issues that pertain specifically to the existence, operation, and governance of the network of networks that we call "'the internet'" and the metaphorical experience that we sometimes refer to as "'cyberspace.'" what legal and policy problems are unique to the internet and cyberspace? When and how should "'ordinary'" legal problems be treated differently if they concern the internet or cyberspace in some respect? Specific topics are expected to include the construction and definition of the internet; internet governance, including domain name regulation and network neutrality; and network and information security. It is expected that the course will not consider intellectual property topics, freedom of expression topics, or jurisdictional (civil and criminal procedure) questions. The course will focus primarily on public policy questions wrapped up in legal questions, rather than on principles of law as such.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: Global Studies

LAW 5407 - TRIAL ADVOCACY

Minimum Credits: 2
Maximum Credits: 2
A course devoted to the art of presentation and persuasion in the courtroom. Students will be engaged in preparation for, and performance of, all basic phases of a typical trial including jury selection, opening statements, direct examination, cross examination, techniques for introducing evidence, closing argument, etc. Emphasis will be on actual performance of mock problems in a true courtroom setting, as well as instructor's critique of those performances.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5103; PROG: School of Law (LAWSC)

LAW 5413 - MERGERS AND ACQUISITIONS

Minimum Credits: 3
Maximum Credits: 3
Mergers and acquisitions is a standard third year elective at many United States law schools. The course concerns itself mainly with the legal implications and practical aspects of the combination of business entities. Attention is paid to the economic and business reality which creates the context in which the legal issues arise. The course materials take a chronological review of the subject, from preliminary negotiations and letter of intent stages through definitive agreement drafting and closing, with litigation which may arise afterwards.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5112 or LAW 5141; COREQ: LAW 5112

LAW 5414 - ESTATE PLANNING

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5417 - LAWYERING PROCESS SUMMER CLINIC

Minimum Credits: 2
Maximum Credits: 2
Students will be able to gain live client experience in performing an ensemble of essential lawyering skills, including: interviewing, counseling, negotiation, document/pleading drafting, and representation before the court of common pleas. Modeling, training and supervision will be provided by experienced staff attorneys at the field-based setting in Washington and the professor in a one-hour weekly group review meeting at the law school/online through Lync. Family law ' protection from abuse, custody, divorce, and child dependency ' will be the principal area of practice, with students provided preparatory substantive instruction/materials by staff attorneys and professor. Family law is not a required prerequisite. Scheduling of clinical hours will be adjusted to accommodate each student's other work commitments. Transportation costs associated with travel to/from the office will be reimbursed.
Academic Career: Law
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5418 - IMMIGRATION LAW

Minimum Credits: 2
Maximum Credits: 2
This administrative law course will examine the constitutional, statutory and regulatory system associated with the admission and exclusion of foreign nationals into and from the United States. While not a prerequisite, completion of administrative law is an advantage in the

course's procedural aspects. Taught from the practitioner's perspective, the course will address the particular challenges in the effective representation of noncitizen clients. The course will include business, employment and investment Visa categories (both temporary and permanent), asylum law and procedures as well as exclusion and deportation litigation.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: Global Studies

LAW 5422 - ALTERNATIVE DISPUTE RESOLUTION

Minimum Credits: 3
Maximum Credits: 3
Legal and other disputes are increasingly resolved by dispute resolution processes other than litigation. Given this trend, it is important for law students to be familiar with these alternative processes, such as arbitration and mediation, and the benefits and risks they present. At the same time, these alternative processes require creative and interdisciplinary problem-solving perspectives and skills. This course begins with an overview of problem-solving approaches, and is followed by the study of arbitration, mediation, and hybrid processes. The course emphasizes interactive student discussion and activities, including role-plays, exercises, and presentations that simulate professional activities of lawyers, arbitrators, mediators, and clients. The classes build on each other, so that knowledge that we acquire in the earlier classes will be integrated into our materials, discussion, and activities in later classes.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: Asian Studies

LAW 5424 - INTERVIEWING AND COUNSELING

Minimum Credits: 2
Maximum Credits: 2
Proficiency in interviewing and counseling is essential to both the litigator and transactional lawyer. Lawyering process I will provide the student with theoretical understanding of interviewing/counseling and intensive training designed to develop these essential skills. Through lectures, readings, demonstrative videotapes and class discussions, the "client-centered" model advocated by the instructor as well as the "traditional approach" will be introduced, examined, and collectively critiqued. Practice will involve observing/critiquing weekly in-class simulations (with students as "client," "lawyer"). Periodic quizzes and two videotaped exercises at mid-point and end of course (with students interviewing/counseling 'outside' client) will be scheduled. Consistent attendance is required in order to ensure the effectiveness of in-class simulated exercises and to acquire comprehensive knowledge of/practice in each essential skill.
Academic Career: Law
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5425 - LOW-INCOME TAX CLINIC

Minimum Credits: 3
Maximum Credits: 3
Working under the supervision of experienced tax attorneys, students participating in this clinic will assist in all aspects of the delivery of legal services to low income taxpayers in disputes with the internal revenue service. Students may expect to engage in interviewing, counseling, research, drafting, and negotiation with the I.R.S. Calendar and the disposition of the cases taken. In addition to the client work, students will also meet for weekly case reviewsessions.
Academic Career: Law
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis

LAW 5430 - INFORMATION PRIVACY: LAW AND PRACTICE

Minimum Credits: 2
Maximum Credits: 2
This introductory course will provide a comprehensive overview of the primary laws, regulations and guidelines dictating data protection safeguards in the health care industry. It will begin with an introduction to the origins and philosophical perspectives that provide the framework for current privacy laws. Students will then explore the HIPPA privacy/security rules, provisions of Hi-tech breach notification standards, technical, physical and administrative safeguards and their intersection with the various state data protection laws. This course will include an introduction to the legal challenges associated with securing electronic data along the information highway and within the cloud, while attempting to safeguard against cybersecurity threats. Students will be introduced to the implications of privacy to the health care provider, health plans, health care clearinghouses, business associates, and the enforcement activities belonging to the office for civil rights. It will also afford students an opportunity to examine privacy from the financial and international perspectives.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5433 - OCCUPATIONAL SAFETY & HEALTH

Minimum Credits: 2
Maximum Credits: 2
With the explosion of COVID regulations from federal, state and local regulators, this class will take what was once the niche area of occupational health & safety and teach the administrative law skills needed by a new generation of lawyers as this historically-rooted specialty suddenly impacts the operations of offices, restaurants, manufacturers, and virtually every other type of client any lawyer might represent. The course will briefly review historic dangers posed to workers and move into a study of the modern regulatory state with the creation of OSHA. The course will study several tragic incidents the faculty have personally been involved with and walk students through handling an emergency investigation, managing public relations, filing an initial appeal, conducting a mandatory settlement conference, and litigating on the expedited OSHA timeline. The course will focus on how lawyers interact with experts and clients to quickly conduct a root cause analysis and examine broader legal defenses to OSHA actions such as unanticipated employee misconduct. The course will also examine risks for clients beyond any discrete citation, with discussions about OSHA's national "one" employer doctrine. Course faculty will leverage the international reach of their Dentons colleagues and other guest speakers to add different perspectives to the material. A particular focus of the course will be issues of racial and financial inequities in some OSHA matters. At least one class will focus on COVID-era class actions filed on behalf of largely minority essential workers.
Academic Career: Law
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5460 - REAL ESTATE TRANSACTIONS

Minimum Credits: 2
Maximum Credits: 2
This is a practical course teaching students how to represent the client in a real estate transaction and covering all appropriate issues which might occur. The class will cover residential and commercial agreements of sale, deeds, financing the real estate transaction including drafting mortgages, notes and other finance documents, real estate appraisal practice, leases, what caused the real estate crises, title examinations, title commitments, title insurance, eminent domain, condominiums, issues affecting the real estate transactions, such as easements, licenses, adjoining landowner relationships, liens and their duration and priorities, real estate brokers, mortgage bankers, foreclosure proceedings, inter alia.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5464 - BIOETHICS AND LAW

Minimum Credits: 3
Maximum Credits: 3
This is an introduction to a variety of issues in biomedical ethics brought about primarily by the innovative techniques and technologies that the biomedical sciences have developed such as artificial procreation (e.g., In vitro fertilization, surrogacy, cloning), genetic screening and engineering, and life support systems (e.g., Respirators, medications, artificial nutrition and hydration). The primary focus of our inquiry will be whether these innovations should be regulated by law and if so how.
Academic Career: Law

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)
Course Attributes: West European Studies

LAW 5474 - JOURNAL OF HEALTH LAW & POLICY

Minimum Credits: 1
Maximum Credits: 2
The University of Pittsburgh Journal of Health Law and Policy is a periodical published by second and third-year students. The journal builds on Pitt Law's longstanding leadership in health law and will serve as a platform for legal scholars, practitioners, policymakers, and healthcare professionals to engage with critical issues shaping health systems and public policy. The publication will feature both an annual long-form volume and more frequent short-form contributions that offer concise, practical insights into emerging health law topics.
Academic Career: Law
Course Component: Workshop
Grade Component: Grad HSU Basis

LAW 5475 - SPANISH FOR LAWYERS

Minimum Credits: 2
Maximum Credits: 2
This is a Spanish language course in a legal context, designed to acquaint students with the rudiments of the Spanish language and with Spanish legal vocabulary sufficient to permit an American attorney to communicate effectively with Spanish-speaking clients. Vocabulary, readings, class discussions and written work will be in a legal context. No prior study of Spanish is required.
Academic Career: Law

Maximum Credits: 3
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5478 - HIGHER EDUCATION AND THE LAW

Minimum Credits: 2
Maximum Credits: 2
Colleges and Universities occupy a unique role in American society and culture. Courts in case law vividly describe colleges and universities as "marketplaces of ideas" and consider higher education to play a critical role in our democratic society. As a result, concepts such as academic freedom and free speech shape the legal landscape in unique ways. In addition, many statutes specific to higher education govern the day-to-day actions and obligations. At the same time, many areas of the law apply to colleges and universities in the same manner as they would to any other institution. This course will provide students an overview of the legal principles that shape higher education law. Students will then learn to apply the unique legal concepts to the analysis of the myriad of issues that commonly arise on campus.

Academic Career: Law
Course Component: Lecture

LAW 5487 - ADVANCED TRIAL ADVOCACY

Minimum Credits: 1
Maximum Credits: 1
This course is for students who will represent Pitt Law in an interschool trial competition. The course will support and enhance both development of a case file from competitions materials and all aspects of competition participation. You will deepen your skills in identifying a theme for your case, crafting a compelling story, effectively teaching through your advocacy. You will also learn and practice oral advocacy skills with a focus on careful listening, persuasive response, and smooth transitions. You will also focus on trial evidence and its application to a judicial proceeding. Through class exercises, reflection, and self-assessment, you will prepare both for your competition and for the most exciting aspect of your legal career: continuous learning and growth.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5491 - ADVANCED LEGAL RESEARCH

Minimum Credits: 3
Maximum Credits: 3
This course will build on the material presented in the foundations of legal research course, and will provide students with a broader array of strategies and skills to approach legal research projects. The course is to be broadly divided into three components. The first component focuses on strategic approaches to legal research, how to incorporate the research process into the litigation or transactional problem presented and to more effectively integrate the various legal research tools available into that strategic approach. Cost-effective research strategies, including strategies to effectively manage real-world lexis and Westlaw costs will also be covered. This component will somewhat overlap with, but significantly expand on material from the foundations course, and will give students a broader understanding of the research process. The second component of the course recognizes that not all substantive areas of the law utilize the same research resources, strategies and techniques. During this component of the course, students will self-select into one of three topical research tracks-expected to be intellectual property, environmental law, and health and disability law-and spend several weeks looking at the unique

resources and research challenges presented by those areas. The third component of the course returns all students to the same material and focuses on non-legal research areas such as medical and scientific research, business and corporate research, investigative research, and financial and marketplace research.

LAW 5494 - IN-HOUSE COUNSEL AND MODERN CORPORATION

Minimum Credits: 2
Maximum Credits: 2
This course will explore the unique legal and practical challenges that face counsel working in corporate law departments of various size, including entrepreneurial industries. Students will come to understand the use of the legal function as a tool which is critical to innovation and furthering business objectives. Themes addressed will include client service, driving business objectives through the legal function, and the independent duties owed by a corporate attorney to the corporation, as well as, where tensions arise between those themes. These themes will be examined through topics such as selecting and managing outside counsel and expense, developing internal training programs, and reducing litigation risk, each as distinct from the responsibilities of outside counsel. The course will also examine matters of corporate compliance and governance, attorney-client privilege, and the Sarbanes-Oxley act specific to the in-house context.

LAW 5507 - EVIDENCE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This writing seminar will examine selected topics in evidence law and policy from a more advanced, and often more critical, theoretical, and practical perspective than is feasible in the basic Evidence course. We will examine current doctrinal controversies and explore scholarly critiques of specific rules and principles, including critical or interdisciplinary perspectives on the traditional approaches underlying evidence law. Each student will produce a substantial research paper on a related topic to be chosen in consultation with the instructor, and a significant portion of the course will be devoted to the development, writing, and editing of those papers, both during class meetings and in individual meetings with the instructor.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: CREQ: LAW 5103; PROG: School of Law

LAW 5508 - PERFORMING JUSTICE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Anyone who has set foot in a courtroom knows that what goes on there has as much to do with drama as with rational inquiry. Judges act as if they are finding legal rulings by applying objective rules, while making subjective choices about which rules to apply and how. Witnesses testify as if responding spontaneously to questions that actually have been rehearsed. Lawyers are professionally histrionic - paid to play righteous believers in their clients' virtue. This is the decision making process Jeremy Bentham called "theater of justice" and the American Legal Realists derided as a "ceremonial routine" of "word jugglery," "legal ritual," "magic solving words" and verbal "sleight of hand." In this seminar we will explore some standard critiques of law as performance. Along the way we will consider how the theatrical, ritual, and perhaps even magical aspects of legal process might both detract from and contribute to the production of justice. We will approach these questions through reading and discussing a wide range of texts, including, judicial opinions, law review articles, performance theory, plays, social criticism, and ethnography. There will be at least one "field trip" to see some legal performance live, and we will likely make use of film and video as well.
Academic Career: Law
Course Component: Seminar

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5510 - SUPREME COURT PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to practice before the Supreme Court of the United States, with an emphasis on understanding the rules that govern the Court's handling of cases and the Court's decision-making processes. Over the duration of the course, we will track the progress of recent cases before the Supreme Court from beginning to end through certiorari filings, decisions to grant or deny certiorari, merits filings, oral arguments, and opinions. We will also take a closer look at three cases as examples that the students in the class will help us select. In particular, we will ask for student help to pick a case that was decided last Term, one that is scheduled to be argued during the course, and one that will be argued later in the Term. Our final exercise in the course will be to do a mock Conference in which we will try to predict the outcome in the case we select that has been argued but not yet decided by the Court. This course will continue to build student skills in (1) reading and analyzing cases, particularly Supreme Court cases; (2) identifying issues and considerations that might lead the Court to adopt a particular holding; (3) understanding how various argument strategies might affect outcomes; and (4) analyzing legal problems, including stating the established law, identifying open or unresolved or new issues in the law, and applying law to the facts to resolve a problem.

LAW 5527 - INTERNATIONAL IP SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar surveys current issues in international and comparative intellectual property law, focusing on aspects of copyright, trademark, patent, and related laws. It introduces key international IP treaties, and contrasts different countries' approaches to IP protection.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5547 - INTERNATIONAL INTELLECTUAL PROPERTY LAW

Minimum Credits: 3
Maximum Credits: 3
International intellectual property law has expanded substantially over the past few decades, and today seeks broadly to regulate transnational flows of information and culture. This course analyzes the international IP regime, situating it within the dynamics of globalizing flows of information and cultural objects. It provides an overview of the law, theory, and politics of this area of law, and will use case studies to illuminate the interaction between the three. Subjects covered include copyright and related rights (moral rights, traditional cultural expression, performers rights); trademarks and geographical indications; Internet domain names; trade secrets and

patents. Case studies may include considerations of access to medicines, moral rights in Europe, and "piracy" in China as well as copyright formalities and Berne retroactivity.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5572 - PENNSYLVANIA INNOCENCE PROJECT PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
The Pennsylvania Innocence Project Practicum is a one-semester course (with the option of a second semester) offered by Pitt and Duquesne Law Schools. This unique program allows students to develop their lawyering skills by reviewing and investigating actual claims of innocence from Pennsylvania inmates. Under the supervision of the Project's Director and Managing Attorney, students are assigned real cases and engage in a wide range of hands-on activities. These include reviewing criminal files, collaborating with investigators, contacting past trial and appellate counsel, interviewing clients, gathering documentation, and preparing legal documents and memoranda. Students also have the opportunity to tour the Allegheny County Medical Examiner's Office, the Allegheny County Jail, and a state correctional facility. While most claims are resolved through written pleadings and briefs, students are encouraged to attend court proceedings whenever possible. Additionally, students evaluate new applications to identify viable innocence claims. Through this practicum, students gain valuable experience in legal analysis, legal writing, and problem-solving. As they progress, they explore substantive and procedural issues within their assigned cases and discuss ethical considerations inherent to this area of practice. The classroom component covers key topics such as defining claims of innocence, investigating and litigating innocence claims under Pennsylvania law, preserving claims for federal review, post-conviction discovery rules, state and federal post-conviction procedures, investigative techniques, DNA and scientific evidence, and evidentiary rules governing admissibility.
Academic Career: Law

LAW 5585 - EDUCATION AND JUSTICE AND CIVIL RIGHTS SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to education and civil rights law and policy that are the foundation for civil rights protections in K-12 public education. Students will explore key education and civil rights issues in the following topic areas: school segregation (past and present), the criminalization of students of color, school privatization, and social movements for education justice. Students will emerge from this class with an understanding of historical and current flashpoints in education and civil rights in the United States and the role of lawyers and the law. In addition to analyzing key cases, articles, and social science research, students will explore how law students and lawyers can play a meaningful role through policy, litigation, and advocacy for social change.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5609 - PROFESSIONAL RESPONSIBILITY

Minimum Credits: 3
Maximum Credits: 3
This course will cover selected topics on the law governing lawyers. Major topics will include formation and termination of the attorney-client relationship and its attendant obligations, fee issues, conflicts of interest, ethics in advocacy, transactional lawyering, and entity representations, among others. The course will cover these topics from the vantage point of the model rules of professional conduct and the restatement of the law governing lawyers, as well as those aspects of constitutional law, evidence law, agency law, tort law, and procedural rules (both civil and criminal) that bear on an attorney's obligations to clients, courts, opposing parties and their attorneys, and the legal system at large. Class discussions will incorporate in-depth analysis of case law and the rules, as well as analysis of practical hypothetical scenarios in which a lawyer seeks advice about his or her legal and ethical options for moving forward in dealing with his or her clients.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5616 - MOCK TRIAL STRATEGY AND PRACTICE

Minimum Credits: 2
Maximum Credits: 2
In this class, you will learn fundamentals associated with trying a jury case. You will learn how to conduct each phase of the trial from opening statements to closing arguments and everything in between. There will be a focus on the use of trial evidence which will serve as a good supplement to a regular evidence class. This is very much a learning by doing environment, and you will be required to participate in class each work to demonstrate your understanding of the assignment. It cannot be emphasized enough that grading will not be based on overall skill, but instead focused on individual improvement throughout the semester. This class will also serve as a springboard into competing on the Law School's Mock Trial teams. Although this class is focused on trial practice, it is beneficial to all students regardless of their anticipated career path. Through the semester, you will learn how to synthesize, sort and present ideas in a persuasive fashion to your audience

LAW 5618 - ARABIC FOR LAWYERS 1

Minimum Credits: 2
Maximum Credits: 2
Arabic for lawyers is a two semester course comprised of both Arabic for lawyers I and Arabic for lawyers II. Arabic for lawyers is a course that helps students to familiarize themselves with Arabic legal terminology and basic Arabic grammar. This is a beginner class that assumes no prior knowledge of or exposure to the language. As such, native speakers and those with formal training over a period of years may not enroll. The course is a two semester (full year) course and students are encouraged to take both semesters in order to benefit from the course. However, students are permitted to take only the first semester if they wish. They may take only the second semester with the professor's permission if they have had some modest experience with the Arabic alphabet. The first semester of the course deals with learning the Arabic alphabet, mastering pronunciation and developing the ability to write in Arabic by hand. In the second semester, we will turn to learning basic rules of grammar and developing vocabulary in a manner that is designed to be of interest and use to lawyers and legal professionals. The class will conclude by reading simple cases, laws and other basic legal materials. To facilitate the learning experience, laptops will not be permitted in class.

LAW 5622 - COMPARATIVE PROFESSIONAL RESPONSIBILITY

Minimum Credits: 3
Maximum Credits: 3
The course provides an exploration of the organization and the sources of regulation of the legal profession in the United States, and an overview of select countries in the Americas as well as Europe, briefly highlighting the main differences existing in lawyers' ethical standards in civil law and common law systems. It focuses on the main standards of professional legal ethics in the United States, and compares them with those of Latin American and European countries. The course will be centered on the ABA Model Rules of Professional Responsibility. The Model Rules will be compared with the rules of professional conduct proposed by international associations such as the International Bar Association and the rules proposed by bar associations in the MERCOSUR zone. The course also seeks to engage students in an exploration of the challenges posed by the increase in cross-border, transnational legal practice, and an overview of the ethical regulatory responses attempted so far in this field. This course meets the New York professional responsibility requirement. N.Y. Court Rules for Admission of Attorneys and Counselors at Law Rule 520.3(c)(1)(iii).
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5623 - CYBER POLICY, CRIME & NATIONAL SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course will explore theoretical and practical aspects of nation-state legal issues concerning cyberspace, with a particular focus on computer-related crime, espionage, war, and international governance. The course will review key legal cases, policy, and legislation. In tandem with a series of expert guest speakers from the field, the course will reflect on the roles of national and international governments, the legal and ethical dimensions of cybersecurity, the relationship between the public and private sectors, and the increasing tensions between privacy and national security. The course will consist of four major components: (1) an assessment of the current cybercrime threat landscape, (2) a review of the relevant national and international legal frameworks, (3) analysis of case studies of significant prosecutions, and (4) assessments of domestic and international policy and security challenges, including gaps in existing frameworks. Students who complete the course will obtain an enhanced understanding of the legal, policy, and security frameworks at the core of these challenging issues for nation-states.

LAW 5627 - WICKED PROBLEM INNOVATION

Minimum Credits: 3
Maximum Credits: 3
"Wicked Problem Innovation" is a new, innovative, cross-disciplinary course that brings together graduate students from Pitt Law, the Katz School of Business, and other units across the University of Pittsburgh to engage deeply in a selected acute problem that faces Pittsburgh and the broader world. "Wicked" problems are stubborn, complex societal and business challenges, like global climate change, income

disparity, inclusive economic growth, and universal healthcare. These problems arise from a variety of causes and affect multiple stakeholder groups, each of which has a different idea of how the problem arises and what can be done to improve it. While it is likely not possible to "solve" these problems in a traditional sense, it is possible to make sustained progress in tackling them. Course participants will research the selected problem from legal, business, historical, and other perspectives, identify and consult with stakeholders, and ultimately design a process to improve progress on the selected problem. During the course, students will learn to work collaboratively with peers and instructors from a variety of disciplines, and will practice a host of practical skills, including interviewing witnesses and clients, negotiating outcomes, and actively problem solving across a range of subject matter areas. Additionally, students will gain substantial and deep contacts in local, state, and potentially national, government, nonprofit, and business communities. Students will come away from the course will critical skills in working collaboratively across subject matter boundaries and experience creating an innovative problem-solving process from the ground up.

LAW 5630 - FEDERAL CIVIL LITIGATION SKILLS

Minimum Credits: 2
Maximum Credits: 2
This course explores practical and procedural pretrial litigation activities encountered in federal civil litigation. The course is designed to develop practical case management, advocacy and negotiation skills while increasing awareness and familiarity with the local rules which govern litigation in the United States district court (W.D. Pa.). The course will consist of both lectures and 'hands on' exercises, both written and role-play, that track the procedural progress of a federal case.

LAW 5631 - LAW AND ENTREPRENEURSHIP

Minimum Credits: 3
Maximum Credits: 3
This hands-on, practical course is intended to expose law students to entrepreneurs, innovation companies and the legal issues they face. The course will take students through the life cycle of a technology start-up company, from concept and formation to exit (IPO or sale), through careful analysis of relevant legal documents and case studies, as well as participation in lectures, workshops and simulations. The course will cover choice of entity and formation (including tax issues at start up and early stage fundraising), employee hiring and compensation, evaluation and protection of intellectual property and the development of a comprehensive IP strategy, valuation and financing (investment opportunities), licensing and sales, multinational operations, and exit strategy. The course will provide students with the legal framework and tools necessary to launch and grow a successful technology start-up, and to advise and assist entrepreneurs interested in launching a new business.

LAW 5640 - DIVERSITY INTERGROUP DIALOGUE

Minimum Credits: 1
Maximum Credits: 1
The Diversity Intergroup Dialogue Workshop is open to all 2L, 3L, LLM, MSL and joint-degree Pitt Law students and brings together those with diverse cultural and social identities in a small group setting, with the goal of engaging students in experiential learning as well as open and constructive dialogue concerning issues of intergroup relations, conflict and community. Students will learn from each other's experiences and examine how race, ethnicity, class, religion, age, disability, sexual orientation, gender identity and expression relate to power and privilege; and will practice constructive approaches to dialogue and the bridging of differences. Students will also consider how attorneys in a pluralistic society can use Intergroup Dialogue skills to better serve clients, advance causes and enhance professional

satisfaction. The workshop process is designed to stimulate learning, growth and engagement across the cultural identities identified above to provide students with the affective, behavioral and cognitive acumen that will promote skill-building to navigate effectively in our increasingly pluralistic nation and world.

LAW 5641 - SECTION 1983

Minimum Credits: 2
Maximum Credits: 2
This is a course in advanced constitutional rights litigation brought pursuant to 42 USA1983-- the federal statute which puts constitutional rights in action. It focuses on the means by which constitutional rights claims are actually litigated in lawsuits against public officials and local governments. Topics will include what it means to act "under color of state law;" absolute and qualified immunities; government liability for the acts of individual officials; remedies for constitutional violations, including monetary and injunctive relief; structural reform litigation; and the award of attorney's fees. The objective of the course is to provide students with the threshold substantive knowledge- to be able to bring or defend a 1983 case--- with the presentation facilitated by using "real-life cases" actually litigated by the instructors-- who between them have over 80 years of combined 1983 federal court trial and appellate litigation experience; and who accordingly--expect to provide practical insights into how 1983 cases are litigated.

Grade Component: Grad LG/SU3 Basis

LAW 5642 - FEDERAL HATE CRIMES

Minimum Credits: 2
Maximum Credits: 2
This course will focus on federal hate crimes. Students will examine and analyze relevant statues and key cases with a focus on gaining a practical understanding of the elements and application of these statutes. Students will have the opportunity to engage in discussions regarding the larger societal conversations relevant to these cases in order to better understand the various lenses through which prospective jurors may view such cases. Students will also learn about the tailored strategies applicable to investigating and litigating federal hate crimes cases, as many of these strategies are unique to this specific area of law. In addition to exploring various fact patterns through in-class discussion, students will utilize a specific hypothetical case fact pattern throughout the duration of the course that will serve as a basis for exploring the relevant statutes and strategies. As the course progresses, students will investigate the hypothetical case (including through an "investigation workshop"), analyze evidence related to the case, and litigate the case (through a "litigation workshop" and mock trial exercises). Please note that the subject matter of this course will require students to read about, view, listen to, and discuss material that may be disturbing or offensive to some or all students. Such material may include recordings or descriptions of the use of racial slurs and other offensive language, recordings or descriptions of the use of violence targeting victims based on a specific trait (race, ethnicity, gender, sexual orientation, religion, etc.), and other similar material.

LAW 5643 - THE PRESS AND THE LAW

Minimum Credits: 2
Maximum Credits: 2
The press often requires representation to ensure that it has access to the news and to ensure it can gather and report news without interference. There is a considerable body of law on the press' rights of access to government actions and the right to report news. The body of law also protects the press' sources and research from government intrusion. The course, taught by an attorney with extensive experience in representing the press, will review this body of law. It will afford students practical experience in representing the press by mock court appearances and arguments, and pleading preparation. Among the topics to be covered are: A. Origins of Freedom of Press History of Censorship of the Colonies and the Development of the Protection of the Press in the Bill of Rights B. Prohibition on Prior Restraint of the Press - New York Times v. United States of America C. Protections of the Reporter in Covering News -The Qualified First Amendment

Privilege and the Pennsylvania Shield Law D. Access to Judicial Proceedings and Judicial Records 1. The common law right of access 2. The higher First Amendment right of access 3. The Pennsylvania Constitution protections 4. How the press can assert its right of access E. Access to the Executive Branch 1. Freedom of Information Act 2. Pennsylvania Right to Know Law and Sunshine Law and similar state laws

LAW 5644 - PHILOSOPHY OF CRIME & PUNISHMENT - NATIONAL & INTERNATIONAL PERSPECTIVE

Minimum Credits: 2
Maximum Credits: 2
This class will examine the philosophical and moral justifications for punishment in both American and international criminal justice systems, with a specific focus on the impact that the philosophy of punishment has on the individual and more broadly, on society as a whole. We will examine legal theory and concepts while fostering philosophical contemplation and discussion. There are four main theories of punishment: deterrence, retribution, rehabilitation and incapacitation. Depending on era and country, different views take a different approach and order of importance; this class will examine the four main theories in other countries, as well as our own. We will examine which philosophy of punishment is most effective and why. As we attempt to move toward a more socially conscious view of justice, we must ask a series of "why" and "how" questions: why do we punish those who have violated the law, and how do we decide the proportionality of the punishment in question? What philosophy do other countries use/ what philosophy has shaped our modern view of crime and punishment? Are we becoming more or less moral? Whose standards of morals? Are we becoming a more or less compassionate society? And how do those standards compare to the moral/philosophical views of comparative criminal justice systems in other countries? This class will be taught by lecture and discussion and will require short essays and one longer research paper. The purpose of these essays will be to make a well-reasoned argument supported by the readings, as well as counterpoints.

LAW 5646 - FEDERAL CRIMINAL PRACTICE

Minimum Credits: 2
Maximum Credits: 2
This introductory course will provide an overview of federal criminal law from the perspectives of one or more attorneys with extensive experience in both the US Attorneys' Office as well as the Federal Public Defenders' Office . The course will develop and supplement students' knowledge of substantive and procedural criminal law through the lens of how criminal prosecutions actually work in the federal context. Specific topics will include charging decisions, right to counsel, discovery, plea bargaining, and trial. Students will learn about the goals of prosecutors and defenders when approaching cases. This course is especially helpful for students who will have a federal judicial clerkship, and those who anticipate a career in litigation.

LAW 5647 - INTRODUCTORY ENTERTAINMENT LAW

Minimum Credits: 3
Maximum Credits: 3
Introductory Entertainment Law exposes students to a wide range of legal knowledge, practical skills, industry experts, potential clientele and content genre encountered in the field of entertainment, sports and art law. Students will learn. from their professors, who have worked in these fields, as well as other outside speakers, including lawyers, athletes, entertainers, artists and/or other industry experts. The course will focus on a wide variety of sports, entertainment and artistic genre, including film, television, amateur and professional sports, video games, music, theater and visual art content. Course legal issues will include: Representation by lawyers, agents, and managers; protection, licensing, infringement and fair use of intellectual property; labor and employment law; negotiation and drafting of contracts; representing for-profit, non-profit, governmental and social benefit organizations; investment, debt, governmental and charitable financing; and specific legal issues related to film, television, sports, video games, music, art and live entertainment. Student projects will include oral presentation and a final paper expanding in a sports, entertainment and or/art law topic.

LAW 5653 - INTERNATIONAL HUMAN RIGHTS

Minimum Credits: 3
Maximum Credits: 3
This course will examine the history of the development of international human rights laws, the concepts behind the current status of those laws, and the mechanics present for enforcing those laws in international, regional, and domestic legal systems. The course will include a discussion of the theories behind international human rights law and the ability (or lack thereof) to enforce international human rights standards. The course will look at different examples of human rights crises throughout the world, how those crises are being addressed and how we believe they should be addressed in light of established law and morality. In light of the growing importance of the r2p ("responsibility to protect") doctrine and the related doctrine of "human rights intervention," we will examine these doctrines closely, whether they comport with international human rights law and whether they in fact accomplish what they claim to accomplish.

LAW 5669 - POLICE MISCONDUCT & HATE CRIMES

Minimum Credits: 2
Maximum Credits: 2
This course will address civil rights with a focus on police misconduct and hate crimes. While these are distinct areas of criminal law, they represent the two primary categories of federal criminal civil rights enforcement. Students will examine and analyze relevant statues and key cases with a focus on gaining a practical understanding of the elements (and application thereof) of each crime. Students will also learn about the strategies applicable to investigating and litigating these matters. Students will then apply their understanding to real-world fact patterns examined through in-class discussions, mock hearing and trial exercises, and assignments focusing on the development of written and oral litigation skills. Please note that because this course addresses police misconduct and hate crimes, the subject matter will require students to read about, view, listen to, and discuss material that may be disturbing or offensive to some or all students. Such material may include videos of police shootings, recordings or descriptions of the use of racial slurs and other offensive language, recordings or descriptions of the use of violence targeting victims based on a specific trait (race, ethnicity, gender, sexual orientation, religion, etc.), and other similar material.

LAW 5670 - PERSONAL FINANCIAL PLANNING & BUSINESS START-UP PLANNING

Minimum Credits: 1
Maximum Credits: 1
This course deals with the basics of personal financial planning and startup business planning. Students will create personal financial plans based on projected horizons of 1, 3 and 5 years. The primary focus is on near term planning with emphasis on: initial savings, paying off student debt, judicious use of credit, and investing for short and long term goals. Also, students will create a comprehensive business plan for starting a law firm after graduation. This plan's focus should be on business structure, financing, cash management and cost control. Topics such as benefits and insurance should be covered as well. Students will prioritize and codify their plans based on personal, professional and lifestyle objectives projected over each plans stated horizons.

LAW 5671 - CYBERSECURITY, PRIVACY, AND AMERICAN DEMOCRACY

Minimum Credits: 3
Maximum Credits: 3
This course will explore the intersection of cybersecurity issues and American democracy. The proliferation of technology in the cyber age has not only collided with existing norms and laws around privacy, but also stressed American democracy in profound ways. The proliferation of algorithmic tools within government and cyber threats to our critical election infrastructure (including digital disinformation and hacking) are among the most pressing challenges that our democracy must confront to preserve popular legitimacy in the face of cyber's growth. By first exploring the legal framework around cybersecurity and privacy, students will have a sufficient grounding to examine these complex issues facing American democracy.

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5672 - IMPLICIT BIAS IN HEALTH CARE

Minimum Credits: 2
Maximum Credits: 2
Equity of care, cultural competence, implicit bias, diversity, patient health management, population health, and their connection to federal law and informed consent liability can be among the most challenging of myriad legal mandates for health care providers. Long described as just "doing the right thing," culturally competent health care is now a legal imperative, with significant implications for physicians and health care providers' practices, livelihoods, and the health of their patients. Academic studies demonstrate that culturally competent, civil rights compliant care reduces costs while also driving new business, attracting new customers, increasing workplace productivity, improving patient outcomes, and heightening medical staff satisfaction. In this class, we will discuss the new legal landscape of cultural competence and the consequences for providers. We will examine health care diversity and inclusion, implicit bias, its daily manifestations in health care and everyday life, including organizational culture and the BLM movement and protests. We will discuss how to identify such bias and how to minimize its influence on vital health care and professional decision making. We will analyze federal health care civil rights laws and apply them to real life health care situations while providing students with behind the scenes information about little known court decisions, leadership courtroom testimony, and health care defense practices that tipped the balance in multiple courtrooms across the United States.
Academic Career: Law
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 5673 - HEALTH CARE FRAUD, ABUSE, AND COMPLIANCE

Minimum Credits: 2
Maximum Credits: 2
United States health care spending reached $3.6 trillion in 2018, accounting for 17.7% of the gross domestic product. Government officials have been quoted as saying that up to ten percent of this spending is due to fraud, waste, or abuse. In fiscal year 2019, the federal government won or negotiated $2.6 billion in health care fraud and abuse judgments and settlements, as well as additional amounts from administrative cases. As one of the most highly regulated industries in the United States, health care entities are required to comply with numerous statutes and regulations, including those related to fraud and abuse. These laws are increasingly complex, thereby exposing health care entities to liability for non-compliance. Thus, individuals involved in the administration and delivery of health care and lawyers who wish to practice health law must be well-versed in the laws and regulations that govern health care fraud, abuse, and compliance, as well as the strategies health care entities employ to address these concerns. In this course, students will explore the major federal civil, administrative, and criminal laws that have been used to combat health care fraud and abuse. These laws include the False Claims Act, the Anti-Kickback Statute, the Physician Self-Referral Law, and the Civil Monetary Penalties Law. Related compliance strategies and the practical compliance issues faced by health care providers will also be covered, including the seven elements of effective compliance programs, conflicts of interest and governance, repayments and disclosures, privacy and security, and corporate integrity agreements.

LAW 5674 - THE STATE ATTORNEYS GENERAL

Minimum Credits: 2
Maximum Credits: 2
The course will cover the day-to-day challenges faced by state Attorneys General and their staffs in enforcing state and Federal laws and defending state agency clients in a constitutional and ethical manner. The course will focus special attention on the 1,000-person Pennsylvania Office of Attorney General and on consumer financial issues, including enforcement of the Consumer Financial Protection Act and other federal consumer financial laws. Although each State is unique, the course will demonstrate the remarkable congruence that exists among State Attorneys General when addressing similar challenges and issues. Each office possesses broad jurisdiction and to varying degrees is independent from the executive and the legislative branch of state government. Attorneys General in 43 states are elected statewide on a partisan basis. The combination of sweeping jurisdiction and constitutional independence has given rise to a unique American legal institution of growing importance. The course considers the unique ethics issues that Attorneys General and their staffs

must confront. The course will also cover the relationship of Attorneys General with Governors, state legislatures and agencies, the federal government, the private bar, and a myriad of advocacy organizations.

LAW 5675 - DOMESTIC ARBITRATION: LAW, POLICY & PRACTICE

Minimum Credits: 2
Maximum Credits: 2
This course will discuss not only the governing legal framework for domestic arbitration but also how to approach arbitration as a practitioner, with a particular focus on arbitrations in the employment and consumer contexts. Students will consider on what grounds arbitration can be compelled or, in the alternative, opposed. Students will also learn how arbitrations are actually conducted and the key practical differences between arbitration and litigation. Finally, students will consider the policy implications of the trend toward resolving disputes through arbitration rather than litigation. The course will utilize simulations, role-playing exercises, mock arguments, and similar methodologies to ensure that students are active and engaged discussion participants.
Academic Career: Law
Course Component: Clinical
Grade Component: Grad LG/SU3 Basis

LAW 5676 - PERSONAL FINANCE & BUSINESS FOUNDATIONS

Minimum Credits: 2
Maximum Credits: 2
This course deals with the basics of how to develop and implement a sound personal financial plan and startup business plan. Students will create both a personal plan and a business plan based on projected horizons of 1, 3 and 5 years. The primary focus is on near term planning with emphasis on: initial savings, paying off student debt, judicious use of credit, and investing for short and long term goals. Also, students will create a comprehensive business plan for starting a law firm after graduation. This plan's focus should be on business structure, financing, cash management and cost control. Topics such as benefits and insurance should be covered as well. Students will prioritize and codify their plans based on personal, professional and lifestyle objectives projected over each plans stated horizons.

LAW 5677 - CORPORATE IN-HOUSE COUNSEL PRACTICE

Minimum Credits: 3
Maximum Credits: 3
This practical business law concentration, three credit experiential course, will explore the unique legal and real-world challenges that face counsel working in a typical corporate law department. Students will continually engage as a member of legal affairs for a fictional corporation addressing various topics. Themes include: serving stakeholders and the client, furthering business objectives, adding value and weighing the independent duties owed by a corporate attorney to the corporation, as well as, managing the tensions that arise in the role. Themes will be explored through selecting and managing outside counsel and budgeting, advocating for and integrating legal technology, applying effective practices as part of legal operations, administering merger and acquisition transactions and managing litigation, each as distinct from the responsibilities of outside counsel. Students will examine matters of fulfilling corporate compliance and governance requirements, awareness of legal knowledge versus application of legal intelligence, and the operation of the attorney-client privilege specific to the in-house context. Students will learn that the demands of business operations will encourage innovation, often substantiating use of technology, and they will recognize that expectations to be innovative are largely directed by the increasing need to be a predictive, forward-looking and problem-solving lawyer. Students will build practical skills for writing business-oriented communications, training and counseling the non-lawyer business client in order to realize legal and business objectives. Students will repeatedly interact with in-house practitioners and other guest speakers, as well as, participate in a shadow program for a day in the life inside a law department.

Grade Component: Grad LG/SU3 Basis

LAW 5678 - SOCIAL JUSTICE IN ACTION

Minimum Credits: 3
Maximum Credits: 3
This course is a continuation of the fall term course Social Education Justice Project. The spring semester of the course will be primarily experiential in nature, both as a simulation course and a clinic course. The simulation component will involve students as attorneys supervising junior attorneys in the preparation of an appellate brief and oral argument for a national moot court competition. Students will be placed in a lawyer role representing a client and completing lawyering tasks. I will supervise them directly and provide frequent feedback. The students will participate in a classroom component throughout the semester. The clinic component will place students in the role of facilitative lawyer, acting as a third party neutral and advising an individual or entity who is pursuing a social justice initiative or project in the community. I will supervise the students' work directly as they serve in the lawyer role and I will provide regular feedback. The students will participate in a classroom component throughout the semester.

Course Component: Clinical
Grade Component: Grad LG/SU3 Basis

LAW 5679 - INSIDE-OUT PRISON EXCHANGE PROGRAM

Minimum Credits: 3
Maximum Credits: 3
This course, which will be taught using the Inside-Out method, will explore some of the most fundamental and current issues arising in criminal justice and the law. Among them those issues and questions: What is the history of prisons in the U.S., and why do we have prisons now? Why has the U.S. engaged in one of the largest experiments in mass incarceration the world has ever seen? Why do people commit crime? Are there alternatives to incarceration that would produce better outcomes and a more just system? What role has race played in criminal justice in the U.S., and what would a more just system look like? The course will bring together students from the School of Law (and perhaps undergraduates from the University of Pittsburgh) with students who are incarcerated at a correctional institution in the region. All students will study together, with most class sessions taking place at the institution. Students will use reading and group discussions as well as writing assignments to bring together theoretical knowledge and learning, lived experience, and the experience gained in the class. The Inside-Out method emphasizes collaboration and dialogue facilitated by the instructor, which invites all participants in the class to address topics under discussion with a willingness to discuss things with honesty and integrity and to learn from each other. Students should anticipate that they will have the opportunity to test and sharpen their understanding of criminal justice issues, in an environment that will depend upon an honest exchange of ideas through real dialogue. In doing so, we will create real connection between students on the outside, and students on the inside.

LAW 5680 - CAPITAL MARKETS/INTERNATIONAL BANKRUPTCY

Minimum Credits: 3
Maximum Credits: 3
This class offers a unique opportunity to study two interrelated areas of law: capital markets and international bankruptcy. Among the skills developed in this class are legal reasoning and analysis, problem solving, negotiation, and cultural competence. Introductory bankruptcy is not a prerequisite for this class. Capital markets are at the heart of contemporary finance. How do businesses get the funds they need to succeed? Bankruptcy can present critical capital markets challenges. In times of distress, how do businesses get the funds they need to survive? This class looks at these issues generally and in the context of international bankruptcy.
Academic Career: Law
Course Component: Lecture

LAW 5681 - PRACTICE OF INTERNATIONAL LITIGATION & ARBITRATION

Minimum Credits: 3
Maximum Credits: 3
There has been a dramatic rise in complex global disputes, often between private parties and sovereign states. These cases carry significant

political, economic, and legal consequences, and the legal regime governing these disputes is both complicated and underdeveloped. This reality create both pitfalls and strategic opportunities for creative counsel. This course provides students a unique opportunity to explore the evolving area of cross-border disputes, while obtaining substantial stand-up advocacy experience that translates to any dispute-resolution setting. Based upon a realistic simulation of a cross-border dispute between a U.S. company and a foreign state-owned entity, students will prepare submissions that they will then argue to mock panels comprised of prominent arbitrators, corporate counsel and leading practitioners. Reflecting the reality of global disputes, roughly 30% of the class is dedicated to transnational litigation, 50% is dedicated to international arbitration, and 20% focuses on mediation. Students will leave with first-hand experience in the substantive and procedural aspects of international litigation and arbitration, with the additional overlay of complex and delicate facts involving foreign sovereigns. The focus of the course is on practical skills and strategic considerations, and the lectures are designed to provide sufficient context and background to make the simulations accessible for students with little prior exposure to this area of law. In this way, the course is as useful to student who might be taking the course to primarily to hone their advocacy skills as it is for those students with a background and interest in international disputes and international law.

LAW 5682 - GLOBAL CHALLENGES & TRADE LAW

Minimum Credits: 1
Maximum Credits: 1
The ongoing transformation of the international economic legal order and of global governance institutions is generally attributed to globalization. The establishment of global governance institutions is linked with the need of solving issues that affects, due to their nature, the international community. Yet, both globalization and institutions established for its promotion are in a profound crisis of identity. Concerns arise as to the coherence and compatibility of these trading processes and efforts with respect to national and global challenges. Both public opinion and policy makers fear that international trade, in particular a further liberalization thereof, may undermine or jeopardize policies and measures enacted for facing global challenges. This is the domain of this course; the law and policy of relations between national governments concerning the regulation of economic transactions that have cross-border effects also on the life of the population at large. The course covers the relevant WTO agreements and look into the interaction among trade, economic globalisation and global challenges. This course will also deal with past and present debates over the role of the legal order in economic development, analyzing today's most important issues in this domain: environmental crisis and the rise of emerging economies. Emerging economies, especially China, are increasingly taking the lead in reforms attempt of international economic law and from rule taker are now shaping the future of this field. Trade wars, the securitization of international trade as well as COVID-19 implications on international economic law are 2 also covered in this course to demonstrate the broader crisis of what we can term as multilateralism.

LAW 5683 - TRANSACTION NEGOTIATION & DOCUMENT DRAFTING

Minimum Credits: 2
Maximum Credits: 2
This course is designed to strengthen students skills in two areas of fundamental importance to any transactional lawyer negotiation and drafting. Specifically, students will learn how to develop and most effectively deploy their own negotiation style, understand the bargaining process, and then develop what they have learned to draft negotiated agreements with counterparties. The course is experiential, and it will rely largely on simulations and mock exercises to assess student progress in realizing the course objectives.
Academic Career: Law
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 5684 - MEDIATION SKILLS

Minimum Credits: 3
Maximum Credits: 3
Mediation continues to be utilized by parties and the judicial system as a preferred alternative to litigation. This course is designed to train students to become mediators and to meet the minimum standards set by the courts for mediation of cases. Students may use this course to

satisfy accepted requirements for a basic 40-hour mediation training program. This course focuses on the structure and goals of the mediation process and on the skills and techniques used to assist parties in overcoming barriers to dispute resolution. This will be achieved through a thorough discussion of the theories and sources of conflict, theories of conflict resolution conciliation processes, mediation, negotiation, and professional ethics. These theories are then tested in simulations, exercises, and role plays to allow the students to develop mediation skills, implement creative options for resolving conflict, and explore the effectuation of the theories and their skills. In addition, it is incumbent on all lawyers to be familiar with the mediation process and become competent in representing clients in mediation. The course also will cover ethical issues for lawyers and mediators, dealing with difficult people, power imbalances, and cultural considerations.

LAW 5685 - CYBER LAW & POLICY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Cyberspace is the critical infrastructure that runs our world. Yet, much remains ungoverned and the threats are constantly evolving. This course will explore theoretical and practical aspects of nation-state legal issues concerning cyberspace, including computer-related crime, espionage, war, and international governance. The seminar will review key legal cases, policy, and legislation. In tandem with a series of expert guest speakers from the field, the course will reflect on the roles of national and international governments, the legal and ethical dimensions of cybersecurity, the relationship between the public and private sectors, and the increasing tensions between privacy and security.

LAW 5686 - LEGAL INSTITUTIONS & THE HOLOCAUST

Minimum Credits: 3
Maximum Credits: 3
The Legal Holocaust in Hitler's Europe and its Aftermath in US Federal Court. This course examines the development of racial laws during WWII in France, Germany, and the British Channel Islands. We will use original documents and actual statutes and cases to understand how what was once legally grotesque became "law" in these places. We will then fast forward a half century, via the Nuremberg war-crimes of 1946, to the time when victims or their heirs began bringing restitution lawsuits in US federal courts, a development that continues to this day, the instructor being one of the plaintiffs' lawyers in a half dozen such cases, including a pending matter in the Seventh Circuit. Thus the course examines historical material as well as complex contemporary questions under US federal law and standards of professional ethics.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5687 - RE-IMAGINING POLICING SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will explore issues arising around policing, and ask students to re-imagine our entire concept of public safety. In recent history, any discussion of public safety was always a discussion of policing, and often little else. The course will ask students to take a broader look at the whole concept of safety without limiting themselves to policing. What is necessary to create public safety for everyone? The course will require students to use all of their legal and analytical skills to re-imagine how public safety should be created and delivered to all, from the ground up. Subjects considered may include such topics as the origin and purposes of policing agencies; handling crises related to mental health, homelessness, and drug addiction; the recruiting and training of police; and accountability for police misconduct. Students will use assigned readings, group discussions, presentations, and writing assignments to bring together theoretical knowledge and learning, lived experience, and the experience gained in the class.

Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5688 - SOCIAL JUSTICE EDUCATION PROJECT

Minimum Credits: 3
Maximum Credits: 3
The Social Justice Education Project offers University of Pittsburgh upper-level law, social work, and education students the opportunity to teach 11th grade students at The Neighborhood Academy High School located in the Stanton Heights neighborhood of Pittsburgh. The Neighborhood Academy is an independent, college preparatory school that provides a holistic education and works to break the cycle of generational poverty. Currently, all of the Academy students are Black. Pitt students will work with Pitt and Academy faculty to develop and teach a core social justice course for the Academy's junior class. They will introduce Academy students to selected constitutional law concepts and cases, the social history that informs the cases, and critical race theory. Pitt students will also prepare Academy students to participate in a national moot appellate moot court competition sponsored by the Marshall-Brennan Center on Constitutional Literacy. In addition, Pitt students will work with Academy students to develop and implement actual social justice projects in the Pittsburgh community.

Grade Component: Grad LG/SU3 Basis

LAW 5689 - CANNABIS AND THE LAW

Minimum Credits: 2
Maximum Credits: 2
Although still federally illegal, cannabis is big business in the United States. Medical marijuana is now legal in 37 states, including Pennsylvania, and the District of Columbia. "Adult-use," or "recreational," marijuana is now legal in 18 states and the District of Columbia. According to multiple reports, the U.S. cannabis industry is projected to soon exceed $40 billion and potentially employ approximately a half-million individuals nationally. "Mainstream" businesses have now entered this space. Many more ancillary businesses - such as architects, landlords, packaging companies, and insurance companies - interact routinely with this industry. As such, outside and/or in-house counsel representing "conventional" companies - as well as ones advising plant-touching companies, such as cannabis dispensaries, growers, and processors - must understand the unique legal challenges the U.S. cannabis industry presents. This course will address those challenges -- such as (i) whether one can be found to have violated federal criminal law when complying with state cannabis law, (ii) whether other federal statutes (e.g., the federal Fair Labor Standards Act) apply to this industry, and (iii) whether federal courts will enforce contracts relating to cannabis - while also considering if and how established law can adapt/apply to novel industries. It will also consider other important legal, legislative, and public-policy issues facing the dynamic U.S. cannabis industry, such as access to banking and mitigating risk in corporate transactions and agreements.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5690 - BLOCKCHAIN FOR LAWYERS

Minimum Credits: 2
Maximum Credits: 2
The Blockchain course reviews how Blockchain technology is significantly altering the way business is being conducted generally and in specific fields like finance, healthcare and data privacy, to only name a few. Those changes, in turn, will bring many new legal challenges that our laws and courts , regulatory agencies and other institutions must address. This course will consider some of the legal opportunities and challenges facing existing and new applications of the blockchain technology.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5691 - LATINOS/LATINAS AND THE LAW

Minimum Credits: 3
Maximum Credits: 3
This seminar will offer a critical approach to the role that law has played in the shaping of the Latino and Latina communities in the United States. It will also critically analyze legal issues of particular relevance to the Latino(a) communities in the United States. The course will explore sociological and historical readings to address questions of who Latinas/os are in terms of demography and the multiplicity of latino(a) identities. The course will also use case studies (based principally around governmental policies and programs and U.S. or state Supreme Court opinions) to explore issues of relevance to the Latino(a) communities : civil rights, colonialism, litigation over the right to serve on juries, education, language regulation, radical latino(a) movements, incarceration, identity issues and various issues in immigration law. In studying the legal issues affecting Latina/os, much attention will be paid to Critical Race Theory and critical Latina/o (LatCrit) theory and intersectionality. The readings are interdisciplinary in focus and include research in the social sciences and the humanities as well as legal sources.

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5692 - CORPORATE & VENTURE FINANCE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Corporate & Venture Finance is an elective worth three credits toward graduation. Business Organizations is a prerequisite for this course, which is an intense examination of the law and finance of corporate capital structure and markets. Students will produce a 20-page portfolio that will be developed and reviewed with feedback over the course of the semester. Students will draft materials that clients would use to make investment decisions, evaluate venture financing and options, and decide how to structure an executive compensation package. Students will use Excel to do analysis and develop competence to review banker proposals and issue fairness opinions for deals. No advanced background in accounting, economics, finance, mathematics, or securities is presumed or required, but some familiarity will be developed over the course of the semester.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5693 - CRIMINAL POLICE MISCONDUCT

Minimum Credits: 2
Maximum Credits: 2
This course will address federal criminal police misconduct with a specific focus on the use of excessive force by police. Students will examine and analyze relevant statues and key cases with a focus on gaining a practical understanding of the elements and application of these statutes. Students will have the opportunity to engage in discussions regarding the larger societal conversations relevant to these cases in order to better understand the various lenses through which prospective jurors may view such cases. Students will also learn about the tailored strategies applicable to investigating and litigating police misconduct cases, as many of these strategies are unique to this specific area of law. In addition to exploring various fact patterns through in-class discussion, students will utilize a specific hypothetical case fact pattern throughout the duration of the course that will serve as a basis for exploring the relevant statutes and strategies. As the course progresses, students will investigate the hypothetical case (including through an "investigation workshop"), analyze evidence related to the case, and litigate the case (through a "litigation workshop" and mock trial exercises). Please note that the subject matter of this course will require students to read about, view, listen to, and discuss material that may be disturbing or offensive to some or all students. Such material may include videos of police shootings, recordings or descriptions of the use of offensive language, and other similar material

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5694 - TRADEMARK LAW

Minimum Credits: 3
Maximum Credits: 3
Trademark law deals with legal bases for obtaining and enforcing interests in commercial symbols, including logos, slogans, and the like,

which play central roles both in modern commercial transactions (selling and buying stuff) and in daily conversation. Trademarks are partly information and partly the stuff of speech. The trademark law course will teach you about the many roles that trademark law plays in positioning trademarks as part of business strategies, commercial markets and other institutions, and everyday life. For producers of goods and services, how does trademark law help them make money? For competitors, for purchasers of goods and services, and for firms and citizens generally, how does trademark law preserve the power to access and use trademarks as information about commercial things, information that shapes about the commercial sphere, and information that guides daily experience (if that's separate from the commercial sphere). The course will teach those things in the context of teaching the skills of trademark lawyering. How do practicing lawyers work with clients? How do practicing lawyers develop and exercise professional judgment? How do practicing lawyers solve trademark problems? The course will put students in the role of practicing lawyers and teach them to think, write, and act as lawyers generally and especially as trademark lawyers.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5696 - MILITARY LAW

Minimum Credits: 3
Maximum Credits: 3
The United States Military has become a unique training ground for lawyers in the modern era. Military lawyers or "JAG's" operate worldwide in almost every discipline of law in almost every country on the planet. This course will instruct upon the fundamentals and foundations of the military justice system including its origin and evolution, Special and General Courts?Martial, Administrative Separation procedures, unique evidentiary considerations, the Uniform Code of Military Justice and the Law of Armed Conflict. This course will also discuss the role and relationship between military lawyers and their commanding officers and the many ethical considerations surrounding military decision?making processes.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5697 - PRACTICAL ASPECTS OF GLOBAL DISPUTES

Minimum Credits: 2
Maximum Credits: 2
The focus of the course is on practical skills and strategic considerations that arise in the management and resolution of global disputes. The course will take students through a hypothetical dispute based upon realistic scenarios so that they can master the practical and strategic problems present when a multinational company becomes embroiled in a dispute with a foreign sovereign entity. The lectures will cover all of the substantive and procedural aspects of suing a foreign sovereign or sovereign entity in a U.S. court (like the Foreign Sovereign Immunity Act and the Act of State Doctrine). The course will also address the practical considerations of litigating in foreign courts, and the tools available for litigators to coordinate parallel U.S. and foreign litigation (like transnational discovery and antisuit injunctions). It will then explore commercial and treaty-based arbitration against foreign state-owned entities and states themselves, which

may be pursued alternatively or in addition to U.S. and foreign litigation. As most disputes are ultimately mediated and settled, the course addresses the different ways by which the parties can reach a negotiated solution. Finally, the course reviews the issues surrounding asset attachment and recognition of judgment and arbitral awards against foreign sovereigns. Illustrating the practical and theoretical interplay among these scenarios, the focus will be on the strategic options presented at various junctures, as well as a focus on advocacy skills required across the domestic, foreign, and arbitral fora.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5698 - INTERSECTION OF LAW & POLICY - LAWYER IN POLICY DEVELOPMENT

Minimum Credits: 2
Maximum Credits: 2
This course focuses on what it means to be a lawyer working in policy development. To examine the lawyer's role in the policy development context, this course will first explore the intersection of law and policy, focusing on the Federal government and higher education. The course will then analyze the role of an attorney in developing policies generally and in these institutions specifically. Building on these discussions, the course will conclude by examining, and providing an opportunity to develop or strengthen, the skills used to navigate the relationship between law and policy in order to create and implement effective policies. There are two central purposes of this class. The first is to enrich students' understanding of how policies are developed in the Federal government and in higher education. To do this, the course will provide an opportunity to talk with practitioners, who are experts in these fields and have been actively engaged in shaping policy, as well as read and discuss publications by those who have studied or are currently studying policy development and articles describing contemporary examples illustrating why policy and process are important. The second central purpose of the class is to develop and strengthen the students' skills that lawyers use when creating and implementing policy. These skills will be practiced and examined through case studies, group exercises, and writing assignments. These assignments will allow students to practice the skills they learned through the course readings and guest presentations.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5701 - HEALTH CARE FRAUD AND ABUSE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
United States health care spending reached $3.2 trillion in 2015, accounting for 17.8% of the gross domestic product. Government officials have been quoted as saying that up to 10 percent of the money the United States spends on healthcare is due to fraud, waste, or abusive practices. If true, that now amounts to over $3 billion per year. In Fiscal Year 2016, the federal government won or negotiated over $2.5 billion in health care fraud judgments and settlements, as well as additional amounts from administrative cases. Thus, health care fraud is a major priority of both federal and state agencies and lawyers who wish to practice health law would be wise to understand the laws that govern health care fraud and abuse. This course focuses on the major civil, administrative and criminal laws that have been used to combat health care fraud and abuse, broadly defined as actions by health care providers (e.g., hospitals, physicians and physician practices, nursing homes, medical device and pharmaceutical manufacturers, home health agencies, clinical laboratories, and rehabilitation facilities) that are

inconsistent with accepted business and medical practices. These laws include the federal civil False Claims Act, the federal Anti-Kickback Statute, the Stark Law, and the Civil Monetary Penalties Law. While the class focuses on federal law, health care fraud and abuse laws at the state level will also be discussed. Related compliance strategies and the practical compliance issues faced by healthcare providers will also be covered.

LAW 5714 - ENVIRONMENTAL POLICY AND PRACTICE

Minimum Credits: 3
Maximum Credits: 3
In many areas of law, the daily practice is not black-letter analysis and trial practice, but interdisciplinary collaboration and policy development. This is particularly true of environmental law, which combines legal issues in the common law, statutory frameworks, administrative law, international and transnational law, and constitutional law, along with scientific understanding, public communications, political persuasion, and ethics. Focusing on environmental issues, this discussion section and practicum will provide students with a chance to explore interdisciplinary policy practice through an open-ended semester-long simulation. The simulation is paired with a weekly discussion section to discuss a variety of issues in environmental law and policy. This course's practical simulation will put students into teams to address a real-world environmental policy issue. Each team will approach the issue from a different perspective (for example, one team will represent environmental interests while another will represent a regulated industry or the government). Students will prepare memos, comment letters, presentations, and public statements based on their own research, in response to the arguments of their classmates, and in consideration of their overall strategic and legal goals. In the discussion component of the course, students will dive into readings and discussions about the law, policy, ethics, and practical realities of environmental law.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5717 - TELECOMMUNICATIONS LAW

Minimum Credits: 2
Maximum Credits: 2
This course explores the regulation and evolution of electronic communications in the United States. We will survey the legal framework of telecommunications, broadband and the Internet at several significant points in its development. Following the respective regulatory paths of broadcast, wireline and wireless telephony, cable, and broadband, the analysis will include early Federal Communications Commission broadcast regulation; the Communications Act of 1934 and its progeny; the advent of long-distance and local market telephone competition; the evolution of multichannel video communications; and the changes wrought by the Telecommunications Act of 1996. Finally, we will examine technological convergence, the emergent dominance of broadband and wireless communications, and the impact of rapid technological changes. We will also look at telecommunications from a policy and practice-oriented perspective, keeping in mind that regulations and statutes have played as important (if not more so) a role as court decisions in the development of telecommunications law. Themes that will be addressed include: conflicts between federal and state/local jurisdiction; monopoly versus competitive market regulation and issues associated with transitioning from the former to the latter; universal service issues; and the impact of such concerns as intellectual property and free speech. No prior knowledge of the telecommunications industry (or associated law) is necessary. Exposure to administrative law or antitrust law might be beneficial.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5718 - TECHNOLOGY AND EMPLOYMENT LAW

Minimum Credits: 2
Maximum Credits: 2
This course explores the evolving application of employment laws with a focus on how the law responds to technological, social, and economic changes. It examines changing definitions of the employment relationship in light of evolving tech platforms and the "gig economy." It analyzes issues of employee privacy and data security as well as developments in post-employment restrictions, confidentiality, and trade secret and intellectual property protection. Throughout the course, students will be exposed to core employment doctrines such as wage and hour law and discrimination with a particular focus on how disruptive forces such as big data, social media, and virtual workplaces are reframing traditional views of these doctrines.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5719 - APPLIED LEGAL DATA ANALYTICS AND AI

Minimum Credits: 3
Maximum Credits: 3
Technological advances are affecting the legal profession. While it is hard to predict the changes that machine learning and natural language processing will bring, legal professionals certainly will need to understand the new techniques and how to use and evaluate them. This course, co-taught by instructors from the University of Pittsburgh School of Law and Intelligent Systems Program, provides a hands-on practical introduction to the fields of artificial intelligence, machine learning and natural language processing as they are being applied to support the work of legal professionals, researchers, and administrators. Researchers in the field of Artificial Intelligence and Law (AI&Law) have been applying recent advances in natural language processing and machine learning to extract semantic information from legal documents and to use it to solve legal problems. Meanwhile, the commercial LegalTech sector is thriving. Companies and startups have been tapping into the legal industry's need to make large-scale document analysis tasks more efficient, and to use predictive analytics for better decision making. This course will help law students gain literacy with these technologies and learn how to apply them to the kinds of legal problems they have studied or will encounter in practice. This course not only teaches law students about the new tools, but enables students to gain practical experience using them under close mentorship and in project-based collaboration with students from computer science backgrounds who want to learn about the law. Lecture sessions will alternate with working sessions where instructors assist groups with projects.

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5720 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 0
Maximum Credits: 0
Students in this first year course will begin to develop the art of analytical legal writing. In classes, students engage in discussions and practical exercises as they learn to analyze cases, statutes and other authorities. The course emphasizes student development in the following skills: organizing the analysis of legal issues logically and coherently; expressing written legal analysis clearly, concisely, and effectively; developing and defending legal arguments, both in writing and orally; performing basic legal research; drafting selected legal documents; and using proper citation form. Exercises and other assignments promote the students' awareness and appreciation of relevant ethical standards.

LAW 5722 - TECHNOLOGY, RACE & THE LAW

Minimum Credits: 3
Maximum Credits: 3
This seminar will examine the myriad social and legal issues that lie at the intersection of technology, race, and the law. Informed by the nascent field of critical race and technology studies, this seminar seeks to understand the impact that technology has had on our understandings of racial difference while exploring the manner in which science and technology can perpetuate racism and disparate social outcomes. This course will address the racialized aspects of cutting-edge issues such as predictive analytics, artificial intelligence, algorithmic bias, biotechnology and race-based health research, population and ancestry genetics, surveillance technologies, digital databases, and social media platforms.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5723 - WORKING WITH PUBLIC INTEREST TECHNOLOGIES AND CIVIC DATA

Minimum Credits: 3
Maximum Credits: 3
This class is designed to equip students passionate about social justice issues to work with public interest technologies and civic data using a curriculum co-developed by four Pitt centers: Center for Analytical Approaches for Social Innovation (CAASI), Western Pennsylvania Regional Data Center (WPRDC), the Office of Diversity, Equity and Inclusion (DEI), and the University Honors College (UHC). The goal is to discern the opportunities and challenges that can come from working with technology and civic data, prepare students to understand and account for community dynamics, develop socially-responsible research and data practices, and implement projects that hold benefits for both community partners and students. This is not a quantitative course and no programming experience is expected.
Academic Career: Law

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 5728 - EXPUNGEMENT OF CRIMINAL RECORDS

Minimum Credits: 3
Maximum Credits: 3
This course provides hands-on experiential learning, working directly with clients on their expungement-related needs. This includes client consultation, drafting of petitions and other legal documents, and court representation as needed. Training and ongoing supervision by Neighborhood Legal Services (NLS). This course is also part of a research study on the effectiveness of expungement in improving employment and housing opportunities for those who were formerly in the criminal justice system. The research study is coordinated by Harvard Law School and jointly sponsored by Pitt Law, NLS, and Duquesne Law. In addition to time servicing clients, students will also have writing assignments throughout the semester to reflect on their experiences and its relationship to their legal education and professional development, and to demonstrate their mastery of the laws and their application.
Academic Career: Law

LAW 5729 - HEALTH LAW CLINIC

Minimum Credits: 6
Maximum Credits: 6
The Health Law Clinic is a medical-legal partnership between Children's Hospital of Pittsburgh of UPMC and the University of Pittsburgh School of Law Legal Clinics. The Health Law Clinic provides legal needs screening and brief advice in matters involving childhood SSI, special education rights, and medical decision-making. Students enrolled in the clinic must apply for and obtain a certified legal intern designation from the Pennsylvania Bar. Students take primary responsibility for client representation under the supervision of their professor/supervising attorney. Students will have opportunities to represent parents of children with disabilities in Court and in administrative hearings, as well as in negotiations with area school districts. The clinic seminar provides an opportunity to engage in inter-professional learning with students from the Pitt Schools of Medicine and Nursing, while exploring policies that challenge, and structures that reinforce, health outcome disparity.

LAW 5731 - CURRENT ISSUES IN HEALTH LAW

Minimum Credits: 1
Maximum Credits: 1
The purpose of this course is to increase the awareness of students in the health law certificate program to the rapidly changing health care industry and the equally rapidly changing field of health law. It is difficult, if not impossible, to understand the law regulating the health care industry without understanding the industry itself. Another purpose of the course is to expose students to a more in-depth treatment of selected topics than they can obtain in the basic survey course in health law and policy. The course also exposes students to topics that are not covered in the basic course, providing a broader view of the field of health law, which helps in the selection of other course offerings and of a topic for the faculty supervised writing requirement. In addition, the course introduces students to the variety of settings in which lawyers are involved in health law and the range of kinds of clients they represent. Classes will be taught by leading experts in the fields of health management and health law practicing in Pittsburgh andelsewhere.

LAW 5733 - MARSHALL-BRENNAN CONSTITUTIONAL LITERACY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar relates to the Marshall-Brennan constitutional literacy component of the law school's pipeline diversity program. The Marshall-Brennan constitutional literacy project prepares students to teach a constitutional literacy seminar in Pittsburgh area high schools. Students selected for the Marshall-Brennan constitutional literacy project are required to participate in the Marshall-Brennan Constitutional Literacy seminar concurrent with their teaching assignment at a Pittsburgh area high school. The seminar will focus on teaching methodology and review of constitutional doctrine in the areas to be covered in the high school course. Areas of focus will include the first, fourth, fifth, sixth and eighth amendments to the United State constitution, with particular emphasis on the constitutional rights of high school students and young people generally. Students will develop detailed lesson plans relating to topics to be covered in the high school course. In addition, students will be required to produce a substantial paper relating to one of the topics covered in the curriculum.

LAW 5734 - COPYRIGHT & MUSIC SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar explores intersections among copyright law, technological innovation, entertainment industries, and political and cultural change, using music as its central case study. Copyright law plays an important role in the contemporary landscape of the music industry. Digital platforms and cultural norms also increasingly shape how music is made, distributed, and enjoyed. Students will learn about how law is only one part of the entertainment sector. Part history, part law, part economics, and part culture, this collaborative seminar will feature faculty members in dialogue with one another and with guests who work in the art and business of music.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5735 - AI - PRACTICALITY & GOVERNANCE

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to Artificial Intelligence (AI) in both the legal and industry settings with practical legal service and healthcare use case scenarios. You will learn what AI, generative AI, machine learning, and large language models (LLMs) are, how they function, and how we anticipate they will function in the future. The course will include current best practices and policies for AI governance, fairness, and safety. Regulation of AI in healthcare and non-healthcare settings is in its infancy, but transactions and contracts involving these technologies are well-established, though ever-changing. The class will include guest speakers and cover such topics as use in public interest settings, use in law firms, operationalizing ethics, transparency in machine learning, assessing and mitigating AI hallucinations and bias, development of legislation/regulation/standards, and the impact of the technology on the disability community. Students will be queried throughout the course about how to best tailor the course to fit student ambitions.

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5736 - POLICY ENTREPRENEURSHIP SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Did you come to law school to learn how to make policy change happen? Is the West Wing one of your secret (or not so secret) favorite shows? Come join Professor of Practice Aadil Ginwala in a seminar exploring the nuts and bolts of what it means to be a policy entrepreneur and make change happen. The course will focus on the policy entrepreneurship lessons Professor Ginwala has gained from his past experience in the White House, Department of Commerce, and outside of government. This seminar will heavily feature case studies of actual successful policy change efforts, frequently with live guest speakers who made the change happen. Some case studies might include - changing US organ donation policy to help eliminate the kidney waiting list, creating and funding a critical non-profit to ensure first-generation college students can afford to finish college, and finding a way to get free internet to low-income public elderly housing in

Baltimore. Students in this seminar will be expected to have or develop a desired policy change and work throughout the semester on applying the lessons and techniques learned to a final project plan to help make that change a reality. This course especially well-suited to students who have a passion project already, though all are welcome. Let's learn how to make it happen!

LAW 5737 - EQUAL PROTECTION SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar will provide an opportunity for a more in-depth analysis of constitutional equal protection law than is possible in the 1L Constitutional Law survey course. The course will examine the theory, doctrine, and history of the equal protection clause. There will be two simultaneous components of the course: in-class discussion of readings on various topics related to equal protection rights, and an intensive writing experience in which students research and write academic papers (20 pages minimum) on a topic of their choice related to equal protection. Readings will consist of legal scholarship (such as law review articles) and case law. Topics to be covered include: theories and critiques of equality, rational basis review, heightened scrutiny and its triggers, racial and gender equality, intersectional and multi-dimensional approaches to suspect classes, recent controversies around transgender rights, fundamental interests in an equality analysis, and more. Papers will be submitted initially in draft form at a midpoint in the semester; students will receive extensive feedback from the professor and will revise the papers in response to the feedback. Final drafts will be due at the end of the exam period. Students will be expected to present and discuss their own research.

LAW 5738 - LAW INTERSESSION - WRITING

Minimum Credits: 1
Maximum Credits: 1
The Law School's intersession runs the week before regular spring semester classes begin. During the intersession, we make available a selection of short, intensive one credit courses to our students that they might otherwise find difficult to enroll in. For a specific description of each particular course offered during the intersession, please go to the link for the course located at the Law School's online Catalog of Courses. To receive credit for any of the courses offered during the intersession, students must attend class every day for approximately 2.5 hours and should expect to spend roughly twice that amount of time outside of class working on class related activities.

LAW 5741 - PUBLIC INTEREST ADVOCACY TOOLS

Minimum Credits: 2
Maximum Credits: 2
This course is designed for students embarking on careers in public interest law or policy and explores the many necessary techniques to become highly effective advocates for social change. Students will be presented with a fact pattern and spend the semester workshopping strategies to address the challenges presented. The purpose of the class is to help class participants develop creative advocacy approaches and learn to think beyond litigation and other traditional legal strategies to meet key client and societal goals. In particular, the course will: 1) Explore how coalition building, grassroots organizing, and public policy advocacy can be used to enhance legal strategies; 2) Teach basic public interest advocacy skills, including media relations, legislative advocacy, leveraging data and research, social marketing and public opinion, and digital strategies; and 3) Introduce students to dynamic experts in relevant issue areas, from community organizers to communications experts.

LAW 5742 - SENTENCING LAW & POLICY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
The course examines the law and policy of sentencing, paying particular attention to the intersection of race and class. As a course that focuses on sentencing law, it necessarily focuses on the policies that animate the statues, sentencing guidelines, and case law that we will be studying. Perhaps unlike other areas of legal practice, sentencing is an area that demands practitioners have competence in policy considerations at different stages of the punishment phase. Whether one is arguing for a suspended sentence, enhancement, reduction, or to spare a life, understanding punishment policy is critical to the job. The course is an opportunity for students to engage in supervised research leading to a substantial independent research paper in this area of law. Assessments focus on improving students' written skills and argumentation, oral advocacy, and editing skills; they include producing an original draft and redraft of the research paper, oral presentations, and peer editing. Topics include guilty pleas, rights during sentencing, sentencing guidelines, community-based sanctions, plea bargaining, and capital execution.

LAW 5743 - FORESIGHT/HINDSIGHT/OVERSIGHT: THE ROLE OF DIRECTORS IN CORPORATE LAW

Minimum Credits: 3
Maximum Credits: 3
This is a seminar that utilizes lectures and team-based simulation modules to examine the law of corporate directors. Students will work on case studies that span the life of a company, from its inception all the way to its potential sale; over the course of that time, students will grapple with a myriad of practical legal issues that face corporate directors, including control, fiduciary duties, financial valuation, and governance.

LAW 5744 - HEALTH LAW CLINIC

Minimum Credits: 4
Maximum Credits: 4
Health Law Clinic is a medical-legal partnership with UPMC - Children's Hospital of Pittsburgh. Medical-legal partnerships enable legal advocates to collaborate with a patient's medical care team. Recognizing that acute, preventative, and rehabilitative care are only part of the whole health equation, the Health Law Clinic specifically addresses the role of income, education, caregiver stability, and self-determination on patient health. Providing "legal care" in the form of access to counsel can mitigate the collateral impact on mental and physical health that legal problems can cause. Students in this clinic will receive substantive instruction in childhood SSI, adult guardianship, and special education law. Students will have opportunities to represent parents of children with disabilities in administrative hearings, in Orphan's Court, as well as in negotiations with area school districts. The Health Law Clinic provides a meaningful opportunity to gain course credit while acquiring and developing practical legal skills.
Academic Career: Law
Course Component: Clinical

LAW 5747 - LAW OF MENTAL HEALTH SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to the laws and issues that affect individuals with mental illness, many of whom find themselves in the criminal or civil justice systems. Emphasis will be on the issues surrounding civil commitment and the emerging use of treatment courts on the criminal side. This will require a review of Pennsylvania¿s Mental Health Procedures Act and other state and federal statutes, cases, and regulations. Students will be permitted to attend a session of mental health court.

LAW 5748 - RACE,RELIGION,&CRIMINAL JUSTICE

Minimum Credits: 3
Maximum Credits: 3
This course examines the legal treatment of religion in various contexts, paying particular attention to the intersection of race and criminal justice. As a course that is primarily interdisciplinary in its approach, this exploration necessarily involves study of how law impacts and shapes religion, and in turn how religion impacts law and policy. The class focuses on the Religion Clauses of the First Amendment as well as other areas of law, including the Religious Freedom Restoration Act (RFRA) and the Religious Land Use and Institutionalized Persons Act (RLUIPA). Topics include Civil Religion, Death Penalty, Intoxicants and Worship, Prison Rights, and Islam in Prison. The course will involve the development of a research topic and plan of research, development of a working outline of the project, submission of an initial draft, and submission of a final draft

LAW 5754 - TECHNOLOGY, LAW & LEADERSHIP

Minimum Credits: 3
Maximum Credits: 3
The theme of this seminar is change. Technologies are changing in ways that we often do not even see. The character of law, legal institutions, and law practice is changing rapidly and dramatically. As humans, our capabilities and futures are changing. How do we identify and assess the virtues and drawbacks of all of this? As lawyers and as professionals in other fields, what if anything can and should we do about it? The seminar approaches those questions by diving into deep critical examinations of how technological change is generating and reflecting new ideas about what law is and what law does, at both global and local scales. The payoff is greater than learning about contemporary technology law. The payoff is an introduction to leadership competencies and capabilities that help new lawyers and other professionals thrive in this new world.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5755 - RACIAL HARASSMENT IN THE WORKPLACE

Minimum Credits: 3
Maximum Credits: 3
This seminar explores racial harassment in the workplace, including how frequently it occurs and its different forms. We discuss the legal framework and dispute-resolution processes for racial harassment, including their current shortcomings and ideas for more effectively remedying racial harassment. We also draw from sexual harassment research and law -- and consider how society and the justice system treat sexual harassment and racial harassment similarly and differently. In consultation with the professor, students will select a topic on racial harassment, sexual harassment, or another form of harassment to research and present in a power-point presentation and paper. In addition to the professor's feedback on their research and writing, Professor Wysor of the Law School Writing Center will also provide feedback.
Academic Career: Law
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5756 - BASIC BUSINESS CONTRACT DESIGN

Minimum Credits: 3
Maximum Credits: 3
This course demonstrates how "design thinking" can be used when drafting basic business contracts that provide positive incentives for the parties to perform their obligations. Reading assignments explain design thinking, the role of incentives in business, foundational concepts in law and economics relevant to business concepts and how transactional business law practice differs from litigation-practice. Students practice "aligning" basic business contracts with clients' business goals through practical drafting assignments. These assignments permit students to compare and contrast the skills required to align contract language with transactional business goals for global multinational businesses, small and medium sized businesses and private individuals engaged in business. Students are trained to distinguish appropriate and inappropriate copying of contract language from "drafting precedents" and to carry out legal research on contract drafting issues for which there is no case law. One "capstone" assignment invite students to apply their new "incentive design" skills to drafting a law firm engagement letter for "value-based billing," a new business law billing model that is replacing billable hours and contingency fees. A second "capstone" assignment invites students to research a contract drafting issue that highlights how the business ethics of Walmart differ

from those of Toyota and the impact of that difference on the professional responsibility of attorneys.
Academic Career: Law
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 5757 - LAW PRACTICE INNOVATIONS

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to selected innovations in law practice technology most likely to have a major impact on the legal profession and legal institutions in the future. No prior knowledge of programming is required, and this is not a course designed to teach students how to program. The focus is instead on learning to think critically about what technological innovations can and cannot contribute to the practice of law and the administration of justice in America. Reading assignments provide theoretical perspectives and historical context for changes occurring in law practice today. Lab assignments simulate situations in which new technologies could be applied to a few basic law practice challenges. Students develop and write a short paper about an idea for an innovation in law practice (which may be a technology solution, a new process, etc)

Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 5758 - TRANSNATIONAL TRADE LAW

Minimum Credits: 3
Maximum Credits: 3
The ongoing transformation of the international economic legal order and of global governance institutions is generally attributed to globalization. The establishment of global governance institutions is linked with the need of solving issues that affects, due to their nature, the international community. Both globalization and institutions established for its promotion are in a profound crisis of identity. Concerns arise as to the coherence and compatibility of these trading processes and efforts with respect to national and global challenges. Both public opinion and policy makers fear that international trade, in particular a further liberalization thereof, may undermine or jeopardize policies and measures enacted for facing global challenges. This is the domain of this course; the law and policy of relations between national governments concerning the regulation of economic transactions that have cross-border effects also on the life of the population at large. The course covers the relevant WTO cardinal principles (nondiscrimination, most-favored nation, national treatment, free trade, etc), the WTO agreements, the WTO Dispute Settlement Mechanism and the foundational case law. A brief overview on the most recent or problematic case law on national security, state interference in the market, subsidies and countervailing duties and intellectual property is also provided. The course looks into the interaction among trade, economic globalisation and global challenges. It also deals with past and present debates over the role of the legal order in economic development, analysing some of today's most important issues in this domain: the relations between law and development and the rise of emerging economies. Emerging economies, especially China, are increasingly taking the lead in the reform attempts of the international economic law and from rule taker are now shaping the future of this field. Trade wars, trade sanctions, the securitization of international trade as well as COVID-19 implications on international economic law are also covered in this course to demonstrate the broader crisis of what we can term as multilateralism. In addition, this course is addressing the international trade law and its domestic regulation and policy in different countries with cases studies on the U.S., the European Union, and other economic powers.

LAW 5759 - INTERNATIONAL ENVIRONMENTAL LAW

Minimum Credits: 3
Maximum Credits: 3
Climate change is one of the most fundamental challenges ever to confront humanity. The United Nations climate change negotiations offer a historical opportunity to step up international action on climate change. Over the last forty years discussions of international environmental law and policy have grown in number and frequency, and treaties addressing the topic have become common. Many of the treaties contain concepts that have now become accepted as commonplace, such as the ecosystem approach and the precautionary principle. The early beginnings of the subject can be found in bilateral and multilateral efforts to protect shared and jointly exploited natural resources

like fur seals and fisheries, but now the subject of international environmental law and policy has grown into a complex code of treaties and other instruments that impose obligations on states to protect their own environments as well as to refrain from causing extra-territorial environmental harm. This course examines the basic objectives, principles, techniques, and content of international environmental law and policy and how international environmental law is related with core areas. It starts by examining the main environmental challenges and root causes, and then looks at the role that the global economic system plays in creating and perpetuating the problems. Once a foundation for understanding the genesis of the issues has been laid, global challenges are analysed. More specifically, the intersection between international environmental law and policy, international environmental negotiations and the following fields will be analysed: Climate Change, Energy, Trade, Human Rights, Water, Intellectual Property Rights, Biodiversity, Food Security, Traditional Knowledge, and Climate Justice. The course will conclude with reflections on the future of international environmental law and on how to meaningfully address global challenges. In addition, the course intends to present in an inclusive way the different perspectives on sustainable development, climate change, the protection of the environment and biodiversity from both the North and the Global South with classes and case studies dedicated not only to U.S, Europe and the other Western countries and Western categories, but also to China, India, Latin American, Africa, Middle East, South East Asia. At the end of the course, students will be expected to know the basic principles and issues of international environmental law and policy.

LAW 5760 - HEALTH JUSTICE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Although the United States likes to pride itself on having the most advanced medical care in the world, its residents' experiences diverge widely with respect to the care they receive, as well as their health status and outcomes. Health disparities based on race have received the most attention, but disparities also exist with respect to ethnicity, gender, disability status, and sexual minority status, among others. Nowhere have those disparities been more glaring than in the context of the COVID-19 pandemic, which has disproportionately affected communities of color and people with disabilities. Significant health disparities call into question both the justice and the quality of the U.S. health care system. What role does or could the law play in addressing these inequities? Conversely, how has the law contributed to them? This seminar provides students with an opportunity to explore in depth topics relating to the law's responses (and potential responses) to health inequality. While the seminar's central concern is with the law, readings and discussions will explore and integrate evidence and knowledge from multiple professional and academic disciplines. Topics covered might include, simply by way of example, health equity issues associated with Medicaid policy decisions; the ACA's contraceptive coverage mandate, gender equality, and religious liberty; disparities in insurance coverage and access to care for persons with mental illness; and health care providers' obligations to provide accommodations to disabled patients.

LAW 5764 - STREET MEDICINE PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
This practicum will offer students the opportunity to work alongside physicians, medical students, and other professionals in addressing the healthcare, legal, and social needs of persons experiencing homelessness in Pittsburgh. The practicum is structured as a partnership with Pitt Med's medical residency track in Street Medicine and the student group Street Medicine @ Pitt. Law students will participate in Street Rounds, held weekly, and will provide brief advice to unhoused persons on issues that may include access to health insurance and public benefits, criminal record expungements, and housing-related issues, among others; law students also will assist with referrals to legal services providers for issues that require attorney representation. Students will gain transferable skills for any lawyering context, such as interviewing, legal research and writing, problem-solving, and inter-professional communication and teamwork. The practicum's weekly seminar sessions (which may also be attended by medical students/residents) will address (1) skills needed for communicating effectively with persons served by Street Medicine; (2) basic law regarding the legal needs frequently experienced by unhoused persons; (3) social drivers of health and structural factors that contribute to and arise from homelessness; and (4) legal and policy strategies for addressing homelessness as a social and public health problem. The field work component will consist of regular participation in Street Rounds and any follow-up work needed. Street Rounds are held mainly on Wednesdays from 6:30-9:00 p.m. in Downtown Pittsburgh and East Liberty/Oakland. Students who enroll must be able to attend Street Rounds on a regular basis. To allow students prompt opportunities to participate in Street Rounds, a mandatory in-person orientation session will be held on the Friday prior to the first week of classes.

LAW 5765 - LAW, CAPITALISM & DISTRIBUTIVE JUSTICE

Minimum Credits: 3
Maximum Credits: 3
This seminar course explores the role of law in constituting the institutions of capitalism and how law creates or contributes to a structure for society that is unjust in the distribution of important social goods. Markets in large-scale settings of social cooperation are constituted by law. Law is a human created institution. We decide collectively as a society how important social goods are allocated through law. The outcomes of some social choices implemented through law have often been inequality, domination, exploitation, and expropriation. This course focuses on the law that creates these unjust outcomes. It also provides students with a theoretical and cross-disciplinary framework by which to critique law on these grounds.

LAW 5766 - BUSINESS FUNDAMENTALS FOR LAWYERS

Minimum Credits: 2
Maximum Credits: 2
Business Fundamentals for Lawyers provides an introduction to key business concepts and issues. This orientation will allow insights into client and employer needs and how lawyers must operate within a broader set of economic interests. Students will learn the "vocabulary" of business. Topics will include: the economics of the practice of law, business structures and corporate governance, principles of finance and accounting, common business contracts and transactions, role in business strategy and risk management, employment issues, ethics. The substance of the course will be relevant to private practice, government and public interest attorneys. The course will primarily use a lecture format and make use of guest speakers from law firms and industry. This will also help deepen relationships with the Pittsburgh Legal and Business Community.

LAW 5767 - SUPREME COURT ADVOCACY

Minimum Credits: 2
Maximum Credits: 2
This course is an experiential course based on a case that Professor Lobel is scheduled to argue before the Supreme Court the end of January or early February 2026. The case is Exxon v. Cimex: Exxon suing Cuban governmental agencies for the nationalization of its gas stations and oil refinery in Cuba after the 1959 Cuban Revolution. The question before the Court is whether Title III of the Helms Burton Act providing US Citizens a right to sue Cuban entities and other companies trafficking in nationalized property abrogates the immunities accorded in the Foreign Sovereign Immunities Act. The students will help Prof Lobel prepare for oral argument by drafting bench memos based on the briefs in the case and participating in moot courts prior to argument and possibly in strategy sessions with Prof Lobel's legal team. The students will be expected to travel to D.C. to attend the S.Ct. argument, meet with Cuba's lawyers afterwards to analyze the argument, and draft an opinion in the case based on the briefs and oral argument. Timing will be critical. Students will have be emailed the briefs by January 1, read the briefs and do some research and write bench memos before the class starts and then participate in moot courts and strategic discussions the first two weeks of the spring semester

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 5769 - CRITICAL RACE THEORY

Minimum Credits: 3
Maximum Credits: 3
As civil rights gains were rolled back in the 1970s & 1980s, a group of legal scholars, including the late Derrick Bell, sought to critique

notions of "formal equality" and "colorblindness" that pervade American conceptions of "equality" and "justice." This course explores the body of theory that these scholars pioneered, now called Critical Race Theory (CRT), and some of its interdisciplinary directions. In it, we will consider 1) the intersectional appellate legal histories and presents of race and racial inequality in the United States, 2) how formal equality obscures racial inequality through claims to race neutrality, and 3) why American conceptions of liberalism, with their attendant reliance on individual responsibility and meritocracy, serve as consistent and effective alibis for racial inequality. The major assignment for this writing and discussion-driven course will be a substantial analytic paper that takes the theories that we discuss and applies them to a contemporary or historical problem of (in)equality under the law.
Academic Career: Law

Grade Component: Grad LG/SU3 Basis

LAW 5770 - PHILOSOPHY OF PRIVATE LAW

Minimum Credits: 3
Maximum Credits: 3
This seminar examines the philosophical foundations of private law. Private law is the law of contract, tort, property, and unjust enrichment. It governs the horizontal relationships between persons rather than the vertical relationship between citizen and state. This seminar focuses on several competing accounts of private law: rights-based and corrective-justice views hold that private law is intelligible only in terms of the bilateral relationship between the parties, contractualist accounts justify private law's principles by reference to what persons could reasonably agree to or could not reasonably reject, and relational justice accounts locate private law's normativity in the equal standing and respect the parties owe one another in the interaction itself. Readings will cover whether distributive justice is relevant for private law. The course will cover the concept of private law itself and how it differs from public law. Course coverage may also reflect on differences between English, European and American approaches to private law.

LAW 5798 - LEGAL WRITING III

Minimum Credits: 2
Maximum Credits: 2
his is a continuation of Legal Writing II. This course is designed for those students who need additional practical experience in developing the skills they began to acquire in the first-year Legal Analysis and Writing course. Students will engage in a series of challenging writing projects, focusing primarily on issues arising in the area of commercial law. Assignments will include the drafting of commercial documents, with supporting memoranda to explain and discuss the students' work product. Some student work product will be based on negotiation or mediation exercises held within the class. Some assignments will be drawn from materials used on the bar examination. Students will complete approximately one assignment per week, and will receive extensive feedback from the instructor regarding each assignment.

Course Requirements: PROGRAM: School of Law

LAW 5805 - PERSUASIVE NARRATIVE

Minimum Credits: 3
Maximum Credits: 3
Effective lawyering requires the ability to communicate a convincing story from a client's point of view. In this class, students will improve their critical reading skills, their writing skills, and their ability to tell a persuasive story by (1) reading and critically discussing well-written short fiction and similar forms of communication, such as poetry, song lyrics, and speeches; and (2) producing their own written work to be critically reviewed and discussed by the class. Students will read and discuss several examples of quality writing produced by a diverse group of authors, all with a law-related theme, and often exploring sensitive topics. Student written work will be similarly reviewed and discussed by the entire class. Students will be expected to develop a clear theme, and to present their writing in a focused, coherent manner. The focus on short stories and similar materials is intended to expose students to a higher quality of writing than that typically found in legal authorities such as cases and statutes. The class will emphasize critical reading skills and the importance of thorough editing and refinement of one's work. We will also explore the persuasive power of effective story telling. Regular attendance and thorough preparation will be critical.

LAW 5811 - HEALTH CARE BUSINESS TRANSACTIONS

Minimum Credits: 3
Maximum Credits: 3
This course will expose students to a variety of commercial transactions prevalent in the health care industry. The course will focus initially on health care as a regulated commercial enterprise. After studying the case law, statutes and regulations applicable to health care providers, students will begin an in-depth study of negotiated health care transactions. This study will begin with an examination of the

fundamental elements of the acquisition process and an analysis of the tax, antitrust, regulatory and successor liability considerations generally addressed in health care combinations. Students will then be exposed to the various stages of the negotiated acquisition process: due diligence; preliminary negotiations and agreements; transaction structure; final negotiations; definitive agreements; and post-closing relationships. We will also explore the financing mechanisms required to support healthcare entities. The course will examine sources of funding, enterprise valuation, healthcare cost controls, capital structure, traditional debt financing, tax exempt bond financing, securities filings, and insolvency. By the end of the course, the students will have acquired an understanding of the complexities of health care financing and will be familiar with the health care acquisition process from its inception toconclusion.

LAW 5814 - INTERNATIONAL AND COMPARATIVE LAW SURVEY

Minimum Credits: 1
Maximum Credits: 1
The Deans' Office has surveyed our JD students with significant non-US contacts and has discovered that a number of them have expressed a strong desire for a comparative and international law survey course that enables them to learn more about specific areas of law in jurisdictions other than the United States. This course fills that need. It requires special permission so as to be limited to those students who have significant experience living in jurisdictions other than the United States. It is further designed to be an in person class with much interaction between faculty and student - no remote option will be offered or delivered for this course. If gatherings are restricted in number because of public health guidelines, the class will be divided into as many sections as necessary to continue in person instruction. Any instructor unable to teach the course in person will be replaced by another determined by the remaining professors. The course will be divided into 13 one hour modules to be delivered by the professors co teaching the course or other guest lecturers. It will discuss various areas of law: commercial law, intellectual property law, real property law, environmental law, tort law, and legislation and regulation, among others as well as research methods for how to locate that law.

Grade Component: Grad LG/SU3 Basis

LAW 5815 - STUDENT ADVISORY COUNSEL

Minimum Credits: 1
Maximum Credits: 1
The Student Advisory Council is the OEIE-affiliated student organization. The Council has been charged with developing guidelines and processes for both when a student applies with troubling issues in their past, as well as when it is discovered that a student who is already part of the law school has done something troubling in the past. This course will facilitate broad student participation, and enable students to earn course credit for their work on the counsel.

LAW 5817 - CORPORATE TAXATION

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the specific rules of subchapter C related to the taxation of corporations and shareholders. Using a "cradle to grave" approach, the course proceeds through a study of the tax consequences upon formation (birth of the corporation, including incorporation of going concerns), operation (life of the corporation, including distributions of cash or property, stock dividends, and redemption's), mergers and acquisitions (marriage and corporate offspring), and complete liquidation (death, including liquidation of a controlled subsidiary).

LAW 5818 - LAW INTERSESSION

Minimum Credits: 1
Maximum Credits: 1
The Law School's intersession runs the week before regular spring semester classes begin. During the intersession, we make available a selection of short, intensive one credit courses to our students that they might otherwise find difficult to enroll in. For a specific description of each particular course offered during the intersession, please go to the link for the course located at the Law School's online Catalog of Courses. To receive credit for any of the courses offered during the intersession, students must attend class every day for approximately 2.5 hours and should expect to spend roughly twice that amount of time outside of class working on class related activities.

Grade Component: Grad LG/SU3 Basis

LAW 5820 - LL.M COLLOQUIUM

Minimum Credits: 1
Maximum Credits: 1
This is a required course for all students in the ll.m. Program for foreign law graduates. The course will include guidance in the development and writing of projects for seminars or independent study projects. Students will be assisted with topic selection, developing an analytical focus, and writing the paper. Students doing independent studies will present their papers in the class for feedback. The course will also provide an opportunity to address specific issues of interest to students as well as opportunities to observe settings involving practical legalskills.

LAW 5822 - STATE CRIMINAL DEFENSE PRACTICUM

Minimum Credits: 4
Maximum Credits: 4
This Practicum will teach law students about the practice of criminal defense, with field placement coordinated with the Allegheny County Public Defender's office. The class will consist of lecture and class discussions, courtroom observation, and direct in-court participation. This class is open to all students. Students who have completed Evidence will be required to become Certified Legal Interns, working under the direct supervision of attorneys in the Pretrial and Trial Division of the Public Defender's Office. Students who have not completed Evidence will participate in observation and client interaction.

LAW 5824 - ELDER LAW LAB

Minimum Credits: 4
Maximum Credits: 4
This course is the clinical companion to the Elder Law Seminar. Those enrolled in the lab must take the seminar, but the lab is optional for those in the Seminar. This course offers students who have completed three semesters of law school an opportunity to represent clients and develop practical lawyering skills. Students enrolled in the Clinics are certified to practice law and take primary responsibility for client representation under the supervision of their faculty/supervising attorneys. Client representation will focus on guardianship of older adults and/or disabled adults; estate planning for clients of limited means, including powers of attorney, health care directives Wills and testamentary special needs trusts; and eligibility for government benefits for long term care.

LAW 5839 - LAW ENTERTAINMENT AND SOCIAL ENTERPRISE PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
Law, entertainment and social enterprise ("lese") will expose students to the legal knowledge, skills and roles entailed in the representation of a social entertainment enterprise. Students will gain a broad understanding of the operations of the entertainment industry and the intellectual, corporate and securities matters that permeate the industry. We will specifically use a case study of the steel town entertainment project ("steel town"), a local social entertainment enterprise that is dedicated to building a socially and commercially significant entertainment sector in southwestern Pennsylvania. The course will involve cross-disciplinary and experiential learning and immersion opportunities. In lese, students will acquire substantive knowledge, practical skills and role models needed by lawyers representing a social entertainment enterprise ("see"). Students will learn about social enterprise, entertainment, intellectual property, corporate and securities law. Students will learn to research and draft a private placement memorandum based on a business plan for a strategic entertainment investment fund see will launch in the spring of 2010. Students will work closely with practicing lawyers who represent or volunteer for the steel town entertainment works and other social entertainment enterprises in southwestern Pennsylvania such as WQED, family communications and Pittsburgh Filmmakers. Students will gain a broad understanding of the business operations and legal needs of various social enterprise entertainment clients in the industry, including but not limited to incorporation, strategic alliances, licensing and venture capital.

LAW 5841 - INTERNATIONAL TAX

Minimum Credits: 3
Maximum Credits: 3
This course will serve as an introduction to the U.S. Federal tax aspects of the cross-border flow of capital and labor. At the most basic level, we will explore the distinction, both for income and for estate and gift tax purposes, between a U.S. And a foreign person. We will then compare and contrast the manner in which U.S. And foreign persons (including tax expatriates) are subject to income tax. We will also cover the special tax regimes applicable to investments made by U.S. Persons in foreign corporations (i.e., The controlled foreign corporation and passive foreign investment company regimes) as well as an introduction to the foreign tax credit rules. Throughout the course of the semester we will consider the potential impact of tax treaties on the rules in the internal revenue code. The grade for the course will be based on a series of drafting projects.
Academic Career: Law
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 5105

LAW 5843 - LITERATURE AND THE LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
In this seminar, we will read and discuss stories about law. In such writers as Dostoevski, Melville, Glaspell, Wright, Lee, Shakespeare, Camus, Kafka, Porter, and Malamud, and in many popular culture and on-line media, LAW is represented, criticized, admired, and deconstructed, There is no better -- or more enjoyable! -- way to learn about the underlying premises and prejudices of legal systems than to participate in the real conflicts depicted in great stories, In this seminar, too, we will take a COMPARATIVE approach, because the writers chosen come from varied backgrounds, and their careful depictions of trials, investigations, and lawyers in action permit us to see how legal systems differ one from another.. Thus by perusing carefully Dostoevski , Kafka, and Camus, for example, we will see how criminal procedure on the continent of Europe differs markedly from common law approaches to guilt and innocence. The stuff of stories will be supplemented, where helpful, by readings in comparative law. Meanwhile these stories also permit us to raise questions of race, religion, and gender both within specific contexts (Shakespeare's Venice; Susan Glaspell's early 20th century America; Richard Wright's Chicago; Harper Lee's Jim Crow south) and comparatively (Bernard Malamud's recreation of the "blood libel trials").

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5847 - GENDER AND LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will examine how gender influences legal doctrine and how legal doctrine in a number of specific areas of law affects women and shapes societal understandings of gender. The objectives of the course are twofold: (1) to explore how an understanding of gender and feminist legal theory can enrich the study of law; and (2) to learn specific areas of legal doctrine that are particularly relevant to women and societal understandings of gender. The course will cover a number of areas related to issues of gender equality, such as employment, education, family and domestic responsibilities, sexual harassment, and domestic violence. Various feminist legal theories will provide a framework for studying these areas oflaw.

Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5860 - ANCIENT LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar will introduce students to the very beginnings of Western legal history. Through a comparative examination of the legal systems and practices of ancient Mesopotamia (including Hammurabi's Babylon, c. 1700 B.C.), Ancient Egypt, ancient Israel, ancient Anatolia (the Hittite empire, c. 1500 B.C.), Ancient Greece and ancient Rome, we will investigate the historical origins of "law" as an idea. We will see how each of these societies created law in the image of its own beliefs and needs. We will look at what differentiated the resulting legal systems, and what united them. We will examine not merely the ancient "law in the books" (the formal written codes that have received so much historical and philological attention over the years) but also the ancient "law in action" (the performances, rituals and ceremonies that created legal rights and duties in all these proto-literate societies). We will look at some of the earliest surviving trial records. Throughout the seminar, emphasis will be placed on developing a broad interdisciplinary perspective on the ancient legal cultures examined; readings will be drawn not only from the fields of law and history, but also from religion, anthropology, archaeology, literature and communication studies.

LAW 5862 - FOUNDATIONS OF INTELLECTUAL PROPERTY LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3

This seminar deals with the theoretical and policy foundations of patent, copyright, and trademark law. The readings consist of both contemporary and "classic" law review articles and other primary and secondary sources that explore connections between intellectual property law and a variety of possible justifications for the law and its leading cases, statutes, and treaties, including history, liberal political theory, economics and other social sciences, literary theory, and cultural theory. The bulk of the work of the seminar consists of supervision and discussion of original research by students (that is, research in print collections and other collections of analog sources, and digital archives of print collections) on historical intellectual property topics of their choosing, and the production and classroom presentation of a significant piece of original writing by each student.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5866 - ISLAMIC LAW AND JURISPRUDENCE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will focus primarily on Islamic law, and Islamic jurisprudence, in the modern era, using the classical period only as the backdrop against which modern notions and understandings of Islamic law may be tested. We will begin with a brief introduction into the creation and development of Islamic law from its earliest formative period through its golden, classical era in an effort to explore the principles of Islamic jurisprudence. We will then move quickly to address central questions concerning how that law has evolved given that the empires that gave rise to law in the classical era have evaporated and been replaced with nation states that have adopted by and large transplanted political and legal ideas, among them constitutionalism and reliance on secular legal codes to resolve legal questions. In this context, our primary focus will be on the judicial application of Islamic law in Muslim and non-Muslim countries, surveying court practice in states as varied as Egypt, Iraq, Indonesia and Malaysia. We will also address the increased pan-national use of concepts that purport to be based on Islamic law, from Islamic finance to jihad.

LAW 5871 - INTERNATIONAL CRIMINAL LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar is an introductory survey of the substantive and procedural aspects of international criminal law, a new and evolving area of law that has gained in prominence in the past decade. The course starts with an overview of fundamentals, focusing on the notion of international crimes and their historical evolution, as well as the general features and sources of international criminal law. The second part of the seminar analyzes the substantive law, especially the definitions and subjective and objective elements of genocide, crimes against humanity and war crimes. The discussion will take place within the context of a comparative evaluation of the main international judicial mechanisms developed after World War II to prosecute these crimes. Particular attention is paid to the International Military Tribunal at Nuremberg, the ad hoc United Nations International Criminal Tribunals for the former Yugoslavia and Rwanda, the Special Court for

Sierra Leone and the permanent International Criminal Court. In the final part, we examine the fair trial rights and the limited defenses and immunities available to alleged perpetrators of international crimes. A key question students will be expected to engage throughout is whether, and if so to what extent, individual criminal prosecution is a legitimate and effective tool to address mass human rights violations during or after conflict.

LAW 5873 - PRIVATE INTERNATIONAL LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Private international law traditionally covers three areas important to cross-border transactions and dispute settlement often referred to in the United States as conflict of laws: jurisdiction, the determination of applicable law, and the recognition and enforcement of judgments. This course will focus on these core issues and give attention to broader issues of international private law dealt with under the rubric of private international law in the U.S. Department of state, including international arbitration law, judicial cooperation, and other areas. We will review major international legal instruments (treaties, model laws, sets of principles, European regulations, etc.) And their importance to both transactional and litigation practice. Particular attention will be given to the expanded role of the European union institutions in the development and implementation of rules of private international law, as well as to the work of the Hague conference on private international law, the united nations commission on international trade law (Uncitral), and the international institute for the unification of private law (Unidroit). During the second half of the semester, each student will present the results of his or her research in preparation for the finalpaper.

LAW 5874 - SECURITIES ARBITRATION CLINIC

Minimum Credits: 4
Maximum Credits: 4
The securities arbitration clinic is a two-semester clinic; however, students may enroll in either the spring or the fall semesters, but must complete 2 semesters in order to receive credit. Total credits hours for the two semesters are 8 credits. The securities arbitration clinic offers a practical and educational opportunity in the securities arbitration process. In this course, the students will represent individual small investors with controversies of up to $75,000.00 before a securities panel under the supervision of practicing attorneys. The securities arbitration clinic is designed to impart negotiation, advocacy and trial litigation skills to the students, as well as provide a service to investors that might otherwise be unrepresented. Each student will handle all aspects of assigned a particular client's case, including:' review case file ' meeting with the client to review facts, request supporting documents, and determine relevant issues ' research of applicable securities laws ' meeting with supervising attorney to determine course of action ' if case is accepted, file power of attorney or entry of appearance with the Pennsylvania supreme court or securities and exchange commission, preparing and filing a statement of claim with finra and following through with all aspects of case preparation. 'Contact sec attorneys, opposing counsel and the sro to discuss recourse and schedule the arbitration panel if necessary. ' For arbitrations: prepare case to be presented to the arbitration panel, including obtaining all necessary documents and witnesses, as well as completion of all research on the law; represent the client in arbitration;

complete post arbitration work, including review of stipulated decision, if case is settled before arbitration.

LAW 5877 - PUBLIC POLICY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar will explore the processes of federal law-making and public policy development through examination of a series of selected topics concerning lobbying, the legislative process, judicial challenges to new laws, and administrative rule-making and enforcement. A primary purpose of the seminar is to enrich students' understanding of law-making and policy development by focusing on a series of case studies concerning particular laws and policies and introducing information about the relevant political dynamics, bureaucratic systems, and other real-world factors. Thus, in addition to studying written materials, students will talk with Washington-based attorneys and others who are experts in the relevant fields. The selected topics will vary from year to year.

Course Requirements: PROG: School of Law; PREQ: LAW 5032 or 5201 or 5237

LAW 5880 - IMMIGRATION LAW CLINIC

Minimum Credits: 4
Maximum Credits: 4
The Immigration Law Clinic is a two semester clinic.In the Immigration Clinic students represent immigrants requesting asylum, facing removal from the United States, and seeking special protection under the Violence Against Women Act. In representing clients under the supervision of the clinical professor, students perform all aspects of case preparation including interviewing clients, writing pleadings, appearing in Immigration Court, appearing before administrative agencies and managing post-relief issues. Clinic students also assist their clients in overcoming linguistic and cultural barriers that could impede their clients' success in the U.S. legal system. Clients may include refugees, immigrant women and children survivors of domestic violence applying to change their status, persons with criminal convictions who seek relief from removal from the United States and other immigrant populations. Students are also expected to collaborate with community based organizations that serve the foreign born population in the city.

LAW 5890 - ELECTRONIC DISCOVERY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
The discovery process has undergone a revolutionary change in the last quarter-century. Today, the vast majority of documents are created, stored and retrieved electronically, and the sheer volume of electronically-stored information ("ESI") has multiplied exponentially. This explosion in the volume of ESI has raised a host of legal, ethical and technological challenges for litigators and courts alike. This seminar will address many of the pressing legal issues that electronic discovery raises, including the creation, preservation and production of ESI; the distribution of the costs of e-discovery; the risk of spoliation; and the ethical and privilege issues that arise in connection with e-discovery.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5929 - PA PRACTICE PRACTICUM

Minimum Credits: 4
Maximum Credits: 4
This course offers students a great opportunity to help indigent clients and to learn important lawyering skills under the close supervision of an experienced attorney at neighborhood legal services association or laurel legal services. Students will work on cases involving poverty law issues such as eviction, custody, protection from abuse, public benefits, and debt collection. The classroom component will focus on various substantive and procedural poverty law issues, on ethical considerations, and on lawyering skills - such as interviewing, counseling, fact-gathering, legal analysis, negotiation, research, drafting, and litigation - critical to many types of legal practice. Classroom assignments will include simulation exercises and preparing a monthly journal. The field component will focus on advising and representing indigent clients. Field assignments will be available in Pittsburgh, Bridgeville, new castle, and butler. This is an excellent opportunity for students to gain experience in the county where they live or hope to practice. Most field assignments will include courtroom experience, and most students will be able to complete the field component before final exams. Every attempt will be made to schedule the field assignment at times convenient to the student.
Academic Career: Law
Course Component: Practicum

LAW 5937 - PA PRACTICE ANTI-EVICTION PRACTICUM

Minimum Credits: 2
Maximum Credits: 2
"Eviction is a cause, not just a condition, of poverty" Matthew Desmond, Evicted The PA Practice Practicum is focused on providing students with skills needed to practice law. It does this through a focus on anti-eviction representation. Research has shown that tenants who are represented by counsel have a much better chance of maintaining housing stability. Students will learn substantive law and practical skills and use them to protect low income clients from eviction and its devastating consequences. There are no exams. Writing assignments take the form of advice letters to clients. There will be weekly class sessions as needed at the offices of Neighborhood Legal

Services to learn applicable law and client skills such as interviewing, negotiating, and representing in court. Students must be eligible to be certified to appear in court, and must be available Thursday mornings because that is when many of the hearings are.

LAW 5939 - CRIMINAL DEFENSE PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
This Practicum will teach law students about the practice of criminal public defense. The class will consist of lecture and class discussions, courtroom observation, and direct in-court participation. Students will be required to become Certified Legal Interns and will work under the direct supervision of licensed attorneys in the Pretrial and Trial Division of the Public Defender's Office. By the end of the semester, the following learning objectives are expected: 1. Students should have a comprehensive knowledge of the process by which criminal cases move through the system and be able to articulate the separate stages of a criminal case. Students should be able to explain this process in an understandable and relatable way to clients. 2. Students should have knowledge of the bail and detainer process and understand how these concepts relate to incarcerated clients pre-trial, including the process of writing bond motions. 3. Students should understand the law and ethics around representing individuals in criminal matters, and the importance of zealous, client-centered representation through hands-on experience. 4. Students should be able to conduct a preliminary hearing from beginning to end, including cross-examination of witnesses. 5. Students should be able to formulate compelling arguments based on the elements of the charged offenses. 6. Students should have refined their interview skills and be able to interview clients and extract relevant and pertinent information in preparation for preliminary hearings. Students will be expected to formulate a weekly schedule for the semester and adhere to that schedule. The schedule will include both courtroom and office hours.

LAW 5952 - CRIMINAL PROSECUTION PRACTICUM

Minimum Credits: 0
Maximum Credits: 0
The office of the district attorney of Allegheny county administers the criminal prosecution practicum under the auspices of former prosecutor, judge Edward J. Borkowski. The practicum runs the full school year, with the 8 credits awarded upon completion of the spring term. Those interested must devote both semesters to the program to receive credit.. The practicum combines classroom instruction with actual courtroom prosecution experience in order to prepare students for the practice of criminal law. The classroom portion of the course requires students to attend a two hour class once a week in the courtroom of judge Borkowski in the Allegheny county courthouse. Students will be instructed on and be required to conduct opening statements, closing arguments, and direct and cross examination of lay and expert witnesses. Students are provided with a vehicle that includes police reports, lab reports, and transcripts of taped statements based on the class model (a homicide case) from which the exercises are performed in class by the students in a live courtroom setting with a judge and defense attorney present and participating as such. The practical portion of the course requires students to extern ten (10) hours per week in Stephen A. Zappala'"s Allegheny county district attorney's office. Certified students are permitted to litigate guilty pleas, suppression motions, and nonjury trials in the Allegheny county court of common pleas. The goal of the practicum is to give students a broad overview of the inner workings of a prosecution office while providing hands-on experience in prosecuting cases.

LAW 5954 - D.C. SEMINAR

Minimum Credits: 3
Maximum Credits: 3
The D.C. Seminar is one component of the semester in D.C. Program. The other component of the semester in D.C. Program is the D.C. Externship, which is described separately. Students must enroll in both the D.C. Externship and the D.C. Seminar in order to participate in the semester in D.C. Program. The D.C. Seminar will provide intensive skills training, meetings with alumni and practitioners, and opportunities to reflect on and analyze students' externship experiences. The seminar will meet in the law school's D.C. Classroom. The three seminar credits will be graded. Grades will be based on class participation, a weekly journal, and a significant paper regarding a legal issue or set of issues relating to the externship. The paper can be used to satisfy the upper level writing requirement. Students interested in participating in the semester in D.C. Program should: (a) contact prof. Deasy and/or prof. Baylis directly to discuss the program requirements and externship application process and (b) sign the semester in D.C. Program statement of interest form included with the registration materials and return it to the registrar's office when they submit their registration materials. Students who sign the statement of interest for the semester in D.C. Program should also register for classes as they normally would, in order to keep open the option of taking a regular course load until they have obtained an externship position. Upon securing an externship position, students can drop their other classes and add the D.C. Externship and D.C. Seminar.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5980 - ETHICAL ISSUES IN CLINICAL CARE

Minimum Credits: 3
Maximum Credits: 3
In this intensive seminar students observe and analyze ethical and health law issues as they arise in two clinical settings: an intensive care unit (ICU) and a medical unit in University hospitals. Students spend ~20 hours/week, allocated across two mornings and one full day per week, observing in the clinical setting. They accompany physicians and other healthcare professionals on clinical rounds, observe family meetings or ethics consultations, and attend one or more ethics committee meetings. Students are expected to complete a self-paced medical terminology text; must attend an orientation session (time and location to be determined); and must participate in the weekly meeting (typically in the late afternoon or early evening) that synthesizes their observational experience. This affords students the opportunity to analyze their experience and the issues they observe, in light of assigned readings. Relatively light reading is assigned for each week. Readings bring social science perspectives to bear on medicine and healthcare and illuminate clinical ethics issues. Students also make a case presentation, write a case analysis, maintain a journal or field notes of the clinical experience, and submit those field notes for review and comment.

LAW 5984 - TRADE SECRETS & CORPORATE ESPIONAGE

Minimum Credits: 2
Maximum Credits: 2
This course will cover various aspects of trade secret law with an emphasis on practical considerations relevant to the business environment. Students will examine public policy considerations of trade secret law, compare the Uniform Trade Secrets Act (UTSA) to the Restatement Approach and to the Pennsylvania UTSA (as well as the law of other jurisdictions), and compare trade secret protection with other forms of intellectual property. We will review the elements of a trade secret and compare the types of information and the circumstances under which courts have recognized or denied trade secret protection. The rights of a trade secret owner relative to its employees and third parties will be examined in detail, including use of confidentiality agreements and non-competition agreements. Enforcement of trade secret rights will be surveyed and include civil and criminal proceedings including the Economic Espionage Act (EEA). Practical issues from the business world are strongly emphasized in this course including drafting and negotiating non-compete, non-solicitation and confidentiality agreements, establishment of business policies and procedures for trade secret protection, practical considerations surrounding the bringing and settling of trade secret cases. This course will feature presentations by various trial lawyers, computer forensics experts and other professionals who are routinely engaged in litigation involving corporate espionage and the theft of competitive intelligence. Particular emphasis will be placed on the strategy behind launching and pursuing such litigation, together with an investigation of the various ways that individuals and corporations defend themselves against such claims. This course will also explore the various forms of equitable and legal relief typically requested in such cases, with a focus on certain recent damages awards in the tens of millions of dollars. Technological advancements in securing competitively sensitive information, together with novel efforts to gain access to such data, will be studied in detail, with particular attention given to the manner in which courts have tried to shape the law in a fast-changing business environment.

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2016 - PROPERTY

Minimum Credits: 2
Maximum Credits: 2
Property law governs relationships among people with respect to "things." These "things" include real property, personal property, and intellectual property. The course examines how real property rights may be limited in certain situations, and how the law balances the rights of a property owner against the rights of others. You will learn how a person or entity acquires property and the key attributes of property ownership; you will also study the law of leases (landlord-tenant law), land sales, easements and private covenants, public land use regulation including zoning, and limits on government authority to "take" private property for public use.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2017 - TORTS

Minimum Credits: 2
Maximum Credits: 2
This course explores the field of private wrongs, which form the majority of lawsuits filed in U.S. courts. You will study the methods and policies for allocating responsibility and compensating losses when a person harms another person, their property, or other interests under civil (as opposed to criminal) law. The course examines the three main theories of tort liability - intentional, negligent, and strict liability - and surveys key categories of tort claims that MSL students are likely to come across in professional and personal pursuits. You will complete a variety of research and writing exercises aimed at cementing a foundational knowledge of tort law.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2018 - CRIMINAL LAW

Minimum Credits: 2
Maximum Credits: 2
This course introduces MSL students to the fascinating area of criminal law. The course analyzes doctrines of substantive criminal law, both traditional and current. It focuses on such issues as theories of punishment, the formal elements of various crimes, the theory of homicide and the different degrees of that crime, criminal causation, liability as an accessory to a crime, conspiracy, and defenses to crimes including excuse and justification. The course also covers white collar crimes, which are crimes relating to financial fraud in business or government transactions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2019 - LEGISLATION AND REGULATION

Minimum Credits: 2
Maximum Credits: 2
This course has three main goals: first, to offer MSL students an overall sense of how the legislative, administrative, and judicial arms of government interrelate to govern our society under our constitutional system of checks and balances; second, to teach students how legislatures make written law (statutes) and administrative agencies apply the law, using regulations and adjudications; and third, to introduce students to the tools and doctrines courts use to understand the meaning of statutes (statutory interpretation).
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2020 - CONTRACTS

Minimum Credits: 4
Maximum Credits: 4
What promises are legally enforceable? Why does the law enforce those promises? What does it mean to enforce a promise? This course explores those questions, using the basic concepts, principles, and doctrines of contract law, sometimes called "the law of broken promises." Specific topics include the requirements for formation of a contract (such as offer and acceptance), justifications for enforcing promises (such as consideration or detrimental reliance), justifications for denying or limiting enforcement (such as unconscionability or mistake), interpretation of contract terms, and remedies for breach of contract.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2021 - AMERICAN LEGAL SYSTEM

Minimum Credits: 3
Maximum Credits: 3
This course prepares you for success in all courses in the MSL program by providing an overview of key areas of law you will study in depth in later MSL courses and by helping you to begin to "think like a lawyer." You will gain experience reading and analyzing judicial decisions ("case law") and written laws ("statutes" and "regulations"). Equipped with this new skill, you will begin to understand how to use the law to predict answers to legal questions. You will practice writing basic legal documents, such as a case brief and a legal memorandum, and will participate in online discussions and other activities with classmates and the course facilitator as a tool to cement the knowledge you gain in the course. The course will also include a sampling of legal readings and documents.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 2024 - PROPERTY

Minimum Credits: 4
Maximum Credits: 4
Property law, broadly defined, governs relationships among people with respect to "things." These "things" include land ("real property"), tangible objects such as a casebook ("personal property"), and intangibles such as a publisher's right to prevent others from reproducing the original content in a book ("intellectual property"). The property course examines how property rights may be limited, in situations where more than one person has rights to the same piece of property, and in situations where one owner's rights must be balanced against the

rights of the owner of a separate piece of property. Topics covered in the property course may include: modes of acquisition of property (e.g., Capture, find, creation), present possessory estates and future interests, co-ownership of property, marital property, landlord-tenant law, land sales, title recording systems, easements, restrictive covenants, nuisance, public land use regulation (including zoning, eminent domain, and the issue of regulatory takings), and global property issues.

LAW 2030 - AMERICAN LEGAL SYSTEM

Minimum Credits: 2
Maximum Credits: 2
This course prepares you for success in all courses in the MSL program by providing an overview of key areas of law you will study in depth in later MSL courses and by helping you to begin to "think like a lawyer." You will gain experience reading and analyzing judicial decisions ("case law") and written laws ("statutes" and "regulations"). Equipped with this new skill, you will begin to understand how to use the law to predict answers to legal questions. You will practice writing basic legal documents, such as a case brief and a legal memorandum, and will participate in online discussions and other activities with classmates and the course facilitator as a tool to cement the knowledge you gain in the course. The course will also include a sampling of legal readings and documents.

Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (PLAW)
Course Attributes: MCSI - Sustainability Related

LAW 2039 - MEDIA LAW

Minimum Credits: 2
Maximum Credits: 2
The last two years have seen the revelation of "deep throat", the most famous confidential source of all time, juxtaposed with the spectacle of reporters going to jail for refusing to divulge confidential sources. Representing a media client today requires an understanding of the constitutional and statutory issues surrounding the gathering of news and protection of confidential sources. Although the confidential source issue is the hottest issue today, representing a media client involves much more. This course is designed to provide an overview of both the legal framework and the 'real world' considerations related to libel, invasion of privacy, access to courtrooms and judicial records, access to public records, protection of confidential sources, pre-publication review, and responding to subpoenas.

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2046 - CRIMINAL LAW

Minimum Credits: 3
Maximum Credits: 3
Traditional and contemporary doctrines of substantive criminal law are analyzed, with focus on such issues as: theories of punishment, the formal elements of criminal culpability, the theory and degrees of homicide, criminal causation, inchoate crimes, accessorial and vicarious liability, conspiracy, and defenses of excuse and justification.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2047 - CRIMINAL PROCEDURE

Minimum Credits: 3
Maximum Credits: 3
The subject matter is supreme court decisional law and policy issues relating to the application and scope of the fourth, fifth, sixth, and fourteenth amendments to the United States constitution. Topics typically covered include: incorporation theory, right to counsel and related entitlements, the exclusionary rule, pretrial identification procedures, search and seizure law, and interrogation law. Students should gain both knowledge relating to constitutional law, which governs the permissible perimeters of police conduct and defendants' rights, and an informal sense of how the criminal justice system actually operates.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2050 - PRIVATE LAW: CONTRACTS

Minimum Credits: 1
Maximum Credits: 1
What promises are legally enforceable? Why does the law enforce those promises? What does it mean to enforce a promise? This course explores those questions, using the basic concepts and principles of contract law, sometimes called "the law of broken promises." Specific topics include the requirements for formation of a contract (such as offer and acceptance), justifications for enforcing promises (such as consideration or detrimental reliance), justifications for denying or limiting enforcement (such as unconscionability or mistake), interpretation of contract terms, and remedies for breach of contract. Students will complete written exercises that reinforce essential aspects of contract law and drafting.
Academic Career: Graduate

Course Requirements: School of Law (PLAW)

LAW 2051 - PRIVATE LAW: TORTS

Minimum Credits: 1
Maximum Credits: 1
This course explores the field of private wrongs, which form the majority of lawsuits filed in U.S. courts. You will study the methods and policies for allocating responsibility and compensating losses when a person harms another person, their property, or other interests under civil (as opposed to criminal) law. The course examines the three main theories of tort liability - intentional, negligent, and strict liability - and surveys key categories of tort claims that MSL students are likely to come across in professional and personal pursuits. You will complete a variety of research and writing exercises aimed at cementing a foundational knowledge of tort law.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2052 - PRIVATE LAW III:PROPERTY

Minimum Credits: 1
Maximum Credits: 1
Property law governs relationships among people with respect to "things." These "things" include real property, personal property, and intellectual property. The course examines how real property rights may be limited in certain situations, and how the law balances the rights of a property owner against the rights of others. You will learn how a person or entity acquires property and the key attributes of property ownership; you will also study the law of leases (landlord-tenant law), land sales, easements and private covenants, public land use regulation including zoning, and limits on government authority to "take" private property for public use.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2053 - PUBLIC LAW I: CONSTITUTIONAL LAW

Minimum Credits: 1
Maximum Credits: 1
This course is an introduction to American constitutional law, with an emphasis on U.S. Supreme Court decisions interpreting and applying the U.S. Constitution. The course explores various methods of interpreting the Constitution and the doctrines that guide judges' application of its provisions. You will explore such topics as the role of the judiciary in reviewing acts of the political branches of government; the separation of powers and relations among the three branches of the federal government; the powers of the national government and how the concept of federalism limits the powers of Congress and the states; and constitutional protection of the rights of individuals.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2054 - PUBLIC LAW II: CRIMINAL LAW

Minimum Credits: 1
Maximum Credits: 1
This course introduces MSL students to the fascinating area of criminal law. The course analyzes doctrines of substantive criminal law, both traditional and current. It focuses on such issues as theories of punishment, the formal elements of various crimes, the theory of homicide and the different degrees of that crime, criminal causation, liability as an accessory to a crime, conspiracy, and defenses to crimes including excuse and justification. The course also covers white collar crimes, which are crimes relating to financial fraud in business or government transactions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2055 - PUBLIC LAW III: LEGISLATION & REGULATION

Minimum Credits: 1
Maximum Credits: 1
This course has three main goals: first, to offer MSL students an overall sense of how the legislative, administrative, and judicial arms of government interrelate to govern our society under our constitutional system of checks and balances; second, to teach students how legislatures make written law (statutes) and administrative agencies apply the law, using regulations and adjudications; and third, to introduce students to the tools and doctrines courts use to understand the meaning of statutes (statutory interpretation).
Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2056 - BUSINESS & TAX LAW

Minimum Credits: 2
Maximum Credits: 2
This course focuses on the laws governing corporations and other business enterprises, in particular how corporations and other business enterprises are formed, what structures a business enterprise may take and how those structures differ, how business enterprises govern themselves, how they raise capital, and what fiduciary duties are owed by corporate directors and officers. The Tax Law portion of this course will introduce the basic concepts of the Internal Revenue Code relating to individuals and business enterprises, as interpreted by the Internal Revenue Service and the courts.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2057 - COMMERCIAL & TECHNOLOGY LAW

Minimum Credits: 2
Maximum Credits: 2
The Commercial Law portion of this course explores the primary U.S. legislation governing agreements to transfer an interest in goods -- Article 2 of the Uniform Commercial Code. Subjects covered include what transfers Article 2 applies to, how contracts are formed, warranties, acceptance, rejection and revocation of acceptance of goods, risk of loss, excuse for failure to perform, and remedies for breach. The Tech Law portion of this course focuses on intellectual property, which, in the Information Age, has taken on even greater significance. Intellectual Property (or ¿IP¿) law is designed to encourage the production of certain forms of information by granting property rights to the producers, enabling them to realize the value of the information they produce. In this course, we survey state intellectual property law (e.g., unfair competition and trade secrets) as well as federal intellectual property law, including trademark, patent and copyright. We examine some of the ramifications of recent technological developments on intellectual property law and some of the problems of international protection of intellectual property.

LAW 2070 - INTRODUCTION TO THE LEGAL SYSTEM FOR HUMAN RESOURCES; HIRING AND FIRING

Minimum Credits: 3
Maximum Credits: 3
This course will begin by explaining primary sources of law and exploring the judicial process, which will include an overview of state and federal court systems, state and federal administrative agencies, jurisdiction, class actions, the civil litigation process, and alternative dispute resolution. It will next look at job classification: whether a worker is an employee, an independent contractor or a student intern. Next this course will review job selection and hiring issues, such as resume fraud, background checks, questions considered inappropriate to job seekers, employee contracts, non-competition and arbitration agreements, protecting trade secrets, job references, and vicarious liability. Finally, this course will cover selected legal disputes surrounding job termination: claims of wrongful discharge and violation of whistleblower laws.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2071 - WAGES, HOURS AND BENEFITS

Minimum Credits: 3
Maximum Credits: 3
This course will begin with an examination of issues presented by the Fair Labor Standards Act: minimum wage, overtime, off-the-clock work, and child labor. It will next look at human resource recordkeeping functions such as personnel file maintenance, medical file maintenance, performance evaluations and disciplinary actions. Finally, this course will cover selected employee benefits and income maintenance issues, such as health insurance, pensions, disability benefits, unemployment compensation, family and medical leave, and plant closing/mass layoff notification.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2072 - WORKING CONDITIONS

Minimum Credits: 3
Maximum Credits: 3
This course will begin with the topic of health and safety at work, including employer obligations under the federal Occupational Safety and Health Act and state workers compensation laws. It will next look at human resource challenges posed by employee handbooks and employer codes of conduct. This course will next cover employee privacy issues, such as workplace appearance and grooming, "love contracts," privacy off the job, employee monitoring, social media and politics in the workplace, and drug testing. Finally, this course will explore selected labor-management relations issues, including situations where employees (union and non-union) engage in concerted activity for their mutual aid and protection.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2073 - ANTI-DISCRIMINATION LAW

Minimum Credits: 3
Maximum Credits: 3
This course will cover federal, state and local anti-discrimination laws and will begin with identification of protected classes, including race, color, sex, religion, national origin, age, and disability. It will next look at employment discrimination enforcement mechanisms, legal defenses, and legal remedies. Finally, it will look at "types" of discrimination, including disparate treatment, disparate impact, harassment, and retaliation claims.

LAW 2076 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 4
Maximum Credits: 4
Students in this first year course will begin to develop the art of analytical legal writing. In classes, students engage in discussions and practical exercises as they learn to analyze cases, statutes and other authorities. The course emphasizes student development in the following skills: organizing the analysis of legal issues logically and coherently; expressing written legal analysis clearly, concisely, and effectively; developing and defending legal arguments, both in writing and orally; performing basic legal research; drafting selected legal documents; and using proper citation form. Exercises and other assignments promote the students' awareness and appreciation of relevant ethical standards.

LAW 2082 - CLIMATE CHANGE AND THE LAW

Minimum Credits: 2
Maximum Credits: 2
This course examines the problems of climate change and how law and policy and corporate America are responding to them. The course begins by describing what is encompassed under the current "climate change" debate; considering what science can tell us about the climate change issue, including the uncertainties in that science and the significance and role of descent from the mainstream view of the science. It then considers, given the current state of the science, how we should assess the actions that should be taken to respond to this problem. That assessment should take account mitigation vs. Adaptation. The course also considers the legal responses to the issue of climate change. This course will discuss the united nations framework convention on climate change (UNFCCC), the KYOTO protocol, and the likely future of both. This course will discuss the domestic federal legislation with regard to GHGS as well as certain regional initiatives and voluntary commercial GHG reduction schemes. This part of the course will be examining the "boomlet" in global warming litigation in federal and state courts looking at the administrative and tort actions pending in U.S. Courts. Finally, the course will address sustainability issues for business, including green building, carbon neutral strategies, certain esoteric accounting issues, some carbon trading issues. Lectures will include voluntary and NGO-driven business initiatives (proactive approaches) as well as certain secondary effects caused by climate change that affect businesses.

LAW 2089 - PUBLIC HEALTH LAW

Minimum Credits: 3
Maximum Credits: 3
Public health law touches the lives and livelihoods of every person. Understanding the intent, basic structure, and methods for employing the local, state, and federal laws governing public health activities will facilitate legal practice in a variety of disciplines, including: municipal, healthcare, environmental, and judicial practice. This is a survey course, intended to introduce students to the most commonly encountered national and world public health law issues. Specific topics include: an overview of the epidemiologic principles underlying public health law; police powers; balancing public and private interests at stake; privacy and confidentiality of public health information, emergency preparedness; search, inspection, embargo and condemnation of private property; abatement of nuisances and dangerous conditions; and the major federal statutes affecting public health. In addition, material concerning world public health issues will be presented to help students understand the community health benefit from comprehensive public health legislation. Finally, ongoing local public health law interventions will be analyzed using the basic principles introduced early in the course.

Course Requirements: School of Law (PLAW)

LAW 2090 - CONSTITUTIONAL LAW: FREEDOM OF RELIGION

Minimum Credits: 2
Maximum Credits: 2
This course will examine the first amendment's establishment and free exercise clauses, including the history and purpose of each, the applicable doctrinal tests, and how the supreme court's theory regarding the clauses has changed over time. Classroom discussion will focus on the specific application of these tests, the limitations of each, and whether the tests fulfill the purposes of the religion clauses. Finally, the course will explore how the requirements of the establishment and free exercise clauses can be reconciled and whether any of the current tests or theories can provide a workable solution and balance.
Academic Career: Graduate
Course Component: Lecture

LAW 2103 - EVIDENCE

Minimum Credits: 3
Maximum Credits: 3
This course is an introductory course on the rules of evidence and will focus on the federal rules of evidence. We will cover hearsay and its exceptions, relevance, the use of character evidence, cross-examination and impeachment, among other subjects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2105 - FEDERAL INCOME TAX

Minimum Credits: 4
Maximum Credits: 4
This course will introduce the basic concepts found in the internal revenue code, as interpreted by the internal revenue service and the courts. We will explore the concept of "income," and specifically consider the difference between ordinary income and capital gain, the timing of income inclusion, and the determination of a taxpayer's basis in property (which relates to the calculation of income). We will also explore exclusions and deductions that may reduce a taxpayer's income. This course has two primary goals: first, to give the students a basic familiarity with the internal revenue code so that they will be aware of tax issues that may arise in their practice, and second, to prepare students who have (or acquire) a deeper interest in tax for more advanced courses in taxation.
Academic Career: Graduate

LAW 2135 - COMMERCIALIZING NEW TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
The key challenge addressed in this joint project course between the Katz business school and the law school is how to commercialize new technologies. Commercialization is the process of transforming an invention (i.e. a new technique or artifact that performs a useful function) into an innovation (i.e. a product or service that creates value in a specific use). Whether a new technology originates in a University, in an established company, or with an individual inventor, several issues must be addressed in order to determine whether it is worth investing in further, and to decide how the technology can be commercialized for maximum long-term value. We will focus on four types of analyses as input to a commercialization strategy: (i) technology analysis, (ii) market analysis, (iii) competitive assessment, and (iii) business model evaluation. For each, you will be provided with one or two practical articles, which outline an analytical tool or approach, and we will discuss their application to one of the cases. Although we'll walk through these steps in the order listed, they will need to be conducted iteratively (e.g. as you learn more about market opportunities you may wish to revisit your initial assessment of the technology's core elements). Throughout the course, law students will have the opportunity to assist the team in assessing legal matters that impact commercialization (from intellectual property matters, to regulatory landscape impacts, to alliance considerations) while also gaining an understanding of key business goals, strategies and tactics. Innovation Practice Institute in order to receive approval to participate. Many factors will be considered in making the decision on which students will be approved for participation, including but not limited to: Life experience Participation in related courses in law school (e.g., Business Organizations, IP-related courses), other graduate studies, or undergraduate studies, JD/MBA Program candidacy, Previous employment experience in relevant fields

LAW 2146 - LANDLORD TENANT LAW

Minimum Credits: 3
Maximum Credits: 3
This course will examine issues relating primarily to the relationship between residential landlords and tenants, including the creation of the tenancy, the rights and duties of the parties, interpretation and application of critical lease provisions, and the framework for prosecuting and defending various types of eviction proceedings based upon a violation of law or breach of lease. Other topics may include discrimination in rental housing, rent regulation, public housing and housing-related public policy initiatives. There will be discussion and analysis of federal, state and local statutory authority and recent case law developments. Students will also have an opportunity to hear from lawyers and judges to get their "real-world" perspective on landlord-tenant practice. Students will be assessed through class participation, a mid-term exam, and a final exam.

LAW 2148 - THE LAWS OF INTIMACY

Minimum Credits: 2
Maximum Credits: 2
So much throughout the history of our nation, federal, state and local governments have attempted in various ways to regulate our society's most intimate relationships and decisions. Challenges to laws regulating marriage, sexual conduct, reproduction, health and other very personal decisions permeate our country's jurisprudence. These "laws of intimacy," provide a historical window through which one can view the evolution of some of America's greatest and most enduring societal and civil rights conflicts. This course will provide students with an overview of the history underlying various "laws of intimacy" and the legal principles that have come to shape the debates concerning these issues. Students will apply these legal principles in their own analyses of continued efforts to regulate the most personal of human behaviors and decision-making.

Course Requirements: School of Law (PLAW)

LAW 2149 - LAW OF ARMED CONFLICT

Minimum Credits: 2
Maximum Credits: 2
The Law of Armed Conflict (LOAC), also known as International Humanitarian Law (IHL), is an area of public international law. It is responsible for regulating the conduct of armed hostilities, and balances the desire of states to prevent unnecessary suffering and destruction on one hand with the need to permit the effective waging of battle on the other. LOAC makes special provision for the protection of civilians, prisoners of war, the wounded, sick, and shipwrecked. LOAC applies to international armed conflicts (conflicts between states) and to non-international armed conflicts (conflicts between states and certain non-state groups). This course will explore: how conflicts are characterized (as IACs/NIACs or purely "domestic"actions); the main rules underlying the conduct of hostilities; and how

those rules are enforced. Real-world examples and case studies will be used to elucidate theory.
Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

LAW 2151 - HUMAN DIGNITY RIGHTS UNDER LAW

Minimum Credits: 1
Maximum Credits: 1
This class is an introduction to the substantive law of dignity rights, a new and important emerging field of law in the U.S. and throughout the world. Dignity is the root idea that every person, everywhere has human dignity and the human right to have their dignity respected and protected under law. Dignity is a foundational value and a legal right in international law (e.g. as reflected by the 1948 Universal Declaration of Human Rights), regional law (e.g., the American Declaration of Human Rights), in nearly 160 domestic constitutions throughout the world, and in thousands of juridical opinions spanning the globe. Dignity is also an emerging constitutional value in the United States, reflected in jurisprudence regarding equality, same sex marriage, reproductive rights, capital punishment, substantive and procedural due process, and climate crisis. Moreover, in August 2019 the 400,000-member American Bar Association adopted the advancement of human dignity as a core function and ingredient of the rule of law in the U.S. and around the globe. This course would be a rare opportunity to learn more about this important new area of law.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 2152 - NEGOTIATION SKILLS (BUSINESS)

Minimum Credits: 2
Maximum Credits: 2
The purpose of this course is to provide students with an understanding of current negotiation theory and practice. Students will study negotiation theories, research and techniques. As a result of taking this course, students will have an understanding of how to negotiate effectively in transactions, as managers, and to build effective teams. The materials for this course will consist of readings, negotiation scenarios, and real-life examples. Students will engage in skill-building exercises, actual negotiations, classroom and online discussions, individual presentations, self-reflection, self-assessment, giving and receiving feedback, and close reading of assigned texts and other materials. Students will have an opportunity to explore negotiation theory, practice different styles and techniques, and develop their own strategic approaches to negotiations.

LAW 2153 - GENDER LAW

Minimum Credits: 3
Maximum Credits: 3
This course will study various perspectives on theory and doctrine relating to gender in a number of different substantive areas of law. The course objectives are to: (1) integrate theory and practice in the study of law; (2) better understand how law both reflects and shapes understandings of gender in society; and (3) develop students' writing and analytical skills in addressing practical legal problems in areas relevant to gender and the law. The course is organized around several theoretical models of gender and feminism rather than by traditional subject matter categories. Within this framework, we will examine a number of different subject matter areas of law, including employment, education, athletics, work/family conflicts, the legal profession, sexual harassment, domestic violence, and the regulation of gender identity.

LAW 2170 - ELECTION LAW

Minimum Credits: 3
Maximum Credits: 3
Election law is a hot topic in the U.S. today. Opinions about what our federal, state and local election laws require -- and should require -- are sharply divided. This course introduces key issues in U.S. election law in historical, political and (to a limited extent) international contexts. Topics include voting qualifications and limits on voting (e.g., residency requirements, poll taxes and age qualifications), how race, gender and property have shaped voting rights and participation, the highly decentralized and diverse structures of U.S. election administration, how concerns and claims of fraud shape election law, districting and the concept of vote dilution, partisan gerrymandering, and limits on campaign spending and speech. We will look at some of the dramatic legal conflicts that emerged around the 2020 presidential election over election structures like voting by mail, extended voting time periods, and ballot counting procedures, and over the power of state legislatures, state courts and federal courts to shape voting structures and ratify or undermine election results. And we will consider how current concerns about election integrity and restricted voting access at once raise new legal issues and connect with longstanding legal and political schisms. This is an introductory course that surveys a wide range of election law issues and structures. We will do one in-depth case study, however, of laws that ban voting based on criminal conviction. Felony voting bans highlight the sharp differences in voting rights among different states, offer a telling example of the way U.S. voting qualifications interact with racial inequality, and reveal how election law on the books does not entirely define election administration or the bounds of political participation.

LAW 2198 - ANIMAL LAW

Minimum Credits: 2
Maximum Credits: 2
This course will examine the rapidly-growing and diverse field of animal law. Topics include the legal status of various non-human animal species, animals as property, animals in agriculture and food systems, animals in entertainment, animal protection laws, wildlife and endangered species, service animals, veterinary malpractice, and more. Applicable legal principles involve administrative law, contracts, torts, constitutional law, and civil and criminal procedure. Recent developments and current events in animal law will be discussed, including efforts to create and reform animal laws and the challenges faced when litigating and legislating on behalf of animals.

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2201 - ADMINISTRATIVE LAW

Minimum Credits: 3
Maximum Credits: 3
It is next to impossible to practice law today without dealing with administrative agencies, federal or state, or the law they create. Indeed, more cases are adjudicated in administrative bodies than in the courts. The substantive law that is created and implemented by agencies is the subject matter of individual courses such as environmental law, securities regulation, taxation, and banking. It is the procedural/structural law that governs the creation and implementation of substantive law by agencies that is the focus of administrative law. We will discuss the different types of functions undertaken by agencies, for example, rulemaking and adjudication in all its forms and how those disparate functions determine the appropriate structure of decision-making. At the federal level, where we will focus our attention, the procedures that apply originate in a variety of sources, including the United States constitution, the administrative procedure act and other statutes, and agency rules. There is often a complex interplay among these sources of law, which will be one of the topics we will explore. Another is the relationship of agencies to the chief executive and the legislature, an area that implicates important constitutional doctrines, statutes, and executive orders. Finally, we will spend considerable time on the availability, timing, and scope of judicial review of agency action, including the doctrines of standing, ripeness, exhaustion of administrative remedies, and judicial deference to agency findings of fact, interpretations of law, and exercises of discretionary power.

LAW 2204 - COLONIALISM & INTERNATIONAL LAW

Minimum Credits: 3
Maximum Credits: 3

This seminar begins by exploring justifications for colonialism in international law. The course then turns to modern international law - students will be able to identify and analyze legacies of colonialism, the development of a racialized hierarchy of states, and the use of international law to produce, reproduce, and justify those hierarchies. Students will work on a major research paper throughout the course, and at the end of the semester will give a presentation on their research for the class.

LAW 2210 - PATENT LAW

Minimum Credits: 2
Maximum Credits: 2
For over two hundred years the united states patent system has stimulated innovation by conveying time-limited exclusionary rights to inventors who adequately disclose their novel and nonobvious inventions to the public. Throughout this time, technological advancements in various industries have repeatedly confronted the patent system with fascinating policy and doctrinal challenges. In a constant effort to keep up with the pace of innovation and ensure that the patent system fulfills its constitutional purpose to 'promote the progress of . . . Useful arts,' patent case law has become one of the most rapidly evolving and adapting areas of American law. Through study of judicial decisions and statutory provisions, this course will examine the substantive legal doctrine and policy underlying two primary aspects of united states patent law: (1) the requirements for obtaining a patent; and (2) the means by which an issued patent is enforced (and its validity challenged). Specific topics include patentable subject matter (including computer-implemented inventions and biotechnology), novelty, no obviousness, utility, loss of right, disclosure requirements, patent claim interpretation, literal infringement, the doctrine of equivalents, prosecution history estoppel, defenses to patent infringement resulting in invalidity and/or unenforceability, injunctive relief, damages, and the unique role of the united states court of appeals for the federal circuit in shaping patent law.

LAW 2212 - BUSINESS PLANNING, ENTREPRENEURSHIP AND TECHNOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course will address key legal and business issues faced by entrepreneurs when establishing a commercial enterprise. Specifically it will address the protection and development of ideas, the commercialization of technology, and the legal and business aspects involved in forming, funding, operating, and managing the emerging business enterprise. The course will be taught from a business planning perspective. Through participation in the course students will be exposed to advanced business law concepts applicable to emerging companies in the business, technology, and medical fields.
Academic Career: Graduate

LAW 2213 - CONFLICT OF LAWS

Minimum Credits: 3
Maximum Credits: 3
Disputes between parties from different states or countries and disputes having contacts with multiple jurisdictions raise a host of challenging legal questions, including: (1) which jurisdiction's law will govern the dispute; (2) whether and in what circumstances a judgment rendered in one state or country will be recognized and enforced in other jurisdictions; and (3) how courts should make these determinations. State laws, the federal constitution, and international and foreign law all play a role in deciding these issues, which can have a profound impact on the ultimate resolution of the controversy.

Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2216 - EMPLOYMENT DISCRIMINATION

Minimum Credits: 3
Maximum Credits: 3
This course will examine federal statutory law as it applies to employment discrimination, with an emphasis on discrimination based on race, sex, color, ethnicity, national origin, religion and age. The most prominent statutes in this area are title vii of the civil rights act of 1964, the age discrimination in employment act, and an older civil rights statute from the reconstruction era, 42 U.S.C. 1981. The course will explore the substantive meanings of "iscrimination" under these acts, the models of proof for establishing a claim, the theoretical underpinnings of the statutes, and some of the procedural and remedial issues relevant to employment discrimination law.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 2225 - INTERNATIONAL BUSINESS TRANSACTION

Minimum Credits: 3
Maximum Credits: 3
This course analyzes basic international business transactions and the effects of U.S. Law, specific foreign law, and treaties on the conduct of the parties involved. The course covers issues of commercial law, regulation of cross-border transactions, dispute resolution, tax considerations, and antitrust law. Although a basic understanding of each of the areas of the law in the domestic context is helpful, there are no course prerequisites. Students are expected to develop an understanding of the U.S. Laws applicable to private international transactions

and an awareness of the risks inherent in doing business in or with other countries and their nationals.

LAW 2226 - INTERNATIONAL LAW

Minimum Credits: 3
Maximum Credits: 3
This course explores how international law regulates, or attempts to regulate, relations between states, and between states and individuals. It therefore examines both classical and contemporary topics such as the sources of international law, rights and responsibilities of states, jurisdiction, the incorporation of international law into domestic law, individuals as bearers of rights and obligations at the international level (in particular human rights law and humanitarian law), the law of treaties, the law on the use of force and the role of the united nations and the international court of justice in the peaceful settlement of international disputes. Several specific topics will be examined to illustrate the increasing impact of international law on domestic legal practice, and the influence of the united states on the development of modern international law.

LAW 2232 - LAW AND LEGAL PROCESS IN LATIN AMERICA

Minimum Credits: 2
Maximum Credits: 2
This is a two-credit introduction to the legal tradition, juridical institutions, and legal processes of the countries of Latin America. The first several weeks of the course will be devoted to the Roman origin of the Civil Law tradition (of which, of course, the countries of Latin America are part), the development of that tradition in Medieval Europe (with special attention to Spain), the growth of legal and governmental institutions in Spain's American colonies, and the influence of the U.S. and the French Revolutions and of German Legal Science on the newly-independent countries of Latin America and on the present-day legal systems of those countries. As the course proceeds, the students will be introduced to procedural devices created in Brazil, Mexico, and Argentina to adjust portions of those countries' Civil Law systems to the selective introduction of Anglo-American constitutional concepts. Finally, some time will be allocated for study and discussion of relevant special interests of students enrolled in the course.

LAW 2251 - BIOTECHNOLOGY LAW

Minimum Credits: 2
Maximum Credits: 2
Virtually every aspect of our lives is touched by biotechnology, so this class is designed as an introduction to many of the critical issues related to biotech and society. Specific topics include genetically modified organisms (Franken foods), patenting life, vaccination laws, human and animal testing, bioterrorism, biological weapons laws, bio-prospecting, pharmaceutical pricing, FDA laws, as well as scientific (and investor) fraud in biotech. The class also focuses on the policy relationships between law and public health, as well as related underlying economic incentives that can create tension in the life sciences. The class includes a number of guest speakers from industry including biotech licensing professionals and an FDA practice attorney. This class will be useful for anyone planning to practice law related to the life sciences including patent law. The issues are presented in a non-technical manner so the class is accessible to anyone interested in the field. It may be helpful to have exposure to patent law in general but it is not required.

LAW 2260 - INTELLECTUAL PROPERTY

Minimum Credits: 3
Maximum Credits: 3
In the information age, intellectual property (IP) law has taken on even greater significance. IP law is designed to encourage the production of certain forms of information by granting property rights to the producers, enabling them to appropriate the value of the information they produce. In this course, we survey state intellectual property law (e.g., Unfair competition and trade secrets) as well as federal intellectual property law including trademark, patent and copyright. We examine some of the ramifications of recent technological developments on intellectual property law and some of the problems of international protection of intellectual property.
Academic Career: Graduate

Course Requirements: School of Law (PLAW)

LAW 2265 - LABOR LAW: PRIVATE SECTOR

Minimum Credits: 2
Maximum Credits: 2
This course, after a short review of American labor history, will focus almost exclusively on the national labor relations act, the nation's premier statute dealing with labor management relations in the private sector, and the model for many public sector state laws covering the field. The course deals with the rights of individual employees, employers, and unions with respect to concerted activity, unionization, the establishment of collective bargaining units, elections conducted by the national labor relations board, and the collective bargaining process. The course will also cover strikes, picketing and hand-billing by unions, the current restrictions or limitations on such conduct, and the administration of collective bargaining agreements, grievance processing, and the arbitration of disputes. We will study and critically examine procedural and substantive case law developed by the national labor relations board, and its impact upon labor-management relations in both unionized and non-union environments. The course concludes with a discussion of the future of labor relations. We will discuss more recent tactics employed by unions and management and engage in a debate as to whether and how the current labor laws should be amended. Classes will be a combination of both lecture and dialogue. We also will discuss critical issues with representatives from Pittsburgh's union and business communities.

LAW 2268 - CONSTITUTIONAL LAW 2: GOVERNMENT POWERS, FEDERALISM AND THE PRESIDENCY IN THE TRUMP ERA

Minimum Credits: 3
Maximum Credits: 3
This upper level constitutional law course advances issues raised by the structural parts of the United States Constitution, as opposed to individual rights. Attention will be given to the relationships of the three federal branches of government, with emphasis on some of the powers and limitations of the executive, legislative and judicial bodies that arise from principles of separation of powers and national checks and balances. The course will also consider federalism and the respective roles of the national and state governments in some detail. These structural aspects of the Constitution will be discussed against the backdrop of the Trump Presidency, including, but not limited to, questions concerning judicial processes of indictment, Presidential pardons, the Emoluments Clause, the 25th Amendment, plenary powers over foreign affairs, the constitutionality of an international wall, congressional impeachment processes, and the legitimacy of sanctuary cities. Students will be expected to discuss the issues in a dispassionate, civil and academic fashion.

LAW 2283 - MENTAL HEALTH LAW

Minimum Credits: 2
Maximum Credits: 2
This course will focus on the impact of the legal system on persons with mental health disabilities. Civil proceedings, such as guardianships, commitments and treatment rights will be covered. Civil law areas covered will include mental illness, substance abuse, confidentiality, consent, substitute decision making and the rights of parents and of children in juvenile proceedings, custody determinations and divorces. While the primary focus will be civil law, criminal law topics will include capacity, right to refuse treatment, and insanity as a defense. The role of mental health professionals and mental health courts will be a prominent issue in the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2290 - EMPLOYMENT LAW

Minimum Credits: 3
Maximum Credits: 3
Focuses on the law governing nonunionized workers and work sites, whether in private or public sector, and whether skilled labor or managerial/professional. Topics include: doctrine of employment at-will; wrongful discharge; title vii; equal pay act; pregnancy discrimination act; executive order 11246; hiring; promotion; harassment; comparable worth and discharge; OSHA; and erisa.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2291 - TRANSACTIONAL PRACTICE

Minimum Credits: 2
Maximum Credits: 2
This course will offer an experiential learning opportunity in that all students will observe and perform many "lawyering" tasks normally entrusted to legal counsel who work on complex corporate and financing transactions. These tasks often require execution of instructions from a client or senior lawyer. Some require bilateral bargaining and judicious compromise. Some require collaboration or teamwork. The course will be cast primarily in the setting of a proposed acquisition of a "target company", as a going concern, by a so-called "private equity" investment firm. Students will be exposed to, and will engage by simulated participation in, the legal and practical dynamics by which transactions in this milieu are created, including: Negotiation of terms and bargaining over allocation of risks and uncertainties. Disclosure processes and protocols, for fulfillment of one party's appetite for information and the other's protective needs. Choice of transaction structure. Preparation of contract documents and drafting techniques. Dealing with "stakeholder" needs.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PREQ: LAW 2112

LAW 2295 - EXPERT WITNESS

Minimum Credits: 2
Maximum Credits: 2
In recent years, the use of expert witnesses has proliferated as both civil and criminal litigation have become more complex and technical. In this course, students will learn when expert testimony is needed; where to find appropriate experts; how to work with the expert to develop a theory of the case; and many more issues leading up to the actual trial of the case. Once the case reaches the courtroom, students will learn how to organize and present their own expert's testimony in a clear and concise fashion, and how to pursue the challenging task of "doing battle" with the opposing expert. In the end, students will achieve a greater appreciation for the subtleties of expert testimony, while at the same time acquiring the tools to deal with witnesses who speak in technical and unfamiliar language.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2296 - CORPORATE GOVERNANCE

Minimum Credits: 2
Maximum Credits: 2
This course will examine the internal structures, processes and standards of behavior that are required by law in the governance of corporate organizations, utilizing a series of hypothetical problems. Particular attention will be given to the corporate director's duties of oversight, care and loyalty, to the shareholders' ability to enforce those duties, and to the concept of fiduciary "independence." Some features of the Sarbanes-Oxley act of July 2002 and related rules will also be considered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2297 - WORKERS' COMPENSATION

Minimum Credits: 2
Maximum Credits: 2
This course deals with the law, theory and practice of workers' compensation under state and federal administrative programs, including the Pennsylvania and other state acts; longshore and harbor workers' compensation act (LHWCA); federal employees' compensation act (FECA); and the federal employers' liability act (FELA). The student will study the essential aspects of such laws, including their development and purpose, coverages, the various levels and varieties of benefits provided and how claims are established and enforced. Special emphasis is placed on how such laws affect the rights of individuals to other remedies such as the ability to sue in tort or assert discrimination claims; how compensation programs are implicated in contemporary efforts to reform healthcare coverage and delivery; and

the role workers' compensation plays in occupational safety and health. The student will become familiar with the uniform policy of insurance for compensation coverage and how compensation coverage and other regulatory requirements are policed by governmental authorities. A pervasive theme of the course is the status of workers' compensation as a unique hybrid of administrative law and tort, with the consequent effects of such status on the law, theory and practice of the field.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2301 - FIRST AMENDMENT: FREEDOM OF EXPRESSION

Minimum Credits: 3
Maximum Credits: 3
This course will address the history, theory, case law, and practice of the First Amendment's protection of freedom of expression. We will cover the history and origin of the First Amendment's Speech Clause and the various freedom of expression doctrines developed in the case law, including (but not limited to) prior restraints, vagueness and overbreadth, political speech, symbolic speech, time, place, and manner-restrictions on speech, the distinction between content-based and content-neutral restrictions on speech, and categories of unprotected or 'less-protected' speech. We will not be covering the First Amendment's Religion Clauses because they are covered in other courses. Given time constraints, we also will not be covering the First Amendment's Press, Assembly, or Petitions Clauses in any detail (although we will likely reference them in connection with other freedom of expression doctrines).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2304 - COMMERCIAL TRANSACTIONS

Minimum Credits: 3
Maximum Credits: 3
This course explores statutes and treaties governing agreements to transfer an interest in goods. The primary area of focus is article 2 of the uniform commercial code, and aspects thereof not covered in the first year contracts course; subjects covered include applicability of article 2, selected contract formation rules; warranties; acceptance, rejection and revocation of acceptance of goods; risk of loss; excuse for failure to perform; and remedies for breach. To a lesser, but significant extent, the course also covers the united nations convention on the international sale of goods (CISG), in force in the United States since 1988.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2307 - EDUCATION LAW

Minimum Credits: 3
Maximum Credits: 3
This course explores the often contentious relationship between federal, state, and local law and policy in the shaping of the American education system. It will examine past and current legal challenges faced by the system in areas such as school desegregation, discrimination on the basis of race, gender, disability, and immigration status, compulsory school attendance, freedom of religion, school financing and resource distribution, school discipline and policing, and federal mandates with high stakes testing. The course will equip students with a deeper understanding of the interconnection between the fundamental social and political principles underlying the education system and the development of education law jurisprudence.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 2319 - LAWYERS IN AMERICAN CULTURE

Minimum Credits: 3
Maximum Credits: 3
Lawyers like to think of themselves as members of one of the most helpful and important professions in American society. All too often, however, we encounter suspicion, derision or open hostility, not to mention nasty jokes. Public and private criticism of lawyers in the United States has become noticeably more intense in recent decades, but we have rarely attempted to survey its range, explore its roots, assess its legitimacy, or evaluate our own responses to it. This course proposes to do these things by examining characterizations and representations of lawyers in American culture from colonial times to the present day. We will relate changing views of American lawyers and lawyering to shifting social and professional circumstances; we will also explore the impact of those circumstances on fictionalized depictions of lawyers in American plays, novels, films, radio and TV, humor, art and song. We will consider what members of other prominent groups in American society from 17th Puritan clergy to 20th century businessmen have said or alleged about lawyers. We will also discuss how, where and with what effect lawyers have presented, promoted and defended themselves before the American public. We will conclude the course by considering how lawyers might learn from past experience and leverage the opportunities and challenges of 21st century law practice to restore or at least improve their public standing.

Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2328 - COPYRIGHT LAW

Minimum Credits: 3
Maximum Credits: 3
Copyright law deals with legal protection for certain kinds of human "creativity," including creativity expressed in books, music, and computer code. The copyright law course will describe the role that copyright law plays - together with other intellectual property law, other non-IP law, and other non-legal institutions - in positioning that creativity as part of a knowledge ecology and the knowledge economy. For authors and publishers, how does copyright law help them make money based on their creative output? For readers and consumers (and next-generation authors), how does copyright law preserve the power to access and use knowledge? And for law students, how do lawyers participate in doing both things, by representing and counseling clients? The course will describe the constitutional and statutory attributes of copyright law; the rights and remedies that copyright law provides for authors and publishers; constitutional and statutory protection that copyright law provides for the public; and the intersection of American copyright law with other intellectual property law, with state law, and with international law. Students are expected to master the substantive law of copyright, but that mastery is only a preliminary step. The major goal of the course is to teach students how to use the law to advance their clients' interests in creative products. The course does that by requiring students repeatedly to use their professional judgment in a counseling context.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2336 - LAND USE

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to provide students with a basic introduction to the mechanics and legal theories underlying land use controls. The course will strive to go beyond the theoretical by presenting a series of guest speakers (ranging from judges and zoning officials to land use planners, civil and transportation engineers, state environmental officials and developers) who deal with land use issues on a daily basis. Students will also be provided an opportunity to observe zoning board and court proceedings first hand and prepare class

projects and papers based upon these proceedings. The course will emphasize the inter-relationship and conflict with environmental regulations. Class discussions and projects will focus upon recent judicial and legislative developments in land use law.

LAW 2339 - LAW OF DISABILITY DISCRIMINATION

Minimum Credits: 2
Maximum Credits: 2
This course will provide in-depth analysis and discussion of the major federal disability discrimination statutes, including the Americans with disabilities act, the individuals with disabilities education act, and section 504 of the rehabilitation act. Readings and class discussions will focus on the application of these laws to issues such as employment, public accommodations, education, architectural barriers, transportation and insurance. The course will explore how disability discrimination statutes interact with other statutes, such as the social security act and the family and medical leave act.

LAW 2340 - ENVIRONMENTAL LAW

Minimum Credits: 3
Maximum Credits: 3
This course focuses on domestic environmental law and, in particular, on federal law rather than state law. The diverse and technical nature of modern environmental law is such that, in practice, lawyers often specialize in very narrow areas. Nevertheless, the same or similar moral, scientific, and policy arguments familiar to one area of the law are found in many of the others and similar regulatory approaches have been adopted or proposed for adoption to deal with very different types of environmental hazards. This course will focus its attention on the clean air and water acts, the national environmental policy act, the resource conservation and recovery act, the comprehensive environmental response, compensation, and liability act, and wetland protection, with passing coverage of various federal public land management statutes. We will explore the basic regulatory and non-regulatory approaches currently in place, including market-based systems to achieve better environmental quality, as well as proposals for changes to those approaches. A significant portion of the course will also be devoted to exploring issues presented by government and citizen suit enforcement of environmental laws. While administrative law is obviously relevant to much of environmental law given the fact that it is agencies which make and administer the law involved, the course will offer students an overview of administrative law principles which will be sufficient background for the purposes of this course.

LAW 2355 - NON-PROFIT ORGANIZATIONS

Minimum Credits: 2
Maximum Credits: 2
This class will survey the state and federal laws governing nonprofit tax exempt organizations. The course will examine the formation of nonprofit corporations under Pennsylvania law, principles of corporate management, and options for fundamental organizational change. In addition, the course will analyze the process of qualifying for tax exemption under the Internal Revenue Code and under the laws of Pennsylvania. Issues of private inurement, unrelated business income, charitable giving and fundraising regulations will be discussed. The course will include statutory and regulatory analysis, selected caselaw and case studies based on actual NPO's.

LAW 2386 - FOUNDATIONS OF LEGAL RESEARCH

Minimum Credits: 1
Maximum Credits: 1
Foundations of legal research is a one-credit concentrated course that will provide students with foundational legal research skills in case law, statutes and legislative history, administrative materials, use of secondary sources, sherardizing, and will integrate traditional print resources with online, CD-ROMs and internet resources. This course will meet once a week for the semester. The course is offered in three sections and is required for second-year students.

Course Requirements: School of Law (PLAW)

LAW 2395 - HEALTH LAW AND POLICY

Minimum Credits: 3
Maximum Credits: 3
This is a survey course of fundamental issues, covering a broad range of topics, in health law and policy intended both for students who merely wish to become acquainted with the field, and for those who plan on concentrating in the field. For those planning on concentrating, this course provides a foundation for in-depth courses such as health care business transactions, health care fraud and abuse, health care antitrust, and financing in the healthcare industry. For students not concentrating in health law, it provides an introduction to the multitude of issues with which lawyers working with clients in the health care industry need to be familiar. The course examines the role that law plays in achieving three societal goals: increasing access to health care, controlling health care costs, and assuring quality of health care. Specific topics are the structure of the health care system(including integrated health care delivery systems); regulating quality through licensing, staff privileges, and accreditation; labor and employment issues; the legal obligation to provide treatment, including Emtala); tax exemption and charitable purposes; health care reform; state and federal regulation of health insurance and managed care (including Erisa); federal initiatives to expand private insurance coverage(including HIPAA, cobra and ADA); Medicare/Medicaid eligibility, benefits, and reform efforts; health care fraud and abuse (false claims act, ant kickback statute, stark); and antitrust issues in the health care industry. This course does not examine issues of professional liability, and it does not cover ethical issues in health care (covered in, which is the subject of "bioethics and law").

LAW 2402 - CRIMINAL PROCEDURE 2

Minimum Credits: 3
Maximum Credits: 3
Criminal Procedure II (The Adjudication Process) -addresses all of the major federal constitutional issues that arise during criminal adversarial proceedings in the United States - in both the state and federal court systems. This course will provide a detailed, practical, and realistic understanding of what occurs in a criminal case from the time an accused is arrested until the time of conviction, sentence, and appeal. Procedures in both federal and state courts will be discussed including preliminary issues such as arrest procedure, prosecutorial discretion in determining what charges will be filed, bail concerns, preliminary hearings, and grand jury proceedings. The course will then address pre-trial matters such as discovery, Brady material, and pre-trial motions practice. This section will include but not be limited to joinder and severance, speedy trial, plea bargaining, and pre-trial habeas corpus. The "trial" section of the course will discuss jury issues

including jury selection and a variety of procedural issues that arise at trial including confrontation clause, hearsay, double jeopardy, and Bruton issues. Supreme Court cases, such as Apprendi and Alleyne, will generate an important discussion of not only appropriate language in indictments, but verdicts and verdict slips as well. Time will also be spent on sentencing, both state and federal. We will also briefly cover the appellate and collateral attack post-conviction processes.

LAW 2422 - ALTERNATIVE DISPUTE RESOLUTION

Minimum Credits: 3
Maximum Credits: 3
Legal and other disputes are increasingly resolved by dispute resolution processes other than litigation. Given this trend, it is important for law students to be familiar with these alternative processes, such as arbitration and mediation, and the benefits and risks they present. At the same time, these alternative processes require creative and interdisciplinary problem-solving perspectives and skills. This course begins with an overview of problem-solving approaches, and is followed by the study of arbitration, mediation, and hybrid processes. The course emphasizes interactive student discussion and activities, including role-plays, exercises, and presentations that simulate professional activities of lawyers, arbitrators, mediators, and clients. The classes build on each other, so that knowledge that we acquire in the earlier classes will be integrated into our materials, discussion, and activities in later classes.

LAW 2464 - BIOETHICS AND LAW

Minimum Credits: 3
Maximum Credits: 3
This is an introduction to a variety of issues in biomedical ethics brought about primarily by the innovative techniques and technologies that the biomedical sciences have developed such as artificial reproductive technologies, genetic screening and engineering, and life support systems. The primary focus of our inquiry will be whether these innovations should be regulated by law and if so how. Topics covered include right to refuse medical treatment (including life-sustaining medical treatment), informed consent, physician-assisted suicide; sterilization, abortion, artificial reproduction, surrogacy; genetic counseling, screening, and testing; stem cell research and cloning; organ transplantation; and confidentiality and privacy in health care.

LAW 2491 - ADVANCED LEGAL RESEARCH

Minimum Credits: 3
Maximum Credits: 3
This course will build on the material presented in the Foundations of Legal Research course, and will provide students with a broader array of strategies and skills to approach legal research projects. The course is to be broadly divided into three components. The first component focuses on strategic approaches to legal research, how to incorporate the research process into the litigation or transactional problem presented and to more effectively integrate the various legal research tools available into that strategic approach. Cost-effective research strategies, including strategies to effectively manage real-world Lexis and Westlaw costs will also be covered. This component will somewhat overlap with, but significantly expand on material from the Foundations course, and will give students a broader understanding of the research process. The second component of the course recognizes that not all substantive areas of the law utilize the same research resources, strategies and techniques. During this component of the course, students will be exposed to specific topical research areas and spend several weeks looking at the unique resources and research challenges presented by those areas. The third component of the course returns all students to the same material and focuses on non-legal research areas such as medical and scientific research, business and corporate research, investigative research, and financial and marketplace research. The use of experts in these areas as guest lecturers is anticipated.

LAW 2508 - PERFORMING JUSTICE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Anyone who has set foot in a courtroom knows that what goes on there has as much to do with drama as with rational inquiry. Judges act as if they are finding legal rulings by applying objective rules, while making subjective choices about which rules to apply and how. Witnesses testify as if responding spontaneously to questions that actually have been rehearsed. Lawyers are professionally histrionic paid to play righteous believers in their clients' virtue. This is the decision making process Jeremy Bentham called "theater of justice" and the

American Legal Realists derided as a "ceremonial routine" of "word jugglery," "legal ritual," "magic solving words" and verbal "sleight of hand." In this seminar we will explore some standard critiques of law as performance. Along the way we will consider how the theatrical, ritual, and perhaps even magical aspects of legal process might both detract from and contribute to the production of justice. We will approach these questions through reading and discussing a wide range of texts, including, judicial opinions, law review articles, performance theory, plays, social criticism, and ethnography. There will be at least one "field trip" to see some legal performance live, and we will likely make use of film and video as well.

Course Requirements: School of Law (PLAW)

LAW 2585 - EDUCATION JUSTICE AND CIVIL RIGHTS SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will introduce students to education and civil rights law and policy that are the foundation for civil rights protections in K-12 public education. Students will explore key education and civil rights issues in the following topic areas: school segregation (past and present), the criminalization of students of color, school privatization, and social movements for education justice. Students will emerge from this class with an understanding of historical and current flashpoints in education and civil rights in the United States and the role of lawyers and the law. In addition to analyzing key cases, articles, and social science research, students will explore how law students and lawyers can play a meaningful role through policy, litigation, and advocacy for social change.

LAW 2623 - CYBER POLICY, CRIME & NATIONAL SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course will explore theoretical and practical aspects of nation-state legal issues concerning cyberspace, with a particular focus on computer-related crime, espionage, war, and international governance. The course will review key legal cases, policy, and legislation. In tandem with a series of expert guest speakers from the field, the course will reflect on the roles of national and international governments, the legal and ethical dimensions of cybersecurity, the relationship between the public and private sectors, and the increasing tensions between privacy and national security. The course will consist of four major components: (1) an assessment of the current cybercrime threat landscape, (2) a review of the relevant national and international legal frameworks, (3) analysis of case studies of significant prosecutions, and (4) assessments of domestic and international policy and security challenges, including gaps in existing frameworks. Students who complete the course will obtain an enhanced understanding of the legal, policy, and security frameworks at the core of these challenging issues for nation-states.

LAW 2627 - WICKED PROBLEM INNOVATION

Minimum Credits: 3
Maximum Credits: 3
"Wicked Problem Innovation" is a new, innovative, cross-disciplinary course that brings together graduate students from Pitt Law, the Katz School of Business, and other units across the University of Pittsburgh to engage deeply in a selected acute problem that faces Pittsburgh and the broader world. "Wicked" problems are stubborn, complex societal and business challenges like global climate change, income disparity, inclusive economic growth, and universal healthcare. These problems arise from a variety of causes and affect multiple stakeholder groups, each of which has a different idea of how the problem arises and what can be done to improve it. While it is likely not possible to "solve" these problems in a traditional sense, it is possible to make sustained progress in tackling them. Course participants will research the selected problem from legal, business, historical, and other perspectives, identify and consult with stakeholders, and ultimately design a process to improve progress on the selected problem. During the course, students will learn to work collaboratively with peers and instructors from a variety of disciplines, and will practice a host of practical skills, including interviewing witnesses and clients, negotiating outcomes, and actively problem solving across a range of subject matter areas. Additionally, students will gain substantial and deep contacts in local, state, and potentially national, government, nonprofit, and business communities. Students will come away from the course will critical skills in working collaboratively across subject matter boundaries and experience creating an innovative problem-solving process from the ground up.

LAW 2640 - DIVERSITY INTERGROUP DIALOGUE

Minimum Credits: 1
Maximum Credits: 1
The Diversity Intergroup Dialogue Workshop is open to all 2L, 3L, LLM, MSL and joint-degree Pitt Law students and brings together those with diverse cultural and social identities in a small group setting, with the goal of engaging students in experiential learning as well as open and constructive dialogue concerning issues of intergroup relations, conflict and community. Students will learn from each other's experiences and examine how race, ethnicity, class, religion, age, disability, sexual orientation, gender identity and expression relate to power and privilege; and will practice constructive approaches to dialogue and the bridging of differences. Students will also consider how attorneys in a pluralistic society can use Intergroup Dialogue skills to better serve clients, advance causes and enhance professional satisfaction. The workshop process is designed to stimulate learning, growth and engagement across the cultural identities identified above to provide students with the affective, behavioral and cognitive acumen that will promote skill-building to navigate effectively in our increasingly pluralistic nation and world.
Academic Career: Graduate

LAW 2642 - FEDERAL HATE CRIMES

Minimum Credits: 2
Maximum Credits: 2
This course will focus on federal hate crimes. Students will examine and analyze relevant statues and key cases with a focus on gaining a practical understanding of the elements and application of these statutes. Students will have the opportunity to engage in discussions regarding the larger societal conversations relevant to these cases in order to better understand the various lenses through which prospective jurors may view such cases. Students will also learn about the tailored strategies applicable to investigating and litigating federal hate crimes cases, as many of these strategies are unique to this specific area of law. In addition to exploring various fact patterns through in-class discussion, students will utilize a specific hypothetical case fact pattern throughout the duration of the course that will serve as a basis for exploring the relevant statutes and strategies. As the course progresses, students will investigate the hypothetical case (including through an "investigation workshop"), analyze evidence related to the case, and litigate the case (through a "litigation workshop" and mock trial exercises). Please note that the subject matter of this course will require students to read about, view, listen to, and discuss material that may be disturbing or offensive to some or all students. Such material may include recordings or descriptions of the use of racial slurs and other offensive language, recordings or descriptions of the use of violence targeting victims based on a specific trait (race, ethnicity, gender, sexual orientation, religion, etc.), and other similar material.

LAW 2644 - PHILOSOPHY OF CRIME & PUNISHMENT - NATIONAL & INTERNATIONAL PERSPECTIVE

Minimum Credits: 2
Maximum Credits: 2
This class will examine the philosophical and moral justifications for punishment in both American and international criminal justice systems, with a specific focus on the impact that the philosophy of punishment has on the individual and more broadly, on society as a whole. We will examine legal theory and concepts while fostering philosophical contemplation and discussion. There are four main theories of punishment: deterrence, retribution, rehabilitation and incapacitation. Depending on era and country, different views take a different approach and order of importance; this class will examine the four main theories in other countries, as well as our own. We will examine which philosophy of punishment is most effective and why. As we attempt to move toward a more socially conscious view of justice, we must ask a series of "why" and "how" questions: why do we punish those who have violated the law, and how do we decide the proportionality of the punishment in question? What philosophy do other countries use/ what philosophy has shaped our modern view of crime and punishment? Are we becoming more or less moral? Whose standards of morals? Are we becoming a more or less compassionate society? And how do those standards compare to the moral/philosophical views of comparative criminal justice systems in other countries? This class will be taught by lecture and discussion and will require short essays and one longer research paper. The purpose of these essays will be to make a well-reasoned argument supported by the readings, as well as counterpoints.

LAW 2670 - PERSONAL FINANCIAL PLANNING & BUSINESS START-UP PLANNING

Minimum Credits: 1
Maximum Credits: 1
This course deals with the basics of personal financial planning and startup business planning. Students will create personal financial plans based on projected horizons of 1, 3 and 5 years. The primary focus is on near term planning with emphasis on: initial savings, paying off student debt, judicious use of credit, and investing for short and long term goals. Also, students will create a comprehensive business plan for starting a law firm after graduation. This plan's focus should be on business structure, financing, cash management and cost control. Topics such as benefits and insurance should be covered as well. Students will prioritize and codify their plans based on personal, professional and lifestyle objectives projected over each plans stated horizons.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2673 - HEALTH CARE FRAUD, ABUSE, AND COMPLIANCE

Minimum Credits: 2
Maximum Credits: 2
United States health care spending reached $3.6 trillion in 2018, accounting for 17.7% of the gross domestic product. Government officials have been quoted as saying that up to ten percent of this spending is due to fraud, waste, or abuse. In fiscal year 2019, the federal government won or negotiated $2.6 billion in health care fraud and abuse judgments and settlements, as well as additional amounts from administrative cases. As one of the most highly regulated industries in the United States, health care entities are required to comply with numerous statutes and regulations, including those related to fraud and abuse. These laws are increasingly complex, thereby exposing health care entities to liability for non-compliance. Thus, individuals involved in the administration and delivery of health care and lawyers who wish to practice health law must be well-versed in the laws and regulations that govern health care fraud, abuse, and compliance, as well as the strategies health care entities employ to address these concerns. In this course, students will explore the major federal civil, administrative, and criminal laws that have been used to combat health care fraud and abuse. These laws include the False Claims Act, the Anti-Kickback Statute, the Physician Self-Referral Law, and the Civil Monetary Penalties Law. Related compliance strategies and the practical compliance issues faced by health care providers will also be covered, including the seven elements of effective compliance programs, conflicts of interest and governance, repayments and disclosures, privacy and security, and corporate integrity agreements.

LAW 2683 - TRANSACTION NEGOTIATION AND DOCUMENT DRAFTING

Minimum Credits: 2
Maximum Credits: 2
This course is designed to strengthen students skills in two areas of fundamental importance to any transactional lawyer negotiation and drafting. Specifically, students will learn how to develop and most effectively deploy their own negotiation style, understand the bargaining process, and then develop what they have learned to draft negotiated agreements with counterparties. The course is experiential, and it will rely largely on simulations and mock exercises to assess student progress in realizing the course objectives.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

LAW 2684 - MEDIATION SKILLS

Minimum Credits: 3
Maximum Credits: 3
Mediation continues to be utilized by parties and the judicial system as a preferred alternative to litigation. This course is designed to train students to become mediators and to meet the minimum standards set by the courts for mediation of cases. Students may use this course to satisfy accepted requirements for a basic 40-hour mediation training program. This course focuses on the structure and goals of the mediation process and on the skills and techniques used to assist parties in overcoming barriers to dispute resolution. This will be achieved through a thorough discussion of the theories and sources of conflict, theories of conflict resolution conciliation processes, mediation, negotiation, and professional ethics. These theories are then tested in simulations, exercises, and role plays to allow the students to develop mediation skills, implement creative options for resolving conflict, and explore the effectuation of the theories and their skills. In addition, it is incumbent on all lawyers to be familiar with the mediation process and become competent in representing clients in mediation. The course also will cover ethical issues for lawyers and mediators, dealing with difficult people, power imbalances, and cultural considerations.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

LAW 2686 - LEGAL INSTITUTIONS & THE HOLOCAUST

Minimum Credits: 3
Maximum Credits: 3
The Legal Holocaust in Hitler's Europe and its Aftermath in US Federal Court. This course examines the development of racial laws during WWII in France, Germany, and the British Channel Islands. We will use original documents and actual statutes and cases to understand how what was once legally grotesque became "law" in these places. We will then fast forward a half century, via the Nuremberg war-crimes of 1946, to the time when victims or their heirs began bringing restitution lawsuits in US federal courts, a development that continues to this day, the instructor being one of the plaintiffs' lawyers in a half dozen such cases, including a pending matter in the Seventh Circuit. Thus the course examines historical material as well as complex contemporary questions under US federal law and standards of professional ethics.

LAW 2694 - TRADEMARK LAW

Minimum Credits: 3
Maximum Credits: 3
Trademark law concerns common law and statutory bases for obtaining and enforcing legal protection for commercial symbols, including logos, slogans, and other potentially distinctive product and service identifiers. The trademark law course will describe the role that trademark law plays - together with other intellectual property law, other non-IP law, and other non-legal institutions - in positioning that commercial "speech" as part of commercial markets generally. For producers of goods and services, how does trademark law help them make money? For competitors, for purchasers of goods and services, and for citizens generally, how does trademark law preserve the power to access and use information about the commercial sphere - and to extend that information into other "free speech" contexts? And for law students, how do lawyers participate in doing both things, by representing and counseling clients? The course will cover the constitutional, statutory, and common law attributes of trademark law; the rights and remedies that trademark law provides for producers; the protection that trademark law provides for competitors and consumers; and the intersection of American trademark law with other forms of intellectual property protection, with the first amendment, and with international law. Students are expected to master the substantive law of trademark, but that mastery is only a preliminary step. The major goal of the course is to teach students how to use the law to advance their clients' interests in commercial symbols. The course does that by requiring students repeatedly to use their professional judgment in a counseling context.

LAW 2695 - TRADEMARK LAW PRACTICE

Minimum Credits: 2
Maximum Credits: 2
A course to delve into trademark and unfair competition practice before the USPTO, trademark trial and appeal board and in state and federal courts. The course will advance practice oriented trademark issues including: the identification, protection and enforcement of trademark rights; the relief that can be acquired through enforcement of those rights; the role of lawyer as counselor in adopting trademarks as part of the branding process; avoiding infringement of others' trademarks; and the assignment and licensing of trademarks. The course will probe these same concepts in other jurisdictions, as well.

LAW 2701 - HEALTH CARE FRAUD AND ABUSE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
United States health care spending reached $3.2 trillion in 2015, accounting for 17.8% of the gross domestic product. Government officials have been quoted as saying that up to 10 percent of the money the United States spends on healthcare is due to fraud, waste, or abusive practices. If true, that now amounts to over $3 billion per year. In Fiscal Year 2016, the federal government won or negotiated over $2.5 billion in health care fraud judgments and settlements, as well as additional amounts from administrative cases. Thus, health care fraud is a major priority of both federal and state agencies and lawyers who wish to practice health law would be wise to understand the laws that govern health care fraud and abuse. This course focuses on the major civil, administrative and criminal laws that have been used to combat health care fraud and abuse, broadly defined as actions by health care providers (e.g., hospitals, physicians and physician practices, nursing homes, medical device and pharmaceutical manufacturers, home health agencies, clinical laboratories, and rehabilitation facilities) that are inconsistent with accepted business and medical practices. These laws include the federal civil False Claims Act, the federal Anti-Kickback Statute, the Stark Law, and the Civil Monetary Penalties Law. While the class focuses on federal law, health care fraud and abuse laws at the state level will also be discussed. Related compliance strategies and the practical compliance issues faced by healthcare providers will also be covered.

LAW 2719 - APPLIED LEGAL DATA ANALYTICS & AI

Minimum Credits: 3
Maximum Credits: 3
Technological advances are affecting the legal profession. While it is hard to predict the changes that machine learning and natural language processing will bring, legal professionals certainly will need to understand the new techniques and how to use and evaluate them. This course, co-taught by instructors from the University of Pittsburgh School of Law and Intelligent Systems Program, provides a hands-on practical introduction to the fields of artificial intelligence, machine learning and natural language processing as they are being applied to support the work of legal professionals, researchers, and administrators. Researchers in the field of Artificial Intelligence and Law (AI&Law) have been applying recent advances in natural language processing and machine learning to extract semantic information from legal documents and to use it to solve legal problems. Meanwhile, the commercial LegalTech sector is thriving. Companies and startups have been tapping into the legal industry's need to make large-scale document analysis tasks more efficient, and to use predictive analytics for better decision making. This course will help law students gain literacy with these technologies and learn how to apply them to the kinds of legal problems they have studied or will encounter in practice. This course not only teaches law students about the new tools, but enables students to gain practical experience using them under close mentorship and in project-based collaboration with students from computer science backgrounds who want to learn about the law. Lecture sessions will alternate with working sessions where instructors assist groups with projects.

LAW 2720 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 0
Maximum Credits: 0
Students in this first year course will begin to develop the art of analytical legal writing. In classes, students engage in discussions and practical exercises as they learn to analyze cases, statutes and other authorities. The course emphasizes student development in the following skills: organizing the analysis of legal issues logically and coherently; expressing written legal analysis clearly, concisely, and effectively; developing and defending legal arguments, both in writing and orally; performing basic legal research; drafting selected legal documents; and using proper citation form. Exercises and other assignments promote the students' awareness and appreciation of relevant ethical standards.

Grade Component: Grad LG/SU3 Basis

LAW 2731 - CURRENT ISSUES IN HEALTH LAW

Minimum Credits: 1
Maximum Credits: 1
The purpose of this course is to increase the awareness of students in the health law certificate program to the rapidly changing health care industry and the equally rapidly changing field of health law. It is difficult, if not impossible, to understand the law reguLating the health care industry without understanding the industry itself. Another purpose of the course is to expose students to a more in-depth treatment of selected topics than they can obtain in the basic survey course in health law and policy. The course also exposes students to topics that are not covered in the basic course, providing a broader view of the field of health law, which helps in the selection of other course offerings and of a topic for the faculty supervised writing requirement. In addition, the course introduces students to the variety of settings in which lawyers are involved in health law and the range of kinds of clients they represent. Classes will be taught by leading experts in the fields of health management and health law practicing in Pittsburgh and elsewhere.

LAW 2747 - LAW OF MENTAL HEALTH SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course provides an introduction to the laws and issues that affect individuals with mental illness, many of whom find themselves in the criminal or civil justice systems. Emphasis will be on the issues surrounding civil commitment and the emerging use of treatment courts on the criminal side. This will require a review of Pennsylvania's Mental Health Procedures Act and other state and federal statutes, cases, and regulations. Students will be permitted to attend a session of mental health court.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 2749 - GENDER AT WORK

Minimum Credits: 3
Maximum Credits: 3

Sexual harassment and gender disparities continue, but are we paying enough attention? The me-too movement and highly publicized downfalls of celebrities like Harvey Weinstein and Bill Cosby have brought cases of sexual assault and harassment into daily conversation. But does the law really assure women a level playing field and freedom from bias in their education and work? This course will explore these complicated topics, drawing on introductory legal reasoning and interdisciplinary perspectives. Class will be based on small group discussion in a supportive environment and students will investigate a topic of their choice through a research essay and presentation. No prerequisites or familiarity with the law required. Students from all majors welcome.
Academic Career: Graduate

Course Requirements: School of Law (PLAW)

LAW 2754 - TECHNOLOGY, LAW AND LEADERSHIP

Minimum Credits: 3
Maximum Credits: 3
The theme of this seminar is change. Technologies are changing in ways that we often do not even see. The character of law, legal institutions, and law practice is changing rapidly and dramatically. As humans, our capabilities and futures are changing. How do we identify and assess the virtues and drawbacks of all of this? As lawyers and as professionals in other fields, what - if anything - can and should we do about it? The seminar approaches those questions by diving into deep critical examinations of how technological change is generating and reflecting new ideas about what law is and what law does, at both global and local scales. The payoff is greater than learning about contemporary technology law. The payoff is an introduction to leadership competencies and capabilities that help new lawyers and other professionals thrive in this new world.

LAW 2755 - RACIAL HARASSMENT IN THE WORKPLACE

Minimum Credits: 3
Maximum Credits: 3
This seminar explores racial harassment in the workplace, including how frequently it occurs and its different forms. We discuss the legal framework and dispute-resolution processes for racial harassment, including their current shortcomings and ideas for more effectively remedying racial harassment. We also draw from sexual harassment research and law -- and consider how society and the justice system treat sexual harassment and racial harassment similarly and differently. In consultation with the professor, students will select a topic on racial harassment, sexual harassment, or another form of harassment to research and present in a power-point presentation and paper. In addition to the professor's feedback on their research and writing, Professor Wysor of the Law School Writing Center will also provide feedback.
Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

LAW 2760 - HEALTH JUSTICE SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Although the United States likes to pride itself on having the most advanced medical care in the world, its residents' experiences diverge widely with respect to the care they receive, as well as their health status and outcomes. Health disparities based on race have received the most attention, but disparities also exist with respect to ethnicity, gender, disability status, and sexual minority status, among others. Nowhere have those disparities been more glaring than in the context of the COVID-19 pandemic, which has disproportionately affected communities of color and people with disabilities. Significant health disparities call into question both the justice and the quality of the U.S. health care system. What role does or could the law play in addressing these inequities? Conversely, how has the law contributed to them? This seminar provides students with an opportunity to explore in depth topics relating to the law's responses (and potential responses) to health inequality. While the seminar's central concern is with the law, readings and discussions will explore and integrate evidence and knowledge from multiple professional and academic disciplines. Topics covered might include, simply by way of example, health equity issues associated with Medicaid policy decisions; the ACA's contraceptive coverage mandate, gender equality, and religious liberty;

disparities in insurance coverage and access to care for persons with mental illness; and health care providers' obligations to provide accommodations to disabled patients.

Course Requirements: School of Law (PLAW)

LAW 2811 - HEALTH CARE BUSINESS TRANSACTIONS

Minimum Credits: 3
Maximum Credits: 3
This course will expose students to a variety of commercial transactions prevalent in the health care industry. The course will focus initially on health care as a regulated commercial enterprise. After studying the case law, statutes and regulations applicable to health care providers, students will begin an in-depth study of negotiated health care transactions. This study will begin with an examination of the fundamental elements of the acquisition process and an analysis of the tax, antitrust, regulatory and successor liability considerations generally addressed in health care combinations. Students will then be exposed to the various stages of the negotiated acquisition process: due diligence; preliminary negotiations and agreements; transaction structure; final negotiations; definitive agreements; and post-closing relationships. We will also explore the financing mechanisms required to support healthcare entities. The course will examine sources of funding, enterprise valuation, healthcare cost controls, capital structure, traditional debt financing, tax exempt bond financing, securities filings, and insolvency. By the end of the course, the students will have acquired an understanding of the complexities of health care financing and will be familiar with the health care acquisition process from its inception to conclusion.

LAW 2847 - GENDER AND LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This course will examine how gender influences legal doctrine and how legal doctrine in a number of specific areas of law affects women and shapes societal understandings of gender. The objectives of the course are twofold: (1) to explore how an understanding of gender and feminist legal theory can enrich the study of law; and (2) to learn specific areas of legal doctrine that are particularly relevant to women and societal understandings of gender. The course will cover a number of areas related to issues of gender equality, such as employment, education, family and domestic responsibilities, sexual harassment, and domestic violence. Various feminist legal theories will provide a framework for studying these areas of law.

LAW 2860 - ANCIENT LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar will introduce students to the very beginnings of Western legal history. Through a comparative examination of the legal systems and practices of ancient Mesopotamia (including Hammurabi's Babylon, c. 1700 B.C.), Ancient Egypt, ancient Israel, ancient Anatolia (the Hittite empire, c. 1500 B.C.), Ancient Greece and ancient Rome, we will investigate the historical origins of "law" as an idea. We will see how each of these societies created law in the image of its own beliefs and needs. We will look at what differentiated the resulting legal systems, and what united them. We will examine not merely the ancient "law in the books" (the formal written codes that have received so much historical and philological attention over the years) but also the ancient "law in action" (the performances, rituals and ceremonies that created legal rights and duties in all these proto-literate societies). We will look at some of the earliest surviving trial records. Throughout the seminar, emphasis will be placed on developing a broad interdisciplinary perspective on the ancient legal cultures examined; readings will be drawn not only from the fields of law and history, but also from religion, anthropology, archaeology, literature and communication studies.

LAW 2871 - INTERNATIONAL CRIMINAL LAW SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar is an introductory survey of the substantive and procedural aspects of international criminal law, a new and evolving area of law that has gained in prominence in the past decade. The course starts with an overview of fundamentals, focusing on the notion of international crimes and their historical evolution, as well as the general features and sources of international criminal law. The second part of the seminar analyzes the substantive law, especially the definitions and subjective and objective elements of genocide, crimes against humanity and war crimes. The discussion will take place within the context of a comparative evaluation of the main international judicial mechanisms developed after World War II to prosecute these crimes. Particular attention is paid to the International Military Tribunal at Nuremberg, the ad hoc United Nations International Criminal Tribunals for the former Yugoslavia and Rwanda, the Special Court for Sierra Leone and the permanent International Criminal Court. In the final part, we examine the fair trial rights and the limited defenses and immunities available to alleged perpetrators of international crimes. A key question students will be expected to engage throughout is whether, and if so to what extent, individual criminal prosecution is a legitimate and effective tool to address mass human rights violations during or after conflict.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

LAW 2877 - PUBLIC POLICY SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This seminar will explore the processes of federal law-making and public policy development through examination of a series of selected topics concerning lobbying, the legislative process, judicial challenges to new laws, and administrative rule-making and enforcement. A primary purpose of the seminar is to enrich students' understanding of law-making and policy development by focusing on a series of case studies concerning particular laws and policies and introducing information about the relevant political dynamics, bureaucratic systems, and other real-world factors. Thus, in addition to studying written materials, students will talk with Washington-based attorneys and others who are experts in the relevant fields. The selected topics will vary from year to year.

LAW 2909 - HOW LAW BEGAN

Minimum Credits: 3
Maximum Credits: 3
How did law develop in early societies? Why did it develop? As an embodiment of human values and a fundamental form of human expression, how did early law reflect and shape custom, religion, government and the very concept of civilization itself? We'll explore these questions and more through an examination of law's rise in a wide range of ancient cultures broadly clustered around the Mediterranean basin, beginning with Mesopotamia a thousand years before Babylon and extending three millennia to the eastern Roman Empire in the 6th century CE. In between, we'll encounter Egyptian viziers presiding in pharaonic courts, Hittite kings making international treaties with their neighbors, Hebrew law-givers leading their people to justice in the promised land, Greek logographers writing speeches for delivery to Athenian juries, and Roman advocates arguing cases before judges sitting in the city forum. We'll meet Hammurabi, Ramesses, Moses, Demosthenes, Cicero and Justinian. We'll find early law written on clay and set in stone; we'll read it in text, touch it in ancient coins displaying legal symbols and look at it literally in the round as its monuments stand in modern museums. We'll search for law in early Assyria, Phoenicia and Persia, and following in the footsteps of Alexander the Great we'll even reach towards the ancient legal cultures of India and China to gain a comparative perspective on law's earliest meanings and manifestations in civilized society. At the end of our journey, we may discover that far from being somehow primitive or undeveloped, early law and the people who made it have much to teach us today, not just about what they were, but about what we could be.

LAW 2910 - LAWYERS IN AMERICAN SOCIETY

Minimum Credits: 3
Maximum Credits: 3
This course examines the role of American lawyers as nation-builders from colonization to the present day. It explores not only how lawyers crafted the domestic legal and constitutional structure, but also how they shaped American settlement, politics, business, letters, education, rhetoric, race relations, immigration, communication, diplomacy, war-waging and peace-making over more than four centuries, allowing lawyers (not businessmen, not doctors, not professors, not clergy, not engineers) to largely define what it means to be an American. It considers how ordinary citizens and members of other professional groups have reacted to lawyers in their many social capacities, and it assesses how embracing and occasionally rejecting their self-appointed status as "essential Americans" has affected lawyers themselves. It concludes with an investigation of where lawyers stand in today's divided and disoriented America, assessing whether they have succeeded or failed in their larger ambitions to build and to lead, and how they might better serve their country and themselves in uncertain times. Although this course may be of particular interest to Honors College students contemplating a legal career, it is pointedly designed to engage students in history, political science, sociology and the general humanities who would like to develop a deeper understanding of the role and power of the legal profession and the dynamics of American society as a whole.

LAW 2911 - FIRST AMENDMENT

Minimum Credits: 3
Maximum Credits: 3
The First Amendment Law course will focus on the history, development, evolution and theory concerning fundamental freedoms protected by the First Amendment: speech, press, assembly and religion. We will explore the various doctrinal approaches employed by courts to resolve cases presenting First Amendment issues and place them in the historical/political contexts within which various doctrines dominated case outcomes. The class will discuss the role of courts in resolving highly divisive political and societal issues. We will engage in dynamic discussions of a broad range of First Amendment issues including, but not limited, to subversive speech, symbolic speech, hate speech, permissible regulation of speech, religion in schools, religion in the public square, limits on free exercise of religion, accommodation of religion and legislative responses to First Amendment court decisions. Whereas the primary focus of assigned readings will be on case law and the reasoning of the judges who participated in the decision-making process, students in this class will be encouraged to identify, explore and discuss additional factors that may impact judicial decision making. These additional factors include, but are not limited to, current events, political forces and judges' backgrounds. Students will also be invited to identify and discuss unintended consequences of court opinions read for class.

LAW 2931 - HEALTH JUSTICE

Minimum Credits: 3
Maximum Credits: 3
Although the United States likes to pride itself on having the most advanced medical care in the world, our citizens' experiences diverge widely with respect to the care they receive, as well as their health status and outcomes. Health disparities based on race have received the most attention, but disparities also exist with respect to ethnicity, gender, disability status, and sexual minority status, among others. Significant health disparities call into question both the justice and the quality of the U.S. health care system, a challenge that has become all too apparent during the COVID-19 pandemic. This course will examine evidence of and explanations for health disparities along several axes, focusing primarily on race/ethnicity, but also including gender, disability status, and sexual minority status. After reflecting on how theories of justice respecting health and health care apply to disparities, the course will turn its attention to the roles that medicine, public health, and law can play in responding to disparities. The course is intended for a broad range of students. While it may be of particular interest to those contemplating a career in law, medicine, public health, or other health sciences, it is designed to engage students in history, sociology, philosophy, Africana studies, gender and sexuality studies, and general humanities who would like to develop a deeper understanding of why health disparities in the U.S. are so persistent and pervasive and of efforts to advance health justice.

Maximum Credits: 4
This offering is for MSL students only. Enrollment in this course requires special permission. MSL students may earn credits through experiential learning under the supervision of a Pitt Law faculty member or a member of the bar employed by government agencies, not-for-profits, or federal, state and county judges. The type of work varies with each assignment but may include legal research and drafting memoranda and legal documents. Credit is based upon the number of hours worked. Each credit requires 54 hours of work. The exact terms of the work assignment are negotiated between the student and the supervising attorney and must be approved by the MSL Program

Director.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2976 - MSL EXTERNSHIP

Minimum Credits: 1
Maximum Credits: 1
This offering is for MSL students only. Enrollment in this course requires special permission. MSL students may earn 1 or 2 credits through experiential learning under the supervision of a Pitt Law faculty member or a member of the bar employed by government agencies, not-for-profits, or federal, state and county judges. The type of work varies with each assignment but may include legal research and drafting memoranda and legal documents. Credit is based upon the number of hours worked. Each credit requires 54 hours of work. The exact terms of the work assignment are negotiated between the student and the supervising attorney and must be approved by the MSL Program Director.
Academic Career: Graduate

LAW 2986 - INTERNATIONAL ARBITRATION SEMINAR

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

LAW 2990 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: School of Law (PLAW)

Less Commonly Taught Languages

LCTL 0102 - FOREIGN LANGUAGE 2

Minimum Credits: 4
Maximum Credits: 4
This course will help students learn to understand, and to express themselves creatively in both spoken and written **Language**. They will acquire basic knowledge of everyday **Language** and of the country and culture of **Country**. We will focus on building communicative competence and conversational proficiency, while simultaneously building a solid foundation in **Language** grammar, writing, listening and reading comprehension skills. Students will be expected to memorize vocabulary and utilize it in both speech and writing.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: LCTL 0101; MIN GRADE 'C'

LCTL 1901 - LANGUAGE INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Undergraduate
Course Component: Independent Study
Grade Component: LG/SNC Elective Basis

LCTL 2909 - TOPICS IN LANGUAGE STUDY

Minimum Credits: 3
Maximum Credits: 3
This course will be a topics course, meaning that the specific content of the course will change each time the course is offered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

Library & Information Science

LIS 2020 - LIFECYCLES OF DATA AND INFORMATION

Minimum Credits: 3
Maximum Credits: 3
Using lifecycles of data and information as a grounding device for exploring the stages of data / information creation, description, storage, processing, management, preservation, sharing and reuse. Different lifecycle conceptualizations and a range of broad types of data and information from contexts including government data, corporate data, research data, social media data, archival records and citizen / personal data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2021 - IDENTIFYING INFORMATION NEEDS OF KNOWLEDGE ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
Student teams focus on inquiry, through experiential learning, by identifying the information needs of the knowledge organization with which the team has been matched. Students are immersed in observing organizational behavior, collaborating in teams, and practicing soft skills necessary for communication and presentation. Team members gather information about the mission and culture of the organization by observing and listening to understand the context of the needs and challenges of the organization.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Enrollment blocked if the student has successfully completed (min B grade) LIS 2024

LIS 2022 - IMPLEMENTING SOLUTIONS FOR KNOWLEDGE ORGANIZATIONS

Minimum Credits: 3
Maximum Credits: 3
Building on skills students have developed in the pre-requisite course, student teams propose, develop, and implement prototypes of solutions to the information challenges of their knowledge organizations, focusing on implementing a viable product via rapid prototyping, tight feedback loops, and iterative development.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LIS 2021

LIS 2024 - DESIGN METHODS FOR INFORMATION PROFESSIONALS

Minimum Credits: 3
Maximum Credits: 3
Student teams focus on how information professionals can use design methods to plan and devise solutions to information challenges in knowledge organizations. Students will learn the steps in the design methods process to identify the information needs of a knowledge organization by studying its mission and organizational culture; research possible solutions; test, propose, and implement solutions through the analysis of case studies; and participate in team construction and project management, as well as practice soft skills necessary for communication and presentation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: ANTIREQ: Enrollment blocked if the student has successfully completed (min B grade) LIS 2021 and LIS 2022

LIS 2030 - DATA AND INFORMATION IN SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Introduction to the concepts and technologies around data, code, metadata, and databases. Basic data types and file formats, code to manipulate data, the generation of metadata about data, and modeling databases to persistently store and structure data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2040 - THE INFORMATION PROFESSIONAL IN THE COMMUNITY

Minimum Credits: 3
Maximum Credits: 3
This course will provide the context as well as a forum for students to discuss, understand and critique value systems, ethical frameworks and power structures embedded in information technologies, policies, systems and institutions. Emphasizing the importance of design, evaluation and engagement with communities through institutions and technologies ranging from public library systems to start ups, this course foregrounds the role of information professionals as active community members as well as the impact of the information professions on society.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2140 - CRITICAL LIBRARIANSHIP AND INFORMATION PROFESSIONALS

Minimum Credits: 3
Maximum Credits: 3
Critical librarianship refers to the movement within libraries to reflect upon the libraries' role in hegemonic structures, and to empower community members to disrupt these systems. Critical librarianship is concerned with issues of social justice, intersectionality, privilege, power, and systems of oppression. It is influenced by critical race theory (CRT), queer theory, disability theory, intersectional feminist theory, and critical pedagogy, among others. In this course, we will explore how critical librarianship can allow us to interrogate the systems and structures of the library in order to seek justice in our communities.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2184 - INTELLECTUAL PROPERTY AND "OPEN" MOVEMENTS

Minimum Credits: 3
Maximum Credits: 3
Concepts, legislation, and case law about censorship, freedom of access to information, privacy, copyright, professional liability, and other issues. Legal implications and safeguards.Origins, development, evolution, and pivotal role of copyright, fair use, and related issues within 21st century information, legal, policy, and economic framework. Key and emerging issues such as public domain, orphan works, section 108 exceptions for libraries and archives, licensing, recent statutory legislation and case law, and international copyright. Alternative protection schema, such as open access and creative commons.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2188 - OPEN GOVERNMENT DATA AND INFORMATION: CONCEPTS, STANDARDS, AND IMPACT

Minimum Credits: 3
Maximum Credits: 3
This course introduces participants to "open data," a term that is assigned to data that are free to access and use, that are available in machine-readable formats, that can be reused for any purpose, and that can be modified and shared by others. Globally, we see conversations about open data in research, with growing expectations and requirements to share research data, and in government, with policies and initiatives to expand public access to datasets. This course will focus on this second category of open data: data produced and shared by government and civic organizations. This course will overview the historical precedents to the open data movement, survey current policies at different levels of government, and examine key concepts in the open data movement. While we will focus on drivers and initiatives in the United States, we will look at case studies that will provide us with a broader understanding of what is happening worldwide. The focus of this course will be the core information skills and principles that underpin the success of open data initiatives and the mechanisms and standards in which governments at all levels in the United States are employing to publish data.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2194 - ETHICS OF DATA, INFORMATION AND EMERGING TECHNOLOGIES

Minimum Credits: 3
Maximum Credits: 3
Intersection of data, information, existing technologies and disruptive emerging technologies within the contexts of law, ethics, and policy in the digital and AI ages.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: Global Studies

LIS 2220 - ARCHIVES AND RECORDS MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Introduction to the essentials of records management in diverse organizational settings and in society. Organizational theory and how this relates to the history and development of record-keeping systems, electronic-records management and the advent of new technologies, and the place of records management in the information professions. Theoretical principles, methodologies, and practical administration of archives, records, and other information sources from print to oral contributing to the management of evidence and information necessary for organizations and society.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2222 - ARCHIVAL APPRAISAL, DESCRIPTION, AND ACCESS

Minimum Credits: 3
Maximum Credits: 3
This course is organized in three parts and will provide students with an introduction to the critical archival responsibilities of archival appraisal, description, and access. In the first section of the course, we will engage with archival appraisal. The archivist's process in determining continuing value affects all other archival functions and impacts individual, organizational, and societal memory. Because of its significance for both archival work and society, appraisal has been the function most debated and subjected to experiments with new methodologies and theoretical models. This course will survey these models and, through an experiential project, delve deeply into one model in particular: documentation strategy. 1 Representing archival materials and providing access to them are core functions of the archival profession. Archivists do this with access systems that incorporate descriptive standards, data structures, controlled vocabularies, and increasingly, digital tools. The ways in which archives are described and represented influence the ways that users, such as historians, lawyers, and policymakers access, engage with, and understand the historical record. In the second section of this course, students will engage with archival descriptive standard and archival management systems, as well as debates and theories in the representation of information. Finally, we'll consider strategies for raising the level of access for an archival collection, paying particular attention to the creation of digital exhibits.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LIS 2220

LIS 2231 - COMMUNITY ARCHIVES

Minimum Credits: 3
Maximum Credits: 3
Communities of all kinds create records, but not all communities have traditionally been represented in institutional archives, nor included in the process of establishing and maintaining archival collections that document their experiences. This course will draw from archival scholarship and recent case studies to introduce students to a range of models, including grassroots community archives, community-created archives that have been acquired by formal archival institutions, and partnerships between communities and archivists. Throughout this semester, we will engage with a range of topics relevant to community archives, including participatory and post-custodial archives, outreach and advocacy, grant writing and fundraising, and community-based, collaborative research methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2322 - RESOURCES AND SERVICES FOR CHILDREN

Minimum Credits: 3
Maximum Credits: 3
Critical evaluation of contemporary materials for use in a diverse society coupled with strategies to encourage the use of those materials by children (birth to age 14), their caregivers, and those who work with children. Survey of literature resources, services and programming that will encourage use. Books, discussions, and programming focus on equality, diversity, and inclusion within the framework suggested by ALSC.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Sciences or Sch Computing and Information

LIS 2323 - RESOURCES AND SERVICES FOR YOUNG ADULTS

Minimum Credits: 3
Maximum Credits: 3
Critical assessment of resources (contemporary books, periodicals, video/film, games, and other digital formats, social media, web sites, tools, and apps) of interest and importance to young adults. Services and programming to encourage young adults and those who work with young adults to use these resources as both creators and consumers. Intellectual freedom issues and handling challenges to intellectual freedom.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2325 - CURRICULUM RESOURCE AND SERVICE/SCHOOL LIBRARY

Minimum Credits: 3
Maximum Credits: 3
Integration of library media center collections and services into the curriculum. The teaching roles of the school library media specialist.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2326 - STORYTELLING AND PROGRAMMING FOR YOUNG PEOPLE

Minimum Credits: 3
Maximum Credits: 3
Storytelling in library and education settings, including history, sources and selection, ethics, development of stories for telling, and performance techniques. Also includes planning, implementing, and evaluating storytime and children's programming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2329 - LITERACIES AND LIBRARIES

Minimum Credits: 3
Maximum Credits: 3
This course explores roles for librarians and libraries in supporting patronsa evolving literacies, including but not limited to traditional literacy and information literacy. Students will demonstrate knowledge of strategies and rationale for planning and delivering library-based literacy instruction, services, and programming for children, teens, adults, and families.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2332 - RESOURCES AND SERVICES FOR ADULTS

Minimum Credits: 3
Maximum Credits: 3
Survey of materials in a variety of formats of interest to and importance for adults, with an emphasis on popular resources, utilization of resources and program development.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2407 - METADATA

Minimum Credits: 3
Maximum Credits: 3
Principles and application of metadata for networked information resource organization, representation, retrieval, and interoperability using a variety of schemes and tools.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2500 - REFERENCE SOURCES AND SERVICES

Minimum Credits: 3
Maximum Credits: 3
Survey and application of tools (paper and electronic) needed to respond to questions in the changing reference environment. Discussion of philosophies and theories underlying the practice of general reference. Introduction to subject reference tools and services.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2585 - HEALTH CONSUMER RESOURCES AND SERVICES

Minimum Credits: 3
Maximum Credits: 3
Collection development, reference, and educational services in the domain of consumer health resources in print, non-print, and electronic formats. Identification of appropriate and accurate resources for consumer health and family education; policy issues in providing consumer and family health information in different settings; role of public media; and information and referral services to and from healthcare organizations, community agencies, and public libraries.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2586 - HEALTH SCIENCES RESOURCE AND SERVICES

Minimum Credits: 3
Maximum Credits: 3
Survey and evaluation of current sources, services, and trends related to information transfer in the health sciences, including medicine, nursing, pharmacy, dentistry, allied health, and veterinary science. Materials and services appropriate to hospital, academic, and special libraries and information centers.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2633 - TECHNOLOGY IN THE LIVES OF CHILDREN AND YOUTH

Minimum Credits: 3
Maximum Credits: 3
Effects of media on young people, ages birth to 18 years; technology in everyday life--from toys to television; gaming and libraries; filtering; privacy and child safety; social networking/cyber-bullying; information/media literacy instruction in children's libraries (public); digital libraries for children; evaluation of digital resources for children; children's information behavior; interaction/interface design for young people; digital divide and social equity issues; global perspectives--technology in young people's lives around the world; future trends.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2640 - INSTRUCTIONAL DESIGN

Minimum Credits: 3
Maximum Credits: 3

Instructional design is the systematic planning, creating, delivering, and evaluating instructional activities, products, environments, and modules/courses. Instructional design can be used in face-to-face or digital settings, but typically involves the use of educational technologies to enhance learning. For information professionals, instructional design is a growing area that enables new ways of connecting with and educating the community in a scalable and sustainable manner.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2671 - DIGITAL HUMANITIES

Minimum Credits: 3
Maximum Credits: 3
Digital Humanities surveys the history, core debates, and evolving future of the digital humanities, with particular attention to the roles of information professionals as researchers, collaborators, and stewards. Students explore a range of digital tools and methods, especially as they relate to library and archival contexts. The course blends seminar-style discussion with studio-based practice, allowing students to design and interpret DH projects, teach and learn about a range of DH tools, and critically reflect on the field. Assignments support both theoretical understanding and hands-on engagement with digital humanities.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Sch Computing and Information

LIS 2674 - PRESERVING DIGITAL CULTURE

Minimum Credits: 3
Maximum Credits: 3
This course is divided into two sections. First, we delve into fundamental concepts and principles of digital preservation, studying what the Library of Congress's Trevor Owens terms "the theory and craft of digital preservation." We will consider standards, strategies, and tools that librarians, archivists, data curators, and information professionals broadly employ to ensure long term availability of digital materials. We will view digital preservation as a spectrum, using the National Digital Stewardship Alliance's (NDSA)"Levels of Digital Preservation" as a means to understand the ways that and the extent to which an organization may implement a preservation strategy. The NDSA Levels of Digital Preservation will serve as a framing for our discussions on file formats, storage and repositories, and file fixity. This first section of the course will involve lectures, discussion, and tool labs. In the second section, we will conduct a deep dive into complex digital object types and probe the strategies, systems, and ethical/legal issues surrounding the curation of this sample of materials: social media, websites, email, and software.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2680 - DATABASE DESIGN AND APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
Characteristics and concepts of database systems; database development process, including entity-relationship model, relational database models, normalization, structured query language (SQL), basics of transaction management and physical database design; current database technologies; and database applications in libraries and archives.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LIS 2600 or LIS 2610; PROG: School of Information Science or Sch Computing and Information

LIS 2700 - MANAGING AND LEADING INFORMATION SERVICES

Minimum Credits: 3
Maximum Credits: 3
Managing and leading libraries and information services, one of the required core courses for the MLIS degree, focuses on key management theories and practice-based competencies in preparing students to be successful, service-oriented managers and leaders at all levels of diverse organizations. Students in this diversity and inclusion 'infused course will develop understanding of important skill sets and management and leadership domain areas, such as communication; strategic planning; core values and organizational culture; leading productive meetings; managing people, money, facilities, conflict, and change; legal and ethical issues; collaboration and partnerships; marketing and public relations; and professional development. Guest speakers representing different types of libraries, as well as other institutional settings, will provide students with exposure to varied management and leadership styles and perspectives. Individual and group assignments, course content and case studies from non-profit and for-profit sectors, readings, podcasts, and in-class and online discussions will examine emerging trends, challenges, and opportunities for 21st century information center managers and leaders.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or ; EXCLUDING SBPLAN: Archives and Information Sci (MLISAIS-SP); School Library Cert Program (MLISLCP-TR); MLIS Fast Track School Lib Cer (MLISFTL-TR)

LIS 2771 - ACADEMIC LIBRARIES

Minimum Credits: 3
Maximum Credits: 3
The environment of academic libraries has changed radically since the 1990s with rapid advances in technology, developments in higher education and innovations in scholarly communication. The fundamental purpose of academic libraries has not changed, but traditional jobs have given way to self-service and professional roles have evolved into complex specialties. This course explores the challenges and problems facing academic libraries today, examining their resources, services, facilities and staffing, with reference to historical contexts and future directions. It will cover traditional and emerging practices in areas such as academic liaison, information literacy, research support, scholarly publishing, library assessment and career management.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG:School Computing and Information or School of Information Science

LIS 2774 - SCHOOL LIBRARY MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Planning, providing, managing, and assessing library programs for students and teachers in elementary and secondary school libraries, including access, budget, collection, instruction in information and digital literacy, infrastructure, and technology.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LIS 2850 - INFORMATION PROFESSIONALS ROLE IN TEACHING AND LEARNING

Minimum Credits: 3
Maximum Credits: 3
This course prepares participants for formal and informal educational roles as teachers, trainers, and facilitators of learning for all age groups found in school, public and academic libraries, as well as those found in archives, museums, and other information service organizations. Topics covered include: teaching and training fundamentals; information literacies; learning styles; instructional strategies; managing large and small instruction programs; and delivering online instruction.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2901 - INDIVIDUAL RESEARCH 1

Minimum Credits: 1
Maximum Credits: 3
Research on a topic selected by the student and carried out with scheduled reports to a faculty member. Reports of the research may take various forms as determined in advance by the student and faculty member. Faculty member's agreement to sponsor required.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PROG:School Computing and Information or School of Information Science

LIS 2902 - INDIVIDUAL RESEARCH 2

Minimum Credits: 1
Maximum Credits: 3
Research on a topic selected by the student and carried out with scheduled reports to a faculty member. Reports of the research may take various forms as determined in advance by the student and faculty member. Faculty member's agreement to sponsor required.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PROG:School Computing and Information or School of Information Science

LIS 2921 - FIELD EXPERIENCE

Minimum Credits: 3
Maximum Credits: 3
This course provides MLIS students practical, mentored experiences in library, archives, and information organizations, encouraging observation, engagement, and reflection. Activities on site are supplemented and situated in the library and information science field via instructor conferences and other assigned learning activities. Students must have completed a minimum of 12 credits and have earned a QPA of at least 3.0 in the MLIS program to apply. Acceptance is determined through an application process. Approval must be obtained from the field experience faculty coordinator, academic advisor, and field work supervisor. Additional prerequisites may apply.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG:School Computing and Information or School of Information Science

LIS 2922 - PRACTICUM IN SCHOOL LIBRARY MEDIA PROGRAMS

Minimum Credits: 3
Maximum Credits: 6
Experience in a school library, under the supervision of a cooperating teacher librarian working collaboratively with teachers, teaching information literacy skills, providing services to students and teachers, and managing resources. Weekly seminars, individual coaching sessions, and other online written requirements focus on identifying best practices and using case studies to problem solve. Professional assessment; completion of SLCP portfolio of demonstrated competencies and electronic professional portfolio.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PLAN: Not Candidate for Degree (NCDSCIG-ND); SUBPLAN: School Library Cert-End Option (SCPE-TR) or School Library Cert-Intern Opt (SCPI-TR)
Course Attributes: Hybrid

LIS 2970 - SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Courses offered on an experimental basis or as special topics seminars.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Science or Sch Computing and Information

LIS 2975 - SEMINARS: SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Analysis of journal articles, books, and conference proceedings involving issues in information science. Techniques for preparing for the preliminary and comprehensive examinations.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: School of Information Sciences or Sch Computing and Information

LIS 3000 - INTRODUCTION TO DOCTORAL STUDIES

Minimum Credits: 3
Maximum Credits: 3
An introduction to the requirements for the Ph.D. Degree in the department of library and information science and to the broader social and academic context of doctoral studies: its history and traditions, social role, methodologies, and outcomes of doctoral scholarship in library and information science.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Library & Information Science (PHD)

LIS 3901 - INDIVIDUAL RESEARCH 1

Minimum Credits: 1
Maximum Credits: 3
The course is used for individual research projects under the supervision of an ICDS faculty member. Student and sponsoring faculty should identify and agree to course expectations and rubric prior to enrollment.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Library & Information Science (PHD)

LIS 3902 - INDIVIDUAL RESEARCH 2

Minimum Credits: 1
Maximum Credits: 3
The course is used for individual research projects under the supervision of an ICDS faculty member. Student and sponsoring faculty should identify and agree to course expectations and rubric prior to enrollment.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Library & Information Science (PHD)

LIS 3950 - TEACHING PRACTICUM

Minimum Credits: 3
Maximum Credits: 3
Hands-on teaching practicum course for graduate students to learn about university-level teaching.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PLAN: Library & Information Science (PHD)

LIS 3970 - SEMINARS: SPECIAL TOPICS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Library & Information Science (PHD)

LIS 3999 - DISSERTATION

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Library & Information Science (PHD); CUM GPA: 3.50

Linguistics

LING 1000 - INTRODUCTION TO LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This course is a survey of general linguistics, emphasizing the theory and methodology of the traditional central areas of the field--phonetics, phonology, morphology, and syntax- with special concentration on phonological and syntactic theories and analytical techniques. The remainder of the course will be devoted to phonetics, morphology, historical linguistics, semantics and pragmatics, sociolinguistics, and psycholinguistics.
Academic Career: UGRD
Course Component: Lecture
Grade Component: LG/SNC Elective Basis

LING 1901 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 9
This course provides an opportunity for students to formally pursue work on an individual basis.
Academic Career: Undergraduate
Course Component: Independent Study
Grade Component: Satisfactory/No Credit

LING 2000 - THESIS RES FOR THE MA DEGREE

Minimum Credits: 1
Maximum Credits: 9

This course provides for individual work under the guidance of a faculty member.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

LING 2009 - ESL WRITING ADVANCED

Minimum Credits: 3
Maximum Credits: 3
This course is intended for foreign students who need work on advanced composition skills in English covering (a) the process and mechanics of writing a research paper (b) composition writing, with a focus on expository writing for college work (c) selected grammar skills.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad SN Basis

LING 2010 - STATISTICS FOR RESEARCH IN LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
Students finish this course with a basic understanding of the reasoning behind the most common statistical tests and measures used in linguistics. Students are able to use their knowledge to select, perform, and interpret statistical tests in both corpus-based and experimental research.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2020 - DATA SCIENCE FOR RESEARCH IN LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
Approaches data science with an emphasis on the principles and practices that linguists need to know about how to approach data: how to get data into shape, how to extract a story from data, and how to communicate that story. Students learn modern data science tools like GitHub and R. Previous classwork or experience with R required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

LING 2141 - TEACHING ENGLISH ACROSS CULTURES

Minimum Credits: 3
Maximum Credits: 3
This course is designed to introduce students to the ideologies and cultures of learning, teaching and living in countries where English is taught as a second or foreign language. The course will focus the roles of students and teachers, types of literacy, the role of gender, the influence of political and religious authority, educational policy, and classroom culture. We will also include the issue of identity, the construct of 'native speaker of English' and the 'non-native English-speaking' teacher.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

LING 2142 - THEORIES AND PRACTICES OF SECOND LANGUAGE TEACHING

Minimum Credits: 3
Maximum Credits: 3

This course is intended to introduce current and prospective foreign and second language teachers to the various theories, approaches, issues, and practices employed in the teaching of English as a foreign or second language and, by extension, to other foreign language teaching as well. The course provides a broad overview of content in order to provide foundational knowledge of the field, and includes lectures, exams, and practical experience components.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: CREQ: LING 1000 or 2144

LING 2143 - SEM LANG TCHNG MATLS DEVELOPMENT

Minimum Credits: 3
Maximum Credits: 3
This is a course designed to introduce students to the de sign and development of materials and texts for the teaching of second languages. The course is conducted as a seminar with student presentations on the various aspects of materials designed to teach language skills. Each student also presents a project prospectus that describes the purpose, descriptive objectives, operational objectives, concepts, and procedures for incorporating concepts into the materials. Students then prepare the materials (or part of them) and present reports on their projects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2144 - RES METHODS IN APPLIED LING

Minimum Credits: 3
Maximum Credits: 3
This course will give a broad introduction to research methods for the study of non-native language development. Both quantitative and qualitative methods will be discussed for the study of as well as informal learning and acquisition processes. But some emphasis will be put on qualitative methods and on classroom language development. Occasional reference will be made to research strategies in sociolinguistics and psycholinguistics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2145 - TESTING & ASSESSMENT IN TESOL

Minimum Credits: 3
Maximum Credits: 3
This course presents an overview of testing and assessment techniques in TESOL. Students will learn about current language testing and assessment principles and instruments. The course will distinguish among different assessment types and purposes, including standardized tests and classroom assessments. Students will have the opportunity to create and critique a variety of assessment tools and examine the benefits and drawbacks of alternative assessments. Students will also evaluate a variety of language testing instruments with regards to their usefulness, validity, reliability, practicality, inter-activeness, and washback effects.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

LING 2146 - SECOND LANGUAGE ACQUISITION

Minimum Credits: 3
Maximum Credits: 3
This course will deal with second language development from a linguistic and psychological, rather than from an educational point of view. Both the influence of linguistic theory on second language research and the importance of second language data for linguistic theory will be discussed. Second language development in children as well as adults will be described, and frequent comparisons will be made with data from first language acquisitions.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: LING 1000
Course Attributes: Global Studies

LING 2150 - LANGUAGE LEARNING AND TECHNOLOGY (CALL)

Minimum Credits: 3
Maximum Credits: 3
This course seeks to provide students with an understanding the benefits and limits of technology in instructed SLA. It will familiarize students with the most current language technology programs and apps and distinguish among different technology types and purposes. Students will also understand web-based technologies for delivering instruction and assessment (e.g., Canvas, Quizlet, the iBT and Accuplacer). The course will also examine the benefits and drawbacks of communication through technology: synchronous and asynchronous interaction, and on line language tutors. It will also review and evaluate: (i) how to integrate technology into the classroom as a mediational tool; (ii) games for language learning; (iii) Social Media in Language Learning: (Facebook, Twitter, Snapchat, Instagram).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2194 - PRACTICUM OBSERVATION ESL TEACHING

Minimum Credits: 2
Maximum Credits: 2
This 2-credit Practicum/Observation includes observation of classes in English as an additional language (EAL) in higher education contexts, supervised practice teaching of adult English language learners, application of course-work content and tools to teaching contexts, and interactions with EAL teaching faculty and students outside the classroom.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

LING 2195 - PRACTICUM ESL TEACHING

Minimum Credits: 1
Maximum Credits: 3
The requirements of the practicum may be fulfilled by supervised teaching either in the English language institute or in its informal ESL course (for at least 15 contact hours). Teachers are required to attend orientation and training meetings, be observed in class, attend post-observation discussions, and provide an evaluation of the curriculum.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

LING 2235 - LANGUAGE, GENDER AND SEXUALITY

Minimum Credits: 3
Maximum Credits: 3
The course considers the ways in which linguistic patterns are sensitive to the social categories of gender and sexuality, including intersectional categories such as race, class, and age, and the role of power and privilege in these patterns. The main questions considered are: How does language categorize the gender/sexuality world in both grammar and interaction? How do speakers display, create, and orient to gender, sexuality, and desire in interaction? How and why do people display different ways of speaking based on their gender/sexual identities?
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

LING 2267 - SOCIOLINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course in the social aspects of language. The course is divided into three parts: (1) linguistic competence; (2) communicative competence; and (3) language policy, which deals with implications of earlier topics when applied to society.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

LING 2270 - ADVANCED SOCIOLINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This course is a continuation of LING 2267, Sociolinguistics. This course will focus on topics selected by students' particular interests and these topics will be covered in depth.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

LING 2274 - LANGUAGE CONTACT

Minimum Credits: 3
Maximum Credits: 3
This course examines the effects of language contact on the structure of the involved languages. We will investigate a variety of language contact situations and the ways in which varying degrees of intensity of contact lead to differing degrees of interference between linguistic systems. Topics include: language contact as a cause for linguistic change (loan words, phonological and other structural change); typologies of language contact (substratum, sprachbund); bilingualism in the individual and the bilingual community (social dialects, diglossia); the emergence of new languages through contact (regional versions of standard languages, pidgins and Creoles).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LING 1253 or 2253 or 2267

LING 2330 - INTRODUCTION TO COMPUTATIONAL LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This is a course designed to introduce students in linguistics to the foundations and real-world applications of computational linguistics. Students will learn how core aspects of human language-words, morphology, grammar, and meaning-are represented and processed computationally. They will also be introduced to the challenges of real-world language engineering problems and discover how the latest language technologies and artificial intelligence systems seek to solve them. Many practical applications will be covered: search, document classification, spell checking, machine translation, corpus exploration, and more. Throughout the course, there will be a big emphasis on hands-on training; students will work extensively with popular natural language processing platforms. NOTE: The Python prerequisite (CS 8, 10-12) can be waived upon proof of Python knowledge. Please email the instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: CS (0008 or 0010 or 0011 or 0012) with grade of B or better

LING 2340 - DATA SCIENCE FOR LINGUISTS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2391 - PHONOLOGY OF SPANISH

Minimum Credits: 3
Maximum Credits: 3
This course provides a description of Spanish sounds (vowels, diphthongs and consonants in all their allophonic realizations), and prosodic features (stress and intonation) in light of current phonological theories. Special attention will be paid to syllable structure, as well as different phonological processes such as assimilation, dissimilation, and epenthesis. The relationship between phonology and other components of the grammar (in particular morphology and syntax) will also be dealt with.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Latin American Studies

LING 2394 - SPANISH DIALECTOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course looks at varieties of Spanish from different perspectives: regional, social, and stylistic. Phonological, morphological, syntactic, and lexical variation will be taken into account. Special attention will be paid to heritage Spanish, creoles, language contact, as well as the diachronic sources of regional differentiation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

LING 2397 - SPECIAL TOPICS IN HISPANIC LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This course aims to cover a number of topics which are presently under discussion in the field of Hispanic linguistics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2441 - FIELD METHODS IN LINGUISTICS

Minimum Credits: 3
Maximum Credits: 4
This course is meant to simulate the experience of linguistic field work, and raise awareness about the effective ness of specific interview techniques for acquiring linguistic data. The course will give instruction and experience in eliciting data from a speaker of a non (Indo) European language. Students will undertake the investigation of the phonology, some aspect of grammar, and the ethno semantic study of a taxonomically structured semantic field such as plants or animals. Students will make detailed elicitation plans in advance of their administration.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: CREQ: LING 2579 and 2773 and 2777

LING 2490 - LINGUISTICS ANTHROPOLOGY CORE COURSE

Minimum Credits: 4
Maximum Credits: 4
This course approaches language as a practice through which social relations, cultural models, and consciousness are constituted. Specific topics include: approaches to signs and significance; linguistic relativity (relationships between habits of speech, thought, and action); analysis of conversation and interaction; relationships between meaning and intention; models of variation and change; linguistic dimensions of cultural stereotypes; and the means by which languages, styles, and other aspects of cultural patterning, can be mapped onto populations. Throughout the course we pay particular attention to how tools from linguistic and semiotic anthropology can be applied to the study of topics other than language ' as a framework for ethnography, for textual research, and for the study of material culture.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2578 - PHONETICS AND PHONEMICS

Minimum Credits: 3
Maximum Credits: 3
Intensive analysis of the sounds of speech, giving special attention to organs involved in the articulations of speech sounds and auditory discrimination. Students will obtain grounding in practical phonetic skills. Concepts of phoneme, features, abstractness in addition to grammatical theory regarding descriptive phonology will be introduced.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2579 - PHONOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course introduces the principles of phonological analysis and theory. After a brief survey of the roots of modern phonology in Prague school and American descriptivist ('classical phonemic') theories, the main focus of the course will be on generative phonology. Both in and out of class, students will be expected to solve phonological problems and construct theoretical arguments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LING 2578

LING 2738 - LINGUISTIC STRUCTURES OF ENGLISH

Minimum Credits: 3
Maximum Credits: 3
This course is a "nuts and bolts" description of the lexical and syntactic structures of English. An attempt will be made to provide students with a thorough grounding in traditional grammar, while, at the same time, presenting insights and explanations from a transformational-generative perspective. The class is designed for English language teachers- either those who are teaching it in American school systems or those who wish to teach EFL. Lecture format with class discussion.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: LING 1000

LING 2761 - DISCOURSE ANALYSIS

Minimum Credits: 3
Maximum Credits: 3

Many aspects of language cannot be handled adequately in sentence grammars. Although these aspects arguably pertain to a separate area of study, the fieldworker or student of language in context must not avoid them. This course studies discourse in a number of languages, from formal and functional perspectives. Discourse will be shown to provide rich insights into language and culture.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2773 - MORPHOLOGY

Minimum Credits: 3
Maximum Credits: 3
Morphology, the study of words, is interrelated with the syntax, the phonology, the lexicon, and semantics. The purpose of this course is to develop operational competence, through problem solving and discussion, in the major aspects of morphological theory. Theoretical issues to be addressed will include lexical phonology, prosodic morphology, morphology and logical form, morphology and valence alternations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies, Latin American Studies

LING 2777 - SYNTACTIC THEORY

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction, stressing understanding of theoretical concepts, to the transformational generative approach to English sentence structure. This approach uses formal rules to produce sentences, and to explain how they are composed of phrases. The first part of the course concentrates on mechanical manipulation of systems of rules, aiming to acquaint the student with how the rules work. The second part concentrates on how syntacticians use evidence about a language to support or disconfirm their theories.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2800 - SPECIAL TOPICS IN LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on a specialized topic in linguistics. The content changes depending on the instructor, but most often a particular language, language group, or language area will be the topic.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 2860 - INTRO TO HISTORICAL LINGUISTICS

Minimum Credits: 3
Maximum Credits: 3
A survey of the principles and methods of historical linguistics; practice in the basic techniques of historical linguistic research. The major topics to be studied are the analysis of sound change, analogic change, contact-induced language change, the relationship between variation (regional and social) and language change, the comparative method, and internal reconstruction.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies

LING 2900 - LINGISTICS CONSULTING/INTERNSHIP: CONNECTING LINGUISTICS TO THE COMMUNITY AND INDUSTRY

Minimum Credits: 1
Maximum Credits: 3
Humanities subjects have many practical applications outside of academia, yet our students do not feel confident in effectively selling themselves in today's STEM-saturated job market. It is crucial to prepare humanities students to take advantage of growing opportunities in the region. It is equally imperative other organizations realize the potential contributions of humanities to their projects. Preparing students for versatile careers is especially important in light of changing trends in employment. Teaching them skills like creativity, critical thinking and collaboration will serve them in almost any job they pursue (NAS, 2018; Harper, 2018) . Through this internship program, we desire to enhance the visibility of the humanities and its important connections with several disciplinary areas across the University, foster collaborative work in research, education, clinical services and other areas of study and to strengthen connections with the wider community in Pittsburgh and beyond. At the same time, it is an opportunity to enrich the humanities and outline the diverse ways in which humanities, and linguistics in particular, can in fact help us navigate the new reality of our digital age and more.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad Letter Grade

LING 2902 - DIRECTED STUDY FOR MA STUDENTS

Minimum Credits: 1
Maximum Credits: 9
This course provides for individual work under the guidance of a faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

LING 2959 - DEPARTMENTAL SEMINAR

Minimum Credits: 1
Maximum Credits: 1
A forum for the exchange of ideas among faculty members and advanced graduate students. Topics to be presented and discussed will include areas of linguistic endeavor which are under current exploration by any of the program participants, i.e. Faculty projects, doctoral dissertation work, and M.A. Long paper research.
Academic Career: Graduate
Course Component: Colloquium
Grade Component: Grad LG/SNC Basis

LING 2990 - INDEPENDENT STUDY FOR MA STUDNTS

Minimum Credits: 1
Maximum Credits: 9
This course provides an opportunity for students to formally pursue work on an individual basis.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

LING 3000 - DISSERTATION RESEARCH FOR PHD

Minimum Credits: 1
Maximum Credits: 9
This course provides for individual work under the guidance of a faculty member.
Academic Career: Graduate

Course Component: Thesis Research
Grade Component: Grad SN Basis

LING 3099 - INDEPENDENT STUDY FOR PHD STDNT

Minimum Credits: 1
Maximum Credits: 9
This course provides the opportunity for students to formally pursue work on an individual basis.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

LING 3101 - PHD COMPREHENSIVE PAPER 1

Minimum Credits: 1
Maximum Credits: 9
This course provides students with guidance in proposing, researching, writing, and orally presenting the final draft of part one of the Ph.D. comprehensive requirement, normally no later than their fourth year. Depending on the time spent on the comprehensive, the course can be worth one to nine credits. If nine credits are chosen, the comprehensive paper must be completed by the end of the semester.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

LING 3102 - PHD COMPREHENSIVE PAPER 2

Minimum Credits: 1
Maximum Credits: 9
This course provides guidance to students in proposing, researching, writing, and orally presenting the final draft of part two of the Ph.D. comprehensive requirement, normally no later than their fourth year. Depending on the time spent on the comprehensive, the course can be worth one to nine credits. If nine credits is chosen, the comprehensive paper must be completed by the end of the semester.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

LING 3146 - ADV SECOND LANGUAGE ACQUISITION

Minimum Credits: 3
Maximum Credits: 3
This course is a doctoral seminar in which students discuss the most recent papers on a topic of interest to the professor and the students in second language acquisition and learning. Students and the faculty member will agree on a set of topics to be covered in the class, and students will present papers and lead discussions on topics relevant to their doctoral work.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 3578 - ADVANCED PHONETICS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

LING 3579 - ADVANCED PHONOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course will continue to build on LING 2579 constructing a model of phonological theory. This course provides students with an overview of advanced topics in phonology such as feature geometry, under specification, lexical phonology, syllable theory, auto segmental phonology, metrical phonology and optimal theory. Students will be provided with opportunities to apply the theory to data from a wide variety of languages, leading to a greater understanding of the applications of the theory to sound systems and of the implications for an understanding of human cognition.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 3773 - ADVANCED MORPHOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course consists of an in-depth analysis of morphological phenomena in natural language in light of current theories (both formal and functional). Special attention will be paid to polysynthetic and non-concatenative morphology, as well as to the interaction between morphology and other components of the grammar.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 3777 - ADVANCED SYNTAX

Minimum Credits: 3
Maximum Credits: 3
This course consists of an in-depth analysis of syntactic phenomena in natural language in light of current theories. The interaction between syntax and other components of the grammar will occupy a central place in the syllabus. Representative problems to be addressed include non-local dependencies, functional categories, ellipsis, and the representation vs derivation debate in syntactic theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

LING 3902 - DIRECTED STUDY FOR PHD STUDENTS

Minimum Credits: 1
Maximum Credits: 9
This course provides for individual work under the guidance of a faculty member.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis

LING 3990 - INDEPENDENT STUDY FOR PHD STUDENT

Minimum Credits: 1
Maximum Credits: 9
This course provides the opportunity for students to formal ly pursue work on an individual basis.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

Management Information Systems

BMIS 2053 - DESIGNING THE USER EXPERIENCE

Minimum Credits: 3
Maximum Credits: 3
Designs are all around us. Most visible are apps and websites, which offer a user experience that might fall short of what users expect or what the creators intended. As a result, firms of all types have encountered pressures to improve the user experience. Organizational practices should be adopted to make sure designers and developers take into account theories and practices developed over the last half-century. There are tools for gathering requirements, achieving a usable first draft, and testing and improving upon that draft. Several assignments will make such processes of design more vivid. An early project will evaluate usability of what the student considers a poor website or app. A sequence of additional assignments will focus on improving the user's experience of the site or app, justifying a change, and evaluating the results. A final project presentation will "pitch" the design changes to management, examining benefits and costs of the improvements.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2056 - MGT INFORMATION SYSTEMS PRACM

Minimum Credits: 3
Maximum Credits: 3
The objective of the practicum is to give the student information systems experience in an actual organizational set ting. Examples of areas for internships are: Systems Analysis and design; Programming and Implementation; Problem Definition and Documentation; marketing and needs analysis, education and training. A project proposal is prepared by the student that, when approved by both a faculty advisor and a corporate supervisor, becomes the formal agreement to complete the project.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Management of Information Systems(MS)

BMIS 2060 - INDEP STUDY MGT INFOR SYSTEMS

Minimum Credits: 1
Maximum Credits: 6
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2061 - INDEP STUDY MGT INFO SYSTEMS 2

Minimum Credits: 1
Maximum Credits: 6
An independent study in management information systems.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

BMIS 2061 - INDEP STUDY MGT INFO SYSTEMS 2

Minimum Credits: 1
Maximum Credits: 6
An independent study in management information systems.
Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

BMIS 2074 - STRATEGIC INFORMATION TECHNOLOGY IN GLOBAL SUPPLY CHAINS

Minimum Credits: 1
Maximum Credits: 1
This online course examines the advantages and complexities of ERP software within the context of global SCM and demonstrates how the system can improve processes and streamline operations. The course progresses through seven experience-based-learning Modules. Each Module includes both a synchronous class session, and asynchronous individual work. The synchronous sessions are focused on the execution of an ERP Simulation where teams of students complete with one another to operate a make-to-stock company that sells a product to a European market. The asynchronous portion of the class allows students to work at their own pace to learn the how ERP systems automate and integrate SCM business processes including hands-on execution of end-to-end business processes in the SAP ERP system; and completion of quizzes and exams.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2402 - COMPUTATIONAL THINKING FOR BUSINESS LEADERS

Minimum Credits: 1
Maximum Credits: 1
The main objective of this course is to lay a foundation for business students to develop computational thinking and analytics skills. Computational thinking involves solving problems by formulating them clearly and systematically so that we can effectively leverage the power of computational tools and models. It is increasingly being recognized that computational thinking and programming are fundamental skills for everyone, not just for students interested in technology careers . Adopting a learning-through-examples approach, the course focuses on developing fluency with computational concepts and programming in a business context. Students will learn the fundamentals of computational thinking and apply them using Python and R programming languages as well as other menu-driven applications such as Excel, Rapid Miner, and Tableau. An additional pedagogical objective of the course is also to pave a path for students to build on the fundamental skills and proceed with confidence to advanced data analysis and machine learning workflows using various open-source libraries available in the Python and R ecosystem. This is an extensively hands-on course, and major components of students' grades are based on their individual submissions for the course's assignments and projects. No prior programming experience is required to enroll in the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BMIS 2409 - INFORMATION SYSTEMS

Minimum Credits: 1
Maximum Credits: 1
.How does information technology enable the business? How does it provide business value? This course provides an overview of information technology and its application in a business. By simultaneously examining business cases and the capabilities of relevant technologies, students will develop an understanding of how information technology supports and enables business strategies, innovation, and improved business capabilities and processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2501 - ENTERPRISE SYSTEMS AND INTEGRATION OF BUSINESS PROCESSES

Minimum Credits: 3
Maximum Credits: 3

Participants in Enterprise Systems and Integration of Business Processes course will gain extensive theoretical knowledge of Enterprise Resource Planning (ERP) systems. The theoretical knowledge is practically implemented and deepened through hands-on exercises using the 11 modules of the SAP S/4HANA system. This immersion course is designed to prepare students for the online SAP TS410 Certification Exam which will be completed during the last day of class. All students are required to take the SAP TS410 Exam Certification exam. Students who pass the exam will receive the "SAP Certified Application Associate - Business Process Integration with SAP S/4HANA" credential from SAP, which is widely acknowledged in business. The University of Pittsburgh, as an active member of SAP's University Alliances program, is qualified to offer the SAP TS410 course to its students. Further, the SAP specific knowledge gained through this course is readily transferrable to other commercial, off-the-shelf, ERP software systems (such as Oracle eBusiness Suite). No computer programming background is required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2525 - CURRENT ISSUES IN COMPUTING

Minimum Credits: 1
Maximum Credits: 1
In this course, students explore a computing/technology related topic of interest and conduct an in-depth independent study, guided by the instructor. A variety of independent study pathways are possible, including but not limited to technical analysis and solutions development using an emerging technology; data-driven analysis; industry analysis; examinations of the adoption, use, and decommissioning of complex enterprise systems; and investigating regulatory and policy landscapes related to an emerging technology. The course is designed to offer a personalized learning journey, and students can align their topic with their career interests, work-related projects, and industry sector preferences.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2526 - ADVANCED DATA PROGRAMMING WITH R

Minimum Credits: 3
Maximum Credits: 3
Data science skills are highly valued in the job market and most businesses are heavily investing to develop their analytics capabilities. This course adopts an experience-based learning approach and introduces the practice of data science to Katz graduate students. The course will emphasize the acquisition of skills such as (1) the use of a programming language (R, Python, etc.) to assemble, clean, and analyze data sets, (2) analytical and text-processing procedures for answering business questions, and (3) visualization and presentation of data-driven results for evaluation of business goals. The primary mode of learning will be through hands-on exercises involving real-world data used to make business decisions. For example, students will make use of the datasets and scripts used in data science competitions (e.g., Kaggle). Although no prior programming experience is required to enroll in the course, students should expect intensive out-of-class readings and practice sessions to get the most out of this course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: BQOM 2401

BMIS 2537 - BUSINESS SYSTEMS PLATFORMS

Minimum Credits: 3
Maximum Credits: 3
Platforms such as Amazon, Google, LinkedIn, Uber, Yelp, and others surround us. This course introduces the technology tools, economics principles, and statistical and analytical tools that platform managers use to make decisions. In the technology module, the course introduces cloud computing and application programming interfaces (API), esp., machine learning APIs widely used by platforms. Labs supplement lectures and provide hands-on experience. In the economics module, the course starts with underlying concepts such as network effects, and then builds to cover platform architecture, launch, monetization, metrics, and strategy. Finally, in the statistical and

analytical tools module, the course introduces causal analysis and covers the statistical analyses of randomized trials, an increasingly used managerial tool in platform companies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Joseph M. Katz Grad Sch Bus

BMIS 2542 - DATA PROGRAMMING ESSENTIALS WITH PYTHON

Minimum Credits: 3
Maximum Credits: 3
This course introduced basic data science concepts behind turning data into actionable insights and knowledge. In addition, the course will emphasize the development of necessary programming skills needed for doing data science. Students will learn and use the Python programming language along with a focus on learning applied statistical inference, machine learning, data visualization, text analysis, and social network analysis techniques. The course takes a hands-on approach and no prior programming experience is expected. This is a required course for students interested in pursuing the Katz Data Science specialization. Follow on courses include Practical Data Science (BMIS 2526) and Advanced Topics in Data Science (BMIS 2543)
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BMIS 2551 - PROJECT MANAGEMENT CONCEPTS AND PROCESSES

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2552 - PROJECT MANAGEMENT PROCESSES AND CONCEPTS

Minimum Credits: 1
Maximum Credits: 1
This course provides a comprehensive introduction to project management principles and practices, covering the project lifecycle from initiation through closure, including scope, time, cost, quality, risk, and stakeholder management.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BMIS 2588 - DATA BASE MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3
Explains data base design, effective use of data bases, basic design objectives, methods, costs and benefits associated with the use of data base management systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: Katz Graduate School of Business

BMIS 2630 - TECHNICAL FOUNDATIONS OF GENERATIVE ARTIFICAL INTELLIGENCE FOR BUSINESS

Minimum Credits: 3
Maximum Credits: 3
This course is part of the "Artificial Intelligence (AI) and Business" curriculum at Pitt Business. The course is designed to equip business students with technical concepts, skills, and understanding necessary to harness the capabilities of generative AI systems. A key learning objective is to gain proficiency in using cloud-computing platforms, application programming interfaces (APIs), transformer architectures, and large language models. Students will build on the data programming skills learned in the pre-requisite courses and will utilize cloud computing and APIs to access large language models and generative AI interfaces for processing and generating text and multimedia content for business workflows. Throughout the course, students will engage with hands-on labs and projects, enabling them to build and fine-tune generative AI applications. To do well in this course, students must be prepared to engage in intensive out-of-class practice sessions based on the topics, examples, and techniques introduced in class sessions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BMIS-2402 or BMIS-2542 or BMIS-2526

BMIS 2635 - DEPLOYING ARTIFICIAL INTELLIGENCE (AI) IN BUSINESS: STRATEGY, DESIGN, AND EXECUTION

Minimum Credits: 3
Maximum Credits: 3
This course is part of the "Artificial Intelligence (AI) and Business" curriculum at Pitt Business. The course focuses on the strategic planning, design, and deployment of AI systems for businesses. Students will identify business opportunities where AI and generative AI systems can create value, develop strategic roadmaps for integrating AI with business workflows, and learn to assess the potential return on investments from AI projects. The course will dive into the design principles, methodologies, and governance frameworks required to develop and implement effective enterprise AI systems as well as the strategies for stakeholder engagement, performance evaluation, managing change, and fostering a culture of AI-enabled innovation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BMIS 2402 or 2542 or 2526; CREQ: BMIS 2630

BMIS 2640 - RESPONSIBLE ARTIFICIAL INTELLIGENCE (AI) FOR BUSINESS

Minimum Credits: 3
Maximum Credits: 3
This course is part of the "Artificial Intelligence (AI) and Business" curriculum at Pitt Business. The course focuses on the significant challenges that accompany the use of AI and generative AI in business and societal settings. Students will learn the implications of "what could go wrong" with AI deployments and learn how to detect and prevent outcomes that could cause significant damage to people, businesses, and society. Students will also build a framework for the responsible use of AI that focuses on purpose of use, ethics, fairness, transparency, and mitigating bias. As a result, students will be able to lead organizational-wide discussions of responsible data science and the potential societal and environmental impacts of using AI in business workflows. The course uses a mixture of lectures, readings, case discussions, and written case analyses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BMIS-2402 or BMIS-2542 or BMIS-2526; CREQ: BMIS 2630

BMIS 2679 - TECHNOLOGY INNOVATION, ADOPTION, AND DIFFUSION

Minimum Credits: 3
Maximum Credits: 3
Expose students to concepts in technology innovation, markets for information technology goods and services, and adoption dynamics within organizations for new products and processes, and therefore should prove useful in a variety of student careers. Assignments emphasize written and oral communication skills. There is an opportunity for a self-selected project to customize the course to particular student interests. Skill acquisition and improvement goals for the course include case analysis, short analytic writing, technology research,

and long-form writing. Technological innovation is the origin of what the economist Joseph Schumpeter termed the `creative destruction' of capitalism (1942). This is the dynamic process by which prior technologies, and their accompanying industrial structures and associated leading firms, are replaced by successive generations of technologies. This is a constantly ongoing process that provides both opportunities for new entrants and threats to existing firms in the market. Students are likely to need a thorough understanding of this process throughout their professional careers. Topics typically covered include: innovation sources and management, s-curves and product life cycles, dominant design and paradigm shifts, disruptive and discontinuous innovation, innovation in design, network effects, standards, complementary goods, standards, intellectual property, partnerships , alliances, and value chain ownership, environment/government regulations, organizational assimilation of technology, and lead-user design.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Joseph M. Katz Grad Sch Bus

BMIS 2681 - INFORMATION SYSTEMS SECURITY

Minimum Credits: 3
Maximum Credits: 3
This course introduces students to the nomenclature, concepts, and applied techniques of information systems security. The technology module of the course will start with foundations, such as digitization, operating systems shells, host types, and networking concepts as they pertain to security issues. Individual labs will supplement the lectures to provide hands-on experience. The technology module covers applied cryptography in enough detail to equip managers with basic understanding to make sound decisions. The module then covers access control, attacks, malicious code and control, and monitoring and analysis. In the managerial module the course introduces students to risk, control and countermeasures, incident response, recovery, security administration and planning, and legal issues. Cases and guest lectures from business leaders augment the concepts learned in the course by showcasing their applicability in the real-world. This course can provide a solid start to students planning to take the Systems Security Certified Practitioner (SSCP), Certified Information Systems Security Professional (CISSP), or Certified Information Security Manager (CISM) credential. Students who have not taken the prerequisite BMIS 2588 but feel that they are sufficiently prepared should seek the permission of the instructor to enroll in the class.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: BMIS 2588; PROG: Joseph M. Katz Grad Sch Bus

BMIS 2811 - INFORMATION TECHNOLOGY AND BUSINESS VALUE

Minimum Credits: 3
Maximum Credits: 3
This required EMBA course introduces students to information technology, with an emphasis on employing it to maximize business value. Topical coverage will be broad, and will examine both processes and it products that executives encounter on a regular basis. After completing the course, students will be better able to communicate with it staff, understand how systems are developed, and evaluate the strategic implications of it decisions. Class sessions will involve lecture, discussion, and business case problem-solving. Outside of the classroom, students will make use of on-line resources, academic research, and case studies. Both written and oral communications skills will be tapped in frequent and focused case write-ups and class presentations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMIS 2812 - RESPONSIBLE AI AND ANALYTICS FOR BUSINESS LEADERS

Minimum Credits: 1
Maximum Credits: 1
The course focuses on the significant challenges that accompany the use of analytics and artificial intelligence (AI) systems in business settings. Students will learn the implications of "what could go wrong" with analytics and AI deployments, and learn how to detect and prevent outcomes that could cause significant damage to people, businesses, and society. Students will also build a framework for the responsible use of analytics and AI that focuses on purpose of use, ethics, fairness, transparency, and mitigating bias. As a result, students

will be able to lead organizational-wide discussions of responsible data science and the potential societal and environmental impacts of using AI in business workflows. The course uses a mixture of lectures, readings, case discussions, and written case analyses.

BMIS 2911 - HEALTHCARE INFORMATION TECHNOLOGY

Minimum Credits: 3
Maximum Credits: 3
Healthcare information technology
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: SUBPLAN: EMBA Healthcare Program

BMIS 2912 - DATA VISUALIZATION TECHNIQUES AND STORYTELLING IN HEALTHCARE

Minimum Credits: 1
Maximum Credits: 1
Healthcare organizations, among others hospitals and clinics, are becoming increasingly data-driven in tracking every aspect of operations. Ranging from core areas, such as visits, surgeries and patient analysis, all the way to corporate aspects: finance, HR, logistics to sales, and beyond. With the rise of Big Data and growing availability of datapoints that healthcare companies have at their disposal, employees at every level need technologies to analyze, present and share data. In this course, students will learn skills and technologies useful in reviewing and delivering aggregated healthcare data in a visually appealing and easy-to-understand manner to support managing hospitals.

Grade Component: Grad Letter Grade

BMIS 3010 - INDEP STUDY MGT INFOR SYSTEMS

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis

BMIS 3012 - FDS INFORMATION SYSTEMS RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The objective of this course is to provide doctoral students with a foundation for becoming is researchers and scholars. As such, we will cover several areas during the course. We will overview the field of is, reading "classic" articles as well as more current research in a variety of is domains. We will also identify relevant reference disciplines, and discuss their role in is research. Finally, we will examine what it means to do "good" research in is, and how to do such research.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: Katz Grad School of Business students only.

BMIS 3019 - HUMAN/COMPUTER INTERACTION

Minimum Credits: 3
Maximum Credits: 3

Investigates the current research and research directions of the Human-Computer Interaction (HCI) literature. The course will emphasize aspects of the relationship between humans and computers, including user learning, understanding and manipulation (usage) of systems.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: Katz Grad School of Business students only.

BMIS 3027 - ECONOMICS MODELS OF ARTIFICIAL INTELLIGENCE

Minimum Credits: 3
Maximum Credits: 3
AI is one of the most significant technologies of our time. However, AI also faces several issues such as algorithmic bias, adoption incentives, algorithmic collusion, interpretability, etc. Most of these issues are not due to technological limitations, but due to the misaligned incentives of stakeholders in the ecosystem. In this course, we will discuss several seminal papers related to these issues and discuss economic models of AI used for addressing these issues. Using these papers, students will also be exposed to game-theoretic modeling techniques in research.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

BMIS 3029 - SOCIAL MEDIA AND DIGITAL PLATFORMS

Minimum Credits: 3
Maximum Credits: 3
This doctoral seminar is designed to provide doctoral students an introduction to recent research issues and challenges in the contexts of social media and other digital platforms. In doing so, the students will gain exposure to how research problems are formulated and refined to a working definition, and how research is conducted and reported. The seminar will also discuss various research perspectives, examine various research methodologies, and explore research in information systems and related disciplines.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

BMIS 3035 - AI, SYSTEM WITHIN SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
This seminar examines artificial intelligence as a system embedded within other systems: human, organizational, and societal. Rather than isolating AI as a purely technical artifact, the course explores its interdependencies, highlighting how design choices, individual behaviors, organizational routines, and institutional structures shape and are shaped by AI. Yet such framings overlook a fundamental truth: AI and human systems are mutually constitutive. Each shapes and reshapes the other in a continuous, bi-directional process. Human cognition, behavior, and decision-making influence how AI is designed, interpreted, and embedded, while AI transforms those very processes, altering human cognition patterns, organizational routines, and even societal norms. Core themes include adoption and use in high-stakes contexts, cognitive and behavioral dynamics in human-AI collaboration, ethical and responsible practices, and the systemic consequences of AI for fairness, governance, and social outcomes. We will engage relevant papers on AI and human behavior from IS and related disciplines to ground theory development in both the capabilities and limitations of AI use and implementation. Through readings, discussions, and case analyses, students will develop a multilevel perspective that connects micro-level human interaction with macro-level institutional and societal implications, actively building connections and synthesizing insights that illuminate AI as a system within systems.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

BMIS 3039 - DIGITAL PLATFORMS, ALGORITHMS AND REMOTE WORK

Minimum Credits: 3
Maximum Credits: 3
This course will offer opportunities to discuss research work in digital platforms, algorithms and remote work. Students are expected to perform weekly readings in related papers and provide critique. At the end of each topic, students are also encouraged to propose meaningful future research questions in related topics. In the second half of the course, students will start working on research proposal under the guidance of the instructor.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

BMIS 3042 - DESIGN INFORMATION SYSTEMS RESEARCH

Minimum Credits: 1
Maximum Credits: 1
This Ph.D. seminar course exposes students to management theories related to the design of software-intensive products and processes. Drawing upon the literatures of design thinking, software engineering, and sociotechnical systems, we will explore the role of product and process design in influencing phenomena of interest to management scholars such as organizational transformation, innovation, and industrial evolution. Classes will be principally student-led discussions of research papers.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SU3 Basis

BMIS 3043 - DESIGN IN INFORMATION SYSTEMS RESEARCH 2

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

BMIS 3044 - QUANTIATIVE METHODS IN INFORMATION SYSTEMS RESEARCH

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to prepare Ph.D. students to understand and confidently apply a variety of statistical methods and research designs that are important for research in information systems and technology management (ISTM). Through discussions of published ISTM research papers and practical data analysis exercises, we will explore models such as those applied for event counts, time-series cross-sectional analysis, causal inference, Bayesian inference, competing risks, differences-in-differences, and designs for randomized field experiments. The course will also place an emphasis on developing skills to communicate econometric results in a rigorous way.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

BMIS 3045 - HEALTH INFORMATION TECHNOLOGY

Minimum Credits: 3
Maximum Credits: 3
This seminar introduces students to research on information technology in health care. We will examine how technologies such as electronic health records, clinical decision support systems, telemedicine, and artificial intelligence shape clinical decision-making, care coordination, access to care, and patient outcomes. A central question is whether these technologies actually improve the efficiency, quality, and equity of health care delivery. The seminar also covers the empirical approaches used to study these questions, including quasi-experimental designs for observational data, such as difference-in-differences and regression discontinuity, as well as laboratory and field experiments. Through close reading and discussion of research papers, students will learn to assess study designs, interpret empirical evidence, and identify promising questions in health information technology.

Grade Component: Grad Letter Grade

Materials Science and Engr

MSE 2003 - STRUCTURE OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Fundamentals of crystallography; lattice geometry; bravais lattices; crystal systems; stereographic protection; point and space groups; symmetry elements; tensor properties of crystals; physical properties; elasticity of crystals; introduction to diffraction by crystals; reciprocal lattice; ewald construction.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2008 - PROCESSING OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
This course is primarily designed for graduate students entering the program without a degree in materials. Students will be introduced to the processing and applications of different types of engineering materials used in industrial applications. The topics to be covered are steelmaking, solidification, alloy design, strengthening mechanisms, mechanical properties: plastic deformation, mechanical properties, and microstructure control; high temperature deformation, grain size control during reheating and during deformation
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2011 - ENERGETICS

Minimum Credits: 3
Maximum Credits: 3

Advanced classical thermodynamics; chemical equilibrium solution thermodynamics; quasichemical model; electrochemical cells; surface tension; thermodynamics of interfaces; introduction to thermodynamics of irreversible processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2012 - COMPUTATIONAL MATERIALS SCIENCE

Minimum Credits: 3
Maximum Credits: 3
This course teaches the fundamentals and applications of computational materials science, which concerns the use of modern computational tools to the analysis of the properties and behavior of materials at various temporal and length scales. The current emphasis of this course is on integrated multiscale simulation method. The course covers topics on the first-principles density functional theory, molecular dynamics, Monte Carlo simulation, and phase-field method. Crystal structure, mechanical properties, structural defects, and electronic structures of materials as well as techniques for modeling them are also discussed. The course consists of a term project, in which students perform modeling and simulation of a material system of their choice and analyze simulation results by visualization and data mining methods using software provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2013 - KINETICS IN MATERIALS SCIENCE

Minimum Credits: 3
Maximum Credits: 3
Diffusion in solids; mathematics of diffusion; atomistics of diffusion and diffusion mechanisms; diffusion in alloys, the Kirkendall effect; uphill diffusion; generalized phenomenological treatment of diffusion; diffusion in ionic solids; diffusion in mutlicomponent systems; grain boundary diffusion; surface diffusion and dislocation effects; anelasticity and internal friction phenomena; the liquid state; diffusion in liquids; viscosity.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2015 - ELECTROMGNTC PROPS MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Magnetic properties of matter; ferro- ferri- and antiferromagnetism; diamagnetic and paramagnetic substances; magnetostatics; the fundamental quantities in the description magnetic behavior; measurement of magnetic quantities; hysteresis; magnetic domains; magnetic anisotropy; magnetostriction; permeability; coercivity; hard and soft magnetic materials for engineering applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2030 - MECHANICAL BEHAVR OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Continuum mechanics concepts; elastic, plastic, and viscous deformation; strength in metals, ceramics, and polymers. Application of concepts to details of material tests (e.g., Tension, torsion, compression, hardness tests); metallurgical phenomena (e.g., Precipitate strain fields, dislocations, transformations, residual stresses, anistropy); failure (by brittle fracture, ductile fracture, creep, fatigue, wear, hydrogen effects); design of components for industrial use or research equipment.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2032 - FRACTURE MECHANICS FOR PRODUCT DESIGN AND MANUFACTURING

Minimum Credits: 3
Maximum Credits: 3
Failure of manufactured products in service, implications for design. Energy release rates, toughness, evaluation of experimental tests. Fracture mechanisms in different material systems. Damage tolerance. Fracture control. Design studies.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2033 - MAGNETIC PROPERTIES OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Magnetic properties of matter; ferro-, ferri-, and antiferromagnetism; diamagnetic and paramagnetic substances; magnetostatics; the fundamental quantities in the description magnetic behavior; measurement of magnetic quantities; hysteresis; magnetic domains; magnetic anisotropy; magnetostriction; permeability; coercivity; and hard and soft magnetic materials for engineering applications; thin film and fine-particle behavior.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2033 - MAGNETIC PROPERTIES OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Magnetic properties of matter; ferro-, ferri-, and antiferromagnetism; diamagnetic and paramagnetic substances; magnetostatics; the fundamental quantities in the description magnetic behavior; measurement of magnetic quantities; hysteresis; magnetic domains; magnetic anisotropy; magnetostriction; permeability; coercivity; and hard and soft magnetic materials for engineering applications; thin film and fine-particle behavior.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2033 - MAGNETIC PROPERTIES OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Magnetic properties of matter; ferro-, ferri-, and antiferromagnetism; diamagnetic and paramagnetic substances; magnetostatics; the fundamental quantities in the description magnetic behavior; measurement of magnetic quantities; hysteresis; magnetic domains; magnetic anisotropy; magnetostriction; permeability; coercivity; and hard and soft magnetic materials for engineering applications; thin film and fine-particle behavior.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2034 - OPTICAL MATERIALS & THIN FILM FOR ENGINEERING OPTICAL AND THERMAL ENERGY TRANSPORT

Minimum Credits: 3
Maximum Credits: 3
This graduate level course targets to provide students with a sound fundamental understanding of applied optics principles relevant for the design of engineered optical coatings for energy related applications including (1) low emissivity coatings for energy efficient windows, (2) anti-reflection coatings for solar photovoltaics, (3) optical absorber material coatings for concentrating solar power, and (4) thermal barrier coatings. Students will also gain experience with custom mathematica or matlab based code development and/or commercial thin film optical modeling packages such as TFCalc, FreeSnell, and Thin Film Cloud. Students will learn techniques and methodologies for modeling the optical constants of typical materials used in optical coating applications which can be integrated with optical coating design models.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2036 - INTRODUCTION TO CONTINUUM MECHANICS

Minimum Credits: 3
Maximum Credits: 3
The fundamental concepts of continuum mechanics necessary for studying the mechanical behavior of solids and fluids. Includes a review of vectors and tensors; stress; strain and deformation; general principles in the form of balance laws; constitutive equations and their restrictions; and specialization to the theories of linearized elasticity and fluid mechanics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2037 - NANOMECHANICS, MATERIALS AND DEVICE

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction for current nanotechnology and fundamentals for nanoengineering. It mainly contains three areas: nanomechanics, nanomaterials and nanoscaled devices. In nanomechanics, it covers nanoindentation mechanics, thin film mechanics and one dimensional nanowire mechanics, nanocrack mechanics, deformation in nanomaterials. Nanomechanical model will be emphasized. In nanomaterials, it covers carbon nanotube, one dimensional semiconducting nanowires and nanomultilayers as well as nanostructured composites. Novel property/phenomena reviewed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2038 - APPLIED SOLID MECHANICS

Minimum Credits: 3
Maximum Credits: 3
Stress and strain transformations; applied elasticity problems in torsion and plane problems; thermal stresses and elementary plasticity; energy methods; fundamentals of finite element methods.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2039 - BASICS AND APPLICATIONS OF POWER MAGNETICS

Minimum Credits: 3
Maximum Credits: 3
Magnetic materials and components play an increasingly critical role for emerging power and energy applications including inductors, transformers, motors / generators, and sensors. For truly optimized design of magnetic components, material properties attainable through material selection and application of advanced manufacturing methods must be considered in parallel (and consistently) with systems and component level design methods. The purpose of this course is to provide a sound background in the fundamentals of magnetic materials and component design. Fundamental principles will also be applied to practical component-level design problems throughout the course, with a final design project to leverage analytical and/or finite element simulations. This course is targeted towards advanced undergraduate, masters, or PhD level students in materials science, mechanical engineering, electrical engineering, and / or applied physics with an interest in learning about power magnetic materials and devices relevant for emerging power and energy applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2040 - QUANTUM MECHANICS FOR ENGINEERS

Minimum Credits: 3
Maximum Credits: 3
Introduction to quantum physics, matrix formulation of quantum mechanics, postulates of quantum mechanics, qubits and their description, composite quantum systems, quantum circuits, density matrices, entanglement and its characterization, introduction to quantum computation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2041 - ADVANCED PHYSICAL METALLURGY 1

Minimum Credits: 3
Maximum Credits: 3
The cold-worked state; crystal plasticity, production of crystalline defects; annealing phenomena; recovery, recrystallization, and grain growth; secondary recrystallization, tertiary recrystallization; genesis of preferred orientation; deformation and recrystallization textures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2042 - ADVANCED PHYSICAL METALLURGY 2

Minimum Credits: 3
Maximum Credits: 3
Strengthening mechanisms in metals and alloys; theoretical strength of crystals; particle strengthening; dislocation particle interactions; grain size strengthening; strengthening by presence of grain boundaries; hall-petch expression; theories of discontinuous yielding; solid solution strengthening; fiber strengthening and the design of high strength microstructures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2046 - PHYSICAL METALLURGY ENGR ALLOYS

Minimum Credits: 3
Maximum Credits: 3
Property requirements of engineering alloys are discussed: strength, toughness, formability, weldability, fatigue resistance, corrosion/oxidation resistance. Review is made of pertinent phase diagrams, transformations, and microstructures in the fe-fe3c and other alloy systems. Composition, processing, microstructure and properties of important structural steels, sheet steels, stainless steels, tool

steels, aluminum alloys, titanium alloys, as well as nickel based & copper-based alloys will be presented. Case studies, design problems & selection criteria are discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2047 - ANALYSIS AND CHARACTERIZATION AT THE NANO-SCALE

Minimum Credits: 3
Maximum Credits: 3
This course offers a survey of micro-analytical, microscopy and diffraction methods that are widely used for the analysis of composition, chemistry, structure, scale and morphology of advanced materials. It introduces the most basic concepts required to understand experimental data obtained with these modern techniques. The main objectives of the course are to enable students to interpret and evaluate relevant data sets presented in the research literature and to identify experimental tools to solve a given Nano-research characterization problem. Some prerequisite basic knowledge of the structure of solid matter (e.g. Crystals and amorphous materials), diffraction methods (e.g. X-ray diffraction) and processing-property-structure relationships in materials is expected.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2048 - ENGINEERING ALLOYS FOR CONSTRUCTION

Minimum Credits: 3
Maximum Credits: 3
The goal of this course is to understand modern metallic alloys used in construction. To accomplish this goal, the following sequence is offered: review of mechanical properties required of structural alloys; review of physical metallurgy principles: thermodynamics, kinetics, phase diagrams and phase transformations; microstructure and properties of stainless steels, aluminum alloys, titanium alloys, nickel and cobalt-based super alloys and alloys for nuclear core applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering (PENGR)

MSE 2049 - TENSOR NETWORKS: COMPUTATIONAL METHODS FOR MATERIALS SCIENCE, ENGINEERING, AND BEYOND

Minimum Credits: 3
Maximum Credits: 3
Introduction to tensor network algorithms. Topics include a general introduction to tensors; their description as matrix product states (MPSs); operators as matrix product structures (MPOs); MPS methods for minimization and time evolution; alternative tensor network structures; and applications of tensor networks to quantum transport, solution of differential equations, machine learning, and quantum computation. Example codes in Julia, based on the ITensor package, will be provided and worked through for each topic discussed in class.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2050 - GAS-METAL REACTIONS

Minimum Credits: 3
Maximum Credits: 3
Oxidation of metals, alloy oxidation, internal oxidation, effect of metallurgical variables on oxidation, reactions of metals and alloys with gases other than oxygen, hot corrosion, coatings.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2052 - INTRODUCTION TO TECHNICAL COMMUNICATION

Minimum Credits: 3
Maximum Credits: 3
An introduction to technical writing and oral presentation skills using Word, Powerpoint, Mendeley, InkScape and LaTeX.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

MSE 2055 - PRIN OF SOLIDIFICATION ENGRNG

Minimum Credits: 3
Maximum Credits: 3
Study of fundamental phenomenon during the formation of crystalline materials. Delineation of the processing parameters that control crystal perfection, solidification substructure, grain size and shape, microsegregation, macrosegregation, microporosity, inclusions, mechanical properties, and physical properties. Application of fundamental principles to the processing of single crystals, ingots, castings, and composites.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2061 - TRIBOLOGY: THE STUDY OF ADHESION, FRICTION, LUBRICATION, AND WEAR

Minimum Credits: 3
Maximum Credits: 3
Tribology is the study of sliding surfaces. This course will cover fundamental topics in tribology relating to surface characterization, surface roughness, adhesion, friction, lubrication, and wear. Students completing the course will be able to describe the theoretical origins of these topics, which relate to mechanics, materials science, and chemistry. They will also be able to apply tools to solve novel problems in these areas. The course will especially emphasize applications in nanotechnology and biology. Students who do not have a background in solid mechanics should contact the instructor before enrolling in the course.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQS: UGRAD: ENGR 0022 or MEMS 0023 or ENGR 0145 or Consent from Instructor; GRADS: ME 2003 or MSE 2036 or BIOENG 1633 or Consent from Instructor; PLAN: ME, MSE, BioE Graduate Students. All other students will need permission from the instructor

MSE 2064 - NANOMATERIALS AND BIOMOLECULAR ASSEMBLY

Minimum Credits: 3
Maximum Credits: 3
With the miniaturization of the building blocks of materials down to the nanoscale, one hundred-thousandth the size of a human hair, many interesting properties emerge that underlie the societal interest in nanotechnology. Importantly, learning how nature builds a panoply of functional materials from the bottom-up opens the door for bio-inspired self-assembly techniques for engineering nanomaterials. This class focuses on the fundamentals of size-dependent properties and interactions governing the manipulation of matter in the 1-100 nm length scale. Various synthesis methods are leveraged for creating nanoscale building blocks with tailored sizes, shapes, and properties. Moreover, techniques for assembling nanoscale building blocks depend on the interplay among different types of forces and how they scale, including van der Waals, electrostatic, magnetic, molecular, and entropic interactions. Topics covered include chemical synthesis and self-organization of low dimensional materials, such as zero-dimensional nanoparticles, one-dimensional nanowires/nanotubes, and two-

dimensional layered structures, like graphene. Examples of heterostructures and multiphasic/hybrid material systems with organic and inorganic components will be discussed leveraging capillary assembly, block copolymer phase segregation, protein assembly, and DNA origami.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2065 - MATERIALS DESIGN

Minimum Credits: 3
Maximum Credits: 3
Alloy manufacturing has been improved over the last 50 years with many new technologies developed. This course introduces several advanced manufacturing of advanced alloys. The methods introduced in this course include alloy casting, additive manufacturing, rapid solidification, powder metallurgy. However, rather than exclusively introducing the techniques themselves, the course particularly focuses on the metallurgical fundamentals of these manufacturing techniques. The materials design concepts and methods will be introduced, and design principles with the process-structure-property-performance relationships for these manufacturing techniques will be emphasized. The course will also cover major contents as below: 1. Fundamental metallurgical concepts for alloy design and manufacturing 2. Materials design principles and methods 3. Casting, welding, and their metallurgical design aspects 4. Powder metallurgy and their applications 5. Alloy 3D printing and its optimization 6. Computational simulation of advanced manufacturing 7. Microstructure engineering for advanced manufacturing 8. Future manufacturing of advanced alloys Each lecture will cover two weeks of class. About 16 weeks are planned for this course. The course will further develop some design projects for students to accomplish.
Academic Career: Graduate

MSE 2067 - ELEMENTS OF MATRLS SCI & ENGRG 1

Minimum Credits: 3
Maximum Credits: 3
This course is primarily designed for graduate students entering the program without a degree in a field of materials engineering. Bonding and structure of materials; thermodynamics and phase diagrams; imperfections in crystals; rate processes.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2072 - CERAMIC PROCESSING

Minimum Credits: 3
Maximum Credits: 3
The course is focused on powder processing of ceramic materials. It is arranged according to the steps in processing, statiing with powder synthesis and characterization, proceeding through the commonly used powder forming methods and finally to the high temperature sintering of the product.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2073 - CERAMIC MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Ceramics engineering is to design and manufacture components of inorganic nonmetallic materials which mainly starts from solid articles. A series of lectures involves a comprehensive treatment of the structure-property relationships of ceramic materials for students with a background in materials science and engineering. Topics include: crystal structures of ceramics and their effect on physical and chemical

properties, the structure and properties of oxide glasses and glass ceramics, defects and transport properties in oxides, ceramic phase diagrams and microstructure-property relationships, basic theory of sintering and various processing techniques of ceramics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

MSE 2085 - SUSTAINABLE MATERIALS PRODUCTION

Minimum Credits: 3
Maximum Credits: 3
This course will focus on the use of global resources in the production of the most heavily consumed materials in manufacturing and construction. For each of these materials the production process will be described starting with the resources from which they are derived and ending with the needs of the manufacturing or construction process in which they are used. The material life cycle and materials eco-selection criteria will be used to highlight end-of-life issues and how the sustainability of materials production may be improved. The use of strategic minerals in materials production will also be highlighted. Finally, renewable materials will be introduced and the prospects for their widespread use in materials production considered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: ENGR 0022 or MEMS 0023 or MSE 2067

MSE 2088 - POWDER PROCESSING OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Powder processing is widely practiced in the traditional powder metals and ceramics industries as well as in additive manufacturing. This course will review these applications and focus on the underlying materials science and engineering employed in: production of metals and ceramic powders, powder characterization methods, the forming methods used to make shapes from metal and ceramic powders as well as sintering and heat treatment.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2090 - CORROSION AND FAILURE ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
This course covers the principles of corrosion and the analysis and prevention of failures. The initial part of the course covers the thermodynamics of corrosion reactions, metallurgical aspects of corrosion, and the various mechanisms of corrosion. An in-depth study is then made of modes of failure and corrosion-assisted failures. Guidelines are given for the prevention of corrosion through the use of coatings, selection of materials, and design improvement.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: MSE 2067; PROG: Swanson School of Engineering

MSE 2096 - MS/MBA INTEGRATED PROJECTS COURSE

Minimum Credits: 1
Maximum Credits: 1
This is the integrated projects course for MS/MBA majors. The project will be jointly overseen by Katz and SSOE. A 1-2 page proposal is due at the beginning of the term, followed by a final report. The project should blend the student's business and engineering skills.
Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad Letter Grade

MSE 2104 - ADVANCED PHYSICAL METALLURGY OF NONFERROUS ALLOYS

Minimum Credits: 3
Maximum Credits: 3
The course covers the following content but is not limited to thermokinetics, phase transformations, and microstructure evolution in different non-ferrous alloys; phenomena related to non-metallic inclusions as well as strengthening particles; structure defects and their impacts on mechanical performance; processing with heat treatment; grain size and texture control through heat treatment; the relationship between processing, microstructure, and mechanical properties. Particularly, some of the case studies related to industrial applications will be discussed. Fundamental problems related to the physical metallurgy of advanced manufacturing, such as additive manufacturing, will be addressed by discussing practical applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2105 - STEELMAKING AND SUSTAINABILITY

Minimum Credits: 3
Maximum Credits: 3
This course will cover the various routes of modern ironmaking and steelmaking, including the primary existing processes and alternative processes, as well as attempts to develop lower carbon and carbon-free ironmaking and steelmaking routes. The blast furnace process for ironmaking will be analyzed, together with currently available alternative technologies and the possible use of hydrogen or electrolysis for ironmaking. The engineering aspects of the basic oxygen furnace and electric arc furnace steelmaking routes will be examined, together with alternative process routes to produce steel. The technical aspects of ingot casting and continuous casting will be reviewed. There will be a focus on some of the environmental issues facing the steel industry, as well as recent developments related to sustainability.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2106 - IRONMAKING AND STEELMAKING PROCESSES

Minimum Credits: 3
Maximum Credits: 3
This course will cover the various routes of modern ironmaking and steelmaking processes from raw materials through semi-finished products such as steel plates, coils, and pipes. The primary focus will be on existing processes, but the course will also cover topics in the development of alternative processes to lower the carbon intensity in the steel industry. The blast furnace process for ironmaking will be analyzed and contrasted with alternative technologies. The basic oxygen furnace and electric arc furnace steelmaking routes will be compared, and their strengths and limitations will be outlined. Some technical aspects of ingot casting and continuous casting will be covered, followed by coverage of rolling, coating, and other finishing processes. Some of the challenges facing the steel industry will also be discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2110 - NUCLEAR MATERIALS

Minimum Credits: 3
Maximum Credits: 3
This course presumes that students have the knowledge base needed to understand materials issues associated with the design and operation of nuclear power plants, such as basic concepts of physical metallurgy, a mechanistic and microstructural-based view of material properties, and basic metallurgical principles. This course will cover the metallurgy and phase diagrams of alloy systems important in the design of commercial nuclear power plants. The micro-structural changes that result from reactor exposure (including radiation damage and defect cluster evolution) are discussed in detail. The aim is to create a linkage between changes in the material microstructure and changes

in the macroscopic behavior of the material. Also discussed is the corrosion of cladding materials as well the effects of irradiation on corrosion performance, as well as the effects of primary and secondary coolant chemistry on corrosion. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is guided by experimental data. Materials issues in current commercial nuclear reactors and materials issues in future core and plant designs are covered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2111 - MATERIALS FOR ENERGY GENERATION AND STORAGE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Attributes: MCSI - Sustainability Related

MSE 2112 - NANOSCALE MODELING AND SIMULATION: MOLECULAR DYNAMICS

Minimum Credits: 3
Maximum Credits: 3
The course covers the essentials of molecular dynamics simulation by integrating theories from dynamics, statistical mechanics, thermodynamics, continuum mechanics, and quantum mechanics. Topics include heat bath methods, time integration methods, accelerated methods, and different applications related to nanotechnology. Students gain hands-on experience using state-of-the-art simulation software.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2113 - NANOSCALE MODELING AND SIMULATIONS:

Minimum Credits: 3
Maximum Credits: 3
This course teaches the essentials of nanoscale modeling and simulations, which concerns the use of modern computational tools to the analysis of materials at the nanoscale. The current emphasis of this course is on first-principle density functional theory (DFT) calculation method. The course covers topics on basic quantum mechanics, fundamentals of DFT, statistical mechanics, thermodynamics, and continuum mechanics, and their role in atomistic scale modeling and simulation. Crystal structure, mechanical properties, structural defects, and electronic structures of materials as well as techniques for modeling them are also discussed. The course consists of a term project, in which students perform modeling and simulation of a nanomaterial system of their choice and analyze simulation results by visualization and data mining methods using software provided.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2120 - INTRODUCTION TO ADDITIVE MANUFACTURING OF MATERIALS

Minimum Credits: 3
Maximum Credits: 3
This class is targeted toward students who want to learn more about additive manufacturing in general, different additive manufacturing techniques, and how they can be used to produce parts out of a large variety of materials. We will cover the general difference between subtractive and additive manufacturing, introduce and detail the advantages and disadvantages of energy beam based and non-beam based additive manufacturing methods, and discuss which materials can be additive manufactured. We will also describe as-printed microstructures and properties and their improvement through post-processing. Furthermore, elements of characterization, testing and qualification will be introduced. If circumstances permit, students will be able to tour the Additive Manufacturing Research Laboratory at

the Swanson School of Engineering and potentially compare different AM methods in hands-on demonstrations
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2122 - FUNDAMENTALS OF MAGNETIC MATERIALS AND APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3
This course will cover the fundamentals of magnetic properties of materials and will provide an introduction to a number of important applications. Classes of materials to be covered include elemental metals and metallic alloys as well as ceramics with an emphasis on ferromagnetic and ferrimagnetic material systems. Topics to be discussed in detail include quantum mechanical exchange interactions, magnetic anisotropy (shape, magnetocrystalline, exchange bias, induced, etc.), saturation magnetization, magnetostriction, temperature dependence of magnetic properties including statistical mechanics treatments of magnetic moment ordering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2123 - POWER MAGNETIC MATERIALS AND DEVICES

Minimum Credits: 3
Maximum Credits: 3
Magnetic materials and components play an increasingly critical role for emerging power and energy applications including inductors, transformers, motors / generators, and sensors. Optimized design of magnetic components requires careful consideration of magnetic material selection and manufacturing techniques in conjunction with systems and component level design methods. The purpose of this course is to provide a sound background in the fundamentals of both magnetic materials and component design. Fundamental principles will be applied to practical component-level design problems throughout the course, with a final design project to leverage analytical and/or finite element simulations. This course is targeted towards advanced undergraduate, masters, or PhD level students in materials science, mechanical engineering, electrical engineering, and / or applied physics with an interest in learning about power magnetic materials and devices relevant for emerging power and energy applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2131 - METAL COOLED REACTORS

Minimum Credits: 3
Maximum Credits: 3
This course is intended to provide you with an understanding of the technology associated with high-energy neutron reactors (most often called fast reactors). The course materials consist primarily of archival papers from literature, the GENIV International Forum materials, my slides, and the time we spend together during lectures; a bibliography of papers relevant to these reactors is provided in the course syllabus. Although many nations' sodium-cooled reactor programs continue to be based on oxide fuel, there is a better way metal fuel. In this course, the student will become more aware of the state of high-energy neutron reactor technology. Moving nuclear power from low-energy neutron fission (water-cooled reactors) to high-energy neutron fission (metal-, salt-, or gas-cooled reactors) will revolutionize fission, just as jet engines and fracking revolutionized commercial air transportation and oil/gas production, respectively. We will focus on metal-cooled high-energy neutron reactors, but you can easily transpose this knowledge to salt or gas systems
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MSE 2132 - BOILING WATER REACTOR SYSTEMS AND SAFETY

Minimum Credits: 3
Maximum Credits: 3
This course will review the fundamentals of boiling water reactor systems and operations as they apply to analysis, design, selection and

application of power generation. The course will cover the evolution of BWR systems including BWR features and characteristics and containment configurations. With successful completion of the class students will understand how BWRs operate through the fundamental principals of reactor power flows and core flow
Academic Career: Graduate

Mathematics

MATH 0120 - BUSINESS CALCULUS

Minimum Credits: 4
Maximum Credits: 4
This course introduces the basic concepts of limits, continuity, differentiation, integration, maximization and minimization. Applications to the social sciences, especially business and economics, are stressed.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: MATH 0020 or 0031 (MIN GRADE 'C') or MATH PLACEMENT SCORE (61 or GREATER)

MATH 0220 - ANALYTIC GEOMETRY AND CALCULUS 1

Minimum Credits: 4
Maximum Credits: 4
This is the first of a sequence of three basic calculus courses. It covers the derivative and integral of functions of one variable and their applications.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: MATH 0032 (MIN GRADE 'C') or MATH 0200 (MIN GRADE 'C') or MATH PLACEMENT SCORE (76 or GREATER)

MATH 0230 - ANALYTIC GEOMETRY AND CALCULUS 2

Minimum Credits: 4
Maximum Credits: 4
This is the second of a sequence of three basic calculus courses. It covers the calculus of transcendental functions, techniques of integration, series of numbers and functions, polar coordinates, and conic sections.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: MATH 0220; MIN GRADE: 'C'

MATH 0280 - INTRO TO MATRICES & LINEAR ALG

Minimum Credits: 3
Maximum Credits: 3
The principal topics which this course will cover include vectors, matrices, determinants, linear transformations, eigenvalues and eigenvectors, and selected applications.
Academic Career: Undergraduate
Course Component: Lecture

Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: MATH 0220 or 0235 (Min Grade 'C')

MATH 0400 - FINITE MATHEMATICS

Minimum Credits: 3
Maximum Credits: 3
The course covers the basic concepts of set theory, logic, combinatorics, Boolean algebra, and graph theory with an orientation towards applications.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: MATH 0020 or 0031 (MIN GRADE 'C') or MATH PLACEMENT SCORE (61 or GREATER)

MATH 0450 - INTRODUCTION TO ANALYSIS

Minimum Credits: 4
Maximum Credits: 4
This course is intended as a first course in mathematical analysis for highly motivated students. Topics will include sets and functions, number systems, topology of Euclidean spaces, limits, continuity, and the main theorems of elementary calculus.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: PREQ: ENG 0102 or ENGCMP (0002 or 0006 or 0020 or 0200 or 0203 or 0205 or 0207 or 0208 or 0210 or 0212 or 0213 or 0214) or FP (0003 or 0006) *Applies to all WRIT Courses*

MATH 1180 - LINEAR ALGEBRA 1

Minimum Credits: 3
Maximum Credits: 3
This course stresses the theoretical and rigorous development of linear algebra. Major topics include the theory of vector spaces, linear transformations, matrices, characteristic polynomials, bases and canonical forms. Other topics may be covered as time permits.
Academic Career: Undergraduate
Course Component: Lecture
Grade Component: LG/SNC Elective Basis
Course Requirements: CREQ: MATH 0413 or MATH 0450

MATH 2000 - THESIS MS

Minimum Credits: 1
Maximum Credits: 15
This course is for students writing a master of science thesis.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

MATH 2010 - TEACHING ORIENTATION

Minimum Credits: 1
Maximum Credits: 1
This course prepares T.A.'S to teach mathematics at a University level.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

MATH 2020 - PROGRESS IN MATH

Minimum Credits: 3
Maximum Credits: 3
This course will deepen the students understanding of analysis through intensive training in problem solving followed by comprehensive study and dissection of the problems attempted. Students preparing for the analysis portion of the preliminary exam are strongly encouraged to enroll.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2030 - ITERATIVE METHODS

Minimum Credits: 3
Maximum Credits: 3
Topics include matrix theory, matrix and vector norms, error analysis, factorizations, direct and iterative methods for solving linear systems, least squares and the algebraic eigenvalue problem.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2060 - COMBINATORICS 1

Minimum Credits: 3
Maximum Credits: 3
This is a graduate level course in combinatorics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2070 - NUMERCL METH IN SCI COMPUTING 1

Minimum Credits: 4
Maximum Credits: 4
This course is the first part of the sequence MATH 2070 - MATH 2071, which is an introduction to numerical methods for science and engineering. Topics to be covered include: general concepts related to error, solution of nonlinear equations, interpolation theory, approximation of functions, numerical integration. Both theoretical analysis of the algorithms and practical implementation issues will be emphasized. The course is complemented with a fully integrated computer laboratory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2071 - NUMERCL MATH IN SCI COMPUTING 2

Minimum Credits: 4
Maximum Credits: 4
This course is the second part of the sequence MATH 2070 - MATH 2071, which is an introduction to numerical methods for science and engineering. Topics to be covered include: numerical methods for ODEs, selected linear algebra topics, numerical solution of linear systems, numerical solution of eigenvalue problems. Both theoretical analysis of the algorithms and practical implementation issues will be emphasized. The course is complemented with a fully integrated computer laboratory. MATH 2070 is not a prerequisite.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2090 - NUMERICAL SOLUTN ORDNRY DE

Minimum Credits: 3
Maximum Credits: 3
The topic covered is modern methods for solving initial value problems. This will include the basic theory and software implementations and numerical experiments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2245 - ALGEBRAIC NUMBER THEORY

Minimum Credits: 3
Maximum Credits: 3
In this course the theory of numbers will be algebraically, that is, as the study of algebraic numbers. Particular attention will be paid to the development of quadratic and cyclotomic number fields and to factorization theorems. Other topics include ideal theory and the work of Kummer and Fermat's last theorem.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2301 - ANALYSIS 1

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to real analysis/measure theory and functional analysis.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2302 - ANALYSIS 2

Minimum Credits: 3
Maximum Credits: 3
This course presents an introduction to the analysis of holomorphic functions followed by an introduction to harmonic analysis. It is a natural continuation of math 2300 analysis 1.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2303 - ANALYSIS 3

Minimum Credits: 3
Maximum Credits: 3
This course presents an introduction to the analysis of holomorphic functions followed by an introduction to harmonic analysis. It is a natural continuation of MATH 2300 analysis 1.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2304 - ANALYSIS 4

Minimum Credits: 3
Maximum Credits: 3

Analysis 4 is a new course that follows on from the analysis 1, 2, 3; especially analysis 2. Its focus will be complex and harmonic analysis. We will integrate this new material with the real, functional, complex and harmonic analysis of the previous three courses.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2370 - MATRICES AND LINEAR OPERATORS

Minimum Credits: 3
Maximum Credits: 3
Linear transformations on finite dimensional vector spaces are studied in a semi-abstract setting. The emphasis is on topics and techniques which can be applied to other areas, e.g., Bases and dimension, matrix representation, linear functional, duality, canonical forms, vector space decom position, inner products and spectral theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2371 - MATRICES & LINEAR OPERATORS 2

Minimum Credits: 3
Maximum Credits: 3
Continuation of MATH 2370.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2430 - INTRODUCTION TO MATHEMATICAL PROBABILITY

Minimum Credits: 3
Maximum Credits: 3
This course provides a rigorous introduction to the mathematical foundations of probability theory. Topics include probability spaces, random variables, expectation, independence, modes of convergence, laws of large numbers, the central limit theorem, martingales, Markov chain, and Brownian motion. Applications to various fields of mathematics are discussed.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2440 - TOPICS IN MATHEMATICAL PROBABILITY

Minimum Credits: 3
Maximum Credits: 3
This course explores selected advanced topics in modern probability theory, with emphasis on recent developments and research-oriented methods. Possible topics include stochastic processes, martingale theory, concentration inequalities, random matrices, or probabilistic methods in fields of mathematics including but not limited to analysis, algebra, combinatorics, optimization, and more. The precise content varies by semester and instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2500 - ALGEBRA 1

Minimum Credits: 3
Maximum Credits: 3
The basic concepts and results of group theory are developed with an emphasis on finite groups. Topics include: homo morphism theorems,

isomorphism theorems, Sylow theorems, permutation representations and hall's characterization of solvable groups.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2501 - ALGEBRA 2

Minimum Credits: 3
Maximum Credits: 3
In this course the fundamental properties of rings, fields and modules are studied.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2505 - ALGEBRA 3

Minimum Credits: 3
Maximum Credits: 3
This is a third course in algebra. It covers commutative algebra, homological algebra and rudiments of category theory. The material covered provides the necessary background for the advanced courses in algebraic geometry and number theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2507 - ALGEBRA 4

Minimum Credits: 3
Maximum Credits: 3
This is the fourth course in Algebra. It covers introductory topics in algebraic geometry, number theory, and representation theory. Course material will be selected by the instructor.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2530 - ADVANCED CALCULUS 1

Minimum Credits: 3
Maximum Credits: 3
This course contains a rigorous development of the calculus of functions of a single variable, including compactness on the real line, continuity, differentiability, integration, and the uniform convergence of sequences and series of functions. Other topics may be included, such as the notion of limits and continuity in metric spaces.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2540 - ADVANCED CALCULUS 2

Minimum Credits: 3
Maximum Credits: 3
This course, a continuation of MATH 1530/2530, covers the theory of limits, differentiation, and integration of functions of several variables.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2601 - ADVANCED SCIENTIFIC COMPUTING 1

Minimum Credits: 3
Maximum Credits: 3
These courses develop the computational mathematics of evolving areas of current scientific interest.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2602 - ADVANCED SCIENTIFIC COMPUTING 2

Minimum Credits: 3
Maximum Credits: 3
Course develops the computational mathematics of evolving areas of current scientific interest.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2603 - ADVANCED SCIENTIFIC COMPUTING 3

Minimum Credits: 3
Maximum Credits: 3
These courses develop the computational mathematics of evolving areas of current scientific interest.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2604 - ADVANCED SCIENTIFIC COMPUTING 4

Minimum Credits: 3
Maximum Credits: 3
These courses develop the computational mathematics of evolving areas of current scientific interest.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2700 - TOPOLOGY 1

Minimum Credits: 3
Maximum Credits: 3
A first course in topology, some of the topics covered include separation axioms, bases and sub-bases, product and quotient topology, homeomorphisms, compactness, the Baire category theorem, the Lindelof property, connected ness, topological spaces and compactification.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2701 - TOPOLOGY 2

Minimum Credits: 3
Maximum Credits: 3
This course is a continuation of 2700. In this course the basic concepts and results in algebraic topology will be covered, this includes both homotopy and homology theory. In particular the calculation of the fundamental group and homology groups from chain complexes will be covered.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2800 - DIFFERENTIAL GEOMETRY 1

Minimum Credits: 3
Maximum Credits: 3
This course covers introductory topics in differential geometry. Topics include topological manifolds, differential structures, tangent and tensor bundles, vector fields and differential equations, integral manifolds and Riemannian structures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2801 - DIFFERENTIAL GEOMETRY 2

Minimum Credits: 3
Maximum Credits: 3
This course is a continuation of 2800 and its goal is to develop advanced concepts in differential geometry. Some topics which might be covered include Riemann surfaces and the differential geometry of r4 and in particular the relevance of these to quantum super string theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2810 - ALGEBRAIC GEOMETRY

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the basic ideas of algebraic geometry. The approach to the subject may be via either the linear series on a curve approach or the algebraic approach through fields of algebraic functions or the sheaf theoretic approach. Applications may also be included.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2900 - PARTIAL DIFFERENTIAL EQUATIONS 1

Minimum Credits: 3
Maximum Credits: 3
This is an introduction course to this area. Some of the topics to be covered include: linear second order equations, the method of characteristics, Laplace and wave equations, the heat equation and various maximum principles.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2901 - PARTIAL DIFFERENTIAL EQUATIONS 2

Minimum Credits: 3
Maximum Credits: 3
This course is a continuation of 2900. The topics covered in this course include an introduction to parabolic and hyperbolic equations, a priori estimates, free boundary problems, shock waves and Riemann problems.
Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2920 - DYNAMICAL SYSTEMS 1

Minimum Credits: 3
Maximum Credits: 3
This course introduces fundamental concepts for the study of continuous and discrete dynamical systems. The dynamical systems perspective treats solutions to dynamical systems as flows in a phase space. The course will cover linearization and associated concepts of stability, energy-related concepts such as Hamiltonians and Lyapunov functions, Floquet theory for periodic orbits, invariant manifolds, and existence, uniqueness, and dependence of solutions on initial conditions and parameters including an introduction to bifurcations.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2921 - DYNAMICAL SYSTEMS 2

Minimum Credits: 3
Maximum Credits: 3
This course continues the presentation of nonlinear dynamical systems theory. It includes detailed analysis of center manifolds and bifurcations, averaging theory, an introduction to multiple timescale dynamics, and the properties and detection of chaos including Smale horseshoes, Lyapunov exponents, and Melnikov's method.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2940 - STOCHASTIC PROCESSES WITH APPLICATIONS IN BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course covers fundamental theory and methods for analysis and simulation of Markovian stochastic processes. The topics include recurrence, transience, absorption probabilities and mean passage times, and steady states for processes with continuous or discrete state spaces on both continuous and discrete time domains, such as Markov chains, diffusion processes, and basic stochastic differential equations. Applications will be taken primarily from biology but also from chemistry, physics, or mathematical finance.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2950 - METHODS IN APPLIED MATHEMATICS

Minimum Credits: 3
Maximum Credits: 3
This course is a rigorous treatment of various aspects of numerical linear algebra, special features of symmetric operators, optimization with emphasis on properties of convex functions and duality theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 15
This course is independent study by the student under the direction of a faculty member.
Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad SN Basis

MATH 3000 - THESIS PH.D.

Minimum Credits: 1
Maximum Credits: 15
This course is taken by a student who is working on a Ph.D. dissertation under the direction of a student's thesis advisor.
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis

MATH 3020 - CALCULUS OF VARIATIONS

Minimum Credits: 3
Maximum Credits: 3
This course is an introduction to the subject. Topics include: variation formulation, the Euler-LaGrange equations, and applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 3040 - TOPICS IN SCIENTIFIC COMPUTING

Minimum Credits: 3
Maximum Credits: 3
This course seeks to provide a broad introduction to the field of machine learning. The emphasis will be the development of a rigorous mathematical basis for the most commonly used algorithms in the field. Topics to be covered include non-convex optimization, convex optimization, clustering, dimensionality reduction and neural networks. A background in multivariable calculus and linear algebra is recommended. Prior programming experience is not required.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

MATH 3060 - TOPICS IN COMBINATORICS

Minimum Credits: 3
Maximum Credits: 3
This course covers a variety of topics in combinatorics.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 3071 - NUMRC SOLUTN PARTL DIFFT EQUA

Minimum Credits: 3
Maximum Credits: 3
This course covers contemporary methods for solving initial and boundary value problems. Topics include: properly posed problems, characteristics, finite difference and finite element methods and error estimates.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

MATH 3072 - FINITE ELEMENT METHOD

Minimum Credits: 3
Maximum Credits: 3
Topics include a description of the method in one, two and three dimensions, variation and minimum energy principles, implementation and discussion of the necessary data structure and evaluation of the errors. Possibly a special topic such as applications to fluid dynamics will be done.
Academic Career: Graduate
