BIOENG 2340 - INTRODUCTION TO MEDICAL IMAGING AND IMAGE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Introduction to Medical Imaging and Image Analysis presents the physics of image formation as well as methods for tomographic image reconstruction for major medical imaging modalities, including X-ray Computed Tomography (CT) and Magnetic Resonance Imaging (MRI). Also introduced are fundamentals of digital image processing, with particular emphasis on medical applications, including basic techniques to enhance image quality, image de-noising, methods for extracting, classifying, and tracking features of and objects in images, etc. Students will learn how to implement these techniques in MATLAB (The MathWorks Inc., Natick, MA) to solve practical image processing problems. MATLAB exercises will demonstrate to students how filtering operations applied in the image domain or the Fourier domain affect medical images. In addition to these fundamentals, more advanced algorithmic approaches for image segmentation and image as well as point-cloud registration techniques will also be reviewed.

BIOENG 2351 - COMPUTER APPLICATIONS IN BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course is designed to teach you c++ programming in the context of real-world tasks that you will likely encounter in future academic or industrial work. In these applications, project management, working with different compilers and operating systems, and learning to effectively use source code that was written by other developers is no less important than programming theory. In this course we will cover the fundamentals of c++, object oriented design, programming with graphical user interfaces, and a basic 3d graphics. By the end of this class, you will know how to effectively use c++ to solve real-world computing problems.

BIOENG 2370 - COMPUTATIONAL SIMULATION IN MEDICAL DEVICE DESIGN

Minimum Credits: 3

Maximum Credits: 3

Computational simulation is increasingly utilized as a method to assess the performance of medical devices. The course provides students with a hands on learning experience on how to use computational simulation in the modeling and design of medical devices. The course details the important steps in computational simulations from preprocessing to solution to post-processing and data presentation. Commercially available software programs are introduced and used to simulate a variety of physical phenomena (solid, fluid, transport) pertinent to medical device design. Upon completing the course, the student should be able to simulate the solid, fluid, and transport phenomena that are useful in medical device design.

Particular attention will be placed on avoiding common mistakes in the preprocessing and interpretation of computational results. Topics covered: geometry creation; discretization; appropriate assignment of material properties; solver management; error mitigation and debugging; post-processing and data presentation; data interpretation; introduction to design optimization.

Academic Career: Graduate

Grade Component: Grad Letter Grade

BIOENG 2383 - BIOMEDICAL OPTICAL MICROSCOPY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to teach the basic principles and applications of optical microscopy and imaging techniques commonly used in biomedical research. The enormous growth of optical microscopy has become an essential tool to investigate biological processes, diagnose diseases and quantitatively measure the biological system at unprecedented cellular and molecular level. It has become increasingly important for biomedical researchers to learn the proper use of optical microscopy, understand the advantages and limitations of each type of optical microscopy and how to apply them for specific biomedical applications. In this course, we will cover the physical principles involved in basic light, basic and advanced optical microscopy techniques. Strong emphasis will be given to biomedical applications for each type of optical microscopy. At the end of the course, a student will have a thorough understanding of basic principles of optical imaging and optical microscopy, learn how to apply optical microscopy to address biological questions and perform basic quantitative image analysis.

Academic Career: Graduate

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2505 - MULTI MODAL BIOMEDICAL IMAGING TECHNOLOGIES: FUNCTIONAL, MOLECULAR AND HYBRID IMAGING TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

In this course some newly evolving multi-modal imaging techniques and analysis methods in biomedical applications will be introduced. The course will briefly cover the fundamental physics, core signal processing, image reconstruction of a variety of current standalone imaging modalities such as X-Ray, computer tomography (CT), magnetic resonance imaging (MRI), nuclear imaging (PET, SPECT), optical imaging (fluorescence, optical diffuse tomography, bioluminescence), and ultrasound. Subsequently, the concept, fundamental physics, and image analysis of some exemplary multi-modal imaging techniques and systems will be introduced. Their applications in Biomedicine in different scales from organ to cellular and molecular level, and from structural to functional imaging will be discussed. The course will also briefly address the issues related to image-based diagnosis, intervention and therapy.

Academic Career: Graduate
Course Component: Lecture

BIOENG 2515 - CARDIO SYSTEM DYNAMICS & MODELING

Minimum Credits: 3

Maximum Credits: 3

The mechanical behavior of the cardiovascular system will be explored in a quantitative manner. The goal is to understand the behavior of each component in isolation and the interactions among various components. Mathematical modeling will be used with an emphasis on model development, validation, and application. The function of the intact organ will be correlated with underlying structural and cellular processes, both for normal and pathological states. Student projects will contribute to the existing library of cardio vascular models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2520 - MOL CELL BIOLOGY & BIOPHYSC 1

Minimum Credits: 6

Maximum Credits: 6

Topics covered in this course are bio-macromolecules, protein purification and microscopic techniques, genetics (chromatin organization, DNA replication, recombination, transcription, translation and control of gene expression), molecular perturbation, membrane biophysics and bioenergetics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Bioengineering (MBE or PhD)

BIOENG 2525 - APPLIED BIOSTATISTICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide an understanding of basic statistics through application. Descriptive and inferential statistics, encompassing both parametric and non-parametric methods will be taught.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2540 - NEURAL BIOMATERIALS AND TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course is designed to introduce students to an advanced understanding of biomaterials and tissue engineering specialized in neural applications. It will review biomaterials used for neural prosthesis, drug delivery devices, and tissue engineering scaffold. The student will gain a fundamental understanding of the biocompatibility issues relevant to a variety of neural implantable devices and the current strategies to solve these issues. Topics will include basic material science, neural tissue biocompatibility with implant, BBB and CNS drug delivery, tissue engineering and regenerative medicine for PNS, tissue engineering and regenerative medicine for CNS, neural electrode/tissue interface (including both simulating and recording electrodes, both peripheral and cortical neural interface). The student should have some exposure to biomaterials and tissue engineering before taking this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

BIOENG 2580 - BIOMD APPLC SIGNAL PROCESSING

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to provide students with experience in applying signal processing techniques to medical and biological data. The nature of biological signals and noise, including appropriate physiological background information, will be presented. Digital filtering, spectral analysis, and automated interpretation of signals will be discussed, with examples drawn from current problems in clinical medicine and research.

BIOENG 2601 - PRINCIPLES AND PROPERTIES OF COMPLEX ENGINEERED MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Complex engineered materials are a new class of systems comprising a variety of inorganic materials. This course is designed to introduce the principles and various functional properties exhibited by inorganic materials at the Nano, Micro and Meso scales. Since inorganic materials comprising metallic and non-metallic systems are a very complicated class of materials that display myriad properties, this course is outlined to discuss the most important properties. Thus, the course will mainly cover optical, electrical, thermal and electrochemical properties of both crystalline and amorphous inorganic complex engineered materials. In each category, the principles underlining each property will be discussed followed by the material class, behavior and applications. The effect of microstructure on each of the properties will also be discussed. The course objective is to introduce the student to these complex engineered materials family and their properties. In doing so, the student should be able to identify a material for a particular application

Grade Component: Grad Letter Grade

BIOENG 2620 - INTRODUCTION TO TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to tissue engineering. Tissue engineering is defined as the development and manipulation of

laboratory-grown molecules, cells, tissues, or organs to replace and/or support the function of injured body parts. Tissue engineering is highly interdisciplinary and therefore crosses numerous engineering and medical specialties. Upon completing this course, the graduate and undergraduate students should: understand the basic principles behind human cell and tissue biology and cell. Be familiar with the general types of biomaterials used in tissue engineering. Understand techniques utilized to design, fabricate, and functionally assess tissue engineering systems. Apply the combined knowledge of tissue organization and tissue engineering strategies to design a unique, reasonable tissue engineering solution. This five part course covers cell and tissue biology, biomaterials, drug delivery, engineering methods and design, and clinical implementation.

Academic Career: Graduate

BIOENG 2630 - METHODS IN IMAGE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Current research topics in biomedical image analysis will be explored with an emphasis on applying geometry and statistics to image segmentation, registration, and visualization. The goal is for computers to recognize and measure anatomical structures automatically in 2d, 3d, and 4d from prior knowledge and image features. Student projects will use (and contribute to) the national library of medicine visible human toolkit, a new C++/OpenGL Library of proven and experimental methods being developed by a consortium of research institutions including our own.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOENG 2632 - BIOMECHANICS 3: BIODYNAMICS OF MOVEMENT

Minimum Credits: 3

Maximum Credits: 3

Biodynamics, the area of focus in biomechanics 3, is the study of large-scale movements in biologic systems. As such, the course focuses on the analysis of human movement, which is used in clinical and research settings to understand how various pathologies impact movement and how interventions can be implemented to aid those affected by movement disorders. We cover the fundamentals of biomechanics of human movement using mechanical modeling techniques. The major focus is kinematic analyses in three dimensions using matrix techniques. Some fundamentals of kinetics are covered as well, 2D and 3D inverse dynamics. Upon completing the course, the student should be able to describe basic methods of kinematic/kinetic analysis used in multi-link systems and be able to implement the methods in the analysis of human movement. Students should also be able to apply the methods to study common human movements, e.g. gait analyses, eye movement analyses, etc. Finally, students should be able to use the computer programming language, matlab, to perform computations on kinematic data.

Academic Career: Graduate

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BIOENG 2650 - LEARNING & CONTROL OF MOVEMENT

Minimum Credits: 3
Maximum Credits: 3

The course will blend robotics, probability, and neuroscience to better understand the human motor system, particularly motor learning and control of movement. While motor control will be discussed as a feedback control problem, these theories will be compared during the entire course to what we know about the motor system. We will begin by studying muscle activation and forces, muscle sensory organs, spinal control structures, and inertial dynamics of a multi-joint limb. This will give us a sense of the machinery that the nervous system must control in order to generate coordinated movements. Probability foundations will be used as a framework to model how the nervous system updates estimates of limb position and sensory feedback during movements. Finally we will consider how disease can inform us about principles of movement control and motor learning. The course material and associated homework will require the students to use matlab to simulate control of biomechanical systems. This will allow students to appreciate the value of models to generate hypothesis and possible explain biological behaviors.

BIOENG 2675 - FINITE ELASTICITY OF SOFT TISSUES

Minimum Credits: 3
Maximum Credits: 3

This team-taught course is designed as the second course in graduate biomechanics that applies and builds on the concepts of finite elasticity to study the constitutive response of various soft tissues. Course topics will include kinematics of large deformation, concepts of stress, thermodynamic principles, and development of constitutive relationships for hyperelastic materials. Isotropy, transverse isotropy, incompressibility, viscoelasticity as well as isotropic damage will be discussed. Specific application areas will include the mechanics of three general types of primary load-bearing soft tissues: vascular, orthopedic, and reproductive.

BIOENG 3020 - DESIGN AND SYNTHESIS OF BIOMEDICAL MATERIALS

Minimum Credits: 3

Maximum Credits: 3

This advanced biomaterials course targets graduate students already familiar with general concepts in biomaterials and organic chemistry, and want to learn more on how to design and modify or synthesize new biomaterial for specific biomedical applications. The course will be student driven using a guided literature search and question-and-answer format with minimal lecturing. The students are expected to be actively engaged in discussions and presentations. There will be 3-4 design modules, at the end of which a presentation and a paper will be submitted to summarize the rationale of the design and propose a feasible material synthesis route. The grade will be based on performance of these assignments. The class will meet twice a week for a 90 minute session.

BIOETH 2668 - SUSTAINABILITY IN LATIN AMERICA

Minimum Credits: 3

Maximum Credits: 3

Latin America hosts some of the most biologically diverse and productive ecosystems on Earth, yet economic and social development are frequently at odds with efforts to conserve and use these ecosystems sustainably. This upper-level seminar focuses on the issues surrounding environmental sustainability in Latin America from a holistic, interdisciplinary perspective. The course will start with a general introduction to the three legs of sustainability and sustainable development theory, as well as the ecology and evolution of Neotropical biodiversity. We will use published primary literature to explore the particular complexities of Latin American sustainable development, and analyze case studies of moments through history in which environmental issues were either championed or de-emphasized. The course will feature several guest lectures, optional seminars for extra credit, and discussions of current sustainability news. Students will be responsible for a final research project and presentation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2014 - BIOMEDICAL INFORMATICS PROJECT COURSE

Minimum Credits: 3

Maximum Credits: 3

The course consists of three main parts. In the first part of the course the projects are conceived. In the middle part, the projects are defined and designed. In the final part, the projects are carried out, analyzed, and reported. In all three phases, students will first have classroom discussions among themselves and the instructor about their ideas for that phase of the project. Next, they will work outside of the classroom on that project phase and write a report. Finally, they will orally present the main ideas of their report to the class. The instructor will provide written and oral feedback on each stage of the project, as it occurs.

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2016 - FOUNDATIONS OF TRANSLATIONAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

The field of translational bioinformatics emerged because of the recent advances in biotechnology with which several new types of patient and disease specific data are being created for large subpopulations. Computer science methods are being rapidly adapted to process and analyze this data, with the goal of drawing biologically and medically-relevant inferences. By analyzing these different types of data individually or integratively, it is now feasible to attempt deciphering biological root cause of a disease (at least the 'why' of the disease if not 'how'), to identify biomarkers, and to design personalized medicine.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2017 - CLINICAL RESEARCH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the emerging field of clinical research informatics (CRI). It involves informatics solutions in support of scientists who conduct clinical research, as well as those who translate evidence in biological, clinical, and epidemiological studies. CRI endeavors to improve clinical research information systems, recruitment of participants to clinical trials, mining of electronic health records for comparative effectiveness research, scientific collaboration, data sharing, re-analysis of extant data, patient registries, results databases, optimization of research workflows, semantic harmonization, and more.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOINF 2018 - INTRODUCTION TO R PROGRAMMING FOR SCIENTIFIC RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Science is increasingly inter-disciplinary, and programming has become a valuable skill in many investigations. This course is designed to empower you with the ability to solve scientific problems through writing computer programs. Emphasis is placed on using the R language to solve biology problems.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2032 - BIOMEDICAL INFORMATICS JOURNAL CLUB

Minimum Credits: 1
Maximum Credits: 1

This course meets once each week for one hour. The research being presented will be taken from recent journal papers.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

BIOINF 2051 - FOUNDATIONS OF BIOINFORMATICS

Minimum Credits: 3
Maximum Credits: 3

Provides an introduction to selected topics of bioinformatics also known as computational biology. In this course, the difficult computational problems involving different types of biological information are identified using case studies from current literature. Emphasis is on genomic aspects of computational biology with some overview of proteomics and structural aspects. The course is structured as a seminar course intending to draw students into participating in discussions related to both problems and existing solutions.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2070 - FOUNDATIONS OF BIOMEDICAL INFORMATICS 1

Minimum Credits: 3
Maximum Credits: 3

This course serves as an introduction to core methods and topics in biomedical informatics using the context of the Learning Health System (LHS). A LHS combines data and information managements, discovery, and application of discoveries to clinical and population health. Discussion of the challenges associated with the construction of a LHS will be used to contextualize and motivate content to be covered in the course (people, data and knowledge, and evaluation).

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2101 - PROBABILISTIC METHODS

Minimum Credits: 3
Maximum Credits: 3

This seminar provides an introduction to computational approaches for probabilistic modeling and inference. A particular focus is placed on Bayesian networks. Although other probabilistic models also will be studied. Medical applications are emphasized; however, the principles are general and no medical knowledge is needed to take the course. The course does not require knowledge of a computer programming language. Understanding basic probability theory is helpful.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2103 - DESIGN AND ANALYSIS OF BIOMARKER STUDIES

Minimum Credits: 2
Maximum Credits: 2

The objective of this course is to identify, describe, and apply the statistical and epidemiological knowledge, tools, and perspectives necessary for effectively designing, analyzing, and interpreting biomarker studies (which may include diagnostic and medical tests, prognostic markers for prediction of future disease outcomes, and/or predictive markers for treatment response). The course will also focus on writing a funding proposal; students will develop a 3-4 page concept proposal as the class project.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: BIOINF 2118

BIOINF 2110 - CONCP SOFTWR PROJ ENGR HLTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course examines how health care organizations implement both clinical and financial information systems. The course will study the implementation process and how to integrate systems to create the computerized patient record (CPR). Students will have the opportunity to learn about the industry-wide implementation data standards and how to manage them.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BIOINF 2117 - APPLIED CLINICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide an overview of the field of applied medical informatics. Students will learn about the myriad issues that arise when deploying information technology into clinical environments. Practical, real world solutions to the challenges of hit will be addressed by experts involved in the day-to-day operations of these types of systems.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2118 - STATISTICAL FOUNDATIONS OF BIOMEDICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory probability and statistics course intended primarily for biomedical informatics students. The first part of the course covers probability, including basic probability, random variables, univariate and multivariate distributions, transformations, expectation, numerical integration, and approximations. The second part of the course covers statistics, including study design, classical parametric inference, hypothesis testing, Bayesian inference, non-parametric methods, classification, ANNOVA, and regression. We will use r for statistical computing and applications. Examples and applications will focus on biomedical informatics and related discipline.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

BIOINF 2119 - PROBABILISTIC METHODS IN ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students who do not necessarily have a background in computer science and want to learn and apply methods in artificial intelligence to problems in biomedicine. The course will introduce and provide the foundations artificial intelligence methods in search, probabilistic knowledge representation and reasoning, and machine learning with applications to biomedical informatics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOINF 2120 - SYMBOLIC METHODS IN ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students who do not necessarily have a background in computer science and want to learn and apply methods in artificial

intelligence to problems in biomedicine. The course will introduce and provide the foundations of artificial intelligence methods in logical knowledge representation and reasoning, biomedical ontologies and terminologies and information retrieval. Prerequisites for this course include introductory mathematics and programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOINF 2012 and 2015

BIOINF 2121 - HUMAN-COMPUTER INTERACTION AND EVALUATION METHODS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide informatics students with the knowledge necessary to take an applied role in the design, implementation and evaluation of healthcare information systems. In this course, students will apply principles of usability and evaluation theory to informatics projects. Topics include: critical success factors, test plan development and user interface design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2122 - CRITL REFLCTN BIOMD INFORMTCS

Minimum Credits: 3

Maximum Credits: 3

This course will showcase presentations from DBMI researchers and invited speakers from across campus and beyond. Session will be videotaped and presented as weekly one-hour recording. The on-site Q/A session afterwards will be substituted by a facilitated asynchronous online discussion in blackboard. Special emphasis will be put on peer- and self-assessment of the contributions to the online discussion which will promote higher-level thinking among the students.

Academic Career: GRAD

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2123 - TERMINOLOGY AND CODING

Minimum Credits: 3

Maximum Credits: 3

This course will cover standardized terminologies (including ontologies) and classification systems with an emphasis on how they relate to the information infrastructure that supports health care delivery and biomedical research. Consideration will be given to both theoretical and practical issues in terminologies and classification systems as well as demonstration of the application of these methods within biomedical informatics systems. A variety of vocabularies, terminologies, standards, and classification systems will be studied including: SNOMED, MESH, ICD, H17, the foundational model of anatomy and the gene ontology. Later in the course, we will explore the relationship of terminologies, information models, messages, and document and record structures. Selected advanced topics such as semantic interoperability will also be addressed. Online students will engage in authentic learning assignments ranging from the creation of concept maps to the participation in asynchronous panel discussions which will assign students to teams with opposing viewpoints.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOINF 2124 - PRINCIPLES OF GLOBAL HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course explores challenges and opportunities in developing and supporting health information systems in developing-world settings by examining differences, and ways to both integrate and sustain systems in an appropriate way in low-resource settings. The course will review the current "state-of-the-art" in this field by looking at examples of systems currently deployed in the developing world, and explore opportunities for advancing this work through a series of case studies and hands-on exercises based on real-world scenarios.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

BIOINF 2125 - INFORMATICS AND INDUSTRY

Minimum Credits: 1

Maximum Credits: 1

The focus of the class is to provide an opportunity for students to interact with leading industry representatives and to learn techniques/tools that would enable them to market their skills in non-academic environments. We will invite speakers from various local, regional, national, and international industry relationships that we have established.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

BIOINF 2129 - INTERNSHIP IN GLOBAL HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

The internship in global health informatics will be expanded to accommodate 5 students from the US. Students will travel to Malawi to study global health informatics in low-resource settings alongside Malawian health and technology professionals. Students will have an opportunity to propose, design and develop a product or intervention relevant to solving a particular problem the group has identified.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2131 - PRACTICUM IN ADV BIOMEDICAL IT

Minimum Credits: 1

Maximum Credits: 6

This course is designed for people who want a practical experience in working with advanced information technology in the center for biomedical informatics.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2132 - SPECIAL TOPIC SEMINAR IN MEDICAL INFORMATICS

Minimum Credits: 1

Maximum Credits: 3

This course is designed for faculty to offer small groups of students a study course on a topic of mutual interest and concern in the faculty member's area of expertise.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2133 - PRACTICUM IN ADVANCED INFECTIOUS DISEASE AND PUBLIC HEALTH SURVEILLANCE (BIOSURVEILLANCE) TECHNOLOGY

Minimum Credits: 1

Maximum Credits: 6

This course is designed for people who want a practical experience in working with advanced bio surveillance technology in the real time outbreak and disease surveillance (rods) laboratory.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2134 - PUBLICATION AND PRESENTATION IN BIOMEDICAL INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course provides a practical overview of how to write a research manuscript and how to give a scientific talk. It is usually taken after completing the project course (BIOINF 2014). Students taking this course must have a completed research project that can be used to complete the course exercises. Each week, we will target a specific section of the manuscript or scientific talk. Didactic sessions describing common problems and approaches will alternate with student presentation and peer critique. The course also covers the details of the publication process. At the end of the course, a special presentation workshop gives students the opportunity to improve their talks using videotaping and debriefing methods. By the end of the course, students will have completed a research paper and a finalized colloquium presentation.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOINF 2204 - INT HLTH INFORMTCS TEC DENTY

Minimum Credits: 3

Maximum Credits: 3

An introduction to health information technology (HIT) for dentists, dental team members and others involved in dentistry with three objectives: (1) understand how hit can support the activities and processes of clinical dental care; (2) select and evaluate hit applications; and (3) plan, administer and manage hit implementations. Course covers topics such as dental care workflow and analysis; electronic dental records; dental data and their representation; controlled vocabularies and terminologies; human computer interaction; information design; computer-based decision support; strategic planning; requirements analysis; evaluating technology; managing human resources for it; planning and implementing hit; basics of hardware and software; and privacy, confidentiality and security of patient information.

Biological Sciences

BIOSC 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1
Maximum Credits: 15

Students working on their early research requirement may (but are not required to) register for BIOSC 2000. A grade of Incomplete is automatically given for this course until the Comprehensive exam is passed.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2025 - RESEARCH ROTATION 1

Minimum Credits: 1
Maximum Credits: 6

Students in the graduate programs in the department of biological sciences perform research rotations in the first year. These rotations supplement classroom-based educational opportunities and provide settings for students to interact with faculty, who may serve on their dissertation committees or be their advisor, and to meet the members of different labs. Students present their results at the end of each research rotation as a brief talk. Students in the MCDB Program do three rotations, those in the EE Program do 2 or 3. Each rotation is worth a single credit.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

BIOSC 2026 - RESEARCH ROTATION 2

Minimum Credits: 1

BIOSC 2040 - SEMINAR IN MCDB

Minimum Credits: 2

Maximum Credits: 2

Papers to be selected from current periodicals in the biological sciences for presentation. Emphasis will be placed on a critical evaluation of experimental procedures, data, and the interpretation of data. A writing component is also included.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

BIOSC 2050 - STUDENT RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 1

In this course, students present their research to faculty, students and postdocs.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2055 - SCIENCE COMMUNICATION: PREDOCTORAL FELLOWSHIPS & GRANTS

Minimum Credits: 1

Maximum Credits: 1

The goals of this course are to inform students about the tools and background needed to prepare for seminar and poster presentations and submit pre-doctoral fellowships and grants.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2056 - SCIENCE COMMUNICATION: SEMINAR & POSTER PRESENTATIONS

Minimum Credits: 1

Maximum Credits: 1

The goals of this course are to prepare students for oral and written presentation of their work. Topics will include seminar preparation, maintaining linear train of thought, balancing data with context, data presentation as a reinforcement tool, preparing for 15-, 30- and 45-minute talks, preparing for broad and narrow scientific audiences, speaking with the general public, preparation of useful abstracts, assembly of effective posters, effective presentation of posters, tips and tricks for fielding questions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2057 - SCIENCE COMMUNICATION: PAPERS

Minimum Credits: 1

Maximum Credits: 1

This course covers the process of writing scientific papers, including primary data papers, review articles, and general opinion pieces. Topics include strategies for data organization, figure preparation, targeting the introduction for the audience, logic flow in the results, and focusing the discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2058 - ETHICAL PRACTICES IN SCIENTIFIC RESEARCH

Minimum Credits: 1

Maximum Credits: 1

This course familiarizes students with areas of ethical concern in scientific research, including data integrity, intellectual property, plagiarism, collaboration and cooperation, data sharing, treatment of animal and human subjects, and responsibilities to the general public.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOSC 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2090 - ADVANCED DEVELOPMENTAL BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will examine selected topics in developmental biology at an advanced level. Topics may include pattern formation in insects, cell lineage analysis, cell-cell interactions and the specification of cell fates, cell adhesion molecules, genetic approaches to mammalian embryo genesis and the extracellular matrix in development. Emphasis will be placed on the critical reading of papers and classroom discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2100 - CELLULAR STRUCTURE AND MORPHOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will explore biological processes within eukaryotic cells. Topics include: mechanotransduction/biomechanics; cellular interactions; polarity; cytoskeletal dynamics; cell-matrix interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2105 - CELL SIGNALING

Minimum Credits: 2

Maximum Credits: 2

This course will examine the pathways used to transmit information within and between cells. Topics include: receptors with enzymatic activity; RTK and map kinase; protein scaffolds; BMP-, WNT- and SHH-pathways; g-protein coupled receptors; calcium and camp-dependent signaling; excitation and ion channels; mechanisms of cell death.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2110 - MICROBIAL DIVERSITY

Minimum Credits: 2

Maximum Credits: 2

This course will survey important genetic, genomic, physiological, cell biological and developmental processes that distinguish viral, prokaryotic and unicellular eukaryotic organisms. Topics include: bacteriophages, plants and animal viruses; bacterial intracellular pathogens, parasites and symbionts of plants and animals; eukaryotic pathogens.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

BIOSC 2121 - BIOSTATISTICS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2130 - GENETICS OF MODEL ORGANISMS

Minimum Credits: 2

Maximum Credits: 2

This course will compare genetic approaches in a variety of model systems. Topics include: genetics screens and selections; linkage mapping; genetic manipulation in haploid and diploid model systems; epigenetics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2140 - GENOMICS

Minimum Credits: 2

Maximum Credits: 2

Advances in molecular biology have enabled the collection of a great deal of sequence data. Genomic studies seek to understand the organization of, and information embedded within, entire genomes. Students will learn a variety of techniques in structural genomics (finding information within genomes), functional genomics (describing gene function and interaction), comparative genomics (assessing how that information changes) and metagenomics (assessing the gene content of multiorganism communities) directed at using genome sequence data to address questions of interest.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2145 - PROTEIN LIFE HISTORY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the fate of proteins within cells. Topics include: protein synthesis; building blocks of protein structure; domains and protein folding; mechanisms of protein sorting; protein trafficking; directional transport and secretion; exo- and endocytosis; autophagy, ER targeting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2147 - PROTEIN STRUCTURE AND FUNCTION

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the biophysical and biochemical characterization of proteins. Topics include: methods for determining protein structure; protein folding; molecular dynamics and modeling protein movement; linking structure and function; protein-DNA interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2150 - NUCLEIC ACIDS

Minimum Credits: 2

Maximum Credits: 2

BIOSC 2150 focuses on the molecular biology of DNA and RNA, and how biological information is stored, replicated, recombined, and processed. Topics to be discussed include: DNA replication and its regulation; DNA segregation; homologous, illegitimate and site-specific recombination; DNA repair; structural and functional roles of RNA in the activity and regulation of telomerase; small nuclear RNAs and the spliceosome; processing of ribosomal and transfer RNAs; regulation by micro RNAs and long non-coding RNAs. There will be an emphasis on the primary literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2155 - GENE EXPRESSION

Minimum Credits: 2

Maximum Credits: 2

This course will examine the regulation of gene expression from a variety of standpoints. Topics to be discussed include: transcriptional mechanisms and regulation in prokaryotes and eukaryotes; mRNA splicing; RNA processing; RNAi; chromatin.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2200 - TEACHING BIOLOGICAL SCIENCES

Minimum Credits: 1

Maximum Credits: 3

Teaching biology is a complex and multi-faceted challenge. It requires the integration of deep disciplinary knowledge with a functional understanding of learning theory and the development of practical skills for working with students. Teaching biological sciences is designed to help you explore multiple strategies for effective teaching and learning and refine your own understanding of biology through efforts to become a better science communicator. The course has both seminar and project based components. You are encouraged to coordinate your work in this course with existing teaching opportunities but this is not required.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOSC 2320 - POPULATION BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on ecological and evolutionary processes at the population level. We will learn how to represent ecological and evolutionary dynamics using increasingly realistic mathematical models. We will first explore population ecology including models of single populations, meta-populations, and interactions between species. We then shift to population and evolutionary genetics studying how the mechanisms of evolution interact with each other. Finally, we will study the explicit interaction between ecological and evolutionary processes that can occur over short timescales.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2350 - EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to biological evolution. The first half of the course will address the history of evolutionary theory, inheritance and variation, population genetics, natural selection, speciation, and adaptation. The second part will cover evolutionary history, with an emphasis on the fossil record, phylogenetics, and the origin of evolutionary novelties, including molecular characters. Emphasis throughout will be placed on how the history of life is studied in the context of scientific methodology.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2351 - ADVANCED EVOLUTION

Minimum Credits: 2

Maximum Credits: 2

This course explores factors that influence inheritance. Topics include: gene-by-environment interactions; polymorphism and polyphenism; sexual dimorphism; causes and consequences of individual variation; extended phenotypes; nutrition and the phenotype; fitness landscapes; mutation and novelty; trait mapping onto phylogenies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2355 - SPECIES INTERACTIONS

Minimum Credits: 2

Maximum Credits: 2

This course examines the interactions between species in a variety of contexts. Topics include: coevolution, mutualism & parasitism; plant-herbivore coevolution; cospeciation; hybridization and signaling of species identity; predation, predator-avoidance and aposematism; predator-prey interactions; foraging ecology; competition; tri-trophic level interactions; herbivory; context-, condition- and trait-dependent species interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2361 - ADVANCED ECOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course examines the relationship between organisms and their environment. Topics include: colonization strategies; succession; biogeography; climate change; trait-mediated assemblages; spatial models; trophic cascades.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2370 - EVOLUTIONARY GENETICS

Minimum Credits: 2

Maximum Credits: 2

This course will cover a wide variety of traits and model organisms in which genetic and developmental studies of evolution have been performed. Topics and concepts will include phylogenetics, population genetics, the evolution of novelty, host-pathogen interactions, and multicellularity. The course will consist of lectures, journal article discussions, and essays relevant to the lecture topic.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2435 - ENVIRONMENTAL PHYSIOLOGY OF ANIMALS

Minimum Credits: 3

Maximum Credits: 3

This course in ecophysiology is a physiology course taught from an ecological and evolutionary perspective. The organismal, ecological, and evolutionary significance of physiological function will be emphasized along with molecular and cellular mechanisms.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BIOSC 2450 - BIOLOGICAL SCIENCES SEMINAR

Minimum Credits: 2

Maximum Credits: 2

Papers to be selected from current periodicals in the biological sciences for presentation. Emphasis will be placed on a critical evaluation of experimental procedures, data, and the interpretation of data.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biological Sciences (PHD)

BIOSC 2500 - CURRENT TOPICS IN ECOLOGY

Minimum Credits: 1

Maximum Credits: 3

This course will cover population ecology, community ecology, and ecosystem ecology. A strong undergraduate background in ecology will be assumed. Some lectures will be included, but most emphasis will be placed on reading and discussing papers from the primary literature, including papers of both historical and current interests.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

BIOSC 2540 - SEMINAR IN ECOLOGY AND EVOLUTION

Minimum Credits: 2

Maximum Credits: 2

Students will participate in the critical review of the current literature relating to a topic in ecology. Specific topic is to be selected later.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

BIOSC 2545 - THE MATHEMATICS OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course uses examples from across biology to illustrate how simple mathematical models can increase our understanding of biological systems. We will focus on several foundational modeling approaches, including systems of difference equations, matrix models, probability, and statistical data analysis. Students will discover how these approaches are used, their strengths and limitations, and how they could be extended to more complex problems. Students should be prepared to use both spreadsheet programs and scripts, written in a language such as Python or R, to explore these models.

BIOSC 2570 - ENVIRONMENTAL SCIENCE TEACHER'S WORKSHOP

Minimum Credits: 1

Maximum Credits: 3

Teachers spend five days at Pymatuning Laboratory of Ecology exploring the relationship between land use, water quality and aquatic community structure. Lectures, field work, data analysis, interpretation of results. Includes development of modules for classroom use.

Academic Career: Graduate

Course Component: Practicum
Grade Component: Grad SN Basis

BIOSC 2810 - MACROMOLECULAR STRUCTURE AND FUNCTION

Minimum Credits: 3

Maximum Credits: 3

Course is concerned primarily with the structure and functions of proteins and nucleic acids. These are large polymers where structure and function are determined by the sequence of monomeric units. Topics will include the physical and chemical properties of the monomer units (amino acids/nucleotides); the determination of the linear sequence of these units; the size, shape and general properties of the biopolymers in aqueous systems; and the relation between structure and function, particularly in transport (hemoglobin) and in catalysis (enzymes).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2840 - REGULATION OF MEMBRANE TRAFFIC

Minimum Credits: 2

Maximum Credits: 2

Course analyzes membrane/protein traffic along both the biosynthetic and endocytic pathways. Emphasis placed on how this traffic is regulated. Topics include the role of G proteins (both heterotrimeric and small), coat proteins (coatamer 1 and 2 and adaptors), signal transduction cascades (pkc, pka, ip3, etc), and snare complexes in protein trafficking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOSC 2940 - MOLECULAR BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Course will examine the molecular basis of life processes, with a primary emphasis on genes (what they are, what they do, how they determine the properties of an organism). Topics covered will include replication of DNA, transcription of DNA into mRNA, and translation of RNA into protein. Much of the course will be concerned with how these processes are regulated in response to changes in the environment, and how this regulation relates to the observed properties and behavior of the organism.

Academic Career: Graduate

BIOSC 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1

Maximum Credits: 1

This seminar series is designed for Ph.D. students and post-doctorate fellows interested in pursuing an academic career and wish to gain didactic knowledge and skills related to teaching in a science, technology, engineering and mathematics (stem) classroom. Experienced faculty provide topics and discussion based seminars.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

BIOSC 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

Designed for graduate students and postdocs preparing for academic careers in the stem disciplines, this course provides an introduction to the scholarship of teaching and learning (SOLT). This is the second course in a series; however, the former course (3001) is not a required prerequisite. The course will utilize material presented in a massive open online course (MOOC) available through coursera.org and sponsored by the center for the integration of research, teaching and learning (CIRTL). Participants will learn about effective teaching strategies and the research that supports them in addition to learning how to collect, analyze, and act upon their own evidence of student teaching. Topics include but are not limited to: 1. Learning through diversity, 2. Cooperative learning/peer instruction, 3. Inquiry-based labs, 4. Problem-based learning, 5. Flipped classroom pedagogy. Further, participants will learn the process for developing a teaching as research plan as well as the role of human subjects consent for classroom based research.

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2021 - COMPREHENSIVE ANALYSIS OF DISEASE 2

Minimum Credits: 2

Maximum Credits: 2

This course is designed to give the students the opportunity to integrate all the knowledge accumulated during the program in a comprehensive study of disease states. Small groups of students will work collaboratively to develop an in-depth analysis of a specific disease, from the diagnosis to the pathogenesis, the molecular and cellular basis and treatment options currently available. Students will also identify and analyze the gaps in knowledge and critical needs to be filled. Each group of students will work in a web-based platform to develop an knowledge-based teaching/research study. Class activities will include presentations by each group of students and critical discussions of the current topics.

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2061 - FOUNDATIONS OF SUCCESSFUL BIOMEDICAL CAREER PLANNING AND DEVELOPMENT II

Minimum Credits: 1

Maximum Credits: 1

The course provides foundational training in career planning and professional development. Key skills that students build are: Increasing your capacity for self-directed career development; Fostering life-long career management habits; Maximizing your scholarly training success; Shaping positive career outcomes. Students will engage in experiential learning, small-group discussions, and peer mentoring. These different approaches enable individually relevant and self-constructed understandings of career development, consistent with expectations of independence in scholarly activities. Areas for discussion include: self-assessments, exploration of different career options, how to set goals, career adaptability, and other topics identified by students. A final self-authoring paper will be required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2062 - PROFESSIONALISM AND NON-COGNITIVE DEVELOPMENT 1

Minimum Credits: 1

Maximum Credits: 1

The course provides foundational training in professionalism and non-cognitive development: students will engage in experiential learning, small-group discussions, peer mentoring, and journaling. Students will explore a wide range of topics such as burnout prevention, health disparities, and narrative interviewing. Non-cognitive skills will also be developed such as emotional intelligence through journaling. This course is required for the "BMP-Scope" experiential program.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Grade Component: Grad Letter Grade

MSBMS 2074 - EXPERIENTIAL LEARNING

Minimum Credits: 1

Maximum Credits: 10

The bmp offers experiential learning activities in the areas of community service, patient volunteering, laboratory research and clinical shadowing. For this course, the bmp student and instructor plan onsite experiential learning activities designed to provide goal oriented outcomes for the student. Students are expected to take initiative to find suitable matches and schedule several experiential sessions. Available opportunities are posted on the bmp website and matches are made each term to optimize the experiential benefit for all bmp students. Students are responsible for documenting all experiential dates and hours, along with what was learned in each activity. Students are also responsible for ensuring all activities are approved by the instructor. Students will also provide a five page maximum reflect on the experiences at the end of the term and a laboratory report for any research conducted, both of which are graded. Students are also required to ensure they complete the appropriate onsite requirements for the number of credits they are registered for.

Academic Career: Graduate

MSBMS 2075 - INDEPENDENT STUDY TOPIC EXPLORATION

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad Letter Grade

MSBMS 2080 - CELL BIOLOGY PATHWAYS IN TREATMENT OF DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course will explore how basic cell biology and genetic investigations have revealed the theoretical underpinnings of, and revolutionized approaches to the understanding of, the basis of selected diseases and uncover tractable approaches to treatments or cures. A set of major cell pathways will be used to illustrate how new drug targets can be identified and can lead to dramatic advances in medical treatments. The course blends traditional lectures with self-directed student activities to prepare the students for interactive lecture discussions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Biomedical Sciences (BIOSCI-MS)

MSBMS 2090 - CELL SIGNALING AND PHARMACOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course examines the principles of drug action. The course covers the basic principles of pharmacodynamics and pharmacokinetics. Particular emphasis is placed on the concept that the rational use of drugs is based on the understanding of the interactions, signaling mechanisms, and functional outcomes at the modular and cellular level.

Academic Career: Graduate

Biostatistics

BIOST 2000 - TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course will provide doctoral students with an opportunity to obtain teaching experience. This course is intended for doctoral students during their dissertation stage. Teaching experience will enhance the professional growth of students. Students will further develop oral and written communication skills and an art for explaining material, which is an integral part of a biostatistician's career.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIOST 2011 - PRINCIPLES OF STATISTICAL REASONING

Minimum Credits: 3

Maximum Credits: 3

Acquaints students with the concepts of statistical reasoning as applied to the study of public health problems. Students learn the general principles of statistical analysis and acquire the ability to utilize a statistical software package (Minitab) as a tool to facilitate the processing, editing, storing, displaying, analysis and interpretation of health research related data.

Academic Career: Graduate

Course Attributes: Global Studies

BIOST 2014 - INTRODUCTION TO BIOSTATISTICS FOR BIMEDICAL SCIENTIST

Minimum Credits: 3

Maximum Credits: 3

Introduction to statistical theory and data analysis for bench scientists, with emphasis on the use of the R software package applied to laboratory and clinical data. Introductory statistical concepts are integrated with data preparation and analysis practice. Topics include: data management; graphics; probability concepts; probability distributions; one- and two-sample statistical tests; linear and generalized linear models; analysis of survival data; assessment of model quality.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 2016 - SAMPLING DESIGN AND ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This is an applied statistical methods course designed to provide students with a working knowledge of introductory and intermediate-level sample designs and associated methods of statistical analysis along with a basic understanding of the theoretical underpinnings. Emphasis is placed on sampling human populations in large communities. Students will also learn statistical software used in survey data analysis, including sample selection and survey procedures in the STATA software package. Lecture topics include: simple probability samples, stratified sampling, ratio and regression estimation, cluster sampling, sampling with unequal probabilities, variance estimation and weighting in complex surveys, two-phase sampling, estimating population size and estimation of rare populations and small areas. The course will consist of one weekly 2-hour lecture and one class devoted to student presentations related to a term project assigned at midterm.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2011 or 2039 or 2041; PROG: Graduate Sch of Public Health (PPBHL)

BIOST 2021 - SPECIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

Qualified students may undertake advanced work or research with the approval and under the guidance of a member of the staff.

Academic Career: Graduate

Grade Component: Grad SN Basis

BIOST 2025 - BIOSTATISTICS SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Biometry seminars introduce the students to current health problems involving the application and development of biostatistics methods and theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

BIOST 2039 - BIOSTATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

This course is an introductory biostatistics methods course for biostatistics graduate students, other quantitative public health students, and health career professionals who will make use of statistical methods in research projects, interpreting literature and possibly develop new biostatistical methods in the future. This class is intended for students needing a more research-oriented approach than that provided in BIOST 2011 and an approach with a greater emphasis on mathematical foundation than provided in BIOST 2041. Students in BIOST 2039 are expected to have a working knowledge of calculus, including multivariable differentiation and integration. Topics covered in this course include exploratory and descriptive analyses, probability, estimation and hypothesis testing. One and two sample problems will be considered for both continuous and discrete variables. ANOVA, regression, correlation and nonparametric methods will be discussed. R will be used extensively for data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: BIOST-MS, PHD

BIOST 2040 - ELEMENTS OF STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Covers generating functions and convolutions of random variables, the poison and compound poison distributions, branching processes, random walk, and the gambler's ruin problem, Markov chains, and simple birth and death processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2043

BIOST 2041 - INTRODUCTION TO STATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Discusses techniques for the application of statistical theory to actual data. Topics include probability theory, estimation of parameters, and tests of hypothesis for both the discrete and continuous case.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BIOST 2042 - INTRODUCTION TO STATISTICAL METHODS 2

Minimum Credits: 3

Maximum Credits: 3

More techniques are given for the application of statistics to actual data with emphasis on distribution-free and multivariate methods. Interpretation of results and concepts will be stressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2041

BIOST 2043 - INTRODUCTION TO STATISTICAL THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Covers joint, marginal, and conditional probabilities; distributions of random variables and functions of random variables; expectations of random variables and moment generating functions; law of large numbers; central limit theorem.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BIOST 2044 - INTRODUCTION TO STATISTICAL THEORY 2

Minimum Credits: 3

Maximum Credits: 3

Covers elements of statistical inference; sampling distributions of estimators; Rao-Cramer's Inequality; problems of testing statistical hypotheses; Neyman-Pearson lemma; likelihood ratio tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2043

BIOST 2046 - ANALYSIS OF COHORT STUDIES

Minimum Credits: 3

Maximum Credits: 3

This introductory applied course in statistical modeling focuses on maximum likelihood and related regression methods for the analysis of cohort data. Topics include generalized linear models, generalized estimating equations, and generalized linear mixed models. The course emphasizes logistic and poisson regression, and discrete survival models with time-dependent covariates. Students analyze several cohort data sets, assess the adequacy of their models, and interpret their results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2042 and 2049

BIOST 2049 - APPLIED REGRESSION ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course in statistical modelling intended for Masters or PhD students in biostatistics or other disciplines who have already had basic training in statistical methods. The course focuses on all types of regression methods with the following learning objectives: To fit and interpret linear regression models with multiple continuous and/or categorical predictors. To fit and interpret generalized linear models (GLMs) with emphasis on logistic and Poisson regression. To justify and apply standard modelling procedures using data, including model interpretation and assessment of model adequacy. To analyze data sets taken from the fields of medicine and public health. To develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 or BIOST 2041

BIOST 2050 - LONGITUDINAL AND CLUSTERED DATA ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This introductory course in statistical modeling is intended for MS students in biostatistics and PhD students in biostatistics or epidemiology in their second year of graduate work. This course may be thought of as the third methods course in Biostatistics following BIOST 2041/2039 and BIOST 2049. The course focuses on regression methods for the analysis of longitudinal or more generally clustered data with emphasis on generalized estimating equation. The course objectives are to introduce generalized estimating equations (GEEs), mixed models, and generalized linear mixed models from an applied perspective to analyze longitudinal and clustered data, to understand the justification and applicability of standard procedures to standard problems, including model interpretation and assessment of model adequacy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049; PROG: Graduate Sch of Public Health

BIOST 2051 - STATISTICAL ESTIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

Fisher's information; Rao-Cramer Inequality and Sufficient Statistics; Bhattacharyya Bounds; Rao-Blackwell Theorem; Methods of Moments; the Method of Maximum Likelihood; Newton-Raphson Method and Rao's Scoring for Parameters; estimation of several parameters; order statistics and life testing problems; estimation with censored data and survival analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 and 2044; PLAN: Biostatistics (PHD)

BIOST 2052 - MULTIVARIATE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Multivariate normal distribution, estimation of the mean vector and covariance matrix, distributions and uses of simple, partial and multiple correlation coefficients, generalized T2 statistic, distribution of the sample generalized variance, Multivariate Analysis of Variance and the Multivariate Behrens-Fisher problem. Multivariate methods applied to repeated measures analysis, factor analysis, and discriminant analysis. Beginning of the course emphasizes theory; later, applications and computational methods emphasized. Lectures are of current and classical literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044

BIOST 2054 - SURVIVAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Introduces the student to the design considerations and statistical analysis of clinical trials. Covers the theoretical aspects of various models in reliability theory and the proportional hazards model, as well as the more applied problems of interpreting specific data sets and designing large-scale trials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOST 2039 and 2044

BIOST 2055 - INTRODUCTORY HIGH-THROUGHPUT GENOMIC DATA ANALYSIS 1: DATA MINING AND APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

This course is a graduate level introduction and overview of modern high-throughput genomic data analysis. It is designed for graduate students in biostatistics and human genetics who are interested in the technology and elementary data mining of high-throughput genomic data (including but not limited to classical expression arrays, various array-based applications, next-generation sequencing and proteomics). The course is also helpful for biology students with basic quantitative training (e.g. two elementary statistics courses and R programming) who have interests in understanding the intuition and logic underlying the data analysis methods. R is the major language used in the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039; PLAN: Biostatistics (MS or PHD)

BIOST 2056 - INTRODUCTION TO DIAGNOSTIC TEST EVALUATION AND ROC ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

The course offers an introduction to concepts and approaches for statistical assessment of diagnostic systems and ROC analysis. The covered material includes different measures of diagnostic accuracy, aspects of the design of accuracy studies, statistical estimation and hypothesis testing, sample size calculation and some advanced topics. General prerequisites include knowledge of basic statistical concepts and approaches related to

estimation and hypothesis testing; some knowledge of regression modeling and SAS is desirable.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2044; PLAN: Biostatistics (PHD,MS)

BIOST 2058 - SCIENTIFIC COMMUNICATION SKILLS

Minimum Credits: 2

Maximum Credits: 2

This course is meant to help students develop oral, visual and written scientific communication skills and to familiarize students with research resources. Students may use their own research topic, including work on a thesis or dissertation, or help will be provided in selecting one.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BIOST 2059 - CONSTRAINED STATISTICAL INFERENCE WITH APPLICATIONS

Minimum Credits: 2

Maximum Credits: 2

This is an applied biostatistics course for biostatistics graduate students, other quantitative public health students, and health career professionals who will make use of statistical methods in research projects and possibly develop new biostatistical methods in the future. While this course is intended to be an application oriented course motivated by real scientific problems, it will rely on some statistical theory. Students are expected to have basic understanding of statistical theory at the level of BIOST 2044 (Introduction to Statistical Theory 2) and have applied analysis skills at the level of BIOST 2049 (Applied Regression Analysis). Additionally, students are expected to have working knowledge of the programming language R. Topics covered in this course include: (a) Brief review of some important concepts from BIOST 2043, BIOST 2044 and BIOST 2049, such as parametric and nonparametric estimation and testing of hypotheses, linear fixed and mixed effects models, best linear unbiased predictor (BLUP) and generalized linear models. (b) Some real world motivating examples of various types of constraints on parameter spaces. Reasons for constrained inference. (c) Estimation of parameters and testing of hypotheses under inequality constraints in a variety of settings - challenges and solutions. Various estimation and testing procedures such as Pool Adjacent Violators Algorithm (PAVA), Restricted Maximum Likelihood Estimation (RMLE), Isotonic Regression, Likelihood Ratio Test (LRT), Williams' test, Dunnett's test, Jonckheere-Terpstra test. Substantial reduction in samples sizes and gain in power when using constrained inference based methods in comparison to standard methods. (e) Resampling methods for constrained inference, why they fail for confidence intervals but are suitable for some testing problems. (f) Nonparametric problems - various notions of orderings of random variables, univariate and multivariate analysis. (g) Applications in clinical trials, toxicology, high dimensional gene expression studies, microbiome, cell-cycle and circadian clock.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044 and BIOST 2049

BIOST 2061 - LIKELIHOOD THEORY AND APPLICATION

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce the student to modern likelihood theory and its applications. The course will cover maximum likelihood theory, profile likelihood theory, pseudo likelihood theory and generalized estimating equations. The course is taught at a doctoral level and much of the theory is illustrated through applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2044

BIOST 2062 - CLINICAL TRIALS: METHODS AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

The course lectures integrate web-based material covering fundamental concepts in the design and conduct of modern clinical trials. Topics include: experimental designs, interim monitoring, analysis methods for comparative clinical trials, ethical, organizational, and practical considerations of design, case studies, and international guidelines for publication of trials in major journals, and meta-analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BIOST 2039 and 2093; PLAN: Biostatistics (MS,MPH, or PHD)

BIOST 2063 - BAYESIAN DATA SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This is a course in Bayesian methods for applied statistics and data science whose broad goal is to provide students with the skills needed to be able to select, conduct, report and interpret appropriate Bayesian analyses for a wide variety of applied problems. General topics covered include Bayesian concepts of statistical inference, Markov chain Monte Carlo and other computational methods, linear, hierarchical and generalized linear models, model selection and diagnostics, and Bayesian learning. The course explores the use of the popular and free software packages R, JAGS and Stan for conducting Bayesian analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: (BIOST 2039 or 2041) and BIOST 2049

BIOST 2065 - ANALYSIS OF INCOMPLETE DATA

Minimum Credits: 3

Maximum Credits: 3

This course will present missing-data problems in statistics and discuss naive methods such as complete-case analysis, available-case analysis and imputation; standard likelihood-based methods, theory and application of multiple imputation, data augmentation, Gibbs sampler, and some recently developed methodologies in the missing-data literature and related fields.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049 and 2051 and 2061

BIOST 2066 - APPLIED SURVIVAL ANALYSIS: METHODS AND PRACTICE

Minimum Credits: 2

Maximum Credits: 2

This course covers fundamental concepts and methods important for analysis of datasets where the outcome is the time to an event of interest, such as death, disease occurrence or disease progression. Topics include: basic methods for summarizing and presenting time-to-event data in tabular form and graphically as life tables, non-parametric statistical techniques for testing hypotheses comparing life tables for two or more groups; approaches to fitting the semi-parametric Cox proportional hazard model and other commonly used parametric models that incorporate study co-variables, methods for assessing goodness-of-fit of the models, and sample size considerations. In addition to didactic lectures, there are group projects that involve analysis of datasets and presentation of analytic reports in the classroom.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2049; PLAN: Biostatistics (PHD,MS)

BIOST 2077 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Introduces the student to specialized topics in biostatistics that are not covered in the formal curriculum.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Biostatistics(PHD, MPH, MS)

BIOST 2078 - STATISTICAL LEARNING IN HIGH-DIMENSIONAL DATA WITH OMICS APPLICATIONS

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is a graduate level course to introduce theories and algorithms for statistical analysis of high-throughput genomic data. Emphases will be given to high-dimensional data analysis and theories behind the commonly used methods. This course is designed for graduate students who already have sufficient statistical background, have basic knowledge of various high-throughput genomic experiments (e.g. already finished BIOST 2055 or MSCBIO 2070) and wish to learn advanced statistical theories for bioinformatics and genomics research. Students are expected to have programming experiences in R (e.g. BIOST 2094) or in other low-level languages such as C, C++, Java and Fortran. The course will meet four hours per week for half a semester.

Academic Career: Graduate

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2043; PLAN: Biostatistics (MS, PHD)

BIOST 2079 - INTRODUCTORY STATISTICAL LEARNING FOR HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is a graduate level course to introduce basic concept and methods for statistical learning with emphasis on modern health science applications. The syllabus includes linear regression with regularization, supervised machine learning, unsupervised clustering, dimension reduction and other special topics (e.g. Bayesian network and hidden Markov model). Target audience will be second year Biostatistics master students or early PhD students with interests in statistical learning techniques for health science data. Through homework problem sets, computer labs and a final project, students train with hands-on materials to implement methods and interpret results in real applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2043 and 2049; PLAN: Biostatistics(MS or PHD); Students are expected to have programming experiences in R or in some low-level languages such as C, C++, Java and Fortran.

BIOST 2081 - MATHEMATICAL METHODS FOR STATISTICS

Minimum Credits: 3

Maximum Credits: 3

Differentiation and integration of functions of several variables. Infinite sequences and series. Fundamentals of matrix algebra. Class examples and homework problems will emphasize applications to probability and statistics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Biostatistics (PHD, MS, MPH)

BIOST 2083 - LINEAR MODELS

Minimum Credits: 3

Maximum Credits: 3

Acquaints students with linear model techniques for analyzing both balanced and unbalanced data. The topics covered include generalized inverses, orthogonal contrasts with unbalanced data, and analysis of covariance. Analysis with computer packaged programs is discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BIOST 2044

BIOST 2086 - APPLIED MIXED MODELS ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Mixed model analysis provides a new approach to modeling which allows one to relax the usual independence assumptions and take into account complicated data structures. This course will consider all types of mixed models into a general framework and consider the practical implications of their use. Topics will include; normal mixed models, generalized mixed models, and mixed models for categorical data, repeated measures data analysis and cross-over trials with mixed models. Software for fitting mixed models will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2083

BIOST 2087 - BIOSTATISTICS CONSULTING PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

Provides advanced students (second-year masters and doctoral) with exposure and practical experience in consulting on the bio statistical aspects of research problems arising in the biomedical or other allied fields. Students initially under the supervision of a faculty member participate in discussions with investigators leading to the design and/or analysis of a current research problem.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

BIOST 2093 - SAS FOR DATA MANAGEMENT AND ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to provide students with an understanding of the SAS program environment as well as the skills needed to use SAS as a tool to conduct research, prepare data, and perform analyses. Upon completion of the course the student will have an understanding of SAS at the intermediate level. The course covers the utility of SAS as a data management, data manipulation, and data analysis tool. The focus will not be statistical analysis, but rather how to use SAS as a programming tool. Emphasis will be placed on program code writing. Concepts will be illustrated with numerous examples from basic descriptive analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PREQ: BIOST 2039; PROG: Graduate Sch of Public Health

BIOST 2094 - ADVANCED R COMPUTING

Minimum Credits: 2

Maximum Credits: 2

An advanced statistical computing course using R designed for graduate level biostatistics students with programming experience in R or other low-level languages such as C, C++, Java, and/or Fortran. Experience in SAS and/or Stata does not qualify. The course will cover topics, including but not limited to, R in modeling and optimization, advanced R graphics, functional programming, object-oriented field guide, efficient computing in R, GUI for R-shiny, embedding C/C++, R package/documentation, Julia, Github etc. The course will also include real life application for students to practice the programming techniques learned in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2039 and 2043; PLAN: Biostatistics

BIOST 2096 - NUMERICAL METHODS BIOSTATISTICS

Minimum Credits: 3

Maximum Credits: 3

The purpose is to familiarize students with a broader range of numerical methods which are useful in bio statistical research. Selected computational techniques used in statistical research will be covered. Background will be provided to facilitate understanding of a few numerical algorithms widely

used in statistics. The following are covered: recurrence relations, power series and asymptotic expansions, generating pseudo-random deviates, basic simultaneously methodology, solutions of nonlinear equations, newton's method, vector and matrix norms, linear regression and matrix inversion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2044 and 2049

BIOST 2098 - AGENT BASED MODELING

Minimum Credits: 3

Maximum Credits: 3

An introduction to agent-based models (ABMS) as a technique for understanding how the dynamics of biological, social and other complex systems arise from the characteristics and behaviors of the agents making up these systems. Examples will emphasize the applications of abms in public health, including infectious disease transmission and control measures; health behaviors such as vaccine refusal, drug and tobacco use, exercise and obesity; community violence and health disparities, but students will have the flexibility to develop projects based on their own areas of interest.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLANS: Biostatistics (MS; MPH; PHD)

BIOST 2099 - CAPSTONE

Minimum Credits: 2

Maximum Credits: 2

The capstone course is a heavily directed and mentored statistical data analysis project course leading to an ETD formatted thesis and formal oral presentation of the work. This course will be an intense data analysis and writing course with the goal of producing an ETD formatted thesis document containing rigorous analytic methods, appropriately summarized analysis results with logical, statistically and scientifically valid conclusions. The Capstone course will ensure that the written thesis milestone demonstrates the student's competency in biostatistics (and area of concentration if applicable) as well as oral and written communication skills in general.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Biostatistics (MS); Required to have passed MS comprehensive exam.

BIOST 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

BIOST 3023 - GEOGRAPHIC INFORMATION SYSTEM AND SPATIAL DATA ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Covers the use of Gis and Spatial Data Analysis Techniques in Empirical Public Health Research. Basic descriptive and analytical functions of Gis are introduced along with spatial and geographic concepts. The interrelationship between Gis and spatial data analysis will be demonstrated through the use of specialized Gis and spatial data analysis software with a particular emphasis on the study of spatial patterns and spatial autocorrelation in public health research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

Business Accounting

BACC 2060 - INDEPENDENT STUDY IN ACCOUNTING

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2100 - MACC INTERNSHIP

Minimum Credits: 1

Maximum Credits: 3

To enroll for an IFC through the MACC program, you must be a MACC student and work for a minimum of 10 hours a week for 10 weeks during the semester you intend to take the internship for credit. You may receive up to six internship credits, but only three per semester, and no more than three credits for an experience. The grade for these credits will be pass/fail (satisfactory/unsatisfactory). The deadline to apply for an internship for credit is the date the add/drop period ends for that given semester. All internship offers must be approved by the MACC office prior to enrollment for that experience. Performance appraisals must be submitted to your faculty advisor and to career services and your employer must complete a midpoint and final performance appraisal.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

BACC 2251 - FORENSIC ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

"Fraud is extremely costly to our society, and the costs seem to be growing. The AICPA recently called forensic accounting one of the seven hot, new, "sizzling" career areas in accounting. It is estimated that there will be a shortage of between 25,000 and 50,000 professionals working in this area in the next few years in the U.S., So there are many opportunities for students knowledgeable in fraud to work in various federal agencies (e.g. FBI), major corporations, and professional service firms. The objectives of the forensics course are to familiarize students with several forms of fraud and the methods that fraud examiners use to prevent and detect it. Students will develop expertise in detecting financial statement fraud from the external auditor perspective, and learn how to use technology to detect fraud. They will acquire a basic understanding of how interviews are conducted in order to detect deception. The class will also provide a historical view of financial statement fraud. The tools used in the class will include interviewing, document examination, and public records searches, which will be helpful to students wanting to become consultants, auditors, tax professionals, managers, etc. The class, of course, includes an ethics component. It will help students to understand the common ethical dilemmas that they might encounter in the business world, and will help prepare them to resist pressure to commit fraud."

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2252 - CORPORATE TAX ACCOUNTING AND PLANNING

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to help students understand how important features of the internal revenue code influence decisions regarding how to organize and structure business operations and select the most appropriate form of doing business. The course begins with a comparison of the issues surrounding the choice of taxable business entity, comparing the regular corporation (c corporation), the small business corporation (s corporation), the partnership, and the sole proprietorship. After this, the course focuses primarily on the c corporation and the s corporation and the underlying principles that determine their respective tax bases and resulting tax obligations. Tax planning is an integral part of the course. Income shifting, tax deductions, tax credits, and income exclusions are discussed in detail. The course uses case studies (including some reflecting an international tax perspective) and tax return preparation to help students to apply the theory and detail of the tax code. Course materials are updated as tax laws change.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

BACC 2253 - INTERNATIONAL ACCOUNTING

Minimum Credits: 2

Maximum Credits: 2

This course will explore the rapid movement toward a set of internationally consistent financial reporting methods in the global marketplace. The financial accounting standards board (FSAB) and the international accounting standards board (IASB) have formally agreed to harmonize reporting standards over time. In addition, the securities and exchange commission (sec) is currently considering a proposed time-line for the adoption of international financial reporting standards (IFRS) in the US. The course will examine the substantive differences between us generally accepted accounting principles (us GAAP) and IFRS, which have already been adopted by many other countries. The course will also provide a framework for understanding the theory and application of IFRS versus us GAAP and explore some of the ethical issues inherent in international business reporting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2254 - ADVANCED FINANCIAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course covers topics that are of particular interest to financial report preparers and auditors. Special emphasis is placed on accounting for business combinations and consolidated financial reporting. Other topics include international accounting, accounting for partnerships, and accounting by fiduciaries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Accounting (MS)

BACC 2255 - INTERNAL CONTROLS AND ACCOUNTING DISCLOSURES FOR DERIVATIVES

Minimum Credits: 1.5

Maximum Credits: 1.5

This accounting elective will focus on derivative instruments and their impact on accounting and internal controls. The course will cover various topics tied to derivative instruments including the benefits, hedging, the risks, cash flow implications, internal controls, accounting & reporting requirements, taxation, and regulations. The course will analyze various incidents where internal controls were compromised and the implications. Upon successful completion of this course, the student will have the knowledge and background required to account for, audit, and monitor the use of derivative products. This course will also help those students who plan on sitting for the CPA examination.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BUSACC 1238

BACC 2256 - STRATEGIC COST MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course deals with strategic implications of alternative methods of product cost measurement. The discussions will primarily be case-based and will include cost measurement issues in both conventional and modern manufacturing environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Accounting (MS)

BACC 2258 - STRATEGIC COST MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

The quality, timeliness and credibility of the cost information used in corporate decision-making can have a significant impact on value creation. This is because cost information is important not only in strategy formulation and in the development and implementation of action plans that link strategies to value creation, but also because such data serve as measures of financial performance for products, processes, organizational sub-units and managers. In particular, product and service cost estimates have a major influence on corporate strategic decisions such as pricing, resource allocation, product development, supply chain design and customer focused management. In addition, product costs are informative signals of operational efficiency. Therefore, they constitute financial measures of the success of management actions such as continuous improvement and business process reengineering. Over-aggregate or obsolete cost systems can have a significant adverse impact on cost reduction in particular and overall corporate strategy and competitiveness in general. The objective of this course is to develop an integrated approach to analyzing these issues. In particular, we will study (a) how product cost measurement affects strategy and resource allocation decisions; (b) how to be sophisticated users of cost feedback and how to understand the strategic distortions that are induced by flaws in cost system design; (c) the strategic role of value-driver information and the relationship between process improvement and cost reduction; (d) the use of budgetary control systems and financial measures in performance evaluation and management and (e) incentive conflicts in organizations and their mitigation through appropriate mechanisms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BACC 2401 - FINANCIAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view. This includes what is (and what is not) included in the reports, how and when events affect the statements, and what can be inferred from these reports about the firm's past activities, present position and the future prospects.

Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2402 - FINANCIAL ACCOUNTING IN HEALTHCARE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2466 - RISK MANAGEMENT AND COMPLIANCE ISSUES FACING INTERNATIONAL ORGANIZATIONS

Minimum Credits: 2

Maximum Credits: 2

This course will be valuable to MBA and mac students interested in working for global businesses, regardless of their desired career paths. As business organizations continue to seek growth in markets outside the United States and Western Europe, they will face increasingly complex and difficult challenges, including compliance with U.S. And foreign criminal and civil laws in places that are corrupt. Compliance with the U.S. Foreign corrupt practices act, which forbids businesses from providing certain benefits to government officials, is essential for global organizations, as penalties are severe. And to succeed in their careers, auditors will need to understand that businesses in certain geographic areas maintain multiple sets of books and hide bribery and tax fraud schemes. Strategic planners and supply-chain professionals will face cross-border risks, including demands by government customs and tax inspectors for bribe payments. Energy executives will confront violence, corruption and supply-chain problems in many oil and gas-producing areas. Sales professionals will confront demands for kickbacks. The course will cover these issues, and will provide students with the knowledge and compliance tools necessary to advance their professional careers in a global economy.

Academic Career: Graduate
Course Component: Lecture

Course Requirements: Katz Grad School of Business students only.

BACC 2510 - INTERMEDIATE FINANCIAL REPORTING AND ANALYSIS 1

Minimum Credits: 2

Maximum Credits: 2

This financial accounting elective is designed for accounting and finance majors who plan to be financial analysts or heavy users of financial reports. Topics covered include accounting procedures for recording and presenting financial information, asset valuations, revenue recognition and financial statement footnote disclosures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Joseph M. Katz Grad Sch Bus

BACC 2511 - INTERMEDIATE FINANCIAL REPORTING AND ANALYSIS 2

Minimum Credits: 2

Maximum Credits: 2

A continuation of BACC 2510 and includes topics such as accounting and reporting for contingencies, liabilities, leases, pensions and earnings per share.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2510; PROG: Joseph M. Katz Grad Sch Bus

BACC 2523 - ACCOUNTING DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Accounting data analytics exposes macc students to the role of big data in accounting and the information technology tools and techniques used by accountants and auditors to produce more timely and accurate reports. Topics include advanced excel, data modeling, statistical sampling and cluster analysis, business intelligence, and xbrl generation and analysis. The course will cover data analytics covering four major themes: financial reporting, performance evaluation, audit analytics, and tax. Each theme will include hands-on instruction using commercial and open source software and requires students to complete a related data analysis project. Accounting data analytics is different from other database and information systems courses in that it will show students how to use specific tools to complete projects and develop an analytical mindset with a specific focus on accounting and auditing processes. This is primarily a project-based course. The students will complete three projects, showing their mastery of the tools, decisions, and the steps they followed to reach their conclusions. The final exam would be used to evaluate general understanding of the concepts discussed throughout the semester. There is potential for additional ebl components including field trips if we can work out logistics. I'm currently developing relationships with the accounting firms to bring in local experts and to work on real-world cases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2524 - INTERNAL AUDIT: RISK & ADVISORY

Minimum Credits: 2

Maximum Credits: 2

Students are introduced to generally accepted auditing standards (GAAS). Internal control is studied in detail with emphasis on how to test for its effectiveness. Audit objectives, planning and sampling techniques are developed as a basis for the audit opinion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 2525 - FINANCIAL STATEMENT ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Financial statement analysis focuses on the evaluation of publicly traded company financial statements and related note disclosures as well as the correlation of this historic financial performance to the company's stock prices. This course will assist students' development of a systematic approach to analyzing reported financial data and understanding the underlying risks and possible inconsistencies among comparative companies. Requirements of the course include interim exams and written and oral presentations of analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Accounting (MS)

BACC 2528 - MANAGERIAL ACCOUNTING

Minimum Credits: 2

Maximum Credits: 2

Students learn how the costs of products and services are determined in cost accounting systems and how this data is used in managerial decisions and in planning and control of business operations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Katz Graduate School of Business

BACC 2533 - ACCELERATED INTERMEDIATE FINANCIAL REPORTING

Minimum Credits: 3

Maximum Credits: 3

Accelerated intermediate financial reporting fulfills the prerequisites of intermediate financial reporting 1 and intermediate financial reporting 2 for students who are entering the MACC program. This course studies the preparation, communication, interpretation and analysis of financial data with emphasis on the information needs of users of financial information prepared under us GAAP. General topics covered in this course include revenue recognition, inventory accounting, long term assets and impairment, investments, current liabilities and contingencies, long term liabilities, capital and retained earnings, leases, pensions and postretirement benefits, income taxes, and preparation of the statement of cash flows. Students are expected to have an accounting background. This course is designed to sit on top of an existing foundation in accounting and will assume students already have taken several financial accounting courses or knowledge obtained through work experience. It is expected that students are fluent with accrual accounting and the accounting cycle and that they have already studied some of the topics in the course in depth. The course will move quickly.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2534 - CONTROLLERSHIP

Minimum Credits: 2

Maximum Credits: 2

This accounting elective is designed for MAcc students seeking a role in corporate accounting and controls. The course will cover the changing role of the controller and the major functions managed by the controller of a typical company. Topics covered include: role of the controller, general accounting, cash management, accounts receivable, accounts payable, payroll, financial planning and budgeting, management reporting and designing well-controlled financial processes and systems. The content will focus not only on the processes managed by the controller, but also the optimization of these processes, policies and procedures and leadership issues. The use of experts from the accounting community will be used as a complement to the theoretical materials presented to illustrate the practical applications and challenges of controllership. Because the course is practical in nature, an experience-based learning group project will be a large part of the curriculum and learning experience offered to students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2537 - TAXES AND MANAGEMENT DECISIONS

Minimum Credits: 2

Maximum Credits: 2

Designed as an introduction to business taxation for majors in areas such as finance or financial planning. Focuses on how managers and analysts can recognize tax problems, consequences and opportunities associated with common business events.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401; PROG: Katz Graduate School of Business

BACC 2540 - INTERNATIONAL TAXATION

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the U.S. law of international taxation. It is designed to provide those entering the global marketplace with a basic understanding of how international transactions are taxed. The course will focus on: (1) fundamentals of international taxation, (2) U.S. activities of foreign taxpayers, and (3) foreign activities of U.S. taxpayers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2559; PROG: Katz Graduate School of Business

BACC 2541 - SEC REPORTING AND DISCLOSURE

Minimum Credits: 3

Maximum Credits: 3

This accounting elective is designed for MACC students as a capstone course in financial accounting. The course covers the rules for financial disclosures under the U.S. Securities and Exchange Commission and is meant to expose students to the financial reporting processes followed by public companies. The fundamentals of the following processes will be covered: earnings releases; quarterly reporting; annual reporting; proxy statements; comment letters and company responses; benefit plan reporting; working with the division of corporation finance and working the division of enforcement. Hot topics in SEC reporting and advanced disclosure topics, such as special areas of revenue recognition, management's discussion and analysis, asset retirement obligations, leasing, corporate restructurings, business acquisitions/spin offs, forward looking statements and disclosures about market risk will be covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2254 and BUSACC 1238; PROG: Katz Graduate School of Business

BACC 2542 - ACCOUNTING AND FINANCE LAW

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide MACC and MBA candidates with advanced legal information that is necessary for effectuating management level responsibilities in the contemporary business environment. This course will enhance a business student's knowledge of the law (past that of the three credit business law elective course that is offered) in a manner that strategically is consistent with the content of the CPA exam.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BSEO 2315 or 2528; PROG: Joseph M. Katz Grad Sch Bus

BACC 2543 - TAX POLICY 1

Minimum Credits: 2

Maximum Credits: 2

Our nation was born from a revolution over taxation without representation. Nearly 250 years later, the debate over tax policy continues to dominate

political debates and presidential campaigns. Why the tax system attracts all this attention is no mystery. It is the aspect of government that directly affects more people than any other. This course will explore the history of tax policy in the United States, the tax legislative process in Congress, how our tax policies influence people's decisions and behavior, international tax considerations, and ideas for future tax reform. Students will discuss what factors are important in designing a good tax system and survey the social justices and injustices that arise from how the government raises its revenue. Upon completion of this course, students should be able to think critically about our tax system and form opinions grounded in facts and policy. This course is for any student that wants to become a more educated citizen (and voter!) With respect to our nation's ongoing debate over tax reform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2559; PROG: Joseph M. Katz Grad Sch Bus

BACC 2544 - TAX POLICY 2

Minimum Credits: 2

Maximum Credits: 2

This course will build upon tax policy I by taking a more in-depth look at our federal tax system. Students will also be introduced to international tax policies and provisions. Students will continue to discuss what factors are important in designing a good tax system and survey the social justices and injustices that arise from how the government raises its revenue. Upon completion of this course, students should be able to think critically about our tax system and form opinions grounded in facts and policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2549 - STRATEGIC COST ANALYSIS

Minimum Credits: 2

Maximum Credits: 2

This course deals with strategic implications of alternative methods of product cost measurement. The discussions will primarily be case-based and will cover cost measurement issues in both conventional and modern manufacturing environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BACC 2401 and 2528; PROG: Katz Graduate School of Business

BACC 2557 - ACCOUNTING RESEARCH AND WRITING

Minimum Credits: 2

Maximum Credits: 2

This course focuses on improving students' writing, deductive reasoning, and problem-solving skills as they conduct research to make a recommendation on the accounting treatment for transactions for which no direct or clear guidance currently exists. Weekly writing assignments are evaluated on both content and the quality of the writing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2401; PROG: Joseph M. Katz Grad Sch Bus

BACC 2558 - NON-PROFIT AND GOVERNMENTAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on financial reporting and disclosure for not-for-profit and governmental entities based on the standards and principles promulgated by the financial accounting standards board (FASB) and the governmental accounting standards board (GSAB). Students will learn how such entities prepare their financial reports and how to interpret and use such information. The course covers financial reporting for not-for-profit entities, balancing the focus on internal operations with fiduciary responsibility. In addition, the course examines the objectives of financial reporting for governmental units and the preparation and use of the financial statements for such entities. A sample of specific entities will be reviewed to

illustrate the preparation and use of their financial statements. In addition, accounting software for governmental transactions will be introduced.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2559 - INDIVIDUAL TAX ACCOUNTING AND PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on individual tax return preparation and planning. Students will learn how to calculate the taxes associated with a variety of personal, investment, property, and sole-proprietorship transactions. Concepts will be reinforced through the preparation of actual tax returns that reflect different combinations of such transactions. Students will develop tax planning skills by considering how various transactions can be restructured to minimize the current or future tax liability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BACC 2801 - FINANCIAL ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view. This includes what is (and what is not) included in the reports, how and when events affect the statements and what can be inferred from these reports about the firm's past activities, present position and the future prospects.

BACC 2802 - FINANCIAL ACCOUNTING IN HEALTHCARE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

The major objective of this course is to help students understand the basic structure and substance of a firm's reports from a user's point of view.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BACC 2901 - ACCOUNTING AND CONTROL FOR HEALTH CARE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

In this course you will develop an understanding of the various roles that accounting information plays in healthcare organizations. We will begin by analyzing the needs of managers, healthcare professionals, healthcare consumers and other parties for financial information concerning a healthcare organization's financial position, current financial performance and cash generating ability. You will learn how standard financial statements (balance sheet, income statement, and statement of cash flows) address these needs, and the strengths and weaknesses of the statements in supplying this information. Financial statement analysis concepts and techniques will be introduced as cost-effective tools that enable healthcare decision makers to draw appropriate inferences from published financial statements. We will also study key issues that arise in accounting for a healthcare organization's operations, investing and financing decisions. The final part of the course will analyze specific uses of accounting information in support of organizational decisions. We will study how accounting systems measure the cost and profitability of healthcare services, the effect of volume on profitability, and the proper use of accounting cost information in supporting decisions such as whether to invest in new equipment and whether or not to expand existing services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BACC 3001 - INTRODUCTION TO ACCOUNTING RESEARCH

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to provide new accounting doctoral students with an overview of accounting research. The course will discuss the variety of topics and methods addressed by accounting scholars, and will seek to provide insight into the characteristics that distinguish the highest quality research. Analytical research methods and topics, as well as applications in managerial accounting, will receive particular emphasis in the first half of the course. In the second half, we will read and analyze representative accounting research employing capital markets, archival managerial and experimental methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BACC 3005 - ACCOUNTING THEORY

Minimum Credits: 2

Maximum Credits: 2

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

BACC 3014 - EXPERIMENTAL RESEARCH IN ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

The course covers recent experimental studies that apply behavioral decision theory, psychology, and economics to address a variety of accounting research questions. The course focuses most heavily on recent work. The goals of this course are to (1) familiarize students with recent experimental research in accounting, (2) help students develop the skills necessary to critically evaluate such research, and (3) generate ideas for future experimental research topics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BACC 3017 - ACCOUNTING WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

Presentation of research papers in various aspects of accounting and related areas by faculty and distinguished visitors. The student is expected to attend the workshop, participate in discussions, and present a workshop paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BACC 3021 - ARCHIVAL RESEARCH IN MANAGERIAL ACCOUNTING

Minimum Credits: 2

Maximum Credits: 2

This seminar will focus on studying management control and performance measurement issues largely from an economics perspective using archival methods. Topics discussed will include, but not be limited to, analysis and economic impact of cost systems, use of financial measures for performance evaluation and compensation, impact of incentive systems on organizational performance, non-financial measures and balanced scorecard. The course materials will consist of papers in accounting. Course requirements include active class participation, presentations/discussions/summary reports of papers, replication of earlier studies (where data are available), and a final examination.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BACC 3024 - ECONOMIC MODELS OF INCENTIVES AND CONTROLS

Minimum Credits: 2

Maximum Credits: 2

This seminar provides students with an introduction to incentive problems in firms and markets and how contractual arrangements serve to mitigate these problems. Students are introduced to the classic papers in agency research and current working papers spanning economics, accounting and corporate finance.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BACC 3025 - CAPITAL MARKETS RESEARCH IN ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This course provides students with a solid understanding of capital market research in accounting and empirical research training. The class will cover topics such as the relation between stock prices and earnings, stock market anomalies, and analyst and management forecasts. Students will also replicate some classic finance and accounting papers in order to provide them with some hands-on experience working with compustat, crsp, ibes, and sdc data using sas statistical programming. The class will help students to better evaluate research in workshops, develop new ideas and do empirical tests.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BACC 3026 - EMPIRICAL ARCHIVAL RESEARCH IN ACCOUNTING

Minimum Credits: 3

Maximum Credits: 3

This doctoral seminar will explore empirical archival research in accounting.

Business Administration

BUSADM 3001 - BEHAVIORAL RESEARCH METHODS

Minimum Credits: 3

Maximum Credits: 3

The primary objective of this course is to familiarize you with and develop an appreciation for business research methodology. Research skills will be an important determinant of your success as an academic. The course will introduce you to a variety of research approaches, allow you to develop an understanding to effectively use these approaches in your own research, and prepare you to evaluate research done by others. The course will also provide you with an introduction to causal modeling techniques (lisrel, pls). By the end of the course you should develop a sound appreciation of the research process and a range of research approaches that can be applied to management problems. In addition, you should have an appreciation for what constitutes "good" research so that you can constructively critique and make use of research done by others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BUSADM 3006 - MULTIVARIATE ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Examines the theory of and applications for multivariate statistical methods of analysis including, but not limited to, multiple regression, multiple

discriminant analysis, and factor analysis. Emphasis on the use and limitations of these tools and upon the meaning and interpretation of results. Students are expected to gain first-hand experience with several techniques by applying canned computer programs to appropriate data sets and by discussing appropriateness of applications in published literature.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BUSADM 3013 - WORK AND ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This seminar is intended for Ph.D. students who wish to develop an understanding of the theoretical underpinnings of research on the management of knowledge and work in organizations. It reviews the major theoretical perspectives, but places a particular emphasis on the current empirical literature related to human resource management. Because of the multi-disciplinary nature of this research space, readings draw on a broad range of material including studies from sociology, organization theory, strategy, economics, and policy. These are used to develop an integrative understanding of the underpinnings of work and employment-related research published in top tier management journals.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

BUSADM 3021 - BEHAVIORAL SCIENCE RESEARCH PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

The primary objective of this course is to provide a hands-on experience in the development, design and execution of rigorous behavioral science research. Students will be asked to design and execute a theory-based research project. We will explore a variety of different methodological approaches and discuss the fit between students' specific research questions and different techniques. Our goal is two-fold: (1) to help students develop a sophisticated understanding for what constitutes rigorous research within the field; and (2) to coach students through the research process in order to create a high-quality empirical paper for publication.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BUSADM 3030 - MANAGING THE TRIPLE BOTTOM LINE

Minimum Credits: 3

Maximum Credits: 3

Issues such as climate change and global warming, human rights, and health and sanitation for all have garnered significant attention in recent years. Leading businesses realize that it is no longer enough to maximize profits and cater to shareholders but as well critical to integrate the wellbeing of the planet and its people into their business models. Such a transformation to managing the triple bottom line of people, planet and profit requires us to look at business and its operations through a new lens. This doctoral seminar will focus on theories, concepts and methodologies that we can use to understand the role of the firm in 21st century society and develop strategies for long run sustainability. The course will be interdisciplinary, drawing on literatures in strategy, marketing, organizational behavior, operations, and finance as well as methods spanning lab experiments to structural equation models to understand the conditions under which creating social and environmental value can drive business value. The course will feature academic guest speakers from the aforementioned disciplines of business to highlight the interdisciplinary nature of sustainability research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BUSADM 3050 - METHODS FOR BEHAVIORAL BUSINESS RESEARCH

Minimum Credits: 2

Maximum Credits: 2

Experienced behavioral business researchers usually fall into a pattern that emphasizes a subset of diverse methods and approaches. But both new

and experienced researchers must depend on a vast literature that makes use of a diverse set of methods, many of which are outside of their expertise. Therefore, drawing from a limited set of approaches would disadvantage any researcher who desires to understand, the literature of his or her chosen field. Another by-product of following only a limited set of approaches is a likely narrowed understanding of trade-offs necessary in any choice of research method. Because no single method can answer all questions, it is important to make good decisions about those trade-offs. This course provides a "hands on" survey of research methods, covering phases from developing research ideas, theorizing, collecting data, identifying what to measure, and determining how it should be measured. A rolling writing assignment throughout the course will provide opportunities for feedback at each step of the way. As a result of this course, you should be a better consumer, critic, and provider of research results in your field.

Academic Career: Graduate

Business Economics

BECN 2019 - ECONOMICS FOR INTERNATIONAL BUSINESS

Minimum Credits: 3

Maximum Credits: 3

Investigates key aspects of the international economics environment. The first half introduces the international monetary system. Reviews the balance of payments, foreign exchange rate systems, adjustment mechanism, the foreign exchange market, and international money and capital markets. In the second half, topics include theories of international trade and investment restrictions on trade, commercial policies of the United States.

Academic Career: Graduate

Business Finance

BFIN 2015 - SHORT-TERM FINANCING

Minimum Credits: 2

Maximum Credits: 2

Focuses on short-term financial management. Major topics include cash management, investment in money market instruments, banking regulations, liquidity policy, financial statement forecasting and simulation credit policy and credit management, and working capital management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2030 - VALUATION 1

Minimum Credits: 2

Maximum Credits: 2

This course provides students with the skills and framework for measuring and managing the value of companies. The course begins by describing how firms create value and then develops the tools required to measure value. Students are required to demonstrate their facility with the techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2031 - CREATING VALUE THROUGH RESTRUCTURING

Minimum Credits: 2

Maximum Credits: 2

Building on concepts developed in valuation (BFIN 2030), this course examines how and why different types of corporate restructuring affect firm value. The course uses both case studies and readings from the applied corporate finance literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2030; PROG: Katz Graduate School of Business

BFIN 2036 - CORPORATE FINANCE

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to corporate financial management. The course builds on BFIN 2006 (introduction to financial management) to provide students with the conceptual framework and analytical tools necessary to appreciate, understand, and analyze the problems facing corporate financial managers. The course consists of four main parts. The first part develops the tools necessary to conduct the analysis of corporate finance problems. These tools include the analysis of data reported on financial statements, building pro-forma financial statements, the basics of put and call options, and an introduction to corporate valuation techniques. The second part of the course examines how managers set the two primary corporate financial policies: capital structure and payout policy (e.g. Dividends and share repurchases), and the process of restructuring in financial distress and bankruptcy. The third part of the course analyzes the process of issuing securities in the capital markets, including the role of the investment banker. Finally, the fourth part explores several aspects of mergers and acquisitions, including the motives for these transactions, the structure of the deal, and the role of private equity firms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus (PKATZ)

BFIN 2039 - INVESTMENT MANAGEMENT/CAPITAL MARKETS

Minimum Credits: 3

Maximum Credits: 3

Focuses on security analysis, portfolio analysis, and the fundamentals of investment theory. Topics include bond and stock valuation, determination of interest rates, effects of inflation and taxes on security values.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410 ; PROG: Katz Graduate School of Business

BFIN 2042 - ACQUISITION OF PRIVATELY HELD COMPANIES

Minimum Credits: 2

Maximum Credits: 2

The course will provide an introduction to the acquisition of privately held companies along with strategies for value creation in the acquired business. The course, which is exclusively taught using the case method, takes lessons taught in the valuation courses extending these concepts to the valuation of privately held business, the structuring of the acquisition balance sheet and the execution of the acquisition process. While a discussion

of secured financing alternatives will be included, the application of junior capital, both mezzanine debt and equity will be the focus of the course. A risk analysis of the target will be performed and an investment thesis intended to illustrate value creation techniques will be central to each class discussion. Upon completion, students will be better prepared how to assess both operational and financial forms of risk, develop techniques intended to reduce both forms of risk, and consider value creation strategies in marketing, operations, finance and management. Each case will involve a real company acquired over the years by PNC equity partner along with actual selling memorandum, diligence prepared by PNC principals, market research firms, accounting firms and law firms employed by PNC as part of their diligence process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus (PKATZ)

BFIN 2043 - INTERNATIONAL FINANCIAL MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Conceptual foundation of international financial management. Begins with a review of foreign exchange markets followed by the asset decision. Analyzes capital budgeting decisions of multinationals and taxation of international transactions. Discusses risk management in a global environment, international sources of financing, analysis of the nature of foreign, money and capital markets; and analysis of international banking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2051 - INTRODUCTION TO DERIVATIVES

Minimum Credits: 2

Maximum Credits: 2

Organization of markets for put-and-call options on stocks, commodities, indices, and foreign exchange. Specific topics include arbitrage and hedging relationships, the valuation of options, and the implications of trading strategies in options.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2056 - DERIVATIVES: APPLICATIONS TO VALUATION

Minimum Credits: 2

Maximum Credits: 2

This course uses the techniques developed in "introduction to derivatives" and applies it to real option valuation, the valuation of dot coms and other start-ups, risk management and innovative security design to reduce cost of capital.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BFIN 2066 - FINANCE PROJECT COURSE

Minimum Credits: 2
Maximum Credits: 2
Brief description: project will focus is on valuation of potential acquisitions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BFIN 2068 - MARKETS AND TRADING

Minimum Credits: 2
Maximum Credits: 2
This course is designed to give participants a broad understanding of the operations of various financial markets with special focus on liquidity, market structure and trading. With this objective in mind, the course will concentrate on the operations of exchanges, trading systems and broker-dealer intermediaries. Participants will be exposed to a range of issues regarding the formulation of trading decisions and market structure design and regulation. Simulation software will be used to provide hands-on experience with making tactical trading decisions in different market structure environments.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2069 - FIXED INCOME SECURITIES

Minimum Credits: 2
Maximum Credits: 2
This course examines the concepts that are most frequently encountered in the market for fixed income securities. Specifically, the course describes the most important fixed income securities and markets and develops tools for valuing these securities and managing their interest rate and credit risk. Historically, "fixed-income" refers to securities which promise fixed cash flows over their lives such as a fixed-rate coupon bond. Now, it is generally accepted that a fixed income instrument is one whose value is driven by the level of interest rates and/or the value of a related underlying asset. This classification would include floating rate bonds, callable bonds, bond futures, bond options, caps, floors and collars, interest rate swaps, credit derivatives and asset-backed securities. The analysis of fixed income securities is quantitative in nature. We will focus on the intuition behind the various concepts presented in class but there will be a fair amount of computation involved. Students should be comfortable with linear algebra, calculus, probability distributions, regression analysis and statistical concepts like mean, variance and correlation (covariance). The course will also assume a high level of familiarity with a spreadsheet package like microsoft excel.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2123 - COMMERCIAL BANKING

Minimum Credits: 2

Maximum Credits: 2

This course examines the role commercial banks play in facilitating the flow of capital between providers of capital (i.e. Depositors) and users of capital (i.e. Borrowers).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410 ; PROG: Katz Graduate School of Business

BFIN 2124 - INVESTMENT BANKING AND VENTURE CAPITAL

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will examine financing transactions from the viewpoints of managers of these financial institutions and managers of firms seeking financing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410 ; PROG: Katz Graduate School of Business

BFIN 2129 - ENERGY PROJECT FINANCE

Minimum Credits: 2

Maximum Credits: 2

This course will cover all aspects of infrastructure project finance with a focus on the energy industry. We will look in depth at why project finance exists and who the players are, how deals are structured and investors evaluate opportunities, the unique contractual issues and risks in the transactions and the specialized financial modeling and analysis. This course is designed to provide students who are interested in the energy and other infrastructure-reliant industries (like transportation or real estate development) with a practical understanding of how large-scale projects are financed in today's marketplace.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2409 and BFIN 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2130 - VALUATION 2

Minimum Credits: 2

Maximum Credits: 2

This is a continuation of valuation 1.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: BFIN 2030; PROG: Katz Graduate School of Business

BFIN 2140 - REAL ESTATE FINANCE

Minimum Credits: 2

Maximum Credits: 2

This course provides an introduction to real estate with a focus on the valuation and financing of real estate. The following topics are expected to be covered as the course focuses on income producing properties: economic theory of real estate, valuation technique (including pro-forma cash flow projections), financing strategies, risk analysis, taxation, and the securitization of real property interests. No prior knowledge of the industry is

required, but students are expected to rapidly acquire a working knowledge of real estate terminology and real estate markets. Classes are conducted in a standards lecture format with discussion required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: BFIN 2006 or BFIN 2410; PROG: Katz Graduate School of Business

BFIN 2145 - FINANCIAL MODELING

Minimum Credits: 3

Maximum Credits: 3

The course will apply finance theory to solve various problems in financial management and investments. It will take a hands-on approach in building financial spreadsheet models using Microsoft excel. Students will learn to address issues that arise in various areas of financial analyses. These issues include but are not limited to discounted cash flow valuation, cost of capital estimation, asset return calculations, portfolio theory, index models, option pricing models, bond pricing and investment performance analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2006 or 2410; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2150 - RISK MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course examines financial risk management from the perspective of the corporate manager. We will examine three issues. The first is why a corporation should manage risk. To understand this, we need to consider how corporations create value for shareholders and the frictions they face that create wedges between what the corporation produces and what is ultimately passed through to shareholders. The second issue is how a corporation should manage risk. This requires an understanding of certain financial instruments that are generally referred to as derivatives - instruments whose values derive from other more fundamental assets such as commodities, currency exchange rates, stocks (equities) and bonds (interest rates). The building blocks for many of these financial instruments are two basic derivative instruments, forwards/futures and options. The third issue is the cost of risk management. We will start by pricing forwards/futures and options under the assumption that markets are efficient and there is no arbitrage. We will then use Monte Carlo simulation as a tool for pricing more exotic derivatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BFIN 2306 - FINANCIAL MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

An introduction to the tools used in corporate financial decision making. Develops two basic valuation models commonly used in finance--present value models and the capital asset pricing model and focuses on the use of these models in corporate decision making. Examines capital budgeting, corporate structure policy, and corporate dividend policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BFIN 2409 - FINANCIAL MANAGEMENT 1

Minimum Credits: 2

Maximum Credits: 2

The main objective of this course is to gain understanding of the theory and practice of financial decision making. This course develops the tools and framework necessary to address the question what investment projects should be undertaken to maximize shareholder wealth? To examine this question, we will learn how to value an uncertain stream of cash flows and apply the concept of the time value of money in valuing bonds and equity. The course covers a number of market-based investment criteria and develops an entity valuation model, based on discounted cash flows (DCF) used

for standard capital budgeting decisions. We will conclude with a short introduction to the concept of risk and return, resulting in the cost of capital. We will cover a case discussion on capital budgeting to put our framework in a more realistic environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: BACC 2401 or BQOM 2401; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2410 - FINANCIAL MANAGEMENT 2

Minimum Credits: 2

Maximum Credits: 2

This course builds on financial management i and develops an asset pricing framework used in corporate finance based on the trade-off between risk and return. We use modern portfolio theory to determine a suitable asset pricing model and arrive at determining the relevant discount rate to reflect the risk associated with the cash flow we focused on in financial management i. Finally, we will address how financing and capital structure choices affect project and firm value using the above techniques and methods. The course will conclude with three valuation methods: WACC, APV, and FTE and an extensive case discussion. Financial management i & ii are prerequisite courses for any other finance elective in the curriculum.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BFIN 2409; PROG: Joseph M. Katz Grad Sch Bus

BFIN 2555 - PRACTICUM PORTFOLIO MANAGEMENT AND SECURITY ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

The students in this class will have hands-on experience in the areas of security analysis, security selection and portfolio management.

Academic Career: Graduate

BFIN 3016 - ADVANCED TOPICS IN FINANCE

Minimum Credits: 3

Maximum Credits: 3

This course examines empirical corporate finance in the areas of equity and debt financing, capital structure, and financial intermediaries in the primary capital market. International aspects of a number of topics are covered. The course uses a mix of influential papers and recent papers in each area. Students will present papers, write referee reports, and complete a term project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BFIN 3018 - MARKET MICROSTRUCTURE

Minimum Credits: 3

Maximum Credits: 3

Analyzes the process and results of trading assets under a set of explicit trading rules. Research in this area examines the structure provided by various market mechanisms to model how rules for price setting evolve in markets. The purpose of this seminar is to provide an introduction to the basic paradigms that are used to explain the behavior of markets and their participants. In addition to discussing the theory underlying market microstructure, we will examine a variety of empirical papers that use tick-by-tick data on bonds, stocks, options and futures.

Minimum Credits: 2

Maximum Credits: 2

This doctoral seminar covers the empirical techniques used most often in the analysis of financial markets and their application to actual market data. Topics covered include the statistical properties of asset returns and the efficient markets hypothesis, empirical tests of asset pricing models (CAPM, APT, intertemporal CAPM, consumption CAPM), and tests of conditional asset pricing models. Topics of related interest may also be covered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

BFIN 3036 - EMPIRICAL ASSET PRICING

Minimum Credits: 2

Maximum Credits: 2

This doctoral seminar covers empirical research on institutional investors. Both asset pricing and corporate finance topics will be addressed

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

BFIN 3037 - FINANCE SEMINAR IN MARKET MICROSTRUCTURE

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Business Human Resources Mgt

BHRM 2023 - HUMAN RESOURCES PLANNING/STRATEGY 1

Minimum Credits: 2

Maximum Credits: 2

Personnel policies and programs as well as the available skills, knowledge and attitudes can provide particular opportunities or limitations to management as an organization's strategic goals and plans are defined. This seminar is designed to examine organizational human resources

management from a strategic perspective. The key focus will be on exploring human resources planning and strategy concepts, developing an understanding of the related analytical tools, & determining how these concepts and tools can be used to enhance an organization's position.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BHRM 2024 - HUMAN RESOURCES PLANNING/STRATEGY 2

Minimum Credits: 2

Maximum Credits: 2

A continuation of "Human Resources Planning/Strategy 1".

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BHRM 2060 - INDEPENT STUDY HUMAN RESOURCES MANAGEMENT

Business Marketing

BMKT 2031 - MARKETING RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Emphasizes the understanding of research purposes and processes from the viewpoint of a consumer of research. Topics include problem analysis and hypothesis formulation, research design, implementation of research, and analysis of research results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: BQOM 2401; CREQ: BMKT 2409; PROG: Joseph M. Katz Grad Sch Bus

BMKT 2032 - APPLIED BEHAVIORAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the theory and application of "behavioral economics," a sub-domain that has gained considerable practical popularity across a range of fields, including marketing, finance, accounting, human resources and public policy. Popularized by books such as "Predictably Irrational" by Dan Ariely and "Nudge" by Cass Sunstein and Richard Thaler, Behavioral Economics focuses on the ways that humans' natural psychological tendencies can be used or overcome in ways that lead to desirable outcomes. Importantly, behavioral economics acknowledges that humans generally do not conform to the assumptions that underlie classical economics and that the ways in which we fail to be rational, self-interested, perfect information processors can be used to our benefit, rather than to our detriment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BMKT 2033 - INTERNATIONAL MARKETING

Minimum Credits: 2

Maximum Credits: 2

Introduces the student to a systematic treatment of marketing on a global scale. In addition to examining the problems of performing various market functions in other countries, heavy emphasis will be given to analyzing and understanding the different cultures in which a firm's products might be marketed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2035 - CONSMR BEHAV THEORY & PRACTICE

Minimum Credits: 3

Maximum Credits: 3

A variety of social and psychological theories and concepts related to consumer behavior as well as their practical application to the field of marketing are examined and discussed. Students have the opportunity to further apply what they learn through case presentations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2060 - INDEPENDENT STUDY IN MARKETING

Minimum Credits: 1

Maximum Credits: 6

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2061 - INDEPENDENT STUDY IN MARKETING MANAGEMENT 2

Minimum Credits: 1

Maximum Credits: 9

Self designed elective course in marketing management.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2062 - INDEPENDENT STUDY IN MARKETING MANAGEMENT 3

Minimum Credits: 1

Maximum Credits: 9

Self designed elective course in marketing management.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2306 - MARKETING MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Topics include the role of marketing in a developed society, consumer behavior, competitive behavior, social and technological change, demand analysis and measurement, marketing research and model building, and marketing planning, strategy, and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2409 - MARKETING MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course examines the role of marketing in creating value for the firm. It helps students answer the central question of marketing strategy, what value to provide and to whom, using the tools of segmentation, targeting, and positioning (STP) of brands. The course shows how central aspects of marketing mix programs, product, place, pricing, and promotion, all follow from an effective STP program, and how marketing support functions such as marketing research, advertising, and new product development can support effective marketing decisions. Emerging trends in digital marketing, competition and globalization are examined. The course emphasizes experience-based learning to develop the necessary marketing knowledge and skills among students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 2509 - MARKETING PLANNING & STRATEGY

Minimum Credits: 2

Maximum Credits: 2

Designed to create an understanding of marketing problems and perspectives and the contexts in which they arise. The ability to structure and analyze marketing problems is reviewed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2513 - CONSUMER BEHAVIOR 1

Minimum Credits: 2

Maximum Credits: 2

Examines a wide variety of social science concepts as they relate to the behavior of consumers. Although consumer research methodology is not a main focus, students will be expected to become familiar with the more common research techniques used to study consumers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: BMKT 2411 or BMKT 2409; PROG: Joseph M. Katz Grad Sch Bus

BMKT 2514 - CONSUMER BEHAVIOR 2

Minimum Credits: 2

Maximum Credits: 2

A continuation of "Consumer Behavior 1".

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: BMKT 2513; PROG: Katz Graduate School of Business

BMKT 2515 - MARKETING AND SOCIAL MEDIA STRATEGY

Minimum Credits: 3

Maximum Credits: 3

This course covers new and non-traditional marketing communications in the age of digital marketing and social media. Through a series of lectures, case discussions, team workshops, projects, and guest lectures, students will learn about this new and exciting area of marketing and how companies and brands can leverage social media platforms and the social interactions that occur between consumers (e.g., Word-of-mouth) to help them achieve their marketing and business goals. Topics covered include consumer-to-consumer interactions, social networks, marketing on digital social media platforms (e.g., Facebook), viral marketing, social CRM, integrated campaigns featuring advertising and social media, and new marketing opportunities with emerging technologies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2522 - SALES MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course is somewhat unique in that it stresses hiring characteristics that should be sought by the sales manager and various recruiting techniques that have proven effective. The entire course will provide assistance to the student in sales positions following graduation and will form the basis for sales management decisions in future years.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2526 - PRODUCT DEVELOPMENT & MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course deals with the development of new products. It focuses on the set of decisions that need to be made in the development of new products and tools useful for making these decisions. This course will also introduce the student to a systematic treatment of marketing on a global scale. In addition to examining the problems of performing various market functions in other countries, heavy emphasis will be given to analyzing and understanding the different cultures in which a firm's products might be marketed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2528 - ADVERTISING

Minimum Credits: 2

Maximum Credits: 2

Advertising is a complex phenomenon - at once leading, lagging and reflecting the values of society. The pragmatic, operational and decision-making aspects of advertising are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2530 - SERVICES MKTG:STRATEGIES/TACTICS

Minimum Credits: 2

Maximum Credits: 2

The intention of the course is to provide a managerial frame work of services marketing for managers and students with an interest in the services sector. Its focus is primarily on services businesses but much of it is relevant to services in the manufacturing businesses. The course focus is on problem solving through discussion and analysis of contemporary service marketing cases. The course is appropriate for: 1) any student seeking a follow up course to the basic marketing course and 2) students who plan marketing careers with service firms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2532 - PRICING STRATEGIES AND TACTICS

Minimum Credits: 2

Maximum Credits: 2

The course focuses on an important element of the marketing mix. While product, promotion and distribution are aspects of the mix that will help create value to consumers, the price creates value to the firm in the form of profits.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Joseph M. Katz Grad Sch Bus

BMKT 2533 - BUSINESS TO BUSINESS

Minimum Credits: 2

Maximum Credits: 2

Most mba graduates will join organizations that market their products and/or services to other businesses, institutions or government agencies. Such marketing is referred to as business-to-business (b2b) marketing. In this class we will look at those management activities that enable a supplier firm to understand, create and deliver value to other businesses, governments and/or institutional customers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: (PREQ: BMKT 2411 or CREQ: BMKT 2409); PROG: Katz Graduate School of Business

BMKT 2544 - SHOPPER ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

To achieve the objectives of this course, we will be using several methods during the semester, including lectures, guest speakers, readings, and class assignments/presentations. The philosophy underlying this course may be a bit different than you are accustomed to. While lectures will be a component, the general approach will be that of a practicum. That is, you will be exposed to a concept or database, then apply those concepts and databases via a project which is presented to the class. Readings are drawn from both business publications and academic journals. You are strongly encouraged to bring in other relevant materials that you encounter.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: BMKT 2411 or BMKT 2409; PROG: KATZ Graduate School of Business

BMKT 2551 - DIGITAL AND SOCIAL MEDIA ANALYTICS

Minimum Credits: 2

Maximum Credits: 2

This course presents a data-driven approach to strategic and tactical marketing decision making in the context of digital and social media. Covering the three main media types of paid, owned, and earned media, students will learn about frameworks and methods that allow them to take data from sources such as google, Facebook, and twitter to be able to generate valuable and actionable managerial insights. The focus is on learning how to use digital and social media activity data to make better decisions, not on statistical methodologies (however, familiarity with excel is needed). The course will involve a combination of lectures, guest speakers, and hands-on workshops. This course is part of the digital marketing certificate and complements the "marketing and social media strategy" course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: BMKT 2515 or 2553

BMKT 2553 - SOCIAL MEDIA STRATEGY

Minimum Credits: 2

Maximum Credits: 2

Social media is changing how business is done around the world in almost every industry. How does social media effect your business? This course provides students with a detailed and up-to-date understanding of social media from a business strategy perspective. Through a series of lectures, case studies, and workshops, students learn how to identify opportunities for using social media in a variety of business areas, including marketing, operations, advertising, services, and human resources. The course takes a broad perspective and considers how social media it can be used successfully for business-to-consumer, business-to-business, and intra-company purposes. A central theme in this course is for students to apply what they learn to their own businesses and industries in order to identify opportunities for strategic, value creating uses of social media in their companies. After taking this course students will see how social media impacts business in many different ways and goes beyond simply using Facebook, twitter, or other popular social platforms for basic marketing purposes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

BMKT 2554 - MARKETING DESIGN AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course presents a data-driven approach to strategic and tactical marketing decision making in the context of digital and social media.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BMKT 2569 - BRAND MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course explores the role played by brands in influencing consumers' choices, and investigates how to move effectively manage such brands. The course uses a variety of tools including lectures, cases, simulations, in-class exercises, hands-on, industry visitors and individual projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BMKT 2411 or BMKT 2409; PROG: Katz Graduate School of Business

BMKT 3001 - CONSUMER BEHAVIOR 1

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

BMKT 3002 - CONSUMER BEHAVIOR 2

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

BMKT 3010 - INDEPENDENT STUDY IN MARKETING

Minimum Credits: 1
Maximum Credits: 9
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad HSU Basis

BMKT 3014 - MARKETING STRATEGY

Minimum Credits: 3
Maximum Credits: 3
Identifies the foundations of all aspects of marketing including product development and management distribution channel activity, sales force management, sales promotion, pricing, planning and strategy, information systems, and marketing organization and management, among other topics.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BMKT 3015 - FOUNDATIONS OF CONSUMER BEHAVIOR

Minimum Credits: 3
Maximum Credits: 3
This seminar seeks provide students a broad overview of the literature in consumer decision making and behavior. Students will also be encouraged and expected to delve more deeply into areas of their particular interest. Further, students will increase their ability to develop and present their research ideas.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: Katz Grad School of Business students only.

BMKT 3017 - MARKETING MODELS

Minimum Credits: 3
Maximum Credits: 3
Examines applications of management science techniques and methodology to improve marketing decision making. Emphasis will be on the use and interpretation of multivariate statistical methods and/or the application and implementation of operations research rather than their theoretical development. Students develop knowledge of at least one managerially relevant problem area and apply or critique the application/implementation of management science techniques through real data analysis or simulation.
Academic Career: Graduate
Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BMKT 3018 - SPECIAL TOPICS IN MARKETING

Minimum Credits: 3

Maximum Credits: 3

Intended to cover a few current topics in marketing in depth. Topics will be those emerging in the field as critical issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BMKT 3025 - MARKET BEHAVIOR RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BMKT 3099 - READINGS IN MARKETING

Minimum Credits: 1

Maximum Credits: 9

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Cardiothoracic Surgery

CTSURG 5461 - PEDIATRIC CARDIOTHORACIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

Four-week elective with clinical experience on pediatric cardiothoracic surgery service. Student will actively participate in care of pediatric cardiac surgery patient and attend weekly med/surg cardiology conference. Covers types of congenital heart disease, physiology and patho-physiology and current methods of operative intervention for palliation or repair. Time can be spent participating in clinical or laboratory research in progress.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5462 - ADULT CARDIAC SURGERY

Minimum Credits: 0

Maximum Credits: 0

Clinical experience on adult cardiac surgical service. Students will participate in preoperative, intraoperative and postoperative care of patients suffering from acquired cardiac diseases. Students will be expected to work in the cardiac ICU and on the wards assisting house staff managing day-to-day patient care issues.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5463 - ADULT THORACIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

Students will be assigned to the thoracic service of UPMC. Participation will be in operative experiences, clinic setting and ward work. Focuses will be on benign and malignant surgical problems of the lungs, esophagus, mediastinum, chest wall and diaphragm. Students will be exposed to minimally invasive approaches including esophagostomy, lobectomy and others.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5840 - CARDIOTHORACIC SURGERY RESEARCH

Minimum Credits: 0

Maximum Credits: 0

This elective is available to interested and motivated students. This elective provides opportunities to learn basic research methodology which may include approach to experimental design, protocol development, data analysis and evaluation of results. Student may participate in ongoing research in the lab and on patients.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5899 - INDEPENDENT STUDY IN CARDIOTHORACIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

CTSURG 5900 - EXTRAMURAL CARDIOTHORACIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in cardiothoracic surgery may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM catalog with all appropriate approvals to be received before the course may be added to the student's schedule for credit.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Cell Biol & Molecular Physio

MSCBMP 2800 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSCBMP 2840 - REGULATION OF MEMBRANE TRAFFIC

Minimum Credits: 2

Maximum Credits: 2

Course analyzes membrane/protein traffic along both the biosynthetic & endocytic pathways. Emphasis placed on how this traffic is regulated.

Topics include the role of g-proteins (both heterotrimeric & small), coat proteins (coatamer 1 & 2 & adaptors), signal transduction cascades (pkc, pka, ip3, etc.), & Snare complexes in protein trafficking. Also, we will discuss the role of the cytoskeleton in transporting cargo & signal transduction. Membrane traffic in several specialized cell types will be covered including polarized epithelial cells, cells of the immune system, & neurons.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2852 - RESEARCH SEMINAR IN CELLULAR BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of membrane trafficking.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSCBMP 2853 - RESEARCH SEMINAR IN REPRODUCTIVE PHYSIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of reproductive physiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSCBMP 2855 - RESEARCH SEMINAR IN MOLECULAR PHYSIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Advanced research seminar with journal club format specializing in current aspects of molecular and cellular physiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCBMP 2860 - MULTIPARAMETRIC MICROSCPC IMAGNG

Minimum Credits: 3

Maximum Credits: 3

A lecture/lab course which immerses students in the theory and practical aspects of modern microscopic imaging. The fields will cover the theory and implementation of all types of light and electron microscopy and computer aided imaging. Students will be expected to reach a functional capability in a selected technology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2870 - HISTOLOGY

Minimum Credits: 5

Maximum Credits: 5

The objective of this lecture/lab course is student comprehension of the relationship between cell structure and organ function, and the application of this knowledge to the identification of light and electronmicroscopic images of cells and organs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2875 - EXPERIMENTS AND LOGIC IN CELL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

The purpose of experiments and logic in cell biology (ELCB) is to engage the students of the cell and molecular physiology graduate program in a self-directed seminar structured to stimulate the students' ability to think scientifically and critically as future scientists. The iterative, collaborative and collegial process of ELCB is the same used by teams of collaborating scientists to develop and solve biomedical projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: School of Medicine (PMEDS)

MSCBMP 2880 - CELLULAR BIOLOGY OF NORMAL AND DISEASE STATES

Minimum Credits: 4

Maximum Credits: 4

This one-term course will explore the cellular basis of multiple disease states. The course, which meets twice a week (two hours each session), will be taught through both lecture and in class discussion of primary literature. Each of seven modules will examine normal cell biology and function and then define how defects in these processes lead to the spectrum of pathologies associated with each disease. Discussion of how bench top findings can be translated to treatments in the clinic will be facilitated by a diverse faculty that includes both basic and physician scientists. The seven modules are as follows: the first examines insulin secretion and signaling and how these events are perturbed in diabetes mellitus. The second module focuses on cell-cell adhesion and its role in cancer progression and epithelial barrier function. The third module defines how defects in endocytosis of the low-density lipoprotein receptor leads to hypercholesterolemia. The fourth analyzes the cellular basis of hypertension and how altered internalization of the epithelial sodium channel leads to elevated blood pressure. The fifth module investigates the role of apical membrane recycling and how defects in aquaporin-2 traffic leads to nephrogenic diabetes insipidus. The sixth module appraises the current state of our understanding of cystic fibrosis and how degradation of defective cystic fibrosis transmembrane conductance regulator by the quality control machinery in the endoplasmic reticulum and cell periphery leads to disease. The last module examines cell migration in wound healing and angiogenesis. At the end of the course students will have an increased understanding of normal cellular function and how research in cell biology can lead to a deeper understanding of diseases that impact millions of people each year.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCBMP 2885 - IMAGING CELL BIOLOGY IN LIVING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The focus of this new course will be to study relevant problems in cell biology, immunology, developmental biology and neurobiology and how they have been solved using imaging approaches. For example at the cell level we will investigate how techniques such as TIRF and high speed confocal have addressed basic problems in endocytosis; at the organismal level we will use multiphoton, confocal, fret, and other approaches to understand aspects of cell biology in cell polarity, respiration and organ development in c. Elegans, Drosophila, Zebra fish and mice. In each case the application will focus on how imaging tools are used to study defined problems in living systems. The course will follow a lecture/demo/journal club format. Lectures will be two part, the first 1/3 will be a description of the technology, how it was developed and how it works (10-15 minutes) followed by description of the scientific problem and how it was solved. This will be followed by lab demonstrations showing the approach in action. Lectures will be interspersed with a journal club discussion of a relevant paper on each technology. Students will prepare the journal club presentations in an alternating fashion. Examination will be a combination of class participation, journal club and written exam.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 2890 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in cell biology or physiology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Cell Biol & Molecular Physio (PHD) or Interdis Biomedical (UNK)

MSCBMP 2895 - CELLULAR PHYSIOLOGY OF THE KIDNEY

Minimum Credits: 2

Maximum Credits: 2

This summer course will provide an introduction to the kidney and lower urinary tract, with emphasis on kidney structure and function. The course, which meets once a week (two hours each session), will be taught through both lecture and in class discussion of the primary literature. Discussion of how bench top findings can be translated to treatments in the clinic will be facilitated by a diverse faculty that includes both basic and physician scientists. You will first learn about the specialized cell types that comprise the kidney and lower urinary tract. Subsequently, you will be introduced to renal stem cells and how they lead to kidney development. Next, you will learn the functions of the kidney, including regulation of water and ion balance. This will be followed by a discussion of the lower urinary tract. Finally, you will learn how drugs can be used to treat kidney dysfunction and how kidney transplants can be used to treat those patients with end-stage renal disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCBMP 3800 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of forty credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Cell Biol & Molecular Physio (PHD)

MSCBMP 3835 - DNA REPAIR JOURNAL

Minimum Credits: 1

Maximum Credits: 1

The course is a journal club on current topics in DNA repair as it relates to human disease, DNA damage processing, genome stability, telomere biology, cancer and aging. Primarily designed for students in the second year of their graduate program and beyond. Presentations will be held twice

per month during the fall and spring semester. In order to receive credit for the course, students must attend a minimum of 80% of the sessions, present once per semester, participate in class discussion and complete anonymous peer-evaluations for each presenter. One week prior to presentation, presenters will identify a recent publication in the field and distribute it to their classmates. Presenters must define the hypothesis of the paper, provide background and significance, describe experimental methods used, interpret the data, conclude whether the data support the authors' conclusions and propose future experiments. Grades will be determined by attendance (10%), class participation (20%) and quality of presentation (70%).

MSCBMP 3840 - REPRODUCTIVE DEVELOPMENT FROM MODEL ORGANISMS TO HUMANS

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the molecular aspects of the transition from gamete to a reproductive organism. The course progresses through the building of germ cells, fertilization and stem cell participation to sex determination, gonad morphogenesis, puberty, menopause and pregnancy. This course highlights both human and model organisms to bring together diverse aspects of the cell and developmental biology of reproductive tissues and their impact on disease pathology.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INTBP 2000

Cellular & Molecular Pathology

MSCMP 2700 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSCMP 2730 - MOLECULAR MECHANISMS OF TISSUE GROWTH & DIFFERENTIATION

Minimum Credits: 3

Maximum Credits: 3

The course covers the anatomy, embryology, histology, function, and growth regulation (growth factors, receptors, and signaling pathways) of various differentiated tissues (central nervous system, lung, liver, pancreas, urinary and reproductive systems, breast, endocrine system, skin, bone, skeletal muscle, bone marrow). Multidisciplinary lectures are given by the members of the departments of pathology, cell biology and physiology, medicine, and surgery who have ongoing research in these areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2740 - MOLECULAR PATHOBIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Some representative of major disease categories (autoimmune, inflammatory, toxic, degenerative, infectious, genetic, and neoplastic) will be examined in terms of patient demographics (who), gross and microscopic morphology (what), and etiology/molecular mechanisms (why).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2750 - RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students present their research, or a recent research article from a broad range of topics selected by the student in consultation with a faculty advisor. The course meets weekly during which the student presents his/her research in progress or an article of his/her choice. Emphasis is placed on a careful analysis and critical evaluation of the manuscript as well as the development of teaching and speaking skills needed for scientific presentation. The student is expected to elucidate issues relevant to the topic and to answer questions from other graduate students and faculty.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCMP 2760 - INTRODUCTION TO TISSUE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to tissue engineering. Tissue engineering is defined as the development and manipulation of laboratory-grown molecules, cells, tissues, or organs to replace and/or support the function of injured body parts. Tissue engineering is highly interdisciplinary and therefore crosses numerous engineering and medical specialties. Upon completing this course, the graduate and undergraduate students should: understand the basic principles behind human cell and tissue biology and cell. Be familiar with the general types of biomaterials used in tissue engineering. Understand techniques utilized to design, fabricate, and functionally assess tissue engineering systems. Apply the combined knowledge of tissue organization and tissue engineering strategies to design a unique, reasonable tissue engineering solution. This five-part course covers cell and tissue biology, biomaterials, drug delivery, engineering methods and design, and clinical implementation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCMP 2770 - BIOMATERIALS AND BIOCOMPATIBILITY

Minimum Credits: 3

Maximum Credits: 3

This course serves as an introduction to biomaterials and biocompatibility and assumes some background in organic chemistry and biology. The first half of the course connects biomaterial applications. The second part of the course introduces biocompatibility issues as they follow from protein adsorption, thrombosis, inflammation and infection are primary interest. Throughout the course ties are made between the topic of student and clinically relevant material and device performance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 2780 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Students will focus on a selected topic in cellular and molecular pathology and write a paper under the direction of a faculty advisor.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

MSCMP 2790 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in cellular and molecular pathology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Cellular & Molecular Pathology (PHD) or Interdis Biomedical (UNK)

MSCMP 3700 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of 40 credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSCMP 3710 - CANCER BIOLOGY AND THERAPEUTICS

Minimum Credits: 3

Maximum Credits: 3

This course presents biochemical and clinical aspects of cancer biology and therapy, and is designed for graduate students training in the basic sciences or medicine. The lectures cover: the biology of normal and neoplastic cells, mechanisms of neoplastic transformation, chemical and environmental carcinogenesis, viral oncogenesis, breast and prostate cancer, chemotherapy, radiotherapy, gene therapy, tumor immunology, and nutrition and cancer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3715 - BIOINF CANCER BIOL & THERPUTCS

Minimum Credits: 1

Maximum Credits: 1

Reading and discussion on bioinformatics resources available to enhance research on cancer biology and therapeutics. We will discuss bioinformatics databases and other resources related to: regulatory networks and signal transduction pathways, genes associated with cancer risk and the progression of cancer; cytogenomics, sources of information on the distribution of cancer occurrence and trends in the us population, databases DNA repair genes, their structure & function, models of cancer progression & responses to therapy, biomarkers for cancer detection, treatment & prevention.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCMP 3730 - TOPICS IN EXPERIMENTAL NEUROPATH

Minimum Credits: 1

Maximum Credits: 1

This course critically evaluates the latest scientific literature concerning diseases of the central nervous system. Emphasis will be placed on methodologies as they are applied to the study of human neurologic diseases. Participants will present scientific papers and lead the classroom discussions. This course is open to students of all levels and will include both basic scientists and clinicians (residents, faculty).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCMP 3735 - EXTRACELLULAR MATRIX IN TISSUE BIOLOGY AND BIOENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Extracellular matrix (ECM) is an important structural and signaling component of all tissues. It plays a defining role in how differentiated cells and tissues respond to homeostatic signals, tissue regeneration, response to inflammation, and wound healing. Indeed one can generalize and state that there is no aspect of the biology or function of any given tissue in which ECM does not play an important role. The objective of the proposed course

is to bring to students the knowledge of fundamental aspects of ECM, its importance for tissue function and its potential use in bioengineering applications. The course will start by providing information about structure and gene expression regulation of the main protein and glycosaminoglycan components of ECM. This will be followed by lectures describing the mechanisms by which ECM components interact with their receptors (integrins) and the intracellular signaling cascades and multiple protein allosteric interactions mediating the transmission of the signal from integrins to multiple intracellular targets affecting cell proliferation, function and cell-cell communication. TGF-beta is an important regulator of ECM synthesis and a special lecture will be devoted to gene regulation of ecm components and the role of TGF-beta. Subsequent lectures will focus on histologic techniques for visualization of ECM and specific tissue examples in which ECM changes define a particular biological model. ECM is known to be remodeled early in liver regeneration and re-synthesized at the end of the regenerative process. ECM signaling is defining the regulation of liver size and termination of regeneration. This will provide an example to illustrate the multifaceted aspects of ecm and cell interaction in a well-known model of tissue biology. Specific targeted lectures will also be given on ECM in wound healing, and repair of tissue in central nervous system, bone and cartilage. ECM is important as a potential barrier for cancer invasion. The mechanisms by which cells invade ECM will be examined in the context of cancer and also in the context of organ building and tissue morphogenesis in embryonic development. The cellular approaches utilizing ECM in bioengineering and tissue reconstruction will be also presented. These will include preparation of decellularized organs (a technique currently applied to liver with partial success in cell recolonization); functions of hyaluronic acid in tissue reconstruction and aspects of its signaling; ECM in vascular reconstruction, and biology of joints; ECM in muscle biology and reconstruction. The course is addressed to graduate students of the interdisciplinary biomedical science program of the school of medicine as well as the bioengineering graduate program. We are expecting a roughly equal proportion of students from those two groups in a class of 20 students. Even though both groups of students are highly sophisticated, particular attention will be given to ensure that the differences in backgrounds do not interfere with assimilation of the fundamental concepts imparted from the lectures. It is also anticipated that some of the concepts to will be presented will be summaries of a vast amount material of biomedical literature. To facilitate full development of lectures and topics which chose a format of 1.5 hours per lecture, to give the lecturers the opportunity of covering all relevant issues in proper depth. To our knowledge, there is no comparable course fully dedicated to ECM biology and bioengineering applications in either the school of medicine or the bioengineering curriculum. It should also be noted that the reviewers of the Cater Training grant noticed the absence of such a course and expressed a desire to have one developed. We believe this course will be important in generating an interest and a depth of knowledge in issues related to matrix biology as well as support the mission of the cater training grand.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3740 - STEM CELLS

Minimum Credits: 3

Maximum Credits: 3

This course will provide a comprehensive overview of stem cell biology - an intriguing & a most-debated research area. The course will focus on the biology of stem cells & their role in health & disease with emphasis on development & carcinogenesis. Trans-differentiation of stem cells for tissue engineering applications will also be discussed. Lectures & student presentations will cover: embryonic as well as fetal & adult stem cells in blood, liver, brain, muscle, kidney, pancreas & gut. Students will also be educated on bioethical issues & existing laws governing stem cell research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3750 - ANGIOGENESIS

Minimum Credits: 3

Maximum Credits: 3

Angiogenesis/vasculogenesis is one of the important research areas in biomedical sciences. This course will provide extensive basic knowledge of devel, cellular, mol biology of angiogenesis and most recent advances in its clinical applications. Topics include: 1. Angiogenesis in physiological and pathological process; 2. Molecular and cellular regulation of angiogenesis; 3. Current advances in angiogenic therapies. Recent outstanding research publications will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSCMP 3760 - RESEARCH SEMINAR: REGENERATIVE MEDICINE

Minimum Credits: 1

Maximum Credits: 1

Research seminar in regenerative medicine is geared towards providing updates information on topics in the field of regenerative medicine, tissue

engineering and stem cell applications. Through biweekly seminars, the students will be acquainted to the recent advances in the ever-growing field of regenerative medicine. Experienced faculty will deliver lectures in this seminar series.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

MSCMP 3770 - CELL THERAPY

Minimum Credits: 3

Maximum Credits: 3

This course will focus on cellular therapy, which includes technologies and strategies applied to the isolation, expansion and preservation of cells for use in regenerative medicine and transplantation, and the use of cellular therapy techniques to a variety of disease states. The overall topic of this course closely interfaces with the areas of gene therapy, stem cell biology, immunology and tissue engineering. Students will also critically read and review the literature in the field of cellular therapy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3780 - SYSTEMS APPROACH INFLAMMATION

Minimum Credits: 2

Maximum Credits: 2

This course is focused on particular topics of great biologic complexity in critical illness, where modeling has the potential to translate in improved patient care. Lectures are provided by basic (biological and mathematical sciences) and clinical faculty, in conjunction with members of industry and speakers from outside institutions. This information will be communicated within the framework of defined themes that describe the complexity of inflammation in acute and chronic illnesses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSCMP 3790 - BASICS OF PERSONALIZED MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Personalized medicine is becoming a reality that is being driven by ongoing discoveries in cell biology, genomics, proteomics, and metabolomics. The translational speed of these discoveries, particularly in the diagnostic, prognostic, and theragnostic arenas, is rapid. We believe that in the future personalized medicine diagnostics will involve both physicians and basic scientists. A major obstacle to this approach is the lack of training components for basic scientists in this area. This course aims to close that gap and provide an appreciation for, and understanding of, key principles of clinical development and testing in order to help bridge this gap. The course will be designed to delve into concepts of personalized medicine using focused topic areas. The first week will introduce the principles and overriding concepts of clinical test development, which differ qualitatively from investigational research. Next there will be six 2-week sessions, with each section focusing on a separate testing modality. Topics will include inherited genetic diseases and predispositions, acquired genetic changes (cancer), metabolomic profiles of endocrine diseases, immune networks for transplant and rejection, proteomic profiling in blood disorders, and proteomic detection of shock and organ failure.

Petroleum Engineering

PETE 2004 - PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This course is designed to provide students who are engaged in thesis or dissertation research an opportunity to participate in an internship with an external organization. The internship must be related to the thesis or dissertation research.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PROG: Swanson School of Engineering

PETE 2097 - SPECIAL PROJECTS

Minimum Credits: 1

Maximum Credits: 6

Student develops an individual project under supervision of a faculty member. Project may be experimental, design-oriented, or instructional. A written report is prepared.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

PETE 2160 - PETROLEUM RESERVOIR ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course covers the principles of reservoir engineering and material balance calculation in petroleum reservoirs. The topics include petroleum origin and oil occurrence and migration; oil , gas, and gas-condensate reservoirs; basic drilling of oil and gas wells; p-v-t behavior of natural gas; material balances in gas reservoirs; oil reservoirs under simultaneous dissolved gas drive, gas cap drive, and water drive; generalized material balance in petroleum reservoirs; basic equations for fluid flow in reservoirs, absolute, effective, and relative permeabilities; and a design project on reservoir calculations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

PETE 2201 - RECOVERY OF OIL BY WATERFLOODING

Minimum Credits: 3

Maximum Credits: 3

Theory of immiscible fluid displacement starting with frontal advance theory and applying it to waterflooding, fluid patterns, sweep efficiency, stratified reservoirs, etc. Relative permeability experiments are simulated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

PETE 2204 - ENHANCED OIL RECOVERY PROCESSES

Minimum Credits: 3

Maximum Credits: 3

This course covers different topics on enhance oil recovery processes (co₂, thermal, miscible fluids and surfactants); coal-bed methane, enhanced methane recovery, and underground coal gasification; surface and in-situ heavy oil, tar sand and oil shale production; and co₂ capture, sequestration and disposal. The fundamentals, thermodynamics, reaction kinetics and transport phenomena as well as the environmental issues and regulations related to these topics are also covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

PETE 2205 - PETROLEUM PRODUCTION ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course covers principles of oil and gas production from hydrocarbon-bearing formations. Topics include: flow through porous media of incompressible, compressible and slightly compressible fluids; reservoir, producing formation, vertical lift, and chock performances; principles of gas lift, gas lift valves and design; and sucker rod pumping design; and design project on artificial gas lift.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering (PENGR)

PETE 2207 - PETROLEUM AND NATURAL GAS PROCESSING

Minimum Credits: 3

Maximum Credits: 3

The course covers different topics on natural gas, petroleum and petrochemical processing. The topics include natural gas cleanup, methane reforming for h₂ production, partial oxidation of ch₄ for synthesis gas production, and chemicals from methanol; refinery feedstocks, crude distillation and refinery products, alkylation, hydrotreating, catalytic reforming and isomerization, catalytic cracking, resid, tar sands and oil shale processing; and methanol/other alcohols, ethylene, fertilizer, and plastic production plants.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

PETE 2208 - PETROLEUM DRILLING AND WELL COMPLETION DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course covers different topics related to drilling operations; directional drilling techniques; completion operations; and work-over operations. The drilling operations encompass drilling rig components, bit selection program, drilling fluid types, cementing program design and well control/safety. The directional drilling techniques include: well-path design/applications, downhole motor components, directional surveys, and logging while drilling. The well completion operations contain: formation evaluation tools, open-hole log interpretation, coring tools, flow testing, perforating, hydraulic fracturing and other stimulation techniques. The work-over operations comprise work-over rig components, cased hole log interpretation, plugs/packers/fishing tools, squeeze job design, casing integrity tests and stimulation evaluation. A special project on casing design is also included.

Academic Career: Graduate

PETE 2209 - HYDRAULIC FRACTURING MECHANICS AND APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

Course description: this class will prepare students to wisely and critically design hydraulic fracturing treatments as well as make informed recommendations to employers, governments, and communities about the risks and benefits of hydraulic fracturing methods. Upon completion of this course, students will be equipped to use engineering formulae to estimate hydraulic fracture dimensions, evaluate strengths and weaknesses of various modeling approaches, characterize subsurface conditions from wellbore pressure analysis, make sound recommendations for monitoring, and compare and contrast approaches and risks for a range of application domains.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

PETE 2211 - RESERVOIR SIMULATION

Minimum Credits: 3

Maximum Credits: 3

This course introduces the students to the simulation process of fluid flow in petroleum reservoirs. Governing equations required to describe fluid flow in porous media are derived, numerical techniques for solving the equations are introduced. Students will learn how reservoir flow simulators can be used in assessment studies of hydrocarbon reservoirs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

PETE 2212 - CO2 FOR ENHANCED OIL RECOVERY AND FRACKING

Minimum Credits: 3

Maximum Credits: 3

This course will cover the physical properties of CO₂ that make it an attractive solvent for enhanced oil recovery (EOR), the natural and anthropogenic sources of CO₂, the types of fields that are suitable for CO₂ EOR, and the mechanisms responsible for CO₂ increasing oil recovery. The current status of CO₂ EOR in the United States will also be reviewed, along with its potential for future expansion. The foremost technical challenges of CO₂ EOR, namely mobility control and conformance control, will be discussed along with a current research efforts. The course will conclude with a brief review of how CO₂ has been used as a hydraulic fracturing, whether as a pure fluid, as the gaseous component of foams, or as an energizing component.

CHE 2016 - FUNDAMENTAL PRINCIPLES OF BIODEGRADABLE METALLIC ALLOYS

Minimum Credits: 3

Maximum Credits: 3

Biodegradable metals have emerged as a new class of materials with significant potential for myriad biological applications, in particular, the craniofacial, orthopedics and cardiovascular areas. The latter has already witnessed clinical trials with few patients already being implanted with a biodegradable metallic stent. This course is designed to introduce the principles and various fundamental concepts of this novel class of metallic alloys. These include fundamental principles of metal alloy physics and theory, important concepts of phase diagrams, physical metallurgy concepts, metallic glass theory, processing fundamentals, biocompatibility, and toxicity issues. The effect of microstructure on biocompatibility and corrosion will also be discussed. The course objective is to introduce the student to this new family of bio-functional metals and their biodegradable properties. In doing so, the student will be familiar with these materials and their useful applications. The students are expected to have had courses in thermodynamics and physiology.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Graduate School of Engineering

CHE 2017 - CHEMICAL ENERGY AND THE NATURE OF THE CHEMICAL BOND

Minimum Credits: 3

Maximum Credits: 3

An overview of energy transformations arising from chemical bonding in chemical catalysis, electrocatalysis, and combustion. Students will be introduced to qualitative quantum chemistry concepts: potential energy and kinetic energy operators, wave functions, electron correlation, and GVB diagrams for analysis of chemical bonds and molecular structures in energy transformations. Students are expected to have completed Undergraduate physical chemistry course on quantum mechanics or equivalent or have prior consent from the instructor.

Academic Career: Graduate

Course Component: Lecture

CHE 2018 - INTRODUCTION TO SURFACE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Surface and interface engineering is critical to many important applications, e.g., coating, composite, biomedical device and membrane. With the fast growth of nanotechnology, understanding the surface properties becomes even more important since nano-sized materials, e.g., graphene, have no bulk phase but surfaces. This course combines elements of physical chemistry and materials of surface and interface in order to serve as the introduction to the surface engineering. The course spans from surface tension, capillary, superwettability to lubrication as well as 2D materials, allowing a comprehensive view to both classic surface science and cutting-edge surface technology. By the end of this class, students will understand both the fundamental principles of surface science and engineering approaches on tailor a given solid surface.

CHE 2600 - PRINCIPLES AND PROPERTIES OF COMPLEX ENGINEERED MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Complex engineered materials are a new class of systems comprising a variety of inorganic materials. This course is designed to introduce the principles and various functional properties exhibited by inorganic materials at the Nano, Micro and Meso scales. Since inorganic materials comprising metallic and non-metallic systems are a very complicated class of materials that display myriad properties, this course is outlined to discuss the most important properties. Thus, the course will mainly cover optical, electrical, thermal and electrochemical properties of both crystalline and amorphous inorganic complex engineered materials. In each category, the principles underlining each property will be discussed followed by the material class, behavior and applications. The effect of microstructure on each of the properties will also be discussed. The course objective is to introduce the student to these complex engineered materials family and their properties. In doing so, the student should be able to identify a material for a particular application.

Academic Career: Graduate

Course Component: Lecture

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CHE 2982 - ISSUES IN RESEARCH AND TEACHING

Minimum Credits: 2

Maximum Credits: 2

This course will present to graduate students issues relating to safety, ethics in science, and research methods. Topics in scientific writing, data analysis and oral presentation skills will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CHE 2999 - M.S. THESIS

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CHE 3001 - GRADUATE SEMINAR

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: PROG: Swanson School of Engineering

CHE 3004 - PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This course is designed to provide students who are engaged in thesis or dissertation research an opportunity to participate in an internship with an external organization. The internship must be related to the thesis or dissertation research.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis
Course Requirements: PROG: Swanson School of Engineering

CHE 3460 - ADVANCED SCIENTIFIC VISUAL COMMUNICATION

Minimum Credits: 3
Maximum Credits: 3
This fast-paced course will train students to produce professional scientific visual work, suitable for publications, presentations, and communicating to the public. Advanced topics, such as 3d modeling & animation, handling and visualizing large datasets, interactive displays, and 3d printing will be covered. The course will emphasize the importance of producing high quality artwork in scientific communication. The primary tools used will be gimp, inkscape, and blender, all of which are open source, and the python programming language for large dataset visualization. PowerPoint for presentations and limited figure production will also be used.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

CHE 3910 - INDIVIDUAL STUDY

Minimum Credits: 1
Maximum Credits: 3
Individual study program at Ph.D. Level.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

CHE 3921 - SPECIAL TOPICS IN CHEMICAL ENGINEERING

Minimum Credits: 1
Maximum Credits: 1
Covers a variety of topics of specialized interest to chemical engineering including topics in thermodynamics, reaction engineering, mathematics, electrochemistry, materials science, and biological engineering.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

CHE 3922 - MODELING OF SOFT MATTER

Minimum Credits: 3
Maximum Credits: 3

This course will provide an overview of several contemporary research topics pertaining to modeling soft and biological materials. Lectures will focus on self-assembly and phase transitions, colloidal dispersions, polymers, gels, liquid crystals. A brief introduction to flow of complex fluids (rheology) and computer simulation methods (such as dissipative particle dynamics, cell dynamics systems, lattice Boltzmann simulations and others) will also be provided. Special attention will be given to point out how methods learned during this course are applied in current frontier research in soft condensed matter: from studies focusing on the origin of life to studies aiming to design soft synthetic biomimetic materials. Along with the lectures the course will include short in-class implementation workshops of some of the methods using mathematical software.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CHE 3935 - PARTICLE-BASED MATERIALS MODELING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the variety of particle-based simulation techniques that are of utility in the study of functional materials. The techniques discussed range from atomistic/quantum techniques, to Meso-scale techniques, to microscale techniques and are useful for modeling such phenomena as: isotope separation using carbon nanotubes, surfactant migration on the surface of droplets, and granular flows in large-scale mixing devices. While the applications range of length and time scales is quite diverse we will emphasize how similar are the theoretical underpinnings of many of these techniques. Among others, we will discuss molecular dynamics, Monte Carlo, molecular mechanics, and the path integral formalism as representative atomistic and quantum simulation techniques; dissipative particle dynamics, Stokesian/Brownian dynamics and lattice Boltzmann for Meso-scale simulation; and the discrete element method.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: Swanson School of Engineering

CHE 3980 - PHD RESEARCH METHODOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course involves the discussion and application of research methodology important for the successful completion of Ph.D. dissertation research.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CHE 3990 - ADVANCED GRADUATE PROJECTS

Minimum Credits: 1

Maximum Credits: 15

Preliminary work for Ph.D. Dissertation.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CHE 3999 - PH.D. DISSERTATION

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Chemistry

CHEM 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1

Maximum Credits: 12

Course designed to be taken by master's degree students who are writing their thesis.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CHEM 2090 - SEMINAR IN CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

This course is created for graduate students to register for their thesis seminar when they do not declare a division or do not satisfy divisional requirements. Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2110 - CHEMICAL SYMMETRY: APPLICATIONS IN SPECTROSCOPY AND BONDING

Minimum Credits: 3

Maximum Credits: 3

Group theory and molecular symmetry, with emphasis on their application to the theoretical aspects of bonding in inorganic and organometallic complexes, as well as to the experimental techniques (electronic, vibrational, and photoelectron spectroscopy) typically used to elucidate the nature of intramolecular interactions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2120 - DESCRIPTIVE INORGANIC AND ORGANOMETALLIC CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

This course is intended to provide a solid background in modern inorganic chemistry for those doing research in all branches of chemistry. Much of the course material is descriptive, but the objective of the selection and presentation of the material will be to develop an understanding of the principles controlling the structures and reactivity of inorganic materials. Aspects of all areas of inorganic chemistry will be discussed, including main group, transition metal, and organometallic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2180 - INORGANIC CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Modern bonding theories are developed to the level that permits some understanding of the effects of structure and bonding on chemical properties. Periodic relationships are discussed and applied to selected families of elements. Emphasis is placed on those aspects of structure, bonding and periodic relationships that are helpful in unifying a large body of chemical knowledge. Selected topics of current interest in inorganic chemistry are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2190 - SEMINAR IN INORGANIC CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2210 - ELECTROANALYTICAL CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Fundamental electrode processes common to all electrochemical cal methods; thermodynamics and kinetics of electrode processes; reaction coordinate diagrams for faradaic currents; exchange current and activation polarization; non-faradaic currents and electric double layer. Mass transfer processes. Linear sweep, cyclic and pulse voltammetric methods and their application to analysis as well as the study of reaction mechanisms and problems in battery technology, electrocatalysis, photovoltaic cells and chemically modified electrodes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2220 - CHEMICAL SEPARATIONS

Minimum Credits: 3

Maximum Credits: 3

A broad thermodynamic and kinetic framework encompassing all chemical separations is used to classify techniques. Concepts such as separation efficiency are generalized. The most powerful and widely used separations techniques are chromatographic, thus solution chemistry will be discussed to provide a chemical framework for chromatography. The use of gas and liquid chromatography will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2230 - ANALYTICAL SPECTROSCOPY

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of optical spectroscopic methods of analysis for determining composition and structure. The course includes analytical applications as well as mechanisms and instrumentation. Recent developments such as Fourier Transform IR Spectroscopy and the use of lasers in spectroscopy are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2240 - MASS SPECTROMETRY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CHEM 2290 - SEMINAR IN ANALYTICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

CHEM 2310 - ADV ORGANIC CHEMISTRY 1

Minimum Credits: 3
Maximum Credits: 3

A qualitative discussion of modern mechanistic interpretations of relations between structure and reactivity. Special emphasis is placed on the roles of reactive intermediates such as Carbonium ions, carbanions, carbenes and radicals. Study of the factors that influence the equilibria and reaction mechanisms of organic molecules.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2320 - ADV ORGANIC CHEMISTRY 2

Minimum Credits: 3
Maximum Credits: 3

A course designed to cover modern synthetic methods for the assembly of complex organic molecules (stereospecific olefin synthesis, cycloaddition reactions, sigmatropic rearrangements, organometallic chemistry, natural product synthesis).

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2330 - ORGANOMETALLIC CHEMISTRY

Minimum Credits: 2
Maximum Credits: 2

A single-semester two-credit lecture course focusing on the mechanistic and synthetic aspects of state-of-the-art organometallic chemistry will be offered. Understanding how organometallic structure and electronics influence reactivity patterns will provide students with predictive tools for interpreting and exploiting organometallic reactivity. The course will focus on the thermodynamics, kinetics and stereoselectivity of main group- and transition metal-mediated reactions having applications in organic synthesis.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2370 - SYNTHETIC ORGANIC CHEMISTRY

Minimum Credits: 2
Maximum Credits: 2

This early graduate level course builds onto sophomore organic I and II courses by applying the learned principles to the synthesis of FDA-approved drug molecules. The emphasis of the course will be on analyzing the molecular structures of drugs in a retrosynthetic fashion, followed by developing suitable synthetic routes to these molecules. The reaction mechanisms of key steps of these syntheses will be discussed in detail. Further discussion will include fundamental functional group interconversions, chemoselectivity, and protecting group use, enantioselective synthesis, and organometallic chemistry. Students will learn about the complexities of modern drug molecules, how their structures can be analyzed, and how they are synthesized.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2380 - TECHNIQUES OF ORGANIC RESEARCH

Minimum Credits: 2
Maximum Credits: 2

A course which serves as a guide to the interpretation of ultraviolet, infrared, nuclear magnetic resonance and mass spectra of organic compounds.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CHEM 2390 - SEMINAR IN ORGANIC CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2430 - QUANTUM MECHANICS AND KINETICS

Minimum Credits: 3

Maximum Credits: 3

Basic quantum mechanics, with emphasis on the theory of chemical structure and dynamics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2440 - THERMODYNAMICS & STATISTICAL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Development of equilibrium statistical mechanics and thermodynamics. Applications to chemical systems. These applications include solutions, phase transitions (Ising Model) and reaction theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2490 - SEMINAR IN PHYSICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Only students planning to present a seminar should register for this course. Others may attend without registering.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2540 - INTRO TO MASS SPECTROMETRY

Minimum Credits: 3

Maximum Credits: 3

A basic, yet comprehensive, introduction to mass spectrometry is presented including a summary of instrumentation, spectral interpretation procedures, and data handling. Applications of mass spectrometry to geology, biochemistry, energy research and the environment are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2600 - SYNTHESIS & CHARACTERIZATION OF POLYMERS

Minimum Credits: 3

Maximum Credits: 3

Synthesis and characterization of polymers is focus of course. Current methods of polymer synthesis will be surveyed, practical implementation of

reactions and kinetic consequences of reaction strategies in homopolymer, copolymer and block copolymer synthesis. Techniques for characterization of polymer molecular weight, chemical composition, and stereochemistry (Ft-Ir, NMR, other spectroscopic and chemical methods) will be discussed. Brief treatment of polymer solution thermodynamics and selected topics in polymer chemistry will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2620 - ATOMS, MOLECULES AND MATERIALS

Minimum Credits: 3

Maximum Credits: 3

This course will use qualitative molecular orbital theory to understand the design and performance of new materials. A link will be made between "small molecule" intuition and the solid-state perspective on large molecules, clusters and solids.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2700 - GRADUATE RESEARCH SEMINAR

Minimum Credits: 0

Maximum Credits: 0

Seminar given by faculty on graduate research opportunities in chemistry. This course is designed especially to help students in their selection of a research adviser.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CHEM 2710 - CHEMISTRY RESEARCH ROTATION EXPERIENCE

Minimum Credits: 1

Maximum Credits: 1

First year graduate students will spend a term carrying out research in various laboratories in order to make a well informed decision about choosing a PhD research adviser.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SNC Basis

CHEM 2810 - BIOLOGICAL CHEMISTRY 1

Minimum Credits: 3

Maximum Credits: 3

This course considers the chemical properties of amino acids, oligopeptides, and proteins; the biosynthesis of proteins; the physical interactions that determine the properties of proteins; the conformational properties of polypeptide chains and biomacromolecules, integral membrane proteins and ion channels; interactions between proteins and other molecules; enzyme kinetics; catalytic antibodies; and biosynthesis of small molecules.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2820 - BIOLOGICAL CHEMISTRY 2

Minimum Credits: 3

Maximum Credits: 3

This course will discuss select biological systems and problems and the chemical tools that are being developed in order to study and address them. In addition to an introduction to cell biology and molecular and cell biological techniques, topics may include: conditional control of gene editing, forward and reverse chemical genetics, sensors of cellular processes, protein bioconjugation, small molecule inhibitors of kinase function, activity-based probes, small molecule dimerizers of proteins, and targeted protein degradation. This will lead to the following expected learning outcomes:

basics of cell biology, biological techniques and vocabulary relevant to the field of chemical biology, important research topics and research areas in the field of chemical biology, navigating and critical reading of chemical biology primary articles and review articles, and knowledge of key labs that are major contributors to the field of chemical biology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2830 - SYNTHETIC BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 2890 - SEMINAR IN BIOLOGICAL CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CHEM 2970 - TEACHING OF CHEMISTRY

Minimum Credits: 1

Maximum Credits: 1

This course is for graduate students who are teaching assistants/fellows in the department.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

CHEM 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Research credits towards a MS and Ph.D. degree.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CHEM 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

Research credits for the Ph.D. Degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CHEM 3001 - PREPARATION FOR THE STEM CLASSROOM

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad HSU Basis

CHEM 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

This course consists of a MOOC offered by Coursera, jointly developed at Boston University, Vanderbilt, Michigan State and Wisconsin-Madison, combined with in-person class meetings of the local learning community at the University of Pittsburgh. Students will meet with the facilitator for the course, Dr. Mary Besterfield-Sacre, four times during the semester to go over the material in the online sessions, and to relate it to their teaching experiences in labs, discussions, and classrooms. The course will draw on the expertise of experienced stem faculty, educational researchers, and staff from University teaching centers, many of them affiliated with the center for the integration of research, teaching and learning (CIRTL), a network of 22 research universities collaborating in the preparation of stem graduate students and post-docs as future faculty members.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Attributes: Hybrid

CHEM 3100 - ADVANCED TOPICS INORGANIC CHEM 1

Minimum Credits: 1

Maximum Credits: 1

Minicourse. Topics vary from term to term, but all focus on some aspect of inorganic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3110 - ADVANCED TOPICS INORGANIC CHEM 2

Minimum Credits: 2

Maximum Credits: 2

Minicourse. Topics vary from term to term, but all focus on some aspect of inorganic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3120 - ADVANCED TOPICS INORGANIC CHEM 3

Minimum Credits: 1

Maximum Credits: 1

Minicourse. Topics vary from term to term but all focus on some aspect of inorganic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3300 - ADVANCED TOPICS ORGANIC CHEM 1

Minimum Credits: 1

Maximum Credits: 1

Minicourse. Topics vary from term to term but all consider some specific aspect of organic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3310 - ADVANCED TOPICS ORGANIC CHEM 2

Minimum Credits: 2

Maximum Credits: 2

Minicourse. Topics vary from term to term but all consider some specific aspect of organic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3380 - ORGANIC GROUP MEETING

Minimum Credits: 1

Maximum Credits: 1

A weekly meeting to discuss the most recent advances in organic chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3390 - SYNTHETIC ORGANIC COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

A weekly workshop on current synthetic organic chemistry literature and state of the art research.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad LG/SNC Basis

CHEM 3410 - ADVANCED TOPICS PHYSICAL CHEM 2

Minimum Credits: 2

Maximum Credits: 2

Minicourse. Topics vary from term to term but all consider some specific aspect of physical chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3430 - INTRO MODERN COMPUTATIONAL CHEM

Minimum Credits: 3

Maximum Credits: 3

This advanced quantum mechanics course will cover the treatment of angular momentum in electronic states, scattering and spectroscopy. The use of Clebsch-Gordon and Wigner coefficients to analyze angular momentum coupling and recoupling will be discussed, as will be methods to create and measure polarization and alignment in molecules.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3450 - MOLECULAR MODELING AND GRAPHICS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to computational methods to determine molecular structures and stabilities, Monte Carlo and Molecular Dynamics Simulation Methods, and the use of graphics for displaying structures, charge densities, and other properties. Use will be made of both microcomputers and the Cray XMP at the Pittsburgh Super Computing Center.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3460 - INTRO MODERN COMPUTATIONAL SCI

Minimum Credits: 3

Maximum Credits: 3

This course will emphasize the application of microcomputers and numerical methods for solving problems of importance in chemistry. Methods to be studied include solving systems of linear and differential equations, least squares fitting, eigenvalue problems, solution of nonlinear equations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3480 - KINETICS AND MOTION IN CHEM RXNS

Minimum Credits: 3

Maximum Credits: 3

A general treatment of the rates of gas phase reactions with emphasis on theories and experimental measurements of elementary rate processes. Principle topics include data handling, mechanisms, and transport effects; two-body unimolecular, and recombination reactions; and special topics such as explosions, flames, shock tube kinetics, excited states, and energy transfer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3700 - SCIENTIFIC PROPOSAL WRITING

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CHEM 3800 - ADVANCED TOPICS BIOLOGICAL CHEMISTRY 1

Minimum Credits: 1

Maximum Credits: 1

Minicourse. Topics vary from term to term but all consider some specific aspect of biological chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHEM 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

Directed study in a specific area of chemistry to enhance preparation for graduate research.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Chinese

CHIN 2000 - RESEARCH AND THESIS MA DEGREE

Minimum Credits: 1

Maximum Credits: 6

This course recognizes work performed in the course of preparing the thesis.

Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Attributes: Asian Studies

CHIN 2025 - ASPECTS OF THE CHINESE LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

Aspects of the Chinese language will offer a linguistic introduction to Chinese. No prior knowledge of linguistics is assumed although familiarity with linguistic analysis is a plus. The Chinese language is substantially different from English or other Indo-European languages. It is also distinct from some other East Asian languages. For instance, it has a logographic writing system and is a tonal language. Its word order is more flexible than English and is a topic-prominent language. It does not have rich grammatical inflections but has a limited number of aspectual markers. The course serves the following purposes: (1) introduce the basic facts of the Chinese language including its development, the phonology, morphology, the semantic and syntactic aspects of Mandarin Chinese, and the interactions of the language with Chinese culture and the society; (2) introduce elementary linguistic concepts relevant to Chinese to enable students to use the right tool to describe and critically analyze the features of a language; (3) encourage students to reflect on their language learning experience or knowledge of other languages to conduct reasoning, such as analyzing the sources of difficulty in their studying of Chinese; (4) to inspire interest in a range of topics including differences in modern and classical Chinese, philosophical belief embodied in the language, Chinese culture manifested in the language (such as the notion of politeness, face, etc.), and to lay a foundation for further studies in linguistics as well as in those relevant topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2047 - CHINESE AND WESTERN POETRY

Minimum Credits: 3

Maximum Credits: 3

A comparative study of Chinese and Western lyric poetry. This course explores the world of feeling as expressed in the poetry of two vastly different worlds: China and the West and focuses on the language of feeling in a poetic medium. The purpose of this course is to appreciate how differences between the two poetic traditions is essential to a better understanding of the two cultures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Asian Studies, West European Studies

CHIN 2059 - ADAPTED FOR THE SCREEN: CHINESE LITERATURE AND FILM

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CHIN 2083 - MASTERPIECES OF CHINESE LITERATURE

Minimum Credits: 3

Maximum Credits: 3

This course is devoted to the study of Chinese literature from ancient times to the end of the 19th century. Lectures and readings include prose (historical, philosophical and literary texts, legends and myths of the remote past, anecdotes, short stories and fantastic tales of ghosts and love) and poetry (from the book of songs to the poetry of the T'ang and Sung periods).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2084 - MASTERPIECES OF CHINESE LITERATURE AND FILM

Minimum Credits: 3

Maximum Credits: 3

A critical analysis of some of the most representative literary works in modern China from a literary and socio-political perspective. Film is used as a means of enhancing the student's appreciation of the works under consideration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2088 - NEW CHINESE CINEMA

Minimum Credits: 3

Maximum Credits: 3

Students will study Chinese films made by filmmakers of mainland China and Taiwan. They will learn about origins, development, themes, and styles with major directors and important films of new Chinese cinema being studied. Students will have an opportunity to understand contemporary Chinese culture and society.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2089 - THE WORLD OF CHINA

Minimum Credits: 3

Maximum Credits: 3

Various topics are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2090 - GREAT MINDS OF CHINA

Minimum Credits: 3

Maximum Credits: 3

First segment on Confucianism, including the Analects and Mencius, will be studied with relevant commentaries, stressing implications for Chinese culture, especially in ethical and socio-political dimensions. Second segment on Taoism, Lao Tzu and Chuang Tzu, will be studied with emphasis on impact on the arts and literature. Final segment on Buddhism will concentrate on representative sutras of the tradition, Diamond Sutra and texts from the Chan (Zen) masters.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2700 - TRANSLATION THEORY AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CHIN 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 6

Tutorial for advanced graduate study.

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis
Course Attributes: Asian Studies

Civil & Environmental Engineer

CEE 2085 - GRADUATE DEPARTMENTAL SEMINAR

Minimum Credits: 0
Maximum Credits: 0
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

CEE 2100 - NUMERICAL METHODS

Minimum Credits: 3
Maximum Credits: 3
Finite difference methods and finite element methods for parabolic, elliptic and hyperbolic differential equations. Also included are numerical methods for structure analysis and dynamics of vibration.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Swanson School of Engineering

CEE 2105 - ADV CIVIL ENGRNG MATERIALS

Minimum Credits: 3
Maximum Credits: 3
Advanced topics in material behavior - fatigue, creep, fracture, etc. - As applied to high performance civil engineering materials; high strength low alloy steel, high strength concrete, composite materials, laminated timbers, etc., With special emphasis upon infrastructure rehabilitation.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Swanson School of Engineering

CEE 2106 - NONCONVENTIONAL ENGINEERING MATERIALS

Minimum Credits: 3
Maximum Credits: 3
This course focuses on materials science topics relevant to the application of nonconventional materials in [civil] engineering structures, infrastructure and products. Increasingly, engineers are looking to [often locally-sourced] nonconventional materials to augment or replace resource-intensive conventional engineered materials, such as steel and concrete. This is especially true in resource-scarce regions of the planet. This course will address a broad range of nonconventional materials falling into three categories: i. advanced reinforced polymer composites (GFRP, CFRP, BFRP, pGFRP) and metals (Al and Ti); ii. traditional and vernacular materials such as earth-based materials and bamboo; iii. historic materials (and the repair and restoration thereof); Course deliverables are partially project driven, allowing students to pursue materials issues of interest to their plan or study or research. This course is open to all Engineering and Architecture students (as a technical elective).
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: CEE 1105 or ENGR 0022; CEE and ENGR Undergraduates must have at least 75 credit hours completed and a GPA greater than 3.2.; BS (Architecture) students may take course with permission

CEE 2201 - CONSTRUCTION COST ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course teaches the methodology for estimating construction costs. The course covers all types of costs and all types of construction. The student is introduced to standard reference materials and to computerized estimating systems. The course teaches methods and procedures for developing accurate estimates and the basis for follow-on cost control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2202 - CONSTRUCTION SCHEDULING

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student the theory and practice of planning, scheduling, and controlling the time and cost of construction projects. The course covers various advanced techniques such as cost duration analysis, critical resource analysis, stochastic modeling, and cost control. The course teaches the use of contemporary computerized software systems with hands-on application.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2203 - CONSTRUCT METHODS AND EQUIPMENT

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student how to plan, organize, and execute construction operations. The course includes typical operations in both building construction and engineering construction. The course describes how to properly construct in order to achieve quality and productivity objectives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2204 - CONSTRUCTION LAW AND RISK MGMNT

Minimum Credits: 3

Maximum Credits: 3

This course introduces the student to the legal and risk management issues in construction. The course covers the principles of contract law and various legal areas affecting construction such as environmental regulations, insurance, bonds, tort liability, dispute resolution, and professional services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2205 - CONSTRUCT FINANCE & COST CONTROL

Minimum Credits: 3

Maximum Credits: 3

This course introduces the student to the company level financial and accounting systems which are used in the construction industry, and to project control systems which are used to manage cost and time. The course includes such topics as financial accounting, cost accounting, financial statements, and variance analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering
Course Attributes: Global Studies

CEE 2206 - CONSTRCT & COST OF ELEC SUPPLY

Minimum Credits: 3

Maximum Credits: 3

This course teaches basic construction and cost estimating methodologies for single and three-phase electrical distribution systems that include wiring, power, and controls. The course uses commercial estimating systems and the national electrical code.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2207 - CONSTRCT & COST OF MECHL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course teaches the student how to plan, organize, and execute mechanical construction operations; and the methodologies for estimating their costs. The course covers mechanical systems such as water (supply and waste), HVAC, fire protection, and their controls.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2209 - LIFE CYCLE ASSMNT METH & TOOLS

Minimum Credits: 3

Maximum Credits: 3

This class will introduce students to life cycle thinking and provide engineers with tools to assess the sustainability and environmental impact of a product, process, or activity. Life Cycle Assessment (LCA) principles, methods, tools, and challenges will be explored throughout the course. Topics include material and energy flow analysis, environmental indicators and metrics for sustainability, case studies of LCA applications, and impact assessment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2210 - ENGR AND SUSTAINABLE DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course is intended as an introductory interdisciplinary engineering course. Topics include principles of sustainable design in engineering, manufacturing, infrastructure, communications, and community development; overview of environmental issues for engineers; design for the environment; models of environmental processes; introduction to the use of life cycle assessment; and case studies examining the relationship of green design and the field of engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

Course Attributes: Global Studies

CEE 2217 - GREEN BUILDING DESIGN AND CONSTRUCTION

Minimum Credits: 3

Maximum Credits: 3

Understanding the design and construction of green buildings are key elements in green and sustainable engineering. This course teaches all of the major aspects of green building design and construction, including sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation, and design process. The United States green building council's leadership in energy and environmental design green building rating system is used to demonstrate one possible green building rating system. Life cycle thinking will be discussed to expand the focus from not only design and construction, but also use, operations, and decommissioning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2218 - DESIGN FOR THE ENVIRONMENT

Minimum Credits: 3

Maximum Credits: 3

Design for the environment (DFE) is a specific set of design practices aimed at creating eco-efficient products and processes. Incorporating sustainability into product and process design as a design constraint is clearly a necessity, as all engineers must understand the limits on natural resources. Students will be introduced to the DFE toolbox which includes design for demanufacture, life cycle assessment, and ecofriendly materials selection. Students will also be exposed to real world industry sustainability challenges and hands on lab experiences designed in conjunction with local industry and organization partners. The course is also intended to be inter-disciplinary between engineering and business students to foster a balance between sustainability design efforts and business plans and strategies. Students can expect that labs will consist of a mix of field trips to partner companies and labs at the university. A major aspect to the course will involve student partnerships with local companies; students will be challenged to apply their DFE skills to projects that address sustainability challenges. Additionally, students will have the opportunity to participate in a summer residency to implement their project with their sponsor company at the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2230 - BUILDING INFORMATION MODELING

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to introduce the students to building information modeling (BIM) and other new and evolving technologies which are revolutionizing the building and horizontal infrastructure construction industry. Students will learn how BIM and other innovative technologies are being adopted currently by progressive builders to streamline the construction process through enhanced coordination, visualization, logistical planning, cost estimation and analysis. They will also learn how these new tools are enabling (and in some instances requiring) new highly integrated processes that are redefining architecture, engineering, construction and operations (AEEO) business relationships and delivery contracts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2320 - ADVANCED MECHANICS OF MATERIALS

Minimum Credits: 3

Maximum Credits: 3

The fundamentals of elasticity are introduced and related to various problems such as beams and bars on elastic foundations, unsymmetrical bending, torsion of thin walled members, curved bars, failure theories, and stability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2321 - ELASTICITY, PLASTICITY AND FRACTURE MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This course provides first-year graduate students with the fundamentals regarding mathematical derivations, mechanical models and numerical analyses in elasticity, plasticity and fracture mechanics. It is aimed at laying the foundations for the students for their future study and research in advanced mechanical problems. The main topics of this course includes: 1) equilibrium and compatibility in elastic domains; 2) complex potential method for elasticity problems; 3) plasticity fundamentals; 4) linear elastic fracture mechanics; 5) stress intensity factors; 6) cohesive crack model and crack band model; 7) size effect and scaling; 8) probabilistic fracture mechanics; and 9) micromechanics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Swanson School of Engineering (PENGR)

CEE 2330 - ADVANCED STRUCTURAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Theory and application of matrix stiffness and flexibility methods for analysis of framed structures. Computer implementation for the solution of two- and three-dimensional frames, trusses, and grid systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2333 - INTRODUCTION TO FINITE ELEMENTS

Minimum Credits: 3

Maximum Credits: 3

Introduction to the finite element method and its application to various problems of elastic elements and structures. Both physical and variational approaches are used.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2340 - CONCRETE STRUCTURES 2

Minimum Credits: 3

Maximum Credits: 3

Advanced behavior, strength and design of reinforced concrete structures, including column and frame stability effects, two-way slabs, and serviceability criteria. Introduction to earthquake design concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2341 - STEEL STRUCTURES 2

Minimum Credits: 3

Maximum Credits: 3

Advanced design criteria for steel structures, including composite beams, columns, and frames; member and system stability; first- and second- order analysis of frames; and serviceability criteria.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2343 - PRESTRESSED CONCRETE

Minimum Credits: 3

Maximum Credits: 3

Design of prestressed concrete beams and slabs, including shear and torsion effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2346 - REPAIR AND RETROFIT OF STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Introduction and use of performance-based design concepts. Analysis and modeling techniques for existing and repaired structures. Gravity and lateral load retrofit procedures. Selection, modeling and design of repair and/or retrofit measures for a variety of structures and building materials. Retrofit for blast loads.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2347 - BRIDGE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Introduce concepts of bridge engineering by providing the students with the necessary knowledge and skills to apply the AASHTO IRFD specifications for the analysis and design of highway bridge superstructure components.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2350 - MACHING LEARNING IN INFRASTRUCTURE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course covers theory and practical algorithms in machine learning from a variety of perspectives, with applications to solve problems in civil infrastructure engineering. The topics include linear methods for regression and classification, regularization, kernel smoothing methods, bayesian inference, sampling, decision tree learning, support vector machines, statistical learning methods, unsupervised learning and deep learning, as well as their field applications. This course is designed to give graduate-level students a thorough grounding in methodologies, technologies and algorithms in machine learning and push field applications in, but not limited to, civil infrastructure engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2360 - DYNAMICS OF STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of free and forced vibration of one and multi degree of freedom structures, including damping. Matrix formulation of multi-degree of freedom structures. Analytical and numerical methods for determining response; deflection and stress evaluation including damping effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2370 - INTRODUCTION TO NONDESTRUCTIVE EVALUATION AND STRUCTURAL HEALTH MONITORING

Minimum Credits: 3

Maximum Credits: 3

The course aims at providing an overview of the different techniques for the nondestructive evaluation (NDE) and the structural health monitoring (SHM) of civil and aerospace structures. Techniques such as electrical resistance strain gauges, fiber optic sensing and ultrasonics will be described within the framework of the NDE. Applications to materials characterization and defect detection will be discussed with emphasis on steel and composite structures. Global and local methods for SHM will be introduced with emphasis on vibration and ultrasonic methods, respectively. The course will also provide the essential tools necessary for the digital signal processing of ultrasonic data. Mat lab and laboratory exercises on recent researches will be investigated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2401 - OPEN CHANNEL HYDRAULICS

Minimum Credits: 3

Maximum Credits: 3

Basic theories and principles of open channel flows (including flows in rivers and streams). Methods of calculating uniform flow, gradually varied flow, rapidly varied flow, and unsteady flow. Design of open channels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2410 - WATER RESOURCES ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course addresses fundamental and practical issues of water resources engineering. The increasing demand for sufficient water quantity and quality that is distributed in time and space forces engineers and policy makers to develop more comprehensive, complex, and ambitious plans for environmental and water systems. This course emphasizes understanding, formulating, and approaches of solving problems of water resources engineering. Quantitative overview of the water resources development, water resources problems, impacts of climate variability and global warming on water resources, and the fundamental principles and basic tools to solve these problems will be covered. Topics to be discussed also include introduction to basic concepts of hydrology, GIS (Geographic Information Systems) applications, theory of unit hydrograph, frequency analysis, flood routing through reservoirs and rivers, introduction to rainfall-runoff analyses, and watershed modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate Engineering Students

CEE 2416 - SEDIMENT TRANSPORT

Minimum Credits: 3

Maximum Credits: 3

This course describes the interaction of fluid and sediment transport processes. This interaction causes morphodynamic changes in open channel flows. This course covers topics such as boundary layer flow and distribution of flow velocities and shear stresses in open channel flows; physical properties of sediments; types of sediment transport (bed-load and suspended-load) for uniform and mixture, dynamics of bed forms, modulation of bedforms into hydrodynamics and morphodynamics, review of the state-of-the-art in sediment transport research, review of the importance of sediment transport processes into engineering projects. This course serves contains computational, analytical and some experimental projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2500 - ENVRNMNTL ENGRG MICROBIOL

Minimum Credits: 3

Maximum Credits: 3

Biological fundamentals as applied to the description and evaluation of natural environments and environmental quality control systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2501 - ENVIRONMENTAL ENGINEERING CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Chemical fundamentals as applied to the description and evaluation of natural environments and environmental quality control systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2502 - PHYSICAL-CHEMICAL PRINCIPLES IN ENVIRONMENTAL ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Basic principles and applications of thermodynamics, reaction kinetics, equilibria, diffusion, and mass transfer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2505 - WATER TREATMENT AND DISTRIBUTION SYSTEMS DESIGN

Minimum Credits: 3

Maximum Credits: 3

Stepwise development and process design, equipment selection, economic evaluation, layout, and operating guidelines for water treatment, storage and distribution systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2511 - ENVIRONMENTAL ENGINEERING PROCESS LABORATORY

Minimum Credits: 3

Maximum Credits: 3

Chemical and biological laboratory procedures and techniques for instrumental analysis applied to evaluation of liquids and gases for environmental assessment and operation and control of environmental quality control systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: Graduate School of Engineering

CEE 2513 - ENVIRONMENTAL IMPACT ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Technical and procedural aspects of environmental impact analysis and assessment with emphasis on regulatory framework, characterization of impacts and their remediation, and the decision process when applied to engineering systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2515 - WASTEWATER COLLECTION AND TREATMENT PLANT DESIGN

Minimum Credits: 3

Maximum Credits: 3

Stepwise development and process design, equipment selection, economic evaluation, layout, and operating guidelines for wastewater collection and treatment systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2609 - LIFE CYCLE ASSESSMENT METHODS AND TOOLS

Minimum Credits: 3

Maximum Credits: 3

Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2610 - ENGINEERING AND SUSTAINABLE DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course is intended as an introductory interdisciplinary engineering course. Topics include principles of sustainable design in engineering, manufacturing, infrastructure, communications, and community development; overview of environmental issues for engineers; design for the environment; models of environmental processes; introduction to the use of life cycle assessment; and case studies examining the relationship of green design and the field of engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2612 - DESIGN AND ANALYSIS OF EXPERIMENTS

Minimum Credits: 3

Maximum Credits: 3

Principles of designing experiments, analysis of variance techniques for hypothesis testing, simultaneous confidence intervals, robust design and Taguchi methods, block designs, factorial experiments, random effects and mixed models, split plot designs, analysis of covariance, response surface

design

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2620 - ADVANCED GREEN BUILDING AND CONSTRUCTION

Minimum Credits: 3

Maximum Credits: 3

This course first provides an overview all of the major aspects of green building design and construction, including sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality, innovation, and design process. The course then focuses on energy modeling, indoor environmental quality monitoring, and post-occupancy evaluations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 2700 - TRAFFIC MGMNT AND OPERATIONS

Minimum Credits: 3

Maximum Credits: 3

Introduction to traffic flow theory and characteristics. Highway capacity analysis. Basic traffic management and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2710 - TRAFFIC CONTROL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

A range of traffic control systems including the analysis and design of traffic signals are discussed along with traffic signal systems. Other topics covered include data collection for traffic control systems, optimization software and models; traffic signal hardware design; traffic signal systems selection (adaptive traffic signal systems versus traditional systems) and design and implementation. Pre-requisite CEE 1703 for 1710 and CEE 2700 for 2710

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: CEE 2700; PROG: Swanson School of Engineering

CEE 2711 - ADVANCED TRANSPORTATION MANAGEMENT STRATEGIES

Minimum Credits: 3

Maximum Credits: 3

This is a management-oriented course that covers key aspects of how government transportation agencies operate their transportation systems. Focus is on the strategies that are used to improve public safety and mobility, including traffic incident management, traffic management, traveler information and pricing. Emphasis is also placed on processes, including planning, performance management and systems engineering, that agencies apply in advancing programs and projects. The course concludes with a look at the future, including the effects that automated vehicles and Smart City concepts will have on the future of transportation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2714 - PAVEMENT DESIGN AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Concepts and principles in the structural design of pavements for highways and airfields including: traffic loads, climatic factors, soil and material characterization. Application of current pavement design practices and procedures. Economic evaluation of highway and airport pavements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2715 - PAVEMENT MAINTENANCE AND REHAB

Minimum Credits: 3

Maximum Credits: 3

Engineering concepts and information needed to maintain and rehabilitate pavements. Project evaluation, testing and analysis. Design of rigid and flexible overlays, and other methods of rehabilitation. Selection of rehabilitation alternatives. Analysis of the effects of maintenance activities on pavement performance. Initial and life cycle cost analysis of various rehabilitation alternatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2717 - COMPONENTS, PROPERTIES AND DESIGN OF PORTLAND CEMENT CONCRETE

Minimum Credits: 3

Maximum Credits: 3

Examines the influence of constituent materials (cements, aggregates and admixtures) on the properties of fresh and hardened concrete, mix design handling and placement of concrete; and behavior of concrete under various types of loading and environment; test methods, designing concrete mixes for specific applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

CEE 2718 - ADVANCED CONSTRUCTION AND BITUMINOUS MATERIALS

Minimum Credits: 3

Maximum Credits: 3

Soils, soil stabilization, aggregates, bituminous materials and mixtures. Advanced topics in selection and design of bituminous materials. Asphalt cement, rheology, emulsions, chip seals, hot-mix asphalt design, visco-elasticity characterization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2720 - URBAN TRANSPORTATION PLANNING

Minimum Credits: 3

Maximum Credits: 3

All aspects of the transportation planning process including transportation planning and decision making, transportation modeling, demand and supply analysis, transportation studies, environmental issues and project implementation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CEE 2700; PROG: Swanson School of Engineering

CEE 2721 - TRAVEL DEMAND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

The analysis of travel demand. Aggregate and disaggregate models. Activity and time budgets.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2725 - PUBLIC TRANSPORTATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to give seniors and graduate students a basic background in the planning, operations and development of public transportation systems within the context of the overall transportation system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering (PENGR)

CEE 2730 - HIGHWAY ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Highway administration, classification, planning and programming. Geometric design of highways. Traffic characteristics and capacity analyses. Traffic operations and control. Highway design project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2750 - PROJECT DEVELOPMENT AND IMPLEMENTATION

Minimum Credits: 3

Maximum Credits: 3

Project development and implementation - 3 credits: this course provides overview of the process used in project programming and planning, design, construction and operation. The course will emphasize the process used for implementation of major projects with emphasis on construction management and how that task interfaces with other aspects of project development. Students will be involved in a team effort to conceptualize the project, plan alternatives, determine the environmental impact, examine design alternatives, prepare the project for construction documents, recommend award of the contract, manage the contract during construction and determine operational needs of the project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2800 - ENGINEERING GEOLOGY

Minimum Credits: 3

Maximum Credits: 3

Review of basic geologic principles with emphasis on the importance and influence of geology and geologic processes on engineering projects such as dam sites, foundations, tunnels, mine subsidence, landslides, highways, groundwater problems, and seismic studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

Course Attributes: Global Studies

CEE 2801 - ADVANCED SOIL MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Mathematical and graphical operations on stress and strain, seepage analysis and flow net, consolidation theory, upper and lower bound analysis, earth pressure theory, bearing capacity, and plasticity based soil models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 2802 - GEOTECHNICAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of the analytical and numerical methods in geotechnical engineering are explored. Emphasis will be placed upon implementation and verification of various formulations into basic programs. Seepage, stress distribution, settlement, consolidation, sheet piling wall, and beams on elastic foundations are some of the topics covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 2805 - EARTHQUAKE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Earthquake hazard assessment, time domain and frequency domain analysis of multi-degrees of freedom systems, response spectrum, material nonlinearity, stochastic response and failure assessment, soil-structure interaction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering

CEE 2809 - HYDRAULIC FRACTURING MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This class will prepare students to wisely and critically design hydraulic fracturing treatments as well as make informed recommendations to employers, governments, and communities about the risks and benefits of hydraulic fracturing methods. Upon completion of this course, students will be equipped to use engineering formulae to estimate hydraulic fracture dimensions, evaluate strengths and weaknesses of various modeling approaches, characterize subsurface conditions from wellbore pressure analysis, make sound recommendations for monitoring, and compare and contrast approaches and risks for a range of application domains.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 2814 - SLOPES & EARTH RETAINING STRUCT

Minimum Credits: 3

Maximum Credits: 3

Conventional methods and recent advances in slope stability analyses; classical and modern earth pressure theories; design of rigid and flexible retaining structures; earth dams, their design and stability.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PROG: Graduate School of Engineering

CEE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

CEE 2996 - SPEC INVSTGTN FOR M.S. STUDENTS

Minimum Credits: 1

Maximum Credits: 9

A special project course in which students may broaden their knowledge by studying approved topics or problems in a specific field within the department under the guidance of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

CEE 2997 - RESEARCH, M.S.

Minimum Credits: 1

Maximum Credits: 15

Non-thesis option research project for the MS Degree under the guidance of a civil engineering faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

CEE 2999 - M.S. THESIS

Minimum Credits: 1

Maximum Credits: 15

Scheduled discussion periods with the student's advisor. Literature survey, selection of thesis topic, development of research methods and procedures, and preparation of thesis under the guidance of a civil engineering faculty member.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CEE 3209 - ADVANCED TOPICS IN LIFE CYCLE ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PROG: PENGGR

CEE 3330 - STRUCTURAL STABILITY

Minimum Credits: 3

Maximum Credits: 3

An upper level graduate course focusing on classical solutions for column and frame buckling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Swanson School of Engineering (PENGGR)

CEE 3333 - ADVANCED FINITE ELEMENT METHODS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Civil & Environmental Engineer (PHD)

CEE 3361 - STRUCTURAL WIND & EARTHQUAKE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Introduction to nature of wind, aerodynamic wind loading and design. Investigation of the response of structures to dynamic and pseudo-dynamic wind, earthquake, shock waves, and other deterministic and random loading. Design criteria for buildings and nuclear power stations, special topics in lifeline, computer applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CEE 2360

CEE 3408 - ADVANCED ENVIRONMENTAL FLUID MECHANICS

Minimum Credits: 3

Maximum Credits: 3

This course describes the theory behind fluid mechanics processes for environmental flows. Topics to be covered are: a review of boundary layer flow and distribution of flow velocities and shear stresses in open channel flows; turbulence in open channel flows, shear layer flows, hydrodynamics of lakes and reservoirs, stratified flows, geophysical flows. This course contains computational, analytical and some experimental homework and projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 3414 - ADVANCED HYDROLOGY

Minimum Credits: 3

Maximum Credits: 3

Fundamental and advanced theories and processes of hydrology. Topics to cover include processes of water in the atmosphere, over land surface, and within soil; advanced representation of infiltration and evapotranspiration processes; partitions of water and energy budgets at the land surface; snow and snowmelt processes; applications of remote sensing (e.g., Satellite and radar), and flood and drought analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

CEE 3501 - ENVRNMTL ENGRG PROCESSES 1

Minimum Credits: 3

Maximum Credits: 3

Theory and applications of physical and chemical principles to water and wastewater treatment and disposal. Mixing, equalization, coagulation, sedimentation, filtration, disinfection and solids handling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

Course Attributes: Global Studies

CEE 3502 - ENVRNMTL ENGRG PROCESSES 2

Minimum Credits: 3

Maximum Credits: 3

Theory and applications of aerobic, anoxic and anaerobic biological processes in environmental quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering or (PREQ: CEE 1503 or CET 1141; PROG: Undergraduate School of Engineering)

Course Attributes: Global Studies

CEE 3609 - ADVANCED TOPICS IN LIFE CYCLE ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Life cycle assessment (LCA) is a tool for evaluating the environmental impacts of a product or process by documenting energy and material flows from inception to ultimate disposal. This course teaches framework, methods, and tools that can be applied to decision making in the design, construction, operation, and maintenance of the built environment. Topics include the principles of life cycle assessment, case studies of applications of life cycle assessment, methods for life cycle inventory, and methods for life cycle impact assessment. The course aims to encourage systems thinking and to facilitate life cycle applications to graduate students' individual research topics. Students can expect to develop a project and paper applying LCA to their research topic. In most cases, students will produce a publishable journal article at the end of the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CEE 3714 - ADVANCED PAVEMENT DESIGN & ANAL

Minimum Credits: 3

Maximum Credits: 3

Theoretical models for analysis of pavement systems. Design and analysis of pavements through the use of transfer functions relating pavement response to pavement performance. Evaluation of current pavement design practices and procedures. Economic evaluation of highway and airport pavements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 3805 - ROCK MECHANICS

Minimum Credits: 3

Maximum Credits: 3

Behavior and properties of rock as an engineering material; failure of rock; design and construction of underground structures and slopes in rock; design of rock abutments for dams.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: Graduate School of Engineering

CEE 3996 - SPECIAL INVSTGTN FOR PH.D. STDNT

Minimum Credits: 1

Maximum Credits: 6

A special project course in which advanced students may broaden their knowledge by studying approved topics or problems in a specific field within the department under the guidance of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

CEE 3997 - RESEARCH, PH.D

Minimum Credits: 1

Maximum Credits: 15

Directed research and study for the preparation of the Ph.D. Dissertation proposal.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

CEE 3999 - PH.D. DISSERTATION

Minimum Credits: 1

Maximum Credits: 15

Scheduled discussion periods with the student's advisor. Literature survey, selection of dissertation topic, development of research methods and procedures, and preparation of the dissertation, under the guidance of a civil engineering graduate faculty member.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Classics

CLASS 2019 - GLOBAL ISSUES THROUGH CLASSICS 1

Minimum Credits: 1

Maximum Credits: 1

This course represents the first half of a two-semester graduate proseminar introducing students to global issues through ancient Greek and Roman sources in translation. The course proposes that global issues are not only transnational but in fact transhistorical: that is to say, the processes of connection and disruption, inequality, precarity, and violence, associated with the uneven flows of people and power through space and over time can be found operating around the ancient world as much as in the modern. Consequently, not only can ancient texts, sources, and ideas be used to enrich our understanding of today's global issues, but methods from Global Studies can also be usefully applied to probe these same processes in antiquity. Topics may include: poverty and inequality; war, peace, and diplomacy; citizenship and xenophobia; indigeneity and nationalism; migration and mobility; center versus periphery; terrorism; imperialism; conceptions of race and ethnicity; and the organization of knowledge and circulation of information. Students are expected to complete weekly readings of ancient texts, and to prepare materials for discussions of ancient and contemporary global issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2020 - GLOBAL ISSUES THROUGH CLASSICS 2

Minimum Credits: 2

Maximum Credits: 2

This course is the continuation of a two-semester graduate proseminar investigating contemporary global issues through ancient Greek and Roman sources in translation. The course proposes that global issues are not only transnational but in fact transhistorical: that is to say, the processes of connection and disruption, inequality, precarity, and violence, associated with the uneven flows of people and power through space and over time can be found operating around the ancient world as much as in the modern. Consequently, not only can ancient texts, sources, and ideas be used to enrich our understanding of today's global issues, but methods from Global Studies can also be usefully applied to probe these same processes in antiquity. Topics may include: poverty and inequality; war, peace, and diplomacy; citizenship and xenophobia; indigeneity and nationalism; migration and mobility; center versus periphery; terrorism; imperialism; conceptions of race and ethnicity; and the organization of knowledge and circulation of information. Students are expected to complete weekly readings of ancient texts, to prepare materials for discussions of ancient and contemporary global issues, and to develop an independent research project or paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2090 - TOPICS IN CLASSICS

Minimum Credits: 3

Maximum Credits: 3

Close study of selected topics in classical studies. Course may be repeated for credit provided material covered is different.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2140 - ANCIENT POETRY AND RECEPTION

Minimum Credits: 3

Maximum Credits: 3

Students will read, in translation, a selection of Greek and Roman poets and the reception of their works across varying genres, cultures and timeframes. Particular focus will be placed on the specific literary, cultural and historical contexts, those in which the authors wrote and those in which their works were received.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CLASS 2301 - ANCIENT PHILOSOPHY

Minimum Credits: 3

Maximum Credits: 3

This is a beginning to intermediate level graduate seminar in ancient philosophy, with emphasis on Plato and Aristotle, taken almost exclusively by students in the doctoral program, usually during their first or second year of residence. The exact contents of the course vary from one occasion to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2319 - FROM PHILO TO PHILOPONUS: AN INTRODUCTION TO THE HISTORY OF PHILOSOPHY IN LATE ANTIQUITY

Minimum Credits: 3

Maximum Credits: 3

This course is designed thematically and historically to expand the course offerings of the Departments of Classics and Philosophy. The history of philosophy in Late Antiquity is lamentably neglected by historians of ancient philosophy, even though the thinkers of this period made crucial and

formative contributions to the development of Western philosophy, theology, and science. The aim of this course is to provide students with a clear sense of the cultural and social forces that shaped the doctrinal and philosophical debates and concerns of the first six centuries CE, and to familiarize them with the roots of what was to become medieval and Renaissance philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2320 - CLASSICS, PHILOSOPHY, AND ANCIENT SCIENCE GREEK AND LATIN SEMINAR 1

Minimum Credits: 3

Maximum Credits: 3

Bringing together students and faculty members, the aim of this course is to read and discuss a variety of Ancient Greek and Latin authors in their original language. The format of the course is flexible. Each participant translates a portion of text and singles out topics for discussion, whether philological, philosophical or methodological in nature. All members are encouraged to interrupt and participate as the mood strikes. We attempt to cover authors both central and at the margins of the curriculum, depending on students' interest. The course alternates weekly between Greek and Latin authors.

Academic Career: Graduate

CLASS 2390 - TOPICS IN ANCIENT PHILOSOPHY

Minimum Credits: 3

Maximum Credits: 3

Study of selected topics in the area of ancient philosophy. Course may be repeated for credit if the material covered is different.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

CLASS 2392 - ARISTOTLE'S CONCEPT OF NATURAL SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Among theoretical forms of investigation and knowledge, Aristotle distinguishes mathematics, natural science and first philosophy (metaphysics). This seminar explores Aristotle's understanding of the aims, methods and the conceptual and explanatory structure of natural science, and the relationship between it and the other forms of theoretical inquiry.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

CLASS 2547 - ARISTOTLE'S PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar explores Aristotle's views on the nature of science, such as explanation, causation, demonstration, and necessity. We will study a number of Aristotle's works, including the analytics and physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CLASS 2902 - DIRECTED STUDY FOR M.A. STUDENTS

Minimum Credits: 1

Maximum Credits: 9

Directed study on classical topics for students in the MA Program.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

CLASS 2970 - TEACHING OF GREEK

Minimum Credits: 3

Maximum Credits: 3

Practical experience in the teaching of ancient Greek.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

CLASS 2971 - TEACHING OF LATIN

Minimum Credits: 3

Maximum Credits: 3

Practical experience in the teaching of Latin.

Academic Career: Graduate

Clinical Nurse Specialist

NURCNS 2161 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

Students elect an area of interest and work with a specific faculty member to meet agreed upon objectives.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

NURCNS 2350 - GROUP THERAPY THEORY

Minimum Credits: 2

Maximum Credits: 2

This course examines models of group interventions in psychiatric mental health nursing from a holistic perspective and incorporates theory and research from nursing and related sciences to develop a framework for guiding advanced nursing practice. Clinical therapeutics focus on the use of group interventions across the life cycle with different populations in altering human responses associated with mental and emotional problems. Various classifications of systems of nursing phenomena are considered in relation to advances in psychobiology and in relation to use of group interventions with specific client populations. Group management skills are explored within the context of a selected clinically-related management role and case management.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: CREQ: NURCNS 2351

NURCNS 2351 - GROUP THERAPY PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This clinical practicum is taken concomitantly with NURCNS 2350 and includes practice and a weekly clinical conference. Clinical applications of theoretical knowledge focus on experiences in short-term group interventions and in the clinically related role of manager.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2350

NURCNS 2352 - FAMILY THEORY/THERAPY TECHNIQUES

Minimum Credits: 2

Maximum Credits: 2

This course examines models of community mental health and mental health nursing from a holistic nursing perspective with a focus on family mental health and family functioning. Theories and research about family dynamics and processes are examined as the student develops a conceptual framework to guide clinical practice. Clinical therapeutics focus on the use of interventions for maintaining functional and altering dysfunctional patterns of responses with family systems and in a selected clinically related management role in community mental health services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Nursing students only.

NURCNS 2353 - FAMILY THERAPY ROLE SEMINAR AND CLINICAL PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This clinical practicum is taken concomitantly with NURCNS 2352 and includes clinical experiences as a family therapist. Experiential seminars are held. Knowledge gained from theory course is applied and synthesized into a conceptual framework for advanced nursing practice.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: School of Nursing students only.

NURCNS 2354 - INDIVIDUAL PSYCHOTHERAPY THEORY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the theory relevant to individual psychotherapy. The emphasis is on preparing the student to provide appropriate models of psychotherapy within the managed care and private practice environments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2355; PROG: Graduate School of Nursing

NURCNS 2354D - INDIVIDUAL PSYCHOTHERAPY THEORY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the theory relevant to individual psychotherapy. The emphasis is on preparing the student to provide appropriate models of

psychotherapy within the managed care and private practice environments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: Distance Education

NURCNS 2355 - INDIVIDUAL PSYCHOTHERAPY PRACTCM

Minimum Credits: 1

Maximum Credits: 1

The goal of this practicum is to provide the student with an opportunity to gain skills in the practice of individual psychotherapy with patients across the life span and in different populations. The student will be expected to provide psychotherapy to patients through the beginning, middle, and end phases of treatment, utilizing concepts learned in NURCNS 2354 individual psychotherapy theory.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: CREQ: NURCNS 2354

NURCNS 2361 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

An in-depth study in a particular area of interest by arrangement with a designated faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

NURCNS 2850 - CNS ROLE IMPLEMENTATION

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide a framework for clinical nurse specialist (CNS) practice that is organized around the three spheres of influence (patient, nursing personnel, organization/network) that encompass consumers of CNS services. Students are introduced to unique competencies in each sphere of influence as operationalized in acute care. Emphasis will be placed on acquisition of skills needed to develop population-based programs of care; facilitate systems that promote innovative, cost-effective and comprehensive care; develop and implement evidence-based practice initiatives; and collaborate with health team members to improve health care delivery and patient outcomes. Using model cases and problems derived from their practice, students examine how leadership, consultation and collaboration skills can be used to solve problems for patients/populations, health team members, and organizations/systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

NURCNS 2851 - CNS CLINICAL PRACTICUM 1

Minimum Credits: 4

Maximum Credits: 5

Practicum is the first of two clinical practica designed to provide experience in role development for the clinical nurse specialist (CNS). Emphasis is placed on enhancing competencies within the three spheres of influence of the CNS (patient, nursing personnel, organization/network) and developing characteristics essential to CNS practice.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: NUR 2850

NURCNS 2852 - CNS CLINICAL PRACTICUM 2

Minimum Credits: 1

Maximum Credits: 4

This practicum is designed to provide experience in role development for the clinical nurse specialist (CNS). Emphasis is placed on further refinement of characteristics essential to CNS practice and competencies

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

NURCNS 2853 - CLINICAL EMPHASIS SPECIALTY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to develop a comprehensive theoretical and practical foundation for advanced nursing care of adult-gerontology patients with dysfunctions/alterations in the selected area of clinical specialization. The course integrates the pathophysiology of dysfunctions/alterations in the selected area with appropriate diagnostic parameters and management strategies. Aspects of health promotion and maintenance appropriate to these patients and families will also be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: NUR 2004; PROG: NURS

NURCNS 3039 - DNP-CNS ROLE PRACTICUM

Minimum Credits: 1

Maximum Credits: 5

This course is designed to provide a culminating practicum experience for the DNP clinical nurse specialist (CNS). Students will focus on promoting evidence based practice as interdisciplinary team members and providing high quality, cost effective care in a dynamic health care environment. Emphasis is placed on further refinement of competencies within the three spheres of influence of the CNS (patient, nursing personnel, and systems) and further development of characteristics essential to CNS practice at the doctoral level.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

NURCNS 3239 - DNP CNS ROLE PRACTICUM

Minimum Credits: 1

Maximum Credits: 5

This course is designed to provide a culminating practicum experience for the dnp clinical nurse specialist (CNS). Students will focus on promoting evidence based practice as interdisciplinary team members and providing high quality, cost effective care in a dynamic health care environment. Emphasis is placed on further refinement of competencies within the three spheres of influence of the CNS (patient, nursing personnel, and systems) and further development of characteristics essential to CNS practice at the doctoral level.

Grade Component: Grad LG/SU3 Basis

Clinical Rehab and Mental Health Counseling

COUN 2715 - MEDICAL & PSYCHOLOGICAL ASPECTS OF DISABILITY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to prepare counseling professionals to become skillful interpreters and users of medical information and terminology. Students examine major chronic illnesses and disabilities in order to obtain a practical and theoretical understanding of the implications of these conditions on all areas of functioning and participation, including interpersonal relationships, sexuality, education, employment, and independent living.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2723 - ASSISTIVE TECHNOLOGY TO PROMOTE MENTAL & PHYSICAL FUNCTIONING

Minimum Credits: 2

Maximum Credits: 2

This course will address aspects of assistive technology for use at home, in education and the workplace. Topics will include legislation, computer access, ergonomics, mobility, and adaptations for visual, auditory, motor, cognitive and mental health impairments. Field trips and guest speakers will provide unique experiences and insights.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2728 - FOUNDATIONS OF REHABILITATION & MENTAL HEALTH COUNSELING

Minimum Credits: 2

Maximum Credits: 2

The course provides an overview of the professional practice of counseling. The content includes the origins of counseling and rehabilitation, the professions associated with rehabilitation and mental health counseling through the philosophy, legislative, and clinical history of the disciplines. The goal of studying history and foundations is to gain perspective on the nature and scope of counseling practice. Students are exposed to the requisite knowledge and skills for effective practice. Students understand need for, and develop skills for professional and sociopolitical advocacy for the counseling professions and service recipients. The course also provides fundamental knowledge about psychosocial aspects of disability, including models of disability and adjustment to disability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2729 - HUMAN DEVELOPMENT ACROSS THE LIFESPAN

Minimum Credits: 2

Maximum Credits: 2

The course provides an in-depth study of human development from a disability and multicultural perspective. The content will cover theories of physical, cognitive, social, cultural, and emotional human development from the prenatal period through aging and death. Clinical approaches for each stage of development will be reviewed. Multi-cultural competencies, personal biases, and client preferences will be explored, tested, and applied to clinical work. Students are expected to develop knowledge of human development, disability, and culture that will inform future case conceptualization and treatment as a clinical rehabilitation mental health counselor. Application of these skills and knowledge will be evaluated through direct observation in the community.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2730 - CULTURAL CONSIDERATIONS IN COUNSELING

Minimum Credits: 2

Maximum Credits: 2

This course is designed to increase multicultural awareness, knowledge, and skills in the competencies necessary to effectively work with and relate to ethnically and culturally diverse clients. Students will examine their own culture, attitudes, beliefs and internalized messages. Knowledge and skills in the area of multicultural counseling will be explored and practiced. Application of these skills and knowledge will be evaluated through direct observation in the community. Students will learn about a variety of topics including theories and models of multicultural counseling, intersectionality, social justice and advocacy, implicit bias, cross-cultural communication, microaggressions and generational trauma. Cultural

humility will be introduced as a process to help build authentic relationships with clients of different cultural and ethnic backgrounds. The course will also expose students to historic and current cultural events.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

COUN 2731 - FOUNDATIONS OF REHABILITATION & MENTAL HEALTH COUNSELING

Minimum Credits: 3

Maximum Credits: 3

The course provides an overview of the professional practice of counseling. The content includes the origins of counseling and rehabilitation, the professions associated with rehabilitation and mental health counseling through the philosophy, legislative, and clinical history of the disciplines. The goal of studying history and foundations is to gain perspective on the nature and scope of counseling practice. Students are exposed to the requisite knowledge and skills for effective practice. Students understand need for, and develop skills for professional and sociopolitical advocacy for the counseling professions and service recipients. The course also provides fundamental knowledge about psychosocial aspects of disability, including models of disability and adjustment to disability.

Academic Career: Graduate

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2733 - COUNSELING SKILLS & TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This is an experiential course where students will learn advanced counseling skills and apply them into clinical practice. The class will consist of three themes, including: (1) listening skills, building trust and rapport, and multicultural competencies; (2) development and application of counseling skills; (3) clinical documentation and progress reports. Class time will be utilized for practicing counseling techniques and styles through class activities, demonstrations, and role-plays. This course requires students to conduct, video-record, and document ongoing counseling sessions with a simulated client. Students are expected to effectively conduct 50-minute goal-directed counseling sessions with a cross-theoretical approach by the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2734 - COUNSELING THEORIES AND TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This course provides an in-depth overview of major counseling theories, principles and techniques. Theories and techniques are explored with an

emphasis on multicultural considerations. Emphasis is on both theory and practical applications of the various approaches. Students are encouraged to learn the theoretical principles of counseling theories and begin to integrate various theories to develop their own understanding and approach to counseling. Instruction includes experiential learning such as in-class role-plays and recorded counseling sessions with individualized feedback.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2735 - CAREER COUNSELING & VOCATIONAL ISSUES

Minimum Credits: 2

Maximum Credits: 2

This course focuses on theory and practice of career and vocational counseling. Module 1 of this course focuses on models of theories of career development and career counseling, with cultural considerations taken into account. Students learn to incorporate theory into career counseling practice. Module 2 emphasizes vocational issues including job placement, pre-placement analysis, client-readiness, job development, job modification, and employer culture and attitudes. Module 2 content includes sources of occupational data, lab or market analysis, job analysis, job seeking skills, and procedures for analyzing transferable work skills. Students learn various employment alternatives including competitive employment, supported employment, self-employment, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2736 - CRISIS COUNSELING, RISK MANAGEMENT AND DISASTER PREPAREDNESS

Minimum Credits: 2

Maximum Credits: 2

The course provides guidelines and parameters for risk assessment and risk management of harm to self and/or others. Students will demonstrate proficiency in establishing risk assessment/management plans for clinical practice. Students examine research on crisis theory, resolution, and resilience. Students will learn the effects of crises, disasters, and other trauma-causing events on persons of all ages. The course examines diverse crisis situations and the assessment and treatment strategies used by counselors to assist individuals, groups, and organizations in managing and resolving crises. Students learn how people deal with crises, explore personal crisis experiences, and develop crisis intervention competency.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2737 - CLINICAL, DIAGNOSTIC AND FUNCTIONAL ASSESSMENT IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is focused on the psychometric qualities, indications for use, administration and interpretation of various assessment procedures. Procedures include interview and mental status examination, psychological and neuropsychological testing, functional assessment, vocational testing and vocational evaluation, and specialized assessments such as EMA. Professional and ethical standards and the effect of culture and disability on assessment are included. Students learn to apply assessment findings to goal setting and intervention planning through a series of case studies that require interpretation of test data in the context of a client's life (as presented in the case study). Students are required to demonstrate proficiency in written and oral reporting and communicating assessment results to professionals and clients. The course includes a lab where student teams develop, norm administer and interpret naturalistic assessment tool.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2738 - DIAGNOSIS & TREATMENT OF COGNITIVE AND MENTAL HEALTH DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course contains three modules: 1) dsm-5 and differential diagnosis, 2) cognitive rehabilitation, and 3) psychiatric rehabilitation. Students develop skills in diagnostic formulation and clinical intervention planning and implementation. The influence of multicultural identity in diagnosis and treatment is addressed. In module 1, students learn about the diagnosis of cognitive, behavioral, and mental health disabilities through extensive review of the current edition of the diagnostic and statistical manual and related information. In module 2, students learn specialized counseling techniques for individuals with cognitive impairments and behavioral issues. Students demonstrate use of techniques such as external cognitive aids, metacognitive strategies, and social skills training. In module 3, students learn interventions for mental health disorders such as psychiatric rehabilitation day programming, assertive community treatment and case management, and self-help and peer-delivered services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2739 - GROUP COUNSELING

Minimum Credits: 3

Maximum Credits: 3

In this course, students are introduced to group work, including theoretical approaches, personal and professional characteristic of an effective group leader, guidelines for forming a group, and leader and participant tasks and behaviors throughout the stages a group. Group counseling ethical, professional, and legal considerations, as well as multicultural issues are discussed throughout the course. Experiential and interactive learning is supplemented by lecture and video demonstration. Using evidence-based practice techniques, students research and evaluate a group intervention of their choice. Students develop a group proposal and demonstrate proficiency in leading a group of their choice. Participation in a 10-week experiential group is required (lab).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2740 - CLINICAL APPLICATIONS IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course is divided into two modules designed to provide students with basic skills needed for 1) interviewing for intake and assessment purposes and engaging clients in a therapeutic relationship, and 2) application of evidence-based counseling using cognitive behavioral therapy (cbt). The course will employ brief didactic presentations, discussion of readings, video review, and role-play. Students will have the opportunity to conduct a clinical interview and a brief course of cbt with an actor playing the role of the client. These sessions will be video recorded. Evaluation by self, peers, and instructor will occur. Student performance will be evaluated to determine competency for entry-level practice and specific detail for student remediation will be provided if needed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

COUN 2741 - CASE CONCEPTUALIZATION & TREATMENT PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course presents the process of synthesizing relevant client information including client history, interview, and assessment results, along with contextual information (environmental and demand information) in order to achieve accurate case conceptualization. Students learn and demonstrate proficiency in goal setting, treatment planning, case monitoring, and measurement-based care using individual, evolving client case studies. Students explore and develop a compendium of community resources.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2742 - LEGAL, ETHICAL & PROFESSIONAL ISSUES IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to legal, ethical, and professional issues pertaining to the practice of clinical rehabilitation and mental health counseling. This course will offer an in depth focus on the relevant knowledge, awareness and skills necessary to practice safely and responsibly in counseling. Students will examine a variety of complex legal and ethical issues that confront clinical rehabilitation and mental counselors as they work with clients and colleagues within difference counseling systems. Aca, nbcc, and crcc codes of ethics will be examined, as well as decision making models that will facilitate students informed decision making when faced with ethical and legal issues in the workplace. Clinical rehabilitation and mental health counselor standards of practice will be examined.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2743 - FAMILY AND COUPLES COUNSELING

Minimum Credits: 3

Maximum Credits: 3

In this course, a broad theoretical and practical foundation for counseling couples and families is emphasized. The course includes an introduction to theories of family therapy, counseling strategies and techniques, and research in family counseling and functioning. Using a family systems approach, the course exposes students to the dynamics of contemporary family structures, living patterns, and lifestyles. Students learn the family development framework and common family issues across the family life cycle. Students are challenged to better understand their own family system and to examine some of their beliefs and values about what constitutes a family. Learning methods include readings, didactic presentations, discussions, role-playing, and case reviews.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clin Rehab and Mntl Hlth Cnsln or SBPLAN: Rehabilitation Counseling (Health and Rehabilitation Scs-MS)

COUN 2744 - EVIDENCE BASED PRACTICE IN COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course prepares students to be competent counselors that utilize evidence-based practice in their clinical practice. Students will learn to (1) understand the rationale for using evidence-based practice, (2) use guidelines for determining acceptable evidence, (3) effectively locate free access ebp articles, and (4) create program evaluation plans. At the end of the course, students are required to make evidence-based practice recommendations for clinical case studies. Students also must effectively design a program evaluation protocol for a complex counseling intervention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: HRS PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2745 - SUBSTANCE ABUSE AND ADDICTIONS COUNSELING

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to substance abuse counseling. The expected student outcomes of the course include: develop understanding of substance use disorders; develop evidence-based addiction counseling competencies; and increase competence in providing substance abuse evaluation, education, and treatment services. Students are introduced to the theories of etiology and intervention for alcohol and substance use, abuse, and addiction. Students explore community resources proving substance use intervention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Clinical Rehab & Mental Health Counseling (CRMHC-MS) or Rehabilitation Counseling (MSRC-SP)

COUN 2746 - COUNSELING PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

Students participate in a minimum of 100 hours of counseling practicum with at least 40 hours of direct clinical service. Students receive supervision from an assigned on-site clinical supervisor, and clinical supervision from a designated faculty clinical mentor. Practicum students increase their awareness and understanding of the differences in values, beliefs, and behaviors of individuals from diverse populations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

COUN 2749 - CLINICAL COUNSELING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Students participate in a minimum of 600 hours of counseling internship with at least 240 hours of direct clinical service. Students receive supervision from an assigned on-site clinical supervisor with requisite credentials, and clinical supervision from a faculty clinical mentor with the requisite credential and/or license. Internship students increase their awareness and understanding of the differences in values, beliefs, and behaviors of individuals from diverse populations. The internship reflects the comprehensive work experience of a clinical rehabilitation and mental health professional counselor. This course is the final preceptorship prior to the completion of the degree.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

COUN 2750 - CLINICAL COUNSELING CAPSTONE

Minimum Credits: 1

Maximum Credits: 3

These courses serve as the comprehensive examination. The courses focus on student demonstration of knowledge and skills that reflect the competencies of the clinical rehabilitation and mental health counselor as defined by this program. Students will be assessed on their knowledge and skills accumulated through coursework and clinical experiences. The courses require students to synthesize and apply advanced concepts into clinical practice. The courses implement a case study approach. Students are providing real and/or simulated clients to demonstrate their knowledge and skills. Students are expected to analyze and synthesize case materials for case conceptualization and then develop appropriate and realistic intervention plans. Students are expected to apply appropriate counseling techniques included in their intervention plan via role-play simulations. The courses are delivered over two terms with the first 1-credit course (clinical capstone i) focusing on preparation and practice. If students do not demonstrate readiness for competency evaluation, remediation will be prescribed and deficiencies resolved prior to proceeding. The second 2-credit course will serve as their competency evaluation (clinical capstone ii). Successful completion of this comprehensive examination is needed for the student to demonstrate mastery of graduate study in clinical rehabilitation and mental health counseling.

Academic Career: Graduate

COUN 2755 - CLINICAL COUNSELING MENTORSHIP

Minimum Credits: 1

Maximum Credits: 3

This course provides a structure for clinical oversight and guidance through structured student-advisor interaction over the course of the program's first year of study. The objective of the course is to facilitate the clinical application of knowledge and skills students have acquired from didactic coursework. This course involves mentoring and ongoing formal and informal evaluation to ensure that students achieve the required level of competency for clinical counseling practice.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Clinical Research

CLRES 2005 - COMPUTER METHODS FOR CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

The course provides instruction on the use of computerized methods for clinical research. Dataset manipulation, descriptive statistics, and the graphical presentation of data will be presented using a standard statistical package.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2010 - CLINICAL RESEARCH METHODS

Minimum Credits: 3

Maximum Credits: 3

Clinical research methods provides an overview of the basic research strategies, methods, and goals of clinical research. Topics include study design,

data analysis and interpretation, and determination of appropriate methodologies to answer different research questions. Bias and confounding in observational research, the clinical value of diagnostic tests, appropriate use of cross-sectional, case control and cohort study designs, and various statistical modeling used in clinical research will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2017 - CLINICAL RESEARCH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the emerging field of clinical research informatics (CRI). It involves informatics solutions in support of scientists who conduct clinical research, as well as those who translate evidence in biological, clinical, and epidemiological studies. CRI endeavors to improve clinical research information systems, recruitment of participants to clinical trials, mining of electronic health records for comparative effectiveness research, scientific collaboration, data sharing, re-analysis of extant data, patient registries, results databases, optimization of research workflows, semantic harmonization, and more.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CLRES 2020 - BIOSTATISTICS

Minimum Credits: 4

Maximum Credits: 4

This course focuses on basic concepts and statistical methods and their application to problems in the health and biomedical sciences. Topics include data description and summarization, basic probability theory, estimation, and hypothesis testing with emphasis on one- and two-sample comparisons involving continuous and categorical data. Linear regression and analysis of variance will be introduced. Students will develop their analytic skills through the analysis and discussion of large clinical studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: MEDEDU 2005; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2021 - REGRESSION AND ANOVA

Minimum Credits: 1

Maximum Credits: 1

The course is designed for medical researchers who are not biostatistics majors. Topics covered include multiple linear regression, regression diagnostics, ANOVA, analysis of covariance, confounding, mediation, moderation, and model selection. At the completion of the course, trainees should be able to understand the appropriate uses of ANOVA and linear regression, to assess their appropriateness and adequacy, to analyze simple datasets taken from the fields of medicine and public health, and to summarize results from regression models via written communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2022 - LOGISTIC REGRESSION

Minimum Credits: 1

Maximum Credits: 1

This introductory course in logistic regression modeling is intended for physicians in fellowship training programs and other researchers with a limited background in statistics. The course focuses on regression methods for binary data and on the basics of maximum likelihood inference. At the

completion of the course, trainees should be able to understand how logistic regression can be used to address a variety of epidemiologic and clinical questions; to interpret models and assess their appropriateness and adequacy; to develop analytic skills through the analysis of datasets taken from the fields of medicine and public health; and to develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2023 - SURVIVAL ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This is an introductory course in regression modeling of time-to-event data. It is intended for physicians in fellowship training programs and other researchers with a limited background in statistics. The course focuses on descriptive methods for survival data, survival analysis, and issues pertaining to time-dependent covariates. At the completion of the course, trainees should be able to recognize when it is necessary to account for time in the analysis of yes/no outcomes and appropriately summarize time-to-event data; be able to interpret the survival analysis model and assess the appropriateness and adequacy of the model; be familiar with issues in the design, analysis, and interpretation of studies involving time-dependent covariates; be able to apply analytic skills to the analysis of datasets taken from the fields of medicine and public health; and be able to develop oral and written communication skills through the description of analytic strategies and the summarization and interpretation of results.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: (CLRES 2005 and 2020 and 2021 and 2022) or (MEDEDU 2005 and 2020 and CLRES 2021 and 2022); PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2025 - DESIGN AND ANALYSIS OF BIOMARKER STUDIES

Minimum Credits: 1

Maximum Credits: 1

The objective of this course is to identify, describe and apply the statistical and epidemiological knowledge, tools and perspectives necessary for effectively designing, analyzing and interpreting biomarker studies. Only a brief introduction is provided on clinical and laboratory aspects of biomarker development as these issues are typically very specific to the individual's field of interest; instead, the course will focus on the study design and associated analysis issues given a particular biomarker, or panel of biomarkers, and a corresponding set of clinical outcomes in a manner that is generalizable to a wide range of research studies. Although applications and perspectives will somewhat focus on cancer research, the described methods are broadly applicable to a range of clinical and epidemiological settings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: CLRES 2010 and 2021 and 2022; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2026 - ANALYSIS OF CORRELATED DATA

Minimum Credits: 1

Maximum Credits: 1

CLRES 2026 will provide information on statistical methods for analyzing data arising from multilevel or longitudinal studies. The first half of the course lectures will focus on models for continuous data, including mixed effects models, fixed effects models, and generalized estimating equations. The second half of lectures will extend to analysis in the generalized linear model setting (binary outcomes, count data, etc.) We will show students how to investigate data graphically and descriptively before beginning statistical modeling and will introduce students to topics on missing data, group trajectory modeling, and sample size estimation. We will use homework assignments and articles from multilevel and longitudinal studies to facilitate learning of concepts discussed in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: CLRES 2020 and 2021 and 2022; PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2040 - MEASUREMENT IN CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

The course focuses on properties of good measurement that are integral to the research process. Specific objectives are to analyze methods for testing psychometric properties (reliability and validity) of psychological instruments and physiological instruments; to evaluate the adequacy of selected scaling methodologies used in research; to apply knowledge of instrumentation to the description of a psychosocial instrument and a physiological instrument for a research proposal; and to synthesize course content with statistical criteria for scale evaluation and make decisions regarding scale revision. The domain sampling model is presented as the major theory of measurement error, with the parallel test model presented as a special case of the domain sampling model. The construct, criterion, and content validity of psychosocial instruments are explored, and methods for evaluating each of these relative to specific instruments are presented. A variety of scaling methodologies, as well as the principles involved in the design and formatting of questionnaires, will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2045 - SURVEY DESIGN AND DATA ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

Survey design and data analysis will provide information on the skills and resources needed to design and conduct survey and techniques of analyzing survey data. The skills include identifying and developing specific survey objectives, designing survey studies, sampling respondents, developing reliable and valid self-administered questionnaires, and administering surveys. The techniques of analyzing survey data include both classic methods such as factor analysis and advanced methods such as item response theory. A majority of lectures will focus on survey research, constructing surveys, response set, survey administration methods, questionnaire construction and programming surveys, sampling and power calculation, maximizing response rates, data coding and entry, reliability and validity, survey data analysis, factor analysis and item response theory. The students will be introduced to the internet based survey and the computerized adaptive testing to broaden their scope of the current survey design and collection. I will use manuscripts of survey data and protocols of completed studies to facilitate learning of concepts discussed in class.

Academic Career: Graduate

Course Component: Lecture

CLRES 2050 - ETHICS & RESPONSIBLE CONDUCT OF RESEARCH (ONLINE)

Minimum Credits: 1

Maximum Credits: 1

It's far too easy to relegate egregious ethical violations to the past. We reassure ourselves these could never happen now. After all, we have IRBs and rules and regulations we have to follow when conducting research on human subjects and animals. IRBs, and those rules and regulations, like the Belmont Report and the Declaration of Helsinki, are important, helpful, and a good start, but researchers need more. Many of the problems researchers will face during their careers will not be black and white, and it's really important to learn to navigate through the shades of gray. In this fully online course, we will read important foundational texts and a work of fiction, and we'll engage with case studies. You'll interact with fellow course participants on discussion boards, and submit written answers to questions taken from the readings. This course presents an in-depth examination of ethical issues in the conduct of clinical research. Topics include issues related to privacy, confidentiality, protection of human and animal subjects, informed consent and the role of the IRB in ensuring the responsible conduct of research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2071 - ADVANCED GRANT WRITING PART 1

Minimum Credits: 3

Maximum Credits: 3

The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. Mentor must be identified prior to enrollment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2072 - ADVANCED GRANT WRITING PART 2

Minimum Credits: 1

Maximum Credits: 1

The purpose of the integrated methods course is to build on the skills learned in the methodological core and provide a hands-on research experience. Trainees will learn the phases of the research process from conception to design and, ultimately, to implementation of the research. Through a combination of group sessions and independent work, trainees will use a research topic of their choice to develop their own research proposal in the form of an NIH grant application. The application will include sections on specific aims, background and significance, previous work, and methods. In addition, trainees will review and critique the work of their peers. CLRES 2077 - STRATEGIC LEADERSHIP IN ACADEMIC MEDICINE

Minimum Credits: 1

Maximum Credits: 1

Health care professionals regularly occupy leadership roles in research, educational, and clinical arenas, and leadership opportunities abound in academic settings. Yet clinicians have been described as "accidental administrators," lacking training in skills necessary to be an effective leader. Given the current challenges facing healthcare, increasing reliance on interdisciplinary teams to provide care, and greater emphasis on cost control and quality improvement, the need for clinicians to develop effective leadership skills is paramount. This course is designed for clinician-educators and researchers who want to understand the basics of leadership and management. Through selected readings, this course will develop participants' leadership skills across a variety of domains. Topics covered include understanding how academic medical centers function and how to set team culture, run a meeting, manage time, lead across difference, and create/maintain a five year plan. At the completion of the course, trainees will understand of the basic principles of leadership and management in the context of academic medicine. *Please note in previous terms, this course was titled "Managing Your Career in Clinical & Translational Science" and "Strategic Leadership".

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2080 - MASTERS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Trainees may register for this course with approval from the mentor and selected faculty of the Degree Granting Programs in Clinical Research Curriculum Committee. The course is designed for trainees who are prepared to undertake their thesis or substantive research project.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2085 - DIRECTED RESEARCH/INDEPENDENT STUDY IN CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 3

For Master of Science and Doctoral Certificate in Clinical and Translational Science students. An independent study project is designed by the student to pursue an area of study within clinical research that is not covered by the established curriculum. It cannot be used to replace required or core courses. The project is designed by the student and requires that an Institute for Clinical Research Education (ICRE) faculty member supervise the project. The student will complete the directed research independent study form, and the faculty preceptor and Director of Academic Programs must approve it. An independent study project may carry 1-3 graduate semester credits, assigned at the faculty member's discretion based on the project proposed. Doctoral CTS students may only register for a maximum of 2 credits.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2086 - CLINICAL RESEARCH TEACHING PRACTICUM

Minimum Credits: 0

Maximum Credits: 3

The objective of this teaching practicum is to provide students the opportunity to design and/or implement a curriculum. This practicum involves curriculum development and implementation (i.e instruction). Each year the course directors will assess whether substantive curriculum development/refinement is necessary prior to instruction.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2095 - PHARMACOEPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to the field of pharmacoepidemiology which uses epidemiologic methods to examine the benefits or risks of medications in the population. In addition to formal lectures, students will be given the opportunity to examine and critique the literature in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CLRES 2107 - COMPARATIVE EFFECTIVENESS RESEARCH AND PCOR

Minimum Credits: 2

Maximum Credits: 2

This course will define Comparative Effectiveness Research (CER) and Patient-centered Outcomes Research (PCOR) and highlight the history and current national efforts in promoting CER/PCOR for drugs, devices and other interventions. The curriculum will include topics on the conceptualization, outcome measurements, engagement of patients and stakeholders, study designs, and analysis methods used in CER/PCOR studies. The course is project based and students learn how to define their own CER/PCOR research question and design a research project to answer the question.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2108 - PATIENT REGISTRIES & ELECTRONIC HEALTH RECORDS IN CER

Minimum Credits: 1

Maximum Credits: 1

This course explores the role of research registries that include electronic health record data in comparative effectiveness research. Students will gain an understanding of different registry models, including establishing a registry, evaluating a registry, using registry data and the strengths and weaknesses of different registry models. We will discuss the use of registries with both identifiable and de-identified data. Ethical issues surrounding the use of these data sources for research will be discussed. We will use case studies to facilitate the learning of concepts discussed in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2120 - COST EFFECTVNS ANAL HLTH CARE

Minimum Credits: 1

Maximum Credits: 1

CLRES 2120 provides an introduction to the methods used in the economic analysis of health care programs. The course will discuss economic principles that serve as the foundation of cost-effectiveness analysis, will describe the various ratios and methodologies used in cost-effectiveness studies, will highlight the current controversies in cost-benefit analysis, and will explore issues regarding the appropriate use of cost-effectiveness in making medical decisions concerning patients and populations. Additional topics include concepts of perspective, utility analysis, discounting, and

the definition of various costs and benefits.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2121 - CLINICAL DECISION ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course presents an overview of the theory of medical decision making. Topics include the incorporation of uncertainty and risk into medical decision making; the use of decision-making techniques in both population and individual patient settings; the design, structure, and evaluation of decision trees generated by software packages; sensitivity analysis and the stability of model outputs; and controversies concerning the perspective of the analysis and the discounting of costs and benefits. The course will help trainees become skilled in structuring and analyzing decision-making problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2122 - COMPUTER METHODS IN DECISION AND COST-EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course expands upon topics introduced in CLRES 2120 (cost effectiveness analysis) and CLRES 2121 (clinical decision analysis) and provides additional guidelines for using decision sciences in larger, more complex applications. Topics include modeling clinical processes and systems; discrete event simulation; advanced sensitivity analysis and confidence limits; controversies surrounding the use of cost-effectiveness analyses; and multi-attribute utility theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2124 - DIRECTED STUDY IN DECISION ANALYSIS AND COST EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 3

There are no formal class meetings. Each student will meet independently with their chosen faculty members; develop a timeline and schedule of meetings and milestones for various components of the particular project, or topic review. It is expected that the trainee and faculty member will meet every one-two weeks during the duration of the course.

Academic Career: Graduate

CLRES 2140 - BEST PRACTICE OF CLINICAL RESEARCH

Minimum Credits: 1

Maximum Credits: 1

CLRES 2140 covers the basic operations of conducting a health services research project, from developing realistic timelines and schedules to building tracking databases, training interviewers and data collectors, monitoring data collection and budgets, reporting, and closing out a study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2141 - MEDICAL WRITING AND PRESENTATION SKILLS (ONLINE)

Minimum Credits: 1

Maximum Credits: 1

Medical educators and researchers must be able to present their work clearly and effectively. However, important educational material and research data are sometimes obscured by poorly delivered presentations or poorly written manuscripts. The main objective of this course is to help students develop excellent medical writing and presentation skills. This objective will be achieved through a combination of videos, readings, individual assignments, and team projects in which students will practice specific skills. Students will craft an abstract, write a discussion section of a manuscript, practice methods of disseminating their science to the lay public, create a poster, construct a table or figure, and develop a PowerPoint presentation and record themselves delivering a 10-minute talk.

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2155 - MEDICAL PRODUCT IDEATION

Minimum Credits: 3

Maximum Credits: 3

A didactic class that explores the principles and use of "ethnography" as a tool to observe and document clinical activity in order to draft a clear statement of a clinical problem in need of solution and methods for concept generation to identify potential solutions. Students will be able to describe and use ethnographical techniques in identifying workplace problems and be able to describe and use concept generation methods to develop potential solutions. Topics covered: ethnography in the workplace; group brainstorming; brain-writing; affinitization; morphological analysis; basic human factors design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CLRES 2156 - MEDICAL PRODUCT DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

A didactic course that uses principles of system engineering, the stage-gate process for medical product development and engineering and business analysis principles to evaluate the commercial potential proposed medical devices to further develop feasible solutions to a clinical problem identified in BIOENG 2150. Students will demonstrate use of systems engineering techniques to prioritize a set of feasible device and/or system solutions and ability to use intellectual property (IP) tools to determine suitability for further development. Students will demonstrate use of course principles in development of a commercialization plan for a proposed medical product. Design controls required by FDA and international bodies; systems engineering methodologies; intellectual property (IP) and IP search tools; brief market analysis; size by region, growth, competition, barriers to entry, sustainable advantage; reimbursement issues for proposed medical device/system; basic financial analysis ' students will construct spreadsheets typically presented to senior business management. This will include estimates of costs, margins, break-even analysis, NPV, hurdle rates, ROI, IRR; codes, standards, and regulatory processes (FDA, IEC & ISO, UL, ministry of health (Japan), NRC, BRH, notified bodies, obtaining broad indications for use); safety, reliability, product liability considerations, manufacturability considerations (DFM ' design for manufacture, workflows)

CLRES 2170 - MAKING THE MOST OF MENTORING

Minimum Credits: 1
Maximum Credits: 1

We strongly believe that effective mentoring is the cornerstone of a successful academic career, whether it be in education, research, or clinical work. Good mentors are able to guide mentees as they attempt to navigate through the course of their careers. This course is designed to provide a basis for understanding the mentor-mentee relationship and to provide strategies for making the most out of the experience. Topics will include communication and negotiation, the use of mentoring contracts, providing and accepting feedback, evaluating the mentoring relationship, and solving problems and meeting challenges. Fellows, postdocs, other Institute for Clinical Research Education (ICRE) trainees, and junior faculty will discover useful ways to enhance the mentoring relationship and make it a rewarding experience both for the mentees and the mentors.

CLRES 2200 - INTRODUCTION TO RESEARCH DISPARITIES ON HEALTH CARE

Minimum Credits: 2
Maximum Credits: 2

This course will provide knowledge and skills to understand and apply the basic principles of healthcare disparities research. Students will be introduced to a variety of healthcare disparities that have been identified in the literature. They will learn about a 3-phase conceptual framework for advancing disparities research that involves detecting (phase 1), understanding (phase 2), and reducing/eliminating (phase 3) disparities. They will become familiar with methodological and conceptual issues that pertain to research designed to detect healthcare disparities, understand multi-level factors that contribute to disparities, and reduce or eliminate healthcare disparities. Students will use their knowledge and skills from the course to develop and present a research proposal focused on a healthcare disparities topic of their choice. The course will consist of didactic lectures, interactive discussions, and homework assignments to establish basic knowledge of research on disparities in health care. It will also include guest presentations by faculty with experience conducting research focused on disparities in health care.

Academic Career: Graduate

Course Requirements: PLAN: Medical Education (CERT-Master's, MS, Not Candidate for Degree), Clinical Research (CERT-Master's, MS, Not Candidate for Degree), Clinical and Translational Sci (PHD)

CLRES 2300 - INTRODUCTION TO SYSTEMIC REVIEWS AND META ANALYSIS

Minimum Credits: 1
Maximum Credits: 1

The course is an overview of the concepts necessary for performing systematic reviews and meta-analyses, covered in sufficient detail to enable students to conduct their own reviews and analyses after completion of the course. Students will learn about the individual steps involved in conducting systematic reviews and meta-analyses, including developing a focused research question, assembling a team to perform the study, designing a study protocol, defining inclusion and exclusion criteria, identifying relevant literature databases (including Cochrane databases and Medline), developing literature search strategies, performing the literature search, creating a data abstraction form, handling data abstraction and management, and using statistical methods for meta-analysis. We will discuss important topics such as criteria for meta-analysis, exploration of heterogeneity, choice of a meta-analytic method, study quality assessment, sensitivity and subgroup analysis, evaluation of potential sources of bias, presentation of results, and application of review results. Each class will have both a didactic component and a hands-on component that allows students to immediately apply the concepts introduced during the session. Students will use concepts learned in this course to evaluate and update a published systematic review and meta-analysis.

CLRES 2320 - CLINICAL TRIALS PRACTICUM

Minimum Credits: 2

Maximum Credits: 3

The purpose of the clinical trials practicum is for trainees (fellows and junior faculty) who are (or want to be) involved with a clinical trial to obtain course credit for their research experience. Each trainee is required to work with an experienced clinical researcher (investigator) who formally agrees to provide the trainee mentorship. The investigator must be planning a clinical trial, conducting a clinical trial, or have conducted a clinical trial. Trainees are expected to become part of the research team and learn how studies or trials are actually designed, implemented, managed, and analyzed. Trainees are expected to provide an outline of readings relevant for the practicum objectives and at the end of the practicum provide summaries of their experiences and reading materials. They may also receive credit by taking a specific question and analyzing a dataset from the trial. They can write up their findings for possible publication under the supervision of the investigators and are expected to provide a written summary of their involvement that is validated by their mentors at the end of the experience. Please see the link below for the NIH's definition of clinical trials: http://grants.nih.gov/grants/peer/tree_glossary.pdf. (Prerequisites: CLRES 2800, CLRES 2810, and CLRES 2820 or instructor permission)

CLRES 2400 - QUALITATIVE RESEARCH METHODS

Minimum Credits: 1

Maximum Credits: 1

The course will introduce participants to the characteristics and various approaches to designing and conducting qualitative research projects in health and health services research. Each student will gain hands-on experience in various qualitative methods and analysis techniques while carrying out a research project related to his or her area of interest. Topics covered will include study design; data collection, with an emphasis on focus group and in-depth interviewing methods; qualitative data analysis theory, techniques, and tools; and the presentation and dissemination of qualitative research results. Course assignments will include designing an interview or focus group question protocol relevant to the student's own research interests, conducting an in-depth interview, and performing preliminary data analysis on the interview text. The final project will be tailored to meet the current research development needs of each individual student and may involve writing a focused literature review, drafting a qualitative research proposal, or writing up the results of a qualitative research project for publication.

CLRES 2430 - INTRODUCTION TO COMMUNITY BASED PARTICIPATORY RESEARCH

Minimum Credits: 1

Maximum Credits: 1

This course is organized around themes central to the conceptualization and implementation of community-based participatory research and practice (CBPRP). The goal of this course is to familiarize students with community-based participatory research and practice. Students will become conversant in seminal community-based participatory research and practice literature. Discussion, interactive learning exercises, and examples of current research will be used to provide an understanding of cbpr and the associated strengths and limitations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education(ACM) or Medical Education(MS) or Clinical Research(ACM) or Clinical Research(MS) or Clinical and Translational Sci(PHD)

CLRES 2431 - TRANSLATING RESEARCH FOR POLICY AND PRACTICE

Minimum Credits: 1

Maximum Credits: 1

This course provides an introduction to concepts and skills in knowledge translation (a coordinated, collaborative approach to ensure that research findings are utilized by key stakeholders) and to the role of research in changing policy and practice at local, regional, and national levels. This module will build on concepts in community-partnered research introduced in module a of this three-part sequence in community based participatory research. This skills-based module will introduce learners to theoretical concepts in knowledge translation (KT), dissemination and implementation science, and apply these concepts to practical exercises to translate research findings for relevance to other key stakeholders, including community partners, program developers, and policy makers. One session will be devoted specifically to skills building in legislative and media advocacy. The goal of this course is to familiarize learners with the critically important steps involved in translating research findings for relevance to stakeholders beyond academia. Discussion, interactive learning exercises, and examples of research dissemination and implementation science will be used to provide a foundation in KT as an aspect of community-partnered research.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education(ACM) or Medical Education(MS) or Clinical Research(ACM) or Clinical Research(MS) or Clinical and Translational Sci(PHD)

CLRES 2432 - CONCEPT MAPPING: A PARTICIPATORY RESEARCH METHOD

Minimum Credits: 1

Maximum Credits: 1

This course provides hand-on training in the participatory research method known as concept mapping (CM). CM gives community members and other stakeholders a unique chance to have their own words communicate ideas and concepts. Research participants contribute directly in the processing of this information as it directly relates to their community and intervention needs. The goal of the course is to familiarize students with example applications of the research method and to provide training related to concept mapping data collection and analysis. Discussion, interactive learning exercises, and examples of current research will be used to provide an understanding of CBPR and the associated strengths and limitations.

Academic Career: Graduate

CLRES 2600 - SOCIAL NETWORKS & HEALTH

Minimum Credits: 1

Maximum Credits: 1

This course is an introduction to the theory, methods, and procedures of network analysis with emphasis on applications to health and social behavior. The goal of the course is to provide a working knowledge of concepts and methods used to describe and analyze social networks so that professionals and researchers can understand the results and implications of this body of research. The course also provides the training necessary for scholars to conduct network analysis in their own research and practice careers.

Course Component: Lecture

Grade Component: Grad Letter Grade

CLRES 2601 - PRINCIPLES AND PRACTICES OF PALLIATIVE CARE PART 1

Minimum Credits: 1

Maximum Credits: 1

The broad objectives of this course are to provide trainees with an overview of the basic and clinical sciences underlying the professional care of dying patients, and to introduce them to the primary reference sources in the field of palliative medicine. The course will be taught in a small-group, discussion format, with faculty drawn from content-experts throughout the medical center. Discussions will combine analysis of the evidence base for a wide range of palliative care interventions with clinical case discussions. Cases will be drawn from the literature, faculty experience, and current clinical activities of the trainees themselves.

Academic Career: Graduate

CLRES 2610 - RESEARCH METHODS IN PALLIATIVE CARE

Minimum Credits: 1

Maximum Credits: 1

This special methods course will provide the critical bridge between the more general research skills and the particular challenges of doing patient-oriented research in palliative care. It consists of the following components: discussion of the use of specific research methods and their strengths and limitations in palliative care and review OIF landmark research articles in palliative care and a critical appraisal of the methodologies. The course is taught in a graduate seminar fashion with an emphasis on discussion and critical analysis. Sessions are often co-moderated by a palliative care physician and a researcher with the particular methodological expertise under discussion.

Academic Career: Graduate

Course Component: Lecture

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2700 - FUNDAMENTALS OF BENCH RESEARCH

Minimum Credits: 2

Maximum Credits: 2

The course is designed to teach fellows in training and future clinician scientists the core principles of scientific investigation. The course is organized such that fellows can learn the theory behind most of the common research approaches as well as new and innovative approaches of current scientific endeavors. In addition, participants acquire laboratory technical skills via a "learning by doing" approach in a two-week period.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2715 - UNDERSTANDING AND APPLYING OMICS

Minimum Credits: 1

Maximum Credits: 1

This required course for the translational research track will provide information on resources available at university of Pittsburgh to facilitate high throughput research techniques and will involve in-depth discussions of definitions and applications of genomics, proteomics and glycomics. Issues important to tissue processing, sample collection, limitations of techniques and special ethical issues related to storage of samples will be covered. Translational researchers will present 'real-life' examples of application of these technologies and students will be required to develop an 'omics' approach to a relevant translational research question pertinent to their own field of study.

Academic Career: Graduate

Course Component: Lecture

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2725 - TRANSLATIONAL RESEARCH PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The major objective of the Translational Research Practicum is to obtain individualized laboratory-based training and acquire proficiency in scientific methodology, experimental design, data presentation, and analysis tailored to achieve pre-defined goals within the scope of the student's thesis work. The Translational Research Practicum must define a translatable component originating from the laboratory training (i.e., application of laboratory-based methodologies/techniques, gain proficiency with pre-clinical studies) with the ultimate goal of addressing questions pertaining to human studies. This work is usually conducted within the research mentor's laboratory.

CLRES 2729 - IDEA 2 IMPACT

Minimum Credits: 1

Maximum Credits: 1

This practical course guides academic researchers step by step through the experience of developing an entrepreneurial idea. It is designed for early-career scientists (e.g., MDs, PhDs, fellows, medical students, faculty, post docs) who are new to entrepreneurship and commercialization, but interested in translating research into practical applications. Each week, participants will focus on one discrete stage of the translational process as they identify a problem, analyze stakeholders, define a solution, describe its benefits, research the competition, articulate differentiators, and create an action plan. The course will be taught in a hybrid format, with self-paced, online modules to provide participants with key concepts and information, and class meetings where they present specific deliverables, receive feedback from colleagues, and engage in focused discussion. On the last day of class, participants will present their fully formed idea to an invited audience.

CLRES 2730 - FROM BENCHTOP TO BEDSIDE

Minimum Credits: 3

Maximum Credits: 3

This 12-week course, commonly known as B2B, is offered by the Innovation Institute, which encourages and supports innovation and entrepreneurship across campus to all faculty, staff and students. More information on B2B can be found on the Innovation Institute website. B2B is designed to give research scientists, clinicians, graduate students, and other interested parties the basic information necessary to assess the business potential of basic science research discoveries. The B2B course will help scientists develop additional focused information, including proof of concept and validation experiments, that increase the value of the technology and reduce the investment risk. B2B will also provide insight into how intellectual property and other differentiators can create a barrier to entry for the competition. The course will cover the fundamentals of investment from the private sector to help finance the climb over regulatory hurdles and meet critical developmental milestones. The course is designed to give graduate students, research scientists, faculty and clinicians the basic information necessary to assess the commercial potential of basic science discoveries.

CLRES 2750 - SEMINAR IN HEALTH SYSTEMS LEADERSHIP

Minimum Credits: 1.5

Maximum Credits: 1.5

This course will consist of a series of case-based examinations of specific managerial and leadership problems and decisions that have faced local health systems leaders in Western Pennsylvania. Health care reimbursement, licensing and accreditation, and measuring health care quality has become both more complicated and more important as pressures to reduce expenses and improve quality increase. Simultaneously, there has been a steady increase in the number of clinicians who have assumed managerial positions, such as medical directors of clinical units, directors of quality measurement and improvement programs, utilization review and many others, as well as the appearance of clinicians in the "C-suite" of many hospitals and health care organizations. Utilizing adjunct faculty who are currently (or very recently have been) executive leaders in health systems, this course will examine a series of collaborations, problems, conflicts and solutions that developed between health system administrators and clinical leadership in health care organizations in the Western PA area. The mechanics of the course will be a series of cases, based on an actual recent issue in health care management in which the senior adjunct faculty member was involved. Students (individually or in groups) will evaluate the case, prepare a response, and make a short presentation of their "solution" to the problem to the health system executive and clinical leader involved in that case. An interactive discussion will follow.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Medical Education (CERT-Master's or MS), Clinical Research (CERT-Master's or MS), Clinical and Translational Sci (PHD)

CLRES 2800 - FUNDAMENTALS IN CLINICAL TRIALS

Minimum Credits: 1

Maximum Credits: 1

Fundamentals in clinical trials course will provide information on the first three phases (phases i-iii) of drug development and fundamental components of randomized clinical trials. A majority of lectures will focus on aspects of phase iii parallel group designs with discussions on topics including developing research questions and defining endpoints, recruitment, randomization, blinding, data management and quality, monitoring, study closeout, and presentation/interpretation of results. The student will be introduced to the good clinical practice guidelines and the principles of planning and implementing clinical research protocols including: ethical issues and regulatory imperatives designed to protect human subjects in clinical research, adverse event reporting, protocol/proposal development, and publications. We will use manuscripts on clinical trials and protocols of completed studies to facilitate learning of concepts discussed in class. It is highly recommended that you have taken ANOVA and logistic regression courses before taking this course.

Academic Career: Graduate

CLRES 2981 - EPIDEMIOLOGY OF AGING-METHODS

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the methodological aspects of epidemiologic research in the field of aging and to critically evaluate research in older adults. The course will focus on: demography, study design, sampling, recruitment, retention, measurement of key variables and special populations. Students will write a critical review of a published article and comment on proposed future directions for epidemiologic studies addressing these questions in older populations. Throughout the course, a Problem Solving Learning Method will be applied by prompting the students to solve pragmatic issues. Examples include: How to measure a specific outcome? What type of chronic health conditions may be related to the research question? How to operationalize specific measures of interest (e.g.: how to create a composite score for co-morbidity assessment?). The course has been formulated to provide the students with the building blocks of the epidemiological study of aging. By the end of the course, the students will be able to critically evaluate various components of a study to further address the research questions in aging populations.

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Clinical and Translational Sci

CLRES 3140 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

Minimum Credits: 3

Maximum Credits: 3

Study of auditory evoked potentials with emphasis on the auditory brainstem responses (ABR). Use of ABR in audio logic and neurologic diagnosis.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2046 - PEDIATRIC EVALUATION

Minimum Credits: 3

Maximum Credits: 3

The mission of this course is to familiarize students with factors associated with heavy loss in infants and children as well as the application of audiology diagnostic procedures with this population.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2047 - AMPLIFICATION 1

Minimum Credits: 3

Maximum Credits: 3

This course provides an initial look at hearing aid evaluation, selection, validation, and orientation. Students will discuss historic as well as current topics in hearing aid selection and validation techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2048 - SOUND AND VIBRATION: MEASUREMENT AND MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This course presents basic principles in the operation and configuration of instrumentation and related concepts of signal production and analysis. For sound and vibration measurements, a special focus of interest will be the measurement and management of noise and its adverse auditory and nonauditory effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2049 - AGING AUDITORY SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The development of the auditory system across the lifespan will be investigated. Changes due to aging will be discussed in terms of their impact on diagnostic and rehabilitative audiology. This course takes a seminar format.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2051 - CLINICAL PROCEDURES LAB 1-2

Minimum Credits: 1

Maximum Credits: 1

Laboratory experience covering clinical procedures addressed in concurrent academic classes. Students will be given the opportunity for hands-on practice across the breadth of clinical audiology procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

CSD 2052 - CLINICAL PROCEDURES LAB 2-3

Minimum Credits: 1

Maximum Credits: 1

Laboratory experience covering clinical procedures addresses in concurrent academic classes. Students will be given the opportunity for hands-on practice across the breadth of clinical audiology procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

CSD 2053 - CLINICAL PROCEDURES LAB 2-1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

CSD 2054 - IMPLANTABLE HEARING DEVICES

Minimum Credits: 3

Maximum Credits: 3

This course will explore non-traditional amplification solutions that are emerging or established technologies for implantable hearing devices. Topics will include such devices as cochlear implants to newer implantable bone conduction devices. Theoretical and practical considerations of these communication solutions will be discussed. Students will leave the course with a working knowledge of the development and current status of these devices, patient candidacy, and clinical considerations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2055 - PEDIATRIC AUDIOLOGIC REHABILITATION

Minimum Credits: 3

Maximum Credits: 3

This course is for students interested in the treatment of infants and children with hearing loss. The course focuses on the speech, language, and auditory characteristics of infants and children with hearing loss, their rehabilitative needs, and the effectiveness of various types of treatment approaches.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2056 - AUDIOLOGY PRACTICUM NETWORK - AUD

Minimum Credits: 1

Maximum Credits: 6

University supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience will be obtained within the speech and hearing clinic network of the department of communication disorders.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2057 - AUDIOLOGY PRACTICUM OUTPLACEMENT

Minimum Credits: 1

Maximum Credits: 6

Supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience may be obtained within the university speech and hearing clinic network or in community clinic facilities associated with the department.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Communication Science and Disorders MA, Communication Science and Disorders MS, Audiology

CSD 2059 - AUDIOLOGY PRACTICUM NETWORK - SLP

Minimum Credits: 1

Maximum Credits: 6

University supervised observational and clinical practicum experience in diagnostic and rehabilitative aspects of audiology. Experience will be obtained within the speech and hearing clinic network of the department of communication disorders.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

CSD 2060 - PROSEMINAR - MA

Minimum Credits: 0

Maximum Credits: 0

Variable content. Speakers from the communication department, other areas of the university and the general professional community present issues of concern to speech pathologists and audiologists.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2062 - INTRODUCTION TO CLINICIAN-CLIENT COMMUNICATIONS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Audiology (AUD) or Speech-Language Pathology (CSD) or SBPLAN: Audiology (Comm Science and Disorders-MA, or MS) or Speech-Language Pathology (Comm Science and Disorders-MA or MS)

CSD 2063 - DEVELOPING CLINICIAN-CLIENT COMMUNICATIONS

Minimum Credits: 1

Maximum Credits: 1

This course builds upon CSD 2062 and is designed to develop the graduate student's knowledge and skills in clinician-client communications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CSD 2064 - INTRO CLINICAL DECISION-MAKING

Minimum Credits: 3

Maximum Credits: 3

This course prepares students for their first clinical practicum, by orienting them to the principles and procedures underlying assessment, remediation and documentation activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2065 - SPEECH PRACTICUM NETWORK

Minimum Credits: 1

Maximum Credits: 3

Student clinicians assess clients presented with various communication disorders, under supervision of certified speech-language pathologists in the university speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2066 - SPEECH PRACTICUM OUTPLACEMENT

Minimum Credits: 1

Maximum Credits: 9

Student clinicians provide intervention to communicatively impaired clients, under supervision of certified speech language pathologists, in the university speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2067 - CLINIC PRACTICE IN SCHOOLS

Minimum Credits: 1

Maximum Credits: 6

Student clinicians provide clinical services to communicatively impaired children in school settings, under supervision of certified speech-language pathologists.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2068 - SPEECH PRACTICUM NETWORK - AUD

Minimum Credits: 1

Maximum Credits: 3

Student clinicians assess clients presented with various communication disorders, under supervision of certified speech-language pathologists in the University speech and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

CSD 2069 - SLP MASTERS COMPREHENSIVE

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2070 - ARTICULATION AND PHONOLOGICAL DISORDERS

Minimum Credits: 3

Maximum Credits: 3

Students learn the principles and procedures needed to identify, evaluate and remediate articulation and phonological disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2071 - CHILD LANGUAGE DISORDERS 1

Minimum Credits: 3

Maximum Credits: 3

This course will advance students' knowledge of models of normal and impaired language development. Students will learn to evaluate the underlying bases, the merits, the limitations of, and the empirical support for various approaches to the evaluation and management of childhood language disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2072 - FLUENCY DISORDERS

Minimum Credits: 3

Maximum Credits: 3

An introduction survey of basic information about stuttering. It includes theories of causation, diagnostic procedures, measurement procedures, dynamics and correlates to stuttering as clinical management procedures.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2073 - VOICE DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course covers information regarding the nature and causes of common pathologies affecting voice, voice measurement, and treatment approaches for voice disorders. Traditional as well as non-traditional approaches are emphasized. The course uses a problem-based learning methodology, in which students are required to adopt critical thinking in solving clinical problems based on material covered in the course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2074 - CLEFT PALATE

Minimum Credits: 3

Maximum Credits: 3

An overview of communication problems associated with palatal clefting and interdisciplinary treatment including embryology, anatomy, classification, neonatal problems, hearing, surgery, speech, and social, mental, and emotional development.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2075 - APHASIA

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the nature, appraisal, differential diagnosis, and management of aphasia, a neurologically-based communication disorder.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2076 - DYSPHAGIA

Minimum Credits: 3

Maximum Credits: 3

Principles and practices necessary to provide counseling, evaluation and treatment to clients with alaryngeal speech and/or swallowing disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2077 - AUGMENTATIVE COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

Serving the needs of nonspeaking individuals by augmenting their residual communication skills or by providing alternate systems of communication is the focus of this course. Considered in the course are the history of augmentative communication, the evaluation and assessment of nonspeakers, the fitting of nonspeakers with augmentative communication devices, the training of nonspeakers who have been fitted with devices, and the team approach to meeting the needs of nonspeakers. Implementation is by lecture, discussion, and demonstration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2078 - PHYSICS, PHYSIOLOGY AND PSYCHOLOGY OF SOUND

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2081 - RESEARCH STRATEGIES AND TACTICS

Minimum Credits: 3

Maximum Credits: 3

This course will advance students' knowledge of scientific approaches to the study of communicative processes and disorders. Students will learn a variety of strategies that guide scientific inquiry, and will examine tactics for implementing those strategies. This course will teach students skills needed to be wise consumers and potential producers of research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2082 - PROFESSIONAL ISSUES 1

Minimum Credits: 1

Maximum Credits: 1

Students address practical and current issues necessary for ethical and informed professional services in the field of speech-language pathology and audiology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2083 - PROFESSIONAL ISSUES 2

Minimum Credits: 1

Maximum Credits: 1

Students address practical and current professional issues, including interprofessional practice and intercultural competence, in preparation for employment and professional practice in the field of speech-language pathology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2101 - STATISTICAL METHODS IN CLINICAL RESEARCH 1

Minimum Credits: 3

Maximum Credits: 3

This is the first of a two-course series for health career professionals who will make use of statistical methods in research projects or in interpreting literature. The first course will provide an introduction to descriptive and inferential statistics. Topics covered include measurement, frequency distributions, histograms, bar graphs, stem-and-leaf displays, boxplots, scatterplots, measures of central tendency, measures of variability, point estimation, interval estimation, sampling distributions, one and two sample t-tests of hypotheses for means as well as an introduction to non-parametric tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2102 - STATISTICAL METHODS CLINICAL RESEARCH 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of a two-course series for students in the health professions who will make use of statistical methods in research projects or when interpreting literature. Topics covered include one and two-way analysis of variance, analysis of covariance, correlation, simple linear regression, multiple regression, and logistical regression, regression diagnostics, confounding and effect modification and model selection. Students will develop analytic skills through the use of clinical datasets where they will learn to analyze data and explain their findings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: CSD 2101; PROG: SHRS

CSD 2110 - NEUROSCIENCE OF COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2120 - PRINCIPLES OF AUDIOLOGY FOR SPEECH-LANGUAGE PATHOLOGISTS

Minimum Credits: 1

Maximum Credits: 1

The purpose of this course is to provide Speech-Language Pathology students with a foundation for understanding the impact of hearing loss on speech, language, cognition and swallowing. Students will develop the knowledge and skills necessary for preventing hearing loss, screening and appropriately referring for hearing loss, interpreting and providing counseling of audiologic reports, conducting listening checks and trouble-shooting hearing technology, and appropriately adapting clinical procedures and home environments for patients with hearing loss, as defined within the Scope of Practice for SLPs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2130 - NEUROGENIC LANGUAGE AND COGNITIVE COMMUNICATION DISORDERS 1

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2162 - COUNSELING FOR COMMUNICATION DISORDERS

Minimum Credits: 2

Maximum Credits: 2

This course will provide an introduction to counseling for individuals with communication, balance and swallowing disorders and their families, consistent with the defined Scopes of Practice for Audiology and Speech-Language Pathology. Student will develop essential counseling skills, acquire knowledge of key approaches and frameworks, and learn best practices for referral and coordination of care with mental health professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2230 - NEUROGENIC LANGUAGE AND COGNITIVE COMMUNICATION DISORDERS 2

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2250 - CHILD LANGUAGE DISORDERS 2

Minimum Credits: 3

Maximum Credits: 3

This course concerns advanced topics in the etiology, diagnosis, and remediation of developmental and acquired language disorders in children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2251 - VESTIBULAR ASSESSMENT AND REHABILITATION

Minimum Credits: 3

Maximum Credits: 3

Evaluation of the functioning of the vestibular system and its associated neural pathways. Special attention is given to differentiation of peripheral and central vestibular disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2252 - ADVANCED PHYSIOLOGICAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Lectures and discussions on advanced topics in auditory evoked potentials including auditory brainstem response, middle latency and late evoked potentials.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2275 - COGNITIVE COMMUNICATIVE DISORDERS

Minimum Credits: 3

Maximum Credits: 3

This course will address the nature, assessment, and management of cognitive and communicative disorders in three populations: adults with right hemisphere brain damage, traumatic brain injury, and dementing conditions. In the first portion of the class, students will become familiar with current concepts, models, and measures of cognitive functions that are associated with, or potentially underlie, the neurologic communication

disorders in these three populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2451 - AUDIOLOGY MASTERS COMPREHENSIVE

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CSD 2454 - AMPLIFICATION 2

Minimum Credits: 3

Maximum Credits: 3

This course allows for in depth discussion of topics related to hearing aid evaluation, fitting, and selection and signal processing. This course takes a seminar format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2456 - SPEECH PERCEPTION ACROSS THE LIFESPAN

Minimum Credits: 3

Maximum Credits: 3

This seminar focuses on the development and potential decline of speech perception across the life span. The relationships between speech perception and audition, vision, speech production, cognitive function, language, and literacy will be explored for typically developing and aging populations. The implications of hearing loss and auditory therapies and technologies on speech perception will be explored, as well as common clinical tests of speech perception.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2479 - SEMINAR IN SPEECH-LANGUAGE PATHOLOGY

Minimum Credits: 1

Maximum Credits: 3

Content varies across the spectrum of speech and language disorders. Each term has a special and specific focus. Students view the literature and present and discuss specific topics of interest.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Speech-Language Pathology (CSD) or SBPLAN: Speech-Language Pathology (Comm Science and Disorders-MA) or Speech-Language Pathology (Comm Science and Disorders-MS)

CSD 2500 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 3

Minimum Credits: 1

Maximum Credits: 3

The course is designed to enhance the skill and knowledge base of medical speech language pathology. Topics include, but are not limited to, pathophysiology of neurogenic communication and swallowing disorders, tracheotomy management, neurological assessment and advanced applied

neuroscience, pediatric feeding assessment and management, structure and function of respiratory and digestive systems, and medical ethics. Active participant learning is essential and performance is judged based on regular participation.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2501 - SPEC TOPC COM DISORDERS PROFSSNL

Minimum Credits: 1

Maximum Credits: 4

Course to provide continuing educ and skill development for professionals in communication disorders. Designed to address continuing education needs, and/or mandates of respective licensing & professional certification bodies. Topic areas may include, but not limited, augmentative communication, autism, literacy & language development, motor speech disorders, neurogenic speech/language disorders, dysphagia, audiology & aural rehab, in a variety of clinical populations across the life span. Emphasis placed on current clinical research in the content areas presented.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Speech-Language Pathology (CSD) or SBPLAN: Speech-Language Pathology (Comm Science and Disorders-MA) or Speech-Language Pathology (Comm Science and Disorders-MS)

CSD 2503 - APPLIED AERODIGESTIVE PHYSIOLOGY 1

Minimum Credits: 3

Maximum Credits: 3

These courses are designed to provide advanced study of the physiological processes involved in speech production and swallowing. Clinical methods used to measure speech production and swallowing physiology will be addressed. Instrumentation will be used to give students hands-on experience in the acquisition, measurement and interpretation of acoustic and physiologic data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD)

CSD 2504 - APPLIED AERODIGESTIVE PHYSIOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

These courses are designed to provide advanced study of the physiological processes involved in speech production and swallowing. Clinical methods used to measure speech production and swallowing physiology will be addressed. Instrumentation will be used to give students hands-on experience in the acquisition, measurement and interpretation of acoustic and physiologic data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD)

CSD 2505 - PROFESSIONAL WRITING 1

Minimum Credits: 1

Maximum Credits: 1

This course will be composed of two 1-credit didactic classes on the art of succinct professional writing. The nature of "the readership" will be examined and how writing style must be modified to suit a specific audience. Assessment will be based on the production of several items including a scientific abstract for conference peer review, an administrative work such as an evidence based business plan for specific service development, and an information leaflet for careers (lay language use). Some of these may require submission to an outside body if appropriate. The third credit in this series will be a scholarly work in which the student will be mentored by a departmental faculty member on the development of a specific project. . It is a requirement that this scholarly component be submitted to an outside institution for peer review. Class waivers will be considered on an individual basis, provided the student can demonstrate writing skills consistent with the outcomes of this course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2506 - PROFESSIONAL WRITING 2

Minimum Credits: 1

Maximum Credits: 1

This course will be composed of two 1-credit didactic classes on the art of succinct professional writing. Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2508 - RESEARCH AND CLINICAL FORUM

Minimum Credits: 0

Maximum Credits: 0

This component encourages residents (and clinical fellows) to attend clinical and research meetings offered by CSD/Pitt/UPMC/VA etc. to gain experience of the various aspects of clinical and research fields relevant to the discipline of communication science and disorders. (Residents and clinical fellows) will attend 4 documented events per semester from the full range of activities available throughout the University of Pittsburgh and its associated medical center's extensive network of institutional and regional clinical, research, and scientific educational offerings.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2509 - HEAD AND NECK ANATOMY

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2510 - COMPLEX DECISIONS

Minimum Credits: 3

Maximum Credits: 3

A problem based learning format will be used to explore situations encountered in medical speech-language pathology. Problems relevant to an array of theoretical, diagnostic and management issues will be presented in a format whereby students will assume complete responsibility for collecting, analyzing, interpreting and summarizing findings with class members.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2511 - ORAL DISSEMINATION SKILLS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2512 - HEAD AND NECK ANATOMY LAB FOR CLINICAL DOCTORATE IN MEDICAL SPEECH LANGUAGE PATHOLOGY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

CSD 2513 - NON SLP CLINICAL ROTATIONS

Minimum Credits: 1

Maximum Credits: 7

This course provides the csc.d student with the opportunity to develop theoretical and clinical knowledge and skills through observation, discussion, and participation with other health professionals via the completion of three 10-week half-time clinical rotations. These experiences may include such disciplines as physical medicine and rehabilitation, neurology, and other related clinical services.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2514 - SCHOOL BASED SERVICE DELIVERY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

CSD 2515 - HUMAN PHYSIOLOGY FOR THE MEDICAL SLP

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

CSD 2516 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 1

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Lecture

CSD 2517 - MEDICAL SPEECH-LANGUAGE PATHOLOGY 2

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

CSD 2520 - MENTORED CLINICAL INTERNSHIP

Minimum Credits: 1
Maximum Credits: 6
The focus of these internship assignments is to further develop, refine and enhance the CScD student's knowledge, skills and abilities as they pertain to the assessment and management of communication and swallowing disorders in the context of their weekly caseload. Mentoring will be facilitated through weekly interactions with designated faculty members.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis
Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2521 - CLINICAL EDUCATION 1

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2522 - CLINICAL EDUCATION 2

Minimum Credits: 1
Maximum Credits: 1

CSD 2524 - CLINICAL CASE EDUCATION

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad SN Basis

CSD 2572 - COMPREHENSIVE EXAMS

Minimum Credits: 1
Maximum Credits: 1
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Comm Science and Disorders(MA, MS) or Speech-Language Pathology (CSD)

CSD 2600 - INTER-PROFESSIONAL ROTATION

Minimum Credits: 1
Maximum Credits: 1
This course includes a clinical rotation where students accompany physicians engaged in clinical examination, diagnosis, and treatment of otology/vestibular patients. Students meet with medical residents in otology conferences and grand rounds. This course exposes students to basic ear anatomy and surgical procedures.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2601 - SUPERVISION

Minimum Credits: 1
Maximum Credits: 1
Students will explore activities associated with supervising students through readings and examples presented in class. This course provides future professionals with tools to be effective audiology supervisors. Material is presented in a manner to convince students that supervising future practitioners is a professional responsibility.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2602 - EDUCATIONAL AUDIOLOGY

Minimum Credits: 2
Maximum Credits: 2
This course takes a lifespan approach to educational audiology. Laws, working within the educational environment and with other educators, developmental needs, room acoustics, and technology will be explored in this course.
Academic Career: Graduate
Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2603 - HUMAN GENETICS FOR HEARING AND SPEECH DISORDERS

Minimum Credits: 2

Maximum Credits: 2

An examination of the mechanisms involved in producing genetic variation in humans and the medical/clinical aspects of genetic variation and disease. Students will learn genetics terminology, patterns of inheritance, DNA/RNA structure and transcription and translation, characteristics of major human syndromic and non-syndromic hearing loss and communication disorders. We will discuss the ethical, legal and social issues associated with our growing knowledge of human genetics and the potential for misuse.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CSD 2652 - ADVANCED CLINICAL SEMINAR 3-1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

CSD 2654 - PRACTICE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Students will investigate the professional, legal, and ethical issues related to practice management. In-depth exposure and critical discussion will be focused on professional issues that impact licensure, occupational codes, and reimbursement. Students will understand CMS and other government agencies that impact how they manage their audio logy practices. Billing as it relates to CPT codes, ICD-9 CM codes, third party payment, etc. will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Audiology (AUDIO-AUD; MACAUD-SP; MSCAUD-SP) or Comm Science and Disorders (PHD)

CSD 2655 - ADVANCED CLINICAL SEMINAR 4-1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

CSD 2656 - ADV AUDLGY CLN PRACTICE-NETWORK

Minimum Credits: 1

Maximum Credits: 4

Third year audiology students engage in advanced clinical practicum under the supervision of university faculty. Practicum activities target the development of independence in higher level clinical skills such as clinical decision making, diagnostic and treatment planning, case management, and professional oral and written communication skills.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2657 - ADVANCED CLINICAL SEMINAR 3-3

Minimum Credits: 1

Maximum Credits: 1

This course provides advanced students with a forum for discussion of advanced clinical topics through case-based learning.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

CSD 2658 - ADVANCED CLINICAL SEMINAR 4-3

Minimum Credits: 1

Maximum Credits: 1

This course provides advanced students with a forum for discussion of advanced clinical topics through case-based learning. Participants will access the course via the chat function on course web.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Attributes: World Wide Web

CSD 2659 - AUDIOLOGY EXTERNSHIP

Minimum Credits: 1

Maximum Credits: 9

Consists of full-time supervised work at sites offering diagnostic and rehabilitative audiology within and outside the Pittsburgh region. Students are expected to gain at least 2000 hours of clinical activity through the internship.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 2660 - ADVANCED CLINICAL SEMINAR 4-2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

CSD 2661 - ADVANCED CLINICAL SEMINAR 3-2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

CSD 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Under the direct supervision of a faculty member, the student carries out specific research (library or experimental) pertinent to the student's and/or faculty member's interests.

Academic Career: Graduate

Course Component: Directed Studies
Grade Component: Grad LG/SU3 Basis

CSD 2970 - TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

Student is supervised in gaining experience in various aspects of university classroom instruction, including preparation of materials, lecturing and discussion, test construction and evaluation and student evaluation.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

CSD 2971 - RESEARCH PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

This variable credit experience provides opportunities for students to be involved in research studies under the supervision of faculty members.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

CSD 2972 - EXAMINATION

Minimum Credits: 1

Maximum Credits: 3

Examination credit registration gives official registration status to a student who will be taking an examination but who may not be registered for any other courses.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CSD 2973 - PRACTICUM IN CLINIC SUPERVISION

Minimum Credits: 1

Maximum Credits: 3

This course provides advanced graduate students with the opportunity to obtain experience supervising first year masters students. The advanced students, in turn, will work in consultation with the director or the assistant director of the university speech-language and hearing clinic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (CSD-MA; CSD-MS; CSD-PhD; SLPATH-CSD)

CSD 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

Independent study credits are taken without supervision by students who propose projects that complement their academic goals, and projects whose substance is not covered in the division's regular course offerings.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CSD 3000 - DISSERTATION RESEARCH PHD DEGREE

Minimum Credits: 1

Maximum Credits: 9

Students will formulate, design, propose, carry out, analyze, interpret, and write up an approved research project, under the direction of a dissertation committee, and in particular the chairperson.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CSD 3048 - PHD SEMINAR

Minimum Credits: 3

Maximum Credits: 3

The seminar will focus on professional concerns such as the scientific method, research design and evaluation, effective scientific writing and presentation, funding sources, and the grant writing process. Among the options for a final product are a research proposal, or a publishable paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3049 - PH.D. SEMINAR IN AUDIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Audiology Ph.D. students will participate in this seminar series.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

CSD 3060 - PHD PROSEMINAR

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Speech-Language Pathology (CSD) or Audiology (AUD)

CSD 3479 - RESEARCH SEMINAR IN SPEECH AND LANGUAGE PATHOLOGY

Minimum Credits: 3

Maximum Credits: 3

Content varies across the spectrum of research issues in speech and language disorders. Each term has a special and specific focus. Students will review research literature and present and discuss specific topics of interest.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

CSD 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Students will explore theoretical or applied questions related to their area of interest by analyzing relevant literature under the direction of an appropriate faculty advisor.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

CSD 3971 - RESEARCH PRACTICUM FOR PHD STUDENTS

Minimum Credits: 1

Maximum Credits: 9

A prerequisite to CSD 3000; doctoral students are involved in research projects under the supervision of faculty members.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: PLAN: Comm Science and Disorders (PHD) or Audiology (AUD) or Speech-Language Pathology (CSD)

Communication: Rhet & Comm

COMMRC 2000 - THESIS FOR MASTERS DEGREE

Minimum Credits: 1

Maximum Credits: 6

After successful completion of the master's level comprehensive examinations, students may elect to write a master's thesis.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

COMMRC 2014 - ARGUMENTATION

Minimum Credits: 3

Maximum Credits: 3

This course interrogates argument as a product, process, and method of inquiry, using a variety of theoretical approaches as points of departure, including pragma-dialectics, speech act theory, controversy studies, informal logic, visual communication, and forensics, as well as critical perspectives such as invitational rhetoric and feminist argumentation theory.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2201 - RHETORICAL CRITICISM

Minimum Credits: 3

Maximum Credits: 3

This course is focused on the history and practice of rhetorical criticism in America during the twentieth century. The student writes several in-depth criticisms of a significant message designed to influence belief and action.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2202 - HISTORICAL METHODS IN RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This course explores the various rhetorical functions that traditional histories of rhetoric serve and introduces students to recent theories of historiography and the rhetorics of historiography.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2203 - SEMNR IN PHILOSOPHY AND RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar concerns itself with the conflict between philosophy and rhetoric. The conflict will be considered both historically and critically. We will ask: how did the conflict come about? What important changes did it undergo in subsequent centuries? How does it exist today?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2212 - VISUAL RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar concentrates on scholarship concerning visual rhetoric and its various synonyms, primarily produced in the United States during the last few decades. Through classroom exercises, readings, and writings, graduate students will become familiar with various practices of message analysis and evaluation pertaining to pictorial persuasion. Seminar participants prepare and present original research concerning visual rhetoric, including the formulation of research questions, developing an appropriate literature review, and, ultimately, inventing sustained argumentation for a thesis concerning the rhetoric of pictorial works.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2215 - RHETORIC AND HUMAN RIGHTS

Minimum Credits: 3

Maximum Credits: 3

This graduate course focuses on key concepts which are useful for describing, analyzing, and interpreting significant public texts and symbols concerning human rights controversies domestically and internationally. The central objective is to strengthen the seminar participants' awareness of qualitative techniques for interpretive and critical studies of public advocacy about human rights. It concentrates on 20th-century controversies within the US concerning "hate" or bias crimes. Considerations of race, sexuality, gender, sex, and economic class will be interwoven throughout the materials and discussions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2218 - CONTEMPORARY RHETORICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Study of selected theorists from roughly the last fifty years who explicitly thematize rhetoric or whose work helps to shape the intellectual landscape for thinking about rhetoric. Key theorists would include Kenneth Burke, Chaim Perelman, Michael McGee, Celeste Condit, Michel Foucault, Martha Nussbaum, Michael Billing, Richard Weaver, Jeanne Fahnestock, Thomas Farrell, Lloyd Bitzer, and Stephen Toulmin. Specific content will vary. Short response papers and one longer research paper required.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2220 - READINGS IN CRITICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Readings in critical theory concerns contemporary discourses about ideology, rhetoric, cultural institutions, power/ knowledge, desire and the subject. Each year a different area or topic is chosen.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

COMMRC 2226 - MEDIA AND CULTURAL STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course traces the history and development of british cultural studies and the role it has played in redefining the study of media in Britain, the US, and Australia. The course examines cultural studies as both a methodology and a political stance by studying its theoretical struggles with Marxism, structuralism, semiotics, social science research, and ethnographic techniques.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2245 - SEMINAR IN CLASSICAL RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar concerns itself with the origin and early development of rhetoric. The focus is on the traditions of the Greek and roman cultures. Particular attention goes to the sophistical, Platonic, Isocratean, Aristotelian and Ciceronian traditions. Consideration is given to the cultural context from which these traditions emerged.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2285 - SCIENCE AND ITS RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar will explore the following questions: what role, if any, do rhetorical interpretations play in the discourse of science? Can the acceptance of scientific ideas be exhaustively explained in terms of epistemic criteria alone, or is there always necessarily recourse to rhetorical topoi? What role does rhetoric play in the internal dialogues of science, and how is rhetoric mobilized when science addresses its lay audience? These questions will be explored through exemplary cases chosen from both the natural and the human sciences.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2296 - PROSEMINAR

Minimum Credits: 3

Maximum Credits: 3

Introduction to graduate study in communication. Required for all new graduate students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 2298 - RESEARCH COLLOQUIUM

Minimum Credits: 0

Maximum Credits: 0

The research colloquium provides a forum in which graduate students, faculty, and invited lecturers present research in progress.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: No Grade Required

COMMRC 2902 - DIRECTED STUDY FOR MA STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course, for individual instruction under a research faculty member, must be within an identifiable area of study in the fields of rhetoric and/or communication. Topics vary. May be taken only once. Open only to students yet to take ma comprehensive examinations.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

COMMRC 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

Independent study is taken without supervision by students who propose projects that complement their academic goals, and projects whose substance is not covered in the division's regular course offerings. Topics vary.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

COMMRC 3000 - DISSERTATION RESEARCH PHD DEGREE

Minimum Credits: 1

Maximum Credits: 12

The student will propose and design a research project and then carry out that project through research and writing. The project must be approved by a dissertation committee and executed under the direction of the chair of the committee.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

COMMRC 3001 - PROSPECTUS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Under individual guidance of a designated research faculty member, students design, propose, and execute a research and writing project related to their prospective dissertation topic. May be used for prospectus preparation.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

COMMRC 3002 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

Under individual guidance of a designated research faculty member, students design, propose, and execute a major professional development activity (e.g., Article, conference paper, or grant proposal) or related set of them, not necessarily related to their dissertation topic.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

COMMRC 3306 - SEM IN RHETORIC AND CULTURE

Minimum Credits: 3

Maximum Credits: 3

This course examines the role rhetoric plays in the formation of culture, reading some interdisciplinary texts (rhetorical, philosophical, historical,

literary) which represent the intellectual elite of a specific time period. These texts will furnish us with an occasion to inquire into the ways in which intellectuals mobilize rhetoric to perpetuate or transform existing socio-political formations: the kinds of cultural self-understanding shaping their discourse and the kinds of spaces their discourse opens to their audiences. Topics vary.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3314 - SEMINAR IN PUBLIC ARGUMENT

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course dealing with specialized topics in the employment of argument in the public sphere. Textual analysis will serve as the primary mode of analysis for discussing the way policy issues are considered in the public realm.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3316 - SEMINAR ON RHETORIC OF SOCIAL MOVEMENTS

Minimum Credits: 3

Maximum Credits: 3

Social movements have been perennial subjects of rhetorical inquiry. What are social movements? How and why do movements form, grow, and dissipate? Can approaches to rhetorical inquiry traditionally reserved for the analysis of lone speakers and single texts shed useful light on the process through which movements attempt to persuade various audiences? This seminar considers the manner in which early social movement scholars in the field of rhetoric grappled with these and other controversial questions. After developing working knowledge of the rhetorical tradition of social movement scholarship, students will engage other theoretical viewpoints from fields such as sociology and political science to illuminate aspects of movement activity that may be less apparent from within the rhetorical horizon. Consideration of specific case studies will anchor such explorations, and the pedagogical approach guiding such study will privilege direct engagement with movement actors. The goals of the course are to provide students with a grasp on the tradition of social movement inquiry in the field of rhetoric, familiarize them with fruitful interdisciplinary perspectives on movement study, and stimulate reflexive awareness of their own status as agents in the field of social action.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3317 - SEMINAR IN RHETORICAL THEORY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

COMMRC 3326 - SEMINAR IN MEDIA STUDIES

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to familiarize students with some of the core issues being debated within contemporary media studies. A number of theoretical perspectives will be incorporated, and topics will vary.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

COMMRC 3384 - TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course focuses on principles and methods for teaching public speaking. It covers such matters as syllabus design; diversity and inclusion in the classroom; lecture preparation and presentation; small and larger group discussions; speech assignments, evaluation and feedback; general classroom management; and techniques for referring troubled students to counseling; and surveys the instructional team approach to teaching large lecture courses and recitations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

COMMRC 3902 - DIRECTED STUDY FOR PHD STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course, for individual instruction under a research faculty member, must be within an identifiable area of study in the fields of rhetoric and/or communication. Topics vary. May be taken only twice. Open only to students yet to defend their Ph.D. comprehensive examinations.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Community Dentistry

CDENT 2113 - DENTAL RESEARCH METHODOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

The focus of this course will be applied and, as such, students will be required to employ statistical software packages for the analysis of dentally relevant data files. Students will be encouraged to develop, collect, encode and analyze their own data sets. Particular emphasis will be placed on analysis of variance techniques involving repeated measures and factorial designs. The interpretation of computer printouts will be paramount. A very brief introduction to the concept of multivariate analysis will also be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CDENT 2114 - DENTAL RESEARCH METHODOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

Course familiarizes students with concepts and methods of research design and measurement in dental medicine. Various systems employed for classifying types of research are presented, including biological and behavioral science approaches. Particular emphasis will be placed on proper design of clinical trials, research paradigms, scientific writing, and methods that can be employed to control for sources of extraneous variance. As a result, students will understand how clinical research becomes a foundation for clinical practice, be able to critically review dental research literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

CDENT 2183 - SCIENTIFIC WRITING

Minimum Credits: 1

Maximum Credits: 1

The component parts of the research paper will be presented and the differences between writing for the thesis or dissertation and a journal manuscript will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 2900 - INDEPENDENT STUDY

Minimum Credits: 2

Maximum Credits: 2

This course will provide the opportunity for dental residents to pursue the independent study of topics of interest in Dental Public Health.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

CDENT 5111 - DATA INTERPRETATION

Minimum Credits: 1

Maximum Credits: 1

The primary emphasis of this course is to give students an understanding of statistical issues as a basis for interpreting the dental literature. Emphasis is placed on understanding how research designs and statistical analysis of research articles relate to the conclusions that can be drawn.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 5114 - CARIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 5116 - EVIDENCE BASED DENTISTRY

Minimum Credits: 2

Maximum Credits: 2

In this course, students will be introduced to concepts of Evidence-Based Dentistry (EBD) as a foundation for developing high-quality evidence-based treatment decisions. The course presents quantitative thinking concepts (biostatistics) with an emphasis on developing the skills required to become an evidence-based practitioner (including critical thinking, asking clinical questions, searching for relevant evidence, assessing quality of evidence, using evidence to assist in clinical decision-making). Students will have an opportunity for hands-on experience in searching online literature for evidence. Assessing evidence quality and its relation to clinical care will be addressed. This course includes small group practice (using Process Oriented Guided Inquiry Learning (POGIL) groups in most sessions), lectures, and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 5117 - PROFESSIONALISM IN DENTAL MEDICINE

Minimum Credits: 2

Maximum Credits: 2

In this course, students will be provided with foundational knowledge in professionalism, including ethical, legal, social and cultural factors in oral health and disease prevention. The goal of the course is to prepare students for clinical dental practice by introducing principles of ethics and professional behavior that are essential to providing the highest level of oral health care in a clinical setting and throughout a career in dentistry. Concepts that are introduced in this course will be reinforced and expanded upon in the Health Promotion and Disease Prevention course series, which is also offered in the first year predoctoral curriculum. This course includes lectures, small group discussions, in-class and homework assignments.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad Letter Grade

CDENT 5145 - HEALTH PROMOTION AND DISEASE PREVENTION 2

Minimum Credits: 2

Maximum Credits: 2

In this course, students will prepare for their first clinical experience in the Adolescent Clinic in the summer term. Students explore concepts in health promotion and disease prevention and behavioral principles related to clinical practice. Students continue to examine the nature of oral health and disease. All of these concepts are developed and reinforced through the use of readings, online and in-class exercises, pre-clinical and clinical assignments, and oral and written presentation of a case that requires integration of the concepts and effective demonstration of the skills as they apply to patient care. The goals of the course are to prepare the student for clinical dental practice by introducing important concepts and developing skills required for the provision of effective dental care; to introduce students to ethical and behavioral principles related to clinical practice; and to provide students with their first exposure to the nature of oral health and disease.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDENT 5146 - CARIOLOGY

Minimum Credits: 1

Maximum Credits: 1

In this didactic course, students will be introduced to current concepts of the etiology, epidemiology, and clinical prevention and management strategies of dental caries. Students will be provided with actual clinical experience in diagnosing caries in subsequent courses. Successful completion of this course will provide students with the foundational knowledge for prevention and conservative management of caries appropriate for the general dental practitioner. The course includes lecture and small group Process Oriented Guided Inquiry Learning (POGIL) activities aimed at providing an in-depth understanding of the disease of dental caries. Several guest lectures are planned. Rationale: Caries is the most prevalent disease of children and one of the most prevalent diseases at all ages. The majority of dentists spend the majority of their patient contact time addressing caries-associated problems. Having an in-depth understanding of caries etiology, prevention, and management strategies is the foundation for ethical and appropriate patient care. This course provides for a contemporary understanding of these issues and reflects currently updated approaches to caries prevention and management (such as those now being disseminated under the title of: The International Caries Classification and Management System).

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF with +/- Values

CDENT 5173 - HEALTH PROMOTION AND DISEASE PREVENTION 3

Minimum Credits: 1.5

Maximum Credits: 1.5

In this course, students will work with peers, adolescent and/or young adult patients in a clinical setting where they will focus on developing practical skills related to risk assessment, oral disease prevention, and health promotion. This course is the capstone experience of the first year of the dental curriculum, preparing students to enter the second year by applying the foundational skills acquired in health promotion and disease prevention. This course includes a variety of activities and assignments such as lectures, in-class discussions, journaling, providing clinical care as doctor and assistant, clinical record management, quizzes, readings, and self-evaluation of clinical communication. The goals of the course goals are to prepare students for clinical dental practice by applying important concepts and developing skills required for the provision of effective dental care; to introduce students to ethical and behavioral principles related to clinical practice; and to provide students with their first exposure to the nature of oral health and disease in patients.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDENT 5280 - CARIOLOGY AND MANAGEMENT OF CARIES

Minimum Credits: 2

Maximum Credits: 2

This course will present instruction in the management of caries. Topics covered include remineralization, provisional resin restorations and fluoride treatment. The design of cavity preparations for root caries will be discussed.

Academic Career: Dental Medicine

Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

CDENT 5281 - SCOPE 1

Minimum Credits: 3

Maximum Credits: 3

The SCOPE community service program is designed to help cultivate health care professionals who are caring, socially responsible and capable of behaving as patient advocates in all practice environments. The SCOPE I service-learning model helps to enable 1) development of relationships and interactions with others, 2) the defining of community, and 3) the maintenance of a balance between personal and professional life. It also aims at developing student cultural competence, communication skills, and enabling a sense of giving back to the community as a crucial part of professional development. Course goals include the following: creating an atmosphere of community-minded oral-health professionals; creating more empathic, personally committed dentists; and improving the willingness of students to treat underserved and at-risk patients.

Academic Career: Dental Medicine

Course Component: Seminar

Grade Component: Grad HSU Basis

CDENT 5282 - CLINICAL APPLICATION OF PROBLEM-SOLVING SKILLS

Minimum Credits: 1

Maximum Credits: 1

This course is designed to support the continued development of evidence-based and critical thinking skills applied to clinical decision-making. The course is designed for 2nd year predoctoral students and supports the theme for the year (diagnosis and treatment planning) by guiding students in the process of applying evidence to support clinical decisions. The course will build and reinforce student understanding of the basic principles of clinical and translational research (i.e., how such research is conducted, critically evaluated, applied to clinical practice, disseminated and shared with patients). The course is taught as a Process Oriented Guided Inquiry Learning (POGIL) series. (POGIL is a student-centered strategy with students working in small groups with individual roles to ensure that all students are engaged in the process.) The course is designed to repeat and build upon information and skills developed from the Evidence Based Dentistry Course and the Oral Diagnosis and Treatment Planning Course. Information acquired during Oral Pathology, Oral Histology and Head and Neck Anatomy may be applied (repeated) during class. The goals of the course are to prepare students for clinical dental practice by further developing their ability to identify clinical problems and plan for clinical care; to provide students an opportunity to further develop skills for the practice of evidence based dentistry; practice intellectual breadth by thinking with an open mind, recognizing and evaluation assumptions, implications, and consequences; and to develop the ability to communicate professionally and work as a team member.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

CDENT 5342 - INTRODUCTION TO BEHAVIORAL DENTISTRY

Minimum Credits: 1

Maximum Credits: 1

Introduction to behavioral dentistry is designed to guide students in increasing awareness of the behavioral component of oral health care, increasing commitment to the biopsychosocial model, and strengthening the behavioral skills necessary to provide oral health care.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF with +/- Values

CDENT 5440 - SCOPE 2

Minimum Credits: 3

Maximum Credits: 3

This course is open to third and fourth year dental students and is structured to: 1) foster civic and social responsibility; 2) foster a sense of caring for others; 3) focus on family and patient centered care; and 4) identify community needs and provide care to these populations. Each participant must participate in five days (40 hours) of clinical dentistry at a SDM related community facility, maintain a reflective journal regarding their community clinical experience, attend community health forums presented by the SOM and public health seminars given by either the SDM's department of community dentistry, or public health related seminars given by other members of the schools of the health professions.

Academic Career: Dental Medicine
Course Component: Clinical
Grade Component: Grad HSU Basis

CDENT 5900 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

This independent externship is for a senior dental student who seeks a dental school approved rotation which is individually prescribed to address a particular interest the student wants to pursue within dentistry. The program which is often tailored to one aspect of dentistry allows enrichment to the student's education which none of our established programs in school or externships provide.

Course Requirements: PREQ: (SWCOSA 2084 or 2088) (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2053 - COMMUNICATIONS AND PUBLIC RELATIONS

Minimum Credits: 3

Maximum Credits: 3

Effective communications and public relations with the community at large are essential to the health and stability of all human services organizations. This course will examine the importance of all human services organizations to promote a positive public image, ensure public accessibility, and thereby accountability, and build a broad base of community support. Student will learn how to identify and respond effectively to the communication needs of all. Students will also explore ways to raise public awareness about compelling human services issues & tap available resources.

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2054 - LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

This course examines theories about leadership and provides students with feedback on their own leadership styles. Leadership skills are defined and applied. Teams, as one context for demonstrating leadership, are explored in depth and methods for recognizing and managing group dynamics are introduced. The course combines theory with practical application. It is highly participative and students are expected to join in a wide range of exercises and simulations.

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2084 - INTRODUCTION TO SOCIAL ADMINISTRATION

Minimum Credits: 3

Maximum Credits: 3

This course seeks to train professionals to develop, manage and lead community service organizations that address human service needs and revitalize communities. This course will address the social work leadership and management competencies as defined by the national association for social work managers, which include: 1) contemporary social and public policies; 2) advocacy; 3) public/community relations and marketing; 4) governance; 5) planning; 6) program development and management; 7) financial development; 8) evaluation; 9) human resource management; 10) staff development. This social administration course will provide an overview of the context, knowledge and skills for human service leadership and management roles, as well as a macro framework for systems and organizational theories key to social administration and organizational management and leadership as they apply in both nonprofit and for-profit settings. Social work values will provide a critical framework for leadership and mission in human service organizations and will draw upon the social work code of ethics as it guides macro systems and

organizations. This course will mainly focus on leadership of human service organizations and will present an overview of leadership roles and issues in personal, professional and organizational contexts. Students will also examine the following topics and issues as important to this social administration: human service systems, regulations and funding; communications and facilitation skills; starting and running a nonprofit organization; alliance, partnerships and collaborations; risk assessment and management; evidence-based practice, outcomes and benchmarking; external environmental issues shaping the human service sector. Students will produce an organizational assessment, analysis, and strategic planning field project to demonstrate their understanding and application of competencies in social administration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063 and SWWEL 2081 and SWGEN 2098; CREQ: SWRES 2021; SBPLAN: COSA (Social Work-MS)

SWCOSA 2086 - HUMAN RESOURCE/SUPERVISION AND FINANCIAL MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

This skill elective focuses upon the techniques, processes, methods and resources employed by supervisors, managers and other administrators to assure the highest quality social services are delivered in the most effective manner. Historical roots and trends; organizational and administrative theories; and research findings and conclusion provide the foundation for examining current supervisory and personnel management practices and financial management. Practical applications are included to enhance competency-based for mid-level human service management learning in this course.

SWCOSA 2087 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

Given the changing nature of social work practice, the MSW program occasionally offers courses in new and/or unique content areas. When offered, this course is designed to provide skill and knowledge content not covered in other community organization and social administration skill courses

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Social Work students only.

SWCOSA 2088 - COMMUNITY ORGANIZING AND PLANNING

Minimum Credits: 3

Maximum Credits: 3

This course seeks to train professionals to develop, manage and lead community service organizations that address human service needs and revitalize communities. This course will provide a framework of systems, power, and inter-organizational network theories, and will define communities in terms of issues, identity and place. Social work values of social and economic justice, participation, democratic practices, social inclusion, empowerment and capacity building will serve as a foundation for this course. This course will explore models of community organizing, including: locality development, social planning and social action, as well as transformative, participatory, feminist, community building and power-based models. Students will examine consensus, campaign, and contests strategies and tactics relative to these models and the techniques for recruiting and mobilizing citizens and constituencies to address social issues and build on local assets. In addition, students will learn: 1) frameworks and tools for assessment, analysis and planning; 2) development of human, social, and economic capital; 3) community capacity building for leadership, organizational, and partnership development; 4) settings of community practice, including unions, environmental, community and faith-based organizations, community development corporations, collaborations and coalitions, enabling and intermediary organizations, and policy and social action groups; 5) roles and skills in community organizing; 6) concepts and issues related to urban communities, including racism, poverty, neighborhood/commercial revitalization, workforce development, housing, and crime. Students will produce a major field project to demonstrate community assessment, analysis and action planning competencies and frameworks learned in class.

Academic Career: Graduate

Course Component: Lecture

SWCOSA 2090 - WORKING WITH GROUP AND INTERGROUP RELATIONS: FACILITATION/NEGOTIATION/MEDIATION

Minimum Credits: 3

Maximum Credits: 3

Organizers and administrators must be able to work with a range of group processes and interpersonal relationships in community and organizational practice. This course focuses on enhancing student knowledge and skills of group dynamics and processes, as well as the individual relationship management that can be challenging for macro practice. It will also provide a social work values and ethical context for practicing these skills. Three over-arching skill areas will comprise the knowledge and practice base of this modular course: 1) facilitation of task group processes of all types and sizes, 2) negotiating and bargaining, 3) mediation, including conflict mediation and resolution.

Academic Career: Graduate

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2092 - ORGANIZING FOR COMMUNITY CHANGE: ISSUE, LABOR AND POLITICAL ORGANIZING

Minimum Credits: 3

Maximum Credits: 3

This course will prepare students for community organizing strategies and tactics that support social change and advocacy across timely social and economic justice issues; promote labor and union organizing; or empower political action and political office.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2096 - COMMUNITY PLANNING AND DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to a community participation approach to local economic development carried out by a nonprofit organization. It would focus on the practical steps for putting together nonprofit housing developments and commercial and industrial business enterprises under participation conditions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWCOSA 2084 or 2088 (MIN GRADE 'B-' for Listed Courses)

SWCOSA 2097 - DIRECTED STUDY - COSA

Minimum Credits: 1

Maximum Credits: 3

This course is designed for those students who are interested in exploring a specific administration and/or policy issue of their choice. The course is appropriate for students with a new and developing interest area or for the student prepared to do advanced work. The course assumes the student's capacity for independent work under the guidance of a faculty member with extensive knowledge and experience in the subject area.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

SWCOSA 2099 - FIELD WORK

Minimum Credits: 1

Maximum Credits: 8

The field practicum emphasizes the integration and application of social work values, knowledge and skills in practice settings. Placements are in

community service delivery systems and are individualized to combine the student's choice of concentration area, certification program and specialized skill interest.

Computational Biology

CMPBIO 2010 - SEMINAR IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Seminar series of the joint Pitt-CMU Ph.D. program in computational biology. Nationally and internationally recognized researchers in the field of computational biology present scientific findings. Students meet informally with each speaker to discuss key areas of computational biology, including: computational structural biology, computational genomics, cellular and systems modeling, bio image informatics, and computational neurobiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

CMPBIO 2015 - COMPUTATIONAL IMAGING FOR SPATIAL SYSTEMS BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The recent explosion of next-generation, high-content, high-throughput spatial imaging technologies for intact tissues measuring protein expressions, DNA and RNA probes for investigating systems biology challenges has attracted the interest of NIH and other international agencies in funding precision medicine efforts, including Human Tumor Atlas Network (HTAN), Immuno-Oncology Translation Network (IOTN), Human BioMolecular Atlas Program (HuBMAP), Human Cell Atlas (HCA) and Human Protein Atlas (HPA). In this course, we will study these spatial imaging technologies in greater depth, from low-resolution, spatially barcoded approaches for spatial transcriptomics to high-resolution in situ approaches for imaging proteins, DNA and RNA (CODEX, MIBI, IMC-CyTOF, Seq-FISH, MERFISH) expressions. We will focus on several key aspects of these technologies requiring evaluation and benchmarking in the context of spatial approaches: validation of reagents; comparison to gold-standard methods; comparison between related techniques; and relation to analyses on dissociated cells. We will discuss the technologies in terms of: tissue preparation and reagent validation, imaging development and optimization, and computational inference to allow for high-resolution systems biology analysis of large tissues sections. We will include experimental hands-on lectures using in-house hyperplexed immunofluorescence imaging apparatus. Prerequisites: No biological background is expected. The assignments will cover the necessary biology. Experience in programming and some software engineering is preferred. Knowledge of probability, statistics, linear algebra and algorithms will be useful. Prior introduction to machine learning and imaging is a bonus. Strong interest in cancer imaging informatics is a plus. The class is open to senior year undergraduates and graduate students.

CMPBIO 2020 - GENE EXPRSN REGLN DATA ALGRTHM

Minimum Credits: 3

Maximum Credits: 3

This course is a graduate level course designed primarily for those students who want to learn about the computational methods and tools that are used in the analysis of promoter regions and transcription regulation data. Students with a biological background and knowledge of introductory level statistics can participate as well as students of quantitative background. The course will primarily focus on the methods that are used for the identification of transcription factor binding sites in the promoter regions of the genes. Both sequence-based and structure-based methods will be discussed. Various technologies for data collection will also be presented, including DNA arrays, SELEX, CHIP, and their derivatives.

CMPBIO 2025 - INTRODUCTION TO BIOINFORMATICS PROGRAMMING IN PYTHON

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to a selection of popular python packages used in bioinformatics and computational and systems biology. Students will be graded on programming assignments. Each assignment will explore a different sub-discipline of computational biology and introduce students to a new python package. Optional recitations will be available for students with programming and will assist in the development of basic programming skills. The course is designed for first-year graduate students in the corresponding fields of study. There will be a 1-hour lecture a week with time allocated for two 1-hour recitations. Both the lecture and recitations need to be scheduled in a computer lab (such as our classroom).

Academic Career: Graduate

Course Component: Lecture

CMPBIO 2030 - INTRODUCTION TO COMPUTATIONAL STRUCTURAL BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course will introduce students to computational structural biology, primarily relying on physical and chemical principles, as well as associated computational approaches. The course is a core class for both (a) the joint program in computational biology and (b) the molecular biophysics program. The course will cover biomolecular structure, statistical mechanical phenomenon in biophysics, simulation of biomolecular behavior, and key applications of computations in the field of structural biology. Specific topics: probability theory, statistical mechanics and thermodynamics, simulation methods, electrostatic phenomena, biochemical kinetics, binding, coarse-grained modeling, computations for structure determination, drug design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CMPBIO 2035 - COMPUTATIONAL STRUCTURAL BIOLOGY 2

Minimum Credits: 3

Maximum Credits: 3

The aim of computational structural biology is to understand the function of biological macromolecules such as proteins and nucleic acids in terms of fundamental physical forces. An important goal, for example, is to predict the 3d structure of proteins based on sequence data, to predict the structural organization of protein-protein and protein-DNA clusters, and to study the role of dynamics in molecular function (e.g., In enzymatic reactions). These studies are important in rational drug design. A great deal of progress has been made in the last 30 years, where sophisticated models and techniques have been developed consisting of quantum and statistical mechanics, simulation theory, electrostatics, etc. However, the challenges are still enormous. The objective of this course is to provide the student with a deeper understanding of the above disciplines as related to biological systems, which will enable him/her to participate in a state-of-the-art research. The course will cover some topics in irreversible thermodynamics (e.g., The fluctuation-dissipation theorem, Onsager relations), complementary material in statistical mechanics (phase transitions), simulation theory as applied to polymer chains and proteins (Rosenblatt, dimerization, scanning, multicanonical and its derivatives), free energy and potential of mean force (e.g., Jarzynski), continuum electrostatics (Laplace, poisson, and poisson-boltzmann equations, born formula, generalized born treatments), kinetics, and quantum mechanics. Most of the material will be presented in lectures by the course instructor, with the balance being presented by expert guest lecturers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CMPBIO 2040 - CELLULAR AND SYSTEMS MODELING

Minimum Credits: 3

Maximum Credits: 3

A graduate-level introduction into mathematical modeling and analysis of biological systems on the cellular and other levels. This condensed and broad course conveys the unity of the modeling methodology in biology. It spans a range of perspectives derived from the different disciplines from which this new area of research originated: biology, mathematics, engineering, and computer science. The systems covered include quantitative physiology, quantitative cell biology, biological networks, dynamic systems, cell mechanics, and systems modeling of critical illness. The

quantitative physiology topics to be covered include hemodynamics, musculoskeletal systems, endocrinology, neuroendocrinology, gastrointestinal/renal, transport phenomena, and pathophysiological conditions. Quantitative cell biology topics surveyed are mathematical models of the cytoskeleton dynamics, intracellular transport, cell locomotion, spatially-distributed models of cell signaling, approaches to whole-cell modeling, and role of modeling in cell-biological research. Models of cellular mechanics will also be addressed. Mathematics of dynamic systems is presented in application to enzyme reactions, bistability in cellular signaling, programmed cell death, and the mechanisms behind the circadian and cell-division rhythms. Biological network theory is presented as it applies to metabolism, protein interactions, regulation of gene expression, and reverse engineering of the biological systems. Theoretical aspects of application of systems modeling to clinical research are also presented on an example of quantitative systems approach to inflammation, sepsis, and trauma. In addition, the course will survey computational methods and models that are broadly useful across the various system types examined. These will include random walk models, master equations, and continuous and discrete models of chemistry within the cell. Finally, the course will include a presentation of general discrete and continuous models broadly useful in cell and systems modeling as well as computational methods for optimization and parameter tuning on such models. Across the entire range of topics, the universality of the systems modeling methodology and its role in biomedical research are emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CMPBIO 2045 - SPECIAL TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course will focus on advanced methods for modeling and reasoning about the dynamics of biological systems. Emphasis will be placed on emerging techniques that complement those based on differential equations and machine learning. Examples include: rule-based modeling, process algebras, hybrid systems, as well as applications of model checking and type theory. Students will be asked to present and provide written summaries of recent papers, and to complete a course project of their own design.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CMPBIO 2050 - LABORATORY METHODS FOR COMPUTATIONAL BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Computational biologists frequently focus on analyzing and modeling large amounts of biological data, often from high-throughput assays or diverse sources. It is therefore critical that students training in computational biology be familiar with the paradigms and methods of experimentation and measurement that lead to the production of these data. This one-semester laboratory course gives students a deeper appreciation of the principles and challenges of biological experimentation. Students learn a range of topics, including experimental design, structural biology, next generation sequencing, genomics, proteomics, bio imaging, and high-content screening. Class sessions are primarily devoted to designing and performing experiments in the lab using the above techniques. Students are required to keep a detailed laboratory notebook of their experiments and summarize their resulting data in written abstracts and oral presentations given in class-hosted lab meetings. With an emphasis on the basics of experimentation and broad views of multiple cutting-edge and high-throughput techniques, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have and are looking for introductory training in more advanced approaches. Touches upon a range of topics, including structural biology, genomics, proteomics, and bio imaging a different laboratory method is covered each week, in the lab of a host faculty member who uses that method. The theory and practical aspects of each method are covered during a lecture session prior to each lab session. Students are required to submit a short lab report each week, summarizing the goals of the experiment, the critical steps and sources of error, and the analysis of the resulting data. With an emphasis on instrumentation and high-throughput data collection, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have.

CMPBIO 2055 - QUANTITATIVE ELEMENTS OF CELL FORM AND MOVEMENT

Minimum Credits: 2

Maximum Credits: 2

This course covers the basic as well as certain selected topics pertaining to the Physico-chemical origins of architecture and motility of biological cells. It is aimed at graduate students pursuing degrees in various fields of biology (and also in mathematics, physics, chemistry, or engineering), who have taken university-level courses in mathematics, physics, and chemistry. This course material draws upon the variety of quantitative disciplines

but maintains a biological perspective. Physical properties and chemical kinetics that determine the structure and function of the cytoskeleton (the assembly of non-covalent polymers at the base of the cellular architecture) will be covered, as will the Physico-chemical mechanisms of motility driven by biological force-generating macromolecules. The didactic material will be presented from the perspective of a practical researcher, and the problem sets will emphasize developing a sense of what makes for a good research strategy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CMPBIO 2060 - CURRENT TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course will offer an overview of faculty research in computational biology, a field of tremendous growth and excitement. It will also offer a sampling of current literature in this field, as well as an opportunity for students to develop and practice their presentation skills. The course will meet once a week, and will follow a seminar-style format, with a PowerPoint presentation, followed by a question-and-answer session. To familiarize students with alternative presentation formats, and to allow for more flexibility, the course may also include one or more webinar/teleconference sessions. Throughout the semester, students will take turns serving as introducer, presenter, and moderator of question-and-answer sessions. The topics covered in this course will be in line with the five specialization areas of the joint CMU-Pitt Ph.D. program in computational biology: computational genomics, computational, structural biology, cellular and systems modeling, bio image informatics, and computational neurobiology. The initial meeting will feature an icebreaker exercise and a refresher on professional presentation skills.

CMPBIO 2070 - COMPUTATIONAL GENOMICS

Minimum Credits: 3

Maximum Credits: 3

Dramatic advances in experimental technology and computational analysis are fundamentally transforming the basic nature and goal of biological research. The emergence of new frontiers in biology, such as evolutionary genomics and systems biology is demanding new methodologies that can confront quantitative issues of substantial computational and mathematical sophistication. In this course we will discuss classical approaches and latest methodological advances in the context of the following biological problems: 1) computational genomics, focusing on gene finding, motifs detection and sequence evolution. 2) Medical and populational genetics, focusing on polymorphism analysis, linkage analysis, pedigree and genetic demography, 3) analysis of high throughput biological data, such as gene expression data, focusing on issues ranging from data acquisition to pattern recognition and classification. 4) Molecular and regulatory evolution, focusing on phylogenetic inference and regulatory network evolution, and 5) systems biology, concerning how to combine sequence, expression and other biological data sources to infer the structure and function of different systems in the cell. From the computational side this course focuses on modern machine learning methodologies for computational problems in molecular biology and genetics, including probabilistic modeling, inference and learning algorithms, pattern recognition, data integration, time series analysis, active learning, etc.

Academic Career: Graduate

CMPBIO 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in

increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

This course will focus on advanced methods for modeling and reasoning about the dynamics of biological systems. Emphasis will be placed on emerging techniques that complement those based on differential equations and machine learning. Examples include: rule-based modeling, process algebras, hybrid systems, as well as applications of model checking and type theory. Students will be asked to present and provide written summaries of recent papers, and to complete a course project of their own design.

MSCBIO 2050 - LABORATORY METHODS FOR COMPUTATIONAL BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Computational biologists frequently focus on analyzing and modeling large amounts of biological data, often from high-throughput assays or diverse sources. It is therefore critical that students training in computational biology be familiar with the paradigms and methods of experimentation and measurement that lead to the production of these data. This one-semester laboratory course gives students a deeper appreciation of the principles and challenges of biological experimentation. Students learn a range of topics, including experimental design, structural biology, next generation sequencing, genomics, proteomics, bio imaging, and high-content screening. Class sessions are primarily devoted to designing and performing experiments in the lab using the above techniques. Students are required to keep a detailed laboratory notebook of their experiments and summarize their resulting data in written abstracts and oral presentations given in class-hosted lab meetings. With an emphasis on the basics of experimentation and broad views of multiple cutting-edge and high-throughput techniques, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have and are looking for introductory training in more advanced approaches. Touches upon a range of topics, including structural biology, genomics, proteomics, and bio imaging a different laboratory method is covered each week, in the lab of a host faculty member who uses that method. The theory and practical aspects of each method are covered during a lecture session prior to each lab session. Students are required to submit a short lab report each week, summarizing the goals of the experiment, the critical steps and sources of error, and the analysis of the resulting data. With an emphasis on instrumentation and high-throughput data collection, this course is appropriate for students who have never taken a traditional undergraduate biology lab course, as well as those who have.

MSCBIO 2055 - QUANTITATIVE ELEMENTS OF CELL FORM AND MOVEMENT

Minimum Credits: 2

Maximum Credits: 2

This course covers the basic as well as certain selected topics pertaining to the physicochemical origins of architecture and motility of biological cells. It is aimed at graduate students pursuing degrees in various fields of biology (and also in mathematics, physics, chemistry, or engineering), who have taken university-level courses in mathematics, physics, and chemistry. This course material draws upon the variety of quantitative disciplines but maintains a biological perspective. Physical properties and chemical kinetics that determine the structure and function of the cytoskeleton (the assembly of non-covalent polymers at the base of the cellular architecture) will be covered, as will the physicochemical mechanisms of motility driven by biological force-generating macromolecules. The final grade will be based on homework problems and on a closed-book exam. The didactic material will be presented from the perspective of a practical researcher, and the problem sets will emphasize developing a sense of what makes for a good research strategy.

Academic Career: Graduate

Course Component: Lecture

MSCBIO 2060 - CURRENT TOPICS IN COMPUTATIONAL BIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course will offer an overview of faculty research in computational biology, a field of tremendous growth and excitement. It will also offer a sampling of current literature in this field, as well as an opportunity for students to develop and practice their presentation skills. The course will meet once a week, and will follow a seminar-style format, with a PowerPoint presentation, followed by a question-and-answer session. To familiarize students with alternative presentation formats, and to allow for more flexibility, the course may also include one or more webinar/teleconference sessions. Throughout the semester, students will take turns serving as introducer, presenter, and moderator of question-and-answer sessions. The

topics covered in this course will be in line with the five specialization areas of the joint CMU-Pitt Ph.D. program in computational biology: computational genomics, computational, structural biology, cellular and systems modeling, bio image informatics, and computational neurobiology. The initial meeting will feature an icebreaker exercise and a refresher on professional presentation skills.

MSCBIO 2070 - COMPUTATIONAL GENOMICS

Minimum Credits: 3

Maximum Credits: 3

Dramatic advances in experimental technology and computational analysis are fundamentally transforming the basic nature and goal of biological research. The emergence of new frontiers in biology, such as evolutionary genomics and systems biology is demanding new methodologies that can confront quantitative issues of substantial computational and mathematical sophistication. In this course we will discuss classical approaches and latest methodological advances in the context of the following biological problems: 1) computational genomics, focusing on gene finding, motifs detection and sequence evolution. 2) Medical and populational genetics, focusing on polymorphism analysis, linkage analysis, pedigree and genetic demography, 3) analysis of high throughput biological data, such as gene expression data, focusing on issues ranging from data acquisition to pattern recognition and classification. 4) Molecular and regulatory evolution, focusing on phylogenetic inference and regulatory network evolution, and 5) systems biology, concerning how to combine sequence, expression and other biological data sources to infer the structure and function of different systems in the cell. From the computational side this course focuses on modern machine learning methodologies for computational problems in molecular biology and genetics, including probabilistic modeling, inference and learning algorithms, pattern recognition, data integration, time series analysis, active learning, etc.

Academic Career: Graduate

Course Component: Lecture

MSCBIO 2075 - MOLECULAR EVOLUTION

Minimum Credits: 3

Maximum Credits: 3

Sequencing technology is continually progressing, and genome sequences from different species and populations continue to become available in increasing numbers. Such data allows questions about molecular evolution to be addressed in new and exciting ways. This course introduces students to the evolutionary analysis of DNA and amino acid sequences. Lectures on theory will be accompanied by practical instruction in the use of contemporary computational methods and software. Topics include: population genetics of selection and mutation, models of sequence evolution, phylogenetic models, analysis of multiple sequence alignments for rates and patterns of divergence, inference of natural selection, and co-evolution between proteins. Emphasis is placed on quantitative modeling and the biological principles underlying observed patterns of molecular evolution. Interested students should have a basic grasp of molecular biology and calculus.

COEE 2120 - HARDWARE DESIGN METHODOLOGIES 1

Minimum Credits: 3

Maximum Credits: 3

This course teaches hardware design processes through use of industry tools. Students use graphical tools to design, simulate and synthesize designs

using hardware description languages (e.g. VHDL/Verilog). High-level design and problem decomposition are also taught. Optimization, simulation and synthesis of combinatorial functions, data paths, and finite state machines are covered in depth. Architecture encapsulation and reuse through 'Intellectual Property' (IP) modules is described and covered in detail. Students will work individually and as a part of a team to create, simulate, model, document, and test IP models.

Computer Science

CS 0401 - INTERMEDIATE PROGRAMMING USING JAVA

Minimum Credits: 4

Maximum Credits: 4

This course is a rigorous introduction to the fundamental concepts and techniques of computer programming using the java programming language.

This is a first course for students who intend to major in computer science.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

CS 0441 - DISCRETE STRUCTURES FOR CS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to understand and use (abstract) discrete structures that are backbones of computer science. In particular, this class is meant to introduce logic, proofs, sets, relations, functions, counting, and probability, with an emphasis on applications in computer science.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: MATH 0220 or 0230 or 0235

CS 0445 - DATA STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

This course emphasizes the study of the basic data structures of computer science (stacks, queues, trees, lists) and their implementations using the java language included in this study are programming techniques which use recursion, reference variables, and dynamic memory allocation. Students in this course are also introduced to various searching and sorting methods and also expected to develop an intuitive understanding of the complexity of these algorithms.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 0401 (MIN GRADE 'C')

CS 0447 - COMPUTER ORGANIZATION AND ASSEMBLY LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to study the components of computing systems common to most computer architectures. In particular, this class is meant to introduce data representation, types of processors, memory types and hierarchy, and device drivers. The students will learn MIPS assembly language, the design of arithmetic and logic units, and basic designs for RISC processors.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: CS 0445

CS 1510 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods and strategies that are useful for the design of nonnumeric algorithms. Students are expected to design their own algorithms.

Academic Career: UGRD

Course Component: Lecture

Grade Component: LG/SNC

Course Requirements: PREQ: [(CS 1501 or COE 1501) and CS 1502] or (CS 0458 and CS 1710); MIN GRADE 'C' FOR ALL COURSES LISTED

CS 1511 - INTRODUCTION TO THEORY OF COMPUTATION

Minimum Credits: 3

Maximum Credits: 3

Understanding the theory of computation provides deeper insights into various topics in computer science. This is an introductory level theory course. The aim of this course is to study the power (or lack of it) of various models of computation. Topics to be covered include: automata, formal languages, computability, and computational complexity.

Academic Career: UGRD

Course Component: Lecture

Grade Component: LG/SNC

Course Requirements: PREQ: CS 1502 or 1710; (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 1520 - PROGRAMMING LANGUAGE FOR WEB APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

Various programming paradigms will be studied using java and scripting languages. The use of java in programming web based applications, network applications, and the use of the extensive java libraries will be studied. The programming paradigm of building software by gluing components will be explored through the use of scripting languages such as perl and JavaScript. Applications include developing guis and internet programming.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 0445 or COE 0445; (MIN GRADE 'C'); PROG: Dietrich Sch Arts and Sciences or Sch Computing and Information

CS 1550 - INTRODUCTION TO OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An introduction to basic concepts of operating systems, common to most computer systems, which interfaces the machine with upper-level programs. This course will introduce processes as processing unit, process management, concurrency, communication, memory management and protection, and file systems.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: (CS 0447 or COE 0447) and (CS 0449 or COE 0449) or (0456 and 1750); MIN GRADE 'C' FOR ALL COURSES LISTED; PROG: Dietrich Sch Arts and Sciences or Sch Computing and Information

CS 1621 - STRUCTURE PROGRAMMING LANGUAGES

Minimum Credits: 3

Maximum Credits: 3

An analytical examination of modern high-level programming language structures; including design specification and implementation. Advanced forms of data types, expressions, and control primitives. Relationship of storage management techniques and language design.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS (0441 and 0445) or (0406 and 0455); (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 1651 - ADVANCED SYSTEMS SOFTWARE

Minimum Credits: 3

Maximum Credits: 3

To discuss in depth some advanced features of fundamental importance in the design of operating systems. The subjects discussed include interprocess communication, real-time scheduling, advanced file systems, security and protection mechanisms. The objective of the course is to provide an understanding of these advanced issues, as well as to bring awareness of the known solutions to these problems and to the limitations of these solutions.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: PREQ: CS 1550 or 1312 or 1792; (MIN GRADE 'C' FOR ALL COURSES LISTED)

CS 2000 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Master's thesis research.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

CS 2001 - RESEARCH TOPICS/COMPUTER SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course introduces the students to the research being conducted in the computer science department. Active, state-of-the-art research topics will be covered.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

CS 2002 - RESEARCH EXPERIENCE/COMPUTER SCI

Minimum Credits: 3

Maximum Credits: 3

In this course, each student will perform exploratory research topics covered in CS 2001. The research will be supervised and directed by faculty members working in the area of the topic chosen by the student.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2001

CS 2003 - COMPUTER SCIENCE COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

The computer science colloquium is offered as a one unit graduate class, with a satisfactory/no credit (S/NC) grading option. The aim of this weekly meeting is to discuss the most recent advances in computer science.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad SN Basis

Course Requirements: PREQ: CS 2001 and 2002; PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS)

CS 2012 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods and strategies that are useful for the design of nonnumeric algorithms. Students are expected to design their own algorithms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2045 - INTRODUCTION TO HIGH PERFORMANCE COMPUTING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the architecture of and software techniques for parallel and high performance computing systems. The content includes fundamental aspects of vector processing, shared-memory and distributed-memory systems. Students will be expected to complete a number of projects demonstrating specific applications in parallel processing paradigms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2053 - APPLIED CRYPTOGRAPHY AND NETWORK SECURITY

Minimum Credits: 3

Maximum Credits: 3

This course will provide the necessary conceptual background and hands-on experience to understand the most common cryptographic algorithms and protocols and how to use them to secure computers networks and distributed applications. Topics include: cryptographic algorithms for data confidentiality, authentication, and integrity, user authentication methods (secure tokens and biometrics), internet security protocols, security in local

area networks, firewalls, and intrusion detection systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2055 - DATABASE MANAGEMENT SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to provide an in-depth knowledge of database systems design. Thus, the emphasis is on how to model one's own data and how to use available database management systems effectively. Towards this end, the relational and the object-relational models are discussed in great detail and object-oriented and other data models are also presented. Commercial database management systems are examined and students get practical experience through the use of such systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2056 - INTRODUCTION TO DATA SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science or Computer Engineering

CS 2074 - INTRODUCTION TO COMPUTER VISION

Minimum Credits: 3

Maximum Credits: 3

In this class, students will learn the basics of modern computer vision. The course will cover topics such as image filtering, edge detection, feature extraction, description and matching, grouping and clustering, object detection, activity recognition, and recognition with a human in the loop.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2110 - THEORY OF COMPUTATION

Minimum Credits: 3

Maximum Credits: 3

This course deals with computability theory, automata theory and formal languages. Various models of computation will be examined, their relations to each other and their properties will be studied. Topics include models for computable functions and church's thesis, models for recognizers and their relation to formal grammars, algorithmically solvable and unsolvable problems, and the complexity of computations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2150 - DESIGN & ANALYSIS OF ALGORITHMS

Minimum Credits: 3

Maximum Credits: 3

This course deals with the analysis of algorithms and the relevance of such analysis to the design of efficient algorithms. The derivation of results that are primarily of theoretical significance shares importance with the practical task of designing efficient algorithms. Topics covered: searching and sorting, graph algorithms, arithmetic, np-completeness, and lower bound techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2210 - COMPILER DESIGN

Minimum Credits: 3

Maximum Credits: 3

The design and implementation of current high level languages. Emphasis is placed on the structure of compilers. Lexical, syntax and semantic analysis as well as target code generation and register allocation. Storage management techniques for recursive and retentive control structures. Formal specification techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2310 - SOFTWARE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course will examine the software engineering process in general, the considerations for large software projects in particular, and then will focus on the conversion of software specifications into production code. Topics will include modern design methods, safety-critical software, verification and validation, testing theory and methods, reengineering of legacy software.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2410 - COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

A study of the hardware structure of computer systems and subsystems. Topics include: processor architecture, parallelism and pipelining, cache and main memory organization, i/o controllers and i/o processors, and interconnection structures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2510 - COMPUTER OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An in-depth study of the control abstractions in modern operating systems and the issues involved in efficient implementation of those abstractions. Topics will include concurrency and its control, memory management, resource management, and structure of distributed and parallel operating systems. These topics will be developed through the lectures, assigned readings from the literature, and an examination of actual operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2520 - WIDE AREA NETWORKS

Minimum Credits: 3

Maximum Credits: 3

The course provides an understanding of the basic principles of broadband networks. It will introduce protocols suitable for broadband networks, with emphasis on atm. Other technologies, such as frame relay and smds, will be discussed. The course will also address important design issues for high speed networks including characterizations of (a) network traffic and its implications on network design, and (b) application performance objectives, traffic policing, and congestion control algorithms that can meet those diverse objectives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2530 - COMPUTER AND NETWORK SECURITY

Minimum Credits: 3

Maximum Credits: 3

The goal of the proposed course is to provide our graduate students the necessary background and hands on experience to do well in systems research or advanced development with an emphasis on security. The instructor will lecture on cryptographic algorithms for data confidentiality, authentication, and integrity, security protocols for the internet and local area networks, firewalls, intrusion detection systems, defense against denial of service attacks, user authentication methods, cryptographic file systems, secure email stenography and usable security.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 2550 - PRINCIPLES OF DATABASE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The main objective of this course is to provide an in-depth knowledge of database management systems design. Topics covered at length are concurrency control including concurrency on structured data, recovery and query optimization. Some important aspects of distributed databases are discussed, including distributed concurrency control and fault tolerance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2610 - INTERFACE DESIGN & EVALUATION

Minimum Credits: 3

Maximum Credits: 3

This course covers methodology for the modeling, specification, design, measurement, and evaluation of Human-Computer Interfaces (HCI). Included topics are: interaction models and modes, conceptual/logical/physical interface structures, objectively measurable interface patterns, and criteria for interface evaluation. HCI relationships to software engineering and artificial intelligence are highlighted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2620 - INTERDISCIPLINARY MODELING AND VISUALIZATION

Minimum Credits: 3

Maximum Credits: 3

This course discusses computer graphics, modeling and visualization techniques used to solve scientific problems. Focus falls on identifying scientific problems, proposing solutions involving graphical modeling and visualization, and designing, implementing, and evaluating the solutions. Examples include interactive software systems, quantitative analysis tools, or new applications of existing visualizations methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2710 - FOUNDATIONS OF ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course covers the foundational techniques in artificial intelligence, including: problem definition and analysis, heuristic search, adversarial search, knowledge representation, planning and constraint satisfaction, and methods for reasoning under uncertainty. Attention will be given to the roles of these techniques in the design of intelligent agents.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2731 - INTRODUCTION TO NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the field of Natural Language Processing (NLP) - the creation of computer programs that can understand, generate, and learn natural language. Natural language understanding will be used as a vehicle to introduce the three major subfields of NLP: syntax, semantics, and pragmatics. The course will introduce both knowledge-based and statistical methods for NLP, and will illustrate the use of such methods in a variety of application areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2750 - MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will give an overview of many techniques and algorithms in machine learning, beginning with topics such as linear and logistic regression, multi-layer neural networks and ending up with more recent topics such as boosting and support vector machines. The basic ideas and intuition behind modern machine learning methods, as well as, a more formal understanding of how and why they work will be covered. Students will have an opportunity to experiment with various machine learning techniques or apply them to a selected problem or domain in the context of a term project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science (CS-PHD; CS-MS; CSMSBS-MS) or Computer Engineering (COEAS-PHD; COEAS-MS; COEENG-PHD; COEENG-MCO)

CS 2770 - COMPUTER VISION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Computer Science or Computer Engineering

CS 2900 - GRADUATE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 1

A professional internship may be taken at any time during the course of graduate study. Ph.D. students may take this course up to two times for credit, MS students may take it at most once.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

CS 2905 - COMPUTER SCIENCE COOPERATIVE PROGRAM

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

CS 2910 - MS PROJECT

Minimum Credits: 1

Maximum Credits: 3

A project under the supervision of a faculty member or a group of faculty members.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

CS 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

This course involves study which is approved by the faculty adviser but carried out independently by student.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

CS 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 9

Any adjunct or full member of the graduate faculty of the department may direct doctoral dissertations.

Academic Career: Graduate

Course Component: Thesis Research
Grade Component: Grad SN Basis

CS 3150 - ADV TOPCS DSGN & ANALYS ALGORTHM

Minimum Credits: 3

Maximum Credits: 3

This course covers recent results in the design and analysis of algorithms. The contents change from term to term.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2150

CS 3210 - ADV TOPICS PROGRAMMING LANGUAGES

Minimum Credits: 3

Maximum Credits: 3

Advanced program representations & program analysis techniques for compilers, optimizers, software tools & parallel systems. Analysis techniques include advanced register allocation algorithms, data flow frameworks & techniques, optimizing algorithms & slicing techniques. Program representations include various types of dependence graphs & static single assignment. Analyses & code improving transformations for various types of parallel architectures including VLIW, superscalar, shared memory & distributed memory machines. Current research topics in prog languages.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2210

CS 3220 - COMPILING TECHNQS/PARALLEL SYMS

Minimum Credits: 3

Maximum Credits: 3

This course will study techniques used in the design of parallelizing compilers. Techniques for computing dependencies and program representations suitable for parallelizing software will be presented. Topics will include detection of fine and coarse parallelism, program transformations and scheduling techniques to exploit parallelism, on shared and distributed memory architectures, and techniques for debugging parallel software.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2210

CS 3410 - ADV TOPICS COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

This course will survey current topics in computer architecture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2410

CS 3510 - ADV TOPICS IN OPERATING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

An in-depth study of specific topics of modern operative systems, the theory behind them, and their implementation. Topics may include advanced concepts in distributed systems, multimedia systems, file systems, resource management, distributed shared memory, among others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: CS 2510

CS 3521 - ADV TOPCS SENSING/UBIQUITOUS TEC

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the fundamental issues related to designing and analyzing sensor networks and applications. Topics include but are not limited to: driving applications for sensor nets; wireless networking issues; directed diffusion, aggregation, and data dissemination; power aware routing computing and communication; hardware and software platform and tools.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2520 or TELCOM 2321

CS 3525 - ADVANCED TOPICS IN SUCURITY AND PRIVACY

Minimum Credits: 3

Maximum Credits: 3

This course covers current research topics in computer security and privacy. The topics covered will change from term to term.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CS 3530 - ADV TOPCS DISTBD & REAL-TIME SYS

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the students to the foundations of real-time systems. The emphasis is on understanding predictability and resource management, at the level of the processor, network, memory, disks, i/o devices, etc. Fault tolerance is another main emphasis of the course, since it is a requirement for real-time behavior. Specific real-time fault-tolerant schemes will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3550 - ADV TOPICS IN MANAGEMENT OF DATA

Minimum Credits: 3

Maximum Credits: 3

The course is devoted to a reevaluation of traditional database techniques and the examination of emerging approaches for the reliable and efficient data management in large distributed systems. Examples of such systems include multi databases, mobile and multimedia databases, and advanced OS and AI. Topics include object management, workflows and extended transactions, semantics-based concurrency control and recovery, active and real-time database techniques. The concepts will be examined within the context of a state-of-the-art system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3551 - ADV TOPICS IN DISTBD INFOR SYS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on emerging technologies for large scale, distributed information systems. Topics to be examined include data and information modeling, heterogeneous data integration, data distribution, caching and replication, web databases, distributed query processing and searching, multimodal access, quality of data, content networks, and pervasive data management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2510 and 2550

CS 3570 - ADVANCED TOPICS IN USER INTERFACE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CS 3580 - SEM: ADV TOPC PARALLEL COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Different topics related to parallel and systolic computations will be covered at various levels of details. Example of such topics are: architectures of parallel processors and VLSI computational networks, languages and programming environments for parallel systems, the design and analysis of parallel and systolic algorithms, reconfigurable and data driven processor arrays, complexity measures of VLSI computations, and the application of parallel processors to supercomputing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

CS 3650 - VISUAL LANGUAGES AND PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course covers the fundamentals of visual language theory, iconic and symbolic representations, parsing techniques, semantics and pragmatics of visual languages, visual programming systems, visual querying systems, visual information systems and knowledge-based visualization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

CS 3710 - ADV TOPICS ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

This course will survey current topics in artificial intelligence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2710

CS 3720 - ADVANCED TOPICS IN INTERNET OF THINGS

Minimum Credits: 3

Maximum Credits: 3

A practical course in expert systems involving discussions of fundamentals of building expert systems, discussion of open problems, and designing and building a prototype expert system.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

CS 3730 - ADV TOPICS NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Natural language processing (NLP) is primarily concerned with creating computer programs that interact with human languages. The objective of this course is to continue the studies of natural language processing (NLP), to explore selected topics among syntax, semantics, and pragmatics more deeply, and to discuss recent advances in (NLP).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2731

CS 3750 - ADV TOPICS IN MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will survey advanced topics in machine learning, for example, inductive learning, reinforcement learning, and neural network learning.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CS 2750

CS 3790 - PATTERN RECOGNITION

Minimum Credits: 3

Maximum Credits: 3

Emphasis on machine pattern analysis and recognition; decision-theoretic and discriminant approach; parameter estimation and supervised learning; non-parametric methods; unsupervised learning; clustering; image processing; scene analysis, heuristic and syntactic approaches.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

CS 3900 - PHD DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

The course may involve a project under the supervision of a faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

Critical Care Medicine

CCM 5430 - CRITICAL CARE MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The goal of this elective is to provide a multi-disciplinary experience in care of the critically ill. Rounds conducted each morning result in a plan of treatment for each day. The medical student will participate in all aspects of care of the patients in ICU. Emphasis is placed on bedside titration of care. Recognition and appropriate treatment of respiratory failure, arrhythmias, and hyperalimantation are emphasized. The student participates in cardiopulmonary resuscitations. Students participate in night call.

Academic Career: Medical School

Course Component: Clinical

Grade Component: Grad LG/SU5

Course Attributes: School of Medicine Year 4

CCM 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0
Maximum Credits: 0
Academic Career: Medical School
Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CCM 5840 - CRITICAL CARE MEDICINE RESEARCH

Minimum Credits: 0
Maximum Credits: 0
These electives provide opportunities to learn basic research methodology, including approach to experimental design, protocol development, data analysis and evaluation of results. Student participates in ongoing research in the lab and on patients. Opportunities for research in resuscitation high frequency jet ventilation, patient monitoring, hemorheology, brain pathophysiology, and pharmacology of anesthesia-related drugs are available. Many other topics are also possible.
Academic Career: Medical School
Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

CCM 5899 - INDEPENDENT STUDY IN CRITICAL CARE MEDICINE

Minimum Credits: 0
Maximum Credits: 0
The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.
Academic Career: Medical School
Course Component: Independent Study
Grade Component: H/HS/S/LS/U

CCM 5900 - EXTRAMURAL CRITICAL CARE MEDICINE

Minimum Credits: 0
Maximum Credits: 0
A clinical experience in critical care medicine may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM catalog with all appropriate approvals to be received before the course may be added to the student's schedule for credit.
Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U

Cross-Disciplinary Dental Education

DMED 5110 - FOUNDATIONS OF PERSON-CENTERED CARE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

DMED 5111 - FOUNDATIONS OF PERSON-CENTERED CARE (BIOMEDICAL MASTERS PROGRAM)

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

DMED 5112 - PRINCIPLES OF PROFESSIONAL PRACTICE

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad HSU Basis

DMED 5140 - CARIOLOGY AND CARIES MANAGEMENT 1

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

DMED 5141 - CARIOLOGY AND CARIES MANAGEMENT 1 LAB

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Dental Medicine
Course Component: Practicum
Grade Component: ABCF

DMED 5142 - FOUNDATIONS OF PERSON-CENTERED CARE 2

Minimum Credits: 2
Maximum Credits: 2
In this course, students will build upon foundational knowledge of person-centered care, including social and cultural factors in oral health, interpersonal communication skills, disease prevention, and evidence-based care.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: ABCF

DMED 5143 - PRINCIPLES OF PROFESSIONAL PRACTICE 2

Minimum Credits: 2
Maximum Credits: 2
The primary goal of the Principles of Professional Practice course series is to teach students how essential practice management concepts contribute to the development and maintenance of a successful professional dental practice. This first- and second-year course series will focus on integrating the new student practitioner into their first practice, which begins with their clinical exposure at the School of Dental Medicine. Corollaries will be made from School practice-to-practice opportunities as an entry-level dental professional. Concepts that are introduced in this course series will be reinforced and expanded upon in the Successful Practice Management course series, which is offered in the third- and fourth-years of the predoctoral curriculum. Course material will be presented through lectures, in-class discussions, and assignments that relate to the clinical application of presented topics.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad HSU Basis

DMED 5170 - CARIOLOGY AND CARIES MANAGEMENT 2

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DMED 5171 - CARIOLOGY AND CARIES MANAGEMENT 2 LAB

Minimum Credits: 1.5

Maximum Credits: 1.5

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: ABCF

DMED 5172 - APPLICATIONS OF PERSON-CENTERED CARE

Minimum Credits: 2

Maximum Credits: 2

In this course, students will work with peers in a clinical setting where they will focus on developing practical skills related to risk assessment, head and neck examination, dental examination, gingival examination, oral disease prevention, and health promotion. This course is the capstone experience of the first year of the dental curriculum, preparing students to enter the second year by applying the foundational skills acquired in Foundations of Person-Centered Care 1 and 2, as well as other courses, such as Caries Management, Practice Management, Periodontics 1, Periodontal Instrumentation, and Head and Neck Anatomy.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DMED 5212 - APPLICATIONS OF PROFESSIONAL PRACTICE 1

Minimum Credits: 2

Maximum Credits: 2

This course will build on concepts taught on the first year predoctoral program.

Academic Career: Graduate

Course Component: Lecture

Grade Component: ABCF

DMED 5243 - APPLICATIONS OF PROFESSIONAL PRACTICE 2

Minimum Credits: 2

Maximum Credits: 2

This course will build on concepts learned in the second year fall term.

Academic Career: Graduate

Course Component: Lecture

Grade Component: ABCF

Cultural Studies

CLST 2006 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This course entails the exploration of a special topic chosen by the instructor.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

CLST 2009 - DIRECTED STUDIES

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

CLST 2050 - CULTURAL STUDIES COMMON SEMINAR

Minimum Credits: 3
Maximum Credits: 3
This annual seminar focuses on a single topic crossing disciplinary and departmental boundaries. Cultural studies faculty with a broad range of research interests participate in weekly talks and discussions.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: Cultural Studies

Dental Anesthesiology

DSANE 2114 - PATH AND MANAGEMENT OF MEDICAL EMERGENCY

Minimum Credits: 2
Maximum Credits: 2
This course covers the prevention, recognition, and treatment of medical emergencies that can occur in the dental setting. Differential diagnosis is presented according to the presenting signs and symptomatology. Emphasis is placed on the proper office protocol during an emergency, including the assembly of an emergency drug kit. Experience with IV and IM techniques is included.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

DSANE 2242 - PRINCIPLES OF ANESTHESIA

Minimum Credits: 2
Maximum Credits: 2
This is the second course in a series of three didactic courses dealing with the philosophy and methods of pain and anxiety control in dentistry.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

DSANE 2243 - POST-DOCTORAL MODERATE SEDATION CLINIC

Minimum Credits: 2
Maximum Credits: 2
This course is designed to integrate with the didactic course series dealing with the philosophy and methods of pain and anxiety control in dentistry. In this clinical course, under the supervision of the anesthesia faculty, students will select and administer the various pain and anxiety control techniques learned in the classroom.
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad Letter Grade

DSANE 2250 - INTRODUCTION TO POSTDOCTORAL MODERATE SEDATION

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide the information needed by the graduate resident to enter the clinical setting to administer intravenous sedation. Basic anesthetic information will be presented including pharmacology, physiology, venopuncture, airway management, and monitoring. The residents will have fundamental knowledge of the concepts of intravenous sedation that will carry them in to the clinic in the following courses.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

DSANE 2260 - POST-DOCTORAL MODERATE SEDATION 1

Minimum Credits: 2

Maximum Credits: 2

The course will foster an appreciation for the important role of pain and anxiety control in dentistry. The resident will demonstrate proficiency in technical aspects of nitrous oxide anxiolysis, conscious sedation, patient management, and the pharmacologic use of medications. All aspects of anesthesia will be undertaken in the clinic. The resident will experience hands-on management of intravenous sedation from pre-operative evaluation to discharge.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

DSANE 2270 - POST-DOCTORAL MODERATE SEDATION 2

Minimum Credits: 2

Maximum Credits: 2

The course will foster an appreciation for the important role of pain and anxiety control in dentistry. The resident will demonstrate proficiency in technical aspects of nitrous oxide anxiolysis, conscious sedation, patient management, and the pharmacologic use of medications. All aspects of anesthesia will be undertaken in the clinic. The resident will experience hands-on management of intravenous sedation from pre-operative evaluation to discharge.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

DSANE 2400 - INTRODUCTION TO ADVANCED ANESTHESIOLOGY 1

Minimum Credits: 1

Maximum Credits: 1

This course introduces advanced techniques in anesthesiology that apply to the dental anesthesiology resident/student entering the initial segment of advanced, post-doctoral training. This didactic instruction is to provide preliminary instruction concerning hospital and out-patient based anesthesiology that will prepare the student/resident for advanced anesthesiology beyond the pre-doctoral level.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSANE 2500 - INTRODUCTION TO DENTAL ANESTHESIOLOGY 2

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSANE 5241 - ANESTHESIA 1: LOCAL ANESTHESIA

Minimum Credits: 2

Maximum Credits: 2

A comprehensive course on local anesthesia. Topics include theories of pain, medicolegal considerations, pharmacology of local anesthetics and vasoconstrictors; techniques of local anesthetic administration, armamentarium, complications, and alternative techniques.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5245 - LOCAL ANESTHESIA TECHNIQUE LAB

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5247 - ADVANCED LOCAL ANESTHESIA TECHNIQUE LAB

Minimum Credits: 0

Maximum Credits: 0

This course will foster an appreciation for the important role of local anesthesia in dentistry. The student will demonstrate proficiency in the technical aspects of local anesthetic administration, with particular attention to advanced techniques of local anesthetic administration.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DSANE 5272 - ANESTHESIA 2: MEDICAL EMERGENCIES

Minimum Credits: 1

Maximum Credits: 1

In this course, students are provided with information pertaining to the prevention, recognition, and treatment of selected medical emergencies occurring in the dental office. Emphasis is placed on patient evaluation and prevention. Emergency drugs and equipment are specified, as well as clinical their application. Lifesaving management of the medically compromised patient is incorporated into the dental treatment plan. Course lectures will include concepts endorsed by the American Dental Association and introduce the student to resources available through the Journal of the American Dental Association. This course will offer foundational knowledge in emergency medicine which will enable the student to assess and manage patients experiencing a medical emergency in the dental office.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5275 - MEDICAL EMERGENCIES LAB

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5311 - PATIENT MANAGEMENT: ENTERAL SEDATION

Minimum Credits: 1

Maximum Credits: 1

In this course, students will be expected to meet the educational requirements for predoctoral dental students set forth in the October, 2007 the American Dental Association's Guidelines for Teaching Pain Control and Sedation to Dentists and Dental Students. In combination with course material presented in pharmacology, physiology, and clinical medicine, satisfactory completion of this course, along with subsequent clinical exposures, will place the student in compliance with the ADA guidelines for enteral sedation. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5313 - ANESTHESIA 3: PAIN AND ANXIETY CONTROL

Minimum Credits: 1

Maximum Credits: 1

In this course, students will be presented with methods of pharmacologic management of pain and anxiety. It is presented as essentially two separate sections: 1) anxiety control with nitrous oxide sedation and 2) pain control with analgesic. Anxiety control encompasses current pharmacologic management in anxiety control for dentistry. This section of the course focuses on the techniques that a general practice dentist can provide in an office setting. The methods of anxiety reduction and sedation that will be presented were selected on the basis of efficacy and safety. Inhalation sedation (nitrous oxide) techniques are covered in depth. Sedation and general anesthesia with respect to the role of the dental anesthesiologist is described. Pediatric management techniques are not covered. Pain control encompasses an introduction to prescription writing and establishes prescribing protocols for both non-steroidal anti-inflammatory and opioid analgesics. Often pain medications are prescribed to the dental patient in an empirical sense; the goal of this portion of the course is to impart a clinical rationale for prescribing pain medications. A method is established so that the student can make a therapeutic choice based on the needs of the patient and contemporary dental practice. A focus is placed with respect to drug diversion and responsible opiate prescribing. Atypical analgesics for oral-facial neuropathic pain will also be presented. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DSANE 5315 - NITROUS OXIDE LAB

Minimum Credits: 0

Maximum Credits: 0

In this course, students will reinforce the knowledge of nitrous oxide gained didactically by engaging in hands-on use of the machines and self-experience of the medication, if desired, in a small group educational setting. This course will serve to assess preclinical competence in order to allow students to progress to the administration of nitrous oxide to dental patients. This course includes small group lab sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5317 - ADVANCED LOCAL ANESTHESIA TECH LAB

Minimum Credits: 0

Maximum Credits: 0

In this course, students will gain an appreciation for the important role of local anesthesia in dentistry. Students will develop and practice techniques in advanced and alternative delivery of local anesthesia. This course also evaluates competency in the standard technique of administering local anesthesia. This course includes one lecture and two small group lab sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: Grad HSU Basis

DSANE 5342 - CLINICAL MEDICINE

Minimum Credits: 1

Maximum Credits: 1

This course in clinical medicine is directed to first professional dental students. Utilizing a combination of dental and medical faculty, the course will provide a better understanding of some common medical conditions and its current treatment, preparing students with the basics in providing dental care to the growing population of aging patients with complex medical conditions in conjunction with their physician colleagues.

An individualized program of advanced studies in anesthesia.

Academic Career: Dental Medicine

Course Component: Independent Study
Grade Component: Grad HSU Basis

DSANE 5912 - CLINICAL ANESTHESIOLOGY 2

Minimum Credits: 1
Maximum Credits: 1

This is a one year undergraduate dental course dealing with the philosophy and methods of pain and anxiety control in dentistry. Concepts of pain and anxiety, as well as, the principles of their psychologic and pharmacologic modifications are explored. Modalities ranging from non-drug and regional analgesic to enteral and parenteral sedative medication techniques are administered by the student under the supervision of the anesthesia faculty. The advantages, disadvantages, and complications associated with these techniques are compared.

Dental Microbiology

DSMIC 5941 - IMMUNOLOGY ORAL FACIAL COMPLEX

Minimum Credits: 1
Maximum Credits: 1

This course uses literature reviews, student presentation, discussions and demonstrations to review the role of microorganisms and host immune responses in the pathogenesis of caries, periodontal diseases and periapical infections. Microbial and immunological factors affecting bone formation,

tooth transplantation, bone implants, and the dental management of patients with allergies, autoimmune diseases and immunodeficiency disorders will also be discussed.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Dental Physiology

DSPHL 2243 - SCIENTIFIC BASIS FOR CLINICAL THERAPEUTICS

Minimum Credits: 1

Maximum Credits: 1

The basis for dental therapeutics is presented in this graduate course. The course emphasizes the elements of controlled trials by critiquing published articles relevant to dental therapeutics. Pharmacologic agents of interest include local anesthetics, nonsteroidal anti-inflammatory analgesic drugs, opioid analgesics, sedatives/hypnotics and antibiotics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Dental Medicine

DENT 2001 - FULL-TIME GRADUATE DENTAL MEDICINE STUDY

Minimum Credits: 0

Maximum Credits: 0

Students who are working full-time in a school of dental medicine graduate program may register for this course.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

DENT 2019 - GRADUATE PATIENT CARE

Minimum Credits: 0

Maximum Credits: 0

This course will provide patient care opportunities in a clinical setting under direct faculty supervision. Treatment procedures will include all aspects of dentistry.

DENT 2119 - GRADUATE PROSTHODONTICS PATIENT CARE

Minimum Credits: 0

Maximum Credits: 0

This course serves to provide patient care opportunities in a clinical setting under direct faculty supervision. Treatment procedures will include all aspects of prosthodontics.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

DENT 2130 - APPLIED HEAD AND NECK ANATOMY

Minimum Credits: 1

Maximum Credits: 1

This course is designed to introduce graduate students in clinical specialties to applied (surgical) head and neck anatomy. The course is comprised of didactic and dissection components, in addition to required readings. The dissection portion is planned to meet the specific needs of the various clinical specialties.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DENT 2150 - ETHICS IN THE DENTAL SPECIALTIES

Minimum Credits: 0.5

Maximum Credits: 0.5

The Ethics in the Dental Specialties course is designed to provide the first year advanced education student with a review of the general principles of ethics and the application of ethical principles in the interactions between general dentists, dental specialists and the patients whose care they share.

The students will be provided the opportunity to identify and work through ethical dilemmas specifically involving their chosen dental specialty.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

DENT 2201 - MASTERS RESEARCH 1

Minimum Credits: 1

Maximum Credits: 3

The master's research course series is designed to provide guidance, structure and support to the graduate student in the advanced education programs at the SDM in their course of study toward fulfilling the research requirement for a master of dental science degree. The school's associate dean of research, the student's research mentor and the student will identify a research topic, form a research committee, complete a literature review and research proposal, gain SRC and IRB approval, complete data collection, analyze data and submit a final thesis and scientific paper for peer review.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

DENT 2202 - MASTERS RESEARCH 2

Minimum Credits: 1

Maximum Credits: 3

The master's research course series is designed to provide guidance, structure and support to the graduate student in the advanced education programs at the SDM in their course of study toward fulfilling the research requirement for a master of dental science degree. The school's associate dean of research, the student's research mentor and the student will identify a research topic, form a research committee, complete a literature review and research proposal, gain SRC and IRB approval, complete data collection, analyze data and submit a final thesis and scientific paper for peer review.

DENT 3111 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN THE HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

Grade Component: Grad HSU Basis

DENT 5115 - HEALTH PROMOTION AND DISEASE PREVENTION 1

Minimum Credits: 1
Maximum Credits: 1
In this course, students will prepare for clinical dental practice by being introduced to important concepts and developing skills required for the provision of effective dental care. Students are introduced to communication skills and behavioral principles related to clinical practice through the health history interview. Students are also provided with their initial clinical exposure to the nature of oral health and disease. All of these concepts are developed and reinforced through the use of readings, pre-clinical, and clinical assignments that require integration of the concepts and effective demonstration of these skills as they apply to patient care. In addition, students will practice conducting a health history interview with a standardized patient. This course includes lecture, class discussion, small group exercises in the pre-clinical and clinical settings, and standardized patient sessions.
Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad HSU Basis

DENT 5118 - QUALITIES OF A GENERAL DENTIST 1

Minimum Credits: 1
Maximum Credits: 1
This course will follow student progression each term in the non-technique sensitive behaviors that the faculty members of the University of Pittsburgh School of Dental Medicine (SDM) deem are essential qualities to becoming a successful general dentist. As the student advances through the four years of the curriculum, SDM faculty will evaluate the students ability to demonstrate the knowledge, skills, and values in the outlined categories that represent expected professional behaviors. This assessed conduct will include all actions displayed in all locations within the school as well as in all external curricular locations. In addition to the areas listed above, this series of courses will include evaluating the students adherence to all SDM directives and/or University guidelines, requirements, policies and procedures.

Course Component: Clinical
Grade Component: Grad HSU Basis

DENT 5173 - HEALTH PROMOTION AND DISEASE PREVENTION 3

Minimum Credits: 2

Maximum Credits: 2

This is the third of a three course series which collectively helps to prepare the student for clinical dental practice by introducing important concepts and developing skills required for the provision of effective dental care. Students explore concepts in health promotion and disease prevention, ethical and behavioral principles related to clinical practice and are also provided with a foundation in evidence-based dentistry. Students continue to examine the nature of oral health and disease. All of these concepts are developed and reinforced through the use of readings, pre-clinical and clinical assignments and case presentations that require integration of the concepts and effective demonstration of the skills as they apply to patient care.

Course Component: Lecture

Grade Component: Grad Letter Grade

DENT 5178 - QUALITIES OF A GENERAL DENTIST 3

Minimum Credits: 1

Maximum Credits: 1

This course will follow student progression each term in the non-technique sensitive behaviors that the faculty members of the University of Pittsburgh School of Dental Medicine (SDM) deem are essential qualities to becoming a successful general dentist. As the student advances through the four years of the curriculum, SDM faculty will evaluate the students ability to demonstrate the knowledge, skills, and values in the outlined categories that represent expected professional behaviors. This assessed conduct will include all actions displayed in all locations within the school as well as in all external curricular locations. In addition to the areas listed above, this series of courses will include evaluating the students adherence to all SDM directives and/or University guidelines, requirements, policies and procedures.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DENT 5211 - DIAGNOSIS AND TREATMENT PLANNING 1

Minimum Credits: 1

Maximum Credits: 1

This course parallels the curricular theme of the second year, providing the opportunity to acquire and practice basic clinical skills and to prepare students to conduct comprehensive patient evaluations. Topics include: obtaining and interpreting medical, dental and medication histories; assessing the patient's health status; and assessing risk. The course will utilize previously acquired knowledge related to the examination of oral, dental and periodontal structures. Students will apply knowledge from their periodontology courses to diagnose gingivitis and periodontitis. Students will continue to develop their skills in oral disease prevention and health promotion. This course includes lecture, clinical assignments with an upperclassman, and case-based learning activities.

DENT 5278 - QUALITIES OF A GENERAL DENTIST 6

Minimum Credits: 1

Maximum Credits: 1

This course will follow student progression each term in the non-technique sensitive behaviors that the faculty members of the University of Pittsburgh School of Dental Medicine (SDM) deem are essential qualities to becoming a successful general dentist. As the student advances through the four years of the curriculum, SDM faculty will evaluate his/her progression in the behaviors that demonstrate the students knowledge, skills, and values in the outlined categories, to include professionalism and ethics. This assessed conduct will include all actions displayed in all locations within the school as well as in all external curricular locations. In addition to the areas listed above, this series of courses will include evaluating the students adherence to all SDM and/or University guidelines, requirements, policies, and procedures.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DENT 5283 - DIAGNOSIS AND TREATMENT PLANNING 3

Minimum Credits: 2

Maximum Credits: 2

In this course, second year students will be provided with an opportunity to apply foundational knowledge in diagnosis and treatment planning to a patient case. The student will work as part of a group to assess, diagnose, treatment plan and present a case to faculty and peers. Students will work within their group to write a written case report. After faculty review of the case report, each group of students will present their case orally during a 20-minute oral presentation. The presentation is followed by faculty questions. Students will also attend one implant conference to gain exposure to multi-disciplinary treatment planning and will then write a journal entry reflecting on this experience. Finally, the student's behavioral skills will be assessed as he/she discusses a treatment plan with a patient through the use of a standardized patient competency examination.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad HSU Basis

DENT 5310 - SPECIAL NEEDS DENTISTRY

Minimum Credits: 1

Maximum Credits: 1

In this course, students will be provided with an introduction to the arena of special needs dentistry; material presented will demonstrate the management and treatment of patients with disabilities/special needs. The primary goals of this course are to introduce the pre-doctoral dental student to common developmental and acquired disabilities, and to provide an increased understanding regarding barriers to care for individuals with disabilities. The focus of the course is to enable the student to understand the necessary parameters of care and modifications to dental treatment to best accommodate individuals with disabilities. The material presented will aid the student in assessing, planning, implementing and monitoring treatment for the patient with special needs. Speakers will include SDM faculty members, as well as guests from various disciplines within the University and external organizations. This course includes lectures, required assignments (reading and/or audio-video) and class discussions.

Grade Component: ABCF

DENT 5313 - ONGOING PERFORMANCE EVALUATION 1

Minimum Credits: 2

Maximum Credits: 2

As first- and second-year students, the Global Assessment (GA) program at the University of Pittsburgh School of Dental Medicine (SDM) helps provide guidance and learning opportunities for predoctoral students to grow and develop the knowledge, skills and values related to professional and ethical decision-making. The GA program utilizes a two-pronged approach: 1) The Qualities of a General Dentist (QGD) course series tracks the students ability to meet the professional and ethical expectations of developing health professionals as they progress through all terms of the four-year curriculum. 2) The Ongoing Performance Evaluation (OPE) course series tracks third- and fourth-year students ability to meet the expected clinical quality care standards, in addition to monitoring their clinical productivity as they provide services to their assigned patients outside rotations. The primary goal of the Ongoing Performance Evaluation (OPE) course series is to follow and assess student clinical progression each term in the third and fourth years of the predoctoral program. The foundation of this course recognizes that the primary goal of the predoctoral dental program is to provide a teaching and learning platform that allows the student to gain the knowledge, skills and values to competently perform as an entry-level general dentist. In doing so, the student is expected to gain clinical experience and advance through the clinical curriculum as s/he provides dental services to SDM patients. It is an expectation of the school that each student will work beyond minimal requirements and subsequent departmental competencies continuing to gain experience and knowledge each semester until graduation, thereby allowing his/her skills to improve.

Course Component: Clinical

Grade Component: Grad HSU Basis

DENT 5900 - INDEPENDENT STUDY

Minimum Credits: 0

Maximum Credits: 3

This independent study course is designed for the undergraduate dental student who desires to pursue additional knowledge in specific areas of dentistry. The content of the course is specified by the student and supervising faculty. Format is designed to encourage independent student experiences with the faculty acting in an advisory capacity with limited direct interaction.

Dermatology

DERM 5380 - DERMATOLOGY CLERKSHIP

Minimum Credits: 0

Maximum Credits: 0

This elective emphasizes clinical dermatology. The student will participate in the outpatient clinics at Flak Clinic, Childrens Hospital and the VA Hospital. These activities will be complemented by grand rounds, kodachrome conference, dermatopathy conference, and journal club conference. There are lectures in the basic sciences.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 3

DERM 5420 - BASIC DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

This elective emphasizes clinical dermatology. The student will participate in our outpatient clinics at Falk Clinic, Children's Hosp, and the VA Hosp. In addition, the student may participate with hospital consultations, clinical therapeutic trials, the pigmented lesion and melanoma program, the cutaneous ulceration and rehabilitation, and the technique of Mohm's microscopic-controlled excision of skin cancer. These activities will be complemented by weekly grand rounds, Kodachrome conf, dermatopath conf, and journal club conf. There are weekly lectures in basic sciences.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5425 - ADVANCED DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

Students are expected to develop skills necessary to independently complete a history and physical examination, identify required laboratory studies, develop a rationale differential diagnosis, and articulate and defend an appropriate treatment plan. The didactic portion will include regular participation in all dermatology department conferences and didactic sessions, and a weekly lecture and q and a session with the course director. Students are expected to formally present one patient at grand rounds and are encouraged to write a case report for publication. Evaluation is based on an exam given on the last day of the elective as well as clinical performance.

Academic Career: Medical School

Course Component: Clinical

Grade Component: Grad LG/SU5

Course Attributes: School of Medicine Year 4

DERM 5430 - DERMATOLOGIC AND PLASTIC SURGERY

Minimum Credits: 0

Maximum Credits: 0

This elective will split time with plastic surgery and dermatology. Such an exposure will provide the optimal learning experience in cutaneous surgery.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5440 - DERMATOPATHOLOGY

Minimum Credits: 0

Maximum Credits: 0

Interact with dermatology and pathology residents as well as dermatopathology fellows and participate in lectures and weekly grand rounds. Participation in case review and sign out sessions. Additional slides available for optional independent study. Independently study at microscope available. Students attempt diagnosis of cases & present them to faculty. Students gain understanding of skin as a separate organ having unique pathobiologic responses. Acquire adequate diagnostic proficiency with response processes seen in dermatopathology. Final evaluation on overall performance.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

An individualized course of study may be arranged with the department of dermatology to fit the student's needs. The student will meet with a department faculty person to design a clinical course of study for a four-week period of time. A written proposal must be approved by the faculty member as well as the student's scheduling advisor. When approvals have been received, the school registrar will schedule the course and notify the department student coordinator.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5810 - DERMATOLOGY RESEARCH

Minimum Credits: 0

Maximum Credits: 0

Research projects in dermatology are available to interested and motivated students. Project areas include 1) various aspects of wound healing; 2) skin microbiology; 3) biological behavior and causes of skin cancer; 4) dermal biochemistry; 5) epidermal cell biology; 6) clinical studies; 7) mycosis fun guides and immune modulation; 8) scleroderma fibroblast study; 9) pigmented lesions and cutaneous immunology. These activities will be complemented by departmental conferences. At the end of the project, the student will present a seminar on his/her results.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

DERM 5899 - INDEPENDENT STUDY DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

DERM 5900 - EXTRAMURAL DERMATOLOGY

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in dermatology may be arranged at an institution other than the University of Pittsburgh School of Medicine. Arrangements must be made in accordance with the process set out in the UPSOM course catalog with all appropriate approvals to be received before the course may be added to the student schedule for credit.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Diagnostic Sciences

DIASCI 2110 - ADVANCED ORAL PATHOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course in oral pathology is to provide the student a logical approach to the differential diagnosis of oral lesions. The definitive information necessary for the establishment of a final diagnosis is then provided. The course consists of a series of lectures augmented by laboratory sessions and clinical pathologic conferences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 2140 - ADVANCED IMAGING

Minimum Credits: 1

Maximum Credits: 1

The course on advanced imaging reinforces the importance of right way of using technology and understanding the usage of advanced techniques like CT, MRI and ultrasound in dentistry. It also helps them to understand the digital radiography and its advantages and disadvantages over the film based technique. It helps them to choose appropriate imaging modality for treatment planning for procedures like implants. The diagnostic part of the course should help residents in describing, interpreting and developing most relevant differential diagnosis for the systemic and bone pathology that is seen on the radiographs. Literature component of the course will help them in knowing the latest research in the field and promotes ideas to develop research integrating imaging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DIASCI 2142 - ADVANCED ORAL PATHOLOGY 2

Minimum Credits: 1

Maximum Credits: 1

This conference provides the essential information for histologic diagnosis of oral pathologies. This individualized program provides concentrated instruction in the microscopic aspects of those oral diseases related to the specific clinical specialty in which the resident is enrolled.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 2191 - PATHOBIOLOGY 1

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

DIASCI 2282 - PATHOBIOLOGY 2

Minimum Credits: 2

Maximum Credits: 2

Applied pathobiology provides the venue wherein residents apply pathobiology to their field of specialization. Utilizing an investigative approach, residents identify a topic of interest and demonstrate by means of a powerpoint presentation pathobiological concepts as they apply to patient care.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

DIASCI 5141 - INTRODUCTION TO RADIOLOGY 1

Minimum Credits: 0.5

Maximum Credits: 0.5

This course introduces the basics of Radiology and students will continue to build on the concepts addressed in the Dental Anatomy, Periodontics and Cariology courses. This course offers the first-year dental student instruction in the fundamentals of theory and practice that include the following 1. A working knowledge of the dental radiological physics, and safety as they apply to dentistry 2. Understand and recognize factors affect image quality of radiographs and how to correct them. 3. Understand concepts and equipment used in digital radiography. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), and mandatory in class sessions on select topics.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

DIASCI 5170 - GENERAL AND SYSTEMIC PATHOLOGY

Minimum Credits: 5

Maximum Credits: 5

This course is organized to present the pathologic processes which underlie a variety of human disease states. Topics in general pathology include cell injury and cell death, inflammation and repair, hemodynamic disorders, neoplasia, and autoimmune, environmental, genetic, and pediatric diseases. Topics in systemic pathology include disease of vasculature, heart, kidneys, lungs, and blood. Oral implications of systemic disease are introduced. This course includes lectures and class discussions. The goal of teaching general pathology is to provide a foundation of the basic processes of disease, such as cellular pathology, inflammation and repair, fluid and hemodynamic derangements, and neoplasia. The study of metabolic deficiencies, environmental, pediatric and genetic disease processes is also included. The student should be able to understand inflammation and repair throughout the body, including the oral cavity. The goal of teaching systemic pathology to the dental student is to educate him/her in the diseases affecting specific organ systems such as cardiovascular, blood, hematopoietic, lymphoreticular and immune systems, respiratory, gastrointestinal, hepatobiliary, pancreatic, genitourinary, male reproductive, breast and female reproductive, endocrine, musculoskeletal and central and peripheral nervous systems. The student should complete the course with a fundamental knowledge of common systemic diseases. They should be able to identify how their patients diseases can affect dental treatment.

Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad Letter Grade

DIASCI 5171 - INTRODUCTION TO RADIOLOGY 2

Minimum Credits: 0.5

Maximum Credits: 0.5

In this course, students will continue to build on the concepts addressed in the Introduction to Radiology 1, Dental Anatomy, Periodontics and Cariology courses. This course offers the first-year dental students instruction in the fundamentals of theory and practice that include the following: 1. A working knowledge of the dental radiological technique, and interpretation as they apply to dentistry; 2. A pre-clinical laboratory exercise to develop practical skills in the area of dental x-ray procedures; 3. Self-instruction materials that cover normal radiographic anatomy. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), mandatory in class sessions on select topics, and a preclinical radiology technique rotation.

Academic Career: Dental Medicine
Course Component: Lecture
Grade Component: Grad HSU Basis

DIASCI 5211 - INTRODUCTION TO RADIOLOGY PHYSICS AND BASIC INTERPRETATION

Minimum Credits: 1

Maximum Credits: 1

In this course, students will continue to build on the concepts addressed in the Dental Anatomy, Periodontics and Cariology courses. This course

offers the second year dental student instruction in the fundamentals of theory and practice that include the following: 1) a working knowledge of the dental radiological physics, technique, safety and interpretation as they apply to dentistry; 2) a pre-clinical laboratory exercise to develop practical skills in the area of dental x-ray procedures; 3) self-instruction materials that cover normal radiographic anatomy; and 4) small group exercises in basic radiographic interpretation of caries and periodontium to serve as the foundation for future radiographic interpretation and patient care. This course includes a self-paced online component (recommended lecture completion dates and test freezing dates will be posted), small group interpretation exercises, and a preclinical radiology technique rotation. In-class sessions are available upon request for any topics that the class would like to review with the course director.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: Grad HSU Basis

DIASCI 5212 - ORAL AND MAXILLOFACIAL PATHOLOGY

Minimum Credits: 4

Maximum Credits: 4

The practice of dentistry requires the ability to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment. Oral and Maxillofacial Pathology is aimed at the recognition of the etiologic, clinical, radiographic, microscopic features of abnormalities, and disease processes unique to the oral perioral structures, as well as those which reflect systemic disease. Where appropriate, treatment of oral diseases will be addressed. The course integrates material learned in the basic science curriculum, including embryology, biochemistry, histology, cell biology, and physiology, and applies it to the diseased state (pathology). Where appropriate, treatment of oral diseases will be addressed. By the end of the course, you will be able to distinguish normal oral anatomy from oral abnormalities, and to determine implications for treatment, which is essential to the practice of dentistry. This course includes lectures, class discussions, and case-based learning activities.

Academic Career: Dental Medicine

DIASCI 5241 - RADIOLOGY, IMAGING AND INTERPRETATION 1

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DIASCI 5319 - CLINICAL RADIOLOGY 1

Minimum Credits: 1

Maximum Credits: 1

This course is designed to allow the student to acquire the skills for performing intraoral and panoramic dental radiographic examinations. The student will demonstrate these skills first on mannequins and develop them doing radiographic examinations on patients. The student will also be taught to recognize and correct common imaging and processing errors encountered in dental radiography. The student will also be introduced to other maxillofacial imaging techniques as patient needs permit.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DIASCI 5320 - MANAGEMENT OF DENTAL EMERGENCIES

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn the principles and procedures for the examination, diagnosis, treatment and documentation of the patient with a dental emergency. Students will be provided with numerous examples of dental emergencies that encompass the various dental disciplines. The goal of this course is to provide students with the foundational knowledge needed to properly evaluate and treat dental emergencies in an expeditious and efficient manner. Students will apply the skills acquired in this didactic course when treating patients during their clinical rotations in the Emergency Care Clinic. This knowledge and experience is intended to help the student manage their patients while in dental school, and after graduation when in a private practice setting. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DIASCI 5329 - EMERGENCY CLINIC ROTATION 1

Minimum Credits: 1

Maximum Credits: 1

This course will provide the third year dental student with the opportunities to evaluate, diagnose, and manage patients requiring immediate intervention.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DIASCI 5341 - SEMINARS IN ORAL PATHOLOGY AND ORAL MEDICINE

Minimum Credits: 1

Maximum Credits: 1

This course will help students develop diagnostic and management skills as they pertain to oral and maxillofacial pathology by building on the basic knowledge acquired in systemic and oral pathology. This course will focus on the recognition, description and management of clinical and radiographic entities which is encountered by general dentists. The course format will be clinical-pathologic correlations (CPCS) seminars. The students will be provided with cases to review.

Academic Career: Dental Medicine

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DIASCI 5373 - RADIOLOGY, IMAGING AND INTERPRETATION 2

Minimum Credits: 1

Maximum Credits: 1

In this course, students will build on the concepts addressed in the anatomy, dental anatomy, oral surgery, oral pathology, and radiology courses taken previously. This course follows DIASCI 5241, (Radiology, Imaging and Interpretation 1), a basic interpretation course which focused on selection criteria to appropriately prescribe radiographs and the identification of the most clinically relevant radiographic pathology (including caries, periodontal conditions, cysts, tumors, systemic conditions, and fibro-osseous conditions). This course is designed to familiarize students with technological advancements in the field of radiology. Application of those advancements to the appropriate prescription of radiographs in a clinical setting will be addressed. Small group interpretation exercises will be implemented throughout the course to aid student learning. The pathology component of the cases will help students develop an understanding of the disease process and correlate disease with radiographic findings. Students will develop an understanding of the various disease processes of the head and neck and will develop skills to prescribe the appropriate imaging technique for further analysis of the disease process. This course will also serve as a review of radiographic features of intraoral pathology, basic imaging principles, and their applications for the National Board Dental Examination (NBDE) Part II. The course includes lecture, class discussions, and small group interpretation exercises.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

DIASCI 5388 - CLINICAL RADIOLOGY 3

Minimum Credits: 1

Maximum Credits: 1

The oral and maxillofacial radiology clinical rotation provides the clinical environment for students to become competent in the technical and clinical aspects of radiographic procedures. Acquisition of radiographs and critiquing will constitute the bulk of this course. In addition, students will be required to acquire at least 5 panoramic or other extra-oral radiographs by the end of the term.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: Grad HSU Basis

DIASCI 5389 - CLINICAL EMERGENCY 1

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide clinical experiences in the area of emergency dentistry for predoctoral dental students. By the end of the fourth year of the curriculum, students will be able to demonstrate competence in providing care to dental patients with emergent needs at the level of a general dentist and will participate in a variety of additional experiences to increase skills in caring for the patient with emergent dental needs.

Academic Career: Dental Medicine

Course Component: Clinical

Grade Component: ABCF

DIASCI 5419 - EMERGENCY CLINIC ROTATION 4

Minimum Credits: 1

Maximum Credits: 1

This course will provide the fourth year dental student with additional opportunities to evaluate, diagnose, and manage patients requiring immediate intervention in a more self-guided environment.

Digital Studies and Methods

DSAM 3000 - DIGITAL STUDIES AND METHODS: SEMINAR

Minimum Credits: 3
Maximum Credits: 3

This seminar addresses the relationships between digital computing and the humanities and allied social sciences, both as a subject of both historical

interest and contemporary practical concern. We engage in ongoing theoretical discussions but also fully engage with what it takes to implement interpretive research in the digital environment. Students leave this class having gained a personally significant understanding of current debates in the field of digitally-oriented interpretive research as well as having built a digital project of their own. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3100 - DIGITAL STUDIES AND METHODS: PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course provides a studio-based, semi-structured learning environment in which students focus exclusively on producing and sharing their own, more advanced, work using digital computing within the context of the humanities and allied social sciences. In this practicum, the students begin to investigate more fully the particular digital tools and methods that seem most promising to their longer-term research agenda. It is designed as a collaboration with the university library system, co-led by and taught in digital scholarship services. This course serves as one of the core requirements for the graduate certificate in digital studies and methods.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3200 - DIGITAL STUDIES AND METHODS: CAPSTONE

Minimum Credits: 3

Maximum Credits: 3

This course, which serves as the final required course for the graduate certificate in digital studies and methods, will require three major efforts on the part of the student. First, the student will undertake (or substantially add to) a large-scale, independent research project that reflects the mindful use of digital technologies in their field of research that contributes meaningful scholarly knowledge. Second, they will produce an annotated portfolio of the work that they have done during the DSAM certificate that also includes methodological reflections on the use of digital methods in the humanities and allied social sciences. Finally, they will present this portfolio and their capstone work at the end of the term in a DSAM showcase. This course has prerequisites: both DSAM 3000 and DSAM 3100

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

DSAM 3999 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 3

This course allows students to work on individual digital projects under the direction of a faculty advisor. This course requires instructor approval and is used only in exceptional circumstances for the graduate certificate in digital studies and methods.

Economics

ECON 2000 - THESIS AND RESEARCH MA DEGREE

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

ECON 2001 - INTRO TO MATHEMATICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Intensive mathematics preparation for first year Ph.D. students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Economics (PHD)

ECON 2010 - MATHEMATICAL METH ECON ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

A survey of differential and integral calculus with application to economic analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

ECON 2020 - INTRO TO ECONOMETRIC THEORY

Minimum Credits: 3

Maximum Credits: 3

This course covers elements of inferential statistics necessary for the study of econometric theory. It emphasizes estimation theory and its applications. Illustrations are drawn from several areas of economics. Students are expected to understand the theory of statistical inference mathematically as well as intuitively when applied to economic problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

ECON 2100 - ADVANCED MICROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

Theories of consumer behavior, producer behavior, market equilibrium, industry structure.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

ECON 2110 - ADVANCED MACROECONOMIC THEORY 1

Minimum Credits: 3

Maximum Credits: 3

The course covers the comparative static approach to macroeconomics. The objectives include both an understanding of past and recent literature on theory and empirical evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: ECON 2001; PLAN: Economics (PhD)

Course Attributes: Global Studies

ECON 2120 - ADVANCED MICROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This course will present the Arrow-Debreu-McKenzie Theory of competitive equilibrium, the theory of imperfect competition, and economics of uncertainty. The presentation will be self-contained, including a discussion of the mathematical techniques used. As time permits, special topics will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 2130 - ADVANCED MACROECONOMIC THEORY 2

Minimum Credits: 3

Maximum Credits: 3

The first part of the course will be devoted to studying models of economic growth and the role money plays in the growth process. The second part of the course will consist of an introduction to the macro-economic rational expectations literature. Both theoretical as well as empirical contributions will be surveyed and discussed in this area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 2150 - GENERAL ECONOMETRICS

Minimum Credits: 3

Maximum Credits: 3

Surveys standard econometric models, their estimation, hypothesis testing and other inferential problems of, among others, (1) classical linear regression, (2) generalized linear regression models, including sur an pooled regression models, (3) dynamic models with spherical and nonspherical errors, (4) qualitative and limited dependent variable models, (5) simultaneous equations models--static and dynamic, (6) use and analysis of econometric models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2160 - EMPIRICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

This course will cover empirical methods typically used in applied microeconomic research and it is designed to help you apply the techniques learned in the econometrics sequence. We will focus on techniques used in applied microeconomics to identify causal estimates. The course will cover data issues and distributional estimators in some detail along with matching and propensity scores, local regressions, instrumental variables, regression discontinuity designs, and inference issues. Many examples will come from development, health, labor, public economics, and political economy, but the material will be useful to any applied researcher. The course will focus also on the implementation of econometric techniques learning the basic tools of programming and coding. The goal of this class is to provide students with the tools needed to become critical readers of

empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2170 - EMPIRICAL METHODS 2

Minimum Credits: 3

Maximum Credits: 3

This course will cover methods to cope with selection bias and external validity (e.g.: imperfect IV, plausibly exogenous IV, weighting matrix), decomposition methods, multiple hypothesis testing, methods for spatial analysis (ARGIS), causal mediation analysis, an introduction to machine learning and big data in economic research, discrete choice models and dynamic choice model applications. Many examples will come from development, health, labor, public economics, and political economy, but the material will be useful to any applied researcher. The course will focus also on the implementation of econometric techniques learning the basic tools of programming and coding. We will use STATA, ARCGIS, R, and Matlab. The goal of this class is to provide students with the tools needed to become critical readers of empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2220 - TOPICS IN EXPERIMENTAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

The course is designed to familiarize the student with experimental methodology and the range of application of experimental methods in economics. Students will devise and execute (in consultation with the instructor) a "pilot" experiment in a substantive area of interest. This can be done in small groups of 2 or 3 or be a solo project. The object is to provide hands-on experience in conducting an economics experiment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ECON 2230 - PUBLIC ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This is a survey course of topics in public finance. The purpose is to acquaint students with a broad range of classical and contemporary issues in public finance. The course will be divided into several topic areas; taxation; expenditure analysis; economics of political processes; control of externalities; regulation; and fiscal federalism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2250 - INDIVIDUAL RESEARCH

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

ECON 2260 - ADVANCED ECONOMETRICS 1

Minimum Credits: 3

Maximum Credits: 3

Covers, with rigor commensurable to the current professional standard, the basis results of statistical inference in the classical linear regression model

and their extension; asymptotic theory and its application to extremum estimators including the least squares estimator and the maximum likelihood estimator; asymptotic tests and related topics; generalized least squares theory; and linear and nonlinear simultaneous equation models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2270 - ADVANCED ECONOMETRICS 2

Minimum Credits: 3

Maximum Credits: 3

Covers qualitative choice models, censored and truncated models, duration models, time series models - univariate and multivariate, causality analysis, dynamic models, cointegration, time series macroeconometrics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2320 - TOPICS IN URBAN AND ENVIRONMENTAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

The first portion of the course is devoted to examining the allocation of resources within and between urban areas. The second portion of the course examines the relationship between this resource allocation and various urban problems including poverty, discrimination, housing, transportation, and urban public finance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2400 - LABOR MARKET ANALYSIS 1

Minimum Credits: 3

Maximum Credits: 3

This course covers topics in areas of labor economics such as: labor supply; household production and labor force participation; labor demand; minimum wages; schooling and earnings; human capital externalities; wage inequality, and skilled biased technological change. The purpose of the sequence (this course and econ 2410) is to familiarize students with the economic models and empirical strategies used in the labor economics literature, and teach them to critically analyze empirical research in preparation of doing their own applied work. By the end of the course, students should have the background necessary to start developing their own independent research interests in the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2410 - LABOR MARKET ANALYSIS 2

Minimum Credits: 3

Maximum Credits: 3

This course covers topics in areas of labor economics such as: immigration; labor market discrimination; compensating wage differentials; incentives, effort and monitoring; efficiency wages; and the economics of marriage and childbearing. The purpose of the sequence (econ 2400 and this course) is to familiarize students with the economic models and empirical strategies used in the labor economics literature, and teach them to critically analyze empirical research in preparation of doing their own applied work. By the end of the course, students should have the background necessary to start developing their own independent research interests in the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2450 - ECONOMIC HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course explores the economic history of the United States from European settlement up to the recent past. Topics covered will include: the origins of American industrial growth; the political economy of the constitution and constitutional ratification; economic and environmental change; the welfare effects of industrialization; the industrial organization of the great trusts, such as standard oil and American tobacco; the sources and consequences of regulatory change; and the great depression and the new deal. The course will train students in the tools and methods of the economic historian. In this way, the course will consider a wide body of theory and empirical tools that can be applied to the study history and historical change. The course readings will be mix of old classic articles and more recent work.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2500 - INTERNATIONAL TRADE

Minimum Credits: 3

Maximum Credits: 3

This course is a rigorous introduction to the pure theory of international trade. The material requires a background in microeconomic theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2510 - INTERNATIONAL FINANCE

Minimum Credits: 3

Maximum Credits: 3

Rigorous survey of the theory of international finance, the applications to international economic policy. Assumes thorough knowledge of micro and macroeconomic theory at the graduate level, and some acquaintance with mathematical techniques. Topics covered include: balance-of-payments adjustment under various change-rate regimes; theory of economic policy in an open economy; international capital movements; the monetary approach to the balance of payments; and empirical evidence on many of the above topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2530 - ECONOMIC DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

A comprehensive survey of the major analytical literature of development economics. Covers approaches to and theories of development; dualistic models of the development process; the impact of the international economy; and development planning. Both major theoretical literature and empirical findings in each area are covered. Primary focus will be on the analytical techniques and literature, though some time will be spent on discussion of researchable topics in the area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2540 - GROWTH & POLICY MODELS OF ECON

Minimum Credits: 3

Maximum Credits: 3

For students interested in the more formal mathematical approaches to economic development and to related quantitative methods for planning and decision making. Topics will include applications of growth theory, input-output analysis, linear programming, computable general equilibrium, and project analysis in a development context. Problem exercises will be assigned.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2600 - COMPUTATIONAL METHODS ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This class is intended to familiarize Ph.D. students with numerical methods to solve economic models. Topics covered depend on instructor. Example topics include approximation methods, fixed point problems, solving functional equations like dynamic programs, Monte Carlo methods. Such methods are used in differentiated product models in industrial organization, political economy models in macroeconomics, and dynamic private information models. Heavy use is made of the computer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2670 - POLITICAL ECONOMY

Minimum Credits: 3

Maximum Credits: 3

In this course, we will take a formal look at various environments where a group of individuals (committee, society, congress, etc) takes a binding decision through some institutional mechanism (consensus, elections, jury deliberations, legislative bargaining etc). The course will have a strong formal, positive focus on how the varied political, social and legal institutions that define the 'rules' of collective decision-making determine the nature of collective outcomes. On the normative side, the course would focus on certain 'desirable properties' (e.g. Respecting minority preference) of collective decision-making and analyze whether and to what extent the existing institutional arrangements satisfy such properties. While we shall start out using concepts of co-operative game theory, for most part of the course we will be in the realm of non-cooperative game theory. This course will provide a starting point for research in formal political theory and political economy. As such, it might be of interest to students of both economics and political science.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2700 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Current topics of particular interest to economics graduate students are discussed and analyzed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2701 - GREEN INFRASTRUCTURE IMPLEMENTATION: A CASE STUDY OF THE PITTSBURGH REGION

Minimum Credits: 3

Maximum Credits: 3

This course is designed to exercise the student's academic knowledge, passions, and skills to facilitate real-world problem solving in a collaborative setting. It will improve the students' skills in these areas: analytical; collaborative work; project management; communication; experimentation; and decision analysis. Differences in baseline skills and interests will be recognized in assignments and grading.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2710 - EMPIRICAL METHODS II

Minimum Credits: 3

Maximum Credits: 3

This course will cover cutting-edge methods typically used in applied micro-economic research and it is designed to help you learn how to apply the econometric techniques learned in the econometrics sequence. It is a natural prosecution of the empirical methods class. The course will cover

methods for spatial analysis introducing students to the use of ArcGIS for applied microeconomic research. Furthermore, it will introduce students to scraping and data mining techniques using Python and R. The goal of this class is to provide students with the tools needed to become critical readers of empirical work and teach them techniques that they can apply to their own original research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2713 - TOPICS IN MACROECONOMICS

Minimum Credits: 3

Maximum Credits: 3

A field course designed to initiate original research projects in areas categorized under the broad heading of macroeconomics. Students select an area in which to specialize (asset pricing theory, growth theory, business cycle theory, etc.). And present one to three lectures summarizing the literature in the area. A short reading list of seminal papers in the area would be provided for the class to follow. Students begin an original research project to be presented at the end of the term, and to be summarized in a paper.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 2720 - RESEARCH METHODS IN ECONOMICS

Minimum Credits: 1

Maximum Credits: 1

This is a mandatory course for second-year PhD students. The course will introduce students to strategies for identifying interesting research ideas, to determine whether the idea is worth pursuing, to effectively review the literature, and to plan how to conduct the research. Insights into how these strategies change across fields within economics will be provided by relevant faculty guests. Other topics discussed in the course will include the typical difficulties involved in conducting research and how to address them; how to deal with advisors; academic etiquette; techniques for presenting work in progress at seminars; and how to write and submit academic papers. Requirements will include the drafting of the second-year paper proposal (PhD Comprehensive Research Paper) and the selection of two faculty readers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2730 - SEMINAR EXPERIMENTAL ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

There is a small, but rapidly growing literature in which behavioral experiments are used to test central propositions of various economic theories. This course will review the experimental literature that exists in several areas of economics, including industrial organization, social choice and preference revelation, behavior of decentralized markets and bargaining. A number of experiments will be replicated. Students will be expected to design their own experiments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2740 - TEACHING ECONOMICS

Minimum Credits: 1

Maximum Credits: 1

A required course for newly appointed ta/tfs in economics. The object is to develop teaching skills that are essential for effective communication between instructor and college students in economics. Theory and pedagogy, as well as practicum and demonstrations are part of this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

ECON 2760 - TOPICS IN MICROECONOMIC THEORY

Minimum Credits: 3

Maximum Credits: 3

This is an advanced level course in microeconomic theory. It deals with a broad range of topics, some drawn from recent papers, chosen to prepare students to tackle the literature on their own. Offered in alternate years to economics 2210 introduction to game theory 2.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ECON 2770 - COMPREHENSIVE PREPARATION

Minimum Credits: 1

Maximum Credits: 12

Graduate students pursue study independently to prepare for comprehensive examinations.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

ECON 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Students pursue study or research independently with minimal supervision by faculty.

Academic Career: Graduate

Course Component: Independent Study

Course Component: Thesis Research

Grade Component: Grad SN Basis

ECON 3100 - SEMINAR IN MICROECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This is a seminar in microeconomic theory and analysis. Special topics are selected each time the seminar is offered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ECON 3110 - SEMINAR IN MACROECONOMICS

Minimum Credits: 3

Maximum Credits: 3

This is a seminar in modern macroeconomic theory and analysis. Special topics are selected each time the seminar is offered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

ECON 3160 - ECONOMETRICS SEMINAR

Minimum Credits: 3

Maximum Credits: 3

Advanced topics in econometrics not covered in econ 2150 and 2160 shall be studied. Each student is assigned a special topic and is asked to present research results.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ECON 3400 - APPLIED MICROECONOMIC SEMINAR

Minimum Credits: 3

Maximum Credits: 3

The primary aim of this course is to introduce Ph.D. Students to a sampling of the current professional research in various applied microeconomics fields 'such as labor economics, health economics, public finance, industrial organization, development economics or political economy. Students learn and critically analyze the range of empirical approaches used to study topics within these areas, in preparation of doing their own applied work. This course requires attendance to the joint CMU/Pitt applied microeconomics workshop, where renowned guest speakers will be presenting their current working papers.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ECON 3420 - LABOR DEVELOPMENT SEMINAR

Education

EDUC 2000 - PSYCHOLOGY OF LEARNING AND DEVELOPMENT FOR EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on those areas of development and learning which have relevance for educators. The course covers preschool through old age. For each age range, typical behaviors and competencies that are learned or developed are considered from a number of domains (cognitive, affective, psychomotor, social). Attention is also given to appropriate research methods. An interactionist perspective is utilized; the course may be team taught.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2003 - RESEARCH METHODS IN EDUCATION POLICY AND PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course presents psychological theory, research and analytical methods applicable to the variety of settings in which adults learn and to the variety of objectives adults have for learning. The roles of memory, prior knowledge and self-regulated learning in these and other task domains are considered. Students should emerge with an understanding of how to analyze what is involved in selected domains of learning and how to identify the more important questions for research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2007 - HUMAN LEARNING

Minimum Credits: 3

Maximum Credits: 3

Presents an overview of theories and of kinds of learning that educational professionals should know. Also considered are recent developments in cognitive psychology, such as information processing and knowledge-based approaches in transition from novice to expert, and from poorly to well adjusted states.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2008 - CONCEPTION TO EARLY CHILDHOOD

Minimum Credits: 3

Maximum Credits: 3

Focuses on developmental pathways from conception through early childhood within contexts of family, daycare/school, community and culture. Pathways are considered with regard to developmental changes in transactions between individuals and social life conditions, with focus on patterns of change in participation in social-cultural practices. Besides a review of current literature, students will be engaged in qualitative investigations of the social lives of young children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 2009 - DEVELOPMENT: MIDDLE CHILDHOOD/ADOLESCENCE

Minimum Credits: 3

Maximum Credits: 3

Course focuses on developmental pathways from middle childhood through adolescence (ages 7-18) within the contexts of family, school, community and culture. Pathways are considered in regard to developmental changes in transactions between individuals and social life conditions, with regard to patterns of change in participation in social cultural practices. Students will be engaged in qualitative investigations of the social lives of children and adolescents.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2011 - CULTURALLY RESPONSIVE PEDAGOGY

Minimum Credits: 3

Maximum Credits: 3

The course, culturally responsive pedagogy, introduces students to theory, research, and especially practice related to developing and enacting curriculum and instructional practices that respond to the social context in which they (will) work. The course covers general principles and approaches to culturally responsive teaching such as how teachers develop meaningful relationships with students, how teachers learn from and about a school and local community, how teachers develop and implement culturally responsive classroom management, and how teachers develop expectations for students that maximize their capacity. In addition, the course will assist students in learning about and developing culturally responsive curriculum and pedagogy in their different content/subject matter areas (such as mathematics, science, art, language arts, and social studies). A recurrent and central question of the course is: how do teachers develop culturally responsive instructional practices in their particular disciplinary domain to maximize students learning opportunities?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 2046 - SPECIAL TOPICS-THE URBAN ENVIRONMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with an introduction to the social, historical, and political factors shaping urban life and communities in the United States. The course is primarily, but by no means exclusively, intended for education students and is designed to help students develop a more sophisticated understanding of the contexts in which urban education occurs and the relationship between urban processes and urban education. More specifically, the course will focus on the history of cities, including 20th and 21st century urban transformation, the development and persistence of residential segregation, urban poverty, the criminalization of urban communities, immigration, and trends in theory and practice around urban redevelopment. In all cases, we will consider the implications for urban families, communities, and schools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2088 - URBAN EDUCATION REFORM

Minimum Credits: 3

Maximum Credits: 3

The course is designed to provide both a background understanding of urban education, as well as expose students to particular urban education reforms. Students will examine selected historic and contemporary reform efforts in education, in particular studying the theories of change, implementation challenges and critiques associated with these different reforms as they apply to urban districts and schools. We will look at the theoretical underpinnings of particular reforms, as well as why education policies have succeeded or failed, and the consequences of these outcomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2089 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 12

An experimental course with a flexible curriculum oriented to special research topics or current issues of concern to educators. Topics vary.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2100 - EDUCATION AND SOCIETY

Minimum Credits: 3

Maximum Credits: 3

The course focuses on the interaction between educational institutions and their social context. Situated in the field of study known as social foundations of education, the content reflects disciplinary methods in the examination of such policy issues as the role of the schools in social change, the influence and consequences of formal and non-formal educational forces, and the economics and politics of school reform efforts. Students are challenged to consider the relationships between culture and power and the value-laden character of all educational endeavors. Thus the role of schooling is considered in cultivating the habits necessary for democratic citizenship which include ongoing efforts to secure equitable and just social relations, and to advance the common good.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EDUC 2102 - HISTORY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Both a chronological order and a thematic/conceptual investigation will constitute the structure of this course by juxtaposing past and contemporary historical developments. Emphasis will be placed on the ideas that prevailed in different time periods. Conflicting organizational arrangements, competing theories, and growing external pressures in different eras will be traced and analyzed in order to develop an educational historiography.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2103 - RACE AND RACISM IN EDUCATION AND SOCIETY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on issues of equity in education based upon the divisions of American society by social constructs of "race". The course is designed to expose students to conceptual frameworks of culture, society, race, class and gender from the social sciences and humanities for understanding the experiences of subordinated minority groups in school and society. The practical problems of social and school reform in American communities and schools will be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2104 - LEADERSHIP IN SERVICE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This seminar examines the conditions under which social and ethnic movements have created non-formal educational programs; assesses pedagogical aspects of movement education; and evaluates movement education outcomes regarding movement goals and relations with the larger society.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2105 - SOCIOLOGY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

An analysis of the development of modern social institutions with special reference to the sociology of the schools. The school is studied as a social system and in the context of broad social organization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2106 - EDUCATION AND CULTURE

Minimum Credits: 3

Maximum Credits: 3

The active experiences in the course are intended to challenge students to investigate and analyze the dynamic relationship between schooling, education, popular culture and society by addressing the normalizing effects of cultural narratives and images that influence our taken-for-granted assumptions, beliefs and actions. Class activities involve considering the moral, social and political dimensions of our educational practice by expanding our sense of what happens outside of schools and classrooms that contribute to shaping our worldviews. We work to better understand the dynamics of culture and the relationships among culture, history, power, language and knowledge. Thus we are challenged to become informed and invigorated professionals that can help reverse the patterns of dehumanization and social control that are often overlooked in the everyday world of practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EDUC 2107 - EVIDENCE BASED HEALTH PROGRAM PLANNING

Minimum Credits: 3

Maximum Credits: 3

The course focuses on the roles of schools in responding to the health needs of children in collaboration with the family and community. Examined is how schools and communities compliment and support health and social services needed to overcome the conditions that put a young person at educational risk.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2108 - STATE/NATIONAL POLITICS OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Analyzes broad national and international political issues as they relate to schools. Political issues are viewed from a contemporary political perspective and are compared to other social science interpretations. An examination is made of the dialectical relationship between the state and the school in an effort to determine how social, economic, and cultural reproduction occurs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2109 - GENDER IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This introductory course provides an overview of anthropological approaches to the study of education. Ethnographic cases drawn from many cultures, knowledge systems, and time periods help to provide a broad, holistic view of education in diverse community and institutional contexts. Modules may include: nurturing a sense of place; comparing folk, popular, and elite cultures; understanding cultural continuity and change; celebrating rituals and holidays; fostering cultural resilience and responsive reform policies; framing multicultural education; and appreciating the sociolinguistics of schools and home. Student's have opportunities to participate in authentic schooling activities, to draft public advocacy pieces, to create team presentations, and to refine a personalized synthesis of a topic of interest. Anthropological field research methods are discussed as a

means to craft compelling analytical accounts, but research training is not part of this course

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: African Studies, West European Studies

EDUC 2110 - GENDER AND EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This seminar examines the role that gender plays in the lives as students, researchers, educators, and policy makers. Major topics may include: changing trends of participation and success in k-16 schooling; childhood and professional socialization; media and curricular bias; coming of age; embodiment, sexuality, and sexual harassment; gender and the educational professions; feminist and antibias teaching; leadership and transnational communities of practice; activism and engaged feminist scholarship.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2111 - CONTEMPORARY PHILOSOPHY OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Examines how philosophies of education can contribute to one's vision of educative experience. Central educational concepts (e.g., Knowing, learning, thinking, valuing, and being) are analyzed in alternative ways.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2112 - POLITICS AND HISTORY OF HIGHER EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course surveys the perennial forces which have shaped the character of America's colleges and universities. Institutional control and governance. Curricular goals and organization, and faculty and student life are examined against the background of political, economic, religious, social, and intellectual developments in American culture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2200 - DISCIPLINED INQUIRY

Minimum Credits: 3

Maximum Credits: 3

This course deals both with methods used in educational research and with the underlying theories, assumptions, and limitations. Students will do various inquiry activities, including sampling, observation and other data collection activities, as well as critical analysis of literature relevant to an important educational problem. These inquiry activities and study provide a foundation for further study of epistemological issues on which educational research and theory are based.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 2201 - INTRODUCTION TO RESEARCH METHODOLOGY

Minimum Credits: 3

Maximum Credits: 3

Introduces basic language and concepts of empirical research with emphasis on the applicability of research methodology (statistics, measurement,

design, and evaluation) for improvement of professional practice in education.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EDUC 2202 - EDUCATIONAL/PSYCHOLOGICAL MEASUREMENT

Minimum Credits: 3

Maximum Credits: 3

Introduction to basic principles of measurement and a survey of educational and psychological testing. Topics include validity, reliability, item selection, and referencing (both norm and criterion); interpreting factor analysis of test scores; using tests in decisions; social and ethical issues in testing; theories of intelligence and their relation to intelligence testing; and tests of personality. Students participate in a laboratory section where they analyze data and evaluate tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EDUC 2205 - FIELD METHODS

Minimum Credits: 3

Maximum Credits: 3

Designed to acquaint students with basic ethnographic field work techniques. Topics addressed include taking and managing field notes on participant-observation and use of archival materials. There will also be some discussion of the relationship among research design, data collection, and data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EDUC 3001 - PRACTITIONER INQUIRY 1

Minimum Credits: 3

Maximum Credits: 3

This initial course in the research sequence introduces students to disciplined inquiry of problems of practice through a variety of perspectives, approaches, and methods of planning and conducting educational research. This course provides a foundation for further study of research topics and the enactment of educational research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3002 - FOUNDATIONS 1:

Minimum Credits: 3

Maximum Credits: 3

This course introduces the notion of a conceptual framework and engages students in critical analysis of exemplars that demonstrate how conceptual frameworks drive the intellectual work of educational research and practice. Students identify a topic of interest and begin to survey the professional literature related to that topic in order to identify a problem of practice and how that problem has been framed and investigated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3003 - FOUNDATIONS 2: LEADERSHIP IN GROUPS AND ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the leadership of pre-20 institutions, and other educationally-related entities in an environment characterized by socioeconomic, political, technological, and demographic change. It will examine the breadth of leadership theories and styles in education, including

traditional, entrepreneurial, behavioral, and relationship-based models. Course participants will learn how to lead system- and institutional-level changes, drawing upon strategic, human resources, financial management, and quality assurance skills. Emphasis is given to leadership models that focus on student-centric solutions, sustainable excellence, equity and social justice within education institutions at all levels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3004 - FOUNDATIONS 3: CONTEXTS OF EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the leadership of pre-20 institutions, and other educationally-related entities in an environment characterized by socioeconomic, political, technological, and demographic change. It will examine the breadth of leadership theories and styles in education, including traditional, entrepreneurial, behavioral, and relationship-based models. Course participants will learn how to lead system- and institutional-level changes, drawing upon strategic, human resources, financial management, and quality assurance skills. Emphasis is given to leadership models that focus on student-centric solutions, sustainable excellence, equity, and social justice within education institutions at all levels.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3005 - FOUNDATIONS 4: POLICY AS A LEVER FOR CHANGE

Minimum Credits: 3

Maximum Credits: 3

Students in this core course will learn the principles of policy development; experience the views of decision-makers about how public policies are created; highlight notable examples of both effective and ineffective policies in education, human services, and healthcare; critically examine policies which are evident in local, national, and international realms for critical examination; and respond to problem-based learning (PBL) scenarios to form and modify real-world examples of policies and regulations in education and related settings; and understand the links among effective policy, leadership, advocacy for children and families, and systems reform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3006 - PRACTITIONER INQUIRY 2

Minimum Credits: 3

Maximum Credits: 3

The course will introduce concepts, tools and methods of quantitative analysis commonly used in research. The course will emphasize real world applications, including data preparation and analysis. Some concepts include: variables and their measurement 'measures of central tendency and variability; sampling; tests of statistical significance; causal inference and research design; data reduction; bivariate relationships: correlation and cross-tabulation; multivariate relationships: inference using regression analysis

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3007 - PRACTITIONER INQUIRY 3

Minimum Credits: 3

Maximum Credits: 3

The course will introduce approaches, strategies, and practices commonly used in qualitative research. The course will emphasize real world contexts and phenomena. Key areas of study include: researcher perspective, stance and voice. Making use of observations, survey, interviews, focus groups, artifact analysis, and other forms of gathering and using 'data'. Applying various research and analytic strategies such as case study, action research, grounded theory, and thematic analysis. Considering emergent genre of research including narrative study, arts-based research and others.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3008 - PRACTITIONER INQUIRY 4: APPLYING DISCIPLINED INQUIRY

Minimum Credits: 3

Maximum Credits: 3

This final course in the research series provides students the opportunity to engage in practice-based research with real-world issues and problems of practice. The seminar will begin with the opportunity to review a number of studies representing quantitative, qualitative, and mixed approaches. Students will then collaborate with colleagues pursuing the same and/or similar research methods and approaches through small workgroups. Each small group will be organized to support students in conducting pilot work in the methods/approaches they plan to use for their practice-based dissertation. Student groups will work with advanced PhD students who have expertise in the methods and who will act as a consultant. Students will be expected to finalize their dissertation overview proposal through this course (in conjunction with their Arco advisor and faculty).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3009 - SUPERVISED PRACTITIONER INQUIRY

Minimum Credits: 3

Maximum Credits: 3

Ed.D research seminar is a faculty-led inquiry group focused on developing deep knowledge in an area of interest.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

EDUC 3010 - INTRODUCTION TO THE HISTORY & SOCIAL CONTEXTS OF URBAN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

In this course, students will develop an introductory and foundational understanding of the dynamics of urban education. The course will address the history of urban life, communities, and schools in the U.S., as well as provide an introduction to policy and practices in the field of urban education. Additionally, the course will take an interdisciplinary approach through readings and activities that are designed to help students establish a basis for lifelong learning through normative and critical reflection on urban education within its historical, philosophical, cultural and social contexts. This includes a focus on the history of cities, including 20th and 21st century urban transformation, the development and persistence of residential segregation, urban poverty, the criminalization of urban communities, and current trends in urban redevelopment, which may shape the future of urban education.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EDUC 3011 - CULTURALLY RESPONSIVE PEDAGOGY

Minimum Credits: 3

Maximum Credits: 3

The course, culturally responsive pedagogy, introduces students to theory, research, and especially practice related to developing and enacting curriculum and instructional practices that respond to the social context in which they (will) work. The course covers general principles and approaches to culturally responsive teaching such as how teachers develop meaningful relationships with students, how teachers learn from and about a school and local community, how teachers develop and implement culturally responsive classroom management, and how teachers develop expectations for students that maximize their capacity. In addition, the course will assist students in learning about and developing culturally responsive curriculum and pedagogy in their different content/subject matter areas (such as mathematics, science, art, language arts, and social studies). A recurrent and central question of the course is: how do teachers develop culturally responsive instructional practices in their particular disciplinary domain to maximize students learning opportunities?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3012 - SUPERVISED INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Students may complete one of three internship experiences: Job-embedded internship: students already working in their field of choice may elect to have their current responsibilities reviewed for eligibility for a full-time job-embedded internship. If the advisor and student agree that the student's current responsibilities represent a relevant and meaningful internship experiences, then a plan will be developed that will engage the student in analysis of practice and leadership activities. Aspirant internship: students will have an apprenticeship experience in which they shadow and collaborate with a trained mentor in their discipline. Global studies experience: students will have the opportunity to design an international experience that provides direct observation or experience with practice or policy in another country.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

EDUC 3045 - CRITICAL RACE THEORY IN EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on foundational scholarship, theories and germinal texts that inform critical race theory. By introducing central tenets, principles and tensions, we will provide an historical overview of critical race theory and consider the following interrelated questions: how are racial inequities produced, reproduced, and maintained in education and society? In what ways is critical race theory used as an analytic tool to explain policy, reform, practice and other phenomena? In what ways is critical race theory used as a framework to conceptualize research? Students interested in the intersections of race, racism, equity, justice and education should find the course useful in helping them conceptualize and develop research projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

EDUC 3046 - SPECIAL TOPICS-THE URBAN ENVIRONMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with an introduction to the social, historical, and political factors shaping urban life and communities in the united states. The course is primarily, but by no means exclusively, intended for education students and is designed to help students develop a more sophisticated understanding of the contexts in which urban education occurs and the relationship between urban processes and urban education. More specifically, the course will focus on the history of cities, including 20th and 21st century urban transformation, the development and persistence of residential segregation, urban poverty, the criminalization of urban communities, immigration, and trends in theory and practice around urban redevelopment. In all cases, we will consider the implications for urban families, communities, and schools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3088 - URBAN EDUCATION REFORM

Minimum Credits: 3

Maximum Credits: 3

The course is designed to provide both a background understanding of urban education, as well as expose students to particular urban education reforms. Students will examine selected historic and contemporary reform efforts in education, in particular studying the theories of change, implementation challenges and critiques associated with these different reforms as they apply to urban districts and schools. We will look at the theoretical underpinnings of particular reforms, as well as why education policies have succeeded or failed, and the consequences of these outcomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3089 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 12

An experimental course with a flexible curriculum oriented to special research topics or current issues of concern to educators. Topics vary.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

EDUC 3099 - GUIDANCE IN SCHOLARLY PRACTICE

Minimum Credits: 1

Maximum Credits: 15

Students will enact an applied inquiry plan and write a report of the enactment under the supervision of a research advisor. The report becomes the basis for a culminating demonstrations of excellence for the doctor of education degree.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

EDUC 3100 - INTRODUCTION TO QUAN METHODS: DESCRIPTIVE AND INFERENTIAL STATISTICS

Minimum Credits: 3

Maximum Credits: 3

This seminar prepares students to conduct descriptive and inferential statistics about a population using data collected under complex survey design. The emphasis throughout the course is on real world data preparation and analysis using the SPSS/STRATA/SAS statistical software package.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3102 - FIRST YEAR SEMINAR 1

Minimum Credits: 1

Maximum Credits: 1

This seminar addresses professional issues germane to doctoral skills and competencies. Topics addressed in the seminar include guidelines for constructing a literature review, IRB requirements, ethical and legal issues pertaining to conducting research, preparing professional presentations and research proposals.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3103 - QUANTITATIVE METHODS 2

Minimum Credits: 3

Maximum Credits: 3

The primary focus of this course is single predictor and multiple regression analysis for continuous and binary outcomes. The pedagogical strategy will be to learn statistical analysis by doing statistical analysis. We will rely primarily on the stata statistical software package. Over the course of the semester, we will examine a variety of data sets, each of which can be used to address substantive research questions by fitting increasingly sophisticated regression models. As we build understanding about how to use these methods in practice, we will discuss the regression model's purpose, mathematical representation, assumptions, implementation, interpretation, presentation, relationship to other statistical methods, implications for research design, and limitations. Additional principles of research design will be incorporated throughout the semester. The course will also include introductory coverage of more advanced topics, such as: multi-level modeling, structural equation modeling, regression discontinuity and propensity score matching. Introduction to these topics is meant primarily to inform students about upper-level courses that they might consider and not necessarily to prepare students to execute these methods on their own.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EDUC 3104 - INTRODUCTION TO QUALITATIVE METHODS

Minimum Credits: 3

Maximum Credits: 3

This seminar introduces students to the inquiry traditions (e.g. empirical, interpretive, critical) and modes of research (e.g. narrative, ethnographic, historical, rhetorical, linguistic) associated with qualitative research in the social sciences. Students will gain experience with various elements in the research process (formulation of questions; research design; data organization and reduction; data analysis; validity and reliability issues) and with research methods characteristic of qualitative research. This course should be completed by the end of the students' second year.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3105 - FIRST YEAR SEMINAR 2

Minimum Credits: 2

Maximum Credits: 2

This seminar for beginning Ph.D. students addresses professional issues germane to doctoral skills and competencies. Topics addressed in this seminar include guidelines for constructing a literature review, IRB requirements, preparing professional presentations, and research proposals.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3107 - WAYS OF KNOWING

Minimum Credits: 3

Maximum Credits: 3

In making a distinction between ways of knowing and procedures for knowledge generating, students in this seminar will examine various epistemological, ontological and axiological schools of thought that are the basis for educational inquiry. The focus will include assumptions that form the logics of justification for truth claims embedded in educational research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

EDUC 3595 - SPECIAL TOPICS - LSAP

Minimum Credits: 3

Maximum Credits: 3

This doctoral level course covers a specially selected learning science and policy topic. Topics vary from section to section and from term to term.

Academic Career: Graduate

Electrical and Computer Engineering

ECE 2043 - ELECTRON MICROSCOPY IN MATERIALS SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Electron optics, lens aberrations, depth of field, depth of focus, resolution, contrast, bright and dark field microscopy, selected area diffraction, calibration, specimen preparation, electron scattering, electron diffraction, Bragg's law, Laue conditions, structure factor, Ewald construction, double diffraction, twinning, Kikuchi lines, contrast theory, kinematical theory of diffraction by perfect and imperfect crystals, limitations, column approximation, extinction contours, dynamical theory, special techniques, high voltage microscopy, applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2120 - HARDWARE DESIGN METHODOLOGIES 1

Minimum Credits: 3

Maximum Credits: 3

This course teaches hardware design processes through use of industry tools. Students use graphical tools to design, simulate and synthesize designs using hardware description languages (e.g. VHDL/Verilog). High-level design and problem decomposition are also taught. Optimization, simulation and synthesis of combinatorial functions, data paths, and finite state machines are covered in depth. Architecture encapsulation and reuse through 'Intellectual Property' (IP) modules is described and covered in detail. Students will work individually and as a part of a team to create, simulate, model, document, and test IP models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2130 - TOPICS IN VLSI CAD

Minimum Credits: 3

Maximum Credits: 3

The course introduces state-of-the-art computer-aided design algorithms with application to VLSI. The course starts with a review of fundamental algorithms, from graph theory, sorting, searching and hashing, and then proceeds to focus on major CAD application areas in architectural, logical, and physical design. Major topics discussed are multiple level combinational logic synthesis and optimization, sequential logic optimization (retiming, clock scheduling), convex optimization and its applications, testing test pattern generation and design for testability, placement and routing, simulated annealing. Hot current research topics will be surveyed briefly.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2192; PROG: Swanson School of Engineering

ECE 2140 - SYSTEMS-ON-A-CHIP DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is a full semester project involving the entire class in one System on a Chip design experience. This includes requirements definition, high-level design, system specification, algorithm modeling, decomposition, IP selection and/or IP creation for re-use, synthesis simulation and testing. The system will be a true SoC with at least one processor core with associated system and application software. Lectures will be the philosophy of SoC as well as the practical issues involved in the SoC design methodology. State of the art CAD software will be used for design and co-simulation of the hardware/software platform.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2120; PROG: Swanson School of Engineering

ECE 2141 - VALIDATION AND VERIFICATION TECHNIQUES OF DIGITAL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course presents state of the art methodologies and tools for simulation based validation and formal verification of complex digital systems implemented as systems on a chip. Topics include testing strategies, test bench design, coverage, and model checking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2121 or 2140; PROG: Swanson School of Engineering

ECE 2160 - EMBEDDED COMPUTER SYSTEM DESIGN

Minimum Credits: 3

Maximum Credits: 3

Design and implementation of embedded microprocessor systems. Topics include 'C' language, top down iteration for assembly language

programming, data structures, co-routines, I/O software structures and real time operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2161 - EMBEDDED COMPUTER SYSTEM DESIGN 2

Minimum Credits: 3

Maximum Credits: 3

Organized as a full term project carried out by student design groups. A complex embedded system will be designed, implemented and tested using Altera and other cad tools. Grade will be based on project reviews and the final project report. Proper design process will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2160; PROG: Swanson School of Engineering

ECE 2162 - COMPUTER ARCHITECTURE 1

Minimum Credits: 3

Maximum Credits: 3

Review of basic architecture concepts, data representation, microprocessor and minicomputer architectures, memory and i/o subsystems, stack computers, parallel and pipelined computers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2165 - DEPENDABLE COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

The field of dependable computing has recently emerged as one of the most important areas of study in computer and electrical engineering. Modern computer systems are susceptible to a broad range of potential faults, errors, and failures, and increasing chip density and design complexity exacerbate the problem. Novel methods in hardware, information, network, software, and time redundancy are now available to mitigate these threats in the form of resilient computer architectures, apps, and systems. The focus of studies here is the design and analysis of dependable machines, from small embedded systems to space-based platforms to high-end supercomputers, in terms of reliability, availability, performability, testability, and safety metrics, and more.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2166 - PARALLEL COMPUTER ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental and newly developing hardware and software topics in parallel computer architecture (PCA) including concepts, models, methods, metrics, systems, and applications. PCA has become one of the most challenging and important areas of ECE, and it is now a dominant theme throughout computer architecture, systems, and programming, from low-power embedded systems to high-end supercomputers, and featuring various forms of fixed-logic (e.g., CPU, DSP, GPU), reconfigurable-logic (e.g., FPGA), and hybrid (e.g., CPU+DSP, CPU+FPGA, CPU+GPU, CPU+FPGA+GPU) processing devices. Prerequisite: Completion ECE 2162 Computer Architecture, with B or better grade, or consent of professor

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2170 - EMERGING MEMORY TECHNOLOGIES AND SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Emerging memory and technology systems discussions on the modern computer system designs and simulations. Topics cover multi-core architecture, CPU, 3D integration, emerging memory hierarchy, solid state data storage, etc. Students are required to read the latest technical references, give seminars, learn how to use simulators and do the self-proposed research projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2192 - INTRODUCTION TO VLSI DESIGN

Minimum Credits: 4

Maximum Credits: 4

Introduction to the concepts and techniques of modern integrated circuit design. Use of computer aided design (cad) tools for circuit design and simulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2193 - ADVANCED VLSI DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is organized as a full semester project in conjunction with a small amount of lecture material on advanced CMOS and biCMOS digital design techniques, as well as the group design process itself. Students form groups that design and implement different VLSI projects which are then fabricated by NSF Mosis facility and returned for testing. Focus is on group projects with written and oral reviews and reports.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2192; PROG: Swanson School of Engineering

ECE 2195 - SPECIAL TOPICS: COMPUTERS

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in computer engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2231 - FUNDAMENTALS OF SEMICONDUCTOR AND QUANTUM ELECTRONIC DEVICES

Minimum Credits: 3

Maximum Credits: 3

Fundamental quantum theory, electron in potential well, harmonic oscillator, band theory of solids, Kronig-Penny Model.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2235 - MONOLITHIC INTEGRATED CIRCUITS

Minimum Credits: 3

Maximum Credits: 3

Fabrication of integrated silicon monolithic circuits, thermal oxidation, solid state diffusion, epitaxial growth, ion implantation, photo and electron lithography, design considerations, active and passive elements in monolithic blocks, surface effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2240 - NANO-OPTICS

Minimum Credits: 3

Maximum Credits: 3

A graduate level course designed for students who want to understand the mechanisms of interaction of light and matter at the nanometer scale, and become acquainted with nano-optics-based technologies. Topics include: electromagnetic theory of optical interaction with matter, optical waves in periodic media, photonic bandgap structures, surface plasmons, optical interaction with metal nanostructures (metal nanoapertures and arrays, and metal nanoparticles), surface plasmon resonance spectroscopy, plasmon coupling and concentration/funneling of electromagnetic energy, surface-enhanced raman scattering, near-field imaging and microscopy, and negative refraction. Prerequisite: junior or senior level em theory course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2250 - POWER ELECTRONICS

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to cover the fundamental concepts in the field in sufficient depth to allow students to analyze and design power electronics circuits. The course covers dc-dc converters and dc-ac converters.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2260 - SCANNING PROBE MICROSCOPY-BASED CHARACTERIZATION AND NANOFABRICATION

Minimum Credits: 3

Maximum Credits: 3

The course concentrates on both theoretical and practical issues of advanced scanning probe microscopy (SPM) techniques. It introduces concepts, theoretical backgrounds, and operation principles of varieties of scanning probe microscopies; addresses the fundamental physical phenomena underlying the SPM imaging mechanism; covers the practical aspects of SPM characterization of a wide range of materials as well as operation devices; discusses SPM-based approaches to nanofabrication and nanolithography such as dip-pen nanolithography and nano-robotic manipulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2264 - FLEXIBLE ELECTRONICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide an understanding of scientific and technical aspects of the flexible electronics and to enable students to contribute to the rapidly developing flexible electronics information. The course aims to introduce graduate level students to semiconductor devices, modern electronic devices on flexible substrate, and wearable and stretchable devices.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2270 - FUNDAMENTALS OF PHOTOVOLTAICS

Minimum Credits: 3

Maximum Credits: 3

The course concentrates on both theoretical and practical issues of advanced scanning probe microscopy (SPM) techniques. It introduces concepts, theoretical backgrounds, and operation principles of varieties of scanning probe microscopies; addresses the fundamental physical phenomena underlying the SPM imaging mechanism; covers the practical aspects of SPM characterization of a wide range of materials as well as operation devices; discusses SPM-based approaches to nanofabrication and nanolithography such as dip-pen nanolithography and Nano-robotic manipulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2295 - SPECIAL TOPICS: ELECTRONICS

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in electronics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2372 - PATTERN RECOGNITION

Minimum Credits: 3

Maximum Credits: 3

Emphasis on machine pattern recognition and learning; Bayes decision theory, parameter estimation, Bayesian belief networks, discriminant functions, supervised learning, nonparametric techniques, feature extraction, principal component analysis, hidden Markov models, expectation-maximization, support vector machines, artificial neural networks, unsupervised learning, clustering, and syntactic pattern recognition.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2390 - IMAGE PROCESSING AND COMPUTER VISION

Minimum Credits: 3

Maximum Credits: 3

This first level graduate course covers essential elements of image processing for computer vision and introductory subjects in computer vision; image segmentation: region-based, edge detection, scale space, active contours ; shape description, deformable templates; textures ; perspective camera model and its parameters; geometry of multiple (2) views, fundamental matrix; scene planes and homographies; consistent labeling; locating objects in 3-d space; motion analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2521 - ANALYSIS STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Probability theory, random variables, sums and limits of random variable sequences, time and frequency domain, modeling of continuous and discrete random signals, least square estimation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2523 - DIGITAL SIGNAL PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Discrete-time signal processing, discrete Fourier transform and FFT implementation, design and stability considerations of FIR and IIR filters, filter implementation and finite register effects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2525 - DETECTION AND ESTIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

A study of optimal techniques for extracting information from the observation of random variables or random signals. This includes hypothesis testing, estimation theory, optimal receiver design, wiener and Kalman-Bucy filtering, and applications such as digital communications and medical imaging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2555 - BIOMEDICAL SIGNAL PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2595 - SPEC TOPICS: SIGNAL PROCESSING/COM

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in signal processing/communications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2646 - LINEAR SYSTEM THEORY

Minimum Credits: 3

Maximum Credits: 3

Linear spaces and operators, mathematical descriptions of linear systems, controllability and observability, irreducible realization of rational transfer-function matrices, canonical forms, state feedback, and state estimators, stability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2647 - INTRODUCTION TO NONLINEAR CONTROL DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to nonlinear control design methods. The main topics include: Lyapunov stability analysis, feedback linearization, sliding mode control, and integrator backstepping. The content will be mathematical, supplemented with application examples from nonlinear systems such as robotic manipulators and human musculoskeletal system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2654 - DIGITAL CONTROL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Transform domain approach to analysis and design of digital computer control systems, linear discrete dynamic systems analysis and the z-transform, discrete equivalents to continuous transfer functions, sampled data systems, design of digital control systems using transform techniques, quantization effects, sample rate selection. Prerequisite: ECE 1673

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2671 - OPTIMIZATION METHODS

Minimum Credits: 3

Maximum Credits: 3

Analytical and computational aspects of finite dimensional optimization, unconstrained and equality constrained problems, basic descent methods, conjugate direction methods, nonlinear programming and the Kuhn-Tucker Theorem, linear programming, dynamic programming, multicriteria optimization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2680 - ADAPTIVE CONTROL

Minimum Credits: 3

Maximum Credits: 3

Adaptation and learning play an essential role in biological systems, and these characteristics have been widely incorporated in modern control systems. This course introduces the general principles of adaptive control and learning. Topics to be covered include: real-time parameter estimation, self-tuning regulators, model-reference adaptive systems, adaptive control of nonlinear systems, practical aspects and implementation of adaptive control systems, introduction to computational learning theory and learning in neural systems, and an example of adaptive control by the cerebellum.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2695 - SPECIAL TOPICS: ADAPTIVE CONTROL

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2774 - POWER SYSTEMS ANALYSIS 2

Minimum Credits: 3

Maximum Credits: 3

Steady state phenomena, matrix transformations, system parameters, system unbalances, digital methods, and numerical analysis techniques applied to load flow, state estimators, and fault studies in the large power systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2775 - ADVANCED ELECTRIC MACHINES AND DRIVES

Minimum Credits: 3

Maximum Credits: 3

This is a course in electric machine and drive analysis and modeling, along with their control systems. The course will cover the dq0 transformation, reference frame theory, saturation, unbalanced operation and dynamics in electric machines. Then cover the converter topologies typically used in machine drives, power electronic device characteristics, pulse-width modulation techniques, current regulation, torque and speed control, and space vector control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2776 - MICROGRID CONCEPTS & DISTRIBUTED GENERATION TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

This course describes fundamental concepts related with the development of microgrids and the integration of distributed generation. Technical topics are divided into three modules. The first module introduces microgrid components and discusses the main types of microsources. The second focuses on energy storage technologies. The third includes system integration topics, such as power electronics interfaces; dc and ac architectures; economics, operation, stabilization, and control; reliability aspects; grid interconnection, and microgrids as part of the "smart"

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2777 - POWER SYSTEMS TRANSIENTS 1

Minimum Credits: 3

Maximum Credits: 3

Lumped parameter analysis, switching transients in ac/dc systems, arc modeling, damping, current suppression, traveling wave phenomena, line discontinuities, Ferro resonance, transient recovery voltage.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate School of Engineering

ECE 2778 - FACTS AND HVDC TECHNOLOGIES

Minimum Credits: 3

Maximum Credits: 3

Advanced Power Electronics (FACTS and HVDC) is a comprehensive course in the area of large-scale power electronics systems, circuits, devices, and the ever-advancing areas of applications. This course will provide graduate students with an understanding of how the broad spectrum of power electronics is integrated into a wide variety of industries, with an emphasis on utility scale FACTS and HVDC technologies and applications,

as well as how applications of power electronics circuits, devices, and systems are utilized for control and operation of various processes and business fields. The course will cover, from a ground-up approach, devices and their characteristics, conversion techniques and circuits, and applications of power electronics with an emphasis on power conversion fundamentals for FACTS and HVDC applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2780 - RENEWABLE AND ALTERNATIVE ENERGY

Minimum Credits: 3

Maximum Credits: 3

This course covers an in-depth analysis and understanding of various renewable and alternative energy technologies' including wind, solar, biomass, thermal, wave, hydro, and other sources and systems. Investigation of applications, integration, markets, policy, and other aspects of renewable development will be studied. Supporting technologies, such as energy storage, power electronics, and controls as applied to renewable and alternative energy applications are also explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2781 - SMART GRID TECHNOLOGIES AND APPLICATIONS

Minimum Credits: 3

Maximum Credits: 3

This is a comprehensive course designed to introduce students to new technologies dedicated to reliably, efficiently and safely managing electric power across utility, commercial, industrial, and residential networks. The course will cover the application of smart grid technologies from power generation through power consumption including grid automation, smart meters, demand response, communication, electric vehicle integration, grid connectivity, renewable energy, cyber security, microgrids and the business processes. Students will gain an understanding of the how the broad spectrum of smart grid technologies is integrated into the electrical energy industry, with an emphasis on distribution systems within homes, buildings, factories, transportation systems, and the utilities serving them

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ECE 2795 - SPECIAL TOPICS POWER

Minimum Credits: 3

Maximum Credits: 3

An MS level course in special topics of current interest in power.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

ECE 2990 - MBA/MS GRADUATE PROJECTS

Minimum Credits: 2
Maximum Credits: 2
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

ECE 2997 - RESEARCH, MS

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad HSU Basis
Course Requirements: PLAN: Electrical Engineering(MEE) or Computer Engineering(MCO)

ECE 2998 - GRADUATE PROJECTS

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Electrical Engineering(MEE) or Computer Engineering(MCO)

ECE 2999 - MS THESIS

Minimum Credits: 1
Maximum Credits: 12
Academic Career: Graduate
Course Component: Thesis Research
Grade Component: Grad SN Basis
Course Requirements: PLAN: Electrical Engineering(MEE) or Computer Engineering(MCO)

ECE 3000 - PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
For full-time graduate students interested in industrial internships as a means of gaining practical experience in their areas of research. Students are responsible for arranging practicum with industry. See practicum guidelines and application. Requires permission of graduate coordinator.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

ECE 3162 - ADVANCED COMPUTER MICROARCHITECTURE

Minimum Credits: 3
Maximum Credits: 3
This upper level graduate course aims to cover the state-of-the-art advances and hot topics in computer architecture research. Topics include emerging non-volatile memory technologies, massive parallel architectures (e.g. GPU), accelerators, optimizing architecture for data analytics, etc. Students are required to read contemporary research papers, and present them throughout a semester. One term project, done either individually or in a team, is required. Prerequisite: ECE 2162 or equivalent.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

ECE 3195 - ADVANCED TOPICS-COMPUTERS

Minimum Credits: 3

Maximum Credits: 3

A Ph.D. level course in advanced topics of current interest in the area of computer engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 3233 - SEMICONDUCTOR DEVICE MODELING

Minimum Credits: 3

Maximum Credits: 3

Topics of current interest in the field of solid-state electronic devices.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 3235 - SEMICONDUCTOR LASERS

Minimum Credits: 3

Maximum Credits: 3

Properties of heterojunctions, stimulated emission in semiconductors, carrier and optical confinement, fabrication and operating characteristics of semiconductor lasers including double-heterostructure lasers, quantum well lasers, distributed feedback lasers, surface emitting lasers, various modulation techniques of semiconductor lasers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2231; PROG: Swanson School of Engineering

ECE 3374 - APPLICATIONS OF WAVELET TRANSFORMS

Minimum Credits: 3

Maximum Credits: 3

This course presents applications of wavelet transforms to multiresolution signal/image processing and pattern recognition. Topics include basic notions of basis functions with compact support, localization property, multiresolution analysis, continuous wavelet transform, discrete wavelet transform, wavelet packets, image compression, signal/image demising, edge localization, texture feature extraction, and multiresolution data fusion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2390 or ECE 2523; PROG: Swanson School of Engineering

ECE 3524 - DIGITAL SPEECH PROCESSING

Minimum Credits: 3

Maximum Credits: 3

The application of digital signal processing techniques in the representation, analysis, and synthesis of speech signals. Topics include digital modeling of speech signals, waveform coders, time and frequency methods in speech processing, linear predictive coding of speech, and discussion of speech processing systems in the area of human-machine communication by voice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2521 and 2523; PROG: Swanson School of Engineering

ECE 3526 - MODERN SPECTRAL ESTIMATION

Minimum Credits: 3

Maximum Credits: 3

An overview of concepts of modern spectral analysis covering traditional approaches and modern estimation methods. The properties, advantages and disadvantages of each estimator will be covered in detail and demonstrated using computer experiments. Also covered are applications of spectral estimation to signal detection and beam forming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2521; PROG: Swanson School of Engineering

ECE 3557 - STATISTICAL SIGNAL PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Random vectors, discrete-time stochastic processes, rational and state-space Gaussian-Markov discrete-time models, estimation, parameter estimation, Wiener and Levinson filtering, Kalman filtering (modeling, filtering and prediction, stability and computational aspects), adaptive filtering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2521 and 2523 and 2646; PROG: Swanson School of Engineering

ECE 3650 - OPTIMAL CONTROL

Minimum Credits: 3

Maximum Credits: 3

Variation calculus and optimality conditions, linear quadratic problems, the Riccati equation, Pontryagin maximum principle, time optimal control, dynamic programming and the Hamilton-Jacobi equation, numerical methods, decentralized control, multicontroller-multiobjective systems, differential games.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2646; PROG: Swanson School of Engineering

ECE 3776 - POWER SYS CONTROL & STABILITY

Minimum Credits: 3

Maximum Credits: 3

The power system model for stability studies, response to disturbances, the behavior of machines, the effect of excitation, and mathematical techniques for stability studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 3778 - POWER SYSTEMS TRANSIENTS 2

Minimum Credits: 3

Maximum Credits: 3

Project-based course in simulation and modeling techniques for power system electromagnetic transients. Frequency-dependent and non-linear component models, with applications to transmission, distribution, power electronic and measurement systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: ECE 2777; PROG: Swanson School of Engineering

ECE 3795 - ADVANCED TOPICS POWER

Minimum Credits: 3

Maximum Credits: 3

A Ph.D. level course in advanced topics of current interest in power.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ECE 3893 - GRADUATE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

A weekly series of presentations by engineers and scientists, visiting researchers, faculty, and graduate students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

Course Requirements: PROG: Swanson School of Engineering

ECE 3995 - RES TOPC ELCRCL & COMPUTR ENGR

Minimum Credits: 3

Maximum Credits: 3

A research course that focuses on specific skills required by students to conduct original research in a particular area of EECE. Students will complete a project, such as a full journal paper, a proposal for research funding, or a complete patent application, as specified by the faculty teaching the course. The project should be beyond material to be included in the student's dissertation.

Emergency Medicine

EMED 5376 - SPECIALTY CARE CLERKSHIP

Minimum Credits: 0
Maximum Credits: 0

The specialty care clerkship is a four (4) week rotation that includes a combination of one week experiences in the disciplines of ENT, ophthalmology, adult emergency medicine and pediatric emergency medicine. In addition to four weeks of clinical time, students will attend weekly lectures, workshops and lab activities. This required clerkship begins with orientation and a suturing and splinting session followed by a simulation-based session in phone communication (how to best communicate medical information over the telephone to patients). One morning each week there will be an ophthalmology lecture and an ENT lecture. Additional morning workshops include dermatology, EKG cases, dizziness and audiology, musculoskeletal exam and rehab and musculoskeletal radiology. The lecture will be followed by clinical responsibilities. Students are evaluated by each specialty area based on clinical performance and will take an on-line proctored examination. One grade will be assigned for the entire four week rotation.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

EMED 5380 - FUNDAMENTALS OF EMERGENCY MEDICINE

Minimum Credits: 0
Maximum Credits: 0

This four week clinical elective is designed for the student seeking exposure to acute care medicine, with an emphasis on the initial approach and decision-making. The clinical experience will consist of supervised evaluation of undifferentiated patients presenting to the emergency department. Basic clinical skills such as the directed history and physical examination and clear, concise documentation will be stressed, while evaluating the diverse illnesses encountered in the emergency department. Students will experience a variety of shifts in the emergency department that may include days, evenings, overnights, weekdays and weekends. Development of medical decision-making skills will be encouraged by working closely with the attending staff and emergency medicine residents. The course curriculum includes an orientation to emergency medicine and a laboratory experience in suturing and wound care basics, acute care oriented orthopedic evaluation and splinting techniques. Students will also have the opportunity to participate in the emergency medicine grand rounds and other conferences.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

EMED 5390 - EMERGENCY MEDICINE

Minimum Credits: 0
Maximum Credits: 0

This elective is offered to third year medical students who will be integrated into the health care team at the emergency room of a hospital. The student will learn the basics of evaluating, both serious and acute, patients under the direct supervision of an attending or senior resident. Directed history, physical exam and lab evaluation will be taught. Directed didactic sessions, in addition to bedside teaching, will reinforce concepts and facts as well as introduce the learner to topics relevant to the field of emergency medicine.

Academic Career: Medical School
Course Component: Clinical
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 3

EMED 5450 - EMERGENCY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This 4 week elective is designed for the student desiring added experience in acute care medicine as practiced both in and out of the hospital. Student will become part of mobile intensive care unit field team operating in the city of Pittsburgh's system. Students are responsible for gaining experience in initial on-scene assessment and intervention, rescue, extrication techniques and cases for follow-up and presentation. Module 2 is spent in emergency department with the goal of providing experience and supervision in the initial evaluation and treatment of wide variety of patient problems.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5460 - MEDICAL TOXICOLOGY

Minimum Credits: 0

Maximum Credits: 0

This four week clinical elective will provide students with experience in the assessment and treatment of toxicology patients. Students will spend time with toxicology faculty in consultation, examination, treatment, and follow-up of patients in the emergency, inpatient and outpatient settings. The clinical experience will include daily clinical rounds on inpatients, outpatient consults, and Pittsburgh poison center case review. Students will be on-call daily with the rotating residents and medical toxicology staff member and will be expected to join the resident and attending on cases presenting to UPMC Presbyterian and Children's Hospital of Pittsburgh. A portion of the rotation will be at the Pittsburgh poison center, where students will learn from current patient cases and summary case reviews. Daily teaching sessions will be provided by members of the medical toxicology service on the spectrum of toxicology subjects. Sample topics include: initial approach to the toxicology patient, decontamination, acetaminophen, salicylates, toxic alcohols, antidepressants, iron and digoxin. Students will also attend the medical toxicology service lectures. Additionally, the student will be encouraged to participate in on-going research projects if available (e.g. chart review). Students will also be encouraged to prepare interesting cases for scientific presentation and publication. The overall curriculum will help students develop their knowledge base in medical toxicology, and improve their ability to diagnose and treat a poisoned patient.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5465 - POINT OF CARE ULTRASONOGRAPHY

Minimum Credits: 0

Maximum Credits: 0

This elective serves as an introduction to the use of point of care ultrasonography (POCUS) over the course of four weeks. The course will expose students to the use of focused, point of care ultrasonography to make bedside clinical decisions for the care of acutely ill patients. POCUS as serve as an extension of the physical exam to aid physicians narrow their differential diagnosis, provide direct visualization of pathophysiology as well as tracking changes to medical interventions, improve accuracy and safety in procedural skills and obtain direct visualization of pathology without the need for transportation to specialized suites or the use of radiation. These skills are essential in the present medical climate where pocus can aid in improved safety, cost-savings and even patient satisfaction. As the use of this technology expands, it is crucial for medical trainees to have exposure.

EMED 5466 - POST CARDIAC ARREST SERVICE

Minimum Credits: 0

Maximum Credits: 0

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 3

EMED 5470 - SENIOR ELECTIVE IN QUALITY AND PATIENT SAFETY

Minimum Credits: 0

Maximum Credits: 0

The quality and patient safety elective is designed for the motivated learner with self-study modules and learning activities facilitated by preceptors remotely. The course complements busy months of interviewing and travel through the use of on-line media, case reviews, videos, podcasts and blog discussions. Instead of in-person meetings, course directors employ on-line meetings and electronic touch points to ensure progress throughout the course. Learning in this course is asynchronous, so timing is at the convenience of the individual learner. Participants will spend at least 2 hours per day completing required on-line learning modules. In addition, students will work independently to research, understand and create a root cause analysis and a rapid process improvement plan. Students will review the RCA and QI plans of their peers, provide feedback and participate in discussion of their work.

Academic Career: Medical School

Course Component: Lecture

Grade Component: S/U Basis

EMED 5650 - INDIVIDUALIZED CLINICAL COURSE

Minimum Credits: 0

Maximum Credits: 0

An individualized course of study may be arranged with the department of ophthalmology to fit the student's needs. The student will meet with a department faculty person to design a clinical course of study for a four-week period of time. A written proposal must be approved by the faculty member as well as the student's scheduling advisor. When approvals have been received, the school registrar will schedule the course and notify the department student coordinator.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5735 - SCIENCE OF RESUSCITATION (ILS)

Minimum Credits: 0

Maximum Credits: 0

This 4-week elective will satisfy requirement for integrated life science course of senior year. Course objectives: 1) identify major physiological influences affecting resuscitation and trace their implementation into clinical guidelines; 2) critique clinical study of resuscitation; 3) become confident conducting medical resuscitation, including use of relevant equipment; 4) appreciate practical/ethical issues surrounding research on emergency interventions. Small group sessions, live animal/simulator sessions and written research critique is required.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5740 - EXERCISE IS MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This is a four week selective that meets the requirement of an integrated life science course. The principles of the exercise is medicine program are shared by the American medical association (AMA) and the American college of sports medicine (ACSM) and they are the focus of this course. At the end of this course, the student will have an understanding of the evidence for the role of exercise in the treatment and prevention of chronic disease and how to apply the evidence to their practice. There are multiple learning modes in this course, including didactic, laboratory, and independent study. The didactic portion will be an active participation exercise in a journal-club format. The goal of the didactic portion will be to critically evaluate the evidence for the role of exercise in chronic disease providing the foundation for understanding, creating, and employing comparative effectiveness research (CER). Through these reviews, the student will evaluate the AXSM/aha exercise recommendations. Laboratory experiences in exercise science will provide insight into the acute response to exercise and exercise stress testing reinforcing principles of physiology learned in the first two years of the curriculum. Students will participate in the labs, wear activity monitors and pedometers at various times during the course to track daily activity to appreciate how these devices can be used to motivate and modify patient lifestyle. Finally, each student will complete an independent study on an aspect of exercise and chronic disease treatment or prevention.

Course Component: Workshop

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5750 - GET READY FOR RESIDENCY BOOT CAMP

Minimum Credits: 0

Maximum Credits: 0

This elective is an intensive preparation for students who are about to enter residency. Students will be provided with a combination of general and specialty-specific, clinically relevant content in a variety of modalities. The focus will be on content that will prepare the student to function at the starting level of an intern (and meet the expected intern-level milestones) after graduation. Teaching modalities will include simulation, small group sessions, skills workshops, standardized patient cases, and a limited number of high-yield lectures.

Academic Career: Medical School

Course Component: Clinical

Grade Component: S/U Basis

EMED 5898 - INDIVIDUAL STUDY OR RESEARCH

Minimum Credits: 0

Maximum Credits: 0

This is a senior-level elective offering. This is a four week elective for the student interested in participating in clinical or basic science research in emergency medicine. The student will be offered the opportunity to choose a research project which interests him or her. The student will work closely with the emergency department attending staff as well as the clinical research coordinator for the department of emergency medicine. The coordinator will meet weekly with the student to provide guidance as well as education materials.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5899 - INDEPENDENT STUDY IN EMERGENCY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

EMED 5900 - EXTRAMURAL EMERGENCY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

A clinical experience in emergency medicine may be arranged at an institution other than the University of Pittsburgh school of medicine. Arrangements must be made in accordance with the process set out in the UPSOM course catalog with all appropriate approvals to be received before the course may be added to the student schedule for credit.

ENDOD 2610 - CLINICAL CONCEPTS IN ENDODONTICS

Minimum Credits: 2

Maximum Credits: 2

This course is the study of the scientific rationale for endodontic treatment. The dental pulp and periapical tissues will be studied at the most basic cellular level. This course will include the embryological development of all related structures; a study of the pathologic/physiologic occurrences of the pulp and periapex; and an understanding of the biological basis for endodontic treatment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2611 - CLINICAL CONCEPTS

Minimum Credits: 1

Maximum Credits: 1

This course will provide the clinical aspect of endodontic treatment. By presenting various techniques used to diagnose and treat the patient in the endodontic practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2612 - CLINICAL CONCEPTS 2

Minimum Credits: 1

Maximum Credits: 1

This course will provide the clinical aspect of endodontic treatment. By presenting various techniques used to diagnose and treat the patient in the endodontic practice.

Grade Component: Grad Letter Grade

ENDOD 2721 - TRAUMATOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course will detail various types of dental trauma; the methods of treatment and possible long-term effects trauma have on oral structures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2821 - SPECIAL LECTURES SERIES

Minimum Credits: 2

Maximum Credits: 2

This course will include an array of lectures that will be presented by experts in various fields, exposing the students to a wide variety of topics and ideas including practice management, dental jurisprudence, and teach methodology

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

ENDOD 2921 - ENDODONTIC SURGERY

Minimum Credits: 2

Maximum Credits: 2

This course will provide the surgical aspect of endodontic treatment. Proficiency in the treatment planning of endodontic surgery, as well as evidence based foundation for all aspects of surgical treatment will be explored. 1) Develop the skills for proper case selection and treatment planning of surgical cases. 2) Understand soft tissue management, and flap design as it pertains to endodontic surgery. 3) Demonstrate knowledge of guided tissue techniques and materials. 4) Demonstrate an understanding of wound healing of both soft and mineralized tissues as they pertain to endodontic surgery. 5) Discuss methods of hemostasis and crypt control during periapical surgery. 6) Understand the possible postoperative complications associated with endodontic surgery and how to manage these situations. 7) Have a strong knowledge of the head and neck anatomy. 8) Understand possible periodontal considerations with the various flap designs. 9) Discuss various suture techniques for specific for the conditions that present themselves.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENDOD 2999 - RESEARCH PROJECT

Minimum Credits: 1

Maximum Credits: 1

This course involves independent or joint research in the field of endodontics. The completion of this class, oral presentation and written paper must be submitted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

ENDOD 5210 - ENDODONTICS 1

Minimum Credits: 1

Maximum Credits: 1

In this course, students will learn the morphology, physiology, and pathology of the human pulp and periapical tissues and the diagnosis, prevention and treatment (to include access preparation, instrumentation and temporization) of diseases and injuries related to these tissues. This course includes lectures and class discussions.

Academic Career: Dental Medicine

Course Component: Lecture

Grade Component: ABCF

ENDOD 5216 - ENDODONTICS 1 LAB

Minimum Credits: 1.5

Maximum Credits: 1.5

In this course, students will develop clinical skills for endodontic treatment in a simulation/laboratory environment. This course includes small group simulation and laboratory sessions.

Academic Career: Dental Medicine

Course Component: Practicum

Grade Component: ABCF

Engineering

ENGR 2007 - SUSTAINABILITY CAPSTONE

Minimum Credits: 3

Maximum Credits: 3

Building upon students' previous experience and skills, this course will focus on enabling interdisciplinary student teams to synthesize comprehensive solutions to complex real-world Sustainability challenges. This is a project-based course. Project topics will be developed in consultation with instructors and sustainability stakeholders. Innovative solutions will require the application of critical thinking and collaboration to resolve. By the end of the course the students will have a deeper understanding of 1) the multi-faceted nature of Sustainability solutions 2) approaches to problem solving across fields and 3) how to communicate sustainable solutions and concepts in an interdisciplinary team environment.

This course serves as a capstone course for the Sustainability certificate and M.S. in a Sustainable Engineering degree and is a required course for these two programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2050 - TECHNICAL WRITING

Minimum Credits: 3

Maximum Credits: 3

This course is designed for non-native English speaking advanced graduate students preparing to write thesis or dissertation proposals in engineering. Topics covered include: format and content of reports needed in technical writing, abstracts and summaries, project proposals and research reports; correcting language problems encountered by non-native English writers and technical writers in particular.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

ENGR 2051 - PRODUCT REALIZATION

Minimum Credits: 3

Maximum Credits: 3

This interdisciplinary course considers diverse aspects of product realization process. Aspects, include defining user requirements, creation of computer based model and designs of a product from an existing product, rapid prototyping techniques and development of a manufacturing plan. Teams of 3-4 students from engineering and business will take a product with a microsystem or mems technology feature from concept to working prototype. In doing this students will address issues of market analysis, design, manufacturing design and product planning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2052 - INTRODUCTION TO TECHNICAL COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

An introduction to technical writing and oral presentation skills using Word, Powerpoint, Mendeley, InkScape and LaTeX.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

ENGR 2060 - SOCIAL ENTREPRENEURSHIP- ENGINEERING FOR HUMANITY

Minimum Credits: 3

Maximum Credits: 3

The course will explore the concepts of social entrepreneurship through the three tenets of sustainability: environment, economy, and equity in the context of complex or 'wicked' problems. An introduction will provide a foundation in sustainability and social entrepreneurship while exploring the impact of innovative business models, such as disruptive innovation and Prahalad and Hart's fortune at the bottom of the pyramid. Additional class time will explore different examples and challenges in the developed and developing worlds. Through weekly readings, the course will focus on classroom discussions about the tenets of sustainability and the relevance of engineering in crafting 'solutions'. The course project will provide students with an opportunity to work with a multi-disciplinary team to design an engineering-based business plan targeting a specific challenge either locally or in the developing world.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2061 - INTRAPRENEURSHIP: ENTREPRENEURSHIP WITHIN THE CORPORATION

Minimum Credits: 3

Maximum Credits: 3

This course explores the developing practice of intrapreneurship which is defined as the application of entrepreneurial principles in a corporate environment for the creation of new products and businesses. The focus will be on providing the student with the needed awareness of cultural and political barriers while providing a specific tool set targeted at maximizing new business as well as career success. The course is designed for junior and senior engineering students who have already had some work experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2062 - STARTUP FUNDAMENTALS FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course is offered within the Swanson School of Engineering to undergraduate and graduate students. At the undergraduate level, the class is part of the new Certificate in Innovation, Product Design and Entrepreneurship. The class is designed to introduce the student to the core business concepts behind innovation and entrepreneurship. The class is highly interactive, and students will be required to participate in groups and individually. Grading is heavily weighted around participation in the group project which will be ongoing throughout the semester. The class is taught by Babs Carryer, Director of Education & Outreach, Innovation Institute at Pitt. Guest speakers, who are experts in their fields, will supplement the core teaching. Topics covered will include: ideation, problem/solution, market opportunity, competitive analysis, customer discovery, pitching, funding, finance, legal issues, team building, and innovation within existing companies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2080 - LEAN LAUNCHPAD: EVIDENCE-BASED ENTREPRENEURSHIP

Minimum Credits: 3

Maximum Credits: 3

Conventional wisdom regarding starting a business is dead wrong. This conclusion led Steve Blank and others to develop the lean startup method, an approach for systematically exploring the business model needed to make an idea into a success. In Blank's own words: 'existing companies execute a business model, startups search for one. This distinction shapes the lean definition of a startup: a temporary organization designed to search for a repeatable and scalable business model.' In this course, we discuss the basic elements of the lean startup method and apply them to the domain of engineering product and customer development. Students are expected to come to the class with their own idea(s) for potential product offering(s), which they will then test using the lean startup approach over the course of the term.

ENGR 2100 - FUNDAMENTALS OF NUCLEAR ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to application of theory to practical aspects of nuclear science and technology. It is intended as a ramp-up course for non-nuclear engineers who wish to pursue a graduate level certificate in nuclear engineering at the University of Pittsburgh. Graduate level content will be assured by use of open-ended assignments and group discussions via an electronic blackboard. The course is designed to accommodate working adults who must travel from time to time. Topics will include: 1. Introduction: a grand tour of the nuclear fuel cycle 2. Power reactors and nuclear systems 3. Atomic and nuclear physics: the Einstein connection 4. Nuclear reactions and radiation: the life and trials of a neutron 5. Radiation and radiation protection: radiation and realism 6. Nuclear reactor theory: from complex to simple 7. Reactor kinetics and control: thanks for delayed neutrons 8. Reactor energy removal: the balance between resilience and power density 9. Power conversion systems and the balance of plant: from neutrons to electricity 10. Reactor accidents and lessons learned.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Engineering (PENGR)

ENGR 2101 - NUCLEAR CORE DYNAMICS

Minimum Credits: 3

Maximum Credits: 3

This course reviews the mathematics of nuclear reactor kinetics. Linear systems of ordinary differential equations are solved by state vector techniques, Laplace transform techniques, or finite difference techniques including the treatment of discretization errors resulting from various finite differencing approximations. A review of the physics of nuclear kinetics is followed by treatments of the kinetics equation including the effect of uncertainties, approximate solutions, and the interpretation of experiments to measure kinetics parameters. Representations and the physical basis of reactivity feedback mechanisms are treated. Lumped and distributed parameter models of fuel, coolant, fission products, and selected plant components are derived and applied to develop quantitative static relationships and qualitative dynamic results for transient conditions. The course provides an introduction to reactor protection and safety analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2102 - NUCLEAR PLANT DYNAMICS AND CONTROL

Minimum Credits: 3

Maximum Credits: 3

This course provides an integrated engineering examination of a nuclear power plant from the perspective of instrumentation and control systems used to infer the condition of the nuclear plants and its systems, control its normal operation, and provide protection during transient situations as well as assess core damage during severe accident situations. Students will apply previous knowledge of analog, digital, and microprocessor electronics techniques to nuclear power plant design and operation and reactor protection and safety considerations that influence the design of the reactor plant. A major outcome of this course will be an integrated understanding of the interaction between the physics of nuclear plant control (reactivity and heat balance) and the control and protection systems. This integrated plant understanding will be essential for the successful completion of the integrated nuclear power plant operations course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2103 - INTEGRATION OF NUCLEAR PLANT SYSTEMS WITH THE REACTOR CORE

Minimum Credits: 3

Maximum Credits: 3

This course examines design bases for major systems and components in a nuclear plant and evaluates how the systems function in an integrated fashion. The student will examine a typical nuclear power plant and those components and systems of the nuclear plant complex that have the potential for affecting core power, and whose failure could be an initiating event for a plant transient. Dynamic relationships for the systems

developed in the companion nuclear courses will be transformed into stable, numerical algorithms for computer solutions and system interactions will be illustrated using a major industry transient analysis code. Emphasis is on how operations of and faults in systems and components can influence reactivity and core behavior. Through classroom discussions the students will assess engineering problems and operational problems that have been experienced in historical nuclear plant operations. The intended outcome is an aptitude for predicting complex transient behavior of the integrated nuclear plant considering factors that are important for safe and efficient operation: reactivity management and control, coolant inventory control, and core heat removal.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2104 - NUCLEAR OPERATIONS AND SAFETY

Minimum Credits: 3

Maximum Credits: 3

Nuclear power is an abundant and renewable power source with unique characteristics which require special attention in its design, licensing and operation. This course explains the fundamental plant processes: nuclear fission, neutron kinetics, heat transfer, chemistry and feedback mechanisms, showing how variations in one plant parameter can propagate effects in the others in ways not seen in fossil, solar, wind, or other systems. The student will also learn methods for analyzing these processes, and the relationship of their features to normal and off-normal plant operations, up to and including postulated severe accidents. Both deterministic analysis and Probabilistic Risk Assessment (PRA) will be employed, with exercises provided in both approaches. Similar concepts will also be applied to the design, manufacture and utilization of nuclear fuel. Stress is placed throughout on the defense in depth concept, and the nuclear safety cultural approach - a necessary point of view regarding how tasks are approached and conducted, whether they be analytical or operational.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2105 - INTEGRATED NUCLEAR POWER PLANT OPERATIONS

Minimum Credits: 3

Maximum Credits: 3

This course promotes understanding of how the integrated nuclear plant works and what challenges the operator faces, and helps an engineer 'speak operations' with interfacing groups. Use of the replica simulator is an effective way for students to understand accident control, emergency operating procedures, and how the control room interfaces with the rest of the plant. Emphasis is placed on understanding plant characteristics and controls, rather than on developing control manipulation skills. Intended outcomes are an aptitude for predicting transient behavior of the integrated plant and a command of reactivity management and control that is important for efficient operation of a nuclear plant complex. The course presumes knowledge of the major systems in a nuclear power plant and will emphasize how operations of and faults in those systems and components can affect reactivity and core transient behavior.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2106 - NUCLEAR QUALITY ASSURANCE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

An introduction to the basic concepts of nuclear quality assurance through a series of case studies of the 18 criteria of NQA-1, 10CFR50 appendix B and other applicable standards that govern work in the construction, service and the supply of safety related items to support the nuclear industry. There will be a concentration of pragmatic examples of what to expect as engineers in support of nuclear power plants. These lectures will highlight such topics as the following: small modular reactors, new passive system designed in the new generations of nuclear power plants, relationships with the NRC, authorized nuclear inspectors, and the nation board, what to expect with respect to acquiring patents and your registered professional engineer qualifications, what is critical to know about non-destructive examinations, software control and validation and verification requirements, an introduction to auditing, welding and other special processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2107 - HIGH PERFORMANCE COMPUTING ALGORITHMS AND METHODS

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to solve complex physical problems using algorithms developed for supercomputing platforms. The course will introduce key concepts in the field of high performance computing, including how to design algorithms. The theoretical concepts will be tied directly to practical applications in the field of science and engineering such as radiation transport, heat transfer, and acoustics. Particular attention will be devoted to hardware selection for supercomputing applications, and will cover the concept and utilization of "open source" libraries, a key component for rapid algorithm development in today's scientific environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2110 - NUCLEAR MATERIALS

Minimum Credits: 3

Maximum Credits: 3

In this course, materials principles are taught in the initial lectures; students do not need to have prior understanding of them. The course will cover the metallurgy and phase diagrams of alloy systems important in the design of commercial nuclear power plants. The micro-structural changes that result from reactor exposure (including radiation damage and defect cluster evolution) are discussed in detail. The aim is to create a linkage between changes in the material microstructure and changes in the macroscopic behavior of the material. Also discussed is the corrosion of cladding materials as well as the effects of irradiation on corrosion performance, and the effects of primary and secondary coolant chemistry on corrosion. Both mathematical methods and experimental techniques are emphasized so that theoretical modeling is guided by experimental data. Materials issues in current commercial nuclear reactors and materials issues in future core and plant designs are covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2112 - NUCLEAR CHEMISTRY AND RADIOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Nuclear and radiochemistry are subdisciplines of nuclear science that focus on the study of radioactive materials and their applications. The course will provide students with knowledge of fundamental nuclear science concepts that are key to the understanding of nuclear power plant safety, spent fuel and nuclear waste management, nuclear fuel reprocessing, environmental radioactivity, nuclear forensics, radionuclide production, medical imaging, nuclear pharmacy, and medical and health physics. The proposed course will consist of lectures on nuclear science fundamentals that include: atomic structure, nuclear models and properties, phenomenon of radioactive growth and decay, radiation emissions, nuclear reactions, radiation interactions with matter, radiation detection and measurement, radiation dosimetry and biological effects, and applications of nuclear and radiochemistry in science, engineering, and medicine.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2113 - RADIATION DETECTION AND MEASUREMENT

Minimum Credits: 3

Maximum Credits: 3

This combined lecture and laboratory course will provide students with an introduction to the principles of radiation detection and measurement and experimental techniques. The lecture material will provide students with an understanding of the theoretical basis of detector operation, radiation interactions with matter, signal conditioning and processing electronics, measurement techniques, and statistical considerations. Laboratory work will

emphasize the practical aspects of radiation detection using an array of radioactive sources, detectors, and associated signal processing electronics. Through a series of laboratory experiments, students will learn to configure and operate instrumentation used in a wide range of radiation detection applications that are of interest to nuclear power, nuclear medicine, radiochemistry, and other scientific disciplines.

ENGR 2115 - HEAT TRANSFER AND FLUID FLOW IN NUCLEAR PLANTS

Minimum Credits: 3

Maximum Credits: 3

This course provides advanced knowledge to promote understanding and application of thermal and hydraulic tools and procedures used in reactor plant design and analysis. It assumes that the student has a fundamental knowledge base in fluid mechanics, thermodynamics, heat transfer, and reactor thermal analysis. The focus of the course is on physical and mathematical concepts useful for design and analysis of light water nuclear reactor plants. Applications of mass, momentum, and energy balances are combined with use of water properties to analyze the entire reactor plant complex as a whole. Principles are applied through the application of major industry codes to specific cases.

ENGR 2116 - BOILING WATER REACTOR THERMAL-HYDRAULICS AND SAFETY

Minimum Credits: 3

Maximum Credits: 3

BWR thermal-hydraulics and safety is a course that focuses on the boiling water reactor (BWR), design, operation, transient response, and abnormal operating conditions and accidents; boiling water heat transfer and two-phase flow; applications with respect to the Fukushima Dai-ichi BWR's. The course will cover the evolution of BWR systems including BWR features and characteristics and containment configurations. Basic thermal-hydraulics (T/H), boiling heat transfer and two-phase flow in BWR systems, t/h performance and thermal limits, BWR abnormal operating conditions and accidents including accident evaluations and overview of the state-of-the-art safety analysis techniques will be the focus of this course.

Academic Career: Graduate

ENGR 2118 - COMPUTATIONAL RADIATION TRANSPORT

Minimum Credits: 3

Maximum Credits: 3

This course provides an in-depth review of modern computational techniques used for solving the linear boltzmann equation, with specific applications to neutron and photon radiation transport problems. Topics to be covered include: an introduction to the physical processes that govern radiation transport through materials, monte carlo methods for the simulation of radiation transport, a first-principles derivation of the boltzmann radiation transport equation for multiplying and non-multiplying systems, the multi-group, diffusion, and discrete ordinates approximations to the transport equation, expansion of the scattering kernel in legendre polynomials, and numerical methods for approximating solutions to the transport equation. In addition, the course will review many commonly used numerical methods for solving integral and differential equations, including: finite differencing, numerical quadrature, harmonic analysis, and the power method for solving eigenvalue problems. Topics covered in the class will be reinforced with weekly programming exercises designed to illustrate the different methods for solving the boltzmann radiation transport equation and demonstrate how these methods can be used to solve realistic problems related to nuclear reactor and radiation shielding analysis. The course will also place a strong emphasis on formal quality assurance methods (and best-practices) for the development, verification, and validation of scientific computer codes intended for use in engineering design calculations of record.

ENGR 2120 - MATHEMATICAL MODELING OF NUCLEAR PLANTS

Minimum Credits: 3

Maximum Credits: 3

Graduate students will develop the graphics/simulation framework and the underlying mathematical models for simulating nuclear power plants in ME/ENGR 2120 mathematical modeling of nuclear plants. Models will be developed in Matlab/Simulink(tm) and configured to run on a PC so that students can both examine the mathematical models on which the simulation is based and use the simulation program in laboratory-like sessions to study the effect of design changes on plant behavior. The simulation model fidelity developed is suitable for educational purposes and provides students with a desktop tool to realistically model and better understand reactor performance under various conditions. While it would not be intended to replace or duplicate the high-fidelity dynamic simulation used in major accident analysis codes such as Relap, Trac, and Trace, the course will provide the student with an introduction and a working knowledge what is embodied in these industry standard codes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2122 - MANAGEMENT PRINCIPLES IN NUCLEAR POWER

Minimum Credits: 3

Maximum Credits: 3

This course will teach management theory and best practices associated for a successful manager in the nuclear industry. The following topics presented and discussed: management theory and practice; ethics; generation economics across the U.S.; dispatch curves; implications of economic factors for existing and new nuclear plants and likely future changes; compensation theory and best practices; labor law issues and challenges common to the nuclear industry; contract law issues and challenges in the nuclear industry; management techniques for dealing with the diverse age groups; change management techniques and best practices in corporations; ethics challenges and issues in the nuclear field; management interactions with inpo and the nrc; project management techniques and practices; management's role in nuclear safety and security culture. Case studies of actual business situations will be studied.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2125 - CASE STUDIES IN NUCLEAR CODES AND STANDARDS

Minimum Credits: 3

Maximum Credits: 3

Presentation of major issues associated with systems and component engineering relative to the nuclear power industry and the industry's consensus codes and standards. The course provides an explanation of the necessity of consensus codes and standards, a high-level view of codes and standards organizations, and shows how codes and standards promotes the safe operation of nuclear power plants. The course discusses how the NRC adopts and makes use of consensus codes and standards. It covers codes and standards for current, advanced and next generation, and high-temperature reactors, including global conformity assessment requirements. Relevant codes and standards from other communities, including nuclear quality assurance, are also summarized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

ENGR 2130 - NUCLEAR FUEL CYCLE AND ENVIRONMENTAL ISSUES

Minimum Credits: 3

Maximum Credits: 3

This course will be developed in conjunction with university of Pittsburgh faculty with an interest in environmental issues impacting the nuclear power industry including school of engineering faculty involved with the Mascaro sustainability initiative, faculty from the department of civil and environmental engineering and faculty from the graduate school of public and international affairs. The course will address such topics as sustainable energy resources, engineering and societal ethical concerns, risk analysis, and future energy supplies in general and as each of these topics relates to such specific issues as the nuclear fuel cycle, nuclear reactor safety, nuclear waste disposal and transportation, and gen iv and the hydrogen economy.

Students will better understand the socio-economic issues surrounding achieving a sustainable nuclear power future as it impacts fuel acquisition, plant operation and waste disposal.

ENGR 2210 - UNDERSTANDING BRAZIL-PREPARATIONS FOR RESEARCH AND STUDY IN BRAZIL

Minimum Credits: 2

Maximum Credits: 2

This seminar is specifically designed for students who will be doing research and/or studying in Brazil. It introduces the economic, political, social, and cultural aspects of Latin America in general and Brazil in particular. The seminar is organized and conducted by the center for Latin American studies, and features guest lectures from on Brazil, readings from current popular literature and news sources (available from the Eduardo Lozano Latin American collection, a library resource of over 340,000 volumes spanning 30 years), and contemporary films (such as *Decade of Destruction: Killing for Land and Brazilian Populations: Stories and Myths*). The first half of the course will introduce students to day-to-day life in Brazil, as well as its current socio-economic situation, the influence of politics and ethnic relations, and the many aspects of Brazilian culture. The second half will focus on disciplinary perspectives that allow students to explore regional issues from a variety of viewpoints. The final seminars in the semester will be used for the presentation of individual student reports on a topic related to Brazilian life, such as the governmental structure, university system, or integration of technology with indigenous lifestyles and traditions. This course is required for all Igert fellows.

ENGR 2450 - ENGINEERING- THE GERMAN WAY

Minimum Credits: 1

Maximum Credits: 18

This course highlights the German approach to engineering from various perspectives. It is designed as mixture of in-class lectures and industrial experience in the form of factory tours. Four broad topics are addressed from the German perspective: (1) R&D management, (2) production and manufacturing systems, (3) digital factory layout and factory simulation, and (4) product-ergonomics and ergonomic aspects in manufacturing. In addition students select one of two additional options dealing with unique aspects of the German business economy: (1) the nature of cooperation between trade unions and employers or (2) the impact on technology law and harmonization on engineering in Europe.

ENGR 2631 - INTRODUCTION TO MINING ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The course introduces students to: 1) the history and importance of mining, 2) the exploration and development of surface and underground mines, 3) modern mining methods and operations, 4) common mining equipment, 5) fundamentals of mine ground control and ventilation, 6) elements of coal preparation and mineral processing plants, and 7) mine health and safety management. It is designed to provide students with basic understanding of the primary elements of a mining operation and the engineering issues associated with operating a mine in a safe, effective, and sustainable manner.

The mining industry is replete with technical jargon and specialized processes and machinery that require mastery by students prior to exploration of more technically complex engineering coursework. Introductory lectures and field trips help to prepare students for the rigors of studying the other mining engineering courses offered within the Swanson School of Engineering. ENGR 2632 - SUSTAINABLE DEVELOPMENT AND THE MINERAL INDUSTRY

Minimum Credits: 3

Maximum Credits: 3

The course begins by examining the needs of society and commercial entities engaged in mineral production. Well conceived and designed mineral or solid fuel projects exercise a balance between economic prosperity, environmental health, and social equality. These concepts are then integrated into a case study, where the feasibility of a proposed mining project is analyzed. This examination forms the underpinnings of a course project report.

ENGR 2634 - ENVIROMENTAL CONTROLS IN MINING

Minimum Credits: 3

Maximum Credits: 3

The course is designed to study the environmental impact of coal, stone, and other mining operation and examine the engineering controls used to mitigate these impacts. The examination begins with the exploration and permitting of the mine site, emphasizing important environmental issues. Next, the impacts of active mining on land and water use are outlined. Most of these issues are related to subsidence impacting surface structures and water movement both at the surface and underground. To complete the mine's life cycle, closure and remediation issues are investigated. Lastly, a detailed examination of the issues associated with abandoned mined-lands, i.e. Acid-mine drainage, mass-wasting, fires, etc., Are studied. Throughout the course, engineering controls that focus on mitigating the environmental impacts of mining are acknowledged and assessed.

ENGR 2801 - INTRODUCTION TO CYBER-PHYSICAL SYSTEMS

Minimum Credits: 1

Maximum Credits: 1

This course is an introductory course to be taken with hacking for defense (h4d). It will introduce lean startup concepts used (h4d), and will present fundamental and necessary background information in cyber-physical systems (more generally described as mechatronics and the internet of things). Topics covered include: embedded systems and micro-controllers, interfacing with physical systems, networks, communications, and mobile platforms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ENGR 2811 - HACKING FOR DEFENSE

Minimum Credits: 3

Maximum Credits: 3

This course will teach students how to build products and services using lean methods. This will be done by solving real-world military and intelligence community problems. The course uses the lean launchpad platform for entrepreneurship. This is a highly customer-centered hypothesis-test approach to developing a mission modes, and is particularly well-suited for technology startups. It incorporates customer needs and user testing to build a minimum viable prototype. At the conclusion of the course, students will be able to understand the problems/needs of searching for product-market fit; understand all the stakeholders, deployment issues, costs, resources, and ultimate mission value; deliver minimum viable products that match customer needs in an extremely short time; produce a repeatable model that can be used to launch other potential technology solutions.

ENGR 2905 - CURRENT ISSUES IN SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the core principles of sustainability (i.e. Social, economic, and environmental) from the perspective of several disciplines and research fields. Covering a variety of topics such as urban infrastructure, energy policy and the environment, sustainable water-use, habitat sustainability and biodiversity, the curriculum and schedule are updated annually to reflect advancements in the field of sustainable engineering and science, and to continually incorporate current topics. While the course is primarily taught by the sustainability faculty fellows it will also consist of various guest lectures by sustainability faculty and senior practitioners working throughout the Pittsburgh region. Course assignments will consist of

a series of essays and assignments and culminate in a team term project. This is a required course for the undergraduate sustainability certificate and the M.S. in Sustainable Engineering.

ENGR 3002 - ADVANCED LEARNING THROUGH EVIDENCE-BASED STEM TEACHING

Minimum Credits: 1

Maximum Credits: 1

Designed for graduate students and postdocs preparing for academic careers in the stem disciplines, this course provides an introduction to the scholarship of teaching and learning (SOLT). This is the second course in a series; however, the former course (3001) is not a required prerequisite. The course will utilize material presented in a massive open online course (MOOC) available through coursera.org and sponsored by the center for the integration of research, teaching and learning (CIRTL). Participants will learn about effective teaching strategies and the research that supports them in addition to learning how to collect, analyze, and act upon their own evidence of student teaching. Topics include but are not limited to: 1. Learning through diversity, 2. Cooperative learning/peer instruction, 3. Inquiry-based labs, 4. Problem-based learning, 5. Flipped classroom pedagogy. Further, participants will learn the process for developing a teaching as research plan as well as the role of human subjects consent for classroom based research.

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2451 - FILM HISTORY/THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will explore issues relating to film theory, history and research methodology. We will discuss dominant modes of film criticism and explore the creation of "cinema history". We will examine different formulations of this history, tracing how certain explanations of events in cinema have come to prevail, and how certain methods of writing about film have become institutionalized.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies, Global Studies

ENGFLM 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g. Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2455 - FILM HISTORIOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This course will look into theories of film history exploring philosophies behind their social, political, economic, technological, and textual stakes. We will analyze how various forms of film history, intellectual and popular, assert their truth and credibility, and discuss how these kinds of claims might be supported and contested. We will explore the problems of writing film history, particularly in eras where little material survives for any kind of study or where language becomes a major barrier.

Academic Career: Graduate

This course will explore documentary from critical and creative vantage points. Key theoretical texts from the interdisciplinary field of documentary studies will address the pertinent ethical, formal and thematic concerns.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2459 - DOCUMENTARY THEORY & PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will explore documentary film and video from critical and creative vantage points. Students will be introduced to key discussions from within the interdisciplinary field of documentary studies while also working on individual and collaborative short documentary projects and exercises. Hands-on training in audiovisual recording and editing techniques will be provided. No prior production experience is required.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2471 - CINEMA AND PSYCHE

Minimum Credits: 3

Maximum Credits: 3

From the earliest years of film theory, writers have likened the discourse of cinema to the workings of the human mind. In 1916, for instance, Hugo Munsterberg (in "the photoplay") drew parallels between film language and recollection, attention, and anticipation. This course (through readings and film screenings) will pursue such comparisons between cinema and the mind, investigating such topics as dream, memory, fantasy, nostalgia, perception, cognition, affect, etc.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2480 - WAR AND CINEMA

Minimum Credits: 3

Maximum Credits: 3

This course theorizes the convergence of military and cinematic technologies, focusing on the logistics of perception, bio-politics, and the relation of cinematic/military technologies to the body. Topics include the military, medical, and cinematic uses of the scope and the screen, theories of human vision and ocularcentrism, new conceptions of space and time, the temporal convergence of production and exhibition (speed and acceleration), new media technologies, and the blurred boundaries of war and entertainment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2485 - GENRE AND FILM MELODRAMA

Minimum Credits: 3

Maximum Credits: 3

Course will interrogate the cultural impact of melodrama through the media. We will explore the various expressions of melodrama in gothic narratives, the "woman's film", historical films, "tragic" melodramas, family melodramas, and TV docudramas. Topics addressed include questions about common sense/folklore and the nature of mass and popular cultural representation, the problematic nature of genre, the relation between melodrama, history, and the construction of narratives of national identity in relation to race, gender and sexuality.

ENGFLM 2494 - KEY CONCEPTS IN NEW MEDIA

Minimum Credits: 3

Maximum Credits: 3

What exactly is "information"? What is an "interface"? What does it mean when we speak of a "media platform"? These terms and concepts form the backbone of the major theories and discourses in new media, which produce a rich vocabulary that has yet to be rigorously defined. This course aims

to provide a theoretical map to navigate the rapidly expanding fields of media studies by critically interrogating a set of key concepts that have been extensively used to deal with the technologies, forms, materials and cultures of new media. We will discuss the meaning, usage, and genealogy of such concepts as "network," "cybernetics," "hardwire," "infrastructure," and "system," which have animated a wide range of researches and debates. By critically engaging with these key concepts, we hope to not only reconstitute a framework for theorizing contemporary media, but to explore the very notion of "media" as a discursive formation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2496 - MEDIA AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

Mobility has been one of the central functions and consequences of media technologies, from papyrus in ancient history to mobile phones in the digital era. This seminar seeks to conduct a thorough theoretical mapping between media and mobility, creating a productive framework in which media can be examined through the ways in which they facilitate, mediate, and regulate various modes of mobility of humans, things, and ideas.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Film Studies

ENGFLM 2661 - QUEER THEORY, QUEER CINEMA

Minimum Credits: 3

Maximum Credits: 3

This seminar explores film (also TV and theater) textuality and reception from a "queer" perspective. What is the relationship among queer authors, queer textuality and the subcultures that consume these texts? What place does non-heteronormative sexuality occupy within the production and reception of mass culture? The course will cover: foundational works in the history of sexuality; camp and gay subcultural reception; gay and lesbian authorship of both Hollywood and avant-garde films; the rise of queer television drama; and queer critical practices.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2695 - HORROR FILM

Minimum Credits: 3

Maximum Credits: 3

This seminar will investigate the key films and critical discussions surrounding the genre from its beginnings to the present, but not merely to perform a genre survey- instead we will use horror as a lens to ask wide-ranging questions about spectatorship, theory, history, aesthetics, and politics that have shaped and continue to transform film studies in profound ways.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGFLM 2700 - ANIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will approach animation as a method, a way to rethink film theory beyond the assumption of an essentially photographic medium, and to unearth and explore the previously underdeveloped territories in theorizing and making sense of moving images.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGFLM 2710 - GLOBAL FILM STARDOM

Minimum Credits: 3

Maximum Credits: 3

Historically, film stardom was examined from an American perspective (where it originated in Hollywood in the first decades of the last century), and theories of stardom emerged from an implicitly Hollywood-based understanding of cinematic fame. Instead, while not ignoring the American cinema, this course will take a global perspective on stardom, in terms of performers, films, and theories. Our approach to stardom will be a combination of the historical, the theoretical, and the textual. This means that in addition to studying individual stars, we will also 1) consider the phenomenon of stardom in terms of its origins and the cultural and national institutional conditions that support it, 2) analyze stardom as a public phenomenon to be understood in the context of specific cultures and audiences, 3) discuss various theories of stardom, celebrity, and public fame, 4) consider the manner in which issues of gender and sexuality impact notions of stardom, and 5) consider the relationship between stardom and spectator subjectivity. Although the course will be focused on cinema stardom, we will also briefly consider theoretical overlaps with the broader category of celebrity studies. In general, when we look at individual stars in the course, we will consider their broad "star text" which involves the interrelationship of screen roles, off-screen information, publicity material, and cultural context. Questions raised will include: what constitutes a "star text" in different historical contexts and ideas about the public and the private? What specifically do the media of photography and film bring to public fame? How does stardom presume and shape norms of identity pertaining to gender, sexuality, social class, race/ethnicity, bodily norms, and other cultural values? What does stardom mean in old and new transnational contexts? What is the relation between stardom, nation, and politics?

English Literature

ENGLIT 2000 - HISTORY OF CRITICISM

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to important aspects of critical thought, especially though not exclusively before the twentieth century. Readings for this course are offered as constellations of texts that intersect with a particular problem or issue. Each constellation will have three goals: to assemble texts that have present significant and important modes of practicing criticism; to include different types of texts where critical thought emerges; to familiarize students with methods of research central to humanistic study.

Academic Career: Graduate

Course Requirements: PLAN: Excludes English MFA majors

ENGLIT 2001 - STUDIES IN THE HUMANITIES

Minimum Credits: 1

Maximum Credits: 1

In this course, graduate students read and discuss new scholarship in an area of the humanities that will be the subject of a one-week seminar

sponsored by the humanities center.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

ENGLIT 2002 - INTERDISCIPLINARY METHODS IN THE HUMANITIES

Minimum Credits: 3

Maximum Credits: 3

This course will theorize and practice interdisciplinary research methods. A central focus of inquiry is how interdisciplinary research might shift the content and scope of our scholarship. How might it shift our disciplines? What are the gains, losses, and syntheses entailed in that shift? (For example, how might fieldwork benefit literary critical projects?) Readings will address debates in anthropology on fieldwork; oral history methods; and the applicability to the humanities of qualitative research methods from the social sciences. Students will write a final paper in which they launch or develop an interdisciplinary research project that fits their research interests. The paper could be a step towards their manuscripts or dissertations or a more contained project.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2003 - LITERARY STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course examines topics in literary studies in relation to current developments in the field of literary studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2005 - SPECIAL TOPICS IN LITERARY STUDIES

Minimum Credits: 3

Maximum Credits: 3

This seminar studies the most important recent developments in the fields of literary and cultural criticism. It both introduces students to a range of topics, methods, and theories and explores deeply the historical, conceptual, and societal significance presented by all these. The course introduces students to, and helps them learn to evaluate, the most important contemporary work in English studies.

ENGLIT 2009 - DIGITAL/CRITICAL INTERDISCIPLINARY METHODS

Minimum Credits: 3

Maximum Credits: 3

This collaboratively taught seminar exposes students to interdisciplinary and evolving methods for discovery and knowledge construction in the humanities and social sciences. In particular, it focuses on how information flows in and out of sociotechnical systems, the ways that researchers access, arrange, organize and describe information for use in their disciplinary context and how that shapes critical inquiry. Students will do hands-on work with data and methods and interrogate their affordances and limitations. Mini units in this course will be led by faculty from History, Political Science, Economics, English, Sociology, Information Science, and History of Art and Architecture who are involved in the Mellon grant-funded

Sawyer Seminar, Information Ecosystems: Creating Data (and Absence) From the Quantitative to the Digital Age, which will feature invited speakers and support several post-docs and grads in AY 2019-2020.

Grade Component: Grad LG/SNC Basis

ENGLIT 2135 - KEYWORDS: HISTORY AND PRACTICE OF CROSS DISCIPLINARY RESEARCH METHOD

Minimum Credits: 3

Maximum Credits: 3

Keywords: a vocabulary of culture and society by Raymond William (1976, 2nd ed., 1983) Is one of the most important works by one of the founders of cultural studies. Keywords is made up of short essays that take crucial terms in contemporary social and political debate and use their philological history as a means of engaging with their contradictory current issues and meanings. Its combination of scholarship with relevance has proved inspiring and offers a model of how academic work can prove socially significant. A group of scholars from Pitt with colleagues from other universities is working to update Williams's work. See the website: this course aims to introduce students both to methodological and substantive issues that formed Williams's work and the uses to which it may be put.

Course Attributes: West European Studies

ENGLIT 2208 - CULTURES OF AMERICAN LITERACY

Minimum Credits: 3

Maximum Credits: 3

This course investigates the historical construction of different kinds of literacy and literacy instruction in the United States. Students will investigate the documentary evidence of how literacy has been defined, taught, and evaluated both in schools and in a variety of other cultural sites.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2240 - RACE, VISUALITY, AND LITERATURE

Minimum Credits: 3

Maximum Credits: 3

This course explores the intersection of race and visual technologies and techniques (photography, film, daguerreotypy, etc.) as they relate to key questions in literary studies. We will pay particular attention to the tense interplay between images, visual practices, and their role in the documentation and production of the racialized body. We will begin our study in the 1850s and conclude with a consideration of more recent visual productions and practices. In so doing, this course will attend to varied strategies (sonic, haptic, affective) deployed by visual theorists, artists, and intellectuals who attempt to negotiate and exit the violent relationship between the visual and race.

Grade Component: Grad LG/SNC Basis

ENGLIT 2245 - STUDIO IN AFRICAN-AMERICAN POETRY AND POETICS

Minimum Credits: 3

Maximum Credits: 3

Explores the interplay of social history and literary texts in the emergence of modern black literature. Readings range from slave narratives to modern novels.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2260 - BLACK WOMEN'S PRINT CIRCUITS

Minimum Credits: 3

Maximum Credits: 3

Whether described as a flourishing, an explosion, or a blossoming, the renaissance of African American women's writing that began in the 1970s is now commonly accepted as the starting point, if not a signature feature, of what we consider the long era of contemporary African American literature. Engaging in bibliographic, archival, and critical work situated at the intersection of textual scholarship and African Americanist criticism, we will examine the gendered dimensions of late-twentieth-century African American print culture by studying the conditions of publication and distribution of black women's novels, short stories, poetry, drama, manifestos, periodical work, anthologies, and essays.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2261 - QUEER WOMEN OF COLOR RADICALISM

Minimum Credits: 3

Maximum Credits: 3

What if we approached the historical and theoretical traditions of activism, feminism, and Marxism using queer women of color as our starting point? We will address intersectional theory derived from Kimberly Crenshaw's legal discourse and how questions of subjectivity have been raised by scholars such as Jennifer Nash and Maria Lugones. However, the course takes its departure from earlier writings by queer women of color in the 1970s and 1980s that resisted multiple oppressions and placed class struggle as a central to social change, including Audre Lorde, Cherrie Moraga, Alice Walker, Gloria Hull, Patricia Hill Collins, and the collective writings from *This Bridge Called My Back*, the Combahee River Collective Statement, *The Black Woman Anthology*, and Keeanga-Yamahtta Taylor's *How We Get Free*. Using this collection of voices as our starting point, we will then look at recent issues and debates in activism studies, contemporary Marxist theory, and the crises of global capitalism, privileging indigenous and grassroots approaches to social change.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2321 - TRANSLATION AND WORLD LITERATURE

Minimum Credits: 3

Maximum Credits: 3

This seminar will examine the role of translation in the construction of world literature, defined for our purposes as a mode of circulation and of reading (David Damrosch). We will operate with an expanded concept of translation, not limited to issues of linguistic or cultural equivalence and attuned to multiple contexts of literary production and reception. Drawing on the work of Damrosch, Lefevere, Casanova, Venuti, and Apter (among others), we will trace key debates and consider factors that shape the global politics of translation today. We will discuss selected case studies and pursue our own translation-based scholarly projects.

Academic Career: Graduate

Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis

ENGLIT 2507 - QUEER INSCRIPTIONS

Minimum Credits: 3

Maximum Credits: 3

Students consider inscription as a hermeneutic for exploring topics related to bodies, identity, and institutional language. Students will gain tools for analyzing & writing subjectivity. Topics include queer legal theory; rhetoric's of state punishment; and race and sexuality in labor negotiation. Course readings are likely to include authors such as b. Allen; j. Alexander; J. Butler; c. Cohen; q. Driskill; s. Mckinnon; e. Meiners; J. Halley; k. Ono; c. Rankine; c. Reddy; i. Reed; b. Smith; D. Spade; s. Somerville; & l. Volpp.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2509 - ORDINARY LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

The purpose of the seminar will be to consider ordinary language theory and its bearing on composition and the teaching of writing. Readings will include an anthology of student essays, some standard work in composition (Mina Shaughnessy, Joe Williams, Jim Slevin, William Coles, Peter Elbow), and a selection of work in rhetoric and philosophy, with particular attention to IA Richards, Stanley Cavell, JI Austin and Ludwig Wittgenstein.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2522 - LITERACY, RHETORIC, COMPUTER CODE

Minimum Credits: 3

Maximum Credits: 3

1. This course takes up the recent turn toward computer code as an object of study in the humanities, as exemplified in the fields of digital humanities, digital media, software studies and critical code studies. This turn toward code in the humanities is driven by the recognition that computer code is slipping into domains once dominated by text. That is, much of our communication and information is now filtered through software running on our computers, phones and tablets. Code propels our modern literacy practices: reading PDFs and writing essays, watching and making videos, taking and editing photos. Looking at computer code through the lenses of literacy and rhetoric in this course, we will ask: what can writing mean and do now that it includes not just text, sound, image, and animation but also *code*? Helping us to explore this question will be theoretical work by Kittler, Chun, Bogost, Manovich, Kirschenbaum, Hayles, Knuth, Galloway and Marino, as well as hands-on practice with digital composition. No previous technical knowledge is required, but students will be expected to play games, blog, and code digital compositions of their own design. Both textual and computational compositions are welcome as final projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2523 - THE ART AND IDEOLOGY OF TEACHING THE ESSAY

Minimum Credits: 3

Maximum Credits: 3

What are we asking of students when we ask them to compose an essay? What knowledge are we hoping they will develop? Many claims have been made about the cognitive, personal, and political benefits of essay writing, but such claims have been challenged by work in literacy studies that calls into question the privileging of "essay-text" writing, a privileging that has consequences not only for the classroom but also for larger, public policy debates about literacy and education. This course will explore the potentialities and limitations of the essay in classrooms and other venues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2524 - RHETORICAL GESTURES

Minimum Credits: 3

Maximum Credits: 3

This course explores historical, theoretical, and methodological approaches to gesture as a component of rhetorical invention. Topics to be considered include affect, kinesthesia, sympathy, and other modes and manifestations of bodily suggestion.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2525 - COMPOSITION STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course will provide a general introduction to composition as an area of professional study. The purpose of the course is to introduce key texts (and forgotten texts) since the turn of the century, and to situate those texts in the development of English studies, the history of post-secondary education, and history of related work on writing. We will be looking at how the field has represented the subject as its own and at how the field has constituted itself as a "discipline".

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2528 - FOUR RHETORICAL THEORISTS: ARISTOTLE, KENNETH BURKE, MIKHAIL BAKHTIN, BRUNO LATOUR

Minimum Credits: 3

Maximum Credits: 3

The seminar will read key texts of four major theorists whose work has been and continues to be fruitful for composition, literature, and criticism and will sample some recent inquiries and arguments informed by their work. These thinkers cross our current disciplinary boundaries in ways that would interest students of composition, literature, criticism, and writing, and student inquiries engaging them in those fields would be all welcome course projects.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGLIT 2532 - HISTORY OF RHETORIC

Minimum Credits: 3

Maximum Credits: 3

Figurative language has had, from the outset, a vexed status in Western philosophical/rhetorical systems, conceived by some as an aberrant form of representational discourse, by others as the most foundational unit of meaning. This course will examine three specific historical moments, each of which handles the conundrum of metaphor in a different manner: the classical period (Plato, Aristotle, Longinus, Quintilian); the romantic period (Coleridge, Shelley, Emerson, Whitman) and the modern period (T. S. Eliot, Wallace Stevens, I. A. Richards and Cleanth Brooks).

Academic Career: Graduate

ENGLIT 2547 - CRITICAL LITERACIES AND PEDAGOGIES ACROSS URBAN EDUCATION AND HIGHER EDUCATION

Minimum Credits: 3
Maximum Credits: 3
This course examines historical, theoretical, and practical relationships among reading, writing, language, culture, and schooling. Specifically, these connections are explored across urban education and higher education learning sites, both in-school and out-of-school. Ultimately, students will be expected to examine the curricular, pedagogical, and theoretical contexts that shape teaching and learning as a bridge to the continued development of their own pedagogical identities.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2555 - THEORIES OF TEACHING/WRITING

Minimum Credits: 3
Maximum Credits: 3
In this course we will examine intersections between teaching and writing theories in a number of ways. We will look at key transitional moments in the history of teaching/writing theory in the 20th century. In each case we will consider scholarly texts, companionable textbooks, and cultural constructs within which the teaching of writing gets framed. We will also look closely at a diverse array of contemporary textbooks, focusing specifically on the ways they pre-construct not only what good writing is and is for, but what a good student and a good teacher are supposed to do and believe to best promote it.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2560 - NARRATIVES OF TEACHING

Minimum Credits: 3
Maximum Credits: 3
This course will explore a wide range of narrative strategies, representing teaching and learning both in pedagogical scholarship and literary texts. We will study how scholars and writers portray their own teaching and that of others, paying special attention to how teachers characterize their students' learning. The basic premise of the course is that representations of teaching and learning are inevitably problematic, because of all they omit from their narratives. Students will develop research projects, represent moments in teaching and learning.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

ENGLIT 2569 - HISTORY OF THE BOOK

Minimum Credits: 3

Maximum Credits: 3

This seminar is designed to encourage reflection on the assumptions that underlie our own scholars by investigating modern and post-modern conceptions of writing history, and their use value for both literary and cultural studies.

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

ENGLIT 2860 - DIGITAL ARCHIVES, BOOK HISTORY, AND LITERARY CIRCULATION

Minimum Credits: 3

Maximum Credits: 3

This seminar will investigate circulation as a crucial mediation between production and reception. Much of its materials will be drawn from the long nineteenth century, mainly works situated in trans-Atlantic systems of exchange, esp. Children's literature and the emergent canon of poetry in English, and we will be exploring digital archives in pursuit of the practices of print culture. As a result, we will need to think through issues of the digital at the present moment, of the uses and limits of various digital databases and digitally enabled methods of investigation.

ENGLIT 2960 - ENGLISH GSA

Minimum Credits: 3
Maximum Credits: 3
This course provides credits for English department graduate students who have been appointed as a graduate student assistant.
Academic Career: Graduate
Course Component: Internship
Grade Component: Grad SN Basis

ENGLIT 2990 - INDEPENDENT STUDY

Minimum Credits: 1
Maximum Credits: 6
In order to register for this course a student must work with a faculty member under one of the following circumstances: a) faculty-graduate student shared research project; b) special study in relation to pedagogical problems; c) defined areas of study in relation to comprehensive examinations.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis

ENGLIT 2991 - PUBLISHING PRACTICUM

Minimum Credits: 1
Maximum Credits: 1
This workshop will help English graduate students to prepare previously-drafted seminar papers for journal publication. Students will read and workshop each other's manuscripts and discuss journals in relevant fields, the politics of publishing, the submission and publication process, and other relevant topics.
Academic Career: Graduate

Course Component: Workshop
Grade Component: Grad LG/SNC Basis

ENGLIT 2992 - DIGITAL PEDAGOGY PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This collaborative workshop for experienced teaching fellows focuses on developing assignments with digital production components. Participants will present and discuss detailed unit plans and assignments. Attention will be paid to crafting rationales to help pedagogical initiatives gain institutional support. Each participant will produce several documents for inclusion in a teaching portfolio.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad SN Basis

ENGLIT 2993 - INTRODUCTION TO GRADUATE STUDIES

Minimum Credits: 1

Maximum Credits: 1

This course will introduce MA and Ph.D. students to important practices and genres of graduate studies and to department programs and resources.

ENGLIT 2996 - WRITING PEDAGOGY I

Minimum Credits: 3

Maximum Credits: 3

This course is a practicum designed to instruct and support graduate students who are beginning their work as teachers in the department. New TFs will teach a section of Seminar in Composition from a shared staff syllabus, will be mentored by CEAT (the Committee for the Evaluation and Advancement of Teaching), and will take this seminar. In the spring term, they will take a graduate Writing Pedagogy II, and continue with the support and mentorship of CEAT. This seminar will meet once a week to discuss a range of issues that frame the teaching of composition. We will focus on reading student writing, revision, pedagogy, and the design of writing assignments. Topics will include: the relationship of reading and writing, writing conventions, social contexts for writing, digital modes of composition, assignments and sequences, evaluation and assessment of writing.

English Writing

ENGWRT 2010 - FICTION WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

This course enables students to master the particular prose fiction forms they are working in. It helps them focus on their manuscript--either a short story collection or a novel-- and to work seriously on it. Close examination of student writing and revision of submitted work are essential parts of the course.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2092 - WRITER'S JOURNALS

Minimum Credits: 3

Maximum Credits: 3

This course studies the journal as an art form. It also questions the purpose and value of journal keeping for a writer.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2094 - READINGS IN CONTEMPORARY FICTION

Minimum Credits: 3

Maximum Credits: 3

This course acquaints students with a variety of contemporary writers. This study helps students raise questions about their own developing esthetics as they are reflected in form and take into account their dual roles as creative writers and critics. It also helps students access their relationship to reviewing and criticism, including its benefits to a creative writer developing a career, and to discover techniques of reviewing and criticism which aid and do not transgress upon their esthetics and its expression.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2110 - NARRATIVE AUDIO WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2210 - POETRY WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

This graduate seminar emphasizes an intensive consideration of student poems, both first drafts and revisions, in an informal workshop setting.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2245 - STUDIO IN AFRICAN-AMERICAN POETRY AND POETICS

Minimum Credits: 3

Maximum Credits: 3

Intended for graduate students and advanced undergraduates, Studio in African American Poetry and Poetics will be a course in interdisciplinary making, as we investigate the evolving fields of African American poetry and poetics through a critical and a creative lens.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2290 - READINGS IN CONTEMPORARY POETRY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on American poets who have come to prominence since 1963. We will read widely in the poetry of this period to understand its unique contribution to the development of poetic form and its relationship to the culture that produced it.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2310 - NON-FICTION WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

A workshop in non-fiction reporting for magazine publication. Students will research, write, revise and re-write articles. Emphasis will be placed on

style, fluidity, organization, suitability for market, and ultimately, on publication.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: English (ENG-MFA)

ENGWRT 2390 - READINGS IN CONTEMPORARY NON-FICTION

Minimum Credits: 3

Maximum Credits: 3

This course familiarizes students with a number of different forms of and approaches to contemporary non-fiction writing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2399 - TOPICS IN NONFICTION: NEW YORK TRIP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2403 - STRUCTURES AND TECHNIQUES IN NONFICTION

Minimum Credits: 3

Maximum Credits: 3

This is a grad level course required for NF MFAs. The course is designed to examine and develop advanced research skills for the nonfiction writer, and to explore and practice story structure through required readings and creative exercises. Students will design and participate in immersion research projects, produce one long-form narrative or research-based essay using field research, interview and textual sources. The classwide project will be produced in digital form.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ENGWRT 2405 - PUBLISHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This practicum is for nonfiction M.F.A.S in their third year of study. We will survey current trends in book, magazine, journal, and online publishing, as we design a trip to New York City to meet editors and agents. Students must have manuscripts and/or other completed work ready for publication in order to be accepted into the class, which is offered by special permission only.

Grade Component: Grad LG/SNC Basis

Environmtal & Occupatnal Hlth

EOH 2013 - ENVIRONMENTAL HEALTH AND DISEASE

Minimum Credits: 2

Maximum Credits: 2

This is the graduate school of public health core curriculum course in environmental and occupational health. The world health organization defines environmental health as "those aspects of human health, including qualities of life that are determined by physical, biological, social, and psychosocial factors in the environment." The discipline of environmental and occupation health refers to the "theory and practice of assessing, correcting, controlling, and preventing those factors in the environment that can adversely affect the health of present and future generations." This course will familiarize the students with current issues and practice in environmental and occupational health, as well as assessment of the risk of environmental exposures. It is designed to introduce the students to knowledge basic to public health focusing on chemical and physical environmental factors affecting the health of the community.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2021 - SPECIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

Properly qualified students may undertake advanced study under the guidance of a faculty member.

Academic Career: Graduate

Grade Component: Grad Letter Grade

EOH 2108 - ENVIRONMENTAL AND OCCUPATIONAL HEALTH PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This practicum provides an opportunity for EOH MPh students to demonstrate integration and application of knowledge in the area of environmental and occupational health, through a culminating experience. This is a faculty supervised applied research or problem solving project in consultation with a health environment related agency or organization. Student participates after completion of course work. The practicum includes preparation, contribution to field work, and a final written report which may be the basis for a master's essay.

Academic Career: Graduate

Course Component: Practicum
Grade Component: Grad LG/SU3 Basis

EOH 2109 - MOLECULAR TOXICOLOGY JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

This course is for students to gain experience in the presentation and discussion of topics of current interest in the fields of industrial and environmental health sciences and toxicology. The format is journal club presented by the students. Our goals are to expose students to the most exciting research in our field of interest. Secondly, to provide a forum to hone skills in organizing and presenting scientific data, as well as critically discussing published work.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad LG/SU3 Basis

EOH 2110 - ROTATION/PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This course is designed to be a practical research experience for Ph.D. students, goals of which are for students to gain research experience within laboratories of faculty within the molecular toxicology training program. Each laboratory rotation will be eight (8) weeks in duration with 2 rotations. Students will be required to write a report on their research project upon completion of the laboratory component.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

EOH 2122 - TRANSPORT AND FATE OF ENVIRONMENTAL AGENTS

Minimum Credits: 3

Maximum Credits: 3

This course presents in a quantitative fashion the movement, transformation, bioaccumulation, and fate of various physical, biological, and chemical agents through the environment, home, and occupational settings. Chemical degradation, atmospheric transport, surface and groundwater transport, deposition on terrestrial surfaces and in sediments, and concentration by biological systems are described, including movement through food chains; also indoor transport and ventilation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EOH 2175 - PRINCIPLES OF TOXICOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the principles governing the interaction of chemicals within the human body. Major organ systems will be described with regard to anatomy, physiology and effects from interactions with chemicals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2180 - INTRODUCTION TO RISK SCIENCES

Minimum Credits: 1

Maximum Credits: 1

Course will explore issues surrounding environmental and occupational risks with focus on adverse human health effects. Will provide overview of risk sciences including: risk assessment, risk perception, risk communication and risk management. Detailed attention to methods for qualitative and quantitative characterization of risks to human health. Qualitative and quantitative approaches for risk assessment will consider methods for

assessment of cancer and non cancer health risks using four step paradigm by national academy of sciences

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: CREQ: EOH 2181; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2181 - RISK ASSESSMENT PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

Practicum will provide the student opportunity to conduct a quantitative risk assessment for human health endpoint (either cancer or non-cancer) from an environmental or occupational exposure. Students will learn to identify human health hazards, characterize dose response relationships and site and mechanisms of action, conduct an exposure characterization dose response relationships and site and mechanisms of action, conduct an exposure characterization and use that data to characterize risks to human health.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: CREQ: EOH 2180; PROG: Graduate Sch of Public Health (PPBHL)

EOH 2309 - ENVIRONMENTAL HEALTH CHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

The organic, inorganic and mechanistic biochemical details of interactions of toxins and biological systems will be presented. Emphasis on chemical understanding of potential toxicological sequelae of such interactions. Students present one lecture on bioorganic toxicological topic synthesized from recent scientific literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 2310 - MOLECULAR FUNDAMENTALS

Minimum Credits: 3

Maximum Credits: 3

Course is designed to be a review of the fundamentals of biochemistry, molecular biology, and cell biology. There is significant time devoted to techniques, with the goal of providing background for Ph.D. students beginning their research careers, and a perspective for mph students on the availability and utility of modern biological research methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EOH 2504 - PRINCIPLES OF ENVIRONMENTAL EXPOSURE

Minimum Credits: 3

Maximum Credits: 3

This course introduces concepts inherent in recognition of sources, contaminant generation, transport and uptake of chemical, biological and physical stresses in the context of potential environmental exposures related to human health. This course prepares students to understand exposure assessment in anticipation, recognition, evaluation and intervention as utilized in risk assessment and composition of matter, exposure pathways, pathway assessment methods including measurement, analogy and exposure modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EOH 2513 - POLICY AND DECISION MAKING FOR PUBLIC HEALTH EMERGENCIES AND BIOTERRORISM

Minimum Credits: 3

Maximum Credits: 3

This three-credit graduate course focuses on public health emergencies and bioterrorism at the phases of preparedness, mitigation, and response. The course emphasizes not only biological agents but also all hazards with public health consequences. It addresses the interfaces of policies and laws in the context of federalism, which requires interaction among the federal, state, and local levels of government. The course considers the critical role of private-sector health care providers in addition to governmental decision makers. Students explore past emergencies through history and case studies, conduct directed research on a chosen policy issue, and experience decision-making in the context of a simulated emergency by playing a chosen and previously researched official role. Teaching methods include lectures, case studies, policy research and writing, interdisciplinary classroom discussion, and simulated decision-making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

EOH 2515 - EOH PREPAREDNESS

Minimum Credits: 2

Maximum Credits: 2

This course will be a graduate level course focusing on environmental health hazards with respect to disaster preparation, didactic and experimental aspects of course will include core principles of environmental health safety. Students will examine challenges with respect to natural and man-made disasters to allow students to prepare programs to handle environmental health emergencies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

EOH 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Includes doctoral study under the various programs within the department.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EOH 3210 - PATHOPHYSIOLOGY OF ENVIRONMENTAL DISEASE

Minimum Credits: 3

Maximum Credits: 3

This graduate level course focuses on the etiology and pathogenesis of human disease and how the disease process affects normal physiologic function. The course will include a didactic component covering the normal anatomy and function of the major organ systems and a series of student-led presentations and discussions of the nature and cause of commonly encountered diseases and or injuries. Students will be expected to apply basic mechanistic physiologic principles of each organ system in current public health and environmentally relevant topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EOH 3305 - GENOME INSTABILITY AND HUMAN DISEASE

Minimum Credits: 3

Maximum Credits: 3

Mechanisms that maintain genome stability allowed the origin of species. DNA damage is omnipresent and DNA repair and DNA damage tolerance mechanisms are interwoven in systems that control transcription, replication, cell division, signal transduction, cell death and evolution. More than 40 distinct human diseases are caused by defects in DNA repair, including syndromes of impaired development, immunodeficiency, cancer predisposition, neurodegeneration, and premature aging. This course will emphasize the molecular biology and biochemistry of DNA repair, placing these mechanisms into the context of other cellular processes as they pertain to health and disease. Environmental, clinical and endogenous sources of DNA damage will be discussed. An understanding of the fundamental role of DNA repair mechanisms in immunology, oncology, neurology, and

aging will be central to all lectures.

Academic Career: Graduate

Grade Component: Grad SN Basis

Epidemiology

EPIDEM 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4

Maximum Credits: 4

This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2012 - NEUROEPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the application of the methods of epidemiology to understand the pathogenesis and etiology of conditions affecting the central nervous system. This course covers epidemiological approaches, etiological perspectives and methodologies to assess disorders of the central nervous

system (CNS), with a special emphasis of neurocognitive assessment and neuroimaging methods. This course also provides guided and critical knowledge of existing neuroepidemiological studies through the research practicum. In addition to students pursuing Doctoral and Master level degrees in Epidemiology, this course is designed to reach trainees in a variety of fields, including medicine, neurology, psychiatry, physical medicine and rehabilitation, neuroscience, psychology and computer science. Emphasis is placed on: a. descriptive epidemiology methods; b. factors that influence vulnerability to onset, progression and response to treatment of neurological diseases, including geographic variations; c. methodologies to assess disorders of the central nervous system (CNS), including behavioral neuropsychological assessments and cutting-edge multimodal neuroimaging. Separate sessions will be available upon request for students less familiar with epidemiology methods (descriptive, analytic, experimental).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2017 - POPULATION NEUROSCIENCE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This seminar focuses on the methods and current literature in population neuroscience. Population neuroscience draws from multiple fields, including epidemiology, neuroimaging, and cognitive psychology, to understand the intrinsic (e.g. genetic) and extrinsic (e.g. environmental) factors that contribute to brain structure and function in various populations (healthy, aging, and diseased).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EPIDEM 2019 - INTRODUCTION TO MULTIMODAL NEUROIMAGING AND APPLICATIONS IN POPULATION NEUROSCIENCE

Minimum Credits: 2

Maximum Credits: 2

There have been great advances in neuroimaging techniques, which allow neuroscientists to visualize molecular, cellular and system physiology and functions. The Introduction to Multimodal Neuroimaging course will teach the underlying principles of neuroimaging techniques, including data modeling and visualization. Special emphasis will be on the discussion of the strengths and limitations of each technique, and on novel approaches to utilize complementary imaging modalities. The course will teach the principles and research applications of neuroimaging modalities via basic lectures and workshops that emphasize the integration of multiple imaging modalities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

EPIDEM 2110 - PRINCIPLES OF EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Epidemiology is a scientific discipline which seeks to identify and describe patterns of disease occurrence, identify determinants of disease, and evaluate disease prevention and health care treatment efforts. With its focus of study in human populations, epidemiology is directly linked with public health research, policy, and practice. This course provides an introduction to the fundamental definitions, terminology, concepts, methods, and critical thinking used in epidemiology. The material presented in this course is designed to lay the foundation for future study and practice in public health activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EPIDEM 2141 - BEHAVIORAL LIFESTYLE INTERVENTION TRAINING - THEORY OF PREVENTION EFFORTS

Minimum Credits: 2

Maximum Credits: 2

Translating the findings of clinical trials of lifestyle intervention for disease prevention into community settings is increasingly important. This

course will provide the conceptual foundation needed for such public health initiatives and serves as a key component of the Prevention, Lifestyle Intervention, and Physical Activity Area of Emphasis within the Department of Epidemiology. The background and rationale for behavioral lifestyle intervention will be covered in this course, as well as the relationship of lifestyle behaviors to chronic disease, with a focus on diabetes and cardiovascular disease. By attending this lecture-style course, students will receive behavioral lifestyle intervention training based upon a modified version of the Diabetes Prevention Program intervention protocol, called the Group Lifestyle Balance (DPP-GLB) program, which was adapted for use in the community setting. Upon successful completion of this class, each student will also receive a Certificate confirming that he/she was officially trained as a coach for the DPP-GLB intervention program.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health

Course Attributes: Hybrid

EPIDEM 2142 - LIFESTYLE INTERVENTION PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course follows the lifestyle intervention training theory course. The foundation for this practicum is the group lifestyle balance (GLB) program, a behavioral lifestyle intervention training based upon a modified version of the diabetes prevention program intervention protocol. The GLB has already been developed and evaluated by the course instructors. The lifestyle intervention training practicum will provide students with the opportunity to utilize their theoretical knowledge for behavioral lifestyle intervention with hands-on application in the field. This course will be a key component in the new prevention/ lifestyle intervention area of concentration within the department of epidemiology, providing the practical experience needed to deliver the group lifestyle balance program independently.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PREQ: EPIDEM 2141

EPIDEM 2143 - SOCIAL EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to introduce students to a broad overview of the field of social epidemiology related to the history and development of the field including the theoretical underpinnings, conceptual approaches, current topic areas, and research methods. Social epidemiology reveals how social processes are intrinsically linked to the health of populations and individuals. Social epidemiology takes into account the social, psychological, biological, and medical determinants of disease and health and uses a multidisciplinary approach to analyzing and solving complex contemporary social issues. This course will emphasize the role of social determinants of health in relation to health equity. Teaching methods include lectures, readings, class discussions, and written assignments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2150 - EPIDEMIOLOGY CARDIOVASCULAR DISEASES

Minimum Credits: 2

Maximum Credits: 2

In this course, we hope not only to guide you to a better understanding of cardiovascular disease and its epidemiology, but also to help develop your critical and presentation skills. We will do this by "critiquing" an article most sessions and having a twenty-minute student presentation based on recent statements of the American Heart Association.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2151 - PHYSICAL ACTIVITY EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

Physical inactivity is a major risk factor for many chronic diseases as identified in the Surgeon General's Report. This course will provide an up-to-date overview of the area of physical activity epidemiology, from the evidence of the relationships between physical activity and/or sedentary behavior and various chronic diseases, to methodological issues pertaining to the assessment of physical activity and/or sedentary behavior, to lifestyle efforts that includes physical activity in population studies, all of which will have a special emphasis on minority groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 OR 2041)

EPIDEM 2152 - STUDENT WORKSHOP IN CARDIOVASCULAR DISEASE EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This course is designed to be a supplement to the standard epidemiology coursework. It is a "hands on" workshop that will provide the opportunity for students to practice many of the concepts that they learn in class in the context of CVD epidemiology. It will also cover some areas which are not covered by the current curriculum, including an introduction to subclinical CVD, professional development, reliability analyses, and formal presentations of analysis results.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

EPIDEM 2160 - EPIDEMIOLOGY OF INFECTIOUS DISEASES

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to provide students with a basic understanding of epidemiologic techniques used to describe patterns of infectious disease transmission and risk for infection. In addition, students will learn about the epidemiology, public health impact, and prevention and control measures for selected infectious diseases. This course includes a series of lectures and practical exercises to introduce students to both the application of epidemiologic skills pertaining to infectious diseases and the public health concepts associated with specific infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

Course Attributes: Global Studies

EPIDEM 2161 - METHODS INFECTIOUS DISEASES EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases epidemiology.

Course includes lectures, readings, and mid-term (take home) and final examinations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2160

Course Attributes: Global Studies

EPIDEM 2163 - GLOBAL EPIDEMIOLOGY OF VACCINES AND VACCINATION

Minimum Credits: 2

Maximum Credits: 2

This course will provide students with knowledge and skills related to the study of vaccines and vaccination programs in the US/EU and in low- and middle income countries. This course will prepare students for entry-level positions in vaccine research or programming for academic, government,

or private sector institutions. This course will provide a broad introduction to a wide range of vaccine related topics ranging from biological mechanisms of vaccines to vaccine financing. Within this range of topics, the course will focus heavily on the epidemiological study of vaccine efficacy, safety, effectiveness, and impact. The course is organized around four themes: 1) introduction; 2) vaccines; 3) research and development; and 3) vaccination programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2166 - GLOBAL CONTROL OF AIDS/HIV AND TUBERCULOSIS

Minimum Credits: 1

Maximum Credits: 1

This course will deal with the epidemiology of infection with human immunodeficiency virus (HIV) and Tuberculosis (TB). Current knowledge of the natural history, biology, virology or microbiology, epidemiology and clinical aspects of AIDS as well as treatment and vaccine efforts against HIV and TB will be reviewed. Descriptive, analytic and experimental epidemiologic studies will be critically reviewed to provide a synthesis of our current understanding of the pathogenesis of these infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2170 - CHRONIC DISEASE EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will reinforce epidemiological concepts, research skills and public health concepts in the context of the study of chronic diseases and associated risk factors. The course will provide an overview of the prevalence, incidence and risk factors for major chronic diseases that face the U.S. population and the population around the world.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2171 - CANCER EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The course reviews basic cancer biology, reviews classic descriptive cancer epidemiology, considers the role for modern biomedical techniques in studies of cancer etiology, and reviews the active hypotheses regarding the etiology of common and uncommon human cancers. Specific topics include biomarkers and intermediate endpoints, tobacco and alcohol associated cancer, viral associated cancer, endocrine related cancer, and nutrition related cancer.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2180 - EPIDEMIOLOGICAL METHODS 1

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the epidemiology methods used in research. The course is designed for students in the Graduate School of Public Health with a modest statistical and data management background. Students will use SAS, a statistical software package, to analyze data sets. This course will focus on the appropriate application of various study designs and statistical methods for answering research questions, as well as the proper interpretation of results derived from these methods. Students will be expected to participate in class discussions that extend and apply the topics covered in lectures and reading to epidemiology research articles and epidemiology in practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041; CREQ: BIOST 2042; PROG: Graduate Sch of Public Health

EPIDEM 2181 - DESIGN AND CONDUCT OF CLINICAL TRIALS

Minimum Credits: 2

Maximum Credits: 2

The course surveys methods in the design and conduct of clinical trials. Clinical trials require successful collaboration of clinical, organizational and statistical skills. This course will focus on clinical and organizational issues, such as patient selection, recruitment, endpoint definition and protocol development. Throughout the semester, students develop a clinical trial proposal that emphasizes the application of the concepts learned. The course will complement courses in biostatistics on the statistical analysis of clinical trials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2183 - READING, ANALYZING AND INTERPRETING PUBLIC HEALTH MEDICAL LITERATURE

Minimum Credits: 2

Maximum Credits: 2

This course provides the opportunity to analyze, interpret and critique original research articles. Assignments consist of oral and written reviews of recently published papers. A literature review paper on a topic chosen by the student is also required. Lecture topics include assessing study validity, subject selection, bias, confounding, laboratory methods, results presentation, quality control, statistical analyses, library searches, and bibliographic data base development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180 and (BIOST 2042 or BIOST 2049)

EPIDEM 2185 - INTRODUCTION TO SAS

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to SAS, a statistical software package commonly used to perform data preparation, statistical analysis, and graphical presentation of results. The course consists of lectures and four lab sessions, where students will practice in a guided manner what was taught during the preceding lectures. The aim of this course is to teach students how to write basic SAS programs to import data, export data, create data sets within SAS, clean data, prepare data sets for analysis and apply statistical, as well as graphical, procedures. Students will also learn to make informed decisions regarding the appropriate SAS commands and options to use for these tasks and will be asked to use SAS for solving a set of simple specific research questions. Upon completion of this course students will feel comfortable using SAS as a tool to conduct research and know how to subsequently further develop their own SAS programming skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Epidemiology (MS or MPH or PHD or DPH)

EPIDEM 2187 - EPIDEMIOLOGICAL METHODS 2

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to advanced epidemiology and statistical methods used in clinical and public health research. The focus of the course is on the appropriate selection and application of statistical methods for answering research questions as well as the proper interpretation of results derived from these methods. Students will learn about the analysis of categorical data, survival data, and longitudinal data. The sample size and power issues involved when using these methods will also be covered. Students will be introduced to the causal inference framework, including the

use of propensity scores and inverse probability weighting, and dynamic modeling. Students will gain experience with the statistical methods studied in this course by analyzing data sets with SAS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2180 and BIOST 2041 and BIOST 2042

EPIDEM 2200 - EPIDEMIOLOGY AND HEALTH SERVICES

Minimum Credits: 2

Maximum Credits: 2

The course surveys epidemiologic methods and approaches, as applied to the study of health services and medical technologies. The course places particular emphasis on measurement and design issues which impact on the validity of health services research studies. The course develops a systematic approach to the assessment of medical technologies and to the application of epidemiologic and other scientific information to the formulation of health policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2210 - SPECIAL STUDIES - ESSAY

Minimum Credits: 1

Maximum Credits: 15

Research credits for master's essay. Also applies to credits for doctoral research prior to passing the doctoral comprehensive exam.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

EPIDEM 2213 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Properly qualified students may undertake special study or research which does not apply to the master's essay or doctoral dissertation. This study must be done with permission of the specific faculty member who will supervise the work.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

EPIDEM 2214 - PUBLIC HEALTH INTERNSHIP

Minimum Credits: 1

Maximum Credits: 4

This internship provides an opportunity to gain valuable knowledge and experience that would not normally be available through coursework. Placements may be outside of the University of Pittsburgh (e.g., in health services organizations, clinics, health departments, community based organizations working with "at risk" populations) or within the University. Each specific placement is to be agreed upon by each student and his/her faculty advisor, based on the strengths, needs and career/academic goals of students. Internship sites should provide a minimum of 200 hours of public health oriented work (generally 20 hours/week for 10 weeks). Students are encouraged to pursue placements beyond the online list and to think creatively about the domestic and international possibilities. Students are encouraged, but not required, to develop their master's essay based on their internship experience.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PREQ: EPIDEM 2110 and BIOST 2041

EPIDEM 2215 - TEACHING PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide doctoral students with opportunities to develop practical skills in teaching and mentoring students taking epidemiology courses. As teaching assistants, students may lecture, grade homework and exams, lead review sessions, hold office hours or maintain course blackboard sites. They may also help plan, update or expand course syllabi or teaching materials. Course goals include improvement in oral and written communication skills and exposure to the process of planning and implementing a course.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

EPIDEM 2220 - APPLIED SPATIAL/COMMUNITY EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide a conceptual understanding of the field of environmental epidemiology and to provide the spatial statistical tools for geospatial analysis. Topics will include: study design and approaches in environmental epidemiology investigations, statistical issues in the analysis and interpretation of such studies, and "hands on" training in software and tools for analysis of spatio-temporal variations in health and disease with respect to demographic, environmental, behavioral, socioeconomic, genetic, and infectious risk factors. The course will provide an overview of health effects of environmental exposures. This includes the investigation of cancer and other disease clusters, health effects of water and air pollution, radiation threats and exposures and proximity to toxic waste sites. Basic tutorials in Arc GIS (10.3) and Geoda freeware will be provided.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or BIOST 2041)

Course Attributes: Global Studies

EPIDEM 2221 - GEOSPATIAL MAPPING AND SPATIAL ANALYSIS IN EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide a conceptual understanding of the field of environmental epidemiology and to provide the spatial statistical tools for geospatial analysis. The course will provide "hands on" training in software and tools for analysis of spatio-temporal variations in health and disease with respect to demographic, environmental, behavioral, socioeconomic, genetic, and infectious risk factors. Basic tutorials in Arc GIS (10.3) and Geoda freeware will be provided. There will be 7 assignments over the term and 1 final project. The course is meant for all interested master's and doctoral students who have taken an introduction to Biostatistics and Introduction to Epidemiology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2041 and EPIDEM 2110

EPIDEM 2230 - ADVANCED TOPICS IN EPIDEMIOLOGICAL METHODS

Minimum Credits: 2

Maximum Credits: 2

This course covers methods for obtaining and presenting data from existing sources. Laboratory sections will cover data management and statistical programming in the context of large public-use datasets and clinical databases. Students will be introduced to topics such as analysis of imaging data, longitudinal clinical registries, and multi-level modeling. Students will work in groups on a secondary analysis research project that will be presented in seminar format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2180

EPIDEM 2250 - SEMINAR IN EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Areas of current epidemiology interest in research are presented. Often a general theme such as epidemiology of aging, women's health issues, disorders of immunity, is chosen. All departmental majors are expected to take this course.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EPIDEM 2260 - EPIDEMIOLOGICAL BASIS DISEASE CONTROL

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to gain understanding of the principles underlying disease prevention and the ability to apply these principles to the design, implementation and evaluation of prevention interventions for chronic and infectious diseases. The first part of the course will be devoted to learning the principles of surveillance and risk assessment development, the second part to application of observational data and efficacy and effectiveness studies to populations. The third part will focus on the evaluation of prevention strategies for chronic and infectious disease.

Throughout the course, there will be an emphasis on the interaction of biologic and clinical information with epidemiologic data and analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2261 - APPLIED EPIDEMIOLOGY FIELD INVESTIGATION METHODS

Minimum Credits: 2

Maximum Credits: 2

This course introduces students to the methods of applied field epidemiology used in applied epidemiology settings such as federal, state, local and tribal government agencies. Upon completion of this course, students will be prepared to conduct urgent public health investigations and write reports for public consumption. This course will also introduce students to applied epidemiology topic areas and their respective analytic methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and EPIDEM 2180; PLAN: EPIDEM - MS or MPH

EPIDEM 2295 - BIOCHEMICAL AND EPIDEMIOLOGICAL ASPECTS OF NUTRITION

Minimum Credits: 2

Maximum Credits: 2

Students and teachers select published manuscripts to evaluate as a group. Topics have included, but have not been limited to, adipokines, antioxidants, arginine and nitric oxide, cytokines, fructose, metabolism, hormones, isoflavones, lipoprotein metabolism, polyunsaturated fatty acids and vitamins. Basic biochemical characteristics of each species are reviewed, nutritional aspects discussed and population implications assessed with respect to cardiovascular disease, diabetes, HIV infection, and obesity.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2310 - PSYCHIATRIC EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will review the classification systems and methodological issues in psychiatric epidemiology, the research methodologies used, and the distribution of specific psychiatric disorders.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2340 - PEDIATRIC EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on epidemiologic approaches to the study of disorders that occur during childhood and will provide an overview of common physical and psychiatric childhood disorders. In addition to describing the epidemiology of the disorders, consideration will be given to the risk factors, research methods, and methodological issues in pediatric epidemiology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2400 - PSYCHOSOCIAL FACTORS IN DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course focuses on psychosocial and behavioral factors that influence the development and course of physical disease. Some of these factors can be modified, so identification can lead to improved health. This course is directed towards students who want to learn about the most common psychosocial factors implicated in disease, how they are measured, psychometric issues, and how to incorporate them into studies of disease and physical health. Students will also learn how to analyze and evaluate the strengths and limitations of studies that include psychosocial factors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110; PROG: Graduate Sch of Public Health

EPIDEM 2525 - BIOCHEMICAL, DIETARY, AND PHYSIOLOGICAL METHODS IN AN EPIDEMIOLOGY LABORATORY

Minimum Credits: 2

Maximum Credits: 2

Students are introduced to analytical methods that support exercise and nutritional initiatives. Initially students will attend a laboratory safety course. Biochemical assays will include measurements of antioxidants, fatty acids, hormones and vitamins using elisa, gc-ms, hplc, ria, spectrophotometric and turbidimetric methods. Sub-clinical tests will involve evaluation of intima-media thickness and pulse-wave velocity. Dietary protocols will encompass behavioral and surgical approaches to weight loss and the maintenance and interpretation of food records. Physiological techniques will target exercise interventions, the determination of energy expenditure, and appraisals of fatigue, power and strength. Anthropometric methods will involve bodpod, bioelectric impedance, dexta, skinfolds and underwater weighing. Imaging studies will evaluate brain images in relation to dementia. Results will be discussed with respect to aging, cvd, diabetes, obesity and osteoporosis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EPIDEM 2560 - NUTRITIONAL EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This interactive course, involving lectures and in-class learning activities, provides students with the skills and knowledge necessary to understand and critically evaluate the nutritional epidemiology literature and design studies in nutritional epidemiology. The course reviews current methods of assessing nutritional status, with a focus on dietary assessment, as well as biological markers, supplement use, anthropometry, and obesity. The course addresses the application of epidemiologic methods to studies of nutrition and disease, highlighting methodological issues and interpretation of findings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

EPIDEM 2600 - INTRODUCTION TO MOLECULAR EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

To provide students with an introduction to the key concepts in genetics and molecular biology, and the diverse ways they are used to solve practical problems in the epidemiology of disease and risk identification. This course will deliver the working knowledge of genetics and molecular biology necessary for critical assessment of molecular epidemiological studies. It will provide suitable preparation for more advanced and specialized study in molecular epidemiology. The student will develop familiarity with the ways molecular epidemiology is used to determine susceptibility to disease and response to interventions. The main topics covered are: genetic susceptibility, the use of biomarkers, and molecular association studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2601 - MOLECULAR EPIDEMIOLOGY TOOLS & TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

There is a steady stream of new methods and technologies entering the biomedical sciences that can be used to generate high-quality, quantitative data on the molecular and biochemical aspects of health and disease. There is tremendous value in applying these methods in epidemiologic studies to interrogate the molecular underpinnings of associations within populations, generate hypotheses on the mechanisms involved, to monitor the effects of interventions and to increase confidence in causal inferences. This course will be an opportunity for students to be exposed to methods for measuring the biologic processes that are relevant to DNA variation in populations, and to exposure effects that impact RNA and protein (and other molecule) expression. This course will go beyond the standard level of awareness of how to receive and analyze data from a laboratory. We will engage students in rigorous thought on how to pose questions on the underlying biology, conduct biomarker selection, design assays, and analyze and interpret data. We will spend ~50% of the time exposing students to hands-on experimentation at the laboratory bench. While, we will discuss 'omics' and high-dimensional methods in lectures, the hands-on work will be limited to single molecule analyses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2600 and EPIDEM 2180 and EPIDEM 2185

EPIDEM 2602 - APPLICATION OF MOLECULAR BIOMARKERS IN EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will advance the learning of students interested in molecular epidemiology by teaching practical aspects of measuring, quantifying and modeling levels of RNA and protein in human biological specimens (blood, tissue, etc). Some topics will include: selecting and validating biomarkers of RNA and protein for application in epidemiologic study design, candidate molecule vs. omics (high-dimensional) approaches, basic know-how in the design and execution of bioassays, and statistical issues in biomarker data analysis. Students will observe the work of a molecular epidemiology laboratory, and have opportunities for hands-on learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PREQ: Undergraduate Biology, more than one EPIDEM course, one BIOST course, and EPIDEM 2600.

EPIDEM 2640 - INJURY PREVENTION AND CONTROL

Minimum Credits: 2

Maximum Credits: 2

Injuries and violence are leading causes of morbidity and mortality in the United States and globally. This course is directed towards individuals with an interest in learning more about this burden and the current approaches being taken to reduce it. It provides an example of how the disciplines of public health can be used to study, understand, and address a significant public health issue. The course will provide an overview of the basic principles and practice underlying injury prevention and control. Lectures will identify the burden underlying major categories of unintentional and intentional injuries and review the multi-disciplinary approaches being used to reduce injuries and violence, in general, and with respect to specific injury and violence issues. In class discussion and problems will be utilized to enhance understanding of approaches to prevention.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

EPIDEM 2670 - INJURY EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide an introduction to and understanding of the epidemiology of injuries. The class will review the fundamentals underlying injury data and the methods used in injury research studies. Research in major injury topics; motor vehicle crash, violence, sports injury, and other topics will be discussed in depth. Through instruction and practice with data, participants will become familiar with the importance of injury as a public health problem, the strengths and weaknesses of injury data sources and injury surveillance systems, and injury research methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2710 - EPIDEMIOLOGY OF WOMEN'S HEALTH

Minimum Credits: 2

Maximum Credits: 2

This course presents an introduction to the influences of health and disease among women. It reviews epidemiologic approaches to understanding the basic etiology and primary prevention of diseases unique to or more common among women. There is a strong focus on life course approaches to understanding health and disease, including methods, study design and analytics appropriate for studies across the lifespan, from in utero to old age. Course includes lectures, seminars, and discussion.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 2720 - REPRODUCTIVE EPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course first presents a solid background of female and male anatomy and physiology, as well as fetal development. The course subsequently covers critical approaches and methodologic challenges unique to reproductive epidemiology. Specific topics include contraceptives, infertility, ectopic pregnancy, spontaneous abortion, gestational weight gain, preeclampsia, preterm birth, low birth weight, intrauterine growth restriction, infant mortality, and breastfeeding. Case studies of selected exposures and reproductive outcomes are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and (BIOST 2011 or 2041)

Course Attributes: Global Studies

EPIDEM 2721 - RESEARCH SEMINAR IN REPRODUCTIVE, PRENATAL, AND PEDIATRIC EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

This seminar focuses on areas of current research in reproductive, perinatal, and pediatric epidemiology. Fellows in the reproductive, perinatal, and pediatric training program are required to take this course, although it is open to any interested students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

EPIDEM 2725 - REPRODUCTIVE DEVELOPMENT FROM MODEL ORGANISMS TO HUMANS

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the molecular aspects of the transition from gamete to a reproductive organism. The course progresses through the building of germ cells, fertilization and stem cell participation to sex determination, gonad morphogenesis, puberty, menopause and pregnancy. This course highlights both human and model organisms to bring together diverse aspects of the cell and developmental biology of reproductive tissues and their impact on disease pathology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: PUBHLT 2015 or EPIDEM 2004

EPIDEM 2850 - PHARMACOEPIDEMIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide an introduction to the field of pharmacoepidemiology, which uses epidemiologic methods to examine the benefits or risk of medications in the population. This course will: explain what pharmacoepidemiology is and what types of study designs are used within this methodology, discuss the roles that pharmacoepidemiology studies have regarding drug use and health outcomes; describe the threats to validity that are possible in pharmacoepidemiologic studies and the variety of solutions available to avert or control for these threats. This information will prepare students to both interpret and critique, in writing and through presentations, studies from the pharmacoepidemiology literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

EPIDEM 2900 - ADVANCED EPIDEMIOLOGY OF AGING

Minimum Credits: 2

Maximum Credits: 2

This is an advanced course targeted towards Epidemiology PhD students. The purpose of this course is to understand in depth the current epidemiologic research findings regarding common health conditions and geriatric syndromes in the aging population. The course will focus on the common age related processes and chronic health conditions that contribute to disability and frailty and on enhancing successful aging and preventing disability. Advanced research methods will be reviewed as part of each class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2981 and (BIOST 2011 or 2041); PROG: Graduate Sch of Public Health

EPIDEM 2921 - GRANT WRITING

Minimum Credits: 3

Maximum Credits: 3

During this course, students will develop a grant proposal on a research topic of their choice. The proposal will be written in the format of the National Institutes of Health (NIH) National Research Service Award (NRSA) Individual Predoctoral Fellowship (Parent F31) grant application. The application will include specific aims and a research plan that includes significance, innovation, and approach. The proposal will also include a research training plan as required by the NIH. Students will also participate in a mock study section (grant review). Students are encouraged to use this opportunity to develop an application for submission to the NIH for support of their dissertation work.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110 and 2180 and 2183. RECOMMENDED: EPIDEM 2160 and 2170.

EPIDEM 2950 - EPIDEMIOLOGY OF AGING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

The workshops are designed as practical professional skill development to supplement to the additional coursework for the Epidemiology of Aging trainees and students. The workshop will include sessions on: presentations by the students from their research, journal article reviews, longitudinal

analyses techniques, and professional skills sessions. The presentation sessions provide an opportunity for students to present and refine their interim research and data analyses by obtaining feedback from peers, faculty and mentors on their work in progress. Journal article review sessions will provide an opportunity for students to identify and share current articles relevant to the epidemiology of aging and develop proficiency in the critical review of scientific literature. Emphasis will be placed on understanding emerging and novel methods in the field, particularly longitudinal statistical analyses techniques (e.g. handling missing data longitudinally; interpreting changes in slopes over time; joint modeling). A faculty member will help student leaders select articles (distributed before the meeting) and will work with students to encourage questions and discussion among the group. Professional skill sessions will vary by semester and cover topics such as post-doctoral career development, grant and professional medical writing, and longitudinal data analysis.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad HSU Basis

EPIDEM 2980 - BIOLOGY AND PHYSIOLOGY OF AGING

Minimum Credits: 1

Maximum Credits: 1

This course introduces students to the aging process as a foundation for research in the epidemiology of aging. Some topics for the course will include: Overview of aging physiology, molecular and biological processes of aging, model systems of aging and study designs that are currently relevant to human population research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2004 or 2712

EPIDEM 2981 - EPIDEMIOLOGY OF AGING-METHODS

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the methodological aspects of epidemiologic research in the field of aging and to critically evaluate research in older adults. The course will focus on: demography, study design, sampling, recruitment, retention, measurement of key variables and special populations. Students will write a critical review of a published article and comment on proposed future directions for epidemiologic studies addressing these questions in older populations. Throughout the course, a Problem Solving Learning Method will be applied by prompting the students to solve pragmatic issues. Examples include: How to measure a specific outcome? What type of chronic health conditions may be related to the research question? How to operationalize specific measures of interest (e.g.: how to create a composite score for co-morbidity assessment?). The course has been formulated to provide the students with the building blocks of the epidemiological study of aging. By the end of the course, the students will be able to critically evaluate various components of a study to further address the research questions in aging populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: EPIDEM 2110

EPIDEM 3100 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Research and dissertation for the doctoral degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Faculty Development

FACDEV 2200 - PRACTICUM ON UNIVERSITY TEACHING

Minimum Credits: 1

Maximum Credits: 3

This course in university teaching is designed for people who are teaching independently for the first time, or who have the flexibility in a recitation to design course materials and teach subject matter. It features the application of instructional principles to course development and materials.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Family Medicine

FM 5316 - FAMILY MEDICINE CLERKSHIP

Minimum Credits: 0

Maximum Credits: 0

Family medicine clerkship is a four week experience in primary care discipline that deals with comprehensive care of individuals and families with special focus on preventive medicine, addressing psychological and social determinants and consequences of illness. Clerkship has five goals: 1) improve and evaluate student clinical skills; 2) provide students with fundamental knowledge of diagnosis and management of common problems; 3) provide rational and scientific approach to preventive medicine; 4) learn unique aspects of family medical care; 5) economic influences of health care delivery and care of patient.

FM 5401 - FAMILY MEDICINE ACTING INTERN

Minimum Credits: 0

Maximum Credits: 0

Four week experience which fulfills the acting internship requirement in which students participate in a family practice teaching service at the level of a first year resident under direct supervision of senior residents and attending physicians. Students are responsible for initial patient evaluation and implementation of care, including writing orders and following up on evaluations. Students participate in night call and weekend coverage as well as all conferences. This is primarily an inpatient experience.

FM 5420 - INDIAN HEALTH SERVICE

Minimum Credits: 0

Maximum Credits: 0

This clerkship is offered at hospitals on the Navajo and other Indian reservations. Each student participates in a project, using clinical epidemiology or health survey techniques. Students may also have some clinical experience at hospitals or clinics; and opportunities to observe various aspects of the IHS field program. Students live in government quarters and work under the direct supervision of us public health service physicians. Overall

coordination and research supervision is provided by clinical epidemiology and preventive medicine faculty.

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5430 - FAMILY PRACTICE-MANAGED CARE

Minimum Credits: 0

Maximum Credits: 0

Clinical education course combining comprehensive clinical experience with an opportunity to learn about the organization and operation of a large group model HMO. Majority of time spent seeing outpatients under direct supervision of practicing physician, regular inpatient rounds and one or more extended hours sessions to participate in the care of urgently ill patients. Time scheduled each week to become familiar with health education, quality assurance, utilization, claims, marketing, and consumer affairs components of an HMO.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5431 - TOPICS IN FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

4 week elective consisting of 2 two week rotations selected from the following three options: 1) healthcare for the homeless, 2) managed care-how an HMO works, 3) medical care for the chronically mentally ill. Each student will also concurrently participate in the following two subjects during the 4 weeks: 1) preventive medicine and 2) critical review of the medical literature. Course objectives are to 1) see how the homeless obtain health care, 2) see how HMO control costs, 3) improve skills in managing medical illness in psych pts, 4) learn role of prevention in primary care.

Academic Career: Medical School

FM 5448 - FAMILY CENTERED MATERNITY CARE

Minimum Credits: 0

Maximum Credits: 0

This elective is intended to offer medical students the opportunity to develop a wide view of family centered maternity care on a community basis. Through a series of inpatient and outpatient clinical experiences, directed readings, and a "mini-project," students will extend their understanding of integrated, interdisciplinary family centered maternity care; barriers to prenatal care; creative programs for reducing low birth weight infants; use of doulas, midwives and others in prenatal and intrapartum care; the role of health insurers in augmenting systems of prenatal care; and the abuse of detrimental drugs in pregnancy, such as alcohol, tobacco, and cocaine. The student will be evaluated by various faculty members and the course director based on oral examination of the knowledge of the readings, the "mini-project," and engagement in the topic.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5450 - COMMUNITY FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This elective is intended to offer medical students opportunity to experience family medicine in a remote community setting which is realistic to how family physicians practice. The student will focus on developing the skills necessary to evaluate and treat patients in a community office setting. The student will participate in a SWPA AHEC community or practice project during the elective. The student will choose one SWPA AHEC family practice site for the duration of the elective. The SWPA AHEC preceptor will be responsible for clinical evaluation of the student.

FM 5451 - RURAL FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

Elective is intended to offer medical students the opportunity to experience family medicine in a rural community setting. Student will focus on developing skills necessary to evaluate and treat patients in a rural office setting. The use of technology to overcome distance and educational issues will be emphasized. Responsibilities will be determined by the knowledge and skills of the student, but in general will focus on both the inpatient and outpatient settings with a practicing family physician, a dentist, and a nurse practitioner.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5455 - PRIMARY CARE SPORTS MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This four-week elective is for the student who is interested in learning more about sports medicine. The musculoskeletal system, its exam and their treatment. Students will be exposed to a variety of sports/musculoskeletal injuries in a multi-provider outpatient sports medicine team approach. The course objectives are: to improve the student's musculoskeletal system exam skills; to assess and manage the various musculoskeletal injuries encountered frequently in a sports medicine/musculoskeletal outpatient setting; to develop an appreciation of the roles of surgeons.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5460 - FAMILY PRACTICE

Minimum Credits: 0

Maximum Credits: 0

Clinical experience, intensive exposure to comprehensive primary care. Multiple sites, general association with community hospitals, family practice residency program. 50-100% Clinical ambulatory, variable inpatient. Emphasis on development of problem-oriented interview and exam, formulation of cost-effective diagnostic approach, and establishment of comprehensive management plans. Knowledge of diagnostic and management strategy, presenting symptoms and chronic problems in office practice stressed.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5461 - EXTRAMURAL FAMILY PRACTICE

Minimum Credits: 0

Maximum Credits: 0

Clinical experience, intensive exposure to comprehensive primary care in primarily outpatient office settings. These family practice experiences will take place in community settings or medical schools away from the university of Pittsburgh but within the United States.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5462 - COMBINED FAMILY MEDICINE AND FAMILY PSYCHIATRY

Minimum Credits: 0

Maximum Credits: 0

This four-week elective focuses on psychiatric and general medical problems in a variety of patients. Student will work on the consultation/liaison service at St. Margaret's Hospital where the student will respond to requests from physicians for psychiatric evaluation of patients on inpatient units. The student conducts the clinical evaluation, investigates any ward management difficulties, assesses the role of the patients family in the clinical problem, makes treatment recommendations and when appropriate does follow up during the patient's hospital stay. The multi disciplinary team on the service attempts to integrate the biological with the psychosocial perspective to achieve a comprehensive view of patient care. Students will participate in family medicine case conferences, attend outpatient experiences at primary care clinics, participate in palliative care interventions and work on the medical care of the psychiatry patient (MCP) service at WPIC. Learning opportunities include: supervised clinical assessments; hospital rounds; case conferences and seminars. This elective can prepare a student for combined family medicine/psychiatry residency programs.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5465 - INTEGRATIVE MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This elective is designed to give students a broad exposure to complementary & alternative medicine (cam) modalities & a more in-depth exposure to somatic oriented approaches and pain management. Students will be exposed to practitioners and physicians in clinical settings covering disciplines including: acupuncture, chiropractic, osteopathic manipulative treatment, integrative medicine, integrative pain management and mind-body approaches. Students are expected to pick one clinical problem and explore the evidence-basis for cam modalities that may offer benefit in treatment.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5470 - PRACTICE-BASED PHARMACOTHERAPY

Minimum Credits: 0

Maximum Credits: 0

This is a 4-week elective where students will participate in a variety of activities (direct patient care, group/individual case-based discussions, chart reviews, and projects to improve skills in prescribing and management of medications. Special emphasis will be placed on obtaining a thorough medication and history and using evidence-based drug information databases. The student will learn rational prescribing strategies based on cost, formulary guidelines, effectiveness and individual patient characteristics. Contact will be with clinical pharmacists and family physicians.

Academic Career: Medical School

Course Component: Clinical

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5485 - CULTURAL COMPETENCY

Minimum Credits: 0

Maximum Credits: 0

Course objectives: to create better understanding of different health beliefs in different culture, resulting in students with facility in operating in a multicultural environment; foster an understanding of the challenges to physicians and the health care system of varying cultural beliefs and practices; improve the recognition of health beliefs and practice as they present in the clinical setting. The medical student will be introduced to a variety of cultural issues as they relate to medical care. Directed readings will be assigned to expose students to major health beliefs, disparities, challenges and practices of members of a variety of culture groups, including native Americans, African Americans, Arab Americans, eastern European immigrants, Latino Americans, and Asian Americans. Students will spend time with UPMC medical translators, attending to inpatients and outpatients, both in clinics and on house calls, learning both from the medical reasons for the patient seeking care, and the background health belief. Students will also attend health education events as available in community settings, including steps to a healthy community programs, center for minority health programs, Jewish community center programs, and other opportunities. The student will be expected to do a complete family health belief study on a selected patient's family, including recommendations for improvement of the quality of their health experience. Students will have a weekly meeting with the course director to discuss suggested readings and how the content applied to the clinical experiences.

Course Attributes: School of Medicine Year 4

FM 5505 - FAMILY MEDICINE IN HONDURAS

Minimum Credits: 0

Maximum Credits: 0

This is a four week elective to expose the student to a global health experience in a community based project working with shoulder to shoulder San Jose in Honduras. It will consist of 2 weeks in Pittsburgh and 2 weeks in San Jose del Negrito, Honduras, under the direction of shoulder to shoulder Pittsburgh and the UPMC family medicine global health (GH) team. In select situations a student with fluency in Spanish and prior international travel experience may construct a four week rotation entirely in Honduras. Each student will have an opportunity to practice clinical medicine and preventative care in a low resource setting in rural Honduras. There will be structured educational objectives in public health, tropical medicine and community oriented primary care. The team traveling to San Jose will work with the local nurse and physician in the local clinic setting as well as the various community projects. Each student will be active not only in the clinic setting but in the wider community as the project focuses on community development and community health.

Course Attributes: School of Medicine Year 4

FM 5812 - COMMUNITY-BASED PBLC HLTH POLICY

Minimum Credits: 0

Maximum Credits: 0

This is a 4-week elective during which students will learn the basic principles of identifying health problems from a population perspective & developing policies to help solve problems. Activities include required reading, working on existing projects with community based organizations, using health databases to answer questions about the health of communities & preparing a written & oral report based on each person's own assessment of a community, one particular problem within that community, & a rational approach to developing health policies to address it.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5815 - BIOETHICS CONFERENCE AND READINGS IN BIOETHICS AND FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The student will attend at his/her own expense, two (2) weeks of conference (s) in bioethics that is accredited (one week option can be discussed). The rotation is offered for four (4) weeks of credit. Independent readings, writings and discussion with Dr. Zimmerman or other faculty of the readings will be needed to complete the course. The student is encouraged to attend any lectures by the center for bioethics and health law. Objectives: use various ethical theories to analyze bioethical issues related to family medicine; understand perspectives on bioethical issues at the beginning of life and/or the end of life; interact with other professionals from a variety of backgrounds on bioethical issues; identify resources for understanding bioethical issues.

Academic Career: Medical School

FM 5840 - RESEARCH IN FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

This elective is available to interested and motivated students. This elective provides opportunities to learn basic research methodology which may include approach to experimental design, protocol development, data analysis and evaluation of results. Student may participate in ongoing research in the lab and on patients.

Academic Career: Medical School

Course Component: Directed Studies

Grade Component: H/HS/S/LS/U

Course Attributes: School of Medicine Year 4

FM 5899 - INDEPENDENT STUDY FAMILY MEDICINE

Minimum Credits: 0

Maximum Credits: 0

The purpose of this course is to provide the student with the opportunity to participate in ongoing clinical or laboratory research under the direction of a faculty preceptor. The student in collaboration with the faculty will develop a learning contract which includes objectives for the independent study method for student/faculty evaluation and timetable for completing the experience.

Academic Career: Medical School

Course Component: Independent Study

Grade Component: H/HS/S/LS/U

FM 5900 - FAMILY MED INDEPENDENT STUDY

Minimum Credits: 0

Maximum Credits: 0

Students interested in pursuing a particular course of independent study and/or research may choose this elective. Topic to be determined by student and preceptor.

Academic Career: Medical School

Course Component: Directed Studies
Grade Component: H/HS/S/LS/U
Course Attributes: School of Medicine Year 4

FM 5910 - LEADERSHIP/MANAGEMENT/ADMINISTRATION

Minimum Credits: 0

Maximum Credits: 0

This elective will offer the opportunity to develop a wide view of medical leadership and management. Through a series of directed readings, guided experiences, and a "mini-project," students will extend their understanding of clinical managerial sciences: quality management and improvement; utilization management; the US health care system; cost benefit analysis and the distribution of the health care dollar; medical staff administration and function; managed care systems, incentives and trends; measuring physician performance; and introductory accounting and financial management concepts. The student will be evaluated by various faculty members and the course director based on oral examination of the knowledge of the readings, the "mini-project," and engagement in the topic.

Academic Career: Medical School

Course Component: Practicum

Grade Component: H/HS/S/LS/U

Film and Media Studies

FMST 2151 - FILM HISTORY/THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will explore issues relating to film theory, history and research methodology. We will discuss dominant modes of film criticism and explore the creation of "cinema history". We will examine different formulations of this history, tracing how certain explanations of events in cinema have come to prevail, and how certain methods of writing about film have become institutionalized.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2152 - FILM HISTORY/THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g. Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2155 - FILM HISTORIOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This course will look into theories of film history exploring philosophies behind their social, political, economic, technological, and textual stakes. We will analyze how various forms of film history, intellectual and popular, assert their truth and credibility, and discuss how these kinds of claims might be supported and contested. We will explore the problems of writing film history, particularly in eras where little material survives for any kind of study or where language becomes a major barrier.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

FMST 2411 - FILM AND LITERATURE

Minimum Credits: 3

Maximum Credits: 3

This course examines the historic and theoretical relationship between film and literature. Among the topics to be considered are: (1) narrative structure in film vs. literature; (2) parallels between filmic and literature genres; (3) adaptation from literature into film; (4) the case of the writer/director; (5) the influence of cinema on writing; (6) the politics of high vs. low culture distinctions; (7) a comparison of film and literature criticism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2415 - WOMEN DIRECTORS IN FILM AND TELEVISION

Minimum Credits: 3

Maximum Credits: 3

This course surveys the history and contributions of women directors working in the film and television industries.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2416 - CINEMA AND TRAUMA

Minimum Credits: 3

Maximum Credits: 3

Trauma studies now stands at the forefront of contemporary cultural theory, straddling such disciplines as history, psychology, philosophy, and literary criticism. This seminar encourages graduate students to examine and contribute to the rapidly emerging sub-field of cinema/trauma studies. We will focus on the two mid-twentieth century events that continue to anchor many definitions of historical trauma: the Holocaust and Hiroshima. What do films that address these events teach us about the politics and ethics of representing experiences often referred to as unrepresentable? How does cinema force us to refigure debates about the "limits of representation" and the nature of "the event" itself? Is cinema an agent of memory or memory's eraser? A broad range of films will inform our discussion of such questions - documentary and fiction, tragedy and comedy, mass cultural successes and lesser-known art films or genre films, films from the past and present.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2417 - QUEER THEORY, QUEER CINEMA

Minimum Credits: 3

Maximum Credits: 3

This seminar explores film (also TV and theater) textuality and reception from a "queer" perspective. What is the relationship among queer authors, queer textuality and the subcultures that consume these texts? What place does non-heteronormative sexuality occupy within the production and reception of mass culture? The course will cover: foundational works in the history of sexuality; camp and gay subcultural reception; gay and lesbian authorship of both Hollywood and avant-garde films; the rise of queer television drama; and queer critical practices.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2418 - CINEMA AND PSYCHE

Minimum Credits: 3

Maximum Credits: 3

From the earliest years of film theory, writers have likened the discourse of cinema to the workings of the human mind. In 1916, for instance, Hugo

Munsterberg (in "the photoplay") drew parallels between film language and recollection, attention, and anticipation. This course (through readings and film screenings) will pursue such comparisons between cinema and the mind, investigating such topics as dream, memory, fantasy, nostalgia, perception, cognition, affect, etc.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2420 - CINEMA AND COUNTER-HISTORY

Minimum Credits: 3

Maximum Credits: 3

This graduate course focuses on visual media's connection to historicizing. It is concerned with theoretical writings that can be understood as offering versions of the past that run counter to received perceptions about historical forms through visual media. The readings and the films pay specific attention to various, often conflicting, theories, forms, and styles to identify the philosophic, aesthetic, and political stakes in activating the past. Among the texts to be studied that are related to philosophies of history are those of Walter Benjamin, Michel Foucault, Gilles Deleuze, Jacques Ranciere, Hayden White, Carlo Ginzburg, and Fredric Jameson as well texts on Andr Bazin, Jean-Luc Godard. Philip Rosen, Mary Ann Doane, Robert Rosenstone, and Vivian Sobchack. The films proposed for screening are Cabiria, Abel Gance's Napoleon, Scipione Africanus, Roberto Rossellini's the Rise to Power of Louis XIV, Pasolini's Mamma Roma, Kubrick's Paths of Glory, Carry on up the Khyber, Monty Python and the Holy Grail, The Camp at Thiaroye, Hyenas, Morfia, a History of Violence, the White Ribbon, and Il Divo.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2421 - GLOBAL FILM STARDOM

Minimum Credits: 3

Maximum Credits: 3

Historically, film stardom was examined from an American perspective (where it originated in Hollywood in the first decades of the last century), and theories of stardom emerged from an implicitly Hollywood-based understanding of cinematic fame. Instead, while not ignoring the American cinema, this course will take a global perspective on stardom, in terms of performers, films, and theories. Our approach to stardom will be a combination of the historical, the theoretical, and the textual. This means that in addition to studying individual stars, we will also 1) consider the phenomenon of stardom in terms of its origins and the cultural and national institutional conditions that support it, 2) analyze stardom as a public phenomenon to be understood in the context of specific cultures and audiences, 3) discuss various theories of stardom, celebrity, and public fame, 4) consider the manner in which issues of gender and sexuality impact notions of stardom, and 5) consider the relationship between stardom and spectator subjectivity. Although the course will be focused on cinema stardom, we will also briefly consider theoretical overlaps with the broader category of celebrity studies. In general, when we look at individual stars in the course, we will consider their broad "star text" which involves the interrelationship of screen roles, off-screen information, publicity material, and cultural context. Questions raised will include: what constitutes a "star text" in different historical contexts and ideas about the public and the private? What specifically do the media of photography and film bring to public fame? How does stardom presume and shape norms of identity pertaining to gender, sexuality, social class, race/ethnicity, bodily norms, and other cultural values? What does stardom mean in old and new transnational contexts? What is the relation between stardom, nation, and politics?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2422 - MEDIA AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

Mobility has been one of the central functions and consequences of media technologies, from papyrus in ancient history to mobile phones in the digital era. This seminar seeks to conduct a thorough theoretical mapping between media and mobility, creating a productive framework in which media can be examined through the ways in which they facilitate, mediate, and regulate various modes of mobility of humans, things, and ideas.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2440 - FILM SOUND: HISTORY, THEORY, AESTHETICS

Minimum Credits: 3

Maximum Credits: 3

Questions framing the course include the relation of sound and image, aural and visual pleasures, soundscapes and theories of shock and modernity, the relation of voice and body to subject formation, sound in silent cinema, the aesthetics of analog and digital sound in cinema, sound technologies and imperialism, theories of non-cinematic audio technology such as radio and gramophone, debates over the ontological status of recorded sound, film sound and space, sound in documentary cinema, and culturally specific theories of sound.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2485 - FILM AND ETHNOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This course will engage the visual and narrative strategies of the "ethnographic imagination" addressing issues of cultural representation, truth, visibility, and epistemological implications of how anthropologists and documentary filmmakers construct other cultures. We will start with the history of ethnographic cinema so as to stage a broader inquiry into forms of popular and everyday ethnography that have accompanied anthropological practice since its inception. In addition to problematizing distinctions such as science and entertainment, authenticity and hybridity, non-fiction and fiction, and self and other.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2508 - TELEVISION STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course will examine the emergence of television studies out of film studies during the 1980s and beyond. We will read key texts and examine approaches that have characterized this new orientation to the study of television: theories of television spectatorship, program and audience history, genre studies, and others. There will be screenings of key texts that have been considered crucial to the development of these ideas. The main emphasis will be to distinguish the televisual from the cinematic.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2510 - ANIMATION THEORY

Minimum Credits: 3

Maximum Credits: 3

This course will approach animation as a method, a way to rethink film theory beyond the assumption of an essentially photographic medium, and to unearth and explore the previously underdeveloped territories in theorizing and making sense of moving images.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2520 - FILM COMEDY

Minimum Credits: 3

Maximum Credits: 3

Since the earliest days of the cinema, film comedy has been one of the most profitable, prevalent and persistent genres-ranging from the primitive burlesques of Edison or Lumiere to the popular features of today. While comedy appeals to a viewer's sense of pleasure, it also addresses her intellect, for as Ousmane Sembene once said, comedy "makes people laugh but it also makes them think." That is precisely what we will do in this course: think through comedy. Here, it is interesting to note that, in 2010, the academic journal comic studies began publication.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2524 - GENRE AND FILM MELODRAMA

Minimum Credits: 3

Maximum Credits: 3

Course will interrogate the cultural impact of melodrama through the media. We will explore the various expressions of melodrama in gothic narratives, the "woman's film", historical films, "tragic" melodramas, family melodramas, and TV docudramas. Topics addressed include questions about common sense/folklore and the nature of mass and popular cultural representation, the problematic nature of genre, the relation between melodrama, history, and the construction of narratives of national identity in relation to race, gender and sexuality.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2525 - HORROR FILM

Minimum Credits: 3

Maximum Credits: 3

This seminar will investigate the key films and critical discussions surrounding the genre from its beginnings to the present, but not merely to perform a genre survey- instead we will use horror as a lens to ask wide-ranging questions about spectatorship, theory, history, aesthetics, and politics that have shaped and continue to transform film studies in profound ways.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2526 - WAR AND CINEMA

Minimum Credits: 3

Maximum Credits: 3

This course theorizes the convergence of military and cinematic technologies, focusing on the logistics of perception, bio-politics, and the relation of cinematic/military technologies to the body. Topics include the military, medical, and cinematic uses of the scope and the screen, theories of human vision and ocularcentrism, new conceptions of space and time, the temporal convergence of production and exhibition (speed and acceleration), new media technologies, and the blurred boundaries of war and entertainment.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2540 - ESSAY FILM/DOCUMENTARY FILM

Minimum Credits: 3

Maximum Credits: 3

This course will explore documentary from critical and creative vantage points. Key theoretical texts from the interdisciplinary field of documentary studies will address the pertinent ethical, formal and thematic concerns.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2542 - DOCUMENTARY THEORY & PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will explore documentary film and video from critical and creative vantage points. Students will be introduced to key discussions from within the interdisciplinary field of documentary studies while also working on individual and collaborative short documentary projects and exercises. Hands-on training in audiovisual recording and editing techniques will be provided. No prior production experience is required.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FMST 2570 - KEY CONCEPTS IN NEW MEDIA

Minimum Credits: 3

Maximum Credits: 3

What exactly is "information"? What is an "interface"? What does it mean when we speak of a "media platform"? These terms and concepts form the backbone of the major theories and discourses in new media, which produce a rich vocabulary that has yet to be rigorously defined. This course aims to provide a theoretical map to navigate the rapidly expanding fields of media studies by critically interrogating a set of key concepts that have been extensively used to deal with the technologies, forms, materials and cultures of new media. We will discuss the meaning, usage, and genealogy of such concepts as "network," "cybernetics," "hardwire," "infrastructure," and "system," which have animated a wide range of researches and debates. By critically engaging with these key concepts, we hope to not only reconstitute a framework for theorizing contemporary media, but to explore the very notion of "media" as a discursive formation.

FMST 2760 - THEORY/TECHNOLOGY/MEDIA FROM PLATO TO VIDEO GAMES

Minimum Credits: 3

Maximum Credits: 3

This course will examine a number of key theoretical debates in the history of visual and verbal media, beginning with the technology of writing itself and moving into the invention of the codex, the printing press, and 19th and 20th century forms of imagistic production. Of particular concern will be modes of competition and symbiosis among various technologies of representation at particular historical moments, such as the relations between speech and print, poetry and theater, painting and photography, and cinema and digital media. Although case studies will be drawn from a number of historical periods, special attention will be paid to the Renaissance and to recent decades, when media of all kinds have come under increasing technological and theoretical pressure. Students will have the opportunity to extend the seminar's concerns to their own areas of research.

Film Studies - Graduate Program

FILMG 2451 - FILM HISTORY/THEORY 1

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema up to 1960, taking up such topics as: the origins of cinema; the development of narrative; the rise of Hollywood and its global appeal; national and international cinemas; the relation between film and the other arts; the coming of sound; arguments between realist and modernist movements; the avant-garde; and the technological and social history of cinema. These topics will be addressed through consideration of major film movements and significant films. Students will also be introduced to key theorists from this time, including Kuleshov, Vertov, Eisenstein, Balzs, Mnsterberg, Lindsay, Epstein, Kracauer, Benjamin, Arnheim, Bazin, and others.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FILMG 2452 - FILM HISTORY/THEORY 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will focus on the history and theory of cinema from 1960 to the present. While individual theorists and historians will be discussed (e.g., Cavell, Deleuze, Frampton, Kluge, Gunning, Mulvey), there will be special attention paid to historical and theoretical arguments within film studies, such as: psychoanalysis and theories of spectatorship; apparatus theory; historicism and archival research; film and philosophy; theories of genre, adaptation, and performance; neo-formalism and cognitive theory; and the rise of new media, from television to digital cinema and from Imax to video games. These arguments will be explored through major film movements and film-makers, taking up topics such as international art cinema, the changing Hollywood studio system, the role of political cinema, and the growing importance of documentaries.

Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

FILMG 2905 - PROSEMINAR IN FILM AND MEDIA STUDIES

Minimum Credits: 1
Maximum Credits: 1

All students in the Ph.D. Film studies program are required to complete a one credit proseminar in film and media studies prior to taking their comprehensive examinations. Enrolled students attend a designated lecture by invited scholars, as well as an associated ninety-minute seminar conducted by a film studies faculty member concerning the work of the speaker or the topic addressed. The faculty member conducting the seminar will typically choose pertinent readings to be completed prior to the lecture and seminar. The proseminar is usually offered twice a year: once during the fall term and once during the spring, with a lecture and its associated seminar scheduled each term. Invited scholars may or may not participate in the seminar meetings. Dates and times of visiting speakers and the associated seminars will be announced well in advance so that students may plan their schedules accordingly. A student in the program may repeat the proseminar for up to three credits. The proseminar in film and media studies seeks to expand and enhance our graduate students' experience of the critical exchange of ideas, by involving them more fully in the contemporary research being conducted by film and media scholars from around the world.

French

FR 2000 - INTRODUCTION TO GRADUATE STUDIES IN MODERN LANGUAGES AND CULTURES

Minimum Credits: 1
Maximum Credits: 1
This one-credit course offers an introduction to graduate study in modern languages and cultures. It will help you adjust to your graduate program and will cover the nuts and bolts of how to take seminars, do readings, teach, balance your various obligations and meet the emotional and life challenges of graduate school. What matters most in teaching is not skills but a sense of personal identity and a strong relationship to the disciplinary knowledge. We will engage with the latest research in positive psychology, resilience, pedagogy, deep learning, creativity, sociology of work and executive coaching. The class will prepare you better to move among different kinds of professional situations within and outside academia.

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FR 2710 - INTRODUCTION TO LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

In this course intended for beginning graduate students in the modern languages, students will survey major movements and concepts in literary and cultural theory of the 20th/21st centuries. These theories have provided us important ways to think about how to read and interpret literature, film, and other cultural artifacts, and, as such, are an important aspect of graduate studies in the humanities. This course is meant to provide students a general background in theory that they can further develop in certain areas as they continue their studies. The course will be taught in English, and all readings will be available in English.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Russian & East European Studies, West European Studies

FR 2715 - TOPICS IN LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

In this course, students will examine a special topic in literary and cultural theory. The course may be organized around a given theoretician, a theoretical movement, or a problematic. Students are expected to have some background in literary and cultural theory.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FR 2761 - FRENCH STUDIES GENDER STUDIES

Minimum Credits: 3

Maximum Credits: 3

What does it mean to put gender/sexuality studies and French studies into productive dialogue? This course treats selected topics related to gender and sexuality in French/Francophone studies. Texts studied might include film, theater, news media, literature, autobiography, and others. Texts may come from a variety of time periods from the middle ages to the twenty-first century. Gender/sexuality will be understood in a broad sense, including women/feminism, masculinity, queer and trans*.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's Studies

FR 2765 - COMPARATIVE FRANCOPHONE CULTURE

Minimum Credits: 3

Maximum Credits: 3

This seminar examines 'Francophonie' through the juxtaposition of francophone cultural production and theory from different areas of the world

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

FR 2766 - TOPICS-MEDITERRANEAN STUDIES

Minimum Credits: 3

Maximum Credits: 3

This seminar focuses on francophone Mediterranean culture and transitional studies

Gender, Sexuality, and Women's Studies

GSWS 2058 - FEMINIST SOCIAL WORK

Minimum Credits: 3

Maximum Credits: 3

This course focuses on gender and social work, beginning with a critical examination of the concept of feminist practice, with attention to oppression, power, and privilege in helping relationships and in women's lives more broadly. It explores meanings of gender as it intersects with race/ethnicity, class, sexuality, age, and ability in the lives of women in general and specifically as social workers and clients. Taught in a seminar format, this course examines topics such as work, welfare, family, violence, justice system involvement, health, mental health, and women as agents of change and is appropriate for students concentrating in micro or macro levels of practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's Studies

GSWS 2150 - TRANSNATIONAL FEMINISMS

Minimum Credits: 3

Maximum Credits: 3

This class will look at the situation of women in international perspective. We will examine how feminist organizations operate in difficult national and local contexts and how women's rights have been addressed through international organizations such as the United Nations and the World Court. Through case studies, we will consider a number of contentious issues in global feminism, including sexual assault, sex tourism, and the global assembly line, and the role of feminism in national liberation movements.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GSWS 2240 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

This graduate course addresses a current topic in gender, sexuality, or women's studies. Topic varies by instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Gender, Sexuality & Women's Studies

GSWS 2242 - FEMINIST THEORY

Minimum Credits: 3

Maximum Credits: 3

This course is an interdisciplinary introduction to feminist theory. It will examine a wide range of feminist theories and theories of gender, drawing from works in history, social sciences, philosophy, legal studies, and literary theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's Studies, Global Studies

GSWS 2252 - THEORIES OF GENDER AND SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of important tendencies and controversies in gender and sexuality studies, emphasizing emerging directions in scholarship as well as foundational readings. Gender and sexuality studies are interdisciplinary fields in conversation with feminist theory and queer theory as well as a host of academic disciplines. Drawing on readings from a variety of disciplines (including sociology, anthropology, history, law, political science, philosophy, and literary studies) and sampling a range of methodologies, this course works through some of the key moments, movements, and problems that have shaped and continue to shape contemporary thinking about gender and sexuality. The course also serves as a graduate-level introduction to the skills and practices of reading, discussing, and writing in a variety of theoretical idioms.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Attributes: Gender, Sexuality & Women's Studies

GSWS 2262 - GENDER, ETHICS, AND THE BODY

Minimum Credits: 3

Maximum Credits: 3

This seminar explores what it means to take a feminist approach to something, particularly ethics, and what it means to examine the gendered nature of something, particularly bodies, ethics, and even feminist approaches themselves.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's Studies

GSWS 2270 - QUEER THEORIES

Minimum Credits: 3

Maximum Credits: 3

Study of recent theories of sexuality, emphasizing work in lesbian, gay, transgender, and queer studies. Consideration of the development of 'queer' as critical category (including its limitations), and of the history of queer theory and LGBT studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Gender, Sexuality & Women's Studies

GSWS 2902 - DIRECTED STUDY

Minimum Credits: 3

Maximum Credits: 3

Individual study on a topic related to gender, sexuality, or women's studies under supervision of a faculty member from the program. A variety of individual research and reading projects not covered in other courses may be undertaken.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Attributes: Gender, Sexuality & Women's Studies

Geology

GEOL 2000 - RESEARCH AND THESIS MS DEGREE

Minimum Credits: 1

Maximum Credits: 12

This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a master's degree in geology.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Geology and Planetary Science (MS) or Geology and Environmental Sci (MS)

GEOL 2001 - SCIENTIFIC COMMUNICATION

Minimum Credits: 3

Maximum Credits: 3

The Scientific Communication course is required for all new MS and PHD students in Geology and Environmental Science. It is designed to introduce students to the department and develop communication skills. The goal of the class is to provide a foundation for students to develop a proposal and research strategy for their thesis project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Geology and Planetary Science(PHD or MS) or Geographical Information Sys (MS) or Geology and Environmental Sci (PHD or MS)

GEOL 2002 - MINEROLOGY/METROLOGY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: GEOL 0800 or 0820 or 0860

GEOL 2006 - ENVIRONMENTAL MODELING

Minimum Credits: 3

Maximum Credits: 3

Models allow scientists and others to represent features and behaviors of environmental systems in order to promote inquiry, develop insight, test hypotheses, and consider solutions to problems. The class will use primary literature and hands on experiences with computer models to introduce environmentally relevant modeling tools. Topics covered will include process-based models of disease, climate, ice, ecosystems, ecosystem services, hydrology, predator-prey systems, and competition among species for resources. Students will have the opportunity to conduct original research projects either by developing their own environmental model or by using existing models. No programming experience is required. Students should have some upper level undergraduate coursework in environmental studies.science, biology, geology, physics or chemistry and be comfortable thinking quantitatively.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2015 - GEOLOGY COLLOQUIUM

Minimum Credits: 1

Maximum Credits: 1

Geology colloquium is a required course for MS and PhD students in geology and planetary science each term. It is a formalization of the seminar series with weekly guest speakers from industry, academia, and government. Each seminar will focus on a different research topic in the earth sciences and describe active and on-going projects of immediate interest to students.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad SN Basis

GEOL 2020 - ANSWERING REGIONAL CHALLENGES IN WATER SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

A graduate-level seminar class devoted to examining local/regional challenges in water sustainability. Course components will include guest presentations by water practitioners, hands on data synthesis and analysis, group/class projects, and development of infographics and briefing sheets for key water challenges.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

GEOL 2021 - ADVANCED PETROLOGY

Minimum Credits: 3

Maximum Credits: 3

The origin and characteristics of the common igneous rocks and minerals are studied in light of natural and synthetic rock systems. Main topics covered are equilibrium relations of the main silicate systems, petrogenesis of the principal igneous rock types and their relation to plate tectonic regimes, and generation and source of magma.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2045 - STATISTICS FOR EARTH SCIENCE

Minimum Credits: 3

Maximum Credits: 3

A statistics course geared toward environmental science and geology majors with an emphasis on applying data analysis and statistical techniques to environmental data. Topics will include: visualizing data, summary statistics, correlation, selected parametric statistics (t-tests, general linear models), selected non-parametric methods, statistical inference, and experimental design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2049 - PALEOCLIMATOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course presents the different types of data used to study the earth's climatic history and long-term climatic variability. Particular emphasis is given to the climatic changes during the last Cenozoic -- the so called glacial ages. Topics of discussion include time scales of climatic change, types of paleoclimatic records and their limitations, numerical climate models, the causes of climatic change, and the importance of paleoclimatic research in forecasting the future.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2054 - SOILS: GEOBIOCHEMICAL LANDSCAPES

Minimum Credits: 4

Maximum Credits: 4

An overview of soils with a strong emphasis on landscape scale process. The course consists of lecture and laboratory/field work. The lecture will include description of physical and chemical soil properties and processes, discussion of major soil classifications and description of ramifications at the landscape scale.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2060 - GEOMORPHOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course is a survey of the major landform features found on the earth's surface. Each landform type is first described qualitatively and then examined in terms of the processes, such as stream flow or glacial activity, which cause its development. The purpose of the course is to familiarize students with geomorphic principles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2110 - PLATE TECTONICS

Minimum Credits: 3

Maximum Credits: 3

The geometry and kinematics of plate tectonics are developed together with the geophysical evidence for plate motions in the first half of the course. The second half involves a geological examination of convergent, divergent, and transform-dominated terranes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2120 - BASIN ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

The integrated study of sedimentary basins as geodynamic entities, including tectonic environment, geologic history and associated strength of the lithosphere, rock weathering and erosion, and sediment transport. The class will give students a background in driving mechanisms for basin formation and subsidence, sedimentary record preservation and alteration, sedimentary geometry, facies and petrology and provide a basic understanding of the continuum mechanics equations that approximate basin formation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: GEOL 1100 and GEOL 1020; LVL: Graduate or PhD

GEOL 2150 - SURFACE WATER HYDROLOGY

Minimum Credits: 4

Maximum Credits: 4

This course shall provide an Earth systems science overview of the processes that govern the hydrologic cycle including precipitation, evapotranspiration, runoff and discharge, infiltration, and groundwater. The course shall emphasize the movement of water through the atmosphere, over the land surface, and within the unsaturated and saturated zones.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2151 - GROUNDWATER GEOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course focuses on physical and chemical processes controlling water movement and composition in sub-surface environments. The lab focuses on practical field methods for the characterization of groundwater.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2446 - ADVANCED GEOGRAPHICAL INFORMATION SYSTEM

Minimum Credits: 3

Maximum Credits: 3

Using advanced geographical information systems technologies and geospatial analysis techniques students will extend their knowledge of geographical information systems to include raster, geostatistical, network, model, and 3d/4d based analysis completing complex analysis of real world data sets.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: GEOL 2449

GEOL 2447 - GEOPHYSICAL WELL LOGGIN'

Minimum Credits: 3

Maximum Credits: 3

This course introduces the ersiarcview tool. Numerous computer workstation based assignments introduce the student to gis landbases and gis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2449 - GIS, GPS, AND COMPUTER METHODS

Minimum Credits: 3

Maximum Credits: 3

The goals of this course are to gain expertise in spatial analysis and geographical information systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

GEOL 2460 - APPLIED REMOTE SENSNG AND GPS TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

Designed as a follow on to the introduction to remote sensing course this advanced class emphasizes field-oriented problems, data collection, and validation. The ultimate goal is to explore the connection between remotely-gathered imagery and the real-world factors which influence those data. Students taking the course should have had at least 1 semester of high school or college physics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2461 - ADVANCE REMOTE SENSING

Minimum Credits: 3

Maximum Credits: 3

This course is offered in conjunction with the introduction to remote sensing (geol-1460) - this course provides a foundation in the theory and techniques of remote sensing and geospatial data visualization spanning the electromagnetic spectrum from the ultraviolet to microwave wavelength

region. Topics will include light/matter interaction, optics and sensor design, image analysis using commercial software, as well as current applications of remote sensing to science and engineering problems. The course and integrated image-processing laboratory are designed to provide you with an appreciation of current remote sensing issues, the geologic and human processes that impact remotely-gathered data, and how those processes can be measured using remote sensing. Students taking this course will participate in an independent research project involving remote sensing theory/data analysis. Students with no prior remote sensing background will also be required to participate in the geol-1460 lecture and computer labs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Geology and Planetary Science(PHD or MS) or Geographical Information Sys (MS) or Geology and Environmental Sci (PHD or MS)

GEOL 2468 - QUANTITATIVE RESEARCH METHODS IN EARTH SCIENCE IN MATLAB

Minimum Credits: 4

Maximum Credits: 4

Quantitative methods are essential for solving problems in Geologic and Environmental Sciences and are often implemented by programming in specialized software. This course focuses on methods for quantitative data exploration and hypothesis testing with Mat lab. The course will introduce students to programming with Mat lab, and use Mat lab to implement and explore a variety of quantitative methods, including: uni- and multi- variate statistics, dimensional analysis, signal processing, spatial extrapolation, and numerical modeling. Classes will include lectures and group assignments that will use various methods to detect patterns in data, pose hypotheses regarding these patterns, and test them.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2469 - TOPOGRAPHIC ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Topographic analysis: Landscape topography can reveal valuable information about the processes, evolution, and external conditions that formed a landscape. This class will introduce students to different methods of topographic analysis and the information they can provide. It will include examination of algorithms for analysis of digital elevation models (DEMs), ways for filtering DEMs for features of interest, and analysis of different topographic attributes and how they relate to factors such as climate, tectonics, and anthropogenic modifications. Methods will be executed and developed using Matlab and ArcGis. The class will focus on the analysis of a specific environment (the specific environment/s will vary from year to year and may include: urban areas, mountain-ranges, Arctic vs Tropical topography etc.). It will use the analyses methods we will learn, together with literature on this specific environment to explore questions regarding the topographic characteristics and environmental conditions that prevail in this environment. Knowledge of Arc GIS and Matlab required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2470 - DYNAMIC EVOLUTION OF EARTH'S SURFACE

Minimum Credits: 4

Maximum Credits: 4

Earth's topography is shaped by interactions between surface, tectonics and climatic processes. This course combines literature reviews with analytical and numerical models to examine how these processes act to modify Earth's surface over long time periods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2501 - ORGANIC GEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

This is mainly a lecture course that will examine the carbon cycle and the life cycle of the organisms that are responsible for the eventual

accumulation of organic materials in sediments. The processes involved in the simultaneous preservation and transformation of organic materials into coal, petroleum, natural gas, kerogen and other dispersed organics will be reviewed in light of modern concepts of thermal maturation processes. The structures of naturally-occurring organic materials in sediments will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2510 - AQUATIC AND SEDIMENTARY GEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

THIS COURSE WILL EXAMINE THE CHEMISTRY AND GEOCHEMISTRY OF MODERN AND ANCIENT AQUATIC AND SEDIMENTARY SYSTEMS, INCLUDING OCEANS AND FRESH WATERS. STUDENTS WILL GAIN AN UNDERSTANDING OF THE BIOGEOCHEMICAL PROCESSES OCCURRING IN AQUATIC SYSTEMS, AND THE GEOCHEMICAL SIGNATURES THEY LEAVE IN THE SEDIMENTARY RECORD.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: (CHEM 0110 and GEOL 0055) or GEOL 0800 or 0860

GEOL 2515 - ENVIRONMENTAL GEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

This course explores the complex interactions of earth's rock, water, air, and life systems that determine the chemical characteristics of our environment. We will examine the distribution, cycling, and transport of chemical compounds in the atmosphere, hydrosphere, and terrestrial environment on local and global scales. Topics will include water chemistry, organic and inorganic pollution and related toxicology, hazardous wastes, acid rain, acid mine drainage, photochemical smog, ozone depletion, and global climate change. A class project involves chemical analysis of student-provided water samples.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2520 - RADIOGENIC ISOTOPE GEOLOGY AND GEOCHRONOLOGY

Minimum Credits: 3

Maximum Credits: 3

Introduction to isotope systematics (including mass dependent fractionation, radioactive decay, generation of cosmogenic nuclides, and nucleosynthesis), and application of isotope systems to problems in geochronology, geology, hydrology, oceanography, biology, and Cosmo chemistry.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2525 - STABLE ISOTOPES

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with a thorough introduction to the stable isotope systematics of light elements (hydrogen, carbon, nitrogen, oxygen, and sulfur). The course examines the fundamental concepts of isotope equilibrium and kinetics, physiochemical and biogenic mechanisms of isotope exchange, and the principles of mass spectrometry and stable isotope extraction techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: CHEM 0110 and GEOL 2520

GEOL 2640 - ADV GEOHAZARDS & RISK MGMNT

Minimum Credits: 3

Maximum Credits: 3

The geological and natural processes that affect the human environment in catastrophic ways are examined in this class in terms of science, prediction, mitigation, avoidance and the policy/safety issues involved. These problems commonly result from human activity modifying and impinging the natural geologic processes. Detailed topics covered include the four primary hazards that are common in the united states: earthquakes, hurricanes, wildfires, and flooding.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2750 - VOLCANOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course focuses on a specific but different topic of volcanology each time it is offered. The course is offered dependent on student demand. Courses that have been offered in the past include: describing and interpreting pyroclastic rocks, exploring explosions and glaciovulkanism. All the courses include discussion in the classroom, especially of recent volcanological literature, study of hand samples and microscope study of thin-sections.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 2853 - WATERSHED HYDROLOGY AND BIOGEOCHEMISTRY

Minimum Credits: 3

Maximum Credits: 3

Understanding the science of watersheds is critical to improving water quality. This course will examine surface water hydrology, biogeochemistry, and management of watersheds. In addition, we will focus on how varying land uses influence the dynamics of hydrology and biogeochemistry across these systems. Student will develop an understanding of the biogeochemistry of various major elements in watersheds, including nitrogen, carbon, sulfur, and mercury, and how these elemental fluxes are exchanged through atmospheric-terrestrial-aquatic interactions. Students will be expected to demonstrate critical thinking, communication, and analytical skills through student-led lectures, journal discussions, and projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

This course permits graduate students to explore specific topics in the geological sciences. The course is designed in a more flexible format than a directed study, stressing a higher degree of independent library research.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

GEOL 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

This course is designed to permit graduate students the opportunity to accomplish research necessary for the completion of a PhD degree in geology.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Geology and Planetary Science (PHD) or Geology and Environmental Sci (PHD)

GEOL 3010 - PLANETARY PETROLOGY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 3410 - EXPLORATION GEOPHYSICS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on exploration geophysics including reflection seismic, well log, gravity, electromagnetic, magnetic, electrical, and other methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3853 - ECOSYSTEMS: LAND-WATER-ATMOSPHERE INTERACTIONS

Minimum Credits: 3

Maximum Credits: 3

Understanding the science of watersheds is critical to improving water quality. This course will examine surface water hydrology, biogeochemistry, and management of watersheds. In addition, we will focus on how varying land uses influence the dynamics of hydrology and biogeochemistry across these systems. Student will develop an understanding of the biogeochemistry of various major elements in watersheds, including nitrogen, carbon, sulfur, and mercury, and how these elemental fluxes are exchanged through atmospheric-terrestrial-aquatic interactions. Students will be expected to demonstrate critical thinking, communication, and analytical skills through student-led lectures, journal discussions, and projects.

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

GEOL 3901 - TOPICS IN SEDIMENTOLOGY

Minimum Credits: 3

Maximum Credits: 3

This is a course designed to permit the teaching of new and significant developments in the field of sedimentology. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

This is a course designed to permit graduate students an opportunity to explore facets of research possibly leading to project/thesis/dissertation topic.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3904 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

This is a course designed to permit graduate students an opportunity to explore facets of research possibly in the area of information science systems

related to their project/thesis/dissertation topic.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3906 - TOPICS IN GEOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is a course designed to permit the teaching of new and significant developments in the field of geology. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3908 - TOPICS GEOLOGY

Minimum Credits: 3

Maximum Credits: 3

This is a course designed to permit the teaching of new and significant developments in the field of geology. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3924 - TOPICS IN GEOMORPHOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is a course designed to permit the teaching of new and significant developments in the integrated fields of geomorphology, tectonics, and climate. The theory, techniques and applications are emphasized as is the use of current data sets through a combination of readings, lectures and analyses. Field trip is associated with this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

GEOL 3925 - TOPICS IN PALEOLIMNOLOGY

Minimum Credits: 3

Maximum Credits: 3

This graduate class will focus on the study lake sediments as archives of climatic change. Lake deposits form a significant part of the geologic record and contain high resolution records of past climatic and environmental changes in continental environments. Because lake deposits are the product of diverse geochemical experiments they provide a framework to discuss numerous problems which are of general interest in both chemical sedimentology and general sedimentology. Readings assigned from current journal articles.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

GEOL 3931 - TOPICS IN PALEOENVIRONMENTAL

Minimum Credits: 1

Maximum Credits: 1

This is a course designed to permit the teaching of new and significant developments in the field of paleo environmental analysis. It permits maximum flexibility enabling presentation of subject matter not normally treated in formal geology courses.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

GEOL 3946 - PYTHON SCRIPTING

Minimum Credits: 3

Maximum Credits: 3

The goal of this course is to gain expertise in programming methods using environmental systems research incorporated arcobjects and the visual studio .net programming environment of microsoft. Arcobjects is a software technology based on the com protocol and can be used within any compliant programming language. Our goal in this class is to gain fundamental skills in visual basic programming using the microsoft developers studio visual basic environment through applied examples and homeworks. After students have gained some programming expertise they will immediately begin programming the arcgis desktop using arcobjects technology.

Academic Career: Graduate

Course Component: Lecture

Course Component: Seminar

Grade Component: Grad Letter Grade

GEOL 3970 - REMOTE EXPLORATION OF THE MOON AND MARS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the theory, technology and science of the recent remote sensing data sets from the moon and mars. Numerous missions from rovers to orbiters have produced datasets that span the electromagnetic spectrum, and these will be the focus of this graduate-level, seminar-style class. Students should have had a remote sensing course and will also complete an independent study utilizing either lunar or mars remote sensing data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GEOL 3971 - TOPICS IN REMOTE SENSING: ORBITAL IMAGING OF THE EARTH

Minimum Credits: 3

Maximum Credits: 3

Orbital remote sensing of the earth has been a reality since the first imaging satellites were launched in the early 1960's. Hundreds of satellites and

thousands of sensors are now currently in orbit measuring diverse data sets important for geological, weather, environmental, and climate processes. This graduate-level, seminar style course will explore many of these missions and sensors by the way of directed journal articles and in-depth discussions. Students will also complete an independent project using one or more of these datasets and present the results at the end of the semester.

Academic Career: Graduate

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Attributes: West European Studies

GER 2110 - INTRODUCTION TO LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

This course offers selected readings in 20th century literary theory, with emphasis on the German tradition. We examine such "schools" of literary theory as psychoanalytic (Freud), Marxist (Lukacs, Benjamin, Brecht), and reception theory (Jauss, Iser). Each is discussed within its historical context; moreover, the implications of each is tested in relation to a selected work of literature. In addition, we study the critical reception of these schools of thought, as well as their relevance to contemporary debates.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Russian & East European Studies, West European Studies

GER 2112 - THEORY IN CULTURAL STUDIES

Minimum Credits: 3

Maximum Credits: 3

From its inception, cultural studies has examined culture as practice and artifacts through the categories of social class, gender, race/ethnicity, collective and individual identity, ideology and power by utilizing theoretical models from across the disciplines. This seminar allows students to

familiarize themselves with key theoretical moments that shaped cultural studies and explore critically the significance of theory in cultural studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

GER 2612 - GOETHE'S FAUST

Minimum Credits: 3

Maximum Credits: 3

This course examines parts I and II of Goethe's Faust as a unified work. Brief consideration is given to the Faust legend and the play's compositional stages, but Goethe's final authoritative text is its chief concern. The seminar format encourages close textual analysis. In connection with a selective review of important secondary literature, students are urged to form a synthetic view of the drama. The class also explores such issues as the figurative basis of human aspiring and Goethe's non-mimetic techniques of dramatic representation.

Academic Career: Graduate

Minimum Credits: 3

Maximum Credits: 3

This course examines and evaluates current pedagogical theories in language teaching and gives practical information on subjects such as teaching the four basic skills, lesson planning, vocabulary building, pattern drills, games, student-teacher interaction, textbook evaluation, testing, grading, visual aids, and culture. Theoretical discussions are augmented by practical sessions devoted to micro teaching demonstrations.

GER 3110 - PROSEMINAR IN LITERARY THEORY

Minimum Credits: 3

Maximum Credits: 3

This course offers selected readings in 20th century literary and cultural theory. We examine such "schools" as psychoanalysis, marxism, feminism, queer theory, reception theory, cultural studies, post-colonial studies, among others. Each is discussed within its historical context. Students will be encouraged to apply these readings to their own research and writing.

Academic Career: Graduate

GER 3112 - THEORY IN CULTURAL STUDIES

Minimum Credits: 3

Maximum Credits: 3

From its inception, cultural studies has examined culture as practice and artifacts through the categories of social class, gender, race/ethnicity, collective and individual identity, ideology and power by utilizing theoretical models from across the disciplines. This seminar allows students to familiarize themselves with key theoretical moments that shaped cultural studies and explore critically the significance of theory in cultural studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

GER 3612 - GOETHE'S FAUST

Minimum Credits: 3

Maximum Credits: 3

This course examines parts I and II of Goethe's Faust as a unified work. Brief consideration is given to the Faust legend and the play's compositional stages, but Goethe's final authoritative text is its chief concern. The seminar format encourages close textual analysis. In connection with a selective review of important secondary literature, students are urged to form a synthetic view of the drama. The class also explores such issues as the figurative basis of human aspiring and Goethe's non-mimetic techniques of dramatic representation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

GER 3820 - KAFKA

Minimum Credits: 3

Maximum Credits: 3

This course examines Kafka's major works with explicit reference to the modernist tradition. Their consummate treatment of such issues as man's relationship to authority, his increasing alienation in a mass society, guilt and punishment in a world that has lost its gods, the discursive nature of truth, the threat of totalitarianism, and the place of art in a fallen world constitute the thematic core of the course. Competing theoretical perspectives on Kafka are also examined.

GER 3892 - APPARATUS THEORY

Minimum Credits: 3

Maximum Credits: 3

Apparatus Theory now, more than ever! Once the heart of Anglo-American Screen Theory, Apparatus Theory generated lively debates about the relation of the moving image and the mechanisms of production that brought it to the screen. Having run into certain impasses regarding gender and ideology, AT became quiescent in the English-speaking world. Outside, however, it continued to develop in new dynamic directions. This seminar will review the multifaceted history of AT and deploy it in analyses of a series of international moving images from mainstream to experimental. The course will be in English. Films will have English subtitles. Public screenings will take place separately outside seminar meetings. Students are asked to sign up for the lab at that time.

Gerontology

GERON 2000 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 6

A student initiated educational experience, guided by a faculty member, that significantly supplements the core curriculum of the certificate and provides specialized, focused training in aging.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

Course Requirements: PROG: Univ Center Social & Urban Res

GERON 2001 - ETHICS AND AGING

Minimum Credits: 3

Maximum Credits: 3

This course offers an overview of ethical issues in aging. Early sessions will explore the ethical implications of stereotypes and myths regarding aging. Turning to the context of health care, students will identify and analyze moral dilemmas that arise in the long-term and end-of-life care of older adults. Concepts and topics to be critically examined include: autonomy, dependency, elder abuse, and just resource allocation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

GERON 2002 - PREVENTION AND HEALTHY AGING

Minimum Credits: 3

Maximum Credits: 3

Prevention and healthy aging is an online course that provides the guidance and rationale for promoting health, prevention, and effective risk factor management in the adult population (50+) in respect to rising health care costs, decreasing benefits, and the aging of our population. This course offers a general overview of various aging issues (physical, cognitive, social, cultural, and economic) that impact the individual, community, and society. This course will prepare students to integrate optimal preventive practice into their professional context and translate evidence-based strategies into community outreach services that are designed to prevent or delay the common conditions of aging and ones that emphasize the importance of healthy behaviors throughout the lifespan.

Health Informatics

HI 2210 - HEALTH INFORMATION AND THE HEALTH CARE SYSTEM

Minimum Credits: 3

Maximum Credits: 3

This course will introduce the student to the healthcare system and health information management as well as the integrity of the health data that is used by healthcare organizations. It will also introduce the student to the importance of the quality of healthcare and health information and the need for risk management and patient safety in healthcare organizations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HI 2231 - TALENT MANAGEMENT AND HUMAN RESOURCES

Minimum Credits: 3

Maximum Credits: 3

This course is a practical guide to human resource management in health care, and covers topics such as recruitment, compensation and benefits, training, discipline, termination, legal issues, labor unions, and multi-human interactions that emerge in the workplace. It is also an overview of the laws and regulations that guide every decision related to managing people in the complex society that we exist in today.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2250 - FOUNDATIONS OF HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course introduces health informatics, providing an overview of the important topics and a foundation for other courses in the master's and certificate programs in health informatics. Students will learn what health informatics is, the challenges in health informatics, career in and profession of health informatics. Students will be briefly introduced to important concepts in health informatics including computing and networking in health informatics, digital health, data analytics and machine learning, data science, health technology intervention, electronic health record, healthcare standard, privacy and security, and bioinformatics and digital imaging.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2410 - HEALTH VOCABULARY, TERMINOLOGY AND CLASSIFICATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course aims to evaluate the reference terminologies that are currently used in health care settings (SNOMED-CT, LOINC) as well as applications of data capture technologies (such as natural language processing, voice recognition, document imaging). Further, the course intends to introduce the students to computer assisted coding technology applications and evaluate the use of health care terminologies, vocabularies and classification systems found both nationally and internationally. A more focused review on format, guidelines and application for ICD-10-CM, ICD-10-PCS and HCPCS/CPT will take place. Students will utilize online coding tools to obtain hands-on practice with each of these 3 systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2450 - SECURITY, PRIVACY, LEGAL, AND ETHICAL ISSUES IN HEALTH INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to introduce basic knowledge of security, privacy, legal and ethical issues in health information systems. In the first half of the course, the major focus will be on security techniques, including basic concepts, encryption and decryption methods, program operating systems, databases, and network security. In the second half of the course, we will shift our attention to the application of the concepts of privacy and security in the healthcare industry. Legal and ethical issues around the privacy and security of health information will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2451 - DATABASE DESIGN AND BIG DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

The ability to capture, organize, and analyze data is critical to healthcare organizations and to biomedical research. Database is arguably the most important tool in supporting data capture, organization, and analysis of outcomes, both for regular, transactional data as well as big data. This course will provide students with opportunities to learn data and big data management skills: principles in database, approaches to manage data, as well as provide a place to discuss and analyze key issues in data management. The course will have two sections. The first section will emphasize on the theoretical and technical aspects of database, specifically in data modeling, design of database, as well as learning the 'language' to manage database. The second section will address advanced topics in database and big data, including transforming data, data warehousing and data mining, as well as analysis and visualization of data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2452 - DIGITAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

The advancement of informatics in health has allowed a convergence of digital technologies with health and healthcare, with the goal of improving

the efficiency and effectiveness of health services as well as making medicines more personalized and precise. These technologies include solutions for both healthcare providers and patients, ranging from Electronic Health Records, Telemedicine, Mobile Health, Wearable Devices, as well as many emerging Internet-of-Things devices and sensors. Interventions through digital health require a multi-disciplinary domain team involving both informatics and social sciences. This course will provide students with opportunities to explore, analyze, and discuss key issues, principles (both from technical and social science perspectives), approaches, and policies surrounding digital health. The final assignment of this course will task student to work with key health service stakeholders (who would actually share their knowledge throughout the course as well) to investigate and propose a practical digital health solution to tackle a specific health issue.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2454 - DATA SCIENCE IN HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course to data science. Data sources, types, data collection methods, data processing and analysis methods, and analysis result interpretation will be covered in this course. Students will learn these skills by finishing several assigned projects. By finishing the course, students will have the skills to analyze various types of data sets using different methods and have the ability to interpret the meaning the results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HI 2632 - LEADERSHIP AND PROJECT MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Leadership and Project Management is a course designed to introduce and develop leadership behaviors as well as manage the project management process. The goal of this course is to advance the capabilities in meeting current healthcare organizations challenges through both leader and leadership development. It is not intended to provide a background on the evolution of thought on leadership or leadership theory. The course takes a developmental "not training" approach by providing a leadership development framework that helps guide one in acquiring the characteristics and behaviors associated with good leadership. This course will study how technology, people, and economics of software projects interact and the impact these elements have on managing software projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Health and Physical Activity

HPA 2040 - HEALTH AND WELLNESS FOR INFANT, TODDLERS AND YOUNG CHILDREN

Minimum Credits: 3

Maximum Credits: 3

This class provides the future pre-k ' grade 4 classroom teacher with a knowledge base in motor development, health and physical education curriculum planning, and appropriate selection of health knowledge and skills and physical activities for infants, toddlers, and young children. Included are labs and field experiences in the pre-k-grade 4 classroom setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2267 - PHYSIOLOGICAL BASIS-FITNESS AND SPORT CONDITIONING

Minimum Credits: 3

Maximum Credits: 3

This course is aimed at developing an understanding of the physiological adaptations to fitness or long term physical training with emphasis on metabolic, strength and conditioning principles. Through the awareness of the body's responses to chronic and acute exercise. The student will be

able to organize and design a physical training or fitness program for young adults, athletes and special populations. This course provides preparation for the American college of sports medicine health fitness instructor or national strength and conditioning exams.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HPA 2268 - PHYSICAL ACTIVITY AND HEALTH

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expose the student to the topics related to the role of physical activity in the prevention and treatment of chronic diseases and additional health-related outcomes according to the most current literature. Students will become aware of all aspects of physical activity epidemiology, including the different methods to measure physical activity, evaluating the strengths and weaknesses of each, and understanding the analysis of physical activity data and research. In addition, this class will cover the physiology and mechanisms through which physical activity and exercise may affect the primary and secondary prevention and/or treatment of various health conditions, and will examine the risks and benefits associated with physical activity participation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HPA 2269 - OBESITY PREVENTION AND TREATMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide students opportunities to understand issues related to obesity. Topics may include prevalence rates, dietary considerations, exercise considerations and special population considerations. Behavioral strategies to enhance obesity treatment outcomes will also be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HPA 2320 - PSYCHOSOCIAL ASPECTS OF HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course will increase students' understanding of the diverse personal, socio-cultural, and institutional factors that influence health, physical activity, and nutrition-related behaviors, and ultimately intervention design and approach. The course will cover the social determinants of health and health disparities, theoretical models of health behavior change, and intervention/behavior change strategies and tools. Students coming away from this course will have a better understanding of how to apply health behavior change models to promote physical activity and healthy eating in diverse populations through tailored interventions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HPA 2322 - EVIDENCE BASED HEALTH PROGRAM PLANNING

Minimum Credits: 3

Maximum Credits: 3

Team based course designing health promotion programs at local large, medium and small organizations. The course presents students an opportunity to design a real health promotion program that has the potential to impact their career trajectory. Students are encouraged to seize the opportunity with enthusiasm. To maximize the opportunity students need to be flexible and demonstrate initiative to travel to the organizational site to meet according to staff schedules. The course is linked with the HPA 2990 course offered in the Spring.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

HPA 2371 - ADVANCED EXERCISE PHYSIOLOGY

Minimum Credits: 3
Maximum Credits: 3

Theory experiences relating to the mechanisms by which the body adapts physiologically to selected conditions of muscular performance within the context of (1) physical education and sport, (2) work environments and (3) disease prevention and rehabilitation.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPA 2373 - INTRODUCTION TO EXERCISE ASSESSMENT AND PROGRAMMING

Minimum Credits: 3
Maximum Credits: 3

This course examines exercise therapy for the cardiac patient and individuals with chd risk factors. Topics include functional capacity assessment (central and peripheral adaptations, graded exercise testing, electrocardiography), exercise prescription (dosage, format, energy cost, case studies), exercise supervision (phase 1, 2 and 3, practical leadership experiences, emergency procedures, nutritional counseling, psychological considerations) and factors that influence the exercise responses are presented.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (MS)

HPA 2374 - EXERCISE TESTING, PRESCRIPTION, AND SUPERVISION

Minimum Credits: 3
Maximum Credits: 3

An introductory lecture, laboratory course in cardiac rehabilitation. Topics presented include: the pathophysiology and epidemiology of coronary artery disease, coronary anatomy, basic and advanced electrocardiography, principles of graded exercise testing, exercise prescription and supervision, nuclear diagnostic techniques, current considerations in pharmacological treatment of coronary artery disease and cardiac rehabilitation in a clinical setting.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HPA 2375 - RESEARCH AND EXPERIMENTAL DESIGN IN EXERCISE PHYSIOLOGY

Minimum Credits: 3
Maximum Credits: 3

This course focuses on the development of experimental design and methodologies in exercise physiology research. The designs are explored within the context of ergogenic aids, training strategies, selected disease states, temperature regulation, and isokinetic strength and energy metabolism.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PLAN: Health and Physical Activity (NCDEG, MS, PHD) or Health Physical/Recreation Ed (MED)

HPA 2380 - BEHAVIOR CHANGE AND HEALTH COACHING

Minimum Credits: 3
Maximum Credits: 3

This course focuses on applying evidence-based behavioral strategies to interactions with health-fitness participants and patient populations to enhance engagement, adherence, and sustainability of lifestyle behaviors related to health. The course will include interaction strategies with patients,

listening skills of health coaches, strategies to enhance compliance, strategies for working with non-compliant patients, and application to specific health-fitness and healthcare setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2381 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 1

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in exercise physiology for the healthy adults as well as for special populations across the lifespan. Emphasis will be placed on mechanisms underlying metabolic and cardiorespiratory responses and adaptation to exercise and on the metabolic determinants of human adaptation and performance under normal conditions as well as during various environmental and physiological changes. Additional emphasis will be on taking in depth look at the acute and chronic responses to exercise in children and adolescents, pregnancy, and older adults. Instruction includes both didactic and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-MS

HPA 2382 - CLINICAL EXERCISE AND PHYSICAL ACTIVITY PHYSIOLOGY 2

Minimum Credits: 3

Maximum Credits: 3

This course is an extension of the Clinical Exercise and Physical Activity Physiology 1 course. This is an advanced course in clinical exercise physiology designed to provide knowledge and understanding of the most recent advances in the application of exercise physiology to clinical populations. Particular emphasis is placed on the acute and chronic responses to exercise in patients at risk for or having cardiovascular, endocrine, pulmonary, and metabolic diseases. Additional topics include clinical exercise physiology for cancer, disorders of the bone/joints, and neuromuscular disorders. Instruction includes both didactic and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2383 - ADVANCED CLINICAL HEALTH AND PHYSICAL ACTIVITY ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

This course includes training on advanced assessment of fitness and health-related measures that can be implemented across various settings including clinical, public health, health-fitness, worksite, etc. Measures will include fitness, physical activity and sedentary behavior, body composition, and a variety of health-related measures. Instruction will include both didactic and laboratory-based experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2384 - MOVEMENT SCIENCE IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

This course examines human movement across the lifespan (youth, adults, older adults), health conditions, and exercise-related activities. Student will learn how to assess movement patterns and how to apply this knowledge to prevention, treatment, and rehabilitation situations. This course will be a combination of classroom and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-MS

HPA 2385 - PRACTICUM IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

Supervised experience for the master's degree student. Student placement is to a clinical setting, applied health-fitness setting, or health promotion setting that is appropriate to the pursuit of the intended degree. Students are also required to attend didactic and online course-related sessions with the instructor throughout this experience. Students intending to take this course need to coordinate the placement with the supervising faculty instructor at least 1 term in advance of registering for this course to allow for appropriate placement.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

HPA 2386 - HEALTH AND PHYSICAL ACTIVITY PROMOTION AND MARKETING

Minimum Credits: 3

Maximum Credits: 3

This course provides students with the conceptual background and practical skills necessary to address how to introduce and market health and physical activity programs and initiatives, and how to identify and implement channels of distribution of these programs and initiatives. This course will include both didactic and practical experiences for students to obtain and apply the necessary knowledge.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2387 - MEDIA AND TECHNOLOGY IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

This course address the application of media and technology in health and physical activity program implementation. Examples include the application of video, audio, online programming, etc. Students will have opportunities to uses the various technologies across various applications related to health and physical activity programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-MS

HPA 2390 - NUTRITION IN SPORT AND EXERCISE

Minimum Credits: 3

Maximum Credits: 3

A lecture and laboratory class in which the principles of nutrition are applied to sports performance and exercise. Topics presented include energy release and substrate utilization, energy metabolism during exercise, fluid intake and athletic performance, body composition, ergogenic aids, vitamins and minerals, the pre-game meal, sports anemia, nutritional considerations for the diabetic individual, lipid metabolism and coronary heart disease.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HPA 2410 - STATISTICS IN HPA RESEARCH

Minimum Credits: 3

Maximum Credits: 3

A general knowledge of computer hardware/software and its use in physical education research is the major focus of this class. Software packages are examined for word processing and statistical analysis. An introduction to basic programming is given.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS)

HPA 2420 - CHILD IN SPORT

Minimum Credits: 3

Maximum Credits: 3

An in-depth and critical look at youth sports in America and its effect on the developing child. The interdisciplinary focus draws from the social, behavioral and biological sciences to provide information for evaluation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPA 2990 - RESEARCH SEMINAR IN HPA

Minimum Credits: 3

Maximum Credits: 3

This course is required of all non-thesis master's degree candidates and includes the development and presentation of an original research paper. The student works in cooperation with a graduate advisor in their area of content specialization. The nature of acceptable projects includes the following: data based research; expanded literature review; development of software and/or hardware, development of instructional materials (i.e., Video tapes, slide series, films, etc.); Journal article.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HPA 2996 - CLINICAL INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Supervised clinical experience for the master's degree student. The student is placed in a clinical setting appropriate to his/her degree interests and career goals and must complete a minimum of 25 hours of clinical work per credit hour. Supervision is provided by the cooperating clinical supervisor and the university clinical advisor.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad Letter Grade

HPA 2998 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

HPA 2999 - MASTER'S THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 9

He student prepares a proposal for an original research project, has that project approved by an appropriate faculty thesis committee, completes proposed project, and defends the completed report in a thesis final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HPA 3114 - EVIDENCE BASED LIFESTYLE PROGRAM DESIGN AND EVALUATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-EDD)

HPA 3115 - HEALTH PROMOTION POLICY AND PROGRAM IMPLEMENTATION

Minimum Credits: 3

Maximum Credits: 3

This course investigates the impact of legislation, policies, and implementation on individuals' and populations' physical activity (pa) and nutrition. Centering on students' conceptualizations of their problem of practice, this course will explore: a) pa and nutrition program implementation and challenges to implementation, b) evidence-based policies, practices, interventions, and services and c) advocacy partnerships and organizations. This course will also integrate discussions of social justice and diversity in pa and nutrition policy and program implementation. Students will analyze these problems and their causes with the goal to craft and advocate for policies that promote pa and nutrition health equity for individuals and populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-EDD)

HPA 3116 - RESOURCE AND FUNDING ACQUISITION FOR HEALTH PROMOTION PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

The course presents the process of developing and submitting extramural grants related to health, physical activity and nutrition. Students develop an idea and write a grant proposal linked to a funding source with the aim of providing higher quality, more efficient and less expensive health promotion and health care to populations. The potential funding sources are public sector, private sector, and non-profit sector. Furthermore, students incorporate into the grant proposal alternative funding strategies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: HPRED-EDD (Health and Physical Activity)

HPA 3117 - HEALTH PROMOTION PROGRAM TRANSLATION AND SUSTAINABILITY

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Educational Administration Ed.D.

HPA 3374 - ADVANCED LABORATORY TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This course provides a framework that aids the advanced graduate student in acquiring knowledge and technical laboratory skills pertinent to exercise physiology research. Content includes: cardiac output, maximal oxygen uptake, isokinetic exercise testing, hydrostatic weighing, techniques for assessing core and skin temperature and plasma volume changes, combined arm and leg exercise and water immersion exercise.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-MS)

HPA 3377 - CHRONIC DISEASE CASE STUDIES

Minimum Credits: 3

Maximum Credits: 3

His course integrates selected elements of the knowledge base in the areas of exercise science, graded exercise testing electrocardiography, pharmacology and exercise prescription in order to develop an effective and realistic therapeutic plan for individuals who have coronary disease or are at risk for its development. The principal learning experiences for the course will center on the development, interpretation and presentation of cardiovascular case studies for intervention.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (MS or PhD)

HPA 3400 - ADVANCED RESEARCH METHODS IN MOVEMENT SCIENCE

Minimum Credits: 1

Maximum Credits: 1

Provides the Ph.D. student with a team oriented process to develop, implement, present and publish experimental research in exercise physiology and health-fitness.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (PhD)

HPA 3404 - COLLEGE TEACHING PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

This course provides the Ph.D. Student the opportunity to teach an undergraduate specialization course in this area of expertise while exploring appropriate teaching methodology and theory.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

HPA 3405 - GRANT WRITING IN HEALTH AND PHYSICAL ACTIVITY

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to provide guidance to doctoral level students on the process of developing a grant proposal for extramural funding. This course will be modeled from the NIH submission and review process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity (HPRED-PHD) and (HPRED-EDD)

HPA 3406 - PROFESSIONAL WRITING IN HPA

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expose the student to the process of developing professional abstracts and manuscripts that can be submitted for peer-review related to health and physical activity. This course will focus on developing empirically-based abstracts, manuscripts, the submission process, the peer-review process, and considerations for resubmission. The culminating experiences will include the submission of an abstract and manuscript for professional presentation and publication.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPA 3995 - SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within either developmental movement and sport studies or exercise physiology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Physical Activity

HPA 3998 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

HPA 3999 - DOCTORAL DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Health and Rehabilitation Scs

HRS 1000 - INTRODUCTION TO RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The study of the nature of research and the applications of the scientific approach in the research procedures. The course focuses on concepts, design techniques and interpretations, as well as limiting factors and ethical considerations.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: PROG: Sch Hlth & Rehabilitation Scs; PLAN: Clinical Dietetics -Nutrition (BS, BOH, BS-H) or (NDNUTR-ND) or (NS-BS)

HRS 1020 - ANATOMY AND PHYSIOLOGY

Minimum Credits: 4

Maximum Credits: 4

Introduces the structure of human cells, tissues, organs and organ systems, and functions associated with them. Range of topics extends from gross anatomical features to considerations of chemical processes that serve as the basis for cellular controls, gene expression and energy metabolism.

Emphasis on relationship of structure to function and on understanding how structural or functional disturbances can become the basis for disease

processes.

Academic Career: UGRD

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 1023 - HUMAN PHYSIOLOGY

Minimum Credits: 4

Maximum Credits: 4

This course has been designed in an effort to provide pre-clinical students with a foundational scientific knowledge base and conceptual understanding of physiological processes. Each organ system, and its contribution to the maintenance of homeostasis, will be discussed. Further, the essential components of each system will be explored, to the extent that life is supported. Some disease states will be discussed, in order to exhibit certain processes.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: Letter Grade

Course Requirements: PLAN: Clinical Dietetics-Nutrition(BS or BSH or BPH)

HRS 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2004 - PATHOPHYSIOLOGY ACROSS THE LIFE SPAN

Minimum Credits: 4

Maximum Credits: 4

This course is designed to provide the student with a comprehensive theoretical foundation of the phenomena that produce alterations in human physiologic function in diverse populations across the life span. Information gained in this course will prepare the student for subsequent courses related to the diagnosis and management of disease processes associated with pathophysiologic dysfunction/alterations in people of various ethnic/cultural groups across the life span.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2008 - ENTREPRENEUR SKILLS FOR NUTRITION PROFESSIONALS

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the components of business planning, implementation and marketing for dietetics related products and services in a variety of settings. Working in teams and independently, students will identify potential products and services, develop business and marketing plans including financial and staffing considerations and present their plan to a panel of their peers and potential "buyers".

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: (Coordinated Master in Dietetics); or SUBPLAN: (Clinical Dietetics & Nutrition) or (Wellness and Human Performance)

HRS 2017 - INJURY EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This introductory course in injury epidemiology will address injury epidemiology, and concepts in basic epidemiology and biostatistics related to injury surveillance, prevention and control. The epidemiological perspective of injuries will address the concepts in the Haddon's matrix and classic epidemiologic triad; current injury epidemiology research needs and injury as a public health issue. Topics addressed will include epidemiology of injuries in developed and developing countries, and injuries in vulnerable populations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Sports Medicine (MSSPM-SP)

HRS 2022 - HUMAN ANATOMY

Minimum Credits: 3

Maximum Credits: 3

Emphasizes the understanding and application of knowledge of human anatomy in diagnostics of clinical conditions commonly encountered by an occupational therapist. The practical component includes the use of prosected cadavers, skeletal models, and palpation of surface anatomical features in live models.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Occupational Therapy (MOT)

HRS 2079 - CHILDREN W/DISABILITIES: CLIN 1

Minimum Credits: 2

Maximum Credits: 2

Course provides an interdisciplinary clinical training experience to graduate students from nursing, medicine, public health, psychology, social work, education, early intervention, nutrition, physical therapy, speech/language pathology, occupational therapy, and audiology. Students have the opportunity to learn about the impact of disabilities on children, families, schools, communities, and society thru clinical activities as part of the university, community leaders for individuals with disabilities (UCLID) center's leadership training program.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2084 - SPECIAL TOPICS IN OSTEOARTHRITIS

Minimum Credits: 1

Maximum Credits: 2

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

HRS 2089 - CHILDREN W/DISABILITIES: CLIN 2

Minimum Credits: 2

Maximum Credits: 2

Course provides an interdisciplinary clinical training experience to graduate students from nursing, medicine, public health, psychology, social work, education, early intervention, nutrition, physical therapy, speech/language pathology, occupational therapy, and audiology. Students have the opportunity to learn about the impact of disabilities on children, families, schools, communities, and society thru clinical activities as part of the university, community leaders for individuals with disabilities (UCLID) center's leadership training program.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

HRS 2090 - LEADERSHIP SEMINAR IN MATERNAL AND CHILD HEALTH 2: FROM BIOLOGY TO POLICY

Minimum Credits: 1

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HRS 2128 - LEADERSHIP

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2305 - ADVANCED NEUROSCIENCE

Minimum Credits: 4

Maximum Credits: 4

This course will provide the student with an in-depth study of neuroanatomical structures and functions. Brain anatomy, function, and interrelationships especially as they relate to movement dysfunction will be reviewed. The clinician will have an opportunity to "revisit" how anatomy and movement are interrelated.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2306 - MOTOR LEARNING AND CONTROL OF MOVEMENT/HEALTH PROMOTION

Minimum Credits: 3

Maximum Credits: 3

Principles of motor learning and motor control will be discussed as they relate to persons with disability. Models of disability will be shared with ideas of how to incorporate some of the principles of motor learning/control into interventions. Health promotion and fitness for persons with neuromuscular disorders will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2307 - FALLS AND BALANCE DYSFUNCTION: PHYSICAL THERAPY MANAGEMENT AND INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with the knowledge and skills to provide advanced assessment and management of persons with balance and vestibular disorders, including those at risk for falls. Students will discuss and practice using assessment tools. Lecture, laboratory practice, case studies, and discussion will be included. This course is offered on 4-5 weekends throughout the semester.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: [HRS 2314 (MIN GRADE: 'C') and SBPLAN: Musculoskeletal Physical Therapy] or [HRS 2305 (MIN GRADE: 'C') and SBPLAN: Neuromuscular Physical Therapy]

HRS 2308 - CLINICAL PRACTICE SEMINAR

Minimum Credits: 2

Maximum Credits: 2

This course will cover basic concepts of physical examination of the patient with neuromusculoskeletal dysfunction. Fundamental examination skills and knowledge will be covered, including issues related to screening, review of systems, history, physical examination and clinical decision making. An introduction to radiology and diagnostic imaging will be provided. Concepts related to pain and the inflammatory process, bone healing and remodeling, and how these concepts impact clinical practice will also be covered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2309 - ANALYSIS OF NEUROMUSCULAR SIGNS AND SYMPTOMS IN CLINICAL DECISION MAKING

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the analysis of the process and knowledge necessary for identifying the neuromuscular tissue or system representing the origin of disorders in patients. Signs and symptoms from history and physical examination will be the focus with appropriate ancillary testing necessary to confirm hypotheses regarding neuromusculoskeletal pathology. The intent is for clinicians to be able to differentiate clusters of signs and symptoms and to make appropriate clinical decisions regarding same.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: [HRS 2314 (MIN GRADE: 'C') and SBPLAN: Musculoskeletal Physical Therapy] or [HRS 2305 (MIN GRADE: 'C') and SBPLAN: Neuromuscular Physical Therapy]

HRS 2310 - ADVANCED MUSCULOSKELETAL DISSECTION ANATOMY

Minimum Credits: 2

Maximum Credits: 2

This course will provide students with an opportunity to study and dissect specified anatomical regions of the human musculoskeletal system and present their dissection to the class with particular emphasis given to clinical applications of that anatomy. Students will be given guidelines and basic instruction in the dissection process and will then work independently throughout the semester to complete their dissections. Through this experience students will gain a mastery of select regions of musculoskeletal anatomy and a greater understanding of the clinical applications of that anatomy.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

HRS 2312 - SEMINAR IN NEUROLOGIC PHYSICAL THERAPY

Minimum Credits: 2

Maximum Credits: 2

A series of papers will be presented with interactive discussion related to novel interventions. Students will be responsible for reviewing the paper and presenting the case to the class. Each student will "teach" the class once and lead the discussion. Topic areas will be assigned by the instructor.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2313 - PHYSICAL THERAPY SPECIAL TOPICS SEMINAR

Minimum Credits: 2

Maximum Credits: 2

This course is designed to foster discussion of current physical therapy clinical issues, such as prospective payment for medical rehabilitation, healthcare trends, reimbursement regulations, legislative policies, practice environments, strategies for maintaining continued competence, and emerging professional issues.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2314 - FUNDAMENTALS OF NEUROSCIENCE FOR THE ORTHOPEDIC CLINICIAN

Minimum Credits: 4

Maximum Credits: 4

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2356 - CONCEPTS AND PRINCIPLES RELATED TO SENSORY MOTOR CONTROL 1

Minimum Credits: 3

Maximum Credits: 3

Topical areas of the neurological sciences will be presented including introductory neuropathology, neuro-diagnostic techniques, and clinical manifestations of certain diseases of the nervous system. Topics will include: reflexes; the pain experience and pain management; somatosensory changes in peripheral and central nervous system diseases; motor dysfunction associated with peripheral and central nervous system diseases; articular neurology; sensorimotor learning principles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 2305 (MIN GRADE 'C'); SBPLAN: Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2361 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS LUMBOPELVIC SPINE

Minimum Credits: 3

Maximum Credits: 3

Course content will include evaluation and treatment of the musculoskeletal conditions involving the lumbopelvic complex including the hip joint utilizing advanced orthopedic physical therapy skills. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2362 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS LOWER EXTREMITY

Minimum Credits: 3

Maximum Credits: 3

Course content will include evaluation and treatment of musculoskeletal conditions involving the foot, ankle, and knee. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2364 - EVIDENCE BASED MEDICAL AND PHYSICAL THERAPY INTERVENTIONS FOR PERSONS WITH NEUROMUSCULAR DISEASE

Minimum Credits: 3

Maximum Credits: 3

This course will focus on an evidence based comparison of newer vs. Older 'techniques' used in the field of neurologic rehabilitation. Students will be asked to explore the evidence basis that supports or refutes use of these various approaches and techniques currently in use. Newer approaches to neurological rehabilitation will also be discussed-these include: constraint induced movement therapy, virtual reality, robotics, and deweighting. Lab and clinic visits will be incorporated into this course so that students will be able to see some of the techniques 'in action'.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2365 - CASE STUDIES OF PERSONS WITH NEUROMUSCULAR DISORDERS

Minimum Credits: 3

Maximum Credits: 3

A series of cases will be presented with interactive discussion related to interventions that have been shown to demonstrate evidence and efficacy to address the person's functional limitations and impairments. Students will be responsible for preparing for the case prior to each session and will bring 'evidence' to support ideas for intervention. Innovative physical therapy and medical interventions will be discussed. Lecture and interactive discussion are the teaching methods of choice. Advanced clinicians will participate in the course to bring 'real life' cases to the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2372 - ADVANCED CLINICAL PRACTICE: THE LOWER QUARTER

Minimum Credits: 3

Maximum Credits: 3

This course will integrate advanced clinical applications of therapeutic technique and rationale for the assessment and treatment of the neuromuscular system. This course will synthesize clinical application of mobilization and manipulation techniques for the lumbopelvic spine and the lower extremities, the assessment and treatment of muscular and soft tissue imbalances, and the application of medical exercise training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2373 - ADVANCED MUSCULOSKELETAL CLINICAL PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will integrate advanced clinical applications of therapeutic technique and rationale for the assessment and treatment of the neuromuscular system. This course will synthesize clinical application of mobilization and manipulation techniques for the cervicothoracic spine and the upper extremities, the assessment and treatment of muscular and soft tissue imbalances, and the application of medical exercise training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2374 - CLINICAL ROUNDS AND CASE PRESENTATION

Minimum Credits: 1

Maximum Credits: 1

Weekly rounds will be presented by various speakers/clinicians/researchers in both the fall and spring terms. These presentations will consist of case presentations, relevant clinical and/or research updates pertaining to the clinical practice of physical therapy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2380 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS FOR CERVICAL AND THORACIC SPINE

Minimum Credits: 3

Maximum Credits: 3

This course will include evaluation and treatment of musculoskeletal conditions involving the cervical spine, the temporomandibular joint, the thoracic spine and rib cage. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills into the plan of care for the patient. Classes will consist of lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2381 - EVIDENCE BASED PRACTICE: CLINICAL CONSIDERATIONS FOR UPPER EXTREMITY

Minimum Credits: 3

Maximum Credits: 3

This course will include evaluation and treatment of the musculoskeletal conditions involving the shoulder, elbow, wrist and hand. Emphasis will be placed upon enhancing clinical decision making and integrating manual therapy skills within the overall plan of care for the patient. Classes will include lecture, laboratory, and clinical experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2391 - PHYSICAL THERAPY CLINICAL ROTATION 2

Minimum Credits: 1

Maximum Credits: 3

This clinical opportunity will provide students the ability to observe and participate in assessment and management of various musculoskeletal disorders. Students will have an opportunity to work with an experienced clinician to learn more about advanced skills in the treatment of neuromuscular dysfunction in the out-patient setting.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: PREQ: HRS 2305 (MIN GRADE 'C'); SBPLAN: Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2392 - PHYSICAL THERAPY CLINICAL ROTATION 3

Minimum Credits: 1
Maximum Credits: 3
Academic Career: Graduate
Course Component: Clinical
Grade Component: Grad HSU Basis

HRS 2416 - INTRODUCTION TO HEALTH INFORMATION & THE HEALTH CARE SYSTEM

Minimum Credits: 3
Maximum Credits: 3

An introduction to Health Information Management and the historical development of the health care field with emphasis on the organizational structure of health institutions, as well as federal, state, and local agencies and allied health associations. Student will be introduced to Health Information Management operations and key functions, with an overview of the American Health Information Management Association (AHIMA). Emphasis will be placed on the use of technology in health care, Electronic Health Record, and data quality. An in-depth look at privacy, confidentiality and security will occur. The laboratory experience provides students with hands-on opportunities to apply the theory and concepts of health information. The content, format, purpose, confidentiality, adherence to regulations/standards and technology applications for health information will be emphasized. Laboratory activities, group discussions, and case studies will supplement basic instructions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health and Rehabilitation Scs or SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS)

HRS 2420 - INTRO TO HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3

Introduction to the basic concepts of the analysis, design, implementation, and evaluation of health information systems. The student will be provided opportunity to develop skills and ability in defining information needs, interpreting the capabilities of health information systems, setting forth the feasible alternatives, and guiding the appropriate diffusion of information science technology into the health care system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2421 - SECURITY, PRIVACY, LEGAL AND ETHICAL ISSUES IN HEALTH CARE

Minimum Credits: 3
Maximum Credits: 3

Students in this course will explore legal, security, and privacy issues related to health information systems. Data availability, integrity and confidentiality of databases and networks, computer security, public key infrastructure, encryption/decryption techniques, and data recovery will be addressed as well as risk assessment, security policies, HIPAA, privacy, applicable health laws, and ethical issues in the management of health information.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2422 - COMPUTER PROGRAMMING FOR HEALTH INFORMATICS

Minimum Credits: 3
Maximum Credits: 3

This course is designed to introduce advanced computer programming technologies. The course will provide students with skills of solving real health informatics problems using computer programs. This course is not designed as first computer programming class. The instructor assumes that students have taken and are familiar with one or a few programming languages (such as BASIC, C/C++, JAVA, C#, PERL, PYTHON, RUBY) prior to taking this class. One or multiple programming languages may be used in this class to solve health informatics problems. This course is hands-on and project-oriented.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2423 - CLOUD COMPUTING, HL7 AND ANALYTICS IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

Information technology (IT) is in an era of change from local servers, rigid data structures, and centralized computing to a remote distributed cloud computing architecture. Health care IT likewise is following this pattern. To optimize health care strategies, the use of information technology is playing an ever increasing role. Modern medicine is driven by use of information and IT capabilities. This course will discuss HL7 and other common protocols for data exchange. Data analytics will also be covered with some data mining and OLAP (Online Analytic Processing) and data visualization. Understanding of the underlying principles of networks, data storage, data protection, "big data" and the capabilities of modern computer architecture and software will be covered. This course has a primary focus of creative use of common IT tools and applying them in ways related to health care computing, information processing and management. Natural Language Processing, Precision Medicine and genomics will be discussed and applied to medical applications and data analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2424 - DATABASE DESIGN AND MANAGEMENT IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

Objectives are to provide students with an in-depth knowledge of database design and provide skills on how to use available database management systems. First part emphasis on how to analyze a healthcare problem and model its data effectively using the entity-relationship model. Students learn to implement the model using relational DBMS. Commercial systems Access, RDB, Sybase, DBase IV systems are studied. Students gain practical experience by designing and implementing database projects in a healthcare setting.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2425 - DATA ANALYTICS: APPLICATION IN GENOMICS AND PERSONALIZED CARE

Minimum Credits: 3

Maximum Credits: 3

This course is designed as an introductory-level course to data analytics and its application in genomics. In this course, students will learn techniques on data collection, data processing, modeling, data visualization, and result interpretation. Specific examples from genomics will be used to demonstrate the details of these techniques. Students will work on individual projects to extensively practice their data analytics skills. A number of web-based data analysis tools will be used in this course; therefore, students are not required to write their own data analysis programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2426 - EVALUATION OF CLASSIFICATION SYSTEMS, REFERENCE TERMINOLOGIES & DATA CAPTURE TECHNOLOGIES IN HC

Minimum Credits: 3

Maximum Credits: 3

This course aims to evaluate the reference terminologies that are currently used in health care settings (SNOMED-CT, LOINC) as well as applications of data capture technologies (such as natural language processing, voice recognition, document imaging). Further, the course intends to introduce the students to computer assisted coding technology applications and evaluate the use of health care terminologies, vocabularies and

classification systems found both nationally and internationally.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2428 - CONCP SOFTWR PROJ ENGR HLTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course will examine how health care organizations manage the software development process. This course will study how technology, people and economics of software projects interact and the impact these elements have on managing software projects. Topics include: system life cycle models, requirements management, and system design and software quality assurance. The student will have the opportunity to learn about industry implementation data standards and the impact of regulations for planning and managing health information systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2429 - FOUNDATIONS OF CLINICAL AND PUBLIC HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

A survey of fundamental concepts and activities on information technology applied to health care. Topics include computer-based medical records, knowledge-based systems, telehealth, decision theory and decision support, human-computer interfaces, systems integration, the digital library, bioinformatics, and educational applications. Department-specific applications such as pathology, radiology, psychiatry and intensive care are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2431 - EVALUATION METHODS IN HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

This course will study the application of well-established evaluation techniques specific to problems in health informatics. No previous knowledge of health informatics evaluation is required or presumed. This interactive course will provide students with opportunities to discuss and analyze the key issues, principles, and approaches in health informatics evaluation. Emphasis of the course will be on theoretical, clinical, technical, and pragmatic issues of health informatics evaluation. Course will address issues such as design, development, and standards of evaluations. Case study analyses will be used to facilitate active learning. This is a hybrid course; i.e., it has on-line modules as well as face-to-face classes. This course is open to graduate students and has no prerequisites.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2432 - TELEMEDICINE, TELEREHABILITATION, AND E-HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course is designed to prepare students for a telemedicine project leadership role. This highly interactive course will provide the students with opportunities to discuss and analyze the key issues, principles and approaches, in telemedicine. Students will study how technology, people, economics and policies of telemedicine, telerehabilitation & e-health interact and the impact these have on healthcare systems. This is a hybrid course, i.e., it has Online modules as well as Face-to-Face classes. Case studies, telemedicine lab visits and projects will be used to facilitate active learning. This course is open to graduate students and has no prerequisites.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2433 - CLASSIFICATION SYSTEMS IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

An introduction to the principles of taxonomy, purposes of classifying diseases and operations. An in-depth study of ICD-10-CM, ICD-10-PCS and CPT-4 will be undertaken along with a summary review of ICD-9-CM. The interaction of Diagnosis Related Groups (DRG's) with classification systems will be emphasized. Data quality, the Uniform Hospital Discharge Data Set as well as coding/sequencing guidelines for both inpatient and outpatient coding will be examined. This laboratory will provide students with "hands-on" experience in ICD-10-CM, ICD-10-PCS and ICD-9-CM Coding, proper application of UHDDS guidelines, DRG assignment and CPT-4 coding. Laboratory practice exercises will provide the principal method of instruction with great emphasis on learning ICD-10-PCS. The impact of coding accuracy and its relationship to reimbursement will be stressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-SP)

HRS 2434 - BUSINESS ISSUES AND DATA ANALYTICS IN HEALTH CARE

Minimum Credits: 2

Maximum Credits: 2

This course focuses on analytics and management of business issues within the health care industry. Professional skills, such as negotiations, productivity tracking, and data analysis are explored. Practical application of leadership techniques and analytics is assisted through the use of published case studies, which allow students to thoroughly navigate common business issues and dilemmas in health care management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2435 - FINANCIAL MANAGEMENT IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

Introduction to selected finance and accounting topics of health care professional, supervisor and department head. No previous knowledge of accounting or financial management required. First half emphasis on basic financial accounting concepts to provide organization-level understanding language, concepts, processes and functions of financial management. Second half emphasizes managerial accounting principles and techniques including cost accounting and budgeting. Focus shifts to departmental level financial management and role of supervisor process include budget development and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2439 - HEALTH INFOR SYSTEMS INTERNSHIP

Minimum Credits: 3

Maximum Credits: 3

Supervised practical experience providing an opportunity for students to learn new skills and to apply previously learned skills and theories in the analysis, design, implementation, and evaluation of health information systems.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2445 - HUMAN RESOURCE MGT/LABOR RELTN

Minimum Credits: 3

Maximum Credits: 3

Course encompasses supervisory management and labor relations concepts, processes, and issues presented within a broad human resource management perspective. Topics include human resource planning, employee recruitment and selection, performance appraisal, compensation management, collective bargaining, contract administration, and the legal/regulatory framework affecting human resource management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2454 - LEAN SIX SIGMA AND OTHER IMPROVEMENT METHODOLOGIES IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

This class will explore the concepts of process management and improvement methodologies including Six Sigma, Lean/Toyota production system/operational excellence, theory of constraints, PDCA, Baldrige and others and their application to healthcare management. The student should be prepared for the American Society for Quality (ASQ) lean six sigma green belt at the end of the class. The focus will be on practical applications in addition to the art, theory, principles, statistics and science of these concepts. The foundation of the class will be understanding the key contributions of each of these approaches.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2456 - REIMBURSEMENT SEMINAR

Minimum Credits: 1

Maximum Credits: 1

An introduction to topics relating to reimbursement in the health care environment. The course will build on topics covered in Classification Systems including the role of coding in reimbursement and minimizing health care fraud. Additional areas include payment methodologies, revenue, and payment cycle management, claims audits, compliance, value-based purchasing and outpatient prospective payment systems. Clinical Documentation Improvement Programs and the increased use of CAC programs will also be explored.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS)

HRS 2457 - QUALITY MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

Focuses on principles and approaches to assessment of quality in health care and how this impacts the role of the health information manager. Theoretical and pragmatic issues related to quality management, utilization review, and risk management is addressed. Responsibilities of governing board, medical staff and other health care personnel in relation to quality management and improvement is examined. Requirements of accrediting and licensing agencies related to quality management is presented. This quality management laboratory focuses on the practical applications of managing the quality of health care, resource use, and risk. Students will design, implement, and present a quality management study at designated clinical facilities. Also, several in-class/online assignments will be required

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2465 - LEADERSHIP SKILL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

Various areas related to a leader's personal development in the health-care environment will be explored. The course will include didactic and experiential work in the following topics: stress management, self-assessment, caring concepts, mentoring, creative problem solving, and personal styles of learning or teaching, leadership.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2475 - DISABILITY RELATIONS AND SERVICES INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2480 - DIMENSIONS OF AGING: CULT & HLTH

Minimum Credits: 2

Maximum Credits: 2

This course provides an overview of the aging experience from a cross-cultural and public health perspective. An understanding of the aging process and the different strategies that people use in the Western and non-Western societies to cope with this universal phenomenon will be the theme of the course. Within this framework, multiple facets of aging including the demographic, biological, environmental and socio-cultural aspects are identified and discussed. This course will provide core knowledge for professionals who will work with/on behalf of the aged.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

Course Attributes: Global Studies

HRS 2482 - LEGAL ASPECTS OF HEALTH CARE

Minimum Credits: 2

Maximum Credits: 2

Discusses principles of hospital law and aspects of handling confidential and health records information. Actual cases and statutes are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2490 - ELECTRONIC HEALTH RECORDS

Minimum Credits: 3

Maximum Credits: 3

This course addresses theoretical and pragmatic issues related to EHR technology, such as design and development, standards and clinical

terminologies, privacy and security issues, model EHR systems, evaluation of EHR software systems, and outcomes research using the EHR. The responsibilities of the health information management professional, as well as the requirements of accrediting and licensing agencies related to EHR, will also be discussed. The responsibilities and involvement of various members of the health care team in the development, use, evaluation, and dissemination of EHR technology will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Health Information Systems (Health and Rehabilitation Scs-MS) or Healthcare Supervision Mgt (Health and Rehabilitation Scs-MS)

HRS 2501 - FUNCTIONAL ASSESSMENT

Minimum Credits: 3

Maximum Credits: 3

Course focuses on functional assessment from the perspective of body structures and functions, activity and participation as defined by the international classification of functioning, disability, and health of the world health organization. Students may focus on infants, children, adults, or older adults.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2502 - HUMAN PERFORMANCE: ANALYSIS

Minimum Credits: 4

Maximum Credits: 4

Course focuses on diagnostic decision-making using neuroscience concepts as an exemplar. Clinical reasoning is emphasized while developing knowledge and skills for the evaluation of individuals with neurological impairments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2503 - HUMAN PERFORMANCE: ADAPTATION

Minimum Credits: 3

Maximum Credits: 3

Course focuses on locating and synthesizing evidence supporting rehabilitation interventions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2504 - DIRECTED READINGS IN OT

Minimum Credits: 3

Maximum Credits: 3

This course focuses on research design for evidence hierarchies in the context of occupation therapy research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2510 - FUNDAMENTALS EVIDENCED-BASED OT

Minimum Credits: 3

Maximum Credits: 3

Course focuses on the skills for asking occupational therapy clinical questions, searching for the best evidence to answer questions, and critically appraising the evidence. It emphasizes the research methodologies associated with hierarchies of evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2514 - HUMAN PERFORMANCE: COMPENSATION

Minimum Credits: 3

Maximum Credits: 3

Course examines the interface between functional impairment, activity, and societal participation. Emphasis is on person-task environment analysis and adaptation to compensate for dysfunction during self-care, home management, school/ work, and play/leisure occupations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2525 - SPECIAL TOPICS SEMINAR

Minimum Credits: 3

Maximum Credits: 3

Course focuses on the principles and practices of therapeutic use of self, clinical reasoning, and evidence-based practice as they are applied in diverse practice environments (e.g., Hospital, school systems, community agencies).

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2555 - BIOMECHANICS OF BALANCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PROG: Sch Hlth & Rehabilitation Scs or School of Medicine or Swanson School of Engineering; LEVEL: Graduate

HRS 2579 - OT AND HEALTH POLICY

Minimum Credits: 2

Maximum Credits: 2

Course content focuses on healthcare trends, reimbursement regulations, legislative policies, practice environments, strategies for maintaining continued competence, and emerging professional issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS)

HRS 2582 - ANAL CLIN DATA/EVDNC FUNCT CHNG

Minimum Credits: 3

Maximum Credits: 3

Course focuses on how to design and carry out single-subject design studies and use quantitative methods of analysis (acceleration line, 2 SD band, c-statistic) to document functional changes in client performance.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Occupational Therapy (Health and Rehabilitation Scs-MS) or Occupational Therapy (Rehabilitation Science-PHD)

HRS 2583 - OT MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2590 - SPECLZD PRECEPTORSHIP: CLINICAL

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in a specialized area of occupational therapy practice (e.g., pediatrics, assistive technology, home healthcare, hand therapy, case management) for the purpose of developing advanced skills related to a specialty practice area.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

HRS 2591 - SPECLZD PRECEPTSHIP: EDUCATION

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in the teaching-learning process applied to entry-level professional education, distance education, client/patient education, consumer education, or knowledge application to clinical settings.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SU3 Basis

HRS 2592 - SPECIALIZED PRECEPTORSHIP: MANAGEMENT

Minimum Credits: 1

Maximum Credits: 6

This course addresses the role of the occupational therapist as manager of occupational therapy services. The focus is on the principles and practices of administration and supervision as they are applied in diverse practice environments (e.g., hospital, school systems, and community agencies).

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad LG/SU3 Basis

HRS 2594 - SPECLZD PRECEPTORSHIP: RESEARCH

Minimum Credits: 1

Maximum Credits: 6

Course provides experiential learning in coordinating occupational therapy research, including obtaining IRB approval, getting informed consent, participating in data collection, and managing data quality.

Academic Career: Graduate

Course Component: Credit Laboratory
Grade Component: Grad LG/SU3 Basis

HRS 2600 - NUTRITION RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 3

An opportunity for students to investigate and formulate potential research topics. Students will be exposed to possible research ideas, discuss technical requirements and identify proper format for presenting research projects, written and verbal.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2621 - ADVANCED SEMINAR IN CLINICAL DIETETICS

Minimum Credits: 3

Maximum Credits: 3

In-depth study of the nutritional management of hospitalized patients. Students will be required to research the appropriate literature, to survey current practices, and to make presentations at a seminar session.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2623 - ADVANCED MEDICAL NUTRITION THERAPY 1

Minimum Credits: 3

Maximum Credits: 3

This is the first of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from her/his undergraduate coursework and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology and treatment, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions for acute and chronic diseases based on evidence-based research and guidelines. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class discussions, and problem-based learning through case studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2624 - ADVANCED MEDICAL NUTRITION THERAPY 2

Minimum Credits: 2

Maximum Credits: 2

This is the second of a two-course sequence in advanced medical nutrition therapy. This course will build on the student's knowledge of medical nutrition therapy from her/his undergraduate coursework and HRS 2623 and will focus on the application of the nutrition care process at the practitioner level. The course will cover pathophysiology and treatment, nutrition implications, nutrition assessment and diagnosis, and nutrition interventions, including nutrition support, for acute and chronic diseases based on evidence-based research and guidelines. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class discussions, and problem-based learning through case studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2625 - NUTRITION COUNSELING METHODS

Minimum Credits: 3

Maximum Credits: 3

This is an advanced course that emphasizes counseling as a supportive process, characterized by a collaborative counselor-patient relationship that involves behavior and attitudinal change. It will focus on the conceptual foundations and philosophy of behavior change theories, with an emphasis on motivational interviewing, including application in practice to provide the learner with a collection of evidence-based strategies and counseling skills to promote behavior change in patients/clients.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Health and Rehabilitation Scs (MS) or SBPLAN: Wellness and Human Performance or Clinical Dietetics & Nutrition

HRS 2626 - SPECIAL TOPICS IN EATING BEHAVIOR

Minimum Credits: 3

Maximum Credits: 3

This class will introduce students to a range of eating behaviors, eating disturbances and body weight issues in the general populations. A primary aim of the course is expose students to the many factors that influence eating behaviors including lifestyle, environment, sport, and pathology. A second aim is to enable students to synthesize and evaluate current research on disordered eating in the general population, and in athletes, with the goal of coming to understand the role of the scientific literature in evidence-based practice. A third aim of this course is to empower students to develop, implement and evaluate presentations and programs on special topics related to eating behavior.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2627 - DIET & EXERCISE CHRONIC DISEASE MGT

Minimum Credits: 3

Maximum Credits: 3

Theory and practical application of the use of diet and exercise therapies in the prevention and treatment of chronic diseases including, diabetes mellitus, hypertension, coronary heart disease, obesity, and arthritis/osteoporosis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2628 - NUTRITION AND PERFORMANCE WITH LAB

Minimum Credits: 3

Maximum Credits: 3

A lecture and laboratory class in which the principles of nutrition are applied to sports performance and exercise. Topics presented include energy release and substrate utilization, energy metabolism during exercise, fluid intake and athletic performance, body composition, vitamins and minerals, nutrition for training and competition, sports specific considerations, fitness and nutrition assessment in athletes, and special issues, such as vegetarian diets, and environmental obstacles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2629 - DIETARY SUPPLEMENTS FOR HEALTH AND PERFORMANCE

Minimum Credits: 3

Maximum Credits: 3

This course will integrate classroom lecture and discussion to help students learn how research evidence supports or negates the use of dietary supplements for health and performance. Emphasis of course will be interpreting research evidence on dietary supplements, ergogenic aids and other

performance enhancing methods, and adapting the evidence into clinical practice recommendations/guidelines.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2631 - NUTRITION FOCUSED PHYSICAL EXAMINATION

Minimum Credits: 3

Maximum Credits: 3

Introduction to professional knowledge and skills in nutrition focused physical examination. The course is based on the knowledge/application of the NCP and Model in professional practice. Learning experiences will include formal class presentations, class discussions, case-based problem solving and simulation laboratory sessions. Knowledge based learning leading to examination technique simulations for anthropometric measurements for body composition, nutrition focused physical examination for malnutrition diagnosing and examination techniques, e.g., vital signs, head and neck exam, intra and extra-oral exams, heart and lung auscultation, as well as, abdominal auscultation and palpation are included. At the completion of the course competency in application of nutrition focused physical examination techniques will be assessed on an individual basis.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS) or Nutrition and Dietetics (MS)

HRS 2632 - PRINCIPLES OF NUTRITION EDUCATION AND COUNSELING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2633 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This course provides students with opportunities to explore through study, discussion and practical application, the issues and trends that are affecting food and nutrition professionals and the profession of dietetics. Included is an introduction to the history and structure of the profession of dietetics and to existing and emerging roles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2634 - FOOD SERVICE MANAGEMENT WITH LAB

Minimum Credits: 3

Maximum Credits: 3

This course presents the basic principles and skills of food service management and leadership. Learning experiences include lectures, discussions, and required field trips. Please note, no other courses can be scheduled during the break between the morning and afternoon class sessions as this time will be needed for travel to field trips sites.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2635 - PROFESSIONAL DEVELOPMENT

Minimum Credits: 2

Maximum Credits: 2

This course provides students with opportunities to explore through study, discussion and practical application, the issues and trends that are affecting food and nutrition professionals and the profession of dietetics. Included is an introduction to the history and structure of the profession of dietetics and to existing and emerging roles.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2637 - PRACTICAL APPLICATIONS OF MEDICAL NUTRITION THERAPY 1

Minimum Credits: 1

Maximum Credits: 2

This weekly conference is designed to prepare students for their planned, supervised practice experiences to be completed at the assigned clinical facility. Teaching approaches for the course include lectures/presentations, group discussions, student presentations, guest lectures, and problem-based learning through case studies. Class exercises are designed to simulate supervised practice assignments and provide opportunity for the student to apply didactic content to the practice of food service management and the nutrition care process used in patient care. Class participation is an important component of the course. Group discussions are used to report on events and share experiences in order to broaden the class's perspective on dietetics practice in the acute care setting.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2638 - PRACTICAL APPLICATIONS OF MNT 2

Minimum Credits: 1

Maximum Credits: 1

This weekly conference is designed to prepare students for their planned, supervised practice experiences to be completed at the assigned clinical facility. Teaching approaches for the course include lectures/presentations, group discussions, student presentations, peer review exercises, and problem-based learning through case studies. Class exercises are designed to simulate supervised practice assignments and provide opportunity for the student to apply didactic content to the nutrition care process used in patient care. Class participation is an important component of the course. Group discussions are used to report on events and share experiences in order to broaden the class's perspective on dietetics practice in the acute care setting.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2639 - PEDIATRIC AND CHILDHOOD NUTRITION

Minimum Credits: 3

Maximum Credits: 6

This course provides students with an evidence-based understanding of the anatomical, physiological, and biochemical changes that occur during pregnancy, human lactation, and development from infancy to adolescence. Students will learn about nutritional and lifestyle factors associated with fertility, pregnancy outcomes, and other high-risk groups in the pediatric population. Students will obtain advanced knowledge on the medical nutrition therapy for management of diseases specific to these life-stages. Teaching approaches for the course include lectures, guest speakers, assigned readings, in-class activities and discussions, and site visits.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

HRS 2640 - SUPERVISED PRACTICE : COMMUNITY NUTRITION

Minimum Credits: 2

Maximum Credits: 2

This course is a combination of dietetics related classroom, observation and supervised practice experiences in community settings. Emphasis is on delivering food and nutrition services in community based settings with a focus on wellness. Core rotations are in the following areas: child and adult day care, WIC and breastfeeding support, congregate and home delivered meals (Meals-On-Wheels), schools, the Western Pennsylvania School for Blind Children, food banks and pantries and community-based wellness programs. Students are required to complete the core rotations and to meet course requirements through special projects in sites of their choice across the lifecycle. Course minimum: 120 hours.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2641 - SUPERVISED PRACTICE: FOOD SERVICE MANAGEMENT

Minimum Credits: 2

Maximum Credits: 2

This course will provide supervised practice experience in the area of food service management. The purpose of the learning activities and assignments is to provide the student with the opportunity to apply knowledge and skill in food service management in a health care setting. The student will observe and then model the functions of a food service manager. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in food service management by completing a Food Service Management Staff Relief. management of food service to hospitalized patients. The student will function as a Food Service Supervisor at the site and will independently conduct all phases of the job role for the last three days of the rotation. The student will attend and participate in any food service management meetings or hospital management meetings attended by food service managers.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2642 - SUPERVISED PRACTICE: CLINICAL 1

Minimum Credits: 5

Maximum Credits: 5

This course will provide supervised practice experience in the area of clinical dietetics. This course is designed to follow the topic sequence and content of HRS 2623: Advanced Medical Nutrition Therapy 1. It provides the students with the opportunity to apply their knowledge of the nutrition care process and medical nutrition therapy (MNT) to the practice of dietetics in the acute care setting. This involves planned learning experiences with a variety of patients at various stages of the health/illness continuum. Students will have opportunity to observe and then model the functions of a clinical dietitian. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in providing comprehensive nutritional care to individuals within the practice setting. This course is the first of two courses which will provide clinical dietetics supervised practice experience. In this course the initial skills required for the nutrition care process will be mastered: nutrition assessment, diet interviewing, developing a care plan, written documentation, and nutrition education/counseling. Supervised practice experience caring for patients with the following disease states will be provided: feeding difficulties, energy imbalances, cardiovascular diseases, diabetes mellitus, and renal disease. During this course the student will begin to develop and construct their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the site's Clinical Nutrition Department and/or the field of clinical dietetics. This is a two term project that will continue into HRS 2643: Supervised Practice: Clinical II.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2643 - SUPERVISED PRACTICE: CLINICAL 2

Minimum Credits: 5

Maximum Credits: 5

This course is the second of two courses which will provide supervised practice experience in the area of clinical dietetics. This course is designed to follow the topic sequence and content of HRS 2624: Advanced Medical Nutrition Therapy 2. It provides the students with the opportunity to apply their knowledge of nutrition assessment and medical nutrition therapy to the practice of dietetics in the acute care setting. This involves planned learning experiences with a variety of patients of all ages at various stages of the health/illness continuum. Students will have opportunity to observe and then model the functions of a clinical dietitian. Through the combination of planned learning activities and professional interaction, the students

will demonstrate increasing level of proficiency in providing comprehensive nutritional care to individuals within the practice setting. Students will be assigned to their same primary site as the fall term; however selected rotations outside of the primary site may be necessary to provide appropriate learning activities. This course will build on skills mastered in HRS 2642 and will provide the students supervised practice experiences to develop and master new skills including calculating and assessing enteral and parenteral nutrition regimens. Supervised practice experience caring for patients with the following disease states/conditions will be provided: gastrointestinal, pancreatic, and liver disorders, cancer, critical illness, and patients requiring nutrition support. During this course the student will complete their Quality Improvement (QI) Research project. This project will give each student the opportunity to work independently on a QI project at the primary clinical site. The project should focus on an area that is relevant to the site's Clinical Nutrition Department and/or the field of clinical dietetics. This is a two term project that will build on the project content from HRS 2642.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2644 - SUPERVISED PRACTICE: MANAGEMENT OF NUTRITION CARE

Minimum Credits: 2

Maximum Credits: 2

The supervised practice experience activities for HRS 2644: Management of Nutrition Care are planned to provide the student with the opportunity to assume increased responsibility for the management of nutrition care to hospitalized patients. In this course, the student will function as a clinical dietitian at the clinical site and will independently conduct all phases of the nutrition care process. Students will continue in the same primary supervised practice facility where they were assigned for Supervised Practice: Clinical 1 and 2.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2645 - SUPERVISED PRACTICE MANAGEMENT IN LONG-TERM CARE

Minimum Credits: 2

Maximum Credits: 2

This course provides supervised practice experience in a long-term care setting. The course will provide supervised practice experience in the areas of food service management and also clinical dietetics to allow the student to carry out the nutrition care process for patients/residents in this population.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Coordinated Mster in Dietetics (MS)

HRS 2646 - INTRODUCTION TO FUNCTIONAL NUTRITION WITH LAB

Minimum Credits: 3

Maximum Credits: 3

This introductory course to functional nutrition is based on a food first approach to promotion of optimal health. Lectures and class activities will explore the scientific basis of medicinal foods and herbs used in cooking. Students will demonstrate practical application by incorporating 'health promoting foods and herbs' into meal planning and preparation with the goal of optimizing health for the prevention and treatment of diet and lifestyle related diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Cord Mster in Nutr and Dietics (CMD-MS) or Wellness and Human Performance (MSNUTR-SP)

HRS 2650 - EXERCISE PHYSIOLOGY

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide graduate students, within the field of rehabilitation science, the knowledge of theoretical and applied aspects of exercise physiology. An in-depth understanding of how the body responds when exposed to acute and chronic bouts of exercise will be provided through lectures and laboratories. Topics discussed will include physiological responses and adaptations of the cardiovascular, respiratory, metabolic, and neuromuscular systems to exercise; assessing cardiorespiratory fitness, body composition, anaerobic performance and muscular fitness; designing exercise programs for health and wellness and special populations; sport performance; environmental considerations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2655 - RESEARCH METHODS AND APPLIED STATISTICS

Minimum Credits: 3

Maximum Credits: 3

This introductory course in research methods and applied statistics will address research study design and descriptive and inferential statistics related to the research process. Inferential statistics will include one-sample, two-sample and multi-sample inference. Topics covered will include issues related to measuring variables (reliability/validity), an introduction to epidemiology and measures of association, and interpreting scientific literature. The course will include hands-on practice in running statistical tests previously taught in class. This course provides awareness about research methods and statistical analysis considerations needed by health sciences students. There are no pre-requisites.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2660 - ADVANCED HUMAN PERFORMANCE AND TESTING

Minimum Credits: 3

Maximum Credits: 3

This course will provide students with advanced knowledge in the field of human performance training and evaluation through classroom lectures and laboratory/field experiences. Topics include developing and testing strength, speed, power, agility, endurance, stability, and flexibility.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2661 - SPORTS SCIENCE PRACTICUM 1

Minimum Credits: 3

Maximum Credits: 3

This course will provide supervised practical experience in the area of sports science. It provides the students with the opportunity to apply their knowledge of sports science, performance, and testing/monitoring in an athletic setting. This involves planned learning experiences with an athletic team at various stages of the training program and season. Students will have opportunity to observe and then model the functions of a performance specialist. Through the combination of planned learning activities and professional interaction, the students will demonstrate an increasing level of proficiency in providing and evaluating comprehensive training to athletes and teams within the athletic setting. This course is the first of three courses which will provide sports science practical experience. In this course the initial skills required of a sports scientist will be mastered: sport/athlete assessment, performance testing, developing a training plan, athlete monitoring/tracking, and data management. During this course, the student will begin to develop and construct their Capstone project. This project will give each student the opportunity to work independently on a sports science or performance outcome with their practicum site. The project should focus on an area that is relevant to the field of sports science or the site's Sports Science/Performance Department's goals. This is a 3 term project that will continue into HRS 2627: Sports Science Practicum 2 and HRS 2630: Sports Science Practicum 3.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

HRS 2662 - SPORTS SCIENCE PRACTICUM 2

Minimum Credits: 3

Maximum Credits: 3

This course is the second of three courses which will provide supervised practical experience in the area of sports science. It provides the students

with the opportunity to apply their knowledge of sports science, performance, and testing/monitoring in an athletic setting. This involves planned learning experiences with an athletic team at various stages of the training program and season. Students will have opportunity to observe and then model the functions of a performance specialist. Through the combination of planned learning activities and professional interaction, the students will demonstrate increasing level of proficiency in providing and evaluating comprehensive training to athletes and teams within the athletic setting. Students will be assigned to their same primary site as the fall term; however, selected rotations outside of the primary site may be necessary to provide appropriate learning activities. This course will build on skills mastered in HRS 2626 and will provide the students supervised practical experiences to develop and master new skills including calculating and assessing athlete data and training regimens. During this course, the student will continue their Capstone project. This project will give each student the opportunity to work independently on a sports science or performance outcome with their practicum site. The project should focus on an area that is relevant to the field of sports science or the site's Sports Science/Performance Department's goals. This is a three-term project that will build on the project content from HRS 2626.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

HRS 2704 - FUNDMS REHAB ENGR AND TECHN 1

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental principles and practices related to multiple areas of assistive technology. The technology area includes: seating and wheelchair mobility, augmentative communication, environmental control, computer access, transportation safety, prosthetics, worksite ergonomic, and man/machine modeling. In addition, common terminology, disability, ethics, and models of service delivery related to assistive technology are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS) or Health and Rehabilitation Scs (MS) or SBPLAN: Rehabilitation Sci & Tech (Health and Rehabilitation Scs-MS)

HRS 2705 - PRACT REHAB ENGR & ASSISTV TECHN

Minimum Credits: 3

Maximum Credits: 3

Develop the clinical skills needed to apply and re solutions to help persons with disabilities achieve their goals in the area of productivity, education, employment, communication, and environmental access. Students will match knowledge of products gained in HRS 2704 to the needs of individuals. Taught using a model for assessing the individual, the context, the technology-user interface and an interdisciplinary team approach. A 3 hour a week commitment to serving learning & a journal is integrated with lectures, guide learning and semester case-based learning project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2706 - INTRODUCTION TO REHABILITATION ENGINEERING DESIGNS

Minimum Credits: 4

Maximum Credits: 4

Material at introductory graduate level. Fundamentals of biomechanics with specific application to rehabilitation. Basic mechanics (Newton's laws, statics, and dynamics) and vector algebra (forces, moments, and equilibrium) will form the first part of the course. The middle section focuses on kinematics and kinetics applied to biomechanics. The final section examines work/energy methods and stress/strain problems. Sets are assigned regularly and there are lab exercises/demonstrations.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2708 - INDIVIDUAL, SOCIAL, AND CULTURAL EXPERIENCE OF DISABILITY

Minimum Credits: 3

Maximum Credits: 3

Course investigates psychological and sociological issues of impairment with regard to viewing disability not as solely located within the individual, but instead as the outcome of interaction between the impaired individual and society. Course focuses on the experience of being disabled, with emphasis on both adjustment to disability and relationship to community. Foundations of stigmatization and discrimination towards people with disabilities and their pervasive ness and effect throughout all domains of life will be examined.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2709 - MANUEL WHEELCHAIR DESIGN

Minimum Credits: 2

Maximum Credits: 2

Covers the basic nomenclature used to describe and order wheelchairs. Wheelchair adjustment, assembly, training and operation will be covered. Students will be introduced to wheelchair standards and government controls. The focus on manual wheelchairs. Various types of manual wheelchairs will be used during the course. Students will participate in lectures and laboratory experiences.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2711 - COMPUTER ACCESS

Minimum Credits: 3

Maximum Credits: 3

This course surveys the hardware and software that can make personal computers accessible to persons with mobility and sensory disabilities. Topics include keyboard modifications, expanded and mini keyboards, key set redefinitions, virtual keyboards, direct selection and scanning strategies, mouse emulation and an intro to the use of augmentative communication aids for computer access. Both Macintosh and intel computers will be addressed. Course time will be equally divided between lecture/theory and hands-on set up of actual computer systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2717 - REHABILITATION TECHNOLOGY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

HRS 2718 - PROJECT BASED TECHNOLOGY DESIGN

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2722 - NEUROCOGNITIVE, SPEECH/LANGUAGE, AND SENSORY PROFILES IN AUTISM SPECTRUM DISORDER

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HRS 2724 - ASSISTIVE TECHNOLOGY FUNDING AND POLICY

Minimum Credits: 3
Maximum Credits: 3
Course for students to develop knowledge and skill in the process and strategies to find and acquire assistive technology devices and services for people with disabilities as well as understand the underlying policies that govern funding. Course focus on funding sources, legislative policy, clinical assessment, documentation procedures, use of evidence, strategies for preparing letters of necessity and advocacy efforts.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade
Course Requirements: PREQ: HRS 2704 and 2705: PROG: Sch Hlth & Rehabilitation Scs

HRS 2727 - CAPSTONE FOR PROSTHETICS AND ORTHOTICS

Minimum Credits: 1
Maximum Credits: 2
The capstone for P&O course is completed as part of the research requirement for the MSPO program. This course is taken in two different semesters as students work to formulate ideas and further conceptualize that idea into a cohesive research project under the guidance of faculty. The capstone is then presented to peers and faculty prior to graduation.
Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad Letter Grade

HRS 2747 - JOB PLACEMENT PRACTICUM

Minimum Credits: 1
Maximum Credits: 6
Practicum involves a minimum of 100 clock hours of supervised rehabilitation counseling vocational interventions, with specific involvement in placement of rehab consumers in employment. Practicum designed to provide specific experience and supervision in job development and placement and work adjustment activities.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HRS 2748 - ASSISTIVE TECHNOLOGY PRACTICUM

Minimum Credits: 1
Maximum Credits: 6
Practicum involves a minimum of 100 clock hours of supervised assistive technology experience including assessment, development, training, evaluation and follow-up regarding rehab technology. Practicum designed to provide specific experience and supervision in the provision of assistive technology to rehab consumers.
Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

HRS 2771 - FUNCTIONAL ANATOMY AND KINESIOLOGY

Minimum Credits: 3
Maximum Credits: 3
This course is the study of the structure and function of the human body, with special emphasis on the musculoskeletal and peripheral nervous

systems. Cadavers and anatomical models will be utilized. Palpation of anatomical landmarks, actions of individual muscles and muscle groups, and normal joint motions will be studied using the students' own surface anatomy. The concepts of measuring muscle strength and length, measurement of joint range of motion, and identification of postural or structural deviations will be introduced. The roles of muscles and types of muscle contraction during movement and exercise will be discussed. The basics of normal gait will be studied, and some common pathological gaits will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2772 - PATHOLOGY IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 2

Maximum Credits: 2

This course is designed to provide a general overview of the pre-disposing factors and direct causes of disease, as well as their effects on the human body. It will also include a systemic approach to the basic disease processes, in terms of etiology, symptomatology, general pathological changes, diagnostic procedures, and types of treatment. Universal precautions to be used in patient care will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2773 - INTRODUCTION TO MATERIALS, EQUIPMENT, AND FABRICATION

Minimum Credits: 2

Maximum Credits: 2

This course will introduce the student to the concepts of general material properties, the common materials used in orthotics and prosthetics, and the specific properties of these materials. The student will be introduced to equipment and fabrication techniques as well as safety precautions for handling and using materials and equipment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2774 - REHABILITATION BIOMECHANICS FOR THE HEALTH CARE PROFESSIONS

Minimum Credits: 3

Maximum Credits: 3

This course is a basic introduction to biomechanics of human motion for individuals in the health and rehabilitation fields. It is designed for individuals with a non-technical background, but a basic knowledge of mathematics, physics, and kinesiology is expected and will be utilized. Topics covered include statics, dynamics, anthropometry, motion analysis, electromyography, and soft-tissue biomechanics. Applications to rehabilitation will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS) or Health and Rehabilitation Scs (MS) or SBPLAN: Rehabilitation Sci & Tech (Health and Rehabilitation Scs-MS)

HRS 2775 - INTRODUCTION TO EVIDENCE - BASED PRACTICE IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2776 - PROFESSIONAL ISSUES IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

Issues and organizations relevant to the practice of orthotics and prosthetics will be presented and discussed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2777 - PRACTICE MANAGEMENT IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 2

Maximum Credits: 2

This course will provide knowledge of all the facets of running or managing the business end of an orthotics and prosthetics department or company.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2778 - RESEARCH SEMINAR IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

This course includes reading and discussion of research related to the practice of orthotics and prosthetics. Case studies, along with the evidence for the chosen or alternative orthotic or prosthetic treatments, will be presented by students and faculty. Students will formulate a research or scholarly paper topic related to orthotics and prosthetics, identify a mentor, and begin research on the topic.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2779 - PATIENT MANAGEMENT IN ORTHOTICS AND PROSTHETICS

Minimum Credits: 1

Maximum Credits: 1

Study of new concepts, devices, and manufacturing techniques in orthotics and prosthetics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2781 - UPPER EXTREMITY ORTHOTICS

Minimum Credits: 3

Maximum Credits: 3

Review of conditions and symptoms indicating treatment with upper extremity orthotics. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of upper extremity orthoses. Fabrication of upper extremity orthoses, including techniques for taking measurements and impressions. Fitting, evaluation of effectiveness, and modification of upper extremity orthoses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2783 - SPINAL ORTHOTICS

Minimum Credits: 3

Maximum Credits: 3

Topics to be covered include: conditions and symptoms indicating treatment with spinal orthotics; evidence for effectiveness of treatment; patient evaluation for prescription and design of spinal orthoses; fabrication of spinal orthoses, including techniques for taking measurements and impressions; fitting, evaluation of effectiveness, and modification of spinal orthoses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Sch Hlth & Rehabilitation Scs

HRS 2785 - LOWER EXTREMITY ORTHOTICS 1

Minimum Credits: 5

Maximum Credits: 5

Review of conditions and symptoms indicating treatment with lower extremity orthotics. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of lower extremity orthoses. Fabrication of lower extremity orthoses, including techniques for taking measurements and impressions. Fitting, evaluation of effectiveness, and modification of lower extremity orthoses.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2786 - LOWER EXTREMITY ORTHOTICS 2

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2828 - STUDY ABROAD PROGRAM IN PROSTHETICS AND ORTHOTICS

Minimum Credits: 1

Maximum Credits: 1

The objectives of the course are to let the students to observe and practice prosthetics and orthotics techniques of fabrication and clinical assessment in the treatment of patients with limited sources in Ecuador. Review of conditions and symptoms indicating treatment with lower extremity prosthetics below and above the knee as well as upper extremity prosthetics below and above the elbow, lower extremity orthotics for the foot, ankle, knee and hip as well as spinal orthoses. Review of evidence for effectiveness of treatment. Patient evaluation for prescription and design of spinal orthoses, upper and lower extremity prostheses and orthoses. Impressions, measurements and fabrication of the prosthetic and orthotic devices. Fitting, delivery and evaluation of effectiveness. A local prosthetics and orthotics company in that country will provide the logistic support of equipment and tools during the program. This experience will reinforce the concepts and knowledge acquired during the past terms in prosthetics and orthotics, and also prepares those who decide to take advantage of this opportunity with better tools of experience before their residence.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

HRS 2866 - PSYCHOLOGY OF SPORT

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2867 - PATHOKIN ORTHOPADC/ATHL INJURIES

Minimum Credits: 3

Maximum Credits: 3

Course will provide a detailed and sequential approach to the assessment and treatment procedures utilized for management of orthopedic related athletic injuries. Course is divided into regional techniques appropriate for management of specific athletic injuries. Course will present techniques which should be utilized to functionally assess the athlete's readiness to return to preinjury activities following rehab of the orthopaedic injury.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SUBPLAN: Sports Medicine

HRS 2868 - SEMINAR IN SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course designed to address a variety of current issues and technical advancements in sports medicine. Course divided into three units including a medical, legal, and ethical issues in sports medicine unit. The second unit will focus on the unique and newly developed technical advances in the field supported by the current research. Final unit will address the research and clinical application of isokinetic testing devices.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2869 - ANATOMICAL BASIS SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course will include dissection of the human cadaver and will emphasize the musculoskeletal, articular, nervous, and vascular systems. Dissection experiences will be supplemented with classroom lectures. The role of anatomical structures as they relate to athletic injury mechanism, evaluation, and rehabilitation will be emphasized.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Sports Medicine (Health and Rehabilitation Scs-MS)

HRS 2881 - UPPER EXTREMITY PROSTHETICS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 2883 - TRANS-TIBIAL PROSTHETICS

Minimum Credits: 5

Maximum Credits: 5

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Prosthetics and Orthotics (MS)

HRS 2885 - TRANS-FEMORAL PROSTHETICS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

HRS 2901 - INTRO TO RESEARCH METHODOLOGY

Minimum Credits: 3

Maximum Credits: 3

Designed to introduce research concepts to the HRS student. Content emphasis is placed on the basic concepts and terminology associated with research methodology. Through the readings and discussion it is hoped that the student will develop an idea of the role of research design measurement and statistics in the research process and thus gain the ability to interpret and evaluate published research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2902 - TOPICS IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course will be to present to all graduate students in SHRS a thorough review of the most current and pertinent issues confronting the health-care industry today. Discussion and assignments will be designed to require students to investigate critical issues which affect health-care delivery, quality of service, cost of health care, manpower utilization, and the effects of various federal and state legislation on health-care delivery.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2903 - ISSUES IN THE HEALTH SYSTEM

Minimum Credits: 2

Maximum Credits: 2

This course will present current and predicted future issues faced by America in the maintenance of the good health of its citizens. Options for resolution of the issues will be identified and pros and cons investigated and discussed both from the standpoint of the lay public and from that of the health professional. The course is required for all advanced degrees, and the enrollment will be composed of students from all professions represented in SHRS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Health and Rehabilitation Sciences

HRS 2905 - ETHICAL ISSUES IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course examines a variety of complex ethical issues which confront health-care practitioners and researchers as they work with clients and colleagues within the health-care system and society. By analyzing actual cases, health-care workers are enabled to make informed choices when faced with these issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2906 - HIST MED AND HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course examines the origins and evolution of both traditional medical systems and alternative health-care patterns in West civilization from the earliest society to the present. Particular attention is placed on the impact of religion, warfare, and other societal factors on the development of medicine. Special sessions cover the role of the physician in defining society's treatment of women, minorities, and the mentally retarded.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

Course Attributes: Global Studies

HRS 2907 - CLINICAL INVESTIGATIONS

Minimum Credits: 2

Maximum Credits: 2

This course will focus on all aspects of clinical investigation, including developing and populating a clinical data base for the purposes of quality improvement, clinical description and clinical research. Interviewing skills, diagnosis, management, outcome and keeping up to date will be covered in depth with a particular focus on evidence-based practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SBPLAN: Musculoskeletal Phys Therapy (Health and Rehabilitation Scs-MS) or Neuromuscular Physical Therapy (Health and Rehabilitation Scs-MS)

HRS 2908 - MUSCULOSKELETAL ASSESSMENT AND INJURY PREVENTION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: SUBPLAN: Sports Medicine

HRS 2910 - STATSTCL APPLCS/HEALTH & REHAB

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to statistical concepts, methods and applications useful for health care and rehabilitation professionals. Emphasis on application of statistical tools to support clinical and managerial decision making and identifying statistical tests and methods appropriate for the data and research design. Use of a computer-based statistical package will be required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2915 - TELEMEDICINE, TELEREHABILITATION, AND E-HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course provides a combination of didactic survey and applied skill development/experiential case-based learning. The curriculum includes: history of telemedicine, telehealth and tele rehabilitation; survey of research findings related to tele rehabilitation; guidelines for implementation of rehabilitation services using tele rehabilitation technology; review of policy related to tele rehabilitation; funding and reimbursement issues and strategies; privacy and security of tele rehabilitation; standards for tele rehabilitation; review and experience with tele rehabilitation technologies including but not limited to tele video ((pots, high bandwidth ISDN, IP conferencing) web-based resources (e.g., Email, discussion boards, instant messaging, listserv), data logging and body media, pdas and other devices (e.g., GPS), etc., And a case-based tele rehabilitation trial experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 2920 - ADMINISTRATIVE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience providing an opportunity to learn new skills in administration of a service or facility and permitting the application of previously learned skills and theories.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

HRS 2921 - CLINICAL INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised practical experience, usually in a clinical facility or agency, permitting the student to observe and participate in existing specialized programs and to develop, apply, and evaluate new clinical procedures.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

HRS 2922 - TEACHING INTERNSHIP

Minimum Credits: 1

Maximum Credits: 6

Supervised experience in a health-related educational program permitting the student to develop and present instructional materials, to experiment with innovative methods of instruction, and to evaluate the effectiveness of the presentations.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

HRS 2924 - GRADUATE RESEARCH PROPOSAL

Minimum Credits: 1

Maximum Credits: 6

Graduate student writes thesis proposal, receives committee approval and institutional review board (IRB) approval for thesis study.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HRS 2925 - GRADUATE RESEARCH

Minimum Credits: 1

Maximum Credits: 6

An original in-depth investigative study of a selected area of professional interest. A research report suitable in format and content for publication is required.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HRS 2926 - SCHOLARLY PAPER

Minimum Credits: 1

Maximum Credits: 6

A research oriented paper based on work the student has done in his or her area of study. Students will be encouraged to submit honors papers for publication or presentation at a national or state professional meeting. The adviser and an appropriate faculty reader will supervise the student's work on the scholarly paper.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

HRS 2927 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 1

Minimum Credits: 3

Maximum Credits: 3

Statistical methods for health science research i. This is the first of a two-course series in statistical methods. Topics covered include measurement, frequency distributions, histograms, bar graphs, stem-and-leaf displays, boxplots, scatterplots, measures of central tendency, measures of variability, point estimation, interval estimation, sampling distributions, one and two-sample tests of hypotheses for means and an introduction to non-parametric tests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2928 - STATISTICAL METHODS FOR HEALTH SCIENCE RESEARCH 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of a two-course series in statistical methods. Topics covered include one and two way analysis of variance, multiple comparisons for main effects and interactions, analysis of co-variance, multiple comparisons for adjusted means, correlation, simple linear regression, multiple regression, and meta-analytic methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: CSD-PHD (Comm Science and Disorders), or REHSCI-PHD (Rehabilitation Science), or AUDIO-AUD (Audiology), or SLPATH-CSD (Speech-Language Pathology), or PT-DP (Physical Therapy), or OT-CSD (Occupational Therapy) or MACAUD-SP (Audiology)

HRS 2930 - ADVANCED TOPICS IN STATISTICAL METHODS

Minimum Credits: 3

Maximum Credits: 3

Advanced topics in statistical methods. This course focuses on applied longitudinal data analysis. Topics include: the multilevel model for change, with an emphasis on individual change over time; applied data analysis using the multilevel model with random and fixed effects; evaluation of model fit; and the discrete-time hazard model.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: REHSCI-PHD or CSD-PHD

HRS 2999 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad LG/SU3 Basis

HRS 3000 - DOCTORAL SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Faculty and students in the rehabilitation doctoral program will participate in this seminar series. Research will be presented and critiqued by faculty and students. Topics related to grantmanship, ethics in research, and issues related to survival in an academic/research environment will be addressed in this seminar series. Doctoral students must present their research for critique by faculty prior to their dissertation defense.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3001 - DISSERTATION RES PHD DEGREE

Minimum Credits: 1

Maximum Credits: 12

Students will formulate, design, propose, carry out, analyze, interpret, and write up an approved research project, under the direction of a dissertation committee, and in particular the chairperson.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Rehabilitation Science (PhD)

HRS 3002 - METHODS OF INQUIRY FOR REHABILITATION SCIENCES I

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3003 - CORE CONCEPTS IN DISABILITY AND REHABILITATION 1

Minimum Credits: 2

Maximum Credits: 2

This course is the first course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this first course, we will review models of disability and rehabilitation. We will focus on aspects of concepts of functioning and disability, including body structures, body functions, activities and participation. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. Students will learn through faculty presentations (from among the various research programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: (REHSCI-PHD) or (CSD-PHD) or; SUBPLAN: (PHDHIM-TR) or (PHDOT-TR) or (PHDPT-TR) or (PHDRST-TR) or (PHDSMN-TR)

HRS 3004 - METHODS OF INQUIRY FOR REHABILITATION SCIENTISTS II

Minimum Credits: 1

Maximum Credits: 1

Course focuses on foundational knowledge regarding methods of inquiry for rehabilitation science. The first segment emphasizes outcome measures and the second segment emphasizes prognostic studies.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 3002 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3005 - CORE CONCEPTS 2

Minimum Credits: 2

Maximum Credits: 2

This course is the second course in a two-course sequence examining core knowledge in disability and rehabilitation sciences. In this second course, we will focus on individual and contextual factors that influence disability and rehabilitation, and implications for research. We will examine how these concepts are applied in ongoing research within field of rehabilitation sciences. We will also synthesize concepts and principles and discuss their application in individual student research programs. Students will learn through faculty presentations (from among the various research programs throughout the school of health and rehabilitation sciences), facilitated discussion, assigned readings, short written papers, short oral presentations, and peer-review of written products.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 3003 (MIN GRADE "B"); PLAN: Rehabilitation Science(PHD) or Comm Science and Disorders(PHD); SUB: PHDHIM-TR or PHDOT-TR or PHDOT-TR or PHDPT-TR or PHDRST-TR or PHDSMN-TR

HRS 3140 - INTRODUCTION TO TRANSLATIONAL RESEARCH IN THE HEALTH SCIENCES

Minimum Credits: 2

Maximum Credits: 2

Course will provide students with a comprehensive survey of the processes involved in translating research discoveries into practices that promote health and prevent disease. The specific topics to be covered include five goals: 1) Introduce students to the NIH roadmap and to discuss the conceptual framework for multidisciplinary and interdisciplinary research. 2) Provide perspectives on objectives outlined at the national level in healthy people 2010/2020 and at the global level by organizations such as the world health organization. 3) Provide an understanding of the models of translational research. 4) Introduce students to the methods of clinical and translational research. 5) Interpret and explain the drug and therapeutic development process. Also, topics include the implementation of new therapies as standards of care and the application of innovative preventive services. Various research methodologies, including those encompassed in the drug development process will be discussed. Course will offer lectures via electronic media and will use a collaborative learning approach to classroom activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3702 - SOFT TISSUE BIOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Soft tissue responses to external mechanical loading are of interest in the prevention and treatment of pressure-related tissue injuries. These injuries include ulcers occurring on the plantar surface of diabetic feet, wounds at the interface between a PROSTheses and a residual limb and pressure ulcers over the bony prominences of immobile individuals with neuromuscular impairments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3703 - ARCHITECTURAL ACCESSIBILITY

Minimum Credits: 2

Maximum Credits: 2

Provides a basic working knowledge of architectural design and construction systems, procedures and terminology related to accessibility and universal design. Topics include: understanding architectural drawings, planning phases of the construction process, translating human needs into construction terms, building codes and ADA accessibility standards. Student project will involve measuring for and designing a home or workplace modification. Access to architectural graphic standards by the American institute of architects is recommended.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3705 - WHEELCHAIR BIOMECHANICS

Minimum Credits: 1

Maximum Credits: 1

Discuss all areas of wheelchair biomechanics including stability of wheelchairs and propulsion biomechanics. Students will use kinetic and kinematic analysis to determine the forces and moments occurring in upper extremity joints during the propulsive stroke. Clinical correlates to the biomechanical studies will be presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3709 - INTRODUCTION TO REHABILITATION ROBOTICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed as an introduction to topics related to rehabilitation robotics. The course will cover areas including intelligent mobility aids, robotic manipulation aids, and therapeutic robots. Clinical applications of these technologies are also discussed. The course will be a mix of lectures and projects where students can engage in hands-on learning skills relevant to the design and evaluation of rehabilitation robotics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3710 - CLINICAL APPLICATIONS AND SEATING

Minimum Credits: 4

Maximum Credits: 4

Course will cover the clinical aspects of seating and mobility intervention for four diverse populations. First, the special needs of children will be addressed. Include various disability specific goals of intervention. Second are people with acquired spinal cord lesions. Seating and mobility intervention from the time onset - through rehab to independent living. The final two populations are people with musculoskeletal disorders and the elderly.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HRS 2704 and 2705; PROG: Sch Hlth & Rehabilitation Scs

HRS 3713 - REHABILITATION ENGINEERING DESIGN

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 3895 - RDG NEUROMUSCLR ASPCT SPRT INJRY

Minimum Credits: 3

Maximum Credits: 3

The course contains in depth study, readings, and critical discussion related to the role of the sensorimotor system in providing joint stability and how these sensorimotor mechanism are altered with orthopedic sport injury.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

HRS 3896 - RESEARCH SEMINAR SPORTS MEDICINE

Minimum Credits: 3

Maximum Credits: 3

Course is designed to introduce student to critical review of research in sports medicine. Students will critique research problems, methodology, analysis and clinical application of published manuscripts. Course will provide student with an opportunity to present and discuss paradigms and specific research proposals that are being developed for completion of thesis and dissertation requirements.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3897 - LAB TECHNIQUES SPORTS MEDICINE 2

Minimum Credits: 3

Maximum Credits: 3

Advance graduate level course into the mechanical, neuromuscular and anatomical bases of human movement. Course is to expand the prerequisite knowledge in basic biomechanics as applied to sports medicine. Students will learn quantitative techniques in kinematics, inverse dynamics, and energetic of human movement. Students will also expand on their basic knowledge of programming so as to be able to process data in an autonomous manner.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HRS 3898 - LAB TECHNIQUES SPORTS MEDICINE 1

Minimum Credits: 3

Maximum Credits: 3

Course is designed to provide an overview of clinical research paradigms within sports medicine. Student will be introduced to lab testing techniques related to neuromuscular mechanisms associated with sport and orthopedic injuries and develop lab proficiency with components on neuromuscular profiling. Will provide student with acquire data management and analysis techniques and develop research related writing skills necessary to complete thesis and dissertation requirements as well as provide a basis for future scholarly activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: School of Health and Rehabilitation Sciences students only.

HRS 3999 - DOCTORAL INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 6

Provides students an opportunity to explore in depth an area of particular interest to them. It is the student's responsibility to find a faculty member willing to undertake such a tutorial.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

Health Policy and Management

HPM 2001 - HEALTH POLICY AND MANAGEMENT IN PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

The core course is designed to give students an overview of the disciplines and competencies associated with the field of health policy and health care management. Understanding the role of leadership in a public health environment is a unifying theme in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2003 - POLICY AND DECISION MAKING FOR PUBLIC HEALTH EMERGENCIES AND BIOTERRORISM

Minimum Credits: 3

Maximum Credits: 3

This three-credit graduate course focuses on public health emergencies and bioterrorism at the phases of preparedness, mitigation, and response. The course emphasizes not only biological agents but also all hazards with public health consequences. It addresses the interfaces of policies and laws in the context of federalism, which requires interaction among the federal, state, and local levels of government. The course considers the critical role of private-sector health care providers in addition to governmental decision makers. Students explore past emergencies through history and case studies, conduct directed research on a chosen policy issue, and experience decision-making in the context of a simulated emergency by playing a chosen and previously researched official role. Teaching methods include lectures, case studies, policy research and writing, interdisciplinary classroom discussion, and simulated decision-making.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2004 - COMPARATIVE GLOBAL HEALTH SYSTEMS AND POLICY

Minimum Credits: 2

Maximum Credits: 2

This two credit course will focus on an understanding of the structures and processes of the health system and the health policies at its foundation from the perspective of 'true access' as defined by application of the of the eight-factor model of Lovett-Scott and Prather. The complexity of health systems will be manifest by comparative studies of national health systems ranging from low-to high income nations. A secondary emphasis will be placed on a retrospective analysis of the UN Millennium Development Goals and a prospective view of the UN's post-2015 Development Goals as an aspirational framework for advocating community development and sustainability with implications for global health policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2005 - CURRENT ISSUES IN HEALTH LAW

Minimum Credits: 1

Maximum Credits: 1

Current Issues in Health Law is an interdisciplinary course for students of public health and law. In this course, students will be introduced to cutting-edge issues in public health law, health law and policy. The course focuses on developments in health care and public health, particularly as they affect medically under-served populations, with implications for lawyers and public health practitioners as policy makers. It will also introduce students to the variety of settings in which lawyers and public health practitioners are involved in law. Classes will be taught by leading experts in the field as well as student led discussions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPM 2010 - ORGANIZATION STUDIES: THEORY AND APPLICATIONS TO HEALTH CARE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Focus on the understanding and application of fundamental concepts, principles and models associated with organization theory within healthcare, rehabilitation, and long-term care. Content will encompass the traditional foci of organization theory, e.g. Structure and functions, authority relationships, coordination and control processes, as well as constructs associated with related disciplines of organization behavior e.g motivation theory, leadership, etc. Emphasis on real-world applications. Organization design discussed in contemporary organization structures and processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2012 - FINANCIAL MANAGEMENT FOUNDATIONS HEALTH CARE AND PUBLIC HEALTH

Minimum Credits: 3

Maximum Credits: 3

Introduction to selected finance and accounting topics of health care professional, supervisor and department head. No previous knowledge of accounting or financial management required. First half emphasis on basic financial accounting concepts to provide organization-level understanding language, concepts, processes and functions of financial management. Second half emphasizes managerial accounting principles and techniques including cost accounting and budgeting. Focus shifts to departmental level financial management and role of supervisor process including budget development and control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: PPBHL; PLAN: HPM-MHA or HPM-MPH

HPM 2014 - APPLICATIONS AND ISSUES IN FINANCIAL MANAGEMENT OF HEALTH CARE INSTITUTIONS

Minimum Credits: 3

Maximum Credits: 3

This curriculum is designed to expand on the concepts presented in the financial management foundations for health care and public health course (HPM 2012). The focus of the instruction will be less book-learning and, instead, primarily be comprised of real-life, practical situations faced in today's healthcare industry. Teachings will be a mix of guest speakers from the local area's leaders and the instructor's experiences. The first part of the semester will revolve around understanding what's behind the data contained in an organization's financial statements. The course will also cover alternative revenue opportunities, such as philanthropic initiatives and investment earnings. Once these concepts have been presented, the instruction will change its focus to managing within a healthcare organization concentrating on budgeting, determining how/what programs to invest in or implement, and balance sheet management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2017 - QUANTITATIVE METHODS: DECISION TECHNOLOGIES AND OPERATIONS MANAGEMENT IN HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

This course gives an introduction to decision technologies and to the art of successfully using them in practice. Part i: focus on methodologies for optimizing and for predicting the consequences of decisions. Health care applications are considered: resource allocation, scheduling, project management. Part ii: focus on operations management issues in health care. Topics include: forecasting, inventory management and quality control.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy & Management (MHA or MPH or LAW) or Health Services Res and Policy (PHD)

HPM 2020 - PROFESSIONAL DEVELOPMENT SEMINAR 1

Minimum Credits: 1

Maximum Credits: 1

The Professional Development Seminar is designed to optimally prepare students to enter the health industry workforce. The primary goal of the Professional Development Seminar is to help ensure that all students fully leverage the career services provided by the university, are exposed to the broad array of settings and roles within the health industry, and gain exposure to health industry professionals from our key external stakeholder organizations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

HPM 2021 - PROFESSIONAL DEVELOPMENT SEMINAR 2

Minimum Credits: 1

Maximum Credits: 1

The Professional Development Seminar is designed to optimally prepare students to enter the health industry workforce. The primary goal of the Professional Development Seminar is to help ensure that all students fully leverage the career services provided by the university, are exposed to the broad array of settings and roles within the health industry, and gain exposure to health industry professionals from our key external stakeholder organizations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: H/S/U Basis

HPM 2025 - HPM PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The student may register for the HPM practicum upon approval of the faculty of the department of health policy and management. The HPM practicum is designed to provide the student already employed in a healthcare organization with exposure to executive management, leadership, and policy-making processes and activities. Typically, the student will complete the practicum at their employing organization.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

HPM 2028 - MICROECONOMICS APPLIED TO HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to microeconomics, the study of resource allocation with particular emphasis on the role of markets. The course focuses on the competitive model. Examples of the use of economic concepts are drawn primarily from the health and medical care delivery systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2029 - HEALTH MANAGEMENT INFORMATION SYSTEMS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide future health care managers and policy-makers a conceptual framework for understanding and managing an integrated health management information system (HMIS). Primary attention will be given to the overall architecture of HMIS and issues related to health information management. The course focuses on the health care manager's role in the design, implementation and control of an effective HMIS. Instructional methods include lectures by regular faculty and guest resources, class discussion, case analyses and an applied field site study.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2037 - ESSAY-HA

Minimum Credits: 1

Maximum Credits: 3

The essay is designed to provide the student with an opportunity to integrate the major components of the health administration learning experience. The student is expected to demonstrate analytical ability and technical proficiency in expository writing.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

HPM 2049 - HUMAN RESOURCES MANAGEMENT FOR HEALTH CARE AND PUBLIC HEALTH PROFESSIONALS

Minimum Credits: 2

Maximum Credits: 2

This course encompasses both personnel administration and labor relations concepts, processes and issues presented within a broad human resource management perspective. The emphasis of the course is on behavioral implications of legal-regulatory, economic, cultural, and technical forces affecting the management of people in health care organizations viewed as an open system. Perspectives of organization theory and behavior, personnel and labor law will be applied to the analysis of human resource/labor relations problems and effective management and supervisory practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2050 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 1

Maximum Credits: 1

The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HPM 2055 - MANAGING HEALTH PROGRAMS AND PROJECTS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to prepare students to effectively manage health programs and projects. The course is lecture/discussion based, but with ample analytical and written assignments. Extensive use is made of internet resources. A conceptual model of core (strategizing, designing, and leading) and facilitative (communicating, managing quality, marketing, and decision-making) management activities is used to structure the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy & Management (MPH)

HPM 2063 - THE POLITICS OF HEALTH POLICY

Minimum Credits: 2

Maximum Credits: 2

This 2-credit course is designed to provide an understanding of the key political dimensions of the health policy-making process in the united states. The course is designed for students with an interest in health policy, although no previous formal training in policy or politics is required. We will examine the roles of government institutions and political actors both inside and outside government in developing and implementing health policy. Past and present health care policy debates will be used to illustrate the concepts and theories discussed in class. Students will acquire an understanding of the political processes in which health policies are considered, and gain practical experience executing political strategies in the context of health policy campaigns.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2064 - HEALTH POLICY ANALYSIS

Minimum Credits: 2
Maximum Credits: 2

The aims of this course are to provide students with 1) an overview of the U.S. Health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. Pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2075 - NAVIGATING THE PHYSICIAN-ADMINISTRATOR RELATIONSHIP

Minimum Credits: 2
Maximum Credits: 2

This course is designed to provide the student with an introduction to the role of physician administrators in the emerging healthcare matrix based organizational model. Physicians, by virtue of their training and clinical experience, bring a background and orientation to administrative roles that differs significantly from the traditional orientation of the non-physician administrator. This often results in a clash of cultures which if not properly managed can negatively impact organizational efficiency. It is imperative that non-physician administrators develop the skill sets that will facilitate the merging of the physician's primarily clinical culture with the non-physician administrator's more traditional business and operational culture in support of an organization's overall mission. The course will emphasize the physician administrator's approach to C-Suite management and provide the student with exposure to and practical knowledge of the administrative and operational issues which commonly engage physician administrators. This course should prepare the student to function within a C-Suite environment that is led or populated by physicians in either a combined clinical and administrative or purely administrative role. Additionally, the student will gain exposure to the myriad of regulatory, quality/safety and patient centric issues for which physician administrators commonly assume overall responsibility. Commonly, while these issues are championed by the physician administrator, the day to day responsibility for the design and implementation of focused resolution strategies becomes the responsibility of the non-physician administrator. This mandates the development of the ability to prioritize, for strategic planning purposes, and to have sufficient competency with the identification and analysis of relevant metrics and the ability to utilize this type of data to formulate effective action plans. This course focuses upon this skill set and is structured to afford the student the opportunity to develop project specific strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence. The student will also be provided the opportunity to develop resolution strategies based upon operational metrics for clinical initiatives that impact operational efficiency and excellence.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2081 - PUBLIC HEALTH AGENCY MANAGEMENT

Minimum Credits: 3
Maximum Credits: 3

The course public health agency management focuses on the areas of knowledge and skills necessary to manage public health agencies. The course covers topics such as core functions and public health practice, legal basis for public health, public health interventions, configuring health departments, fundamentals of management theory and application, agency budgeting and public health constituencies. Classes include a lecture and class discussion of a case study or related question. The class ends with a final group report and group presentation of a class project relative to the development of a county health department.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

HPM 2105 - INTRODUCTION TO THE US HEALTHCARE DELIVERY SYSTEM 1

Minimum Credits: 1

Maximum Credits: 1

Introduction to the US Healthcare Delivery System 1 is a required course for first year HPM MHA and MPH students. This course is the first of a two part sequence that will: provide an historic and current overview of basic elements of the US healthcare delivery system, review HPM practical experiences in the context of professional and leadership competencies, and include current perspectives provided by selected guest healthcare executives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (HPM-MHA or HPM-MPH or HPMLAW-MPH) or Healthcare Systems Engineering (HSEPH-ACM)

HPM 2106 - HEALTH SYSTEMS LEADERSHIP AND PROFESSIONAL DEVELOPMENT 2

Minimum Credits: 1

Maximum Credits: 1

This is a required spring course for the first year MHA that covers additional elements of us healthcare system. Review in great depth of the management residency process, expectations and opportunities continues in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Health Policy and Management (MHA or MPH) or Law (LAWMPH-JD)

HPM 2108 - LEADERSHIP, PROFESSIONALISM AND CAREER DEVELOPMENT

Minimum Credits: 1

Maximum Credits: 1

This is a required course for MPH and MHA students related to the fundamentals of three areas: leadership, which focuses on teamwork, managing and leading people, and communication best practices. The second, professionalism, focuses primarily on principles of etiquette, professional dress, communication best practices and setting oneself apart in the professional setting. Finally, career development principles are covered and this touches on career paths, decision making for career success, and optimizing various work and professional organization experiences for professional growth. The course is primarily interactive in lectures and also requires the students to keep a journal for self-reflection on the topics. A dinner etiquette consultant joins the class as well as an executive from the field to give their perspectives on the three main principles. Accountability, communication, leadership, self-development, and professionalism are the competencies covered in the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2115 - HEALTH POLICY AND MANAGEMENT RESIDENCY

Minimum Credits: 1

Maximum Credits: 1

The course is designed to provide the student with an educational experience in the student's field of interest. It is a field experience performed under the supervision of a preceptor (i.e., A respected professional manager in the health field). Potential sites include a broad range of organizations such as hospitals, multi-unit systems, HMO's, consulting firms, insurance organizations, health policy and planning agencies, and health divisions of corporations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

HPM 2123 - ADVANCED TOPICS IN DECISION AND COST-EFFECTIVE ANALYSIS IN HEALTHCARE

Minimum Credits: 3

Maximum Credits: 3

This is an intermediate/advanced level course on using simulation models in health decision sciences and cost-effectiveness analyses. Simulation models have been used widely in healthcare to address important policy questions, such as cancer screening recommendations and efficient organ

allocations among transplant patients. The emphasis of this course is on applications and methods that are particularly applicable to issues of medical decision making and public health. Students will learn how to choose a model that best fits their applications. They will learn how to construct, parameterize, and analyze complex decision models, including calibration and validation. In addition, the student will be introduced to state-of-the-art methods in uncertainty analysis, value-of-information analysis, and diagnostic test evaluations. Although advanced topics will be discussed, the focus will not be on programming and mathematical notations will be kept to a minimum. Some familiarity with programming and linear algebra are helpful, but not required. Class sessions will be a combination of lecture format, case discussion, and computer labs with expectations of class participation. It is expected that all students will keep up with the required readings and homework assignments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2130 - HEALTH LAW AND ETHICS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce students to the legal and ethical issues which impact the administration and delivery of health services. This course is designed to provide students with the practical knowledge needed to identify legal issues inherent in health care and public health administration and to understand the legal ramifications of administrative and management decisions. Through lecture and class discussion four main subject areas are presented: an introduction to the legal system, legal issues in managing health care organizations, regulating quality of care and public health legal authority. Specific course topics include: sources of law, the court system and legal procedures, professional and institutional liability, governmental regulatory methods, antitrust law, corporate compliance programs, emergency care, and issues concerning informed consent, credentialing of medical professionals, confidentiality of health information, and termination of care, family planning, and public health law.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2131 - PUBLIC HEALTH LAW AND ETHICS

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to introduce students to public health law and policy and the legal environment in which public health is practiced. The course is designed to familiarize students with the process by which laws are created, interpreted and enforced, and to introduce them to the substantive areas of law most relevant to the field of public health. Through lecture, case analysis, class discussion and student presentations, five main content areas will be presented. 1) The legal basis for public health practice; 2) the law and core public health functions; 3) the law and controlling and preventing diseases, injuries, and disabilities; 4) public health emergency law; and 5) the ethical issues impacting public health practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2133 - LAW IN PUBLIC HEALTH PRACTICE

Minimum Credits: 2

Maximum Credits: 2

Local health departments play increasingly pivotal roles in the provision of community public health services; however, they also are experiencing diminished funding and reduced workforces. This course is the first of its kind offered at the University of Pittsburgh: a practice-based, collaborative learning experience for public health and law students. Together, students will develop interventions to address an issue identified by the Allegheny county health department as requiring the expertise of both cohorts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Community Element -General Community Impact

HPM 2134 - INTRODUCTION TO HEALTH CARE COMPLIANCE

Minimum Credits: 2

Maximum Credits: 2

This course will provide an overview of the legal landscape regarding health care compliance and demonstrate the importance of compliance for health care organizations. As one of the most highly regulated industries in the United States, health care entities are required to comply with numerous statutes and regulations at the federal and state level, with harsh penalties for non-compliance. Thus, individuals involved in the administration and delivery of health care must be well-versed in these laws and regulations, as well as the strategies health care entities employ to address particular compliance concerns. Specific topics include fraud and abuse; data privacy and security; the elements of effective compliance programs; audits, investigations, and self-disclosures; and significant compliance risk areas for various health care entities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2135 - HEALTH POLICY

Minimum Credits: 2

Maximum Credits: 2

An introduction to federal and state legislative, administrative, and budget systems as they affect health services. The course focuses on the study of selected health policies, considering them in their historical perspective, present status, and future direction within their social, economic, and political contexts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2141 - MANAGERIAL EPIDEMIOLOGY

Minimum Credits: 3

Maximum Credits: 3

Epidemiology is concerned with the measurement of the health of populations and understanding the determinants of that health. It is one of the fundamental disciplines of public health, and provides the basis for much of what we know about health and disease. As a required MHA course managerial epidemiology takes a broad view of the definition of, population, and will include the study of multiple populations of interest, such as the population: cared for in the service area of a hospital, covered by a particular insurance carrier, and larger populations such as a state, nation and the world. The course provides students with the knowledge and skills required to analyze, understand and interpret the data produced by health care organizations and identify the managerial implications of the data by summarizing data appropriately, understand the characteristics of mechanisms (methodologies) that created the data, and know when data observed is a common/expected or rare occurrence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2143 - PUBLIC HEALTH SYSTEMS: LEGAL, ECONOMIC, AND OPERATIONAL FOUNDATIONS

Minimum Credits: 2

Maximum Credits: 2

This is a required course for the mph degree in health policy & management. The U.S. public health system is comprised of both public-sector and private-sector entities whose interdependencies and competing interests must be understood by those responsible for decision making and problem solving. This course orients students to the governmental and organizational systems that support population health in the United States and, for purposes of comparison and global operations, in other countries as well. The course examines critical public health system problems with emphasis on health disparities and vulnerable populations. Students will hear lectures, engage in case study discussions, and conduct problem-based learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2145 - MARKETING HEALTH SERVICES STRATEGY AND BUSINESS PLANS

Minimum Credits: 3

Maximum Credits: 3

Analysis of concepts vital to the creation of superior competitive marketing planning strategies for health services providers. Emphasis, using

principles of epidemiology, on effective measurement of need in service area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2150 - STRATEGIC MANAGEMENT OF HEALTH SERVICE ORGANIZATIONS

Minimum Credits: 3

Maximum Credits: 3

This "capstone" course for the program stresses the application and integration of knowledge and techniques learned in the context of specific functions and disciplines focuses on identifying strategic issues in complex environments, and formulating realistic responses. The emphasis throughout is on understanding how to improve the major patterns of resource allocation within the organization in order to create lasting value.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2205 - INDEPENDENT STUDY-HA

Minimum Credits: 1

Maximum Credits: 3

Students with major interests in specialized areas participate in individual study, research activities, or advanced readings with a specified faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

HPM 2207 - QUALITY ASSESSMENT AND PATIENT SAFETY

Minimum Credits: 3

Maximum Credits: 3

Examines the definition of quality in healthcare from the perspectives of providers, health plans and consumers. Healthcare standards of JCAHO, NCQA, and HEDIS are reviewed. The role of clinical pathways, outcome measures, technology and the internet are explored as they impact the quality of healthcare.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2214 - FUNDAMENTALS OF HEALTHCARE GOVERNANCE

Minimum Credits: 2

Maximum Credits: 2

The purpose of this course is to provide students with a sense of the responsibilities of governing boards of voluntary hospitals and to enable them to interrelate with their boards appropriately and constructively. The substance of interrelationships between governing boards and managements is as varied as are the forms of the organizations to which they relate and the personalities of the individuals involved. Subjective perceptions are often more important than formal rules and effective governance is more art than science. The course provides guidelines to this art.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2215 - COMPUTER METHODS IN DECISION AND COST-EFFECTIVENESS ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course expands on topics introduced in cost-effectiveness analysis in health care and in clinical decision analysis and provides additional guidelines for using decision sciences in larger, more complex applications. Topics include modeling clinical processes and systems; discrete event simulation; advanced sensitivity analysis and confidence limits; controversies surrounding the use of cost-effectiveness analyses; and multi attribute

utility theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HPM 2216 - HEALTH INSURANCE: FINANCING HEALTH CARE

Minimum Credits: 3

Maximum Credits: 3

Course examines the concerns and practices of private health insurance; the relationships and activities established by the insurance contracts among the insurer, insured, and providers; the insuring process of marketing, underwriting and pricing; the interrelationships of private and public insurance programs; and the varied government activities related to insurance. The objective of this course is to increase understanding of the access, funding, and insuring issues surrounding health care and to explore the alternate strategies being pursued in response to environment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2217 - CLINICAL DECISION ANALYSIS

Minimum Credits: 1

Maximum Credits: 1

This course provides an introduction to the use of decision sciences in health care. In addition to developing a conceptual understanding of medical decision-making, the course will develop technical skills in decision analysis including the creation/evaluation of decision trees, the use of sensitivity analysis, and the incorporation of specific patient preferences through the use of utility analysis. The advantages and disadvantages of formal mathematical models for the analysis of clinical conditions will be presented. Examples from current medical literature will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HPM 2218 - INTEGRATED DELIVERY SYSTEMS NETWORK

Minimum Credits: 2

Maximum Credits: 2

Course will explore three aspects of integrated delivery systems: 1) efforts to develop vertically integrated services 2) integration of physician and hospital services, and 3) integration of payer and providers. Students enrolled in the course will complete an in-depth analysis of a successfully operating integrated system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 2220 - COST EFFECTIVENESS ANALYSIS HEALTH CARE

Minimum Credits: 1

Maximum Credits: 1

Provides an introduction to and develops technical skills in the economic evaluation of health care programs. A brief introduction to the economic foundation of cost effectiveness and cost benefit analysis is followed by an examination of the methodologies involved in performing cost effectiveness analyses. Topics include: definitions of cost and benefits, effect of the perspective of the analysis, calculation of cost-effectiveness ratios, performance of sensitivity analysis, discounting of costs and benefits, and discussions of current controversies in conduct of cost-effectiveness analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HPM 2240 - CASE STUDY ANALYSIS AND PRESENTATION IN HEALTHCARE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to foster crucial skills for healthcare leaders including persuasive public speaking, assessment and analysis skills of case studies, as well as the ability to work in teams to solve problems. This course focuses not only on the ability to increase skill in these areas but also develop professionally by presenting in front of healthcare executives and conveying messages effectively and creating buy-in on their proposed solutions to problems. The course is a prep course for the students to also attend the University of Alabama at Birmingham case competition in the winter, a prestigious competition of most mha programs in the country. The course will include three cases, analyzed and prepared by students broken into teams, where after preparation and analysis will present to executives in the community for scoring and judging. The team will be selected based on student performance from the course.

HPM 2300 - HEALTH LAW FIELD EXPERIENCE

Minimum Credits: 3

Maximum Credits: 3

Required placement in a law firm or in a house counsel office in a health organization or system, a public health agency, or a health policy agency.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

HPM 2700 - SEMINAR IN HEALTH SYSTEMS LEADERSHIP

Minimum Credits: 2

Maximum Credits: 2

This course will consist of a series of case-based examinations of specific managerial and leadership problems and decisions that have faced local health systems leaders in Western Pennsylvania. Health care reimbursement, licensing and accreditation, and measuring health care quality has become both more complicated and more important as pressures to reduce expenses and improve quality increase. Simultaneously, there has been a steady increase in the number of clinicians who have assumed managerial positions, such as medical directors of clinical units, directors of quality measurement and improvement programs, utilization review and many others, as well as the appearance of clinicians in the "c-suite" of many hospitals and health care organizations. Utilizing adjunct faculty who are currently (or very recently have been) executive leaders in health systems, this course will examine a series of collaborations, problems, conflicts and solutions that developed between health system administrators and clinical leadership in health care organizations in the Western pa area. The mechanics of the course will be a series of cases, based on an actual recent issue in health care management in which the senior adjunct faculty member was involved. Students (individually or in groups) will evaluate the case, prepare a response, and make a short presentation of their 'solution' to the problem to the health system executive and clinical leader involved in that case. An interactive discussion will follow. This is a required course for students in the certificate in health systems leadership and management program, and can be used as an elective course by other students with permission of the instructor.

Grade Component: Grad Letter Grade

HPM 2905 - QUASI-EXPERIMENTAL DESIGN FOR HEALTH SERVICES RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students with the research design skills drawn from the social science tradition as applied to the delivery of

health services. This course provides a survey of research design, selection and development of research questions, conceptualization, measurement, and data collection/acquisition. The focus is on the application of quasi-experimental and observational approaches to research in applied health care settings.

HPM 3010 - SEMINAR ON ORGANIZATIONAL STUDIES: HEALTHCARE ORGANIZATIONS AND ENVIRONMENTS

Minimum Credits: 3

Maximum Credits: 3

This seminar is intended to facilitate the mastery of conceptual approaches to health care organizations. Through a combination of in-class discussions, self-directed research, written analyses, and oral presentations, students will clarify complex issues and evaluate innovative ideas. The course content will include such topics as organizational design, organizational behavior, and organizational environments. The primary approach to analyzing organizational phenomena will be the theoretical basis of causality, and the level(s) of analysis addressed by the theory.

Grade Component: Grad Letter Grade

HPM 3064 - HEALTH POLICY ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This course is the doctoral version of HPM 2064. Doctoral students have supplemental reading and writing requirements for this course. The aims of this course are to provide students with 1) an overview of the U.S. Health care delivery system and current policy challenges, and 2) an introduction to policy analysis tools useful for defining policy problems, assessing alternative solutions and examining effects of health policies. The framework used for achieving these aims will be to consider health policy from the perspective of the main stakeholders in the system: patients, providers, health plans, suppliers (e.g. Pharmaceutical and manufacturing industry), and payers. Course materials include a policy analysis text book, peer-reviewed articles, and case studies of contemporary health policy issues.

Course Requirements: PLAN: Health Services Res and Policy

HPM 3065 - ADVANCED HEALTH POLICY ANALYSIS: IMPLEMENTATION, EVALUATION, AND TRANSLATION

Minimum Credits: 2

Maximum Credits: 2

This course is designed to build on the principles learned in HPM 3064: health policy analysis. It is an advanced course for doctoral students in health policy and other disciplines with a focus on policy evaluation, translating the results of policy research for policy makers, and challenges to implementing health policies. Students will be expected to examine four current health policy topics in depth by examining the challenges to policy implementation, critiquing large-scale evaluations of health policies, and tracking the influence of research evidence on the policymaking process. The perspectives of policy analysts, practitioners implementing (or responding to) policies, and policy makers will be examined for each of four topics. The course format will include a combination of student-led discussions and formal presentations, lectures by the instructor, and guest lectures.

Academic Career: Graduate

Grade Component: Grad Letter Grade

HPM 3125 - INTERMEDIATE HEALTH ECONOMICS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to expand on intermediate microeconomic principles and apply these more sophisticated dynamics to the health care market, both domestic and international. Familiarity with introductory economics and calculus is assumed. Course time will be spent on a combination of lectures and discussions of seminal papers to explore theoretical frameworks and their empirical applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HPM 3135 - HEALTH POLICY

Minimum Credits: 3

Maximum Credits: 3

This course is the doctoral version of HPM 2135. Doctoral students have supplemental reading and writing requirements for this course. The course assists students in developing or enhancing key 'packets' of knowledge, skills, and abilities (which form competencies) sufficient to permit them to better analyze and credibly predict results of the health policymaking process in the United States and to learn more about how to exert influence in the health policymaking process as part of their professional roles.

History

HIST 2000 - PROFESSIONALIZATION SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This one hour one-credit course introduces graduate students to the discipline of history and to Pitt's graduate program in history. In addition, the course will enable students to commence work on their MA essays. Our main goals are to gain a better understanding of: a) the principal intellectual strengths of the history department; b) degree requirements such as the MA thesis and the comprehensive exams; c) various methodological approaches, such as social and gender history; d) fundamental analytical skills, such as how to write a historiographical essay, how to use databases, and how to edit your own work; and e) professional issues, such as participation in conferences and academic associations.

Grade Component: Grad LG/SNC Basis
Course Attributes: Global Studies, Latin American Studies, Russian & East European Studies, West European Studies

HIST 2045 - MEMORY POLITICS

Minimum Credits: 3
Maximum Credits: 3

This course introduces students to the study of memory. We will be reading classic works on collective memory, including Maurice Halbwachs, Pierre Nora and Jan Assmann. We will explore how societies remember and how they decide what is included in official history books. Our discussions will focus on how the politics of memory are shaped by actors such as the state, the media, lobbying groups as well as different political agendas. We will read case studies concentrating on Modern Europe with additional readings from classical antiquity, the medieval world, Asia and the Americas for comparative perspectives.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2102 - EUROPEAN READINGS 1850-PRESENT

Minimum Credits: 3

Maximum Credits: 3

This course provides a forum for the discussion of major trends of European history from the mid-19th century to the present, and their reflection in historiography. While the course content reflects the History Department's current European reading list for the comprehensive Ph.D. examination, thus introducing a thematically and methodologically wide range of historiographical literature, an effort has been made to structure the course along coherent chronological and thematic lines.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2130 - GENDER, SEXUALITY, + MASCULINITY IN HISTORICAL PERSPECTIVE

Minimum Credits: 3

Maximum Credits: 3

The seminar will examine Modern European history through the lens of gender, analyzing how gender roles and expectations and the social, economic and political participation of men and women evolved over the course of the 18th to the 20th centuries. We will look at a wide variety of political trends 'nationalism, feminism the welfare state, liberalism, communism and fascism, and at the impact of powerful events such as revolutions and wars on the development of gender roles. The course format is guided discussion of assigned literature. Evaluation based on discussion, presentations and essays.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Russian & East European Studies

HIST 2402 - SOURCES AND METHODS IN EAST ASIA

Minimum Credits: 3

HIST 2440 - ENVIRONMENTAL HISTORY AS WORLD HISTORY: NEW TRENDS

Minimum Credits: 3

Maximum Credits: 3

This reading seminar will provide an introduction to the field of in environmental history in world historical perspective. In order to ground our understanding of environmental history, the course will begin with a review of foundational works written since the birth of the field in the mid-1970s. After establishing this intellectual foundation, we will spend the rest of the semester reading more recently published books and articles that focus on the most important themes within the field of environmental history today. We will consider how these themes have been shaped by, and shape, ongoing discussions of globalization and world historical perspectives. We will consider traditional historical categories such as race, class, and gender, but will also examine more global themes including migration, imperialism and colonialism, the spread of epidemic diseases, and global capitalism, among others.

HIST 2509 - WOMEN, GENDER AND BLACK INTERNATIONALISM

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the complex dynamics of black internationalism, focusing on the global visions; transnational activities; and transracial political alliances of people of African descent in the United States and in other parts of the globe. Highlighting the writings, speeches, activism, and overseas travel of a diverse group of men and women, this course employs a gender analysis and moves black women from the margins to the center of the black internationalist story. The seminar examines varied expressions of black internationalism in the United States and abroad from the late 19th century to the Civil Rights-Black Power era. It engages two key questions: how was black women's engagement in internationalism similar to and/or different from their male counterparts? And to what extent did black women merge internationalism with issues of women's rights and/or feminist concerns? Course readings will represent a combination of primary and secondary sources that reflect the geographical breadth of the African Diaspora including Africa, the Americas, and Europe.
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2515 - VIOLENCE AND THE POLITICS OF MEMORY IN LATIN AMERICA

Minimum Credits: 3
Maximum Credits: 3
Focusing on a variety of Latin American countries, this graduate seminar will consider a range of readings on dictatorship, democracy, violence, and memory. Topics include the experience of specific sectors of society under authoritarian rule, sources of support for dictatorship, forms of resistance to authoritarianism, memories of terror and resistance, and efforts to forge peace and justice in the aftermath of extreme violence.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2530 - TRANSNATIONAL LABOR AMERICAS

Minimum Credits: 3
Maximum Credits: 3
This seminar explores the transnational history of labor in North America, Latin America, and the Caribbean across the 19th and 20th centuries. How have geopolitical shifts and international capital flows remade local communities and regional economies? How have the actions of workers and potential workers shaped investors' possibilities? What role have ideologies of race and gender played in labor control -or struggle? To what extent have different states been able to impact outcomes within this supranational system? How different is the "globalized" present from this past?
Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad Letter Grade

HIST 2540 - EUROPEAN EMPIRES IN THE WORLD

Minimum Credits: 3

Maximum Credits: 3

This seminar offers a survey of European empires in comparative perspective. The sequence is loosely chronological, beginning with hegemonic powers from the 16th through 18th centuries, then lingering in the long nineteenth century of European global dominance, and ultimately examining how that age of empires shaped our own world. Geographically, it ranges from Britain to Russia to European colonies in India, Africa, and Latin America. Thematically, the seminar singles out, first and foremost, geopolitics, but also engages topics such as political economy, networks and exchange, warfare, and the development of "modern" categories of knowledge. Although rooted in historical methodology, the seminar also considers questions relevant to political science and anthropology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2626 - U.S. IN THE WORLD

Minimum Credits: 3

Maximum Credits: 3

The purpose of the course is to look at American foreign policy in the sense of its now-expanded conception (cultural, social, and political). It will examine both governmental and non-governmental influences on the role of the U.S. in the world and also examine how those in the world perceived the U.S. and its efforts. It should prepare students to have a sense of the trajectory of scholarship (Williams to Gaddis to more recent works) while also examining more contemporary discourses on how to assess American interventions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2640 - GLOBAL APPROACHES TO THE CONCEPT OF MODERNITY

Minimum Credits: 3

Maximum Credits: 3

When did modernity start? Is our society postmodern? Are some societies more modern than others? Should we altogether jettison the word "modernity"? Modernity is not only a word whose use you may one day be asked to justify, it is also a gateway unto debates about whether humanity has progressed, about Western expansion, and about how to compare global societies. The first part of this class will give you an overview of three key debates surrounding the concept of modernity: 1) whether modernity is primarily related to capitalism, to the nation-state system, or to transformations in forms of subjectivity, 2) how the temporal markers of modernity, early modernity, and postmodernity have been debated, and 3) how people in societies on the receiving end of Western expansion wrote about modernity and about its twin concept, tradition. The second part of this class will look at actual uses of the concept of modernity by inviting half a dozen faculty members to discuss how they use modernity in their own work. Although based in the history department, this seminar seeks to foster an inter-disciplinary conversation among students from a broad array of disciplines.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2699 - POWER AND INEQUALITY IN AMERICAN HISTORY

Minimum Credits: 3

Maximum Credits: 3

"Power and Inequality in American History" is a readings course that covers the full sweep of American history from early Native America to the near-present. The course will concentrate on four themes within the broader rubric of power and inequality: race, class, gender, and capitalism. We will pay special attention to transnational approaches and to the ever-shifting politics of American historical writing. We will read classic and newer works to demonstrate how historical practice has changed over time. The course will serve as a broad survey for graduate students in any department or discipline who study any period or theme in American history.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2704 - APPROACHES TO GLOBAL HISTORY

Minimum Credits: 3

Maximum Credits: 3

World history has a history. While universal history and world history lost ground to national histories in the nineteenth centuries, historians in the past half century are again experimenting with "global", "international", and "transnational" histories. This seminar reads some of the key texts in a long historiography.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Global Studies

HIST 2709 - AGE OF REVOLUTION IN GLOBAL CONTEXT

Minimum Credits: 3

Maximum Credits: 3

The Age of Revolution has long been considered the beginning of western, and therefore of global, political modernity, the period in which liberal democracy declared victory over absolute monarchy, citizens over subjects, and imperial nation-states over composite empires, the bourgeoisie over the nobility, industrialists over landowners, and capitalism over feudalism, and wage-labor over slavery. But the rise of world history has complicated this view, drawing attention to the worldwide dimensions of many of these processes on the one hand, while questioning the utility of potentially Eurocentric frameworks within this broader global context on the other (for example, "democratic," "Atlantic," "bourgeois," or "Industrial" Revolution). This course plans to engage with these debates by probing the conceptual, geographic, and chronological boundaries of this so-called "Age of Revolution." It is designed to appeal to students from across multiple thematic and regional fields, including power and inequality, Atlantic, world, Europe, US, Latin America, and East Asia.

HIST 2721 - ATLANTIC HISTORY TO 1800: READINGS

Minimum Credits: 3

Maximum Credits: 3

This readings seminar will introduce students to work in Atlantic History. The focus will be on popular and laboring classes, gender, race and ethnicity.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: African Studies, Global Studies, West European Studies

HIST 2724 - RETHINKING THE 20TH CENTURY BLACK ATLANTIC: CIRCUITS, SPHERES, SOCIAL MOVEMENTS

Minimum Credits: 3

Maximum Credits: 3

How has the African diaspora shaped the modern world? What role did afro-diasporic intellectuals and social movements play in the post-emancipation Atlantic world? Recent scholarship in multiple disciplines has traced how men and women from the Caribbean, North America, Brazil, West Africa, and beyond remade 20th C. politics and culture on an international as well as national level. Exploring performance, ritual, literature, social movements, and everyday life, we trace evolving ideas of race and nation, ancestry and authenticity, belonging and rights.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: African Studies

HIST 2729 - SEAS, PEOPLES, AND EMPIRES

Minimum Credits: 3

Maximum Credits: 3

This course focuses on interactions between seas, peoples, and empires in historical and comparative contexts. Using maritime history as its point of departure, the course explores the multiple ways in which contact with the sea shaped the lives of peoples and empires across the world. Beginning with Braudel's pioneering regional study of the Mediterranean and the Mediterranean World, the course moves into the Atlantic, Indian, and Pacific Oceans. In each of these contexts, students will consider how the lives of people across social hierarchies were mediated through the interpenetration of empires and maritime regions. The course also considers the extent to which enclosed maritime worlds make sense historically - as the voluminous literature on specific basins suggest that they do - and if so, what distinguished one such world from that of another? Students will explore these lines of inquiry through readings that concentrate predominantly, though not exclusively, on the early modern and modern periods.

Academic Career: Graduate

Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HIST 2732 - POWER AND INEQUALITY CORE SEMINAR

Minimum Credits: 3

Maximum Credits: 3

How are systematic patterns of inequality generated and sustained? What roles do cultural beliefs, social practice, political institutions, and macroeconomics play? How do different kinds of inequality, such as those around class, racism, ethnicity, and gender interact? How do differently scaled systems of inequality within the household, community, nation, and international system interrelate? We survey four decades of theoretical debate and empirical findings from history, sociology, anthropology, geography, and other disciplines regarding power and inequality.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2733 - ENVIRONMENT & HEALTH HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course explores the interplay between the environment, health, and disease from a global perspective, with an emphasis on the reciprocal relationship between human environmental impacts and natural, biological processes. Important themes include the impacts of local environmental practices on global health, how global processes shape local patterns of disease, and the ways in which humans have responded to environmental and health crises. Readings are interdisciplinary, and draw from diverse fields including disease ecology, environmental studies, and the history of medicine.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2734 - MIGRATION, INEQUALITY AND EXCLUSION

Minimum Credits: 3

Maximum Credits: 3

This course will explore select aspects of the vast history of migration. It will take a broad approach to the topic, linking labor migration with expulsion, displacement, and exile; and connecting the process and experience of migration with the making and remaking of communities and cities after migration. Focusing on the nineteenth to the twenty-first centuries, we will consider movements of people from Europe, Asia, and the Middle East to the Americas; from Latin America to the United States; within Europe and within Latin America. Multidisciplinary perspectives will inform our discussions, as will some of the central methodological questions and debates marking historical work today. The course welcomes students from diverse disciplines, programs, and fields.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HIST 2735 - INTELLECTUAL AND CULTURAL HISTORY

Minimum Credits: 3

Maximum Credits: 3

One of two core courses in the texts & contexts theme offered in history. Students from other units are welcome to take it. We will examine different approaches to intellectual and cultural history & their application to the study of historical cases that fit under the rubric of material culture, cartography, statistical practice, archives and memoirs, national identities & discourse, the evolution of academic disciplines, literature & censorship, etc. Readings & cases will range over different historical periods & spaces. Some sessions will feature invited guests.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2736 - WORLD HISTORY METHODS SEMINAR: DIGITAL METHODS FOR SPATIAL ANALYSIS OF THE PAST

Minimum Credits: 3

Maximum Credits: 3

Over the past two to three decades, scholars in the humanities and social sciences have increasingly referred to a "spatial turn" of increasing attention to the place of geography and landscape in understanding society and culture. At the same time, historians have taken up the term spatial history to describe the ways in which they articulate geographical perspectives from their particular disciplinary approach. The reach of approachable desktop GIS and database design platforms, accessible satellite imagery, and online spatial visualization has amplified these trends. This seminar is an introduction to exemplary projects, applied methods, and techniques and tools for spatial analysis of the human past. At the same time, it is an effort to bring together several approaches that are not yet frequently joined. For instance, spatial history theory, method and exemplar are not well integrated, and we will approach the field from all three of these perspectives. Moreover, spatial history is seldom practiced at the global scale. World historians have not yet "put the world in world history." This class combines reading in theory and exemplars, interaction with online projects, and hands-on work with digital archives and tools. By the end of the class, students will understand the state of the art and possible future trajectories of spatial history as a field and its relationship with the field of world history. They will also be able to plan a spatial history project at the global scale, articulate its significance and scholarly contribution, and identify the sources, tools and expertise needed to complete it. Student work will include reading responses and archive and website assessments throughout the semester, and will culminate in a large-scale project prospectus.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2739 - CITY AS TEXT

Minimum Credits: 3

Maximum Credits: 3

The 'City as Text' seminar focuses on analyzing cities as readable realities that can be interpreted, so as to enable students to appreciate the ways in which cities (the built environment) can be understood as physical and symbolic manifestations of those forces (be they ideological, cultural, political, economic, social or technological) that shaped them and were, in turn, shaped by those forces. Following a series of readings on methodological and conceptual issues, the seminar focuses on case studies from various geographical areas and time periods, although the major focus is on 19th and 20th century cities.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HIST 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

M.A. candidates wishing to do independent reading with a professor on a subject not dealt with in a seminar may take this course, as May M.A. candidates who wish to do one of their papers independently, rather than in a seminar.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HIST 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 12

Candidates with M.A. degrees who are preparing for their Ph.D. Comprehensive examination may register for HIST 2990, a course of independent reading and study with one faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HIST 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 12

Ph.D. candidates who have passed their comprehensive examination may register for HIST 3000 with their advisor as they undertake their research for the doctoral thesis.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

HIST 3902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 12

History 3902 is a special course designed only for one type of student and one type of work. Candidates for the Ph.D. degree who have entered this program with a M.A. from another institution register for HIST 3902 when they undertake individual study with a faculty advisor to complete the research paper required for them.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

History and Phil of Science

HPS 2497 - TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 1

This is a survey course designed specifically for teaching assistants and fellows. The focus will be on practical teaching methods and techniques used in classroom recitations and lectures.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

HPS 2501 - PHILOSOPHY OF SCIENCE CORE SEM

Minimum Credits: 3

Maximum Credits: 3

This seminar is an intensive and advanced introduction to some of the main themes and problems in philosophy of science including the nature of evidence, theory comparison, and the theory-observation distinction, the meaning of theoretical terms, scientific explanation and scientific change.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD) or Philosophy (PHD)

HPS 2502 - HISTORY OF SCIENCE 1

Minimum Credits: 3

Maximum Credits: 3

This is the first of two "core" seminars designed to survey the development of scientific thought in Western civilization. In this first seminar, Greek medicine, astronomy, mathematics, biology and physics, its disappearance in the West, its preservation and development in Islam and finally the emergence of modern science in the renaissance, are the main focus.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD)

Course Attributes: West European Studies

HPS 2503 - HISTORY OF SCIENCE 2

Minimum Credits: 3

Maximum Credits: 3

This seminar will provide an overview of some of the major developments in the sciences from the second half of the seventeenth century to the first half of the Twentieth Century, considering the physical, chemical, biological, geological and social sciences. It will deal with the work of individuals, of general movements and their institutional and national settings.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History and Philosophy of Science (MA, PHD)

HPS 2504 - HISTORY OF GENETICS: MENDEL TO METHYLATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2505 - PHILOSOPHICAL FOUNDATIONS OF COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2509 - SPECIAL TOPICS IN THE HISTORY OF THE PHILOSOPHY OF SCIENCE`

Minimum Credits: 3

Maximum Credits: 3

This course deals with selected special topics in the history of the philosophy of science. It is an intermediate to advanced graduate seminar, usually taken by students in the doctoral program. The exact contents of the course vary from one occasion to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2515 - PERSPECTIVES IN HISTORY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar investigates perspectives of history of science by drawing on recent literature in the field. The emphasis and selection of topics will vary from year to year according to the instructor's selection.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2519 - CONTROVERSY, CRISIS, AND CONSENSUS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2521 - HISTORY OF PARTICLE PHYSICS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2522 - SPEC TOPICS-HISTORY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

A variety of archival resources are available for investigating the history of science, and the internet will continue to make more and more of these materials accessible on-line. In this seminar we will be exploring issues such as how to make intelligent use of resources and how to determine which questions they can help to answer. In particular, can such resources give us insight into the creative process often referred to as scientific discovery? We will explore such questions in the context of archival collections, for example those related to Galileo and Darwin.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2527 - ORGANIZATION, LEVELS AND EMERGENCE

Minimum Credits: 3

Maximum Credits: 3

Biology is a science where both reductive and holistic approaches have frequently been championed. In this seminar we will consider reductive vs emergentist strategies and specific debates including gene-centric vs levels-of-selection accounts of evolution by natural selection, molecular vs systems biology. How can we specify different levels in biology? What types of organization support emergent explanation? Requirements include class participation and presentation, plus the option of 4 short papers or a longer, term paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2530 - READING SEM HIST OF SCIENCE

Minimum Credits: 1

Maximum Credits: 6

This seminar is designed as an intensive reading of one or a small number of texts in the history of science. The text(s) is to be selected by the instructor. Ordinarily this will be a chance to do a directed reading of texts not studied in the department's regular course offerings.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HPS 2531 - FREUD AND PSYCHOANALYSIS

Minimum Credits: 3

Maximum Credits: 3

An intense reading of the works of Freud and selected secondary works. Emphasis will be on psychoanalytic theory rather than therapy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2533 - DESCARTES

Minimum Credits: 3

Maximum Credits: 3

An examination of some of the major works of Descartes. Also a look at his precursors, his culture and his influences.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

HPS 2536 - LAWS OF NATURE, MODERN TREATMENT

Minimum Credits: 3

Maximum Credits: 3

An examination of recent accounts of the nature and function of laws of nature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HPS 2540 - LOCKE AND LEIBNIZ

Minimum Credits: 3

Maximum Credits: 3

John Locke's Essay Concerning Human Understanding is often considered to be one of classics of early modern philosophy. It was first published in 1690, though many of Locke's famous doctrines, like the association of ideas were not developed in the original edition of the Essay but were added to later editions (e.g., the association of ideas comes in the 4th edition of the Essay (1700). The image of Locke grows during the Enlightenment. Yet very quickly, Locke's vision and specific doctrines were disputed. Most notably by G.W. Leibniz in his New Essays Concerning Human Understanding; [Nouveaux essais sur l'entendement humain] (finished in 1704, but suppressed on Locke's death). This is a chapter by chapter rebuttal of Locke's ideas. This seminar will carefully examine these two books, plus a little supplementary material.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HPS 2541 - HISTORY OF NEUROSCIENCES

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2547 - ARISTOTLE'S PHILOSOPHY OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This seminar explores Aristotle's views on the nature of science, such as explanation, causation, demonstration, and necessity. We will study a number of Aristotle's works, including the analytics and physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2553 - DARWIN'S ORIGIN

Minimum Credits: 3

Maximum Credits: 3

This seminar involves a study of Darwin's evolutionary theory and examines Darwin's early studies and research to understand that work's theoretical and empirical basis.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2555 - ARISTOTLE'S CONCEPT OF NATURAL SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Among theoretical forms of investigation and knowledge, Aristotle distinguishes mathematics, natural science and first philosophy (metaphysics). This seminar explores Aristotle's understanding of the aims methods and the conceptual and explanatory structure of natural science, and the relationship between it and the other forms of theoretical inquiry.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: Medieval & Renaissance Studies, West European Studies

HPS 2562 - PROBABILITY AND STATISTICS

Minimum Credits: 3

Maximum Credits: 3

We shall review the development of the notion that uncertainty and the chaos of chance may be tamed by the application of numbers. We trace its birth in the 17th century as a device for bloodlessly resolving gambling disputes; its growth through statistical theory into one of science's most important analytic tools; and its ascendance in the work of philosophically minded Bayesians as the framework of all belief.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2565 - THE GENE: TRANSFORM/FRAGMENT CONCEPT

Minimum Credits: 3

Maximum Credits: 3

The course covers the period from Gregor Mendel to the molecular gene of the 1990s. We explore its status as a hypothetical construct, and as a spatial concept in terms of its localization in the cell. Discussion of its status as a fundamental unit in biology leads to consideration of its place in the theoretical biology, in speculations about the origin of life, and in debates over the levels at which natural selection acts.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2571 - GOING MOLECULAR

Minimum Credits: 3

Maximum Credits: 3

The course is given to an examination of the impact of molecular biological methods and concepts upon the biomedical sciences. Has molecular biology become just a bag of tricks with which to carry on "business as usual"? Have these sciences, perhaps, changed their outward appearance but not their hearts? Consider the neutral theory, the home box, jumping genes, or prions. We take examples like these and explore the nature of the concepts, the degree of discontinuity in their history, and the dependence of these changes on the molecular approach.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2580 - MODERN COSMOLOGY

Minimum Credits: 3

Maximum Credits: 3

In 1917 Einstein asked his new general theory of relativity how the universe might look on the largest scale. So was born the modern tradition in cosmology--rich in wild speculation, technical physics and controversy. We shall review its history and philosophy.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2590 - EINSTEIN 1905

Minimum Credits: 3

Maximum Credits: 3

1905 was the year for Einstein the patent examiner. In papers in Annalen der Physik, he proposed the special theory of relativity, $E=mc^2$, the molecular account of Brownian motion and that light energy came in quanta. In preparation for the centenary of 1905, we will study these papers which laid the foundations of modern physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2607 - NEUROETHICS

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to ethical, social, and philosophical issues in the neurosciences and brain research.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2622 - RECENT TOPICS IN PHIL OF SCIENCE

Minimum Credits: 3

Maximum Credits: 3

In this seminar we will read and discuss recent works in the philosophy of science. The choice of authors and topics will depend on who is doing the most interesting new work in the field.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2626 - TOPICS IN PHILOSOPHY OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

The course will examine some of the fascinating problems to which the modern physical theories of quantum mechanics and relativity have given rise. No previous formal training in physics or mathematics will be presupposed.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2627 - PHILOSOPHY OF PHYSICS

Minimum Credits: 3

Maximum Credits: 3

This seminar investigates philosophical issues in the foundations of fundamental theories of physics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2633 - PHILOSOPHY OF COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course will survey the main philosophical questions provoked by cognitive science. Students will acquire a comprehensive grasp of the main issues in this field. We will discuss questions such as: is the mind modular? Is the mind embodied and situated? Do we ascribe mental states by

simulation or by means of a theory? What is consciousness?

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2634 - TOPICS IN PHILOSOPHY OF COGNITIVE SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This class focuses on advanced topics that have been recently debated in the philosophy of cognitive science. Students will acquire an in-depth understanding of these debates.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2635 - CENTRAL PROBLEMS IN SYSTEMS NEUROSCI

Minimum Credits: 3

Maximum Credits: 3

This course will examine the theoretical foundations of systems and behavioral neuroscience, asking what progress has been made towards a general account of neural processing and discussing obstacles to theoretical unification. Example seminar topics are; the neuron doctrine, information theory and the brain, the Bayesian brain, dynamic representation, understanding intrinsic activity.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2646 - TOPICS IN HISTORY AND PHILOSOPHY OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course aims to examine a variety of philosophical issues that arise in the biological sciences in historical context. Topics that may be covered, depending on which faculty member is teaching it, include: teleological explanation in biology; the nature of selection and/or levels of selection; debates over the gene concept or the species concept; biological individuality; whether there are 'laws of nature' in the biological sciences; mechanistic explanation; biological classification and systematics; biological kinds and natural kinds; integration of development and evolution; etc.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2649 - SCIENCE AND VALUES

Minimum Credits: 3

Maximum Credits: 3

This course will examine values as they appear in scientific reasoning and practice. It will deal with issues such as the distinction between cognitive and social values, and how values enter into the selection of theories and research projects, and their subsequent applications. It will also take up the ethical assumptions and implications of scientific judgments and policy decisions.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2650 - PHILOSOPHY OF PSYCHIATRY

Minimum Credits: 3

Maximum Credits: 3

This course examines conceptual, methodological, and some historical issues in psychiatry. General analyses of psychiatric disorders and classifications, and their reliability and validity, will lead to a consideration of the DSM and ICD. The function of etiological, reductive, and mechanical dimensions (including genetic and neuroimaging research) will be discussed. Historical topics include the contrast between and transition

from psychoanalytical, narrative approaches to the rise of bio-chemical psychiatry. Extended consideration of schizophrenia and depressive disorder will be course themes. The seminar closes with a discussion of legal and ethical issues in psychiatry.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2653 - MODELS AND MODELING IN SCIENCE

Minimum Credits: 3

Maximum Credits: 3

There is increasing interest in representing scientific knowledge by means of models. Some (Suppes, Giere, Vanfraassen) have argued for model theoretic rather than axiomatic formulations in defending a semantic account of theories. For others, models are understood in light of scientific practice, autonomous from theory, or mediating between theory and observation (Morrison, Morgan). This seminar will examine recent philosophical literature (Cartwright and others) on related topics including, the relation of model to theory and to observation, the nature of abstraction, idealization, analogy and isomorphism in modeling, and different types of models including physical and scale models, mathematical models and computer simulations

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2657 - PHILOSOPHY OF BIOLOGY

Minimum Credits: 3

Maximum Credits: 3

This seminar will consider foundational conceptual issues in biology including the nature and structure of biological explanation, the possibility of laws in biology and the relationship of biology to other sciences, natural kinds and the classification of species, teleology and biological function. In addition we will explore cutting edge topics of robustness in complex biological systems and the challenges raised for causal inference, emergence and multi-level organization as well as the relationship between unity of science and pluralism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2659 - NEUROBIOLOGY, REDUCTION AND EMERGENCE

Minimum Credits: 3

Maximum Credits: 3

This is an introductory level graduate seminar on the relations of the mind and the brain. Recent developments in the neurosciences, in theoretical brain science, and in computer science suggest that powerful new perspectives on understanding the "mind-brain" will be covered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2660 - CAUSALITY

Minimum Credits: 3

Maximum Credits: 3

Consideration of various theories of causality and how the theories relate to questions of metaphysics, epistemology and explanation.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2663 - PERCEPTION

Minimum Credits: 3

Maximum Credits: 3

An in-depth analysis of contemporary theoretical and experimental issues in perception.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2665 - PHILOSOPHY OF MEDICINE

Minimum Credits: 3
Maximum Credits: 3
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad Letter Grade

HPS 2667 - PHILOSOPHY OF QUANTUM MECHANICS

Minimum Credits: 3
Maximum Credits: 3
This seminar provides an introduction to philosophical problems of quantum theory including variously the EPR paper, Bell's inequalities, the measurement problem and quantum logic.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2668 - TOPICS IN PHILOSOPHY OF BIOLOGY

Minimum Credits: 3
Maximum Credits: 3
In this seminar we will read both philosophy and biology concerning issues that have led to the development of a new discipline 'systems biology.' Robustness is a system level property of central significance for systems biology. Robustness can refer to the character of a theory or explanation, the evidence for a theory or explanation or a feature of phenomena themselves. In this course it is the latter 'robustness as a feature of complex phenomena' that we will examine. Kitano (2002, science) suggests that robustness occurs in 'adaptation, which denotes the ability to cope with environmental changes; parameter insensitivity, which indicates a system's relative insensitivity to specific kinetic parameters; and graceful degradation, which reflects the characteristic slow degradation of a system's functions after damage, rather than catastrophic failure.' How does a system maintain robustness, how does robustness evolve? How does robustness analysis affect our understanding of causality in flexible networks, modularity, and feedback control, as well as the empirical access to this form of dynamic stability? We will explore a wide variety of examples from bacterial chemotaxis to brain reorganization. In addition to robustness, biological systems also display multi-level organization, and are subject to multi-level explanations. We will consider alternative views about the relationships among the levels, and how experimental and explanatory strategies manage the multiple levels. For example, we will investigate if system-level properties are emergent and whether causal mechanisms can be multi-level.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2669 - REALISM

Minimum Credits: 3
Maximum Credits: 3
What, if anything, makes scientific claims true or false? Is scientific language about anything? If it is, can we know which scientific claims are true, or can we arrange our beliefs to converge towards the truth? If not, what purpose can the enterprise of science serve? This seminar will examine these and related questions.
Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

HPS 2673 - STUDIES IN ARISTOTLE

Minimum Credits: 3

Maximum Credits: 3

Study of selected Aristotelian texts and topics (readings in Greek). Course may be repeated for credit if the material covered is different.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

HPS 2679 - PHILOSOPHY OF MATHEMATICS

Minimum Credits: 3

Maximum Credits: 3

Historical perspectives in philosophy of mathematics, by historical study of philosophical views about mathematics or by philosophical analysis of episodes in the history of mathematics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2680 - READING SEM IN PHIL OF SCIENCE

Minimum Credits: 1

Maximum Credits: 6

Selected texts in the philosophy of science.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

HPS 2681 - AUTHORITY: POLITICAL & SCIENTIFIC

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2682 - THEORIES OF CONFIRMATION

Minimum Credits: 3

Maximum Credits: 3

Survey of accounts of the confirmation of scientific hypotheses, including both Bayesian and non-Bayesian approaches.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2687 - THE EPISTEMOLOGY OF EXPERIMENTAL PRACTICES

Minimum Credits: 3

Maximum Credits: 3

Observation and experimentation have long been taken as central to the legitimacy of scientific claims. This seminar examines the assumptions and inferences involved in reasoning about experimental results.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2688 - SCIENTIFIC EXPLANATION

Minimum Credits: 3

Maximum Credits: 3

This is a graduate seminar in scientific explanation taken almost exclusively by students in the doctoral programs of philosophy and HPS usually during their second or third year of residence. The exact contents of the course vary from one occasion to the next.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2690 - HISTORY AND PHIL OF PSYCHOLOGY

Minimum Credits: 3

Maximum Credits: 3

Examination of historical and/or philosophical texts dealing with the nature of psychology and its theories, experiments and methodology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2699 - EXPERIMENT & SCIENTIFIC PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This will be a course on the epistemology of science. An honest way to do epistemology of science is to ask, given a theory and a set of evidence: to what extent does this evidence support this theory? In this course we will not investigate the topography of evidential warrant so directly. We will turn instead to some recent studies of the experimental practices through which particular pieces of evidence emerge as evidence.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HPS 2720 - PRAGMATISM

Minimum Credits: 3

Maximum Credits: 3

The course focuses on key pragmatic texts from C.S. Pearce to the present. But it will also give some consideration to the historical background of pragmatism and to later critical responses and reactions. Emphasis will be upon those pragmatic teachings ' especially in semantics, epistemology and philosophy of science ' that bear on currently controverted issues.

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2005 - METHODS RESEARCH AND SCHOLARSHIP

Minimum Credits: 3

Maximum Credits: 3

This is the introductory seminar for entering graduate students in the history of art and architecture. As such it has two goals; 1) to explore, through use, the bibliography of reference works central to the history of art; 2) to consider the intellectual history of the discipline, with the various approaches to the work of art revealed in art historical literature.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2007 - HISTORIOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

This class examines the history of analytic approaches to art objects, doing so with an eye to the department's array of research constellations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2008 - CONSTELLATIONS OF ART HISTORY

Minimum Credits: 3

Maximum Credits: 3

This is a graduate reading course tied to HAA's constellations. Readings will address one of the constellations from multiple perspectives. In lieu of a research paper there will be a series of shorter response papers that vary in format and goals, from brief "blog" entries on a particular reading to longer essays that compare several readings to exploratory papers that apply readings to the interpretation of specific works of art.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HAA 2009 - PROSEMINAR FOR GRADUATE STUDIES IN ART HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course aims to familiarize students with the professional landscape they will confront as art historians, and to give them the tools they need to succeed as they do so. Topics covered will concern such subjects as writing grant applications, turning seminar papers into publishable essays, composing successful research statements, working in the digital humanities, and exploring the range of professional outcomes and career paths available to students in the 21st century.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

HAA 2010 - APPROACHES TO ART HISTORY

Minimum Credits: 3

Maximum Credits: 3

HAA 2010 is the capstone research seminar required of all HAA majors and is an official w-course. Students in this class will conduct extensive readings on a special topic devised by the course instructor. Each student in the class will be required to produce a substantive research paper under the guidance of the instructor. Students will work to master the skills that are fundamental to the discipline and broader arts related professions: critical thinking, research, and written and oral communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HAA 2019 - CURATORIAL DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

This museum studies course draws on the University Art Gallery collection to develop an exhibition that will be realized in the Fall by students in the

Exhibition Presentation Seminar. Within a defined thematic or collection-area focus, students will survey the holdings of the gallery to develop an exhibition concept and conduct in-depth research into a single work of art to contribute to a catalogue for the exhibition. Students will explore the key texts related to the subject of the exhibition and identify potential loans to complement its storyline.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2020 - MUSEUM STUDIES EXHIBITION SEMINAR

Minimum Credits: 4

Maximum Credits: 4

This course teaches museum practice through practical experience with the permanent collection and with special exhibitions. Students will help in all aspects of exhibitions, from writing labels and/or catalogue copy, deciding how to best display the works, participating in the actual installation of exhibitions and planning related events such as tours.

This course will discuss specific subjects in museum studies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2051 - WORLD ART: CONTACT AND CONFLICT

Minimum Credits: 3

Maximum Credits: 3

This course, an advanced undergraduate seminar, is a counterpart to the introductory core course Introduction to World Art and invites students to think more critically about 'World Art' as a disciplinary enterprise as it emerged in the last several decades with the 'global turn', post-colonialism, and a call for art history to be more inclusive. Students will be introduced to key terms that are employed by this discourse (contact zones, planetarity, world-picturing, cosmopolitanism). The course works through these ideas by focusing its attention on specific sites and art objects, case

studies that explicitly circulate within or take as their subject the meeting point of different cultures and groups. First and foremost, this course regards 'the contact zone' as a messy and complicated place. To inhabit the earth as a human being, people encounter, perceive, collaborate with and often resist others. Through the spaces and material objects humans create, boundaries are established and individuals and communities are defined and circumscribed. Art objects and constructed spaces not only arise from but define the contact point of individuals or groups occupying different worlds. By studying these works as a space of encounter, students will learn that boundaries between people are porous, with cultural contact a zone of potentially productive collaboration but also power inequity and strife. How do works of art and built spaces incite, mediate, or instantiate such strife? How have people traditionally perceived to reside at the periphery employed artistic expression or rhetorical strategies to subvert existing power structures (the center) and formulate identity? Students who have taken the HAA 0010 Introductory version of this course are encouraged to take this more advanced version, but it is not necessary to have had HAA 0010 to enroll in HAA 1050

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2131 - ROMAN ART

Minimum Credits: 3

Maximum Credits: 3

Roman art served as the funnel through which the principles of Greek art passed into European culture, but the principles were transformed in the process of transmission. The course will trace the beginnings and subsequent development of the arts of painting, sculpture, and architecture in Italy from the period of the kings to the middle years of the empire (ca. 150 A.D.).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2160 - ROMAN ARCHITECTURE

Minimum Credits: 3

Maximum Credits: 3

The course will examine the development of roman architecture from its origins in Etruria and central Italy to the middle empire (ca. 150 Ad). Special attention will be given to the relationship of architectural forms, types and functions to changes in roman politics and society and the significance of materials and outside influences on the development of local Italian traditions and forms. The interaction between roman architectural forms and local traditions in the provinces to create a roman imperial "koine" will be treated only in passing.

HAA 2407 - ARCHITECTURE AND ENLIGHTENMENT

Minimum Credits: 3
Maximum Credits: 3
This course will examine architecture, city planning, interior design, and gardening in eighteenth-century Europe as the product of social, industrial, administrative, and intellectual transformations that began to radically challenge traditional spatial configurations and conventional approaches to building. In cosmopolitan centers like London and Paris, an unprecedented explosion of print media, rapid rises in literacy, and the development of a public sphere outside official power structures opened debate in the arts to previously marginal figures. A range of new voices thus emerged that impacted policy decisions in the urban realm and proffered advice and guidance in thinking about aesthetics and artistic production. The rise of science held out the possibility that cities and institutions could be reshaped to improve human welfare through better hygiene and the expansion of commerce. Influential new classes defined by wealth or specialized knowledge generated the creation of building types for a range of new activities. Elite domestic space in particular reflects a wholesale transformation of social priorities motivated by the novel concept of privacy. Narrowly defined Renaissance discourses on the arts founded exclusively on the model of ancient Rome collapsed under an avalanche of data gathered in remote sites around the Mediterranean and through contact with more far-flung civilizations around the world. New intellectual paradigms reconfigured the relationship between individual and nature, between modern present and historical past. Consequently, the purpose of architecture mutated in the course of the eighteenth century as a bewildering range of new possibilities for shaping building and reshaping social relations were explored. Well before political revolution rocked European governments and toppled traditional hierarchies, the built environment served as a laboratory for experimentation and as a forum for reimagining society.

Course Component: Lecture
Grade Component: Grad LG/SNC Basis

HAA 2411 - MODERNISM

Minimum Credits: 3
Maximum Credits: 3
Something happened in the history of art around the time of Manet which set painting upon a new course. This change has been described as a kind of skepticism or uncertainty about the nature of representation in art, characterized by an attention to the material means by which illusions and likenesses are made. This course will examine several monuments in the history of modernism, in an attempt to define the political ambitions of modernism and to confront the issue of whether modernism has become simply an aesthetic or is still a viable artistic strategy in the "post-modern"

era.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2412 - REALISM AND IMPRESSIONISM

Minimum Credits: 3

Maximum Credits: 3

These movements in 19th century European art were important in the formation of later modern art currents. The course will consider the major developments in Romanticism, then study Courbet, Manet and Degas, and finally move to the major impressionist masters, Monet, Renoir, Sisley, and Pissarro. Much attention will be given to the literary and scientific framework for the art of the period.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2441 - EXPRESSIONISM

Minimum Credits: 3

Maximum Credits: 3

A history of the development of modernist art in Germany from the founding of the "bridge" group in 1905 to the "death" of German expressionism in 1920. Although primarily focused on the art of the "bridge" and "blue rider" groups, the course will also situate this art within the broader context of German art production during these years (academic art, Jugendstil, secession, dada).

Academic Career: Graduate

Grade Component: Grad LG/SNC Basis

HAA 2451 - ART IN THE WEIMAR REPUBLIC

Minimum Credits: 3

Maximum Credits: 3

The course will examine art and architecture in Germany from the end of World War I to the rise of the national socialist dictatorship in 1933. Emphasis will be on a chronological study of the ways in which art developed in Germany under democratic social concepts and a new internationalist outlook in the early years of the republic, and the ways art became embedded in the political structures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2455 - ART OF THE THIRD REICH

Minimum Credits: 3

Maximum Credits: 3

This course examines national socialist art and the fate of modernism under Hitler in the years between 1933 and 1945. As we will explore, Hitler's regime enlisted the arts and architecture, through party rallies, art exhibitions, building programs, and film, in enforcing its dictatorial policies on everything from the extermination of the Jews to sexuality and the war effort. We shall also consider the impact of the purge of modern art under Hitler on the work of such noted modernists as Otto Dix and Käte Kollwitz, who chose to remain in Germany, and on the art of those who fled into exile, among them John Heartfield, George Grosz, and Max Beckmann. The final weeks of the course will consider critical issues involved in recent--and invariably controversial--attempts in museum building, sculpture, and site-specific installations to memorialize the holocaust and examine Germany's Nazi past.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2480 - ARCHITECTURE SINCE 1945

Minimum Credits: 3

Maximum Credits: 3

Treats the key developments in architecture throughout the world since World War II, including theory as well as practice. The course will focus on such figures as Frank Lloyd Wright, Mies Van der Rohe, Le Corbusier, James Stirling, Eero Saarinen, Louis Kahn, Kenzo Tange, Robert Venturi, Richard Rogers, and Norman Foster.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2491 - ART SINCE 1945

Minimum Credits: 3

Maximum Credits: 3

This course will present a review of art movements in America and Europe from 1905 - 1945 in the introduction, followed by a more intensive study of post-World War II art movements in Western Europe and America from 1945 to the 1980's. We will give special attention to: a) different styles of art which fit into the label "abstract expressionism" b) different styles under "pop(ular) art" c) conceptual art movements d) issues in critical evaluations of contemporary art.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2510 - PITTSBURGH ARCHITECTURE/URBANISM

Minimum Credits: 3

Maximum Credits: 3

The course studies the physical environment of Pittsburgh; the topography, early settlement, the expansion of its industrial center, the post-war renewal, and the current shift from production to a service-based economy. A parallel study in the architectural history of Pittsburgh focuses on images of individual buildings from Fort Pitt to the new skyscrapers. Student papers either expand research in building categories (industrial, domestic, etc.) or integrate the physical development of the region with its political and social history.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 2531 - AMERICAN ARCHITECTURE SINCE INDUSTRIALIZATION

Minimum Credits: 3

Maximum Credits: 3

By 1880 traditional American architectural values had broken down under a barrage of ornament and imported European styles. But at the same moment a new American architecture was taking shape to express the new wealth of post-Civil War America and its new social order. The next hundred years would see a succession of brilliant architects in Sullivan, Wright, Mies, Johnson and the pluralists of today. These individual successes only partially mask some major problems; both constitute the underlying themes of this course.

Grade Component: Grad SN Basis

HAA 2970 - TEACHING OF ART HISTORY

Minimum Credits: 1

Maximum Credits: 3

Taken simultaneously with independent teaching by graduate students.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 2991 - 20THC RUSSIAN ART: BETWEEN EAST/WEST

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

HAA 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 9

Dissertation research for Ph.D.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: History of Art & Architecture (MA, PHD)

HAA 3901 - INDIVIDUAL RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Human Behavior

SWBEH 2008 - HUMN BHVR: URBAN ENVIRONMENT

Minimum Credits: 3

Maximum Credits: 3

This course deals with collective behavior and societal values relative to key urban issues, particularly race, gender, and poverty. Guest experts will lecture, with the course drawn together, coordinated, and enriched by a single instructor of wide experience, both in teaching and in running a large innovative agency.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: COSA (Social Work-MS)

SWBEH 2062 - HUMN BHVR: CHLD FMLY AT RISK

Minimum Credits: 3

Maximum Credits: 3

This course is designed to examine the strengths and needs of children and families at risk. The effects on parent and child development of poverty, unemployment, drug and alcohol abuse, family violence, child maltreatment, inadequate housing, inadequate health care, inferior educational opportunities and other micro and macro factors will be examined.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2063 - HUMAN BEHAVIOR & SOCIAL ENVRNMNT

Minimum Credits: 3

Maximum Credits: 3

Using systems theory as an organizing framework, human behavior and its determinants are studied from the societal systems through the group, family, and individual systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Social Work students only.

SWBEH 2065 - HUMAN BEHAVIOR: MENTAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course addresses the etiology, nature, course and treatment of mental disorders across the life cycle. Some mental illnesses begin early in life, and may continue throughout life, being modified by growth and development; others begin later in life or are specific to a particular stage in the life cycle; while others occur in response to environmental circumstances and stressors. Furthermore, gender, race, culture, ethnicity, socioeconomic status and other aspects of diversity shape how symptoms of mental illness are experienced, interpreted and expressed. A selection of the major categories of mental disorder and abnormal behavior will be addressed although it will not be possible to examine all of them in class. Understanding and applying the DSM-IV-TR manual as a clinical assessment tool, an introduction to psychopharmacology, and the nature and role of risk and protective factors associated with suicidal and violent behavior will also be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2066 - HUMAN BEHAVIOR: HEALTH/MENTAL HEALTH

Minimum Credits: 3

Maximum Credits: 3

The overall purpose of this course is to expand student knowledge of physical health and mental health interactions which impact individuals and target populations during the life cycle process. This knowledge is used to design theory driven health promotion interventions. This course will investigate selected physical and public challenges that impact the overall health and well-being of individuals from early childhood to late adulthood. Definitions of health and well-being from both a social work and public health perspective will be defined and discussed to more fully understand the state of physical and mental issues in the western society. Understanding the integration of health education, health behavior, health promotion, is required to facilitate the development of theory driven interventions. Special attention is focused on how values, historical experience, cultural norms and environmental factors such as race, gender, socioeconomic status, and access to resources impact the public's health and their access to service delivery. Students will develop the ability to apply their knowledge and understanding of the interactions between physical health and mental health status across the lifespan to their own work with clients, organizations and policy initiatives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

SWBEH 2077 - HUMN BHVR: ADLT DVLP AGING

Minimum Credits: 3

Maximum Credits: 3

This course focuses on substantive content during adulthood (early and middle age) and old age. This course offers a framework for understanding mid-life and old age from a life-span developmental perspective and examines physical, social (environmental), and personal factors that influence the developing personality. The knowledge is integrated and appraised for its usefulness in working directly with and/or in behalf of middle-aged and older persons.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWBEH 2063; SBPLAN: Direct Practice (Social Work-MSW)

Human Genetics

HUGEN 2010 - BIOINFORMATIC RESOURCES FOR GENETICISTS

Minimum Credits: 1

Maximum Credits: 1

The focus of this course is the online bioinformatic resources available to geneticists. Students will learn to locate and use such resources and interpret the data therein to inform the development of research questions, aid in clinical decision-making, and enhance the understanding and contextualization of research results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Human Genetics or Public Health Genetics; CREQ: HUGEN 2022 & 2040

HUGEN 2011 - SCIENTIFIC WRITING IN HUMAN GENETICS

Minimum Credits: 1

Maximum Credits: 1

Writing and communication skills are amongst the most important assets for any human genetics researcher and/or public health genetics professional. By facilitated discussions and reading and writing exercises/assignments, Scientific Writing in Human Genetics is designed to empower Human Genetics students to establish the communication mindset to write clear and compelling scientific narratives in plain language, utilize the writing resources available on campus and online, improve their scientific writing skills, and complete a solid draft of the Background/Introduction section of their MPH essay, MS Thesis, or PhD research proposal/comprehensive exam document (and possibly, additional sections, including methods, results, or the entire MPH essay) or another academic work with permission of the instructor. The ability to write and use standard English language is required. Whether English is your first or second language, if you are not comfortable writing grammatically correct and properly punctuated English, an "ESL course" is recommended.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2017 - HUMAN GENETICS

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to basic genetic principles and their application to human heredity.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: University Honors Course

HUGEN 2021 - SPECIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

Qualified students may undertake advanced work or research with the approval and under the guidance of a member of the staff.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

HUGEN 2022 - HUMAN POPULATION GENETICS

Minimum Credits: 2

Maximum Credits: 2

This survey course covers the principles of population genetics as applicable to human populations, including (1) the laws of inheritance that govern the organization of the genomes in populations, (2) the evolutionary forces and phenomena that impact genetic diversity in human populations, and (3) the foundational concepts of genetic epidemiology and gene discovery.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2025 - HUMAN GENETICS SEMINAR

Minimum Credits: 0

Maximum Credits: 0

Human genetics seminars present current genetics methodology, theory, and data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HUGEN 2026 - SPECIAL STUDIES HUMAN GENETICS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide advanced undergraduates and graduate students with directed, intensive training in laboratory, statistical or clinical research methods relevant to human genetics. These specialized skills are not available in regularly taught courses in the university. Each special study is designed in consultation with an individual member of the human genetics faculty.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2027 - HUMAN GENETICS FALL JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

Human genetics journal club meets once a week during the fall semester to give students and faculty a chance to present exciting research which they feel is relevant to the department. The audience is other students and faculty from the department and other departments of the schools of health sciences. Presentations are informal and meant to give students the experience necessary to be an effective communicator, and to teach them critical skills for evaluating research publications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2028 - HUMAN GENETICS JOURNAL CLUB AND PEER REVIEW

Minimum Credits: 1

Maximum Credits: 1

Human genetics journal club provides students and faculty with an opportunity to present and discuss exciting research in an informal format. The purpose of the course is to hone students' oral and written critical evaluation skills.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

HUGEN 2029 - INTRODUCTION TO GENE MAPPING

Minimum Credits: 3

Maximum Credits: 3

This course presents a literature-based approach to understanding and interpreting results from gene mapping papers in the field of human genetics. Traditional and state-of-the-art genetic mapping methodologies will be explored.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2022 and 2034 and 2040 and BIOST 2041

HUGEN 2031 - CHROMOSOMES AND HUMAN DISEASE

Minimum Credits: 3

Maximum Credits: 3

The role of chromosomes in human disease is discussed after a thorough background on chromosome structure and function is presented. Topics covered include cytogenetic methodology, aneuploidy, chromosome rearrangements, chromosomes and cancer, chromosome breakage syndromes, and fragile sites on human chromosomes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2032 - GENETIC TECHNIQUES

Minimum Credits: 2

Maximum Credits: 2

Students participate in laboratory exercises to become acquainted with cytogenetics laboratory procedures including cell culture, chromosome preparation, chromosome banding, and karyotyping. Chromosome analysis and karyotype interpretation are practiced.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: CREQ: HUGEN 2031; Graduate Sch of Public Health Students Only

HUGEN 2034 - BIOCHEMICAL AND MOLECULAR GENETICS OF COMPLEX DISEASES

Minimum Credits: 3

Maximum Credits: 3

This course provides students with an overview of the molecular and biochemical genetic approaches to determine the underlying genetic architecture of common diseases that account for a large portion of the public health burden of disease. The genetic, environmental and epigenetic factors that influence susceptibility to common disease will be illustrated using selected examples, such as cardiovascular disease, neurodegenerative diseases, mental health diseases, autoimmune diseases and eye diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2035 - PRINCIPLES OF GENETIC COUNSELING

Minimum Credits: 3

Maximum Credits: 3

This course addresses fundamental concepts important to genetic counseling principles and practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2036 - GENETIC COUNSELING INTERNSHIP

Minimum Credits: 4

Maximum Credits: 4

For this course, students will participate in supervised genetic counseling clinical rotations in a variety of specialty areas. The lectures that are part of the course will address topics relevant to clinical genetics and counseling.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2038 - INTERVENTION SKILLS FOR GENETIC COUNSELING

Minimum Credits: 3

Maximum Credits: 3

Focuses on the understanding of theories of intervention, skill development and application to genetic counseling. The course aims at sensitizing students to the ethical dilemmas faced by affected families and health-care providers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Genetic Counseling (MS)

HUGEN 2039 - RISK CALCULATION GENETIC COUNSELING

Minimum Credits: 1

Maximum Credits: 1

This course provides hands-on training in calculating risk of disease or carrier status in a variety of typical genetic counseling situations, as well as discussion of the limitations of those calculation methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: CREQ: HUGEN 2022

HUGEN 2040 - MOLECULAR BASIS OF HUMAN INHERITED DISEASE

Minimum Credits: 3

Maximum Credits: 3

This course will provide an overview of selected human inherited disorders and integrate clinical descriptions with recent genetic, molecular genetics and biochemical insights. Current state of the art molecular genetics methodologies will be integrated into the overviews.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2041 - BIOETHICS

Minimum Credits: 3

Maximum Credits: 3

This course is an advanced treatment of significant problems in medical ethics. Topics may include euthanasia, rights to health care, competency, allocation of resources, and other issues of medical ethics.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

HUGEN 2047 - CLINICAL GENETICS CASE CONFERENCE

Minimum Credits: 1

Maximum Credits: 1

With clinical cases and specimens from various clinical genetics service units, this seminar illustrates and provides insights into the biologic, medical, ethical, and emotional aspects of genetic disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

HUGEN 2049 - INTRODUCTION PUBLIC HEALTH GENETICS

Minimum Credits: 3

Maximum Credits: 3

This course provides a framework in which to assess how advances in genomics may be applied to public health practice and policies that affect both individuals and society. In addition, the ethical, legal, and social consequences of historical, current, and future interventions are considered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

HUGEN 2050 - PUBLIC HEALTH GENETICS PRACTICUM

Minimum Credits: 1

Maximum Credits: 6

The practicum is a short term field placement (minimum 200 hours of public health oriented work) with an organization or agency that is relevant to the student's area of interest. Each placement must be agreed upon by the student and the MPH program advisor.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: PLAN: Public Health Genetics (MPH or CERT)

Course Attributes: Community Element -General Community Impact

HUGEN 2051 - INBORN ERRORS OF DEVELOPMENT

Minimum Credits: 2

Maximum Credits: 2

This course focuses on the connections between human development and inherited disease. The course will include core principles of development of the body plan and signaling pathways involved in development and differentiation. These biological processes will be used to categorize inherited human diseases, understand disease mechanisms, and the current efforts to develop targeted treatments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

HUGEN 2052 - ETHICAL ISSUES IN CLINICAL AND PUBLIC HEALTH GENETICS

Minimum Credits: 1

Maximum Credits: 1

This course is designed to explore ethical issues as they relate to genetics and genomics in both the clinical and public health contexts. This seminar series provides an ethical framework for analyzing arguments in the literature and cases arising in clinical and research contexts and proceeds throughout the semester with a discussion-based format that encourages students to assume responsibility for engaging in ethical analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

Course Requirements: CREQ: HUGEN 2035 or 2049; PLAN: HUGEN-MS or GNCSLG-MS or PHGEN-CR4 or PHGEN-MPH

HUGEN 2053 - APPLICATIONS IN PUBLIC HEALTH GENETICS AND GENOMICS

Minimum Credits: 2

Maximum Credits: 2

This graduate level course builds on the basic components of public health genetics and genomics and provides students with the opportunity to discuss and apply these concepts to public health. The goal of this course is for students to apply knowledge and skills learned across public health disciplines, especially the use of genetic principles, in a public health practice setting. Using current issues in public health genetics, students will also demonstrate mastery of essential competencies through data analysis, and oral and written communication.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: BIOST 2041 or BIOST 2011; CREQ: HUGEN 2049; PLAN: Human Genetics or Genetic Counseling or Public Health Genetics

HUGEN 2070 - BIOINFORMATICS FOR HUMAN GENETICS

Minimum Credits: 3

Maximum Credits: 3

This course focuses on manipulation and management of human genetic data, with an emphasis on association and linkage studies. The course will cover bioinformatics for genome-wide association analysis, sequence data, and integrated analyses, as well as the R statistical computing language. A key component of the course will be hands-on analyses of example data sets.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2022 and BIOST 2041

HUGEN 2080 - STATISTICAL GENETICS

Minimum Credits: 3

Maximum Credits: 3

An advanced course which discusses the principles and practice of statistical genetics in the area of genetic epidemiology of human diseases and traits. The course will cover statistical modeling and methodology in familial aggregation, linkage analysis and association analysis; the course includes hands-on experience with current computer programs used in these research areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: HUGEN 2022 and BIOST 2041

HUGEN 3010 - RESEARCH AND DISSERTATION PH.D.

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Immunology

MSIMM 2000 - PRINCIPLES OF MICROBIOLOGY AND IMMUNOLOGY

Minimum Credits: 6

Maximum Credits: 6

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSIMM 2200 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

MSIMM 2210 - COMPREHENSIVE IMMUNOLOGY

Minimum Credits: 2

Maximum Credits: 2

This is a lecture course that will introduce the students to the fundamental concepts of modern immunology. The course will cover cells, tissues and organs of the immune system. Furthermore in-depth analysis of the development, activation, effector functions and regulation of immune response will be presented in this course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSIMM 2230 - EXPERIMENTAL BASIS OF IMMUNOLOGY

Minimum Credits: 2

Maximum Credits: 2

This course will expose the students to classical and contemporary literature in modern immunology. Emphasis will be on paper analysis and critical evaluation of primary data. This course will parallel the topics presented in comprehensive immunology lecture course which must be taken before or simultaneously with experimental basis of immunology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: MSIMM 2210

MSIMM 2240 - INTRODUCTION TO IMMUNOBIOTHERAPEUTICS

Minimum Credits: 2

Maximum Credits: 2

This course will provide a comprehensive overview of the principles and the technology upon which immunobiotherapeutics are based. The course will focus on the overall aims of using small molecules, antibodies, genes and cells as immunotherapeutic agents. It will cover the use of viral and non-viral agents as gene delivery vehicles, cells as therapeutic agents and small molecules as delivery and therapeutic vehicles. The course will also cover diseases and disorders in which immunobiotherapy has proven safety and demonstrated successful outcomes like cancer, Mendelian disorders and autoimmunity. Lectures and student presentations will cover: genes and cells as drugs, peptides, antibodies and small molecules as therapeutics and delivery vehicles, viral and non-viral vectors, stem cells, and specific diseases where immunotherapy has shown safety and efficacy. Students may also be educated on bioethical issues and existing laws governing biotechnology and molecular medicine approaches.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSIMM 2250 - TA: MEDICAL MICROBIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Immunology (PHD)

MSIMM 2260 - IMMUNOLOGY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Graduate students and faculty present their current research in a seminar format.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSIMM 2290 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in immunology.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: Immunology (PHD) or Interdis Biomedical (UNK)

MSIMM 3200 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

After advancement to candidacy for the Ph.D. degree, students enroll in this course to pursue original experimental laboratory research, the results of which will provide the substance of their doctoral dissertation. A minimum of 40 credits of this course are required for the Ph.D. degree in the school of medicine.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Immunology (PHD)

MSIMM 3220 - CONTEMPORARY TOPICS - IMMUNOLOGY

Minimum Credits: 1

Maximum Credits: 1

This is an advanced level course in which students will read, present and evaluate the primary literature in immunology. Each semester will feature an integrated set of papers addressing a current issue of interest to modern immunologists. The course may be taken more than once by each student, since the topic addressed will change each semester.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

MSIMM 3230 - IMMUNOLOGY AND HUMAN DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course surveys basic immunological principles as they impact our understanding of the causes or treatments of human disease. The course consists of a series of lecture blocks. Background reading is required and the course relies heavily on the reading of original articles. Classes are regularly devoted to paper discussions, and each student will be responsible for introducing one paper.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

MSIMM 3260 - IMMUNITY AND THE NEUROENDOCRINE AXIS

Minimum Credits: 2

Maximum Credits: 2

This course will consider the interaction among the immune, nervous and endocrine systems. It will prepare the students for a critical understanding

of how endocrine organs and the hormones they produce affect immune cell function, how the nervous system and neuropeptides/neurohormones and neurotransmitters modify immunity and how the immune system (cells and their secreted molecules) affect the endocrine and the nervous system. The course will also permit the students to critically appraise and understand how drug therapy aimed at immunostimulation or immunosuppression may be affected by, and affect the neuroendocrine axis and how pharmacologic manipulation of the neuroendocrine axis can affect the immune system and the outcome of immunotherapies.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: MSIMM 3230

MSIMM 3270 - INNATE IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

This course will focus on the several aspects of host innate immunity against infection. Topics will include the conceptual basis for innate versus adaptive immunity, induction of innate immunity by pathogens, signaling by innate immune receptors, effector cells of the innate immune system, secreted effectors of innate immune signaling, and subversion of innate immune signaling by pathogens. Courses like molecular virology and comprehensive immunology are highly recommended but not a prerequisite for the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

MSIMM 3280 - IMMUNOLOGY OF INFECTIOUS DISEASE

Minimum Credits: 2

Maximum Credits: 2

This course examines the immune responses to pathogens, as well as on immune evasion of microbes. The organisms studied include bacteria, parasites, and viruses. Topics focus on host-pathogen interaction and include innate immunity, modulation of antigen processing and presentation, pathogenic strategies for subversion of immune responses, effector functions of immune cells, and immunopathology.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: MSIMM 2210

MSIMM 3290 - AUTOIMMUNITY & IMMUNOPATHOLOGY

Minimum Credits: 2

Maximum Credits: 2

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: MSIMM 2210 and 2230

MSIMM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Industrial Engineering

IE 2000 - FUNDAMNTLS OF INDUSTRIAL ENGR

Minimum Credits: 1

Maximum Credits: 1

This course will provide an overview of basic industrial engineering principals, primarily for those students who have not had prior exposure to industrial engineering. Topics will include, but are not limited to, flow charts, work methods, and work measurement including work sampling and most.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2001 - OPERATIONS RESEARCH

Minimum Credits: 3

Maximum Credits: 3

The operations research method; linear programming; network flows; CPM/pert; integer programming formulations. A group project is required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2003 - ENGINEERING MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Concepts and processes of qualitative engineering management applied to the management of technical and scientific organizations. Topics include: (1) general systems theory; (2) management and the systems concept; (3) strategic planning and management systems; (4) systems analysis; (5) project management systems; (6) organizational design; (7) evaluation and control of systems; and (8) managing technical professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2004 - DATA BASE DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course introduces the fundamental aspects of database design and management within the context of a relational data base management system (DBMS). Covered topics include: relational model, database design life-cycle, database design optimization, client/server architecture, data modeling, SQL, database security, database management, data warehousing, internet database environment. Students will gain hands-on experience in analysis, design, implementation, and management of relational data base systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2005 - PROBABILITY AND STATISTICS FOR ENGINEERS 1

Minimum Credits: 3

Maximum Credits: 3

Probability, random variables, common discrete and continuous probability distributions, expected values, central limit theorem, distributions derived from the normal distribution (χ^2 , t and f), estimation of parameters and fitting of probability distributions, testing hypothesis and assessing goodness of fit, comparing two samples.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2006 - INTRO TO MANUFACTURING SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students that have a background in advanced manufacturing technologies with an opportunity to learn about fundamentals of micro and Nano machining processes. The course represents a good balance between theoretical problems and practical considerations related to the advanced manufacturing processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (IE-MIE or IE-PHD)

IE 2007 - STATISTICS AND DATA ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Analysis of variance, experiments with one factor, experiments with two or more factors, regression analysis, multiple linear regression, response surface methods, analysis of categorical data, nonparametric statistics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2011 - FUNDAMENTAL OF MICRO AND NANOMANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2012 - MANUFACTURE OF STRUCTURAL NANOMATERIALS

Minimum Credits: 3

Maximum Credits: 3

Description: this course covers contemporary research topics on the design and manufacture of nanostructured materials. In addition to design and manufacturing, this course would also emphasize the nanometer-scale phenomena that make nanostructured materials particularly attractive for structural applications. Topics such as dislocation theory, large strain plasticity phenomena, super plasticity and kinetics of coarsening will be discussed in the context of structural nanomaterials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2013 - MOLECULAR MANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

You often hear in the news about the potential societal impact of nanotechnology, which is simply described as the science and technology of manipulating matter in the 10-100 nm length-scale. However, with the continued miniaturization of material building blocks approaching the atomic scale, a paradigm shift is needed in the way of thinking about how to synthesize and assemble atomically precise units that integrate various different components, which eventually build a functioning device or material. This bottom-up approach to fabrication with atomic level precision is the focus

of this course. The course will include molecular fabrication methods such as DNA origami, protein assembly, chemical synthesis of carbon materials, block copolymer self-assembly, and scanning probe methods that are capable of atomic level manipulation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2014 - MANUFACTURING PROCESS ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to instill a fundamental understanding of manufacturing processes by focusing on the processes, metallurgy and mechanics of deformation in metal forming. To this end, analysis techniques will be developed from solid mechanical principles (stress-strain relationship, deformation and failure) which would then be applied bulk deformation and material removal processes. The course assumes no prerequisites except basic concepts of stress, strain and strength of materials.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2025 - FACILITY LAYOUT AND MATERIAL HANDLING

Minimum Credits: 3

Maximum Credits: 3

Introduction to facility layout and location. Topics including activity relationships, space and personnel requirements, computer algorithms for constructing layouts, and both single and multiple facility location methodologies; material handling methods and equipment including conveyors, lift trucks, carousels, automated guided vehicles, and automated storage and retrieval systems are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE)

IE 2039 - ENTREPRENEURSHIP FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course considers the development of a new technology company from ideation and opportunity evaluation to capital generation and launch. It includes an understanding of accounting principles, budgeting, capital markets, venture capital, operating in the development stage, executive and employee requirements, product development, and growing the company.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2042 - ENGINEERING DERIVATIVES MARKET

Minimum Credits: 3

Maximum Credits: 3

The basic building blocks for engineering futures contracts, call and put options, and swaps are studied within the context of real-world environments. By the end of this course learners will have a good understanding of how these tools are built for the purposes of hedging risks and formulating portfolio strategies, all within the goal of managing financial risk.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2001 and 2005

IE 2044 - INVESTMENT SCIENCE

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to basic concepts of modern quantitative finance and investment. Group projects involving financial market data.

Topics: basic interest rate; evaluating investments: scenario-based analysis and Monte Carlo simulation; fixed-income markets: bonds, yield, duration, and portfolio immunization; measuring risk: volatility and value at risk; the concept of investment diversification in the presence of uncertainty; designing optimal security portfolios; the capital asset pricing model, practical implementation of the concepts, including comparison of loan (e.g., house and auto) terms, credit card financial terms; derivative market and option pricing. No prior knowledge of finance required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 2061 - ERGONOMICS & OCCUPATIONAL BIOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of ergonomics as applied to the industrial workplace. Specific topics include: occupational biomechanics, anthropometry, work physiology, cumulative trauma disorders and slip and fall prevention applied to the organization and physical design of the workstation, effects of hand tool design on workers, and analysis of manual material handling jobs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2062 - DATA MINING

Minimum Credits: 3

Maximum Credits: 3

This is an introductory data analytics class that requires probability as a prerequisite. The objective is to prepare students to effectively collect and analyze data and to teach data-driven thinking, problem-solving and decision-making. In this class, we will cover various statistics and data mining methodologies and use them to analyze real-world problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2005; PROG: Swanson School of Engineering

IE 2064 - DATA SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Data Science involves working with complicated and messy data to build prediction models for use in making decisions. This course covers data processing and exploratory data analysis; regression, classification, and clustering models; and model evaluation methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2065 - STATISTICAL ANALYSIS AND OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2007 or 2064 or 1072 or STAT 1152

IE 2072 - PROBABILITY

Minimum Credits: 3

Maximum Credits: 3

Interpretations of probability, counting methods, conditional probability, Bayes theorem, random variables and distributions, functions of random variables, expectations, special discrete and continuous univariate distributions, law of large numbers and central limit theorems, multivariate distributions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2076 - TOTAL QUALITY MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

introduces the total quality management philosophies and practices of Deming, Juran, and others. We will focus on the use of statistical process control, understanding variability and process capability, acceptance sampling, as well as managing supplier relationships. Research papers and student teaching projects allow students to explore additional topics such as Kaizen, Taguchi methods, FMEA, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2005

IE 2079 - LOGISTICS & SUPPLY CHAIN ENGRNG

Minimum Credits: 3

Maximum Credits: 3

Modern supply chains are based on networks with a number of actors from manufacturer to distributor to retailer. This course covers the use of modeling for coordinating production, inventory, distribution, and transportation across a supply chain network.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2081 - NONLINEAR OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Necessary and sufficient conditions for an optimal solution to the non-linear programming problem; convex sets and functions; numerical solution of non-linear equations; search methods; unconstrained optimization including gradient, metric and penalty methods; algorithms for constrained optimization; quadratic and geometric programming.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2082 - LINEAR OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

Review of linear algebra, matrices and the simplex methods; revised simplex method; generalized bounds; product form of inverse; pricing and pivot selection; duality and sensitivity analysis; separable programming; linear complementarity; Dantzig-Wolfe decomposition; column generation; generalized LP; semi-infinite LP, stochastic LP; interior point methods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2084 - STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Reviews probability theory; conditional probability and expectations; discrete-time and continuous time Markov chains; Poisson process and exponential distributions; renewal theory and its applications; queueing theory; stochastic systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2072

IE 2086 - DECISION MODELS

Minimum Credits: 3

Maximum Credits: 3

Decision making under uncertainty is the key to understanding a variety of problems from industry, including inventory control, revenue management, energy, healthcare, and logistics. This course covers the fundamentals of stochastic (sequential) decision models, including data-driven and risk-averse methods, with applications to real-world problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: CREQ: IE 2005; PROG: Swanson School of Engineering

IE 2088 - DIGITAL SYSTEMS SIMULATION

Minimum Credits: 3

Maximum Credits: 3

Nature of simulation; discrete event simulators; modeling complex systems; input data reduction; random number generation; output data analysis; validation of simulation models; experimental design; variance reduction techniques; comparing alternative systems; overview of simulation languages.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2005 or IE 1071 or ENGR 0020; PROGRAM: SSOE

IE 2089 - ADDITIVE MANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

In this course we will analyze the seven primary types of additive manufacturing, their materials, and machines, highlighting their benefits and limitations. Examples of industrial applications will be given along with ongoing research trends and future directions. Labs will focus on design for additive manufacturing, data capture and input, machine setup, and post processing. Field trips will include observation of machine building and part production at some local industries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2090 - M. S. PROJECT

Minimum Credits: 3

Maximum Credits: 3

This is the capstone project course for M.S. Students. Students working in teams of 3 or 4 will solve a real world problem in conjunction with a

company liaison and a faculty advisor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2100 - SUPPLY CHAIN ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

An overview of supply chain management with an emphasis on operations and strong quantitative orientation. Supply chain strategies; sourcing decisions; demand forecasting; aggregate planning; managing supply and demand; production and inventory control systems including MRP and JIT; dealing with uncertainty; distribution networks; coordination and integration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2001 & 2005

IE 2102 - LEAN SIX SIGMA I (GREEN BELT)

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to lean and six sigma principles with an emphasis on the application of statistics to quality control. Topics include value stream mapping, various lean tools, DMAIC methodology, data collection and measurement, and applications of ANOVA and doe. A project is required and the student should be prepared for green belt certification at the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2103 - LEAN SIX SIGMA II (BLACK BELT)

Minimum Credits: 3

Maximum Credits: 3

This is a follow up course in lean and six sigma covering topics such as influence principles and techniques, systems analysis, design for six sigma, lean enterprise analysis and response surface methods. Several projects are required and the student should be prepared for black belt certification at the end of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2102; PROG: Swanson School of Engineering

IE 2105 - GEOGRAPHIC INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Explore the concepts and history of geographic information systems and learn to effectively use the most utilitarian GIS software, ArcGIS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2106 - OPERATIONS IMPROVEMENT IN HEALTHCARE

Minimum Credits: 3

Maximum Credits: 3

This course leads students to apply basic industrial engineering tools to healthcare. This includes fact gathering through interviews & observation, process mapping, system analysis and modeling, work sampling, work study and workflow improvement. Using the health operations laboratory, students learn to model core operations of key hospital departments, and are required to develop expertise in one of the following areas: work measurement in healthcare, quality improvement in healthcare, department productivity management, supply chain management, patient workflow through a department.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering

IE 2108 - HEALTH SYSTEMS ENGINEERING: QUANTITATIVE ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Applying industrial engineering tools and techniques (often referred to as Healthcare Systems Engineering) provides the opportunity to make significant improvements in the healthcare setting. This course will provide an overview of the US healthcare system and the opportunity to apply industrial engineering techniques while developing and understanding of basic healthcare operations and systems in the United States.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering

IE 2110 - HEALTH SYSTEMS ENGINEERING SEMINAR

Minimum Credits: 0

Maximum Credits: 0

The seminar supplements the education provided by health policy and management and industrial engineering departments by creating a forum for exposure and discussion of healthcare systems engineering issues. Students become aware and are exposed to the role of vendors/consultants that bring solutions for healthcare delivery processes. The standards for professional leadership required for health management are reinforced.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

Course Requirements: PROG: Swanson School of Engineering

IE 2122 - FUNDAMENTALS OF SYSTEMS ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the fundamentals of systems engineering, including technical processes (e.g., requirements definition, architecture design, system verification), technical management processes (e.g., project planning, risk management), agreement processes (acquisition and supply) and project-enabling processes (e.g., life-cycle model management, quality management). Key systems engineering techniques and methods (e.g., system modeling and simulation, function-based systems engineering) will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering (MIE or PHD)

IE 2123 - PROJECT MANAGEMENT FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

The focus of the course will be to understand professional project management in achieving strategic organizational objectives and mitigating risks. The process for obtaining professional project management (PMP) certification will be the foundation. The six domains of project management that will be addressed include: initiating the project planning the project, executing the project, monitoring and controlling the project, project transition and closure, professional and social responsibility.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

IE 2155 - DISCRETE OPTIMIZATION AND APPLICATIONS IN INFRASTRUCTURE SYSTEMS

Minimum Credits: 3
Maximum Credits: 3
Discrete optimization is a powerful modeling and computational tool in decision making, especially for critical industrial systems (e.g., transportation and energy systems). In this course, the focus will be on learning various modeling techniques, classical and popular models (including location, scheduling and transportation problems) and solution techniques (including exact and heuristic algorithms) for these models that lead to millions of dollars in savings.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2001; PLAN: Industrial Engineering

IE 2180 - OPERATIONS ANALYSIS

Minimum Credits: 3
Maximum Credits: 3
Industrial engineers apply production concepts in manufacturing, retail, and healthcare settings. In today's increasingly competitive marketplace, companies must be efficient to remain in business. Many factors influence a company's efficiency but one key area is operational effectiveness. The purpose of this course is to enhance students' knowledge of several key aspects of operational effectiveness including just-in-time (JIT) and pull systems, fundamentals of factory dynamics, scheduling of machines and personnel, change management, and MRP and ERP systems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: (IE 2001 or 2082) and IE 2005

IE 2186 - REINFORCEMENT LEARNING

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course on reinforcement learning (RL), a set of techniques used for learning sequential decision making policies from data. The basics of Markov decision processes necessary for RL will be covered, but a firm grasp of undergraduate level probability and basic programming ability (in Python and MATLAB) will be assumed. A wide range of methods (e.g., TD learning, Q-learning, policy gradients) that perform evaluation and control will be covered. The focus in this course will be on applications, implementation, intuition and some theory.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IE 2005 or IE 1070 or Equivalent and IE 1082 PLAN: Industrial Engineering

IE 2188 - SIMULATION MODELING AND APPLICATIONS

Minimum Credits: 3
Maximum Credits: 3

Introductory graduate course to the concepts, technology and applications of discrete-event and hybrid simulation. Covers the foundational concepts of simulation and the application of those concepts using commercial software. Topics include simulation, modeling, validation, input/output analysis, animation, and project success skills. Students will learn to use the Simio commercial simulation product as well as how to conduct/manage simulation projects. Practical experience will be gained in a simulation project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2001 and 2005; PROG: Swanson School of Engineering

IE 2201 - BIOMATERIALS AND BIOMANUFACTURING

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to provide students having a background in biomaterials and biomanufacturing with an opportunity to learn about the many modern aspect of biomaterials from basic science to clinical applications, across the formulations and chemistry of polymers, ceramics, metals and their use in various biomedical devices and implants, as well as their clinical performance and host responses. Students will also gain knowledge and experiences with designing and manufacturing biomedical devices through team projects. This one-semester, graduate course is intended for students majoring in the industrial engineering, or those who contemplating such a major (or minor). Students enrolled in the class should have an understanding of various biomaterials, and the ability to understand biological phenomena and manufacturing processes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering; PREQ: IE 2006

IE 2301 - INTRODUCTION TO SAFETY ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Introduction to safety engineering" provides a basis to assist students in understanding and applying the scientific and engineering principles associated with the field of safety engineering. Specifically, the course will provide a background in, information on and application exercises in the natural, chemical and physical laws and forces associated with safe design and implementation of work-related tasks and industrial and construction projects. These involve soils and excavation, trenching and shoring, permanent and temporary work platforms and scaffolding, cranes, rigging, ropes, slings and chains, fall protection, pressure vessels, confined space entry, energy isolation and preparation of equipment, hot work, welding, personal protective equipment and non-destructive testing. The course will also address safety related issues associated with building and facility design and layout, job, task and work setting layout. The course will stress the importance of safety engineering as part of both the corrective process and the design process.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2302 - ENGINEERING FOR PROCESS SAFETY

Minimum Credits: 3

Maximum Credits: 3

Engineering for process safety provides for a basic understanding of the quantitative and qualitative analysis methods of process safety engineering and process safety management. The course also provides guidance in planning, implementing and managing an overall process safety management program. It includes coverage of such applicable science and engineering principles as risk, human reliability, fault logic, failure modes, incident cost and prediction. The course is presented in an applied format where several different types of industries are discussed such as oil and chemical, pharmaceuticals, defense, nuclear, aerospace, paper, information technology and manufacturing industries. Regulatory influence on process safety is discussed. Quantitative aspects of the course include application of risk analysis, fault tree analysis, hazard and operability analysis, vapor-cloud dispersion modeling, human reliability analysis, failure modes and effects analysis, etc. This course is also intended to provide a background in managing an overall system safety program and its application to several industries, therefore, cost and effectiveness measurement are covered in the material.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 2303 - WORK DESIGN

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide students the opportunity to learn and use standard industrial tools commonly used in analyzing, troubleshooting, and designing work spaces and work processes. It includes the concepts of cost effectiveness, functional effectiveness, human interface design and characterization, analysis and improvement of productivity. These tools and design methodologies include human information processing, basic auditory and visual displays, cost models, facility layout and network transportation and delivery systems, cognitive engineering, anthropometry and musculoskeletal principles, cumulative trauma disorders, work measurement and time and motion analysis. Students taking this course should be familiar with basic engineering economics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering; PLAN: Industrial Engineering (IE-MIE, IE-PHD)

IE 2725 - DESIGN FOR INJURY PREVENTION

Minimum Credits: 3

Maximum Credits: 3

This course provides instruction for how to design a workplace to prevent occupational injuries. The course will primarily focus on preventing the three types of injuries, the injury mechanism, risk factors, tools for quantifying risk and engineering solutions will be covered. Upon completion of a course, students will be expected to develop custom engineering design solutions to prevent occupational injuries. Students will complete a project where they will design a solution to eliminate or reduce an existing hazard.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 2900 - GRADUATE FELLOWSHIPS AND PROPOSAL-WRITING WORKSHOP

Minimum Credits: 1

Maximum Credits: 1

This workshop will provide information and guidance to students interested in competing for external fellowships to support their graduate research, as well as instruction on proposal writing in general. The workshop will consist of structured class time and outside-the-class mentoring teams to work with students on the preparation of a fellowship application.

IE 3051 - COMPUTATIONAL OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This course addresses issues arising in the implementation of optimization algorithms. Computational strategies and techniques will be explored. A major emphasis will be placed on implementing various algorithms for large- scale linear, nonlinear, and integer programs. Such algorithms include benders' decomposition, Dantzig-Wolfe decomposition, Lagrangian relaxation and algorithms for specially-structured problems.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3053 - GLOBAL OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
This is an introductory course to the theory and applications of global optimization. The topics covered in this course include properties of convex/non-convex sets and functions, convex envelopes, duality, local and global optimality conditions, algorithms and their convergence and finiteness, computational complexity of global optimization, cutting planes, outer approximation, convexification, decomposition, branch and bound, DC Programming, Lipschitzian programming.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PROG: Swanson School of Engineering

IE 3055 - ROBUST OPTIMIZATION

Minimum Credits: 3
Maximum Credits: 3
Today the modeling of uncertain phenomena in both theory and practice is done via probability theory, the foundation of which is based on the axioms set forth by Kolmogorov in 1933. While it offers insights into understanding uncertainty, probability theory (in contrast to optimization) has not been developed with computational tractability as an objective when the dimension increases. Correspondingly, some of its major areas of application remain unsolved when the underlying systems become multidimensional. The goals of this course will be to propose an alternative via robust optimization (RO) for modeling uncertain phenomena, to develop RO as a tractable methodology for solving optimization problems under uncertainty, and to expose students to a large number of applications.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IE 3056 - OPTIMIZATION UNDER UNCERTAINTY

Minimum Credits: 3
Maximum Credits: 3
In this course, students will learn popular formulations and algorithms for stochastic programming, robust optimization, chance constrained optimization, stochastic dual dynamic programming, and VaR and CVaR based models, as well as some interesting applications. Students should

have knowledge of Matlab, Python, C, or C++ programming languages, a doctoral level linear programming background, good mathematical reasoning ability, and a good understanding of integer programming and computational optimization.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 3057 - BILEVEL OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This is a course on the theory, algorithms and applications of bilevel optimization. Bilevel optimization models are motivated by various real-life settings (e.g., in transportation, energy, defense, network design) that involve independent decision-makers, referred to as the leader and the follower, who interact in a hierarchical manner. Specifically, the leader (the upper-level decision maker), whose perspective is modeled, needs to take into account the decisions of the other (lower-level) decision-maker, i.e., the follower, who solves his/her own optimization problem that, in turn, also depends on the decisions of the leader. In this class we will overview basic modeling concepts of bilevel programming, computational complexity issues, solution algorithms and several notable applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IE 3072 - NANOMECHANICS

Minimum Credits: 3

Maximum Credits: 3

Mechanics at the nanometer-scale often greatly diverges from that observed in the macro-scale. This course will elucidate how under different physicochemical condition, different coupled nanoscale phenomenon are dominant. For example, length-scale dependence can be introduced in both elastic and plastic deformation. Topics covered in this course will include size-effects in nanoindentation, their associated strain-gradient dependent phenomena, surface and interface stress dependent phenomena in nanowires and bulk nanomaterials, switch-overs in deformation-modes with shrinking length-scales, implications of interfacial diffusion phenomena in microstructure evolution, thermomechanical response of nanomaterials, diffusion-driven solid-state dewetting, force-controlled mechanochemistry, and elastocapillarity of nanofilaments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Industrial Engineering Graduate

IE 3077 - SEMINAR IN THERAPEUTIC OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This seminar surveys current research in therapeutic optimization. Emphasis is placed on critiquing and extending the current state of the art. Students will also be expected to present their own work in class.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3078 - CONVEX OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This course develops a modern framework for convex optimization. The topics covered in this course include concepts of convex analysis, smooth convex optimization, non-smooth convex optimization, structural optimization, duality theory.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3079 - ADVANCED STOCHASTIC PROCESSES

Minimum Credits: 3

Maximum Credits: 3

The primary objective of this course is to provide graduate students with advanced knowledge of the theory and application of stochastic processes in operations research and industrial engineering. Specific topics include discrete- and continuous- time martingales, Brownian motion and diffusion processes, with applications in queuing, optimal stopping and stochastic control, among others.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2072 and 2084; PLAN: Industrial Engineering (BEH or BSE)

IE 3080 - ADV TOPICS IN OPERATIONS RES

Minimum Credits: 3

Maximum Credits: 3

May cover various topics at the leading edge of technology in the area of operations research. Course content is announced by the professor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3083 - OPERATIONS RESEARCH IN ENERGY

Minimum Credits: 3

Maximum Credits: 3

This course is a seminar on the modeling, analysis and solution of problems related to energy, natural resources, sustainment and the environment using the tools and techniques of operations research. Students will survey a variety of current and emerging topics including, but not limited to, planning and control of energy systems (e.g. capacity planning and operation of large-scale gas and/or electricity networks); operational and design problems arising in renewable energy production, integration and storage; energy systems management and maintenance, as well as pricing and policy related issues.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2082; PROG: Swanson School of Engineering

IE 3085 - QUEUING THEORY

Minimum Credits: 3

Maximum Credits: 3

Simple queueing models using Markov processes. Network series and cyclic queues. Models with general arrival or service patterns. Closed queues. Numerical and simulation techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3087 - NETWORK-BASED OPTIMIZATION

Minimum Credits: 3

Maximum Credits: 3

This course covers graphs, digraphs and related concepts, node and edge covering problems, Euler tours, Hamiltonian cycles, tsp, set covering and matching problems, shortest path problems, maximum flow problems and minimum cost network flow problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3088 - INTEGER PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

Polyhedral theory, computational complexity, super additive duality, and integral polyhedral.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3089 - REPAIRABLE SYSTEMS MODELING AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

A repairable system is a system that can be restored to a satisfactory condition through some intervention by a decision maker. In a manufacturing setting, such actions might include inspections, part replacements or setting adjustments; in a medical context, such actions might include disease screening, surgery or drug therapy. In this course, we consider applications of probability, simulation and optimization in the: (a) mathematical modeling of the performance of repairable systems, and (b) designing of optimal inspection and maintenance policies for repairable systems. In each case, we compare and contrast

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3093 - STOCHASTIC PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course considers stochastic programming, a technique for making optimal decisions under uncertainty. Will consider theory, algorithms and applications. Extensions to multi-stage problems and stochastic integer programs will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3094 - MARKOV DECISION PROCESSES

Minimum Credits: 3

Maximum Credits: 3

Introduces the fundamentals of discrete sequential models when outcomes are uncertain. Covers formulation and analysis of stochastic dynamic programs under several objective criteria; developing and enhancing solution algorithms; applications in the areas of inventory control, vehicle routing, and resource allocation; development of approximate solution techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3095 - GRADUATE SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Speakers from universities and industry discuss research topics and state-of-the-art material in the areas of operations research, engineering management, and manufacturing systems. Enrollment in this course is mandatory for all full-time Ph.D. students.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis
Course Requirements: PROG: Swanson School of Engineering

IE 3097 - ALGORITHMS FOR ENGINEERS

Minimum Credits: 3

Maximum Credits: 3

This course will develop students' ability to understand algorithms and use them appropriately for real-world and theoretical problems. Our discussion will be geared towards topics and example arising in IE applications, in particular, in the context of optimization problems. Topics covered will include introduction to complexity theory, running times and performances measures, common ideas in algorithmic design including randomized algorithms, approximation algorithms, and heuristics..

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Swanson School of Engineering

IE 3099 - THEORY OF STOCHASTIC STIMULATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the theoretical foundations of simulation methodology and its recent advances with an emphasis on stochastic processes. Topics include: generating random objects, output analysis (autoregressive, regenerative, spectral, and stationary times series methods), variance reduction techniques (antithetic variable, common random numbers, control variables), Markov chain Monte Carlo (MCMC), rare-event simulation techniques, stochastic optimization (likelihood ratio method, perturbation analysis, stochastic approximation), sampling of stochastic differential equation, exact simulation and perfect sampling. Some of the motivating applications that will be discussed are drawn from the domain of finance and risk management, insurance modeling, and queuing networks.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IE 2084

IE 3186 - APPROXIMATE DYNAMIC PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course is an introduction to the theory and application of large-scale dynamic programming with emphasis on a broad spectrum of applications in finance, revenue management, and health policy. The first part of the course emphasis more on approximate dynamic programming algorithms. The second part of the course is devoted to the recent advances in reinforcement learning. Topics include Markov decision processes, dynamic programming algorithms, simulation-based algorithms, q-learning, theory and algorithms for value function approximation and policy search methods, stochastic approximation, r-max algorithm, online learning and regret minimization, and posterior sampling method.

Grade Component: Grad SN Basis

Infct Disease & Microbiology

IDM 2001 - MOLECULAR BIOLOGY OF MICROBIAL PATHOGENS

Minimum Credits: 3
Maximum Credits: 3
Students will develop a comprehension of (1) bacterial anatomy, metabolism, regulation of gene expression, genetics, and the action of anti-microbial agents at the molecular level; and (2) the relevance of this knowledge to understanding microbial pathogenesis and the host response. In addition, prokaryotic and eukaryotic model system of gene regulation will be compared to emphasize the conceptual aspects and application of molecular biology to infectious disease.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

IDM 2002 - MOLECULAR VIROLOGY

Minimum Credits: 3
Maximum Credits: 3
The intent of this course is to provide a comprehensive coverage of the animal virus families and a few selected examples of bacterial viruses. The emphasis of the course will be to provide an in depth coverage of the viral life cycle, including the fundamental mechanisms of viral replication and gene regulation. Representative members of each virus family will be selected for the lecture material.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Requirements: PREQ: IDM 2001 or INTBP 2000

IDM 2003 - HOST RESPONSE TO MICROBIAL INFECTION

Minimum Credits: 2
Maximum Credits: 2
Students will develop a comprehension of the concepts and knowledge of resistance and immune responses of humans to microbial infection. The role of phagocytic cells; complement; lymphocytes; the development of humoral and cell mediated immunity at the molecular, cellular, and organ level; and the consequences in controlling and enhancing disease are covered.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IDM 2004 - VIRAL PATHOGENESIS

Minimum Credits: 2
Maximum Credits: 2

The goal of this course is to integrate the lectures given on a particular virus in the comprehensive virology course with two additional lectures which expand the basic biology of the virus life cycle to the level of virus-host interactions. The first lecture will address the pathogenic properties of the virus from the perspective of disease manifestations, immunology, and the natural history of infection. This will be followed by a second lecture which will address the molecular basis of viral pathogenesis and current advances in antiviral research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: LEVEL: Second Year Graduate Students and above

IDM 2007 - PUBLIC HEALTH COMMUNICABLE DISEASE PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The practicum, through structured and educationally supervised assignments at an approved site with an experienced professional, is aimed at providing a means to identify and to apply a variety of theories and skills discussed and demonstrated in the classroom to the real life experiences to which the student is assigned in the field under professional supervision. The assignments and choice of site are determined by the director of the program and the program requirements and career goals of the student.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Attributes: Community Element -General Community Impact

IDM 2010 - PATHOGEN BIOLOGY

Minimum Credits: 2

Maximum Credits: 2

The goal of this course is to teach the basic biology and pathogenesis of many of the most important infectious diseases that are public health challenges in the 21st century. It is intended for students with a background in biological sciences, and will review those features that make these pathogens so successful as agents of disease. Topics covered will include: the interaction between the pathogen and the host genome, the strategies used by each pathogen to evade the host response, and the ways in which the pathogen defends itself against treatments and vaccines. The course will be taught using a combination of didactic lectures and paper discussions based on the current primary research literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: PUBHLT 2015; PLAN: Infect Disease & Microbiology (MS or PHD); SUBPLAN: Infect Dis Path Erad Lab Pract or Inf Dis Mgmt Interv Comm Pract or Peace Corps (IDM)

IDM 2014 - FUNCTIONAL GENOMICS OF MICROBIAL PATHOGENS

Minimum Credits: 3

Maximum Credits: 3

Functional genomics involves the systematic study of genes and their function. This course will introduce many of these innovative technologies for the systematic analysis of gene function including gene discovery, transcriptome analysis, random and targeted gene disruption strategies, proteomics, metabolomics, and integrative systems approaches with a particular emphasis on their application to infectious disease pathogens and their interaction with their host cells. We will also examine the genomes of well-studied pathogens and explore how these technologies have been used to study their biology and pathogenesis and the application of these techniques for drug and vaccine targeting and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IDM 2001

IDM 2021 - SPECIAL STUDIES IN MICROBIOLOGY

Minimum Credits: 1

Maximum Credits: 15

Properly qualified students may undertake special study, experience in a clinical laboratory, or research with the approval and under the guidance of a

member of the faculty. Part or all of such study may be used as the basis for the essay or dissertation requirement for the master's and doctoral degrees.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IDM 2022 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

Properly qualified students may undertake special study under guidance of a faculty member to acquire knowledge and skill to use independently a specific laboratory research tool, e.g., Gene cloning, DNA sequencing, cell sorting, oligonucleotide synthesizer, polymerase chain reaction, statistical analysis with pc.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IDM 2023 - MICROBIOLOGY LABORATORY

Minimum Credits: 2

Maximum Credits: 2

A series of laboratory exercises introduces the student to microbiological procedures, especially as they apply to virology and bacteriology.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2025 - MICROBIOLOGY SEMINAR

Minimum Credits: 1

Maximum Credits: 1

In this course students are going to present scientific journal articles dealing with virology, immunology, molecular biology, and epidemiology and drug therapy of viral diseases. In addition, students will present similar aspects of bacterial diseases. In some sessions students may be shown video presentation of diagnosis and clinical management of a particular viral or bacterial disease.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IDM 2032 - HUMAN DIVERSITY AND PUBLIC HEALTH

Minimum Credits: 2

Maximum Credits: 2

This course will provide a theoretical framework for designing policy, research, and programs for diverse populations. Opportunities for expanding understanding and examining attitudes about human diversity will be presented. Community organizing and marketing methods related to program design and recruiting and sustaining volunteer or patient participation in programs will be a major focus of the course.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2034 - CONTROL AND PREVENTION OF HIV/AIDS

Minimum Credits: 2

Maximum Credits: 2

This graduate level course on HIV disease prevention and control is aimed at providing an in-depth study of the HIV disease. The course goal is to provide advanced knowledge base of information on the complex clinical, preventive, treatment, and policy issues on HIV/aids.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)

Course Attributes: Global Studies

IDM 2038 - PREVENTION, TREATMENT, AND CONTROL OF GLOBAL INFECTIOUS DISEASES

Minimum Credits: 3

Maximum Credits: 3

This course is aimed to prepare the student to demonstrate knowledge of the prevention, treatment, and control of infectious diseases throughout the world. Students will develop knowledge in the pathogenesis, treatment, individual, and environment intervention in prevention and spread of infectious diseases.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: Graduate Sch of Public Health (PPBHL) or School of Medicine (MEDSC)

IDM 2040 - SCIENTIFIC COMMUNICATION

Minimum Credits: 1

Maximum Credits: 1

This course will include a 1-hour lecture with 50 minutes of discussion on topics including: Tools for presentations (e.g. Word, PowerPoint, Endnote, Photoshop, Illustrator), preparing and delivering poster and oral presentations, technical writing skills for scientific publications, writing grant applications, and preparing for writing graduate theses or essays. Assignments will include writing abstracts, designing posters, and a short oral presentation of their work. Satisfactory letter grades will be contingent upon participation in discussions, and completion of assignments and projects.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Infectious Diseases & Microbiology (MPH, MS, or PhD)

IDM 2069 - INFECTION PREVENTION AND CONTROL IN HEALTH CARE SETTINGS

Minimum Credits: 2

Maximum Credits: 2

This course in infection control is aimed at building knowledge and skills as well as critical thinking through evidenced-based and case-based learning to provide students with a foundation in infection prevention and control in a healthcare settings. As the end of this course, successful students will have current knowledge of hospital acquired infections, patient isolation practices, infection surveillance, documentation, monitoring, reporting, and outbreak investigations. The course will be taught by expert practitioners, researchers, and clinicians in infection prevention. Students may enroll in this course only or they may combine it with an optional practicum/internship of a minimum of 200 hours within a clinical setting if accepted into IDM 2068 (Infection Prevention and Control Practicum/Internship)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IDM 2161 - METHODS OF INFECTIOUS DISEASE EPIDEMIOLOGY

Minimum Credits: 1

Maximum Credits: 1

Covers important topics in infectious diseases epidemiology, including public health surveillance, emerging infectious diseases, the role of infectious diseases in the etiology of chronic diseases, and epidemiologic study designs and laboratory methods used in infectious diseases research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: EPIDEM 2110

IDM 2420 - EXPERIMENTAL VIROLOGY

Minimum Credits: 2

Maximum Credits: 2

This course is designed for graduate students training in molecular virology research and is designed to provide a more in-depth study of molecular virology through a critical analysis by the student of seminal research publications in various virus systems. Paper discussion format.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: IDM 2002

IDM 3010 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Grade Component: Grad SN Basis

IDM 3440 - VACCINES AND IMMUNITY

Minimum Credits: 2

Maximum Credits: 2

Vaccines are widely regarded as one of the major contributors to increased life expectancy. The purpose of this course is to (1) explore the history of vaccines; (2) underscore the successful role of current vaccines in the management of infectious diseases; (3) present strategies for a new generation of safe and effective molecular vaccines; and (4) discuss the ethical and economic realities of vaccine use and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: IDM 2003; PROG: School of Public Health

IDM 3441 - EPIDEMIOLOGY AND CONTROL OF SEXUALLY TRANSMITTED INFECTIONS

Minimum Credits: 1

Maximum Credits: 1

The purpose of IDM 3441 is to provide students with an understanding of the major sexually transmitted infections (STIs) in the U.S. This course will focus on the underlying transmission dynamics, history, risk factors, public health impact and current strategies for control. The method of teaching will be to provide STI-specific lectures and promote critical discussion about the strategy and control limitations thereof. Approximately 50% of class time will be lecture and the remaining 50% will be devoted to a critical review of the assigned papers (2) for each class period.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Information Science

HIM 1405 - MEDICAL TERMINOLOGY LAB

Minimum Credits: 1

Maximum Credits: 1

This course is a basic study of the professional language of medicine. It is designed to include word construction, pronunciation, spelling, definition, and use of terms related to all areas of medical science, hospital service, and health related professions. This ONLINE course is designed to give the student a knowledge of words frequently used in the medical field and provides examples through the review of basic anatomy, physiology, surgical procedures, diagnostic procedures, and symptomatology. Coverage of the pathology of each body system is will take place along with an introduction to pharmacology, and the pharmacological treatment of frequently occurring conditions of each body system.

Academic Career: UGRD

Course Component: Mass Media

Grade Component: Letter Grade

Course Requirements: PLAN: Health Information Management (BPH or BS or BS-H)

INFSCI 0017 - FUNDAMENTALS OF OBJECT-ORIENTED PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

First programming course for is majors, designed for students with little or no programming experience. Basic principles and concepts of object-oriented programming using java. Classes, interfaces, operators, program control, arrays, testing, debugging, inheritance, polymorphism, and event handling. Techniques for simplifying the programming process and improving code quality. Activity-based learning.

Academic Career: Undergraduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Course Requirements: CREQ: INFSCI 0010

INFSCI 2000 - INTRODUCTION TO INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Overview of the history, academic roots, conceptual structure, and methodology of information science. Explores principles and concepts that underlie information processing, including information theory, models of information storage and retrieval, and human cognition. Basic processes of information systems analysis, design and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

Course Attributes: Global Studies

INFSCI 2020 - MATHEMATICAL FOUNDATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

Basic concepts of theoretical mathematics needed to understand theoretical work in information science with the exception of probability and statistics; in particular, concepts from set theory, graph theory, combinatorics, logic, abstract algebra, topology, and mathematical analysis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2040 - RESEARCH DESIGN

Minimum Credits: 3

Maximum Credits: 3

Beginning research design with emphasis on the basic process of inquiry. Identifying and articulating research problems, determining and describing procedures for conducting research, designing data collecting procedures, formulating testable hypotheses, interpreting and drawing conclusions from data analysis, and reporting research findings and implications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or School of Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2120 - INFORMATION AND CODING THEORY

Minimum Credits: 3

Maximum Credits: 3

Includes measures of information, information sources, joint and conditional uncertainty, noiseless and deterministic channels, reliable messages through unreliable channels, channel capacities, properties of codes, minimal codes, and error-detecting and error-correcting codes. Examines entropy as a measure of semantic content.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2125 - NETWORK SCIENCE & ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, SAISYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2130 - DECISION ANALYSIS AND DECISION SUPPORT SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduction to decision analysis with elements of human cognition under uncertainty, including structuring decision problems and developing creative decision options, quantifying uncertainty and preferences, and combining uncertainty and preferences to arrive at optimal decisions. Foundations needed for applying the methods of decision analysis in decision support systems. Note: can also be used to fulfill distribution requirement in cognitive science area.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2135 - PROBABILISTIC METHODS

Minimum Credits: 3

Maximum Credits: 3

This seminar provides an introduction to computational approaches for probabilistic modeling and inference. A particular focus is placed on Bayesian networks, although other probabilistic models also will be studied. Medical applications are emphasized, however, the principles are general and no medical knowledge is needed to take the course. The course does not require knowledge of a computer programming language. An understanding of basic probability theory would be helpful, but is not required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2140 - INFORMATION STORAGE AND RETRIEVAL

Minimum Credits: 3

Maximum Credits: 3

Problems and techniques related to storing and accessing unstructured information with an emphasis on textual information. Overview of several approaches to information access with a primary focus on search-based information access. Covers automated retrieval system design, content analysis, retrieval models, result presentation, and system evaluation. Examines applications of retrieval techniques on the web, in multimedia and multilingual environments, and in text classification and event tracking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2149 - INTRODUCTION TO INFORMATION SECURITY

Minimum Credits: 3

Maximum Credits: 3

Introductory information security and privacy course for non-SCI students enrolled in the Graduate Certificate Program in Cybersecurity, Policy and Law. Covers fundamental issues and first principles of security and information assurance, including security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. The course will introduce students to risk management, security assurance, secure design principles, organizational security policy, legal and ethical issues in security, and standards and methodologies for security evaluation and certification.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Plan = CPL-AC, CSPL-AC, or CSPL-MN

INFSCI 2150 - INFORMATION SECURITY AND PRIVACY

Minimum Credits: 3

Maximum Credits: 3

Fundamental issues and first principles of security and information assurance. Security policies, models and mechanisms related to confidentiality, integrity, authentication, identification, and availability issues related to information and information systems. Basics of cryptography such as key management and digital signatures, etc. And network security such as PKI, IPsec, intrusion detection and prevention. Risk management, security assurance and secure design principles. Issues such as organizational security policy, legal and ethical issues in security, standards and methodologies for security evaluation and certification.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: TELCOM 2000 or INFSCI 1070; PROG: School of Information Science or Sch Computing and Information

INFSCI 2160 - DATA MINING

Minimum Credits: 3

Maximum Credits: 3

Introduction to data mining techniques, including data preprocessing, data mining primitives, association rules, decision trees, cluster analysis, classification and machine learning, data visualization, and data warehousing. Detailed applications from a wide variety of domains.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2020 (B or greater) or INFSCI 2725 (B or greater) or INFSCI Exemption-Analytics Component (Test Score 6 or higher);

INFSCI 2170 - CRYPTOGRAPHY

Minimum Credits: 3

Maximum Credits: 3

Principles of number theory, cryptographic algorithms and cryptanalysis. Steganography, block and stream ciphers, secret key encryption (DES, res, re-n), primes, random numbers, factoring, and discrete logarithms. Public key encryption (RSA, Diffie-Helman, elliptical curve cryptography, n'tru); key management, hash functions (md5, sha-1, ripemd-160, HMAC), digital signatures, certificates and authentication protocols. Cryptanalytic methods (known, chosen plaintext etc.) For secret and public key schemes (linear and differential cryptanalysis, pollard's rho method, number field sieve, etc.).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2204 - INTRODUCTION TO TECHNICAL COMMUNICATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

An English language support course for international students in SIS who are non-native speakers of English. Introduces students' to strategies and skills for comprehension and production in academic English contexts. Also addresses issues of academic integrity and plagiarism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

INFSCI 2205 - TECHNICAL COMMUNICATIONS FOR INFORMATION SCIENCE

Minimum Credits: 3

Maximum Credits: 3

An English language support course for international students in SIS who are non-native speakers of English. Helps develop students' strategies and skills for comprehension and production in academic English contexts. Also addresses issues of academic integrity and plagiarism.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

INFSCI 2230 - CYBERCRIME

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

INFSCI 2300 - HUMAN INFORMATION PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Introduction to research and theory in human cognition, including perception, attention, pattern recognition, memory, representation of knowledge, language, problem solving, reasoning, and decision making, with emphasis on modeling human cognition and implications for user interface design and design of intelligent systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2350 - HUMAN FACTORS IN SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduces principles for analysis of human performance in human-machine systems. Emphasis on principles of human factors as applied to the design of systems other than the graphical user interface (GUI) that is covered in interactive systems INFSCI 2470.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2410 - INTRODUCTION TO NEURAL NETWORKS

Minimum Credits: 3

Maximum Credits: 3

Introduces mathematical and computer techniques used in constructing models of information processing by parallel distributed processing (PDP) networks; principles of input-output functions and adaptation (learning) functions in single units and in networks; examines the relation between PDP networks, neurobiology, artificial intelligence, and cognition.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2415 - INFORMATION VISUALIZATION

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the visual design, structure, and organization of information as applied to library and information environments and web site design. Topics include visualization literacy, usability research, theories of visual perception and cognition, visualization models, visual analytics, and data graphics. The emphasis is on user and task-centered design for developing and evaluating visualization-based tools for various types of data. Practical work with visualization technologies will be included.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

INFSCI 2420 - INTRODUCTION NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Overview of computational approaches to natural language processing. Issues in syntax, semantics, and pragmatics, as well as overall system architectures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2300 and (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PROG: School of Information Science or Sch Computing and Information

INFSCI 2430 - SOCIAL COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Introduction to key theories and technologies of social computing. Reviews major types of social computing systems. Several social computing systems are explored and used throughout the course. Final group project focuses on designing and implementing a social web system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2440 - ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

With the focus on the machine intelligence technologies around processing, representing, modeling, and learning from large quantity of data in the current web context, this course serves as a broad introduction to students of the theories, algorithms and applications of modern Artificial Intelligence (AI). Taking a data science oriented perspective, this course aims to help students to develop a broad theoretical knowledge and practical experience in AI. With the understanding that modern AI is actually a discipline of theories and techniques around the idea of data driven model-based machine intelligence, this course consists of four broad modules: 1) representation of knowledge, 2) uncertainty-based modeling and

reasoning, 3) improvements with machine learning, and 4) communication with natural language processing, all of which are necessary components for an intelligent agent to engage intelligently with other agents or people in the real world. The goal of this course is to prepare students to work creatively and productively in current data-driven and intelligence-rich environment, and it is ideal for students who would like to be introduced to the techniques of modern AI. Topics include: search, logic and deduction, knowledge representation and memory organization, production systems, expert systems, planning, language understanding, and machine learning.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2020 and (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PROG: School of Information Science or Sch Computing and Information

INFSCI 2460 - SPATIAL REASONING FOR GIS

Minimum Credits: 3

Maximum Credits: 3

Fundamental issues in qualitative spatial reasoning, spatial languages, and spatial decision-making. Applications of spatial reasoning including problems of navigation and interface issues for GIS.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2470 - INTERACTIVE SYSTEM DESIGN

Minimum Credits: 3

Maximum Credits: 3

The environments that can or should be provided for interactive use of computers. Necessary hardware, software, and behavioral components of an interactive system; data structure considerations for various types of interactive applications; operating system fundamentals, functions, and characteristics. Emphasis on interactive operating systems, human machine dialogues, interactive graphics, programming languages, and application(s) design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Information Science (MS or PHD); SUB: Digital Libraries & Info Mgmt

INFSCI 2480 - ADAPTIVE INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduces key principles of adaptive information systems and modern techniques for user modeling and personalization. Covers the construction of user models and user profiles. Examines the use of various personalization techniques such as adaptive search, recommendation, and navigation support. Reviews major types of adaptive information systems and explores important application areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2710 or 2470; PROG: School of Information Science or Sch Computing and Information

INFSCI 2500 - DATA STRUCTURES

Minimum Credits: 3

Maximum Credits: 3

Theory and application of data structures. Data and file structures and their appropriateness to various applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: (Information Science or Telecommunications or Interdisc Information Science or Not Candidate for Degree) or SUBPLAN: (Digital Libraries & Info Mgmt)

INFSCI 2510 - INFORMATION SYSTEMS ANALYSIS AND DESIGN

Minimum Credits: 3

Maximum Credits: 3

The focus of this course is on studies of specifications of the information systems development process. The course covers fundamental topics on two main stages of information systems development life cycle: analysis, and design. Students will become familiar in techniques to investigate, collect, organize, and structure requirements for an information system as well as understanding how to design different component of the information system to satisfy the requirements. The course hands-on experiences such as working directly with real-world clients to address an information need challenge. Students are evaluated through regular assignments, quizzes, and a course project

Academic Career: Graduate

Course Component: Lecture

Course Requirements: PROG: School of Information Science or Sch Computing and Information ; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2511 - INFORMATION SYSTEMS DESIGN

Minimum Credits: 3

Maximum Credits: 3

Object-oriented design best practices; principles of system architecture; design patterns; requirements traceability; construction of uml-compliant models (class, sequence, communication and package diagrams); refactoring; iterative development of system prototype. Requires knowledge of fundamental of programming concepts including abstract classes, interfaces, inheritance, polymorphism, and message passing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2510; PROG: School of information Science or Sch Computing and Information

Course Attributes: Global Studies

INFSCI 2540 - SOFTWARE ENGINEERING

Minimum Credits: 3

Maximum Credits: 3

Critical analysis of leading iterative software development processes; TSP/PSP, unified process, extreme programming and related agile processes; enterprise management and control of software projects (CMM and COBIT); configuration and change management; quality assurance and testing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2545 - SOFTWARE QUALITY ASSURANCE

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2550 - CLIENT-SERVER SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Analysis and design of distributed systems. Emphasis on distributed applications and various protocols used in such applications. Explores

algorithms for various iterative and concurrent server designs as well as the design of application level protocols. Includes various languages and operating systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science or Sch Computing and Information

INFSCI 2560 - WEB TECHNOLOGIES AND STANDARDS

Minimum Credits: 3

Maximum Credits: 3

Covers core technologies and standards for distributed systems, especially web based distributed systems. Includes an overview of the standardization process and the standards organizations. Looks at network and data standards with significant attention to HTML/XML, HTTP, URL and other web technologies including APIS to programming with them.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2591 - ALGORITHM DESIGN

Minimum Credits: 3

Maximum Credits: 3

Fundamentals of algorithm design including greedy algorithms, divide-and-conquer algorithms, dynamic programming, heuristics and approximate algorithms, parallel and distributed algorithms, multi-dimensional data structures, time complexity of algorithms, and development of programs from algorithms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science or Sch Computing and Information

INFSCI 2595 - MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

Introduction to machine learning, includes algorithms of supervised and unsupervised machine learning techniques, designing a machine learning system, bias-variance tradeoffs, evaluation metrics; Parametric and non-parametric algorithms for regression and classification, k-nearest-neighbor estimation, decision trees, discriminant analysis, neural networks, deep learning, kernels, support vector machines, ensemble methods, regularization techniques; Dimensionality reduction, principle component analysis, LDA, t-SNE; Clustering methods such as k-means, hierarchical clustering, spectral clustering, DBSCAN; Mathematical foundations including linear algebra, probability theory, statistical tests, statistical learning theory; Best practices and application to real-world problems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

INFSCI 2620 - DEVELOPING SECURE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Design and implementation of secure systems. Principles and practice of trustworthy computing, secure and high assurance software development process and lifecycle models. Secure software design using UMLSEC, secure design of operating systems and network services, database and applications. Secure webs services, cots-based and service-oriented systems. Software assurance tools and techniques such as code analysis and testing, evaluation and certification of software. Secure programming techniques.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2150 or TELCOM 2810; PROG: School of Information Science or Sch Computing and Information

INFSCI 2621 - SECURITY MANAGEMENT AND COMPUTER FORENSICS

Minimum Credits: 3

Maximum Credits: 3

Administration and management of security of enterprise information systems and networks. Principles and tools related to intrusion detection systems, vulnerability analysis, anomaly detection, computer forensics, application logging, auditing and data management, risk management, contingency planning and incident handling, digital immune systems, and alarms and responses. Security standards, evaluation and certification process; security planning, ethical and legal issues in information; privacy, traceability and cyber-evidence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (INFSCI 2150 or TELCOM 2810) and TELCOM 2821; PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2625 - CYBERSECURITY AND PRIVACY REGULATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

INFSCI 2629 - CAPSTONE IN SECURITY

Minimum Credits: 3

Maximum Credits: 3

Integrative class for master's students in their final semester of the sais track. Combination of business and technical case studies and group projects. Case studies focus on business/economics aspects of providing information assurance and how this service impacts technology. Group projects involve design and development of a prototype secure and survivable information system including application development, system deployment, system optimization and system economics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (INFSCI 2150 or TELCOM 2810) and TELCOM 2821; PLAN: ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2710 - DATABASE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Basic graduate course on database systems. Centralized relational database systems with emphasis on database design, implementation, and administration. Comprehensive coverage of SQL, data modeling, normalization, storage management, transaction management, and query evaluation. Students will develop practical skills in building and maintaining realistic medium-scale database systems. Also covers more advanced topics including data warehousing and OLAP.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: CREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PLAN: IIS-MS or INFSCI-AC or INFSCI-MSI or INFSCI-PHD or IISCI-MS or ISCI-AC or ISCI-MSI or ISCI-PHD or SAISYS-AC or SAISYS-ACG or TCOMM-MST or TCOMM-AC) or (SUBPLAN: MLISDL-TR or MLISDLI-SP or MLIDLIM-SP)

INFSCI 2711 - ADVANCED TOPICS IN DATABASE MANAGEMENT

Minimum Credits: 3

Maximum Credits: 3

Advanced graduate course on database systems. Key issues that typically arise in the context of large-scale enterprise database management in heterogeneous wide-area environments including distributed and non-relational database systems, network-centric data management, web-based information systems, heterogeneous databases, information integration, and wireless data management.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2710; PLAN ISCI-MSI, ISCI-AC, BDA-ACG, BDAL-ACG, SAISSYS-ACG, SAIS-ACG, ISCI-PHD, INFSCI-MSI, INFSCI-AC, INFSCI-PHD

INFSCI 2725 - DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Introduction to fundamental technologies underlying distributed storage and efficient analysis of very large amounts of data. An overview of approaches to extracting information and knowledge from data, verification, testing, and presentation of results.

Academic Career: Graduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

INFSCI 2730 - E-BUSINESS

Minimum Credits: 3

Maximum Credits: 3

Conceptualization of e-business in the context of markets, business practices, and information theory. Implementation of e-business websites and services via various programming languages. Examines various models for online consumer systems, business-to-business systems, and enterprise computing--e.g., Supply chain models. Covers related technologies in document processing, telecommunications, and security.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2560 and 2710; PROG: School of Information Science or Sch Computing and Information

INFSCI 2731 - SECURITY IN E-COMMERCE

Minimum Credits: 3

Maximum Credits: 3

Covers the technology, concepts, issues and principles that are important in the design and implementation of secure e-commerce systems. Examines technology for protecting electronic commerce. It will include discussion of basic security principles, as well as the issues, policy and standards particular to e-commerce applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2560; CREQ: (INFSCI 2150 or TELCOM 2810); PROG: School of Information Science or Sch Computing and Information

INFSCI 2739 - WEB SERVICES AND DISTRIBUTED COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Looks at advanced techniques to client server computing. Covers design techniques necessary for organizing very large web sites. Integrates the knowledge and skills from e-business and web technologies to develop a functioning distributed application using web services, RMI, RSS, AJAX, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2550 and 2730; PROG: School of Information Science

INFSCI 2750 - CLOUD COMPUTING

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of the concepts and design principles behind existing cloud solutions. Topics include large scale data processing techniques such as mapreduce/hadoop and its related ecosystem, overview of virtualized commercial cloud models, system virtualization, hypervisors and virtualized platforms. Design of cloud storage systems such as key-value stores and geographically distributed storage systems. Introduction to security and privacy issues in cloud computing, issues of data and execution privacy in modern commercial cloud services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: (INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1)); PLAN: School of Information Sciences

INFSCI 2780 - INTERACTIVE GRAPHICS

Minimum Credits: 3

Maximum Credits: 3

Computer graphics, point plotting techniques, line drawing display, clipping and windowing, display lines, geometric models, picture structure, graphic input devices and techniques, event handling, raster graphics, solid area scan conversion, three-dimensional graphics, shading, and user-interface design related to the associated behavioral factors in INFSCI 2300 and INFSCI 2350.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: INFSCI 2500 or INFSCI 2500 Exemption (Test Score=1); PROG: School of Information Science

INFSCI 2801 - GEOSPATIAL INFORMATION SYSTEMS (GIS)

Minimum Credits: 3

Maximum Credits: 3

Introduction to the fundamentals of GIS. Topics include GIS components, geospatial data structures, geospatial databases, geospatial data integration and conversion, overlay analysis, proximity analysis, network analysis, buffering, topology, and GIS tools (hardware and software).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science or Sch Computing and Information; PLAN: Excluded Plans = Library & Information Science (MLIS, PHD, CERT-Advanced)

INFSCI 2802 - LOCATION-BASED SERVICES

Minimum Credits: 3

Maximum Credits: 3

Internet GIS, distributed geo-processing on the internet, mobile GIS, location-based services, navigation systems and services, social networking, and a selection of emerging applications possible through mobile GIS and location-based services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Information Science or Sch Computing and Information

INFSCI 2809 - SPATIAL DATA ANALYTICS

Minimum Credits: 3

Maximum Credits: 3

Geospatial data collection, geospatial data structures and indexing, geospatial analysis, data quality, geospatial data structures and algorithms for surfaces, spatiotemporal databases, and digital terrain modeling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Information Science or Sch Computing and Information

INFSCI 2821 - FOUNDATIONS OF CLINICAL AND PUBLIC HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

A survey of fundamental concepts and activities on information technology applied to health care. Topics include computer-based medical records, knowledge-based systems, telehealth, decision theory and decision support, human-computer interfaces, systems integration, the digital library, bioinformatics, and educational applications. Department-specific applications such as pathology, radiology, psychiatry and intensive care are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PROG: School of Information Science or Sch Computing and Information

INFSCI 2872 - E-BUSINESS

Minimum Credits: 3

Maximum Credits: 3

Conceptualization of e-business in the context of markets, business practices, and information theoretic contexts. Implementation of e-business websites and services via various programming languages. End-user e-commerce, business-to-business e-commerce, and enterprise computing--e.g., supply chain models. Related technologies in document processing, telecommunications, and security.

Academic Career: GRAD

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PROG: School of Information Science

INFSCI 2910 - INDEPENDENT STUDY: FOUNDATIONS

Minimum Credits: 1

Maximum Credits: 3

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

INFSCI 2915 - SPECIAL TOPICS: FOUNDATIONS

Minimum Credits: 3

Minimum Credits: 1

Maximum Credits: 15

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

INFSCI 2965 - SEMINARS: SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Analysis of journal articles, books, and conference proceedings involving issues in information science. Techniques for preparing for the preliminary and comprehensive examinations.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

INFSCI 2970 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

Independent studies are intended to cover advanced material outside of or beyond the scope of current course offerings.

Academic Career: Graduate

Course Component: Independent Study
Grade Component: Grad LG/SNC Basis

INFSCI 2980 - PRACTICUM

Minimum Credits: 3

Maximum Credits: 6

For students who desire experience in applying the knowledge and skills acquired in their course work and laboratory sessions. Students are responsible for arranging a practicum with a business or organization.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

INFSCI 2982 - INFORMATION SCIENCE COOPERATIVE PROGRAM

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

INFSCI 2995 - THESIS

Minimum Credits: 3

Maximum Credits: 3

The thesis is a report of original, theoretical, or laboratory work suitable for publication.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

INFSCI 3005 - INTRODUCTION TO THE DOCTORAL PROGRAM

Minimum Credits: 3

Maximum Credits: 3

An introduction to the purpose and nature of doctoral studies in information science, theories and processes in scholarly research and the current state of research in the discipline. Graduate faculty in the program will present and discuss their current interests with students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

INFSCI 3150 - SEMINARS: SPECIAL TOPICS

Minimum Credits: 3

Maximum Credits: 3

Analysis of journal articles, books, and conference proceedings involving issues in information science. Techniques for preparing for the preliminary and comprehensive examinations.

Course Requirements: PLAN: Information Science (PHD); CUM GPA: 3.25

Institute for Practice & Research in Education

IPRE 9257 - EAST ASIA: YESTERDAY AND TODAY

Minimum Credits: 3
Maximum Credits: 3
The course is designed for middle and high school teachers of world cultures, world history, geography, economics, and literature. This seminar will provide students with the content and resources needed to implement the study of East Asia into their curriculum in accordance with various approaches to "standards". The seminar will include an analysis of the recently posted Pennsylvania civics and government standards. It will also reference to the latest national geography, world history, as well as NCSS standards.
Academic Career: Graduate
Course Component: Workshop
Grade Component: Grad HSU Basis
Course Attributes: Asian Studies

Instruction and Learning

IL 2002 - INTRODUCTION TO URBAN EDUCATION

Minimum Credits: 3
Maximum Credits: 3
Students will explore the systemic issues unique to urban education historically as well as uncover how urban education is/can be a vehicle for social justice and equity in our country. The course will include the impact of policies, national movements, systemic racism, and their implications for students in urban schools over time in the united states as well as a deep understanding of the condition of students today with a focus on race, socioeconomic status, equity, etc.
Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2003 - UNDERSTANDING TEACHING THROUGH A SOCIAL WORKERS LENS

Minimum Credits: 3

Maximum Credits: 3

One critical key to being an effective teacher is being able to delve deep into seeing and understanding people's lived experiences. To do so well, requires that one adopt the 'lens' of a social worker in addition to that of a teacher. Diverse urban school students often have experiences that our predominately white, suburban, middle class teaching force haven't, the knowledge of which can assist teachers in better interpreting behaviors and contextualizing their work. Such topics as trauma, health, family dynamics, violence, and poverty are addressed. This course is a collaboration with the school of social work faculty.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2004 - RELATIONSHIP BUILDING: STUDENTS, FAMILIES AND COMMUNITIES

Minimum Credits: 3

Maximum Credits: 3

Students will learn ways to develop and nurture meaningful relationships with the students, families and communities they serve. This course provides opportunities and assignments designed to actively engage in the relationship development process as well as document it along with evidence of studying about demographics and historical content and contexts that provide the anchor for their work with and perspectives of the urban spaces in which they learn and educate.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2005 - URBAN SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This seminar series provides a deep dive into some of the most salient issues of teaching in urban schools. It is designed to take the students on a journey that begins in the summer with an examination of identity, their own as well as a lens in which to see and understand their students in personal and contextualized ways. The fall seminar takes their newfound understanding and wraps it into meaningful relationship building between the self and student as the foundation for developing classrooms as communal learning spaces for all to thrive. Doing such work in understanding identity and relationships with students in urban spaces includes an explicit look at power and privilege in powerful ways that helps teachers understand their and their students lived experiences in ways that lead to opportunities to more clearly see where inequities lie in our educational and broader systems. This then builds to be the foundation for the spring seminar that provides framing and support in becoming a change agent in educational institutions in ways that disrupt such aspects of the environment, such as systemic institutionalized racism.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IL 2006 - CULTURALLY RESPONSIVE TEACHING

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2041 - INTRO TO EARLY CHILDHOOD ED

Minimum Credits: 3

Maximum Credits: 3

The course is a general introduction to the theoretical, political, economic, and social issues that are inherent in the conduct and development of services for young children. The primary thrust is intended to provide students with both an overview of current issues and a basis for assessment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2042 - LANGUAGE AND LITERATURE FOR THE YOUNG CHILD

Minimum Credits: 3

Maximum Credits: 3

An introduction to language and literacy for children birth through grade 4. Includes applied theories and stages of language development, transitions from oral to written expression, family literacy, and guidelines for the selection and use of quality literature.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2045 - YOUNG ENGLISH LANGUAGE LEARNERS

Minimum Credits: 3

Maximum Credits: 3

Prospective early childhood education teachers will identify, investigate and assess impacts of a variety of social agencies, organizations and current issues in early child hood education through planned interviews as well as class lectures, discussions and reports.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2047 - INTEGRATED CURRICULUM PRE-K-4

Minimum Credits: 3

Maximum Credits: 3

The second half of a two-semester course sequence in which pre-service teachers learn about young (pre-k through grade 4) children's thinking related to core ideas in mathematics and science and gradually, through a series of scaffolded tasks, develop pedagogical skills for designing and implementing math and science instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2091 - SUPERVISED RESEARCH - SCIENCE

Minimum Credits: 1

Maximum Credits: 3

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 2098 - DIRECTED STUDY - SCIENCE

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 2203 - LANGUAGE AND LANGUAGE SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of literacy research and instructional approaches that relate to language and language systems with emphasis on the historical development of English, linguistic and sociocultural perspectives on second language learners and speakers of dialects, and instructional

approaches for encoding and decoding.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2208 - READING/WRITING METHODS 1: PRE K - GRADE 1

Minimum Credits: 3

Maximum Credits: 3

This course is intended for teacher candidates who are pursuing prek-4 certification. It is the first in a two-course sequence that focuses on classroom teaching methods for literacy. It is also part of a set of courses that focus on literacy development and instruction. Other courses in the set include reading/writing methods 2: grades 2-4, language and literature for the young child, and literacy assessment and instruction for children with disabilities in inclusive settings. Teacher candidates in reading/writing methods 1 will have opportunities to build their knowledge about specific aspects of literacy, including: (a) oral language development, (b) emergent literacy, (c) concepts about print, (d) comprehension, and (e) writing. In addition, candidates will learn about specific instructional approaches and resources for supporting students in developing those aspects of literacy in pre-kindergarten - grade 1.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2209 - READING WRITING METHODS 2: GRADE 2-4

Minimum Credits: 3

Maximum Credits: 3

This course is intended for teacher candidates who are pursuing prek-4 certification. It is the second in a two-course sequence and builds on concepts introduced in reading/writing methods 1. It is also part of set of courses that focus on literacy development and instruction. Other courses in the set include language and literature for the young child, and literacy assessment and instruction for children with disabilities in inclusive settings. Teacher candidates in reading/writing methods 2 will have opportunities to build their knowledge about specific aspects of literacy, including: (a) word study-decoding, spelling, and vocabulary, (b) comprehension, and (d) composition, including handwriting. In addition, candidates will learn about specific instructional approaches and resources for supporting students in developing those aspects of literacy in grades 2-4.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2211 - COMPREHENSION AND VOCABULARY

Minimum Credits: 3

Maximum Credits: 3

This course provides an in-depth consideration of reading processes related to comprehension and learning from text, and instructional approaches that support student text comprehension, including vocabulary instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2216 - LITERACY ASSESSMENTS AND INTERVENTION MODELS

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of reading processes and assessments of those processes with a focus on phonology, fluency, vocabulary, and comprehension. The course also provides an introduction to the response to intervention model and its application in various contexts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2217 - LITERACY PRACTICUM WITH ELEMENTARY STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course engages candidates in working with students in kindergarten through grade 3 to assess students' literacy abilities in decoding, spelling, vocabulary, fluency, and comprehension, and to design instruction targeted to support students' literacy development. The course is also an opportunity for candidates to videotape and analyze their interactions with students.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 2218 - LITERACY PRACTICUM WITH ADOLESCENT STUDENTS

Minimum Credits: 3

Maximum Credits: 3

This course involves working with middle school students who are experiencing difficulties with reading. The course takes place at a school site for 3 weeks, 9:00-12:00, Monday through Friday, students meet at the University of Pittsburgh, 9:00-12:00, for three specific dates to prepare for the practicum sessions.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 2219 - DISCIPLINARY LITERACY

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the literacy development of adolescents with particular attention to the demands of discipline-specific reading and writing.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2226 - SPECIAL TOPICS - WRITING

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2228 - SUMMER INSTITUTE FOR TEACHERS

Minimum Credits: 6

Maximum Credits: 6

An intensive, teacher-centered, teacher-led professional development program in the teaching of writing, based on the highly successful national writing project model. Open to teachers in all grade levels (k-16) and all content areas.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

IL 2230 - TEACHING AND LEARNING IN SECONDARY ENGLISH 1

Minimum Credits: 3

Maximum Credits: 3

In this course, teacher candidates are introduced to current issues and effective teaching practices in secondary English language arts education.

Teacher candidates will learn the characteristics of English language arts classrooms, curriculum, and instruction that are inquiry-based, cognitively

challenging, and engaging for adolescents.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2235 - THEORY AND PRACTICE IN TEACHING LANGUAGE, GRAMMAR AND USAGE

Minimum Credits: 3

Maximum Credits: 3

The purpose of this seminar is to teach students current best practices for the teaching of language, grammar and usage in multicultural and multilingual secondary English language arts classes. The course will introduce students to basic linguistic concepts and will help students understand how language and grammar are intertwined with all four language arts (reading, writing, listening and speaking). Students will practice developing language and grammar curriculum that is imbedded in reading and writing instruction and developmentally appropriate, explaining grammar and usage concepts clearly and appropriately, and assessing students' understanding of language, grammar, and usage concepts.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2239 - THEORY AND PRACTICE IN TEACHING NEW MEDIA AND LITERACIES

Minimum Credits: 3

Maximum Credits: 3

Teaching new literacies, multimodal forms of expression and technology in the English classroom will be the emphasis of the course. Students will follow a media literacy framework to learn theory into practice as they review and research current literature on digital tools such as wikis, blogs, social networking sites, and digital audio and video production applications. Methods for incorporating new literacies in the classroom will be explored and shared by the students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2240 - THEORY AND PRACTICE: ASSESSMENT IN ENGLISH EDUCATION

Minimum Credits: 3

Maximum Credits: 3

IL 2240 theory & practice: assessment in English education this course will be a survey of the range of assessment tools and practices appropriate for use in evaluating student learning in the secondary English classroom. Students will explore the purposes, methods, and uses of classroom assessment as well as state and national assessments. Topics explored in this course will include standardized testing, formative and summative assessments, designing writing and project-based assessments and rubrics, providing feedback on student writing, analyzing the results of assessments in order to guide instruction, and other topics related to the design and use of assessments.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2243 - THEORY & PRAC IN TCHNG WRITING

Minimum Credits: 3

Maximum Credits: 3

This seminar critically studies various approaches to the teaching of writing from both theoretical and applied perspectives. Students are expected to have had some experience teaching writing.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

IL 2245 - TEACHING & LEARNING IN SECONDARY ENGLISH 2

Minimum Credits: 4

Maximum Credits: 4

In this course, teacher candidates learn how to draw upon English language arts classroom research, learning theory, and knowledge of adolescent development to design and implement effective English language arts instruction. The course will emphasize the design and implementation of cognitively challenging reading and writing tasks as well as the appropriate instructional supports to help students succeed at those tasks. Teacher candidates will have opportunities to develop instructional plans and practice teaching techniques while receiving feedback from peers and the course instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2246 - THRY & PRAC: MULTI-CULTURAL LIT

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide teachers with a multicultural philosophical perspective, criteria for selecting multicultural literature, and strategies and techniques for infusing literature from diverse cultures into a literature program.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

IL 2250 - TECHNOLOGY IN FOREIGN LANGUAGE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Attributes: Asian Studies

IL 2251 - INTRODUCTION TO FOREIGN LANGUAGE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

A basic introduction course dealing with the most current issues in foreign language education in elementary, middle and secondary schools.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2252 - TEACHING AND LEARNING IN K-12 FOREIGN LANGUAGE 1

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to foreign language classroom instruction, management, and methodology. Students will be introduced to the ACTFL national standards for foreign language learning and will explore instructional practices for helping learners develop proficiency in the target language and culture.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

IL 2253 - PRIN/PRA FRGN LANG TESTNG ASSMNT

Minimum Credits: 3

Maximum Credits: 3

In this course, students become familiar with the most current language testing and assessment principles and procedures through discussion and hands-on practice. Topics covered include test usefulness, validity, reliability, practicality, impact, interactiveness, and so on. Student's practice creating tools ranging from multiple choice and short answer to portfolio and performance assessments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2254 - TEACHING & LEARNING IN K-12 FOREIGN LANGUAGE 3

Minimum Credits: 3

Maximum Credits: 3

In this course, students discuss a variety of issues that relate to the actfl national standards for foreign language learning. In addition, teaching techniques that address these issues are modeled and practiced.

Academic Career: Graduate

Course Component: Lecture

Grade Component: LG/SU3 Elective Basis

IL 2255 - TECHNQ/PROCDR FOREIGN LANG TCH

Minimum Credits: 3

Maximum Credits: 3

The course will present strategies and techniques for teaching the four skills (listening, speaking, reading and writing), culture, and generic principles for effective proficiency-oriented instruction. The emphasis of this course is on practical applications.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2256 - ISSUES IN FOREIGN LANGUAGE ED

Minimum Credits: 3

Maximum Credits: 3

The course deals with current issues in foreign language teaching. Issues are determined by the current concerns and research in the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Global Studies

IL 2257 - TEACHING ENGLISH LANGUAGE LEARNERS

Minimum Credits: 3

Maximum Credits: 3

This course will explore strategies for teaching English language learners (ell's) in formal and informal education settings. Students will be introduced to foundational theories and current research on the social and academic factors that influence ell's learning experiences. The class will include a video component so students can observe instructional approaches for working with linguistically and culturally diverse ell's.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2258 - TEACHING & LEARNING IN SECONDARY FOREIGN LANGUAGE 2

Minimum Credits: 4

Maximum Credits: 4

In this course, students discuss and practice a variety of teaching techniques and assessment tools that support the ACTFL national standards for foreign language learning. In addition, students are introduced to current theories of second language acquisition and apply these theories to explain

and design effective instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2260 - TEACHING & LEARNING IN SECONDARY SOCIAL STUDIES 1

Minimum Credits: 3

Maximum Credits: 3

In this course, students will draw upon research, policy, and curriculum documents to develop an overview of current issues in social studies education. The course is organized around three guiding questions: (1) what are the key practices of social studies educators? (2) What do classrooms in which powerful teaching and learning in social studies look like? And (3) what do teachers need to know and be able to do in order to engage students in powerful learning in social studies?

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: Asian Studies

IL 2262 - TEACHING & LEARNING IN SECONDARY SOCIAL STUDIES 2

Minimum Credits: 4

Maximum Credits: 4

In this course, teacher candidates learn how to draw upon learning theory and knowledge of adolescent development to design and support social studies instruction. Teacher candidates utilize various curricular resources (e.g. Standards, text materials, online modules, etc.) To develop detailed instructional plans for daily lessons and entire units. Emphasis is placed on the selection and/or design of high cognitive demand tasks and appropriate pedagogical scaffolding to support students' engagement in those tasks. Teacher candidates will have opportunities to engage in key pedagogical practices while receiving critical feedback from peers and the course instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2265 - ISSUES IN HISTORY EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Students will explore the historical development of approaches to teaching us history and world history.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2268 - SOCIAL STUDIES METHODS PRE-K - 4

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide a theoretical background in social studies education and to exemplify the appropriate principles and practices necessary to deliver effective social studies instruction in pre-k through grade 4.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2269 - SPECIAL TOPICS: SOCIAL STUDIES

Minimum Credits: 3

Maximum Credits: 3

Students will research social studies topics of special interest. Content varies based on professional expertise and students' needs.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2270 - INTEGRATED ART & MUSIC IN ELEMENTARY SCHOOL

Minimum Credits: 3
Maximum Credits: 3

To introduce preservice classroom teachers to art and music contents and processes with relevance to their expected role in integrating authentic arts learning experiences in their instruction. Emphasis placed on developmental aspects of children's' responsive and expressive skills in art and music.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2277 - COMPARATIVE AND GLOBAL PERSPECTIVES ON EDUCATION

Minimum Credits: 3
Maximum Credits: 3

This course, held on the campus of the University of cape town in cape town, South Africa, explores and compares the 20th century human/civil rights-related histories of the united states and South Africa, and examines implications these histories have had on the education systems (particularly in a context of social studies education) of each country. In their comparative survey of historical, social, and educational contexts, instructors will place special emphases on the philosophies, work, and legacies of key historical individuals including Mohandas K. Gandhi, Dr. Martin l. King, Jr., Nelson Mandela, among others. Study will incorporate a critical analysis of the universal declaration of human rights (1948), lectures by noted historical experts, visits to sites of historical significance, visits to schools and other learning environments, and group discussions of relevant texts and experiences.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2278 - PRACTICUM IN SECONDARY SOCIAL STUDIES

Minimum Credits: 1
Maximum Credits: 1

Teacher candidates engage in fieldwork in a secondary school site daily. Fieldwork includes tutoring individual students, supporting instruction in secondary classrooms, collaborating with mentor teachers to design and/or set up lessons, and careful observation of classroom instruction. Teacher candidates will also be responsible for independent instruction. Teacher candidates will reflect critically and productively on their own instruction. Teacher candidates are responsible for timely submission of all required certification paperwork.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

IL 2281 - LEADERSHIP SCHOOL LITERACY PROGM

Minimum Credits: 3
Maximum Credits: 3

This course examines theories about leadership of the school literacy program. Leadership skills are defined and applied. Leadership theory and research as related to literacy curriculum and instruction are discussed; example of how reading specialists and others (principals, teachers) can fulfill a leadership role as described. Course combines theory with practical application.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2282 - FOREIGN LANGUAGE IN ELEMENTARY SCHOOL

Minimum Credits: 3
Maximum Credits: 3

This purpose of this course is to introduce students to the various types of elementary foreign language programs, to review and apply instructional

practices that are appropriate for young foreign language learners, and to discuss topics that are unique to teaching foreign language in K-8 school settings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2290 - RESEARCH SEMINAR FOR MED STUDENTS

Minimum Credits: 3

Maximum Credits: 3

The student proposes, carries out, and prepares a careful report of a study germane to the student's professional role.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2291 - SUPERVISED RESEARCH - READING

Minimum Credits: 1

Maximum Credits: 6

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 2296 - DOCTORAL DISSERTATION RESEARCH - LANGUAGE LITERACY AND CULTURE

Minimum Credits: 1

Maximum Credits: 9

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Full Time Dissertation

Grade Component: Grad SN Basis

IL 2298 - DIRECTED STUDY - READING

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2391 - SUPERVISED RESEARCH IN ENGLISH

Minimum Credits: 1

Maximum Credits: 6

The student works collaboratively with a sponsoring faculty member in carrying out a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2398 - DIRECTED STUDY IN ENGLISH

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2405 - INTRODUCTION TO ACTION RESEARCH METHODS

Minimum Credits: 3

Maximum Credits: 3

This course introduces students to action research as a method of improving their practice. Students will learn what action research is, how it is carried out, and where it falls in the spectrum of research methodologies. The role of literature in supporting practitioners and their action research and how to develop a literature review will be addressed. Students will design an action research project on a topic relevant to their own practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2430 - TEACHING & LEARNING IN SECONDARY SCIENCE 1

Minimum Credits: 3

Maximum Credits: 3

In this course, teacher candidates will draw upon research, policy, and curriculum documents to develop an overview of current issues in science education. The course is organized around three guiding questions: (1) what are some key practices of scientists? (2) what do classrooms in which students engage in key science practices look like? And (3) what do teachers need to know and be able to do in order to support learning in classrooms where students learn science ideas through engagement in science practices?

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2431 - TEACHING & LEARNING IN SECONDARY SCIENCE 2

Minimum Credits: 4

Maximum Credits: 4

In this course, teacher candidates learn how to draw upon learning theory and knowledge of adolescent development to design and support science instruction. Teacher candidates utilize various curricular resources (e.g. Standards, text materials, online modules, etc.) To develop detailed instructional plans for daily lessons and entire units. Emphasis is placed on the selection and/or design of high cognitive demand tasks and appropriate pedagogical scaffolding to support students' engagement in those tasks. Teacher candidates have opportunities to engage in key pedagogical practices while receiving critical feedback from peers and the course instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2432 - TEACHING & LEARNING IN SECONDARY SCIENCE 3

Minimum Credits: 3

Maximum Credits: 3

Designed to develop an overall rationale for dealing with classroom science instruction; students design, teach and evaluate teaching strategies for secondary school; specific materials for teaching science and strategies for their effective use are examined.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2433 - MATH/SCIENCE INSTRUCTION FOR YOUNG LEARNERS 1 (PREK - GRADE 4)

Minimum Credits: 3

Maximum Credits: 3

The first half of a two-semester course sequence in which pre-service teachers learn about young (pre-k through grade 4) children's thinking related to core ideas in mathematics and science and gradually, through a series of scaffolded tasks, develop pedagogical skills for designing and implementing math and science instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2434 - MATH AND SCIENCE METHODS 2 (PRE K - GRADE 4)

Minimum Credits: 3

Maximum Credits: 3

The first half of a two-semester course sequence in which pre-service teachers learn about young (pre-k through grade 4) children's thinking related to core ideas in mathematics and science and gradually, through a series of scaffolded tasks, develop pedagogical skills for designing and implementing math and science instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2445 - ASSESSMENT AND EVALUATION IN MATH EDUCATION

Minimum Credits: 3

Maximum Credits: 3

In this course we will examine current assessment practices in mathematics education, both historically and in terms of their forms and purposes in today's educational and political climate. Most importantly, however, we will focus on improving current assessment practices to support students' learning in the mathematics classroom. Based on an integrated view of assessment and instruction, students will be expected to employ ideas from the course to improve their own assessment practices.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2448 - SPECIAL TOPICS: SCIENCE ED

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum opportunity oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IL 2451 - SPECIAL TOPICS: MATHEMATICS

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2452 - DISCIPLINING ENVIRONMENTAL EDUCATION: USING DIGITAL STORYTELLING TO UNPACK ENVIRONMENTAL ISSUES

Minimum Credits: 1

Maximum Credits: 1

In other parts of the world, such as Finland, environmental education is infused throughout the curriculum in history, science, technology, and math. This pop-up course serves as one way to provide a platform for Pitt students to experience Finnish nature schools in their backyard. The goal of the pop-up classes will be to provide a space for developing student projects at both the undergraduate and graduate levels. This course is geared for students interested in authoring visual content and testing the productive tensions of this new media. During the pop-up classes, we will establish a student-led AR/VR authoring club, training sessions for students, and work to amplify and circulate our content across our local and global communities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

IL 2470 - REASONING AND PROVING IN SECONDARY MATH

Minimum Credits: 3

Maximum Credits: 3

This course focuses on addressing three overarching questions: 1) what is reasoning-and-proving? 2) How do secondary students benefit from engaging in reasoning-and-proving? 3) How can teachers support the development of students' capacity to reason-and-prove? Teachers explore these questions through engagement in a variety of activities that include: solving and discussing challenging mathematical tasks; analyzing narrative cases that make salient the relationship between teaching and learning and the ways in which student learning can be supported; examining and interpreting student work that features a range of solution strategies, representations, and misconceptions; and making connections to their own teaching practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2473 - MATH FOR ELEMENTARY TEACHERS

Minimum Credits: 3

Maximum Credits: 3

Students will improve their mathematics knowledge of concepts and skills in numeration systems, integers, rationales, geometry, probability/statistics, and other selected topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2474 - PROPORTIONAL REASONING IN MIDDLE SCHOOL MATHEMATICS

Minimum Credits: 3

Maximum Credits: 3

Focuses on developing teacher's ability to reason proportionally and capacity for designing instructional experiences that foster's child understanding of proportional relationships. Includes solving math tasks related to proportional reasoning and analyzing teaching and learning situations that highlight pedagogical approaches that support student learning in this domain.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2476 - TEACHING AND LEARNING IN SECONDARY MATH 1

Minimum Credits: 3

Maximum Credits: 3

Basic orientation to the issues, lectures, and resources in the field of mathematics education. Issues currently affecting the teaching and learning of mathematics focused on middle and secondary schooling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2477 - TEACHING AND LEARNING IN SECONDARY MATH 2

Minimum Credits: 4

Maximum Credits: 4

Topics include learning, instruction and assessment, planning lessons, effective learning environments, successful teaching strategies, and materials and resources. Responsibilities and professionalism will also be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2478 - TEACHING AND LEARNING IN SECONDARY MATH 3

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the development and support of learning contexts in which adolescents have opportunities to engage in challenging mathematical practices. Drawing on cognitive change learning theory, teacher candidates learn to select and develop various assessments that reveal students' thinking and to draw upon their understanding of students' ideas to scaffold learning experiences in the classroom. Emphasis is placed on strategies that build and support students' capacity to engage in mathematical discourse.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2484 - MATH PROBLEM SOLVING K-12

Minimum Credits: 3

Maximum Credits: 3

Students will become familiar with various theories of problem solving. They will solve challenging mathematical problems, discuss strategies, and identify ways to translate what they learn into their own mathematics classrooms.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2491 - SUPERVISED RESEARCH - MATH

Minimum Credits: 1

Maximum Credits: 3

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 2493 - PRACTICUM IN SECONDARY MATHEMATICS 1

Minimum Credits: 1

Maximum Credits: 1

Students will share and discuss implementation of school-based assignments linked to teaching lab and methods courses

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 2495 - INTERNSHIP - MATH

Minimum Credits: 1

Maximum Credits: 9

Interns (mat program) work with cooperating teachers in a school setting to master teaching skills and to enhance their professional attitudes.

Responsibility includes half-day teaching.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2496 - INTERNSHIP - SCIENCE

Minimum Credits: 1

Maximum Credits: 9

Interns assume half-time teaching in a secondary school working with cooperating teachers and supervisors to master concepts, skills and professional attitudes. Career goal orientation is rigorously tested.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad HSU Basis

IL 2498 - DIRECTED STUDY - MATH

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2500 - FOUNDATIONS OF SPECIAL EDUC

Minimum Credits: 3

Maximum Credits: 3

Course provides an overview of the field of special education. It includes such topics as 1) identification; 2) placement; 3) programming; 4) inclusion; 5) advocacy; and other topics relating to individuals with disabilities, and gifted and talented individuals. The course examines the various philosophical views of exceptionality.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2501 - STUDENT W/DISAB IN ELEM CLSSRM

Minimum Credits: 3

Maximum Credits: 3

Course is an introduction to teaching students with disabilities in elementary general education classrooms. Course will provide students who plan to become educators with opportunities to (1) develop a knowledge base of the attitudinal issues regarding inclusive educational practices & a philosophical orientation towards effective inclusion support strategies, (2) increase interpersonal skills for working effectively with individuals and groups, and (3) increase technical skills in observing, planning, assessing, & evaluating for both behavioral & instructional challenges.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 2502 - STUDNT W/DISAB IN SECNDRY CLSSRM

Minimum Credits: 3

Maximum Credits: 3

Course is an intro to teaching students with disabilities in sec level general EDUC classrooms. Course will provide students who plan to become educators with opportunities to (1) develop a knowledge base of the attitudinal issues regarding INCL educational practices & a philosophical orientation towards effective inclusion support strategies, (2) increase interpersonal skills for working effectively with individuals and groups, (3) increase technical skills in observing, planning, assessing, & evaluating for both behavioral & instructional challenges, & adapting instruction & curricula.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

IL 2503 - STUDENT TEACHING FOR DUAL CERTIFICATION IN SECONDARY SCHOOLS

Minimum Credits: 3

Maximum Credits: 3

Student teaching for dual certification in secondary schools teacher candidates engage in fieldwork five days a week in secondary school sites for 14 weeks. Teacher candidates will collaborate with both content area and special education mentor teachers to develop and implement a plan by which the teacher candidate will, by the end of the term, assume responsibility for the majority of provided instruction and classroom management. Assignments and weekly meetings are designed to support teacher candidates' ability to recognize and apply evidence-based practices with adolescents in the school context.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad HSU Basis

IL 2505 - AUTISM: CHARACTERISTICS AND INTERVENTIONS

Minimum Credits: 3

Maximum Credits: 3

This course will present information on the characteristics of and intervention approaches for children with autism spectrum disorders (ASDS). Introductory material will include diagnosis criteria and characteristics of ASDS. Current research on theories of etiology will be explored and analyzed. Screening tools and assessments specific to this population will be examined in detail. Intervention approaches (e.g., LBI/Discrete Trial, ABBLS, precision teaching, teach) will be described and analyzed in terms of basic premises, research base, associated curricula, and evaluative guidelines from the autism society of America and national institute of mental health. Representatives from local education and behavioral health systems serving children with ASDS will present services/intervention models available in the area.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2506 - SOCIAL AND COMMUNICATIVE INTERVENTIONS: AUTISM

Minimum Credits: 3

Maximum Credits: 3

The course will consider programming and strategies for facilitating the communication and social development of young children with autism. Communication strategies will include a focus on nonverbal children, echolalic, and verbal children. Strategies will include sign language, picture systems, developmental approaches, naturalistic teaching, and discrete trial formats. Social interventions will examine play, peer interactions, and peer relationships. For both areas, assessment tools and strategies; published curricula; and a range of intervention procedures will be covered.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade
Course Requirements: PREQ: IL 2505

IL 2507 - EARLY INTERVENTION CONSULTATION

Minimum Credits: 1

Maximum Credits: 1

This module focuses on providing students with skills for consulting with families, childcare providers, related service personnel, other teachers and paraprofessionals, to assist them in carrying out interventions for young children with autism, in homes, inclusive classrooms, and the community. The class will place special emphasis on classroom-based services. The module emphasizes a collaborative approach to consultation. Communication and interpersonal skills, relationship-building, the inclusion of families in all consultations, and techniques for assisting others to carry out interventions are considered. Finally issues related to interagency collaborations with emphasis on strategies to overcome challenges that occur in the daily life of a consulting professional in a variety of settings will be investigated.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2509 - APPLD BHVR ANAL/POSTV BHVR SUPRT

Minimum Credits: 3

Maximum Credits: 3

The course focuses upon the application of applied behavior analysis principles to the instruction of students with disabilities. These include individual, small group and class room-wide instruction. The course emphasizes the acquisition, fluency, maintenance and generalization of skills and providing positive behavior support for changing behaviors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2511 - CURR PRG DVLP-LOW INCDNC DISABS

Minimum Credits: 3

Maximum Credits: 3

This course addresses program and curriculum development for students with moderate/severe disabilities. Topics include the development of assessment, instruction/curricula for the following areas: personal management, social interaction, language communication, leisure, community, vocational, and functional academics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2512 - ASSMNT INSTRUC-HIGH INCDNC DISAB

Minimum Credits: 3

Maximum Credits: 3

Course is designed to provide knowledge of assessment procedures for designing academic programs for children and youth with mild disabilities, with emphasis on assessment for teaching reading, written language and mathematics. Course includes assessment for eligibility for special education and ongoing assessment of instructional effectiveness.

Academic Career: Graduate

Course Component: Clinical

Grade Component: Grad Letter Grade

IL 2513 - INSTRNL METH-HIGH INCDNC DISABS

Minimum Credits: 3

Maximum Credits: 3

This course explores the methods and procedures for developing literacy for students with learning disabilities, mild mental retardation, and behavioral disorders. The focus of the first 5 sessions is on learning to teach young students who have extraordinary difficulty; the next sections address the literacy needs of older students.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2518 - POSITIONING, HANDLING AND MOBILITY: YOUNG CHILDREN WITH DISABILITIES

Minimum Credits: 1

Maximum Credits: 1

Focuses on knowledge and recognition of normal and abnormal gross motor development of children, aged birth to 5, with an emphasis on analysis and facilitation of movement, handling and positioning, adaptive equipment, and safety.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2519 - ORAL MOTOR AND FEEDING STRATEGIES: YOUNG CHILDREN WITH DISABILITIES

Minimum Credits: 1

Maximum Credits: 1

Provides an overview of medical, motor, sensory, psychological and social aspects of feeding children. The class reviews the development of normal oral motor and self-feeding skills and the impact that disabilities may have on these processes. Use of descriptive, criterion-referenced evaluations and clinical observations to identify a child's level of oral motor control will be reviewed. Students will have an opportunity to use assessment procedures and devise treatment plans to address oral motor and feeding needs of children.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2520 - LITERACY ASSESSMENT & INSTRUCTION FOR CHILDREN WITH DISABILITIES IN INCLUSIVE SETTINGS IN SEC CLSSRM

Minimum Credits: 3

Maximum Credits: 3

General education classrooms are increasingly diverse and all teachers must be able to assess the literacy skills of and provide effective instruction to the children in their secondary classrooms for whom reading is a challenge. This course is designed to provide graduate students preparing to teach in general secondary education settings with an understanding of literacy assessment and instruction for children who are at risk or who have disabilities. Students will develop an understanding of assessment components included in a standards aligned system and be able to explain the differences between the various components and to articulate the proper use of each. Students will also gain an understanding of the components of reading, the challenges these pose for children with disabilities, and effective, research-validated methods for intervening. Students will select a child with a disability who is receiving reading instruction in a general education setting and demonstrate the ability to interpret standardized assessment, administer and interpret progress monitoring assessment, and successfully design an individualized, research-validated instructional plan for this child based on assessment data.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2522 - ED STDNT EMOTIONAL DISTURBANCE

Minimum Credits: 3

Maximum Credits: 3

The course provides knowledge of curriculum content, teaching techniques and instructional materials for children and youth with emotional disturbance through a focus upon academic content areas and social skills. The utilization of instruction as therapeutic programming will be the central theme.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2523 - LITERACY ASSESSMENT & INSTRUCTION FOR CHILDREN WITH DISABILITIES IN INCLUSIVE SETNGS IN ELEM CLSSRMS

Minimum Credits: 3

Maximum Credits: 3

General education classrooms are increasingly diverse and all teachers must be able to assess the literacy skills of and provide effective instruction to the children in their elementary classrooms for whom reading is a challenge. This course is designed to provide graduate students preparing to teach in general elementary education settings with an understanding of literacy assessment and instruction for children who are at risk or who have disabilities. Students will develop an understanding of assessment components included in a standards aligned system and be able to explain the differences between the various components and to articulate the proper use of each. Students will also gain an understanding of the components of reading, the challenges these pose for children with disabilities, and effective, research-validated methods for intervening. Students will select a child with a disability who is receiving reading instruction in a general education setting and demonstrate the ability to interpret standardized assessment, administer and interpret progress monitoring assessment, and successfully design an individualized, research-validated instructional plan for this child based on assessment data.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

IL 2524 - LEVEL 2 STUDENT TEACHING PRACTICUM: VI

Minimum Credits: 5

Maximum Credits: 5

This course is required by the pa department of education for certification to become a teacher of the visually impaired. Placements for this clinical experience are arranged by the vision studies program faculty and may be conducted in the student's home area. The approximate length of the placement is 14-weeks serving children who are blind or visually impaired ages three to 21-years.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad SN Basis

IL 2525 - TECHNOLOGY FOR CHILDREN WITH VI

Minimum Credits: 3

Maximum Credits: 3

This course evaluates many facets of assistive technology for individuals who are blind or visually impaired. Coursework includes projects and a weekend workshop for direct experiences with adapted software, hardware, and peripheral devices.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2527 - LEVEL 1 OBSERVATIONAL PRACTICUM: VI

Minimum Credits: 1

Maximum Credits: 1

This clinical experience requires students to engage in observations of practitioners serving a wide range of needs of individuals who are blind or visually impaired.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

IL 2529 - BRAILLE

Minimum Credits: 3

Maximum Credits: 3

This course places emphasis on reading and writing braille. It emphasizes proficiency in reading and writing contracted and uncontracted braille, as well as teaching pre-braille and braille readiness to individuals who are blind or visually impaired.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2530 - INTRODUCTION TO THE EYE AND LOW VISION

Minimum Credits: 3

Maximum Credits: 3

This course presents an overview on the anatomy and physiology of the eye. It also presents information about visual pathology and its effect upon learning and function.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2531 - EDUCATION OF CHILDREN WITH VI 1

Minimum Credits: 3

Maximum Credits: 3

This methods course reviews the concepts and philosophies of educating children who are blind or visually impaired. It presents information on serving the needs of children in public schools, with emphasis on the itinerant model of delivery. This methods course examines assessment, programming, instructional materials and methods, and their theoretical and research basis.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2532 - EARLY INTERVENTION FOR CHILDREN WITH VI

Minimum Credits: 3

Maximum Credits: 3

This course provides an overview of the topics unique to children aged birth through five who are blind and visually impaired and their families. Focus will be on typical and atypical development as a basis for assessing the child's needs and designing appropriate interventions and family supports. The course includes individual and collaborative work in the areas of family-centered practices and collaboration among professional agencies across disciplines. Emphasis will be placed on assessment and intervention in the areas of sensory, cognitive, motoric, and communicative development as well as providing developmentally appropriate orientation and mobility.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2533 - ORIENTATION AND MOBILITY FOR THE TVI

Minimum Credits: 3

Maximum Credits: 3

This course is designed to prepare teachers of the visually impaired with the knowledge and skills to provide initial level sensory, cognitive, and motor skill development to children who are blind or visually impaired. Students will learn the basic skills of sighted guide and self-protective techniques including assessment and remediation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2540 - FOUNDATIONS OF ORIENTATION AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

This fully on-line course is taken prior to IL 2750. It integrates relevant aspects of the process of teaching O&M (I. E., Sensory, cognitive) to individuals who are blind or with visually impaired who may also possess additional disabilities. In addition the history, philosophy, and aspects of professional ethics are covered. Service delivery models are discussed along with O&M resources, supervision, and program administration.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2541 - PROGRAM DEVELOPMENT: ORIENTATION AND MOBILITY

Minimum Credits: 3

Maximum Credits: 3

This fully on-line is taken prior to IL 2752. This course builds upon the knowledge students acquired in IL 2540 to understand assessment and instructional strategies for teaching O&M to individuals who are blind or visually impaired who may also possess additional disabilities. Aspects related to research in the field of O&M are also presented.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2542 - WEB CURRNT ISSUES & TRENDS SP ED

Minimum Credits: 3

Maximum Credits: 3

This web-based course focuses on philosophical issues as well as research findings that impact on the education of persons with disabilities. Through critical analysis of assigned readings, the course facilitates a thorough understanding of various points of view on the education of students with disabilities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: World Wide Web

IL 2545 - EDUCATION OF CHILDREN WITH VI 2

Minimum Credits: 3

Maximum Credits: 3

This course builds on the concepts presented in IL 2531 for developing teaching methodologies and adaptation techniques for children who are blind or visually impaired who may also possess additional disabilities. Curricular and classroom adaptations and modifications are stressed with emphasis placed on teaching academic and functional skills.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2547 - NEMETH CODE/ABACUS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide instruction in the mathematical braille code (Nemeth code) as well as the Cranmer abacus. Students will be instructed in arithmetic computation and mathematical problem solving using both systems. Students will also learn instructional strategies to assist students who are blind or visually impaired to obtain mathematical literacy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2548 - SPECIAL TOPICS SPECIAL EDUCATION

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2552 - STUDENT TEACHING-SPECIAL EDUCATION IN SECONDARY SCHOOLS

Minimum Credits: 3

Maximum Credits: 3

Teacher candidates engage in fieldwork five days a week in secondary school sites with students with both high and low incidence disabilities. Teacher candidates will collaborate with special education mentor teachers to develop and implement a plan by which the teacher candidate will, by the end of each experience, assume responsibility for the majority of provided instruction and classroom management. Experiences are designed to support teacher candidates' ability to recognize and apply evidence-based practices with adolescents in the school context.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2561 - PROGRAMMING IN EARLY INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

Focuses on the development of curriculum and instructional strategies for children under five years of age with disabilities and their implementation in a variety of settings, including inclusive classrooms, home-based programs, and clinical settings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2562 - ASSESSMENT YOUNG CHILDREN DISABILITY

Minimum Credits: 3

Maximum Credits: 3

Focuses on the identification and assessment of children with disabilities under five years of age and the use of assessment information to plan programs for children in partnership with families and other professionals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2563 - SEM: INCLUSION EARLY CHILDHOOD

Minimum Credits: 2

Maximum Credits: 3

This interdisciplinary course will cover the rationale, service delivery models, teaming components, family considerations, curriculum development, and instructional strategies for creating early childhood programs that meet the needs of children with and without disabilities. The course will include simulations in which students solve real life problems with individuals from other disciplines.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2564 - APPLIED BEHAVIORAL ANALYSIS 1: FUNDAMENTALS 1

Minimum Credits: 3

Maximum Credits: 3

This is the first in a series of five courses designed to meet the total academic requirements for board certification in behavior analysis. This course focuses on defining applied behavior analysis, selecting, assessing and evaluating behavior to change, and functional and experimental analyses of behavior change. The primary goal of this and the second course is to provide students with a complete, accurate, and contemporary view of applied behavior analysis, and how functional analysis can be used to understand socially significant behaviors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2565 - APPLIED BEHAVIORAL ANALYSIS 2: FUNDAMENTALS 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of five courses meeting the total course requirements for board certification as a behavior analyst. This course focuses on the development of new behaviors, various clinical interventions for decreasing interfering behavioral, and maintaining behavioral changes. The instructor presumes that students have limited or no background experiences with applied behavior analysis. Some students will have already completed the fundamentals 1 course. The primary goal of this and the first course is to provide students with a complete, accurate, and contemporary view of applied behavior analysis, and how functional analysis can be used to understand socially significant behaviors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2566 - APPLIED BEHAVIORAL ANALYSIS 3: APPLICATIONS IN DEVELOPMENTAL DISABILITIES

Minimum Credits: 3

Maximum Credits: 3

This is the third of five courses meeting the total academic requirements for board certification as a behavior analyst. This course focuses on the application of principles and procedures covered in IL 2564 and IL 2565 to a wide range of behavior disorders in individuals with developmental disabilities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2564 and 2565

IL 2567 - APPLIED BEHAVIORAL ANALYSIS 4: EMOTIONAL BEHAVIORAL DISABILITIES OF CHILDREN AND ADOLESCENTS

Minimum Credits: 3

Maximum Credits: 3

This is the fourth of five courses meeting academic requirements for board certification as a behavior analyst. This course focuses on etiology, analysis, assessment and intervention for mental health disorders of childhood and adolescence with an emphasis on an applied behavior analysis of disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2564 and 2565

IL 2568 - APPLIED BEHAVIORAL ANALYSIS 5: CURRENT DEVELOPMENTS IN APPLIED BEHAVIORAL ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

This is the fifth and final course meeting the total academic requirements for board certification as a behavior analyst. This course is specifically focused on a number of advanced topics, including verbal behavior, ethics, and parent training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2564 and 2565

IL 2569 - APPLIED BEHAVIORAL ANALYSIS PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The applied behavior analysis practicum provides students with intensive opportunities to learn and practice the various roles of a behavior analyst in a variety of different settings and to demonstrate competence as a beginning applied behavior analyst. Opportunities will include conducting assessment activities related to the need for behavioral interventions, designing, implementing and monitoring behavior analysis activities, overseeing implementation of behavior analysis programs by others, and other activities typically performed by a behavior analyst such as attending planning meetings and researching the literature to prepare a behavioral intervention. Each student will work closely with an assigned university supervisor and a mentoring professional from their individual placement site during the practicum. The practicum requires group seminar supervision, individual supervision, on-site observations, and small group supervision in amounts determined by the behavior analysis certification board (BACH) standards. The accompanying practicum seminar allows students to share experiences and knowledge gained in placement sites, as well as to seek support and ideas from classmates.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2575 - TRANSITION PROCESSES AND SPECIAL EDUCATION PROCEDURES

Minimum Credits: 3

Maximum Credits: 3

Course covers critical information related to transition and special education services for students with disabilities in secondary settings

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2577 - BRIDGE COURSE: BCBA CURRICULUM EDITION 3 TO 4

Minimum Credits: 2

Maximum Credits: 3

This course is designed to update the competencies of edition 3 of the board certified behavior analyst curriculum to edition 4 of the curriculum so that individuals who took all or part of their ABA studies under edition 3 may sit for the national exam under the current edition 4. The course will address 10 topics such as direct instruction, incidental teaching, alternative and augmentative communication, MAND training, precision teaching. The required competencies (e.g. measurement and data analysis; change systems; implementation, management and supervision; intervention and behavior change considerations) will be distributed across each topic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 2578 - APPLIED BEHAVIORAL ANALYSIS 6: ETHICS

Minimum Credits: 3

Maximum Credits: 3

This is one of six courses meeting the total academic requirements for board certification as a behavior analyst. This course focuses on ethical practices involving the application of principles and procedures covered in ABA I through ABA V. The ethical practices relate to working with individuals with autism spectrum disorders, developmental disabilities and other behavioral/emotional disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2564 and 2565

IL 2579 - TREATMENT FIDELITY AND COACHING: AUTISM

Minimum Credits: 3

Maximum Credits: 3

This course will present information on the strategies used to monitor and enhance the accuracy and the delivery of evidence-based interventions for children with autism spectrum disorder (ASD) and other disabilities. The course will focus on defining intervention and implementation fidelity, exploring examples of the documentation, planning and assessment of treatment fidelity for evidence-based interventions, and learning skills for peer, parent, and supervisory coaching.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2505

IL 2582 - WORKING WITH FAMILIES

Minimum Credits: 3

Maximum Credits: 3

Course focuses on understanding family systems theory and its application to early intervention, including the development of individualized family service plans. Family centered practices, cultural, ethnic, racial, educational, and economic diversity among families, and accessing community resources will be covered.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2585 - TECHNOLOGY-BASED INTERVENTIONS: AUTISM

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the application of assistive technology to interventions for children with autism spectrum disorder (ASD) and other non-physical disabilities. The course addresses a) the principles of assistive technology (at), b) assessment of students for at, and c) the at continuum of low, mid, and high technology. A range of hardware (E.G., ipad, computers, specialized speech generating devices), software (E.G., imovie, board maker), and interventions (E.G., Video modeling, alternative and augmentative communication strategies, academic skills) will be considered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2505

IL 2586 - AUTISM INTERVENTIONS IN SCHOOL AND COMMUNITY SETTINGS

Minimum Credits: 3

Maximum Credits: 3

This course is designed to prepare graduate students to teach school-aged students with ASD in a range school and community settings, with a particular focus on interventions and strategies appropriate for inclusive classrooms. Through readings, presentations, class discussions, and activities, students will acquire information and skills needed to implement evidence-based interventions approaches to assessment and intervention for students with ASD. As part of the final project, students will develop and deliver an assessment-based intervention for one of the suggested outcome areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2505

IL 2587 - SPECIAL TOPICS - INCLUSION

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IL 2590 - RESEARCH SEMINAR IN SP ED

Minimum Credits: 3

Maximum Credits: 3

This course provides students with competencies necessary for utilizing and evaluating research in special education. Focus is on the critical analysis of research and examination of methodological and ethical considerations. Students in M/PD sections conduct single subject research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 2591 - LITERACY TUTORING

Minimum Credits: 1

Maximum Credits: 1

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 2594 - INTERDISCIPLINARY LEADERSHIP SEMINAR DEVELOPMENTAL DISABILITY 1

Minimum Credits: 1

Maximum Credits: 3

This seminar provides the advanced master's or doctoral student with an opportunity to study and analyze with students and faculty from a variety of disciplines current issues affecting children with neurodevelopmental disabilities, their families, and their communities. Within a framework of family-centered and cross-cultural principles, the seminar examines issues related to advances in diagnosis, treatment, child development, service delivery, and policy/legislation. Leadership issues are also explicitly considered at the beginning and end of each term.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2596 - INTERNSHIP IN SPECIAL EDUCATION

Minimum Credits: 1

Maximum Credits: 3

An internship is proposed, then reviewed by faculty and implemented in varying types of special education settings.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

IL 2598 - DIRECTED STUDY IN SP ED

Minimum Credits: 1

Maximum Credits: 6

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2690 - RESEARCH SEMINAR ONLINE

Minimum Credits: 3

Maximum Credits: 3

This is a required three-credit course for graduate level students in education. It offers opportunities for students to investigate research questions, collect and interpret data and present research documents. Overall, students will be expected to write and submit a research proposal, conduct the research described in the proposal, and use information in the proposal to write a research paper that describes their research. Students will also write an abstract of their research paper.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SU3 Basis

IL 2691 - SUPERVISED RESEARCH - EARLY CHILDHOOD

Minimum Credits: 1

Maximum Credits: 3

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2698 - DIRECTED STUDY - EARLY CHILDHOOD

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 2700 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues in or about the arts that are of concern to educators.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2701 - FIELD SEMINAR: PRIMARY PLUS

Minimum Credits: 1

Maximum Credits: 1

Students participate in district-based in-service activities and complete field-based assignments aimed at promoting an understanding of the professional, personal, social, and political dimensions of schools.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2702 - ADVANCED PRACTICUM IN FOREIGN LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern in foreign language education. This course is designated for students to pursue independent research in foreign language education under the supervision of appropriate faculty member.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

Course Attributes: Asian Studies

IL 2707 - FIELD SEMINAR IN EARLY CHILDHOOD EDUCATION

Minimum Credits: 1

Maximum Credits: 1

Students participate in district-based in-service activities and complete field-based assignments aimed at promoting an understanding of the professional, personal, social, and political dimensions of schools.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2710 - ADVANCED SOCIAL STUDIES METHODS

Minimum Credits: 3

Maximum Credits: 3

This course explores and examines theoretical discourses and advanced methods and materials for improving social studies instruction in the secondary (grades 7-12) social studies classroom. Course content, procedures, and activities focus on effective strategies for engaging and teaching learners from diverse backgrounds and developmental levels. Approaches include investigation and analysis of constructionist ideas, student empowerment, historical thinking, historiography, global citizenship, real-world connectedness, and various technologies as they apply to teaching and learning in the secondary social studies classroom.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2711 - SPECIAL TOPICS - FOREIGN LANGUAGE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 2712 - HISTORICAL THINKING AND HISTORIOGRAPHY: SECONDARY SOCIAL STUDIES CLASSROOM

Minimum Credits: 3

Maximum Credits: 3

This online course is an examination of teaching strategies and techniques related to historical thinking and historiographical analysis in the secondary social studies classroom. Course participants will investigate recent research supporting historical thinking and historiographical analysis strategies and techniques, engage in various projects intended to increase their knowledge and skills in these strategies and techniques, and explore creative ways to enrich their own classroom instruction by getting students engaged in "doing" history.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: World Wide Web

IL 2720 - PRACTICUM IN SECONDARY ENGLISH 1

Minimum Credits: 1

Maximum Credits: 1

Practicum in secondary English language arts 1 teacher candidates engage in 20 hours of fieldwork in one or two secondary school sites weekly. Fieldwork includes working with individual and small groups of students, collaborating with mentor teachers to design lessons, supporting instruction in the classrooms, and observing classroom instruction. Assignments and weekly meetings are designed to help teacher candidates recognize and apply current research on effective English language arts instruction and theories of adolescent learning and development.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 2722 - PRACTICUM IN FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 3

Prospective teachers experience the reality of teaching the foreign languages in a public school setting.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

IL 2723 - PRACTICUM IN SECONDARY SOCIAL STUDIES 1

Minimum Credits: 1

Maximum Credits: 1

Teacher candidates engage in 20 hours of fieldwork in one or two secondary school sites weekly. Fieldwork includes tutoring individual students, supporting instruction in secondary classrooms, collaborating with mentor teachers to design and/or set up lessons, and careful observation of classroom instruction. Assignments and weekly meetings are designed to support teacher candidates' abilities in two areas as they move towards high-engagement social studies instruction: recognizing and applying adolescent learning and developmental theory, and understanding the role of social context surrounding the classroom.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 2725 - PRACTICUM IN SECONDARY ENGLISH EDUCATION

Minimum Credits: 1

Maximum Credits: 1

Teacher candidates engage in fieldwork in a secondary school site daily. Fieldwork includes tutoring individual students, supporting instruction in secondary classrooms, collaborating with mentor teachers to design and/or set up lessons, and careful observation of classroom instruction. Teacher candidates will also be responsible for independent instruction. Teacher candidates will reflect critically and productively on their own instruction. Teacher candidates are responsible for timely submission of all required certification paperwork.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 2729 - PRACTICUM IN K-12 FOREIGN LANGUAGE 1

Minimum Credits: 1

Maximum Credits: 1

In this course, students engage in 20 hours of fieldwork in one or two school sites weekly. Fieldwork includes tutoring individual students, supporting instruction in classrooms, collaborating with mentor teachers to design lessons, and careful observation of instruction. In addition to fieldwork, students engage in weekly assignments and meetings that support students' ability to apply theory and current methodology in school context and reflect critically on their own instruction. In this course, students engage in 20 hours of fieldwork in one or two school sites weekly. Fieldwork includes tutoring individual students, supporting instruction in classrooms, collaborating with mentor teachers to design lessons, and careful observation of instruction. Grade Component: Grad HSU Basis

IL 2750 - TECHNIQUES OF ORIENTATION AND MOBILITY 1

Minimum Credits: 3

Maximum Credits: 3

This first part of this two part methods course, which is offered on-campus in summer two, is designed to introduce the student to the elementary

level travel skills (e.g., Use of human guidance) and procedures (e.g., Sensory development) used when teaching O&M to individuals who are blind or visually impaired who may also possess additional disabilities. Students begin their knowledge of teaching travel skills indoors and gradually transition to the introductory level outdoor environment. Students wear simulation materials designed to fully or partially occlude vision while traveling.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2751 - METHODS AND MANAGEMENT IN SP ED

Minimum Credits: 3

Maximum Credits: 3

This course is designed for students entering the teacher preparation program in mental and physical disabilities. Instruction concerning how to prepare for instruction, write lesson plans, and implement lessons is provided. Field observations and micro-teaching experiences are also provided.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2752 - TECHNIQUES OF ORIENTATION AND MOBILITY 2

Minimum Credits: 3

Maximum Credits: 3

This second part of a two part methods course, which builds upon the knowledge gained in IL 2750, is offered on-campus in summer two. It introduces the student to developing instructional strategies for teaching more complex o & m travel skills (e.g., Use of public transportation systems) and procedures (e.g., Use of tactile maps) to individuals who are blind or visually impaired who may also possess additional disabilities who travel in a variety of indoor and outdoor environments. The course also covers teaching strategies for serving the o & m needs of children as well as adults through simulated teaching activities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2753 - ORIENTATION AND MOBILITY FOR DIVERSE POPULATIONS

Minimum Credits: 3

Maximum Credits: 3

The focus of this online course is on designing assessment and instructional strategies for various populations of individuals who are blind or visually impaired. Specific populations to be examined include: persons with low vision, individuals with dual sensory loss (deaf blindness), infants and preschoolers, school-aged students, individuals with cognitive impairments, students with cortical visual impairments, and dog guide users.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: World Wide Web

IL 2780 - AUTISM ENDORSEMENT PRACTICUM

Minimum Credits: 3

Maximum Credits: 3

As part of this practicum course, students will get practical experience working with students with ASD of various age groups in different educational and community settings. They will also get an in-depth experience at their primary practicum placement by working closely with a mentor teacher and a University supervisor on a variety of application-based projects. All practicum activities will be completed at an approved practicum site (E.G., Autistic support classroom in a public school; general education classroom). Students will acquire competencies related to assessment, intervention, and collaboration with professionals, families, and community organizations. The practicum meetings will be used for group supervision and sharing of the experiences, ideas, and challenges with a team of peers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade
Course Requirements: PREQ: IL 2505 and 2586

IL 2791 - SUPERVISED RESEARCH -FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 3

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2798 - DIRECTED STUDY - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2800 - STUDENT TEACHING-EARLY CHLDHED ED

Minimum Credits: 1

Maximum Credits: 10

Full-time practicum for teacher certification candidates. Provides opportunities to observe, plan, conduct, and evaluate instruction in the school setting and receive professional feedback from university supervisors and experienced master teachers.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

IL 2803 - STUDENT TEACHING SEMINAR - PRIMARY PLUS

Minimum Credits: 1

Maximum Credits: 1

This course supports student teaching. Students work on topics such as instructional management, behavior management, lesson planning, addressing student needs for the department of education.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IL 2804 - STUDENT TEACHING - PRIMARY PLUS

Minimum Credits: 2

Maximum Credits: 5

This is a 14-week student teaching experience under the guidance of a mentor teacher and a supervisor from the university. Students are expected to learn to plan for and teach all four elementary subject areas for an extended period of time during the course of the term. Towards the end of the term, the student teachers are also expected to take on primary teaching responsibility for all subject areas for two weeks.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2820 - TEACHING AND LEARNING IN SECONDARY ENGLISH 3

Minimum Credits: 3

Maximum Credits: 3

This course builds upon teaching and learning in secondary English language arts 2 by emphasizing the role of assessment, long-term curricular planning, language and grammar instruction, process drama, and technology in effective English language arts instruction. The course will also introduce current controversies in English language arts instruction and ways that teachers can address them. Teacher candidates will have opportunities to develop instructional plans and practice teaching techniques while receiving feedback from peers and the course instructor.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 2822 - INTERNSHIP IN FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 10

Full-time practicum for teacher certification candidates. Provides opportunities to observe, plan, conduct, and evaluate instruction in the school setting and receive professional feedback from university supervisors and experienced master teachers.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SU3 Basis

IL 2824 - STUDENT TEACHING SEMINAR IN ENGLISH OR COMMUNICATION EDUCATION

Minimum Credits: 1

Maximum Credits: 3

A seminar for student teachers in the certification field which emphasizes collaborative problem solving of practical teaching problems and continued professional development.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2826 - STUDENT TECHNG SEM-FOREIGN LANG

Minimum Credits: 1

Maximum Credits: 2

A seminar for student teachers in the certification field which emphasizes collaborative problem solving of practical teaching problems and continued professional development. A portfolio of teaching experiences serves as the centerpiece of class discussions.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Attributes: Global Studies

IL 2827 - TEACHING AND LEARNING IN SECONDARY SOCIAL STUDIES 3

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the development and support of learning contexts in which adolescents have opportunities to engage in challenging social studies learning. Drawing on cognitive change learning theory, teacher candidates learn to select and develop various assessments that reveal students' thinking and to draw upon their understanding of students' ideas to scaffold learning experiences in the classroom. Emphasis is placed on instructional strategies that build and support students' capacity to engage in powerful social studies discourse.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2828 - STUDENT TEACHING SEMINAR-SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 2

A seminar for student teachers in the certification field which emphasizes collaborative problem solving of practical teaching problems and continued professional development.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SU3 Basis

IL 2834 - SPECIAL TOPICS - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2841 - INTERNSHIP IN SECONDARY SCIENCE

Minimum Credits: 1

Maximum Credits: 10

Full-time practicum for teacher certification candidates. Provides opportunities to observe, plan, conduct, and evaluate instruction in the school setting and receive professional feedback from university supervisors and experienced master teachers.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad HSU Basis

IL 2842 - STUDENT TEACHING SEMINAR-MATHEMATICS

Minimum Credits: 1

Maximum Credits: 3

A seminar for student teachers in the certification field which emphasizes collaborative problem solving of practical teaching problems and continued professional development.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2843 - STUDENT TEACHING SEM - SCIENCE

Minimum Credits: 1

Maximum Credits: 2

A seminar for student teachers in the certification field which emphasizes collaborative problem solving of practical teaching problems and continued professional development.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2845 - PRACTICUM IN SECONDARY SCIENCE

Minimum Credits: 1

Maximum Credits: 1

Teacher candidates engage in fieldwork in a secondary school site daily. Fieldwork includes tutoring individual students, supporting instruction in secondary classrooms, collaborating with mentor teachers to design and/or set up lessons, and careful observation of classroom instruction. Teacher candidates will also be responsible for independent instruction. Teacher candidates will reflect critically and productively on their own instruction. Teacher candidates are responsible for timely submission of all required certification paperwork.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad HSU Basis

IL 2850 - PRACTICUM - PRESCHOOL

Minimum Credits: 1

Maximum Credits: 3

This course involves direct contact with preschoolers with disabilities. Students are placed in various types of supervised community settings where preschoolers with disabilities and their families are served. A seminar will be held weekly.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

IL 2852 - PRACTICUM - INFANTS & TODDLERS

Minimum Credits: 1

Maximum Credits: 3

This course involves direct contact with infants and toddlers with disabilities. Students are placed in various types of supervised community settings where infants and toddlers with disabilities and their families are served. A seminar will be held weekly.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

IL 2853 - STUDENT TEACHING - STUDENTS WITH HIGH INCIDENCE OF DISABILITIES

Minimum Credits: 2

Maximum Credits: 6

Teacher candidates engage in fieldwork five days a week in school sites with students with high incidence disabilities. Teacher candidates will collaborate with special education mentor teachers to develop and implement a plan by which the teacher candidate will, by the end of the experience, assume responsibility for the majority of provided instruction and classroom management. Experiences are designed to support teacher candidates' ability to recognize and apply evidence-based practices in the school context.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2854 - STUDENT TEACHING WITH LOW INCIDENCE OF DISABILITIES

Minimum Credits: 3

Maximum Credits: 3

Teacher candidates engage in fieldwork five days a week in school sites with students with low incidence disabilities. Teacher candidates will collaborate with special education mentor teachers to develop and implement a plan by which the teacher candidate will, by the end of the experience, assume responsibility for the majority of provided instruction and classroom management. Experiences are designed to support teacher candidates' ability to recognize and apply evidence-based practices in the school context.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2857 - LEVEL 3 INTERNSHIP PRACTICUM - ORIENTATION AND MOBILITY

Minimum Credits: 6

Maximum Credits: 6

Full or part-time clinical experience, minimum 350 clock hours of direct instruction is necessary to fulfill this course requirement. Students must be supervised by an on-site, full-time ACVREP certified O&M specialist, with supplemental support provided by university faculty. Placements are arranged by the vision studies program faculty. Students must be able to demonstrate teaching competence with a variety of individuals who are blind and visually impaired (i.e., Ages, cognitive level), as well as teaching competence in a variety of environments (i.e., Simple as well as complex travel

settings) successfully in order to apply to take the national certification exam in O&M.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2858 - STUDENT TEACHING SEMINAR - SPECIAL EDUCATION TEACHER PREPARATION

Minimum Credits: 2

Maximum Credits: 2

This weekly seminar is offered concurrently with the full-time student teaching requirement. The seminar permits teacher candidates to discuss and process situations and problems as they arise in the field and assists teacher candidates in the completion of program and student teaching requirements. A focus on the preparation of a professional portfolio prepares teacher candidates for the job search and interview process.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IL 2860 - PRACTICUM IN SECONDARY SPECIAL EDUCATION

Minimum Credits: 1

Maximum Credits: 1

Teacher candidates engage in fieldwork two days a week in secondary school sites. Teacher candidates will collaborate with a special education mentor teacher. Teacher candidates will be expected to observe and support instruction. Fieldwork includes conducting and interpreting assessment, and planning and delivering one-on-one and small group instruction for students with disabilities. Teacher candidates will follow guidance provided by the mentor teacher to support iep implementation in appropriate areas. Assignments and weekly meetings are designed to support teacher candidates' ability to recognize and apply evidence-based practices with adolescents in the school context.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

IL 2861 - PRACTICUM IN SECONDARY SPECIAL EDUCATION - SPECIAL EDUCATION TEACHER PREPARATION

Minimum Credits: 1

Maximum Credits: 1

Teacher candidates engage in fieldwork two days a week in secondary school sites. Teacher candidates will collaborate with a special education mentor teacher and will be expected to observe and support instruction. Fieldwork includes conducting and interpreting assessment and planning and delivering one-on-one and small group instruction for students with disabilities. Teacher candidates will follow guidance provided by the mentor teacher to support iep implementation in appropriate areas. This practicum experience will support the completion of assignments from coursework as well as prepare teacher candidates for the full-time student teaching experience.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

IL 2881 - INTERNSHIP-ENGLISH OR COM EDUC

Minimum Credits: 1

Maximum Credits: 9

School-based practicum for graduate students seeking teacher certification and the master of arts in teaching degree. Requires a half-time placement for the entire year under the supervision of a mentor. Interns observe, analyze, and practice basic teaching skills in different grade levels and subject fields.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad LG/SU3 Basis

IL 2882 - INTERNSHIP - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 5

In this course, students engage in supervised field work in a local school district. Students co-plan with their assigned mentor teacher and receive feedback from a university supervisor.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

Course Requirements: PLAN: Instruction and Learning (MAT)

Course Attributes: Global Studies

IL 2883 - INTERNSHIP - SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 9

School-based practicum for students seeking teacher certification and the master of arts in teaching degree. Requires placement for the entire school academic year under the supervision of a mentor teacher. Interns observe, analyze, and practice basic teaching skills while teaching the social studies at the secondary level.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 2890 - ADVANCED TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 9

Course designed for students seeking additional field teacher certification. Includes a school-based practicum in accordance with the student's experience and interests.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 2891 - SUPERVISED RES - SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 6

The student works collaboratively with a sponsoring faculty member in the carrying out of a research project.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 2892 - PRACTICUM IN K-12 FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 1

TEACHER CANDIDATES ENGAGE IN FIELDWORK IN A SECONDARY SCHOOL SITE DAILY. FIELDWORK INCLUDES TUTORING INDIVIDUAL STUDENTS, SUPPORTING INSTRUCTION IN SECONDARY CLASSROOMS, COLLABORATING WITH MENTOR TEACHERS TO DESIGN AND/OR SET UP LESSONS, AND CAREFUL OBSERVATION OF CLASSROOM INSTRUCTION. TEACHER CANDIDATES WILL ALSO BE RESPONSIBLE FOR INDEPENDENT INSTRUCTION. TEACHER CANDIDATES WILL REFLECT CRITICALLY AND PRODUCTIVELY ON THEIR OWN INSTRUCTION. TEACHER CANDIDATES ARE RESPONSIBLE FOR TIMELY SUBMISSION OF ALL REQUIRED CERTIFICATION PAPERWORK.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 2898 - DIRECTED STUDY - SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 2905 - TEACHING INFANTS, TODDLERS AND PRESCHOOLERS

Minimum Credits: 3

Maximum Credits: 3

This course provides the foundation for teaching infants, toddlers, and preschoolers, in group settings in centers outside the home. Topics include developmentally appropriate curriculum and instruction, program design and implementation, legal compliance and program enhancement, family and community relations, professionalism, and advocacy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2906 - COMMUNITY RESOURCES SEMINAR: YOUNG CHILDREN AND FAMILIES

Minimum Credits: 2

Maximum Credits: 3

This interdisciplinary course focuses on the role of the professional in supporting families of young children with and without disabilities by linking them with formal and informal community resources. The course explores rationale; family-centered principles; models and practices for supporting families; and considerations in the development of community resources. It surveys available resources through guest speakers, on-site visits, and the development of a resource directory.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IL 2907 - COLLABORATIVE PARTNERSHIPS WITH FAMILIES AND THE COMMUNITIES

Minimum Credits: 3

Maximum Credits: 3

This course will focus on the role of the professional in supporting families of young children (pre-k - grade 4), including families of children with disabilities and other diverse characteristics. Students will learn about family systems, including how family characteristics affect the development of children, how to communicate, interact, and collaborate with families in school settings, and how to link families with formal and informal community resources.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 2928 - WEB LEGL & LEGISLTV FDS OF SP ED

Minimum Credits: 3

Maximum Credits: 3

This web-based course reviews the practical application of laws, regulations, court decisions, and public policy to the supervision of special education services and programs.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: World Wide Web

IL 2990 - RESEARCH SEMINAR FOR MAT INTERNS

Minimum Credits: 3

Maximum Credits: 3

The student proposes, carries out, and prepares a careful report of a study Germane to the student's professional role.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 3002 - CLASSROOM DISCOURSE

Minimum Credits: 3

Maximum Credits: 3

The purpose of this course is to introduce students to the theoretical underpinnings, methodological concerns, and pedagogical implications of the study of classroom discourse ' the study of who can say what to whom, when and where, for what purposes, under what conditions, and with what outcomes in a range of classroom contexts. The course critically reviews empirical research on classroom discourse (both recent and classical investigations), and covers the accepted methods for conducting research on classroom discourse including different approaches to collecting, recording, and analyzing both verbal and nonverbal discourse. A range of theoretical approaches to analyzing discourse are also covered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3003 - RESEARCH INTERVIEWING

Minimum Credits: 3

Maximum Credits: 3

This course is designed to introduce doctoral students to the theories and methodologies of research interviewing in the social sciences. The course introduces students to aspects of research interviewing such as designing research questions that can be answered through interview data, identifying potential participants, creating interview protocols, transcribing interviews, coding interviews, and recognizing the role/bias of the interviewer. The course will also teach students how to critically analyze the representation and use of interview data in educational research. Students are expected to read published studies, collect and analyze data from interviews, and critically evaluate various approaches in light of their own research questions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3004 - IDENTITY IN EDUCATIONAL SETTINGS

Minimum Credits: 3

Maximum Credits: 3

Recent approaches to conceptualizing and studying identity in complex social environments will be reviewed through course readings and discussions. The historical background of this work will also be addressed. Particular attention will be paid to the identity development of students who are often marginalized in educational settings. Qualitative and interpretive methods for studying identity will also be covered. Students will be expected to actively participate in discussions and complete a term project (either a review of the literature or a small-scale study of identity formation).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3007 - CULTURE AND COGNITION

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the field of cultural psychology and its perspective on the language and thinking of children, adolescents, and adults. Research conducted from a cultural psychology perspective will be reviewed and applied to the assessment of the thinking, speaking, and acting of people from diverse ethnic, racial, economic, and national backgrounds. Instructional practices that have been employed with multicultural populations will be reviewed and evaluated. Students will be expected to actively participate in discussions and complete several short papers and one in-class presentation.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad Letter Grade

IL 3011 - THE STUDY OF TEACHING

Minimum Credits: 3

Maximum Credits: 3

Advanced graduate course for students interested in research on teachers and teaching. Covers mainstream and alternative paradigms, including behavioral, cognitive, and ethnographic modes of pedagogical inquiry. Offers a critical analysis of recent studies on the nature of expertise in teaching, and new approaches to teacher performance assessment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3012 - CRITICAL READING IN LANGUAGE LITERACY AND CULTURE 1

Minimum Credits: 3

Maximum Credits: 3

This course is part of a two-course sequence that provides opportunities for students to engage in thoughtful and critical ways with important texts related to language, literacy, and culture. Examining works by influential theorists and researchers, students will consider such fundamental questions as: how are discussions of language, literacy, and culture deeply rooted in broader social and political contexts? How do issues of language, literacy, and culture relate to education?

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 3013 - CRITICAL READINGS IN LANGUAGE, LITERACY, AND CULTURE 2

Minimum Credits: 3

Maximum Credits: 3

This course is the second in a two-course sequence that provides opportunities for students to engage in thoughtful and critical ways with important texts related to language, literacy, and culture. Examining works by influential theorists and researchers, students will consider such fundamental questions as: how are discussions of language, literacy, and culture deeply rooted in broader social and political contexts? How do issues of language, literacy, and culture relate to education?

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

IL 3014 - THEORETICAL PERSPECTIVES IN LANGUAGE, LITERACY AND CULTURE 1

Minimum Credits: 3

Maximum Credits: 3

This course is the first in a two-course sequence that provides opportunities for students to investigate important theoretical perspectives informing research in language, literacy, and culture. Students consider fundamental questions such as: how do theories shape the choice of research questions and methodologies? And how do theories provide frameworks for analyzing data?

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3015 - THEORETICAL PERSPECTIVES IN LANGUAGE, LITERACY AND CULTURE 2

Minimum Credits: 3

Maximum Credits: 3

This course is the second in a two-course sequence that provides opportunities for students to investigate important theoretical perspectives informing research in language, literacy, and culture. Students consider fundamental questions such as: how do theories shape the choice of research questions and methodologies? And how do theories provide frameworks for analyzing data?

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

IL 3016 - PHD WRITING SEMINAR

Minimum Credits: 1

Maximum Credits: 1

This course is a writing workshop designed to provide LLC Ph.D. students beyond their first year of study with regular feedback on their academic writing, including research articles, grant proposals, and milestone documents.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad HSU Basis

IL 3089 - CURRICULUM ANALYSIS & DEVELOPMENT

Minimum Credits: 3

Maximum Credits: 3

Students submit an individual goal proposal to analyze or develop curriculum materials in an area of interest to them. Criteria for curriculum analysis and development are developed jointly by the students and the instructor. Students will relate curriculum to instruction and evaluate the appropriateness of instructional strategies to curriculum designs.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

IL 3091 - SUPERVISED RESEARCH - SCIENCE

Minimum Credits: 1

Maximum Credits: 6

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 3098 - DIRECTED STUDY - SCIENCE

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 3099 - DOCTORAL DISSERTATION RESEARCH - SCIENCE

Minimum Credits: 1

Maximum Credits: 15

The student proposes and carries out a project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

IL 3248 - SPECIAL TOPICS-LANGUAGE AND LITERACY

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within programs.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 3291 - SUPERVISED RESEARCH - READING

Minimum Credits: 1

Maximum Credits: 6

The doctoral student works collaboratively with a sponsoring faculty member in the carrying out and preparation of a written report of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 3295 - DIRECTED STUDY: LANGUAGE AND LITERACY

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3296 - DOCTORAL DISSERTATION RESEARCH - LANGUAGE LITERACY AND CULTURE

Minimum Credits: 1

Maximum Credits: 9

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Full Time Dissertation

Grade Component: Grad HSU Basis

IL 3298 - DIRECTED STUDY - READING

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3299 - DOCTORAL DISSER RES - READING

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IL 3391 - SUPERVISED RESEARCH IN ENGLISH

Minimum Credits: 1

Maximum Credits: 9

The student works collaboratively with a sponsoring faculty member in carrying out a research project.

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3398 - DIRECTED STUDY IN ENGLISH

Minimum Credits: 1

Maximum Credits: 6

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3399 - DOCTORAL DISSERTATION RES IN ENG

Minimum Credits: 1

Maximum Credits: 18

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IL 3452 - DISCIPLINING ENVIRONMENTAL EDUCATION: USING DIGITAL STORYTELLING TO UNPACK ENVIRONMENTAL ISSUES

Minimum Credits: 1

Maximum Credits: 1

In other parts of the world, such as Finland, environmental education is infused throughout the curriculum in history, science, technology, and math. This pop-up course serves as one way to provide a platform for Pitt students to experience Finnish nature schools in their backyard. The goal of the pop-up classes will be to provide a space for developing student projects at both the undergraduate and graduate levels. This course is geared for students interested in authoring visual content and testing the productive tensions of this new media. During the pop-up classes, we will establish a student-led AR/VR authoring club, training sessions for students, and work to amplify and circulate our content across our local and global communities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

IL 3470 - CURRICULUM ISSUES IN MATHEMATICS AND SCIENCE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

In this course students will draw on the research literature and their own professional experiences to examine current practices of large- and small-scale assessment and teacher evaluation in mathematics and science education - both historically and in terms of their forms and purposes in today's educational and political climate. Current research and practice will be examined with respect to equity, theories of learning, methodology, and policy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3471 - INSTRUCTIONAL ISSUES IN MATH AND SCIENCES EDUCATIONS

Minimum Credits: 3

Maximum Credits: 3

The aim of this course is to introduce students to current approaches to understanding and studying instructional practices in mathematics and science education. A historical perspective on the use of observations to document effective teaching will be reviewed. Students will be introduced to recent research on increasing students' agency, authority, and accountability through classroom discourse. Additional topics will include: the impact of high cognitive demand tasks on student learning and fostering equity in instruction. Students will apply course readings to the analysis of classroom artifacts and videotapes.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3473 - RSRCH,DESIGN & METHD IN MATH ED

Minimum Credits: 3

Maximum Credits: 3

Current research in mathematics education will be analyzed and evaluated with respect to methodological issues. Literature reviews, research methodologies, and professional writing will be discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3474 - COLLEGE SCIENCE TEACHING PRACTCM

Minimum Credits: 3

Maximum Credits: 3

Issues associated with higher education in the science disciplines are explored to develop a perspective for the college science instructor. Supervised teaching handout preparation, cognitive patterns of the adult, and evaluation of learning are studied.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad HSU Basis

IL 3475 - PROFESSIONAL LEARNING IN MATH-SCIENCE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3476 - ASSESSMENT & EVAL IN MATH & SCIENCE EDUCATION

Minimum Credits: 3

Maximum Credits: 3

International, national, and local perspectives on mathematics assessment will be presented. Areas include classroom and large-scale assessment and curriculum and program evaluation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

IL 3491 - SUPERVISED RESEARCH - MATH

Minimum Credits: 1

Maximum Credits: 6

The doctoral student works collaboratively with a sponsoring faculty member in the carrying out and in the preparation of a written report of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 3498 - DIRECTED STUDY - MATH

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out a study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3499 - DOCTORAL DISSERTATION RESEARCH - MATH

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IL 3501 - WEB FINANCING SPECIAL EDUCATION

Minimum Credits: 1

Maximum Credits: 1

This web-based course is designed to provide prospective special education supervisors with an overview of the development and content of mandated special education plans for school districts and intermediate units and to link those plans to the development of a comprehensive special education budget.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: World Wide Web

IL 3509 - ADV SEMINAR: EARLY INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

This course will acquaint students with the latest research in early education and will apply those findings to infants, toddlers and preschoolers with disabilities.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad Letter Grade

IL 3526 - PRACTICUM IN COLLEGE TEACHING

Minimum Credits: 1

Maximum Credits: 3

Students prepare and teach a course under the direct supervision of a faculty member.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad Letter Grade

IL 3536 - SINGLE SUBJECT RESEARCH

Minimum Credits: 3

Maximum Credits: 3

Course covers single subject research methodology applied in studies involving exceptional populations.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 3541 - WEB INSTRNL PRACTICES SP EDUC

Minimum Credits: 3

Maximum Credits: 3

This web-based course focuses on the most current research on instructional practices for students with disabilities and prepares the prospective supervisor for what should be happening in special education classrooms and in the provision of special education services.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: World Wide Web

IL 3542 - WEB CURRNT ISSUES & TRENDS SP ED

Minimum Credits: 3

Maximum Credits: 3

This web-based course focuses on philosophical issues as well as research findings that impact on the education of persons with disabilities. Through critical analysis of assigned readings, the course facilitates a thorough understanding of various points of view on the education of students with disabilities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Attributes: World Wide Web

IL 3548 - SPECIAL TOPICS-SPEC EDUCATION

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern to educators. Focused on areas within program.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3564 - APPLIED BEHAVIORAL ANALYSIS 1: FUNDAMENTALS 1

Minimum Credits: 3

Maximum Credits: 3

This is the first in a series of five courses designed to meet the total academic requirements for board certification in behavior analysis. This course focuses on defining applied behavior analysis, selecting, assessing and evaluating behavior to change, and functional and experimental analyses of behavior change. The primary goal of this and the second course is to provide students with a complete, accurate, and contemporary view of applied behavior analysis, and how functional analysis can be used to understand socially significant behaviors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3565 - APPLIED BEHAVIORAL ANALYSIS 2: FUNDAMENTALS 2

Minimum Credits: 3

Maximum Credits: 3

This is the second of five courses meeting the total course requirements for board certification as a behavior analyst. This course focuses on the development of new behaviors, various clinical interventions for decreasing interfering behavioral, and maintaining behavioral changes. The instructor presumes that students have limited or no background experiences with applied behavior analysis. Some students will have already completed the fundamentals 1 course. The primary goal of this and the first course is to provide students with a complete, accurate, and contemporary view of applied behavior analysis, and how functional analysis can be used to understand socially significant behaviors.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3566 - APPLIED BEHAVIORAL ANALYSIS 3: APPLICATIONS IN DEVELOPMENTAL DISABILITIES

Minimum Credits: 3

Maximum Credits: 3

This is the third of five courses meeting the total academic requirements for board certification as a behavior analyst. This course focuses on the application of principles and procedures covered in IL 2564 and IL 2565 to a wide range of behavior disorders in individuals with developmental disabilities.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3567 - APPLIED BEHAVIORAL ANALYSIS 4: EMOTIONAL BEHAVIORAL DISABILITIES OF CHILDREN AND ADOLESCENTS

Minimum Credits: 3

Maximum Credits: 3

This is the fourth of five courses meeting academic requirements for board certification as a behavior analyst. This course focuses on etiology, analysis, assessment and intervention for mental health disorders of childhood and adolescence with an emphasis on an applied behavior analysis of disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3568 - APPLIED BEHAVIORAL ANALYSIS 5: CURRENT DEVELOPMENTS IN ABA

Minimum Credits: 3

Maximum Credits: 3

This is the fifth and final course meeting the total academic requirements for board certification as a behavior analyst. This course is specifically focused on a number of advanced topics, including verbal behavior, ethics, and parent training.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3569 - APPLIED BEHAVIORAL ANALYSIS PRACTICUM

Minimum Credits: 1

Maximum Credits: 3

The applied behavior analysis practicum provides students with intensive opportunities to learn and practice the various roles of a behavior analyst in a variety of different settings and to demonstrate competence as a beginning applied behavior analyst. Opportunities will include conducting assessment activities related to the need for behavioral interventions, designing, implementing and monitoring behavior analysis activities, overseeing implementation of behavior analysis programs by others, and other activities typically performed by a behavior analyst such as attending planning meetings and researching the literature to prepare a behavioral intervention. Each student will work closely with an assigned university supervisor and a mentoring professional from their individual placement site during the practicum. The practicum requires group seminar supervision, individual supervision, on-site observations, and small group supervision in amounts determined by the behavior analysis certification board (BACB) standards. The accompanying practicum seminar allows students to share experiences and knowledge gained in placement sites, as

well as to seek support and ideas from classmates.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad HSU Basis

IL 3571 - WEB SUPERVISION SPECIAL EDUCATN

Minimum Credits: 3

Maximum Credits: 3

This web-based course reviews problems and practices in special education supervision. Emphasis is placed in increasing interpersonal skills and developing technical skills in observing, planning and evaluating instruction.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Attributes: World Wide Web

IL 3577 - BRIDGE COURSE: BCBA CURRICULUM EDITION 3 TO 4

Minimum Credits: 2

Maximum Credits: 3

This course is designed to update the competencies of edition 3 of the board certified behavior analyst curriculum to edition 4 of the curriculum so that individuals who took all or part of their ABA studies under edition 3 may sit for the national exam under the current edition 4. The course will address 10 topics such as direct instruction, incidental teaching, alternative and augmentative communication, MAND training, precision teaching. The required competencies (e.g. measurement and data analysis; change systems; implementation, management and supervision; intervention and behavior change considerations) will be distributed across each topic.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 3578 - APPLIED BEHAVIORAL ANALYSIS 6: ETHICS

Minimum Credits: 3

Maximum Credits: 3

This is one of six courses meeting the total academic requirements for board certification as a behavior analyst. This course focuses on ethical practices involving the application of principles and procedures covered in aba i through aba v. The ethical practices relate to working with individuals with autism spectrum disorders, developmental disabilities and other behavioral/emotional disorders.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 3564 and 3565

IL 3579 - TREATMENT FIDELITY AND COACHING: AUTISM

Minimum Credits: 3

Maximum Credits: 3

This course will present information on the strategies used to monitor and enhance the accuracy and the delivery of evidence-based interventions for children with autism spectrum disorder (ASD) and other disabilities. The course will focus on defining intervention and implementation fidelity, exploring examples of the documentation, planning and assessment of treatment fidelity for evidence-based interventions, and learning skills for peer, parent, and supervisory coaching.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PREQ: IL 2505

IL 3585 - TECHNOLOGY-BASED INTERVENTIONS: AUTISM

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the application of assistive technology to interventions for children with autism spectrum disorder (ASD) and other non-physical disabilities. The course addresses a) the principles of assistive technology (at), b) assessment of students for at, and c) the at continuum of low, mid, and high technology. A range of hardware (E.G., ipad, computers, specialized speech generating devices), software (E.G., imovie, board maker), and interventions (E.G., Video modeling, alternative and augmentative communication strategies, academic skills) will be considered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

IL 3590 - RESEARCH SEMINAR IN SPECIAL EDUCATION

Minimum Credits: 3

Maximum Credits: 3

This course provides students with competencies necessary for utilizing and evaluating research in special education. Focus is on the critical analysis of research and examination of methodological and ethical considerations. Students in m/ps sections conduct single subject research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 3591 - SUPRVSD RESEARCH IN SPECIAL EDUC

Minimum Credits: 1

Maximum Credits: 9

The doctoral student works collaboratively with a sponsoring faculty member in the carrying out and in the preparation of a written report of a research project.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad HSU Basis

IL 3592 - SUPERVISION PRACTICUM IN SP ED

Minimum Credits: 1

Maximum Credits: 3

The student under faculty supervision works with prospective, beginning, or experienced teachers in the development of their professional supervision skills. This practicum may be completed in conjunction with the professional sequence of coursework in supervision at approved educational sites.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

IL 3593 - RESEARCH PRACTICUM IN SPEC EDUC

Minimum Credits: 1

Maximum Credits: 3

Course is a field-based internship in research methodology. Purpose of the course is to provide opportunities for students to get hands-on experience and direct supervision in the development, implementation and dissemination of educational research.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

IL 3594 - INTERDISCIPLINARY LEADERSHIP SEMINAR DEVELOPMENTAL DISABILITY 1

Minimum Credits: 1

Maximum Credits: 3

This seminar provides the advanced master's or doctoral student with an opportunity to study and analyze with students and faculty from a variety of

disciplines current issues affecting children with neurodevelopmental disabilities, their families, and their communities. Within a framework of family-centered and cross-cultural principles, the seminar examines issues related to advances in diagnosis, treatment, child development, service delivery, and policy/legislation. Leadership issues are also explicitly considered at the beginning and end of each term.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad Letter Grade

IL 3596 - INTERNSHIP IN SPECIAL EDUCATION

Minimum Credits: 1

Maximum Credits: 3

An internship is proposed, then reviewed by faculty and implemented in varying types of special education settings.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

IL 3598 - DIRECTED STUDY IN SP ED

Minimum Credits: 1

Maximum Credits: 6

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3599 - DOCTRL DISSER RES - SPECIAL ED

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IL 3702 - SPECIAL PROJECT FOREIGN LANGUAGE EDUCATION PHD

Minimum Credits: 1

Maximum Credits: 3

A flexible curriculum oriented to special research topics of interest to faculty or current issues of concern in foreign language education. This course is designated for students to pursue independent research in foreign language education under the supervision of appropriate faculty member.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Attributes: Asian Studies

IL 3791 - SUPERVISED RESEARCH - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 6

The doctoral student works collaboratively with a sponsoring faculty member in the carrying out and preparation of a written report of a research project.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SU3 Basis

IL 3798 - DIRECTED STUDY - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3799 - DOCTORAL DISSERTATION RESEARCH - FOREIGN LANGUAGE

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

IL 3890 - ADVANCED TEACHING PRACTICUM

Minimum Credits: 1

Maximum Credits: 9

Course designed for students seeking additional field teacher certification. Includes a school-based practicum in accordance with the student's experience and interests.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad HSU Basis

IL 3891 - SUPERVISED RES - SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 6

The doctoral student works collaboratively with a sponsoring faculty member in the carrying out and preparation of a written report of a research project.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad LG/SNC Basis

IL 3898 - DIRECTED STUDY - SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 9

The student proposes and carries out an independent study project under the direction and supervision of an appropriate member of the faculty.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

IL 3899 - DOCTRL DISSER RES-SOCIAL STUDIES

Minimum Credits: 1

Maximum Credits: 15

The student prepares a proposal for a detailed research study, has that proposal approved by an appropriate faculty dissertation committee, completes the proposed study, and defends the completed draft in a dissertation final oral examination.

Academic Career: Graduate

Course Component: Thesis Research
Grade Component: Grad SN Basis

IL 3928 - WEB LEGL & LEGISLTV FDS OF SP ED

Minimum Credits: 3
Maximum Credits: 3

This course reviews the practical application of laws, regulations, court decisions, and public policy to the supervision of special education services and programs.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis

Integrative Molecular Biology

IMB 2000 - LABORATORY RESEARCH ROTATIONS

Minimum Credits: 1
Maximum Credits: 9

Students are required to perform three distinct four-week laboratory rotations in the summer term of the first year. These rotations provide students with an opportunity to perform experimental research in three different scientific areas, while experiencing diverse laboratory environments and practices. They also facilitate selection of the dissertation laboratory and advisor. Students select the laboratory rotations based on their research interests and in consultation with their academic advisor. To capitalize on the cross campus nature of the program, students are required to distribute the rotations between participating laboratories in the Department of Biological Sciences and the School of Medicine.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

IMB 2050 - PIMB RESEARCH SEMINAR

Minimum Credits: 1
Maximum Credits: 1

Students are required to attend a weekly research seminar. Students may attend seminars hosted by the School of Medicine and/or Department of Biological Sciences.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad HSU Basis

IMB 2080 - DIRECTED STUDY

Minimum Credits: 1
Maximum Credits: 9

This course provides the student an opportunity to carry out a specific research project in the dissertation laboratory prior to admission to candidacy for the doctorate.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad SN Basis
Course Requirements: PLAN: Integrative Molecular Biology (PHD)

IMB 2090 - MS THESIS RESEARCH

Minimum Credits: 1
Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.
Academic Career: Graduate

Course Component: Thesis Research
Grade Component: Grad SN Basis

IMB 3090 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a dissertation for a doctoral degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Integrative Molecular Biology (PHD)

Integrative Systems Biology

ISB 2000 - LABORATORY RESEARCH ROTATION

Minimum Credits: 1

Maximum Credits: 9

Students are required to perform three distinct four-week laboratory rotations in the summer term of the first year. These rotations provide students with an opportunity to perform experimental research in three different scientific areas, while experiencing diverse laboratory environments and practices. They also facilitate selection of the dissertation laboratory and advisor. Students select the laboratory rotations based on their research interests and in consultation with their academic advisor. ISB 2010 - APPROACHES IN MOLECULAR BIOLOGY

Minimum Credits: 5

Maximum Credits: 5

The semester-long approaches in molecular biology course is divided into three separate modules and will meet three times a week. Each week there will be two 1.5-Hour lectures and a 2-hour discussion section at which one or more papers from the primary literature are analyzed. Although each module is distinguished by its focus on the molecular basis of a human disease, we will use the disease paradigm as means to explore questions of fundamental significance in the field of modern molecular biology. The titles of the three modules are: 'cancer: regulation and misregulation of cell growth and control', 'heart disease: molecular and cellular foundations', and 'viral diseases: life cycle and evolution of prokaryotic and eukaryotic viruses'. The course will be taught by members of the program with expertise in each area and will emphasize the design and interpretation of experimental methods in modern biomedical research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ISB 2011 - APPROACHES IN MOLECULAR BIOLOGY 1: CANCER

Minimum Credits: 2

Maximum Credits: 2

The semester-long approaches in molecular biology course is divided into three separate course modules and will meet three times a week for two hours each session. Each week there will be two days of lecture and one discussion section at which one or more papers from the primary literature are analyzed. Although each module is distinguished by its focus on the molecular basis of a human disease, we will use the disease paradigm as means to explore questions of fundamental significance in the field of modern molecular biology. The titles of the three course modules are: cancer, heart disease, and viral diseases. The courses will be taught by members of the program with expertise in each area and will emphasize the design and interpretation of experimental methods in modern biomedical research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Integrative Molecular Biology (PHD)

ISB 2012 - APPROACHES IN MOLECULAR BIOLOGY 2: HEART DISEASE

Minimum Credits: 2

Maximum Credits: 2

The semester-long approaches in molecular biology course is divided into three separate course modules and will meet three times a week for two hours each session. Each week there will be two days of lecture and one discussion section at which one or more papers from the primary literature are analyzed. Although each module is distinguished by its focus on the molecular basis of a human disease, we will use the disease paradigm as means to explore questions of fundamental significance in the field of modern molecular biology. The titles of the three course modules are: cancer, heart disease, and viral diseases. The courses will be taught by members of the program with expertise in each area and will emphasize the design and interpretation of experimental methods in modern biomedical research.

Course Requirements: PLAN: Integrative Molecular Biology (PhD, ND) or Integrative Molecular Biology (PhD, ND)

ISB 2023 - APPROACHES IN MOLECULAR BIOLOGY 3: COMPUTATIONAL SYSTEMS BIOLOGY OF DISEASES

Minimum Credits: 2

Maximum Credits: 2

The semester-long approaches in molecular biology course is divided into three separate course modules and will meet three times a week for two hours each session. Each week there will be two days of lecture and one discussion section at which one or more papers from the primary literature are analyzed. The titles of the three course modules are: cancer, heart disease, and computational systems biology of disease. Although each module is distinguished by its focus on the molecular basis of human diseases, in module 3 we will use disease paradigms as means to explore questions of fundamental significance in the field of modern computational and systems biology. We will cover a variety of topics, from collection and analysis of high-throughput disease data, to viral diseases and drug design. The courses will be taught by members of the program with expertise in each area and will emphasize the design and interpretation of experimental and computational methods in modern biomedical research.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Integrative Molecular Biology (MSIMB-PHD or IMB-PHD)

ISB 2025 - INTRODUCTION TO BIOINFORMATICS PROGRAMMING IN PYTHON

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to a selection of popular python packages used in bioinformatics and computational and systems biology. Students will be graded on programming assignments. Each assignment will explore a different sub-discipline of computational biology and introduce students to a new python package. Optional recitations will be available for students with programming and will assist in the development of basic programming skills. The course is designed for first-year graduate students in the corresponding fields of study. There will be a 1-hour lecture a week with time allocated for two 1-hour recitations. Both the lecture and recitations need to be scheduled in a computer lab (such as our classroom).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ISB 2035 - SYSTEMS BIOLOGY II

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to the use of model organisms and cell systems as research models. General and specific imaging approaches and imaging tools used to study these models will be covered. Model systems to be discussed include mouse, zebrafish, cell culture, yeast and C. elegans. Emphasis will be placed on the strengths that specialized techniques of each organism provide to the biomedical research community

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ISB 2050 - ISB RESEARCH SEMINAR

Minimum Credits: 1

Maximum Credits: 1

Students are required to attend a weekly research seminar. Students may attend seminars hosted by the School of Medicine and/or Department of Biological Sciences.

Academic Career: GRAD

Course Component: Seminar

Grade Component: Grad HSU Basis

ISB 2055 - SCIENCE WRITING

Minimum Credits: 1

Maximum Credits: 1

This course will help students prepare to write their comprehensive exam proposals and will address other essential science communication skills, including research papers, oral and poster presentations, pitching ideas to industry, and web-based communication platforms.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

ISB 2060 - ISB CONFERENCE

Minimum Credits: 1

Maximum Credits: 1

This course will present an opportunity for students to become familiar talking about critical aspects of being a researcher that they deem important including but not limited to, current scientific literature, biological, biostatistical, or computational principles, laboratory techniques, and research-in-progress (RIP) reports. Each week, two students will lead 30 minute discussions either on their own primary research, or on topics of their choosing. For each presenter, time is allocated for questions and discussion of the relevant conclusions to allow development of presentation skills.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad SN Basis

ISB 2070 - THE BEDSIDE TO BENCH

Minimum Credits: 2

Maximum Credits: 2

This course introduced graduate students to biomedical research in a comprehensive format integrating organ system biology and clinical medicine with critical developments in the basic science research literature. Course topics include renal-electrolyte, cardiology, cancer, pulmonology, infectious diseases, endocrinology, neurology, rheumatology, and immunology, hepatology and liver disease, gastroenterology, geriatrics, and hematology/oncology. Course work includes an overview of each biomedical field, clinical tours, discussions with leading physicians on the current challenges in patient care, and analysis of the basic science literature in a journal club forum.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

ISB 2080 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific research project in the dissertation laboratory prior to admission to candidacy for the doctorate.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad SN Basis

Course Requirements: PLAN: Integrative Systems Biology (PHD)

ISB 2090 - MS THESIS RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a thesis for a master's degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

ISB 3090 - PHD DISSERTATION RESEARCH

Minimum Credits: 1

Maximum Credits: 14

A directed research project which results in a dissertation for a doctoral degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Integrative Systems Biology (PHD)

Intelligent Systems

ISSP 2000 - MS RESEARCH

Minimum Credits: 1

Maximum Credits: 9

Research and thesis MA degree.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2015 - FOUNDATIONS OF CLINICAL AND PUBLIC HEALTH INFORMATICS

Minimum Credits: 3

Maximum Credits: 3

A survey of fundamental concepts and activities on information technology applied to health care. Topics include computer-based medical records, knowledge-based systems, telehealth, decision theory and decision support, human-computer interfaces, systems integration, the digital library, bioinformatics, and educational applications. Department-specific applications such as pathology, radiology, psychiatry and intensive care are also discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2020 - TOPICS IN INTELLIGENT SYSTEMS

Minimum Credits: 1

Maximum Credits: 1

This course is an immigration course for the intelligent systems students.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad SN Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2030 - ADVANCED TOPICS IN INTELLIGENT SYSTEMS

Minimum Credits: 1

Maximum Credits: 1

This course is a continuance of ISSP 2020. It is an immigration course for the intelligent systems students. Students continue with this course by carrying out their projects developed in ISSP 2020 and giving presentations presenting their results.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2070 - PROBABILISTIC METHODS

Minimum Credits: 3

Maximum Credits: 3

This seminar provides an introduction to computational approaches for probabilistic modeling and inference. A particular focus is placed on Bayesian networks, although other probabilistic models also will be studied. Medical applications are emphasized, however, the principles are general and no medical knowledge is needed to take the course. The course does not require knowledge of a computer programming language. An understanding of basic probability theory would be helpful, but is not required.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ISSP 2081 - FOUNDATIONS OF BIOINFORMATICS

Minimum Credits: 3

Maximum Credits: 3

Provides an introduction to selected topics of bioinformatics also known as computational biology. In this course, the difficult computational problems involving different types of biological information are identified using case studies from current literature. Emphasis is on genomic aspects of computational biology with some overview of proteomics and structural aspects. The course is structured as a seminar course intending to draw students into participating in discussions related to both problems and existing solutions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2083 - BIOMDCL INFORMATICS JOURNAL CLUB

Minimum Credits: 1

Maximum Credits: 1

This course meets once each week for one hour. The research being presented will be taken from recent journal papers.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2090 - PRACTICUM IN ADV BIOMEDICAL IT

Minimum Credits: 1

Maximum Credits: 6

This course is designed for people who want a practicum experience in working with advanced information technology in the center for biomedical informatics.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2130 - INFORMATION STORAGE & RETRIEVAL

Minimum Credits: 3

Maximum Credits: 3

Problems and techniques related to storing and accessing unstructured information with an emphasis on textual information. Overview of several approaches to information access with a primary focus on search-based information access. Covers automated retrieval system design, content analysis, retrieval models, result presentation, and system evaluation. Examines applications of retrieval techniques on the web, in multimedia and multilingual environments, and in text classification and event tracking.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ISSP 2160 - FOUNDATIONS OF ARTIFICIAL INTELLIGENCE

Minimum Credits: 3

Maximum Credits: 3

The principal topics of AI are: representation knowledge, reasoning and problem solving, knowledge acquisition and machine learning, robotics, and natural language understanding. This course surveys these areas in order to provide an understanding of artificial intelligence methods and research problems. Specific topics include: action and object-centered representations, the search paradigm, planning and constraint satisfaction, qualitative reasoning, analogical reasoning, default reasoning, induction, other methods of learning, and knowledge engineering.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2170 - MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will give an overview of many techniques and algorithms in machine learning, beginning with topics such as linear and logistic regression, multi-layer neural networks and ending up with more recent topics such as boosting and support vector machines. The basic ideas and intuition behind modern machine learning methods, as well as, a more formal understanding of how and why they work will be covered. Students will have an opportunity to experiment with various machine learning techniques or apply them to a selected problem or domain in the context of a term project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2180 - COMPUTER VISION

Minimum Credits: 3

Maximum Credits: 3

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (PhD)

ISSP 2221 - HUMAN INFORMATION PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Introduction to research and theory in human cognition, including perception, attention, pattern recognition, memory, representation of knowledge, language, problem solving, reasoning, and decision making, with implications for user interface design.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2230 - INTRO NATURAL LANGUAGE PROCESSING

Minimum Credits: 3

Maximum Credits: 3

Overview of computational approaches to natural language processing. Issues in syntax, semantics, and pragmatics, as well as overall systems architectures.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2240 - DECISION ANAL & DECISN SUPRT SYS

Minimum Credits: 3

Maximum Credits: 3

Rationality and rational behavior; uncertainty, probability, decision making. Psychology of decision making. Decision theory and decision analysis, structuring decision problems, elicitation of probabilities and utilities. Conflicting objectives, multi-attribute decision theory. Probabilistic methods in artificial intelligence. Group and team decision making. Decision support systems.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2280 - ADAPTIVE INFORMATION SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Introduces key principles of adaptive information systems and modern techniques for user modeling and personalization. Covers the construction of user models and user profiles. Examines the use of various personalization techniques such as adaptive search, recommendation, and navigation support. Reviews major types of adaptive information systems and explores important application areas.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS or PHD)

ISSP 2430 - SOCIAL COMPUTING

Minimum Credits: 3

Maximum Credits: 3

Introduction to key theories and technologies of social computing. Reviews major types of social computing systems. Several social computing systems are explored and used throughout the course. Final group project focuses on designing and implementing a social web system.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS or PHD)

ISSP 2900 - GRADUATE INTERNSHIP

Minimum Credits: 1

Maximum Credits: 3

A professional internship may be taken at any time during the course of graduate study. Ph.D. students may take this course up to two times for credit, MS students may take it at most once.

Academic Career: Graduate

Course Component: Internship

Grade Component: Grad SN Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

Directed study.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 9

Independent study.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 3000 - RESEARCH AND DISSERTATION PHD

Minimum Credits: 1

Maximum Credits: 9

Research and dissertation Ph.D.

Academic Career: Graduate

Course Component: Thesis Research

Grade Component: Grad SN Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 3120 - ADV TOPCS NATURAL LANG PROCSSNG

Minimum Credits: 3

Maximum Credits: 3

Natural language processing (NLP) is primarily concerned with creating computer programs that interact with human languages. The objective of this course is to continue the studies of natural language processing (NLP), to explore selected topics among syntax, semantics, and pragmatics more deeply, and to discuss recent advances in (NLP).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: ISSP 2230 or CS 2731 or INFSCI 2420; PLAN: Intelligent Systems (MS, PHD)

ISSP 3180 - VISUAL LANGUAGES AND PROGRAMMING

Minimum Credits: 3

Maximum Credits: 3

This course will include fundamentals of formal language theory, iconic and symbolic representations, formal theory of iconic systems, icon operators and semantics, icon oriented system compiler for visual interface design, computer graphics and visual programming, issues in the design of visual programming systems, visual database systems, iconic indexing, and advanced topics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PLAN: Intelligent Systems (MS, PHD)

ISSP 3535 - ADV TOPICS IN MACHINE LEARNING

Minimum Credits: 3

Maximum Credits: 3

This course will survey advanced topics in machine learning, for example, inductive learning, reinforcement learning, and neural network learning.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: ISSP 2170 or CS 2750; PLAN: Intelligent Systems (MS, PHD)

ISSP 3565 - ADV TOPICS ARTIFICIAL INTELLGNC

Minimum Credits: 3

Maximum Credits: 3

This course will survey current topics in artificial intelligence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: ISSP 2160 or CS 2710; PLAN: Intelligent Systems (MS, PHD)

Interdis Biomed Grad Prog

INTBP 2000 - FOUNDTNS OF BIOMEDICAL SCIENCE

Minimum Credits: 8

Maximum Credits: 8

Primary objectives of the course are to convey knowledge of the molecular and cellular mechanisms controlling cell, tis sue and organ function, and to develop an understanding of the experimental evidence supporting these concepts through an integrated presentation of material from biochemistry, cell biology, molecular genetics, pathology, pharmacology, and physiology. The development of critical thinking skills will be emphasized through an evaluation of experimental evidence and reading of the primary literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Molecular Biophy & Struct Bio (PHD) or Interdis Biomedical (UNK)

INTBP 2001 - FOUNDATIONS OF BIOMEDICAL SCIENCE STRUCTURAL BIOLOGY

Minimum Credits: 7

Maximum Credits: 7

Primary objectives of the course are to convey knowledge of the molecular and cellular mechanisms controlling cell, tis sue and organ function, and to develop an understanding of the experimental evidence supporting these concepts through an integrated presentation of material from biochemistry, cell biology, molecular genetics, pathology, pharmacology, and physiology. The development of critical thinking skills will be emphasized through an evaluation of experimental evidence and reading of the primary literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

INTBP 2005 - FOUNDATIONS CONFERENCE

Minimum Credits: 4

Maximum Credits: 4

Contemporary approaches to problem-solving in biology, as well as principles underlying modern methods of biomedical research will be integrated with the lecture component of the course through an analysis of mechanisms underlying bio logical phenomena. Students will present papers, critically analyze data and devise experimental approaches to biomedical problems considered in lecture.

Academic Career: Graduate

Course Component: Workshop

Grade Component: Grad Letter Grade

INTBP 2010 - LABORATORY RESEARCH ROTATION

Minimum Credits: 1

Maximum Credits: 1

This lab is designed to introduce the student to relevant laboratory methods as well as the layout and conceptualization of experiments. The course will serve to acquaint the student with the laboratory process, and to facilitate his/ her selection of a lab for dissertation research. Students are required to register for and complete rotations through three different laboratories, thereby ensuring broad exposure to method and practice.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad Letter Grade

INTBP 2011 - LAB RESEARCH ROTATION SUPPLEMENT

Minimum Credits: 2

Maximum Credits: 4

Course supplement to INTBP 2010 for those students initiating their first rotation in summer.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad SN Basis

INTBP 2013 - D2K: FROM DATA TO KNOWLEDGE- BIOMEDICAL EXPERIMENTAL DESIGN AND ANALYSIS

Minimum Credits: 3

Maximum Credits: 3

Experimental biologists formulate hypotheses and models, design experiments, collect data and conduct analyses to draw conclusions. Deep understanding on biological principles requires D2K- the translation of data into knowledge that transcends first-order conclusions. This course for first year Ph.D. students in the biomedical sciences will examine basic principles of experimental design, together with measurement and sources of experimental error. The course will provide practical 'hands on' introduction to the quantitative tools required for experimental research using cellular, molecular, and systems based methods. Topics will include: goals of experimental design, making measurements, principles of parametric and non-parametric statistical inference, use of MS excel, graphpad prism and R, design of publication graphics and a brief introduction to big data approaches. Students will work in small groups to construct capstone projects by making 'you tube' style videos to illustrate key principles of experimental design and analysis.

Academic Career: Graduate
Course Component: Lecture
Grade Component: Grad Letter Grade

INTBP 2090 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 9

This course provides the student an opportunity to carry out a specific laboratory project in any area of interest in degree-granting programs under the interdisciplinary biomedical graduate program.

Academic Career: Graduate
Course Component: Directed Studies
Grade Component: Grad LG/SNC Basis

INTBP 2100 - BIOLOGY OF VISION

Minimum Credits: 3

Maximum Credits: 3

This course is being designed to meet the requirements of the t-32 training grant (t32 ey017271-01 interdisciplinary visual science training program) from NIH. The target students are the graduate students, fellows and residents in the department of ophthalmology. In addition, the post-doctoral fellows working in the department of ophthalmology will be encouraged to take this course. We are planning to cover a wide array of subjects including the ocular anatomy, embryology, biochemistry, pharmacology, immunology, microbiology and genetics.

Academic Career: Graduate
Course Component: Seminar
Grade Component: Grad LG/SNC Basis

INTBP 2290 - SCIENTIFIC ETHICS AND THE RESPONSIBLE CONDUCT OF RESEARCH

Minimum Credits: 1

Maximum Credits: 1

The course is an introduction to the basic ethical issues which arise in the course of conducting scientific research. It is intended for graduate students and fellows in the biomedical sciences who have completed at least one year of graduate work. The course will be composed of informal lecture presentations followed by discussion of issues in small groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: Computational Biology (PHD) or Molecular Biophy & Struct Bio (PHD) or Computational Biology (PHD) or Integrative Molecular Biology (PHD) or Interdis Biomedical (UNK)

INTBP 3240 - GRADUATE STUDENT WRITING SEMINAR

Minimum Credits: 2

Maximum Credits: 2

This course teaches fundamental grantmanship skills using actual NIH training grant submissions. Students construct a competitive research training grant and are instructed on methods to identify funding sources. This course consists of introductory lectures followed by a series of workshops staffed by the IBGP training faculty. Workshops cover peer scientific review and study section operation, avoidance of common pitfalls in grant writing, grant writing ethics and scientific community service.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad Letter Grade

Interdisciplinary

BIND 2024 - CONSULTING FIELD PROJECT

Minimum Credits: 3

Maximum Credits: 3

This course teaches management consulting in a real-world environment. Students are provided a unique opportunity to apply the analytical tools and concepts taught by Katz, and do so in a practical manner. Each project includes three to five students assembled as a team. Each project involves a single "client" organization, which may be a profit, non-profit, or governmental. Each client provides its assigned study team with a project of immediacy and an executive dedicated to working with the team. A faculty advisor is assigned to each team. Students schedule their own time, dovetailing with client schedules and that of their faculty advisor. Students are further supported through Saturday consulting workshops led by consultants from the Pittsburgh office of McKinsey & Company, management consultants. An end-of-term competitive competition is also held, the winner being awarded the McKinsey cup.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2401; PROG: Joseph M. Katz Grad Sch Bus

BIND 2031 - GLOBAL BUSINESS PROJECT

Minimum Credits: 3

Maximum Credits: 3

This graduate consulting project course is offered by a consortium of business schools in the United States and some in the target countries. The global business project asks students to apply both cross-cultural awareness and foreign language skills to produce strategic advice for a company that is focused, compelling and actionable. The course offers students the opportunity to increase their global business competency through guided hands-on business experience while also introducing them to the challenges of virtual teaming. Teams of five or six are constructed through a competitive application process with members drawn from any of the partner schools. At the beginning of the term each student is given an assignment to help him or her prepare for the assignment. All students attend a kickoff meeting in March where they meet with their team and their client; during this meeting they draw up a scope of work, project timeline, and work plan. During the remainder of the term, the teams work virtually, gathering data and investigating solutions to their client's challenges. In May, the teams spend two weeks in their target country doing research and preparing for the final presentation with the client. On the final day of this in-country segment, the team presents its findings to the client in a final presentation. Grades are determined by the faculty advisor for the project based on the following weighted individual grade is 55% and team grade is 45%. Inputs are received from the client and from peer assessment of team members.

Academic Career: Graduate
Course Component: Practicum
Grade Component: Grad LG/SNC Basis
Course Requirements: Katz Grad School of Business students only.

BIND 2035 - APPLICATION GAME THEORY MANAGING DECISION MAKING

Minimum Credits: 2

Maximum Credits: 2

This course demonstrates how insights of game theory can be utilized by managers to address important decisions confronting the firm. The interaction of a business firm with its competitors, customers and suppliers can be formalized as a game situation. We will utilize game theoretic reasoning to analyze issues to entry into new markets or exit from established businesses, investment in research and development, the extent of product differences.

BIND 2070 - HEALTH CARE LAW FOR MANAGERS

Minimum Credits: 1.5
Maximum Credits: 1.5
This course will introduce students to legal, ethical, and policy issues relevant to those in management roles in the health care system. Topics explored will include an overview of the U.S. legal system and policymaking, health care ethics, public health law, liability of health care providers and their institutions, health care reform and access to care, health care fraud and abuse, antitrust, consent for treatment and withholding of consent, fraud and abuse, and health privacy in the digital age.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

BIND 2071 - LEADING EVIDENCE-BASED ORGANIZATIONAL CHANGE

Minimum Credits: 3
Maximum Credits: 3
This course focuses on the key processes of effective organizational change and the acquisition of the best available evidence from science, organizations, stakeholder, etc. to inform the change process. Our objective is to provide evidence-based frameworks and tools for successfully introducing and sustaining organizational change in healthcare organizations.
Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad Letter Grade

BIND 2072 - ENTREPRENEURSHIP START-UP ESSENTIALS

Minimum Credits: 1.5

Maximum Credits: 1.5

This course introduces students to the journey of starting a firm. Students will learn through experience how to prepare and deliver an "elevator pitch"

Course Requirements: Katz Grad School of Business students only.

BIND 2131 - GLOBAL CONSULTING PROJECT 1

Minimum Credits: 1.5

Maximum Credits: 1.5

Intent of the course is, through experiential learning, to guide students in addressing global business problems. This is accomplished by providing students with a real corporate problem or issue whose roots are cross-functional, and whose solution requires global research and a global perspective. Students should expect global travel. The course is conducted across the fall and spring terms, providing the student with travel time during the various school breaks during Thanksgiving, the Christmas holidays and at other times as agreed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIND 2200 - INTEGRATED PROJECT FOR MBA/MS IN ENGINEERING PROGRAM

Minimum Credits: 2

Maximum Credits: 2

All students in the MBA/MS in engineering joint degree program are required to complete an integrated project for a company or some other facility. Oversight of this project will be the joint responsibility of a faculty member from KGSB and one from the student's engineering department. It is the student's responsibility to identify these faculty members; program advisors will assist the student in this effort. Students must present a one or two page proposal prior to the start of the project outlining what they plan to do over the course of the project. Ideally, the project should blend skills learned from the business and engineering components of the program. The proposal must be approved by the business and engineering faculty members overseeing the project.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2203 - ORGANIZATIONAL TRANSFORMATION

Minimum Credits: 2

Maximum Credits: 2

This course recognizes the interrelated web of economic, social, political, and technological forces in the global economy that require organizations to transform their systems and processes--continuously and radically--if they wish to survive and succeed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

BIND 2204 - MANAGING THE PROFESSIONAL SERVICES FIRM

Minimum Credits: 2

Maximum Credits: 2

This 1.5 Credit course is intended for MBA and masters of accounting (MACC) students interested in professional consulting. By the end of this course, students should be able to intelligently discuss the practice of professional consulting, be their intent in business, it or accounting professions. Additionally, the student will gain an understanding for the highly fluid and evolving environment in which professional advisors operate, and how these professionals add value to their clients. Finally, students are made aware of key issues in managing the professional services firm, including scoping out client engagements, organizing and directing professional staff, handling clients and developing practical recommendations. Clinical professor bud smith is instructor, assisted by practicing professionals from the field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

BIND 2263 - GLOBAL ISSUE WORKSHOP

Minimum Credits: 3

Maximum Credits: 3

Students conduct an extensive analysis of a structural or external issue affecting an organization or industry abroad. A student team carries out in-depth international business research in the U.S. and travels abroad to conduct field research and speak to industry and organization experts.

Minimum Credits: 1

Maximum Credits: 1

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

Course Attributes: Russian & East European Studies

BIND 2444 - MANAGEMENT SIMULATION CAPSTONE

Minimum Credits: 3

Maximum Credits: 3

The management game is an applied strategic management and general management exercise where teams of students operate computer simulated companies for 3 years acting as the executive committee of a multi-national manufacturing company. Groups of students compete against each other as they try to add value to their companies. The class teaches competitive dynamics group management skills, cross-functional management, and presentation skills. The class is intended to be taken during the student's last term in the program and is intended to provide an illustration of how to apply the tools acquired in other classes in a complex international business environment. A main focus of the learning is the unstructured nature of the problem. We want to train managers to solve open-ended problems with talented people in creative ways. External boards of directors may be utilized during the class for feedback and to assess student progress. Each team is asked to engage in externally focused exercises. Some examples of these exercises include negotiating a labor agreement with real union representatives and presenting their marketing plans to practicing marketing executives. The external feedback and evaluation structure of the course makes the exercise sharply realistic. The highly unstructured nature of the class makes it invaluable for students preparing to enter the job market as leaders instead of followers.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: BACC 2401 and BQOM 2401 and BFIN 2409 and BMKT 2409

BIND 2510 - EXECUTIVE BOARDROOM SERIES 1

Minimum Credits: 1

Maximum Credits: 1

This interactive course brings in top pharmaceutical and health care executives and builds on the business and management concepts and principles learned in previous courses. Students are engaged in a structured understanding of the "business of pharmacy in health care" and related fields that impact the profession in an executive boardroom format. This course follows the dollar from patient to product and service in the following manner: patient->health insurance pharmacy benefit->p.m.->pharmaceutical industry->pharmacies. The selection process requires a one-page narrative on the potential contribution(s) of this course to the student's education and/or career goals.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2511 - EXECUTIVE BOARDROOM SERIES 2

Minimum Credits: 1

Maximum Credits: 1

This interactive course brings in top pharmaceutical and health care executives and builds on the business and management concepts and principles learned in earlier courses including part 1 of this course. Students are engaged in a structured understanding of the "businesses of pharmacy in health care, and related fields that impact the profession in an executive boardroom format. This (one credit) is the second part of an elective series (offered on alternating years) which focuses on "entrepreneurship in medicines and health care". This course analyzes the fundamentals of entrepreneurship amongst successful executive finders, binders, and minders.

Academic Career: Graduate

Course Component: Colloquium

Grade Component: Grad Letter Grade

Course Requirements: Katz Grad School of Business students only.

BIND 2526 - BUSINESS PROCESS REDESIGN

Minimum Credits: 2

Maximum Credits: 2

Using a cross functional perspective, the course presents tools for the redesign of business processes, shows participants how to diagnose process problems, and explains how to generate and implement process redesign projects in different types of organizations. After the course, participants should be able to generate and implement business process redesign projects of their own.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2533 - ACCELERATED INTERMEDIATE FINANCIAL REPORTING

Minimum Credits: 3

Maximum Credits: 3

Accelerated Intermediate Financial Reporting fulfills the prerequisites of Intermediate Financial Reporting 1 and Intermediate Financial Reporting 2 for students who are entering the MACC program. This course studies the preparation, communication, interpretation and analysis of financial data with emphasis on the information needs of users of financial information prepared under USGAAP. General topics covered in this course include revenue recognition, inventory accounting, long term assets and impairment, investments, current liabilities and contingencies, long term liabilities, capital and retained earnings, leases, pensions and postretirement benefits, income taxes, and preparation of the statement of cash flows. Students are expected to have an accounting background. This course is designed to sit on top of an existing foundation in accounting and will assume students already have taken several financial accounting courses or knowledge obtained through work experience. It is expected that students are fluent with accrual accounting and the accounting cycle and that they have already studied some of the topics in the course in depth. The course will move quickly.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

BIND 2554 - ENTERING FOREIGN MARKETS 1

Minimum Credits: 2

Maximum Credits: 2

This course is designed to enhance students' awareness of the operational and legal challenges associated with three types of market-entry strategies: exporting, licensing/ franchising, and foreign direct investment.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2556 - DOING BUSINESS IN CHINA

Minimum Credits: 2

BIND 2600 - MIB PRACTICUM COURSE

Minimum Credits: 3

Maximum Credits: 3

This course is intended to give students in the MBA/MIB dual degree program practical experience in their fields (finance marketing, MIS, etc.). Students will work fulltime for a period of approximately 4 months in an organization located in countries other than their own native countries. The internship location will be based on near-native competence in a second language.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2602 - CPT INTERNSHIP

Minimum Credits: 1

Maximum Credits: 1

This course prepares the student for their internship opportunity and helps them to leverage the internship experience by focusing on career management, organization and people skills in the context of global executive mobility. Students are provided with a unique opportunity to apply the skills taught at Katz in a practical manner. Each student completes a project during an internship or co-op experience for an employer, which may be a for-profit, non-profit or governmental agency. The employer will sign-off that the student has completed the project. A faculty advisor is assigned to the student. The student is required to attend a one-hour orientation session prior to the internship. The student will attend a full-day global executive skills workshop upon completion of the internship, where the student will provide an executive level presentation to the class. The emphasis is on practical skills to enhance professional success in today's globally mobile business environment for managers. This course is for Katz students only.

Academic Career: Graduate

Course Component: Credit Laboratory

Grade Component: Grad HSU Basis

BIND 2604 - GLOBAL RESEARCH PRACTICUM 2

Minimum Credits: 3

Maximum Credits: 3

This course is tied closely to field study abroad, providing a hand's on experience in a foreign culture. Main objectives are to challenge students to consider business issues from a global perspective and to expose them to actual business environments abroad.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2700 - MIB INTERNSHIP SEMINAR

Minimum Credits: 3

Maximum Credits: 3

Exclusively designed for MIB students post internship experience.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: Katz Grad School of Business students only.

BIND 2702 - GLOBAL RESEARCH PRACTICUM: LATIN AMERICA

Minimum Credits: 3

Maximum Credits: 3

This course is tied closely to field study abroad, providing a hands-on experience in a foreign culture. Main objectives are to challenge students to consider business issues from a global perspective and to expose them to actual business environments abroad. Requirements include a team research project and an individual cultural report. The course includes a 9-day trip to various businesses in Chile. Students develop a research question in areas of managerial specialization and draw evidence from the field study to support their project report. While abroad, students visit a number of selected organizations and/or companies, and explore current business practices/issues. The group meets for three, 3-hour class sessions prior to the trip. Portions of these classes will focus on developing the research project. Also, to help prepare for the trip, selected outside speakers will share their experiences and perspectives on Latin American business and culture. At the final class session after the trip, projects are presented in both written and oral forms.

BIND 2708 - GLOBAL RESEARCH PRACTICUM: SOUTH ASIA

Minimum Credits: 3

Maximum Credits: 3

This course is tied closely to field study abroad, providing a hands-on experience in a foreign culture. Deliverables from the practicum include a team research project and a professional portfolio designed to capture the international experience. The course includes a trip at the end of the fall semester to various businesses in the host country. Students develop a research question in areas of managerial specialization and draw evidence from the field study to support their project report. While abroad, students visit a number of selected organizations and/or companies, and explore current business practices/issues. Students will be required to attend a module preparing them for the class. This will be scheduled during the fall semester. During the spring semester, the group meets for 3-hour class sessions on Friday evenings as determined by the professors. Portions of these classes will focus on developing the research project. Selected outside speakers may also join the class to share their experiences and perspectives on business and culture.

BIND 2709 - GLOBAL RESEARCH PRACTICUM: BRAZIL

Minimum Credits: 3

Maximum Credits: 3

This course is tied closely to field study abroad, providing a hands-on experience in a foreign culture. Main objectives are to challenge students to consider business issues from a global perspective and to expose them to actual business environments abroad. Requirements include a team research project and an individual cultural report. The course includes a 9-day trip to various businesses in Brazil. Students develop a research question in areas of managerial specialization and draw evidence from the field study to support their project report. While abroad, students visit a number of selected organizations and/or companies, and explore current business practices/issues. The group meets for three, 3-hour class sessions prior to the trip. Portions of these classes will focus on developing the research project. Also, to help prepare for the trip, selected outside speakers will share their experiences and perspectives on Latin American business and culture. At the final class session after the trip, projects are presented in both written and oral forms.

BIND 2710 - GLOBAL RESEARCH PRACTICUM: GLOBAL ENERGY (EASTERN EUROPE)

Minimum Credits: 3

Maximum Credits: 3

Immerse yourself in international business while earning 3 credits. The global research practicum introduces students to the global business of natural gas and other energy resources through visits to 4 interconnected locations: Washington county, PA, Washington, DC, Moscow, Russia and Sofia, Bulgaria. The global energy research practicum features: -first hand exposure to different, and oftentimes conflicting, perspectives on major energy topics -access to natural gas producers, policy makers, and scholars in the US, Russia, and Bulgaria. -Behind-the-scenes site visits to several multinational companies and government institutions. -Cultural trips to famous landmarks, restaurants, shops that teach you about the people and history of Russia and Bulgaria. The global research practicum requires students to complete a small research project drawing on secondary sources and experiences gathered during the trip. Leading the program is Susan Hicks, anthropologist and program manager at the center for Russian and East European studies at the University of Pittsburgh.

BIND 2889 - BRAZIL TODAY

Minimum Credits: 1

Maximum Credits: 1

This short course will explore how these three factors interact in Brazil and in the position of Brazil as a world economy. Examples of questions that may be explored during the lectures and that students may want to explore for their paper are: what is Brazil's role in the world economy? What are the major impediments to Brazil's economic growth? What role does race, ethnicity and class play in shaping Brazil's politics and economy? To what extent is the deep social and economic inequality in Brazilian society rooted in discrimination between races? How has development and trade coupled with Brazil's national economic policy affected Brazil's environment? What are the major impediments to Brazil's economic and business growth? Compare and contrast policy debates, environmental impacts etc. Of economic growth between those of the India and Brazil what does the economic growth mean for: an economically well-off American citizen? An American of lower economic status? An affluent Brazilian citizen? A poor Brazilian citizen? What are the current and future challenges of multinational firms in Brazil and what needs to happen to move towards the path of overcoming these to assist the economic and human growth of Brazil? A review of policies and education on a Brazilian industrial sector such as manufacturing, textiles, shoes, chemicals, cement, lumber, iron ore, tin, steel, aircraft, motor vehicles and parts, other machinery and equipment. Compare and contrast policy debates, environmental impacts etc. Of economic growth between those of the Brazil and another emerging economy such as India)

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad Letter Grade

Course Requirements: PLAN: EMBA Healthcare Program

BIND 2903 - PREDICTIVE ANALYTICS IN HEALTH CARE

Minimum Credits: 1.5

Maximum Credits: 1.5

Healthcare is on a precipice of change. More health care-related data has been generated in the past five years than in the entire history of mankind, and this is expected to increase 50 times over the next few years. The overall objective of this course in Predictive Analytics in Health Care is to familiarize students with large data analytic techniques, and their wide-applicability in guiding decisions in such areas as patient care, research & development, policy, and cost effectiveness. For the most common techniques, the objective is to acquire sufficient mastery through hands-on analyses of data so that students are prepared to apply these techniques in future career positions. For other, more advanced techniques, the objective will be to develop a familiarity about how these methods are used and what questions they can answer.

Interpersonal Skills

SWINT 2004 - GRIEF AND LOSS: INTERVENTIONS, IMPLICATIONS & UNDERSTANDING

Minimum Credits: 3

Maximum Credits: 3

This course explores the various models used by social workers who are interested in meeting the complicated needs of grieving clients and their families. Knowledge based practice patterns rooted in the framework of the tasks of mourning, the mediators of mourning and a review of the dual processing model are provided across a wide range of populations and practice settings.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2007 - INTRO PSYPHMCLGY SOCL WRK PRACT

Minimum Credits: 3

Maximum Credits: 3

This course is designed to familiarize students with the basic terminology and models of pharmacokinetics, and the role of social workers in medication management. The development of psychopharmacology from a historical and sociological perspective as well as an overview of neurochemistry and biological-psychological functioning will be addressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2009 - FAMILY CONFERENCE AND TEAMING

Minimum Credits: 3

Maximum Credits: 3

This course will familiarize students with Family Group Decision Making (FGDM), a cross system practice that builds on the strengths of families by supporting prevention strategies and planning for and ensuring the safety, permanency and well-being of children. Family group decision making recognizes the importance of involving family groups in decision making about children who need protection or care, and emphasizes family empowerment by acknowledging that families should be given the opportunity and responsibility to make their own decisions regarding their children and family members.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082; Minimum grade of B-

SWINT 2011 - SOCIAL WORK PRACT WITH FAMILIES

Minimum Credits: 3

Maximum Credits: 3

This course explores various basic models used by social workers for examining, understanding, and intervening in family processes. Video, role play, and case material are used in developing skills for advanced practice in working with families.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2016 - INTERPERSONAL PSYCHOTHERAPY

Minimum Credits: 3

Maximum Credits: 3

This course builds on the student's knowledge of psychotherapies gained in the prerequisite course, SWINT 2082, Models of Intervention, and expands this knowledge to include a focus on the evidence-based model of interpersonal psychotherapy (IPT). The course enables students to learn skills in applying the latest IPT assessment and treatment methods for a variety of mood and non-mood disorders. Particular attention will be paid to empirical methods of evaluating client progress and outcomes. The course will also focus on the relevance of utilizing engagement strategies and IPT treatment approaches to clinical social work practice with "difficult-to-engage" and "at risk" populations confronting issues of age, race/ethnicity, poverty, gender, sexual orientation, religion, and disability.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 and SWBEH 2065 (MIN GRADE 'B-' for Listed Courses)

SWINT 2025 - SOCIAL WORK PRACTICE IN INTEGRATED HEALTH

Minimum Credits: 3

Maximum Credits: 3

This course focuses on the clinical and administrative skills, roles and functions of social work practice which take place in a wide range of community based agencies and institutions at the primary, secondary and tertiary levels of intervention with and on behalf of a diverse population. Knowledge skills and ethics are integrated toward promoting readiness for employment in the healthcare field.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2030 - DIRECT PRACT WITH ELDERLY

Minimum Credits: 3

Maximum Credits: 3

This course defines the range of interpersonal practice with and for the elderly in terms of primary, secondary and tertiary levels of intervention. A broad range of clinical practice roles is addressed in regards to practice across a broad spectrum of settings. All of the established social work practice approaches are looked at in detail for treatment procedures which can be applied to work with the elderly. An eclectic perspective to practice with the elderly is stressed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2031 - ADV DRCT PRAC: COGNITV/BEHVRL

Minimum Credits: 3

Maximum Credits: 3

Building on the student's knowledge of cognitive/behavioral theory gained in the prerequisite course in generalist practice and models of intervention, this course will focus on these theoretical frames of reference in terms of application to interpersonal practice with individuals, families and groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-'); SBPLAN: Direct Practice (Social Work-MSW)

SWINT 2032 - ADV DRCT PRAC: SOCIAL SYSTEMS

Minimum Credits: 3

Maximum Credits: 3

Building on the student's knowledge of social systems theory gained in the prerequisite course in generalist practice and models of intervention, this course will focus on these theoretical frames of reference in terms of application to interpersonal practice with individuals, families and groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-'); SBPLAN: Direct Practice (Social Work-MSW)

SWINT 2033 - ADV DRCT PRAC: PSYCHODYNAMIC

Minimum Credits: 3

Maximum Credits: 3

Building on the student's knowledge of psychosocial theory gained in the prerequisite course in generalist practice and models of intervention, this course will focus on these theoretical frames of reference in terms of application to interpersonal practice with individuals, families and groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-'); SBPLAN: Direct Practice (Social Work-MSW)

SWINT 2034 - DRCT PRACT DIVERSE POPULATIONS

Minimum Credits: 3

Maximum Credits: 3

This course will focus upon issues of cultural diversity and oppression. It will emphasize empowerment as its overarching framework and as a major goal for social work direct practice with individuals, families and small groups.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Social Work students only.

SWINT 2035 - INTIMATE PARTNER VIOLENCE

Minimum Credits: 3

Maximum Credits: 3

This course examines the dynamics and treatment implications of working with family members who have experienced various forms of physical and/or sexual maltreatment from other family members. Physical and sexual child abuse, spouse abuse and marital rape are topics of concern.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2042 - SOCIAL WORK DRUG & ALCOHOL ABUSE

Minimum Credits: 3

Maximum Credits: 3

This course provides a basic orientation to alcohol and drug abuse as problems requiring social work interventions. Emphasis is placed on examining a variety of treatment approaches in providing services to alcoholics, drug abusers, and their families. Special efforts are made to focus the content on the needs of working populations experiencing problems with alcohol and drugs, as well as their families.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2046 - PLANNED SHORT-TERM TREATMENT

Minimum Credits: 3

Maximum Credits: 3

A pluralistic theoretical framework for planned short-term treatment, highlighting contributions from interpersonal and social learning orientations is examined, and major research studies supporting short-term intervention are reviewed. Attention is given to the goals and process of the initial interview and major change strategies (behavioral rehearsal, task assignment, skill training, and cognitive restructuring) are discussed.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2047 - CHILD PERMANENCY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to provide the history, definitions, forms and skill sets for permanence for children and families served by the child welfare system. Based on an historical understanding of program development and human development needs, the course will offer a paradigm for providing healing interventions for children who come to the attention of the child welfare system. The course will explore ways that support is needed and provided to all parties in the work of permanency. The course also will look at the implications of permanency with regards to social/community health and wellness.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2049 - DIRECT PRACTICE WITH CHILDREN

Minimum Credits: 3

Maximum Credits: 3

This course prepares students to work directly with children in social work settings. A variety of teaching techniques are used to help students: utilize different theories and models of working with children; differentiate fact from inference and normal from deviant development; be comfortable with a variety of play media; and examine in-depth the theme of separation and its effect on the child.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2050 - COUPLES THERAPY: THEORY & TECHNIQUES

Minimum Credits: 3

Maximum Credits: 3

This course concentrates on theory and techniques of treatment with the marital dyad. Emphasis is on empirically validated methods, with particular focus on developing an eclectic approach for advanced social work practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2053 - GROUP INTERVENTIONS WITH HIGH-RISK POPULATIONS

Minimum Credits: 3

Maximum Credits: 3

Theory and concepts related to advanced social work practice with groups, including knowledge of group types, processes, selection, and composition, as well as group leader roles and functions are all considered.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2058 - SOCIAL WORK EDUCATIONAL SETTINGS

Minimum Credits: 3

Maximum Credits: 3

This course provides a knowledge base for the practice of social work in school or school-related settings. Focus is on application of knowledge, and values and skills of social work practice toward resolution of diverse problems encountered by pupils, schools and communities in the effort to achieve educational goals.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2063 - ISSUES IN CHILD MALTREATMENT

Minimum Credits: 3

Maximum Credits: 3

This course will provide a comprehensive examination of child sexual maltreatment issues at the micro, meso, and macro levels: etiology; identification; child welfare system response; treatment; the impact the maltreatment has upon individuals, families, groups, and the community (including those coming into contact with maltreatment in the course of their work) and resilience in the face of maltreatment. Emphasis will be on the student's development of assessment skills, knowledge of the therapeutic process of recovery, and the role and function of organizations. Social work interventions and treatment modalities, including outcome data, will be presented. Students will be offered information about maltreatment among diverse populations. All topics will be related to and examined in the light of the core values, ethical principles, and standards of the national association of social workers code of ethics.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2072 - SOCIAL WORK PRACTICE AND TRAUMATIC STRESS

Minimum Credits: 3

Maximum Credits: 3

This course addresses theories of primary and secondary (vicarious) traumatic stress; the nature of traumatic events and environments; and the potential impacts on individuals, families, groups, and communities. Students will be offered information about traumatic exposure and stress among diverse populations. Interventions and treatment modalities for working with those affected by traumatic stress using the person-in-environment perspective will be presented. All topics will be related to and examined in the light of the core values, ethical principles, and standards of the national association of social workers code of ethics. Emphasis will be on the student's development of practice competencies such as critical thinking, supporting the therapeutic process by the use of research-informed and strengths-based practice, identifying opportunities for advocacy, effective self-care, and understanding the role and function of organizations in creating trauma-informed human services environments.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082, Minimum grade of B-

SWINT 2073 - INTEGRATED HEALTHCARE AND PHARMACOLOGY

Minimum Credits: 3

Maximum Credits: 3

This course is designed to develop general knowledge of medical terminology and the social worker's role in medication management. Students learn how to educate and support patients in adhering to recommended medication treatment and in being knowledgeable about possible side effects. Social workers have an extremely important role to play in the patient's ability to adhere to medication requirements. They can support patient compliance with medication by providing information and education that allows that patient to have realistic expectations for what may be achieved with medication. In addition, they can also work with patients to achieve their goals for improving medication adherence.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Requirements: PREQ: SWINT 2082; Minimum grade of B-

SWINT 2074 - SPIRITUALITY AND SOCIAL WORK

Minimum Credits: 3

Maximum Credits: 3

This course explores the role, nature, and impact of spirituality in and upon social work practice and the populations that social workers serve. It builds upon an understanding of spirituality and religious practice as aspects of human diversity which occurs in the context of ecosystems theory, theories of human development, and models of helping. Students will gain spiritual assessment and intervention skills within the scope of social work practice including micro, mezzo and macro levels of practice. Course will highlight themes of cultural competence, variety of spiritual and/or religious practices and traditions, potential harms and benefits, professional development, and ethical considerations for practice.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082; Minimum grade of B-

SWINT 2076 - HUMAN SEXUALITY

Minimum Credits: 3

Maximum Credits: 3

This course presents current research about human sexuality, discusses the range of sexual life-styles, and develops a treatment typology for therapists working with couples and individuals with sexual dysfunctions.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2082 - MODELS OF INTERVENTION

Minimum Credits: 3

Maximum Credits: 3

The course provides a framework for understanding and differentially using treatment models in interpersonal social work practice. It examines four basic treatment models: psychosocial, crisis intervention, behavior modification, and an interpersonal approach based upon either communication theory, the client-centered approach, or an experiential humanist approach. These basis models are compared and contrasted.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWGEN 2098 and SWBEH 2063 and SWWEL 2081; CREQ: SWRES 2021; SBPLAN: Direct Practice (Social Work-MSW)

SWINT 2087 - SPECIAL TOPICS

Minimum Credits: 1

Maximum Credits: 3

Given the changing nature of social work practice, the MSW program occasionally offers courses in new and/or unique content areas. When offered, this course is designed to provide skill and knowledge content not covered in other direct practice skill courses.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

Course Requirements: School of Social Work students only.

SWINT 2096 - CLIN SOCL WRK AFRCN AMERCN FMLY

Minimum Credits: 3

Maximum Credits: 3

The overall objective of this course is to provide a knowledge base on African-American families within a community context that is the basis for developing methods and skills relevant for clinical intervention with African American families. It will provide the student with the opportunity to expand on concepts, skills and assumptions about clinical transactions learned in basic clinical method courses. Conceptual models for assessment/intervention will assist students to clarify and become comfortable with theoretical and practice approaches with black families.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: SWINT 2082 (MIN GRADE 'B-')

SWINT 2097 - DRCTD STUDY INTERPERSONAL SKILLS

Minimum Credits: 1

Maximum Credits: 3

A student-initiated educational experience, guided by a faculty member that significantly supplements the social work interpersonal skills curriculum and conforms to academic course content expectations.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SU3 Basis

SWINT 2099 - FIELD WORK

Minimum Credits: 1

Maximum Credits: 8

The field practicum emphasizes the integration and application of social work values, knowledge and skills in practice settings. Placements are in community service delivery systems and are individualized to combine the student's choice of concentration area, certification program and specialized skills interest.

Italian

ITAL 2088 - TOPICS IN ITALIAN DIASPORA STUDIES

Minimum Credits: 3

Maximum Credits: 3

This graduate-level seminar explores the notion of Italian Diaspora, possibly addressing any of the following questions: the history of emigration from Italy; the languages, literatures, cinemas, and/or cultures of Italian emigration, in Italian or any of the languages of destination countries; the materiality of the Italian Diaspora; the critical human geography of the Italian Diaspora; Italian emigration from the perspective of any destination culture (Italian American, Italian Argentinian, and so forth); italianità, or globally-inflected notions of Italianness created through or in diasporic movements initiating in Italy; comparative studies of Italian Diasporas and other migratory phenomena that engage Italy (over the Mediterranean, from Eastern Europe, or from Asia, for example).

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ITAL 2092 - ITALIAN TRANSLATION STUDIES

Minimum Credits: 3

Maximum Credits: 3

This course explores the field of Translation Studies from the Italian perspective. It may address any or all of the following issues: the history of translation as a literary practice, editorial projects that involve translation, the ethics of translation, translation between standard and dialect languages, translation and power relations, the relative primacy of source and target texts, the relationship between translation and global literatures. Students will develop and pursue final projects that involve commentary on published translation or new translation projects with annotation.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

ITAL 2200 - DANTE

Minimum Credits: 3

Maximum Credits: 3

A close reading of selected cantos from Dante's divine comedy.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ITAL 2315 - RENAISSANCE HUMANISM

Minimum Credits: 3

Maximum Credits: 3

This course examines the major figures in Renaissance humanism, moving from the civic humanism of Florentine authors like Bruno to the philological humanists such as Poliziano. Attention is given also to the independent vernacular humanists, Alberti and Leonardo.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

ITAL 2410 - SETTECENTO

Minimum Credits: 3

Maximum Credits: 3

A survey of Italian literature of the xviiith century: particular attention will be paid to the works of Pietro Metastasio, Carlo Goldoni and Vittorio Alfieri, as well as critical and theoretical texts of the period on theater.

Academic Career: Graduate

Course Component: Lecture
Grade Component: Grad LG/SNC Basis
Course Attributes: West European Studies

ITAL 2420 - GOLDONI

Minimum Credits: 3

Maximum Credits: 3

A course in Goldoni's plays and history of the theater in the 17th and 18th centuries.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

ITAL 2500 - OTTOCENTO 1

Minimum Credits: 3

Maximum Credits: 3

A course in the literary and critical trends of the first quarter of the nineteenth century.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

ITAL 2610 - SICILY WRITING AND WRITTEN

Minimum Credits: 3

Maximum Credits: 3

This graduate-level seminar provides a forum for the analysis of Sicilian cultural production and a laboratory for the production of new knowledge about this Mediterranean Island. The seminar's texts are chiefly drawn from narrative and poetic genres, but also considers cinema, theatre, journalism, essays, and the visual and plastic arts that seek to express and represent the Sicilian experience.

ITAL 2710 - INTRODUCTION TO LITERARY AND CULTURAL THEORY

Minimum Credits: 3

Maximum Credits: 3

In this course intended for beginning graduate students in the modern languages, students will survey major movements and concepts in literary and cultural theory of the 20th/21st centuries. These theories have provided us important ways to think about how to read and interpret literature, film, and other cultural artifacts, and, as such, are an important aspect of graduate studies in the humanities. This course is meant to provide students a general background in theory that they can further develop in certain areas as they continue their studies. The course will be taught in English, and all readings will be available in English.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

ITAL 2801 - HISTORY OF ITALIAN LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

The course will be organized around the central problem that has persisted throughout the history of the language, the so-called *Questione Della lingua*, or the question of which, if any, of its many co-existing forms is the true or correct or in some way the preferable form of Italian.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

ITAL 2902 - DIRECTED STUDY

Minimum Credits: 1

Maximum Credits: 3

This course enables M.A. Candidates to do research under the direction of a faculty member, on a topic of mutual interest.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Course Attributes: West European Studies

ITAL 2903 - MA RESEARCH PAPER DIRECTED STUDY

Minimum Credits: 3

Maximum Credits: 3

In partial fulfilment of the MA in Italian Language and Literature, all students must write a Master's Research Paper (or *tesina*) of professional article quality and length (30 pp min.). Students must conduct research beyond the scope of any single graduate term paper, but are encouraged to develop and formulate their topic in the context of one particular seminar (or two, if seminars are thematically or otherwise related). Students will work closely with the faculty member whose field is most relevant to the chosen topic (typically the faculty member who initially taught the seminar that generated the initial term paper) to identify, appropriate areas for expansion, additional texts or case studies, and relevant methodologies. The paper must be written in Italian.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

ITAL 2910 - COMPREHENSIVE EXAMINATION MA

Minimum Credits: 1

Maximum Credits: 3

This course is intended for M.A. Candidates in their last term of study when they present themselves for the ma comprehensive examination.

Academic Career: Graduate
Course Component: Independent Study
Grade Component: Grad SN Basis
Course Attributes: West European Studies

ITAL 2970 - TEACHING OF ITALIAN

Minimum Credits: 3

Maximum Credits: 3

This course will review the theory and practice of Italian language teaching. This will include all aspects of language teaching and testing, cultural understanding, bi lingual education and the teaching of reading.

Academic Career: Graduate

Course Component: Practicum

Grade Component: Grad LG/SNC Basis

ITAL 2990 - INDEPENDENT STUDY

Minimum Credits: 1

Maximum Credits: 3

This independent course is for M.A. Students who have completed, or are completing in their last term of study, all course requirements for the M.A. Degree.

Academic Career: Graduate

Course Component: Independent Study

Grade Component: Grad SN Basis

Japanese

JPNSE 2023 - ASPECTS OF THE JAPANESE LANGUAGE

Minimum Credits: 3

Maximum Credits: 3

This course introduces the student to the Japanese language through a study of its structure, vocabulary and cultural heritage. Some topics discussed include word order, basic structural patterns, particles such as Wa and Ga, sexism, and word formation. This course is useful for the Japanese studies student wishing to have a deeper understanding of the language as well as the linguistics student interested in gaining knowledge of a non-Indo-European language.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2035 - PRAGMATICS OF JAPANESE

Minimum Credits: 3

Maximum Credits: 3

This course will provide an introduction to the usage aspects of Japanese by reading articles on pragmatic aspects of the language. The instructor will lecture on salient points and lead discussion on specific issues and the appropriate use of the language.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2056 - JAPANESE LITERATURE AND THE WEST

Minimum Credits: 3

Maximum Credits: 3

A critical study of modern Japanese works and selected modern Western literary materials with special emphasis on intensive analysis by means of

modern Western criticism. The course is designed to encourage the student to examine significant similarities and differences between Japanese and non-Japanese materials and to judge the content from an oriental as well as a Western perspective.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2057 - JAPANESE CULTURE AND SOCIETY THROUGH CINEMA

Minimum Credits: 3

Maximum Credits: 3

This course provides a critical study of selected international prize winning Japanese films and compares these films with Western films dealing with similar themes. The student learns to analyze and interpret films; becomes familiar with particular genres of Japanese films compared with Western; studies the history of Japanese cinema and its place in international cinematography and exposes the inter cultural benefits of judging the content of the films from oriental and Western aesthetic perspectives.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2058 - WESTERNS AND SAMURAI FILMS

Minimum Credits: 3

Maximum Credits: 3

A focus on the critical comparative study of two filmic genres--the samurai representing Japanese cinema and the Western representing American cinema. The course demonstrates the analytical processes of the film leading to its structural unity; shows the significance of both genres with respect to the history of Japanese, American and European cinema; compares approaches to films of different countries and provides the overall benefits of approaching films from an intercultural standpoint.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2059 - JAPANESE LITERATURE ON SCREEN

Minimum Credits: 3

Maximum Credits: 3

This course will investigate how literature and film treat some major ideological and socio-cultural issues in Japanese society. Readings of pre-modern tales, modern fiction and contemporary novels. Film adaptations will represent the best of Japan's postwar cinematic tradition. The course is designed for the student interested in Japanese society, culture and intellectual currents through film and literature.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2070 - WORLD OF JAPAN

Minimum Credits: 3

Maximum Credits: 3

Students will receive a grounding in basic principles of Japanese classical literature, poetry and aesthetics. They will read the entire text in English of the Tale of the Genji and examine important works in Japanese literature composed in later periods.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2071 - THE WORLD OF JAPAN

Minimum Credits: 3

Maximum Credits: 3

This course covers the period between 1570 and 1870. Beginning with the unification of Japan under sixteenth century military war lords and ending 1963

with the collapse of the Tokugana Shogunate. Students will read selections from the major scholarly literature on the period.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2080 - GHOSTS, MASKS AND ACTORS

Minimum Credits: 3

Maximum Credits: 3

A critical study of three major dramatic genres of Japan--noh, bunraku and kabuki--in cultural origins. Areas to be explored are the use of masks in the world of the noh theatre, the kabuki with its female impersonators and the near-lifesize puppets of the bunraku. Also discussed is the impact that noh and kabuki have had on modern Japanese and non-Japanese theatrical and film genres.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2081 - FORMS OF JAPANESE THEATRE

Minimum Credits: 3

Maximum Credits: 3

This course will provide a survey of various major forms of Japanese theatre using English language materials. Students will have access to relatively ancient forms of Japanese theatre such as kagura and no, kabuki drama and the bunraku puppet theatre through film and videocassette. The modern and avant-garde theatre are also accessible through translation and videocassette material. This course is designed for upperclass majors in theatre arts and non-majors in related fields.

Academic Career: Graduate

Course Component: Lecture

Grade Component: Grad LG/SNC Basis

JPNSE 2700 - INTRODUCTION TO THEORY AND PRACTICE OF TRANSLATION

Minimum Credits: 3

Maximum Credits: 3

This is an introductory course that answers to a growing interest in the theory and practice of translation from Japanese to English. The genres of texts that will be dealt with include literary works of various kinds (novels, poems, children's books), magazine and newspaper articles, web posts, manga, subtitling of anime and other videos, and texts of technical nature. Students will first learn broadly about the discipline of translation studies, including a history of translation and issues in translation (invisibility of the translator, culturally specific translatability issues, etc.). Students will then learn specific types of translation issues that come up when translating Japanese into English, using excerpts from a variety of genres as case studies. Special attention is paid to the structural differences between Japanese and English, cross-cultural differences in stylistics, writing with clarity, reference work, etc.

Academic Career: Graduate

Course Component: Lecture

Grade Component: LG/SNC Elective Basis

Latin

LATIN 2218 - LATIN SEMINAR: RHETORIC

Minimum Credits: 3

Maximum Credits: 3

This seminar will study the theory and practice of Roman rhetoric in varying literary, philosophical and historical contexts. We will read key passages and orations from a selection of authors including Cicero, Seneca, and Tacitus, and analyze their rhetorical structure and argument. At the same time, we will approach the genre of rhetoric as a window into the social and cultural settings in which the authors wrote.

Academic Career: Graduate

Course Component: Seminar

Grade Component: Grad LG/SNC Basis

LATIN 2902 - DIRECTED STUDY FOR M.A. STUDENTS

Minimum Credits: 1

Maximum Credits: 9

Directed study on classical topics for students in the M.A. Program.

Academic Career: Graduate

Course Component: Directed Studies

Grade Component: Grad LG/SNC Basis

Law - JD course offerings

LAW 5020 - CONTRACTS

Minimum Credits: 4

Maximum Credits: 4

What promises are legally enforceable? Why does the law enforce those promises? What does it mean to enforce a promise? This course explores those questions, using the basic concepts, principles, and doctrines of contract law, sometimes called "the law of broken promises." Specific topics include the requirements for formation of a contract (such as offer and acceptance), justifications for enforcing promises (such as consideration or detrimental reliance), justifications for denying or limiting enforcement (such as unconscionability or mistake), interpretation of contract terms, and remedies for breach of contract.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5024 - PROPERTY

Minimum Credits: 4

Maximum Credits: 4

Property law, broadly defined, governs relationships among people with respect to "things." These "things" include land ("real property"), tangible objects such as a casebook ("personal property"), and intangibles such as a publisher's right to prevent others from reproducing the original content in a book ("intellectual property"). The property course examines how property rights may be limited, in situations where more than one person has rights to the same piece of property, and in situations where one owner's rights must be balanced against the rights of the owner of a separate piece of property. Topics covered in the property course may include: modes of acquisition of property (e.g., Capture, find, creation), present possessory estates and future interests, co-ownership of property, marital property, landlord-tenant law, land sales, title recording systems, easements, restrictive covenants, nuisance, public land use regulation (including zoning, eminent domain, and the issue of regulatory takings), and global property issues.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5028 - TORTS

Minimum Credits: 4

Maximum Credits: 4

This course explores the methods and policies for allocating losses from harm to one's person, property, relations, and economic and other interests. The course covers the substantive principles of tort claims and their defenses. The course examines the three main theories of tort liability: intent, negligence, and strict liability and analyzes the theoretical and practical aspects of tort liability.

LAW 5038 - ENERGY LAW AND REGULATION

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to energy law with emphases on public utility regulation, electricity, and the effect of fuel choice on electricity regulation. The course consists of four modules. The first module on public utility regulation addresses the basic function of public utilities; the contemporary public utility scheme for energy; the basics of ratemaking economics. The second module on electricity regulation addresses the evolution of electricity regulation from the monopoly model to modern restructuring and competition; a technical understanding of electricity generation, transmission, and distribution; the functioning of electricity markets; Pennsylvania's framework for regulating electricity markets. The third module on the relationship between fuels and electricity regulation addresses the conversion of fuels to electricity; a comparative analysis of coal, wind and solar power; major issues in public utility regulation and litigation that relate to the transition from traditional to renewable fuels; Pennsylvania's framework for renewable energy. The fourth module consists of a brief introduction to natural gas regulation at the federal level and

in Pennsylvania. The course provides students with an understanding of (1) public utility regulation of energy, with a focus on electricity; (2) the relationship between electricity regulation and fuels, especially coal and renewables; (3) the public utility regulation of natural gas; (4) the regulatory framework for electricity and natural gas in Pennsylvania.

LAW 5039 - MEDIA LAW

Minimum Credits: 2

Maximum Credits: 2

The last two years have seen the revelation of "deep throat", the most famous confidential source of all time, juxtaposed with the spectacle of reporters going to jail for refusing to divulge confidential sources. Representing a media client today requires an understanding of the constitutional and statutory issues surrounding the gathering of news and protection of confidential sources. Although the confidential source issue is the hottest issue today, representing a media client involves much more. This course is designed to provide an overview of both the legal framework and the 'real world' considerations related to libel, invasion of privacy, access to courtrooms and judicial records, access to public records, protection of confidential sources, pre-publication review, and responding to subpoenas."

LAW 5041 - LAWYERING: A HISTORY

Minimum Credits: 3

Maximum Credits: 3

This course will survey the history of lawyering from ancient times to the present day. Students will be invited to meet Cicero and the Roman jurists, look inside medieval courtrooms to see English common lawyers and European civilians at work, experience the rhetoric of John Adams and Daniel Webster while considering the daunting challenges faced by the emerging bar in early America, and assess the economic, industrial and organizational conditions that contributed to the cultural ascendancy of lawyers in the twentieth century United States. We will investigate both the historical successes of the legal profession and its failures, its championing of great causes and its complicity in great injustices. We will look at lawyering in its changing social, ethical and technological contexts, examining how lawyers over time and in various national settings have constructed their identities, established their power, viewed their duty, and articulated their collective mission. We will investigate how lawyers have been trained, and how different methods of legal education have shaped them. We will learn about legal lives lived far away and right here in Pittsburgh. We will look at today's American bar, assessing its recent history as a business dominated by the rise of the billable hour, and at the end of the course we will peer into some of the possible futures awaiting attorneys working in a digital age.

LAW 5043 - INT'L COMMERCIAL ARBITRATION

Minimum Credits: 3

Maximum Credits: 3

This course will begin with coverage of basic aspects of the law of international commercial arbitration, including arbitral jurisdiction, arbitration procedure, choice of law, and enforcement of awards. This will include coverage of the New York Arbitration Convention and the U.S. Federal Arbitration Act, along with a focus on the UNCITRAL Model Law on International Commercial Arbitration and the UNCITRAL Arbitration Rules. In order to provide a practical context for consideration of arbitration law and policy, we will work with the problem for the Vis International Arbitration Moot that will become available the first week of October. After a review of the problem, we will catalogue the major issues and each student will be assigned a topic from that list for his or her course paper. We will work through all of the arbitration procedure issues as a class, using the contributions of each student to build the arguments and analysis for each side in the Vis problem. We will also cover the basic substantive law issues raised under the United Nations Convention on Contracts for the International Sale of Goods (CISG). Each student will also be assigned a position to be presented in a mock arbitration at the end of the semester, using the Vis problem studied during the semester. The Pitt Law Vis Moot team for the following year may be selected at the end of the semester from the J.D. students in the course, consistent with announcements made prior to the beginning of the semester.

LAW 5075 - LEGAL ANALYSIS AND WRITING

Minimum Credits: 4

Maximum Credits: 4

Students in this first year course will begin to develop the art of analytical legal writing. In classes, students engage in discussions and practical exercises as they learn to analyze cases, statutes and other authorities. The course emphasizes student development in the following skills: organizing the analysis of legal issues logically and coherently; expressing written legal analysis clearly, concisely, and effectively; developing and defending legal arguments, both in writing and orally; performing basic legal research; drafting selected legal documents; and using proper citation form. Exercises and other assignments promote the students' awareness and appreciation of relevant ethical standards. Registration in this course is limited to spring term transfer students.

LAW 5082 - CLIMATE CHANGE AND THE LAW

Minimum Credits: 2

Maximum Credits: 2

This course examines the problems of climate change and how law and policy and corporate America are responding to them. The course begins by describing what is encompassed under the current "climate change" debate; considering what science can tell us about the climate change issue, including the uncertainties in that science and the significance and role of descent from the mainstream view of the science. It then considers, given the current state of the science, how we should assess the actions that should be taken to respond to this problem. That assessment should take account mitigation vs. Adaptation. The course also considers the legal responses to the issue of climate change. This course will discuss the united nations framework convention on climate change (UNFCCC), the Kyoto protocol, and the likely future of both. This course will discuss the domestic federal legislation with regard to GHGS as well as certain regional initiatives and voluntary commercial GHG reduction schemes. This part of the

course will be examining the "Boomlet" in global warming litigation in federal and state courts looking at the administrative and tort actions pending in U.S. Courts. Finally, the course will address sustainability issues for business, including green building, carbon neutral strategies, certain esoteric accounting issues, some carbon trading issues. Lectures will include voluntary and NGO-driven business initiatives (proactive approaches) as well as certain secondary effects caused by climate change that affect businesses.

LAW 5089 - PUBLIC HEALTH LAW

Minimum Credits: 3

Maximum Credits: 3

Public health law touches the lives and livelihoods of every person. Understanding the intent, basic structure, and methods for employing the local, state, and federal laws governing public health activities will facilitate legal practice in a variety of disciplines, including: municipal, healthcare, environmental, and judicial practice. This is a survey course, intended to introduce students to the most commonly encountered national and world public health law issues. Specific topics include: an overview of the epidemiologic principles underlying public health law; police powers; balancing public and private interests at stake; privacy and confidentiality of public health information, emergency preparedness; search, inspection, embargo and condemnation of private property; abatement of nuisances and dangerous conditions; and the major federal statutes affecting public health. In addition, material concerning world public health issues will be presented to help students understand the community health benefit from comprehensive public health legislation. Finally, ongoing local public health law interventions will be analyzed using the basic principles introduced early in the course.

LAW 5090 - CONSTITUTIONAL LAW: FREEDOM OF RELIGION

Minimum Credits: 2

Maximum Credits: 2

This course will examine the Establishment and Free Exercise Clauses of the First Amendment to the United States Constitution. We will examine the history and purposes of the clauses. We will also examine the Supreme Court's doctrinal tests to analyze how the Court's theories regarding the clauses have changed over time and how to approach litigation strategy. Classroom discussion will focus on the application of these tests, the limitations of each test, and whether each test fulfills the purposes of the Religion Clauses. We will discuss majority, concurring, and dissenting opinions to flesh out the issues. Throughout the course, we will discuss how the requirements of the Establishment Clause and Free Exercise Clause can be reconciled and whether any of the current tests or theories can provide a workable solution and balance.

LAW 5105 - FEDERAL INCOME TAXATION

Minimum Credits: 4

Maximum Credits: 4

This course will introduce the basic concepts found in the internal revenue code, as interpreted by the internal revenue service and the courts. We will explore the concept of "income," and specifically consider the difference between ordinary income and capital gain, the timing of income inclusion, and the determination of a taxpayer's basis in property (which relates to the calculation of income). We will also explore exclusions and deductions that may reduce a taxpayer's income. This course has two primary goals: first, to give the students a basic familiarity with the internal revenue code so that they will be aware of tax issues that may arise in their practice, and second, to prepare students who have (or acquire) a deeper interest in tax for more advanced courses in taxation.

Academic Career: LAW

Course Component: Lecture

LAW 5116 - COMPARATIVE LEGAL CULTURES

Minimum Credits: 3

Maximum Credits: 3

The course is designed to introduce students to the civil law tradition, with specific reference to French and German civil law tradition. Constant reference will also be given to the Italian civil law tradition. The introduction to the civil law will mostly avail itself of comparisons between civil law and common law traditions. This approach will therefore call for a previous investigation on the theoretical underpinnings of "comparative" law as a legal discipline. Emphasis will be placed on the historical ancient and more recent roots that help explaining why civil law systems have developed features that distinguish the two law systems. Attention will also be given to the supposed converging trends between the two legal families. In a world that is globalizing universal structures are on the increase and the exponential growth of technologies poses new challenges that need to be addressed by giving prompt and creative answers, without waiting for legislative solutions. The course will consider topics such as legal reasoning the education of lawyers, the system of the civil codes, the judicial interpretation of statutes, the force of precedents and the role of judicial review. Firsthand experience of the civilian every day legal life will be shared as much as possible. The ultimate goal will be the student not only to "learn" but also, to some extent, to "experience" how civil lawyers approach the law.

LAW 5124 - THE CIVIL LAW TRADITION IN U.S. COURTS

Minimum Credits: 3

Maximum Credits: 3

The civil law is the legal tradition of all of continental Europe and many other parts of the world. In our time of globalization, lawyers have increasing contacts with colleagues and clients from abroad. This course is designed to introduce you to the civil law legal tradition, and to familiarize you with foreign legal assumptions, institutions and reasoning through an examination of various areas of law, including civil and criminal. The cases and codifications studied will be principally those of France and Germany. The course also seeks to develop in students a comparative law approach to understanding foreign law more generally.

Course Requirements: PREQ: LAW 5112 or LAW 5141 ; PROG: School of Law (LAWSC)

LAW 5129 - FEDL COURTS & FEDL LITIGATION

Minimum Credits: 3

Maximum Credits: 3

One of the defining features of the American legal system is federalism, the division of powers between the national and the state governments. This course deals primarily with two recurring problems in civil practice that have their roots in this division of powers. First, do one or both litigants have a choice between federal and state court, and, if so, how can the litigants maximize the likelihood of securing the preferred forum? Second, when does federal law trump state law? A dominant theme of the course is the relationship between legal doctrines and the practical consequences of those doctrines in light of existing (and possible future) institutional arrangements. In particular, defendants in civil cases often prefer federal court; plaintiffs tend to prefer state court. But the rules and doctrines that determine which side gets its preferred forum will often be invisible to the average lawyer. One purpose of this course is to alert students to the pitfalls that can trap the unwary; here, more than in other areas of the law, a little learning can be a dangerous thing. Representative topics include: the prerequisites for Supreme Court review of state-court judgments; elements of federal question jurisdiction; removal of cases from state to federal court; and the power of the federal courts to apply rules of law different from those applied in state courts. Attention will be given to litigation strategy (especially the choice of forum) as well as to critical analysis of the doctrines and statutes. This course will be taught by a sitting Federal Appeals Court Judge who will incorporate his perspective as both a former practitioner and as a jurist.

LAW 5132 - LAW AND HUMAN BEHAVIOR

Minimum Credits: 3

Maximum Credits: 3

In order to be effective, lawyers must understand both their clients and the operation of the legal system. Often, legal analysis imbues both clients and the legal system with the qualities of rationality: clients engage in cost-benefit calculations of success and the standard of the legal system is the "reasonable person." Recent developments in the social and natural sciences raise questions about the sufficiency of these models. The standard definition of rationality may be too narrow - a client may want an apology from an adversary rather than just a monetary award - and clients and legal systems do not always act in rational ways. This course will provide students with concrete insights from the social and natural sciences to help them become lawyers better able to assess both clients and the workings of the legal system as a whole. Examples will be drawn from a wide array of legal contexts: from client contacts to jury selection to subtle forms of discrimination to judicial ideology. Emphasis will be on understanding human behavior both as a predicate for effective legal regulation and as a predicate for the values - including economic, ideological, and religious values - that inform voting and legislative determinations. Several school faculty who employ these insights in their scholarship will visit the class to discuss their work. The course's goal is to provide students with a richer set of analytic and practical tools for them to become more effective attorneys in whatever area they may come to practice.

LAW 5133 - UNDST LGL SERVC MKTPLC

Minimum Credits: 2

Maximum Credits: 2

Today's increasingly competitive marketplace demands that new attorneys have an understanding of the commercial landscape of the legal services industry as complement to their substantive legal knowledge and as a means towards making a contribution to their firm, company or organization. This course is an exploration of the industry from three perspectives. The first is a birds-eye view that will examine macro-trends in the industry. The second is the view from the demand side of the industry where we will explore the types of issues driving demand for legal services, factors driving the decisions to procure legal services, and how legal services purchasers/users evaluate the services rendered. Throughout the course we will evaluate real-life, contemporary scenarios and interact with practicing attorneys, clients, and judges. The third is the view from the supply side of the industry where we explore the sales, marketing, operations and soft skills associated with the provision of legal services in the law-firm and in-house contexts.

LAW 5135 - COMMERCIALIZING NEW TECHS

Minimum Credits: 3

Maximum Credits: 3

The key challenge addressed in this joint project course between the Katz Business School and the Law School is how to commercialize new technologies. Commercialization is the process of transforming an invention (i.e. A new technique or artifact that performs a useful function) into an innovation (i.e. A product or service that creates value in a specific use). Whether a new technology originates in a university, in an established company, or with an individual inventor, several issues must be addressed in order to determine whether it is worth investing in further, and to decide how the technology can be commercialized for maximum long-term value. We will focus on four types of analyses as input to a commercialization strategy: (i) technology analysis, (ii) market analysis, (iii) competitive assessment, and (iii) business model evaluation. For each, you will be provided with one or two practical articles, which outline an analytical tool or approach, and we will discuss their application to one of the cases. Although we'll walk through these steps in the order listed, they will need to be conducted iteratively (e.g. As you learn more about market opportunities you may wish to revisit your initial assessment of the technology's core elements). Throughout the course, law students will have the opportunity to assist the team in assessing legal matters that impact commercialization (from intellectual property matters, to regulatory landscape impacts, to alliance considerations) while also gaining an understanding of key business goals, strategies and tactics.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5142 - LEGAL WRITING FOR THE TRANSACTIONAL LAWYER

Minimum Credits: 2

Maximum Credits: 2

This course will introduce students to the craft of drafting transactional agreements. This course is meant to fill a void that currently exists between formal law school education and actual work as a practicing attorney. Oftentimes, the first experience that young transactional lawyers have with drafting agreements follows a familiar pattern, the young lawyer is given a form as a starting point, then asked to make changes to the form to "draft"

the needed document. The young lawyer may successfully edit the party names and dates, but usually has little understanding of the rest of the agreement or even the basic business terms that the agreement must memorialize. Unfortunately, the realities of modern law practice may preclude inexperienced drafters from taking the time to properly hone their craft. This course will prepare students for entering a transactional practice by allowing students to practice drafting and editing agreements, examine strategies for avoiding ambiguities by crafting precise language, and work in a fast paced, team-oriented environment.

LAW 5143 - WATER & SHALE GAS DEVELOPMENT

Minimum Credits: 1

Maximum Credits: 1

Water plays a critical role in the development of our shale gas resources. This course will examine the relationship between water and shale gas extraction. The emphasis will be on the life cycle of water used in shale gas well development, beginning with common law, statutory and regulatory rights and requirements governing the ownership and allocation of water resources, with particular attention paid to interstate compacts and basin wide water allocation mechanisms. The course will place an emphasis on emerging issues that attorneys face in practice and will include guest lectures by hydro-geologists, geochemists, and other professionals. Some of the issues that will be covered include: common law water quantity rights; basin commission water quantity regulations, and their impact on shale development's significant water withdrawals; the application of the clean water act and the state version of it (the clean streams law) to the shale extraction process; treatment and disposal of wastewater; groundwater contamination; local zoning and land use; and trends in shale-based litigation.

LAW 5145 - SECTION 1983 LITIGATION: CONSTITUTIONAL LAW IN ACTION

Minimum Credits: 3

Maximum Credits: 3

This is a course in advanced constitutional rights litigation brought pursuant to 42 USC §1983-- the federal statute which puts constitutional rights in action. It focuses on the means by which constitutional rights claims are actually litigated in lawsuits against public officials and local governments. Topics will include what it means to act "under color of state law;" absolute and qualified immunities; government liability for the acts of individual officials; remedies for constitutional violations, including monetary and injunctive relief; structural reform litigation; and the award of attorney's fees. The objective of the course is to provide students with the threshold substantive knowledge-- to be able to bring or defend a § 1983 case--- with the presentation facilitated by using "real-life cases" actually litigated by the instructors-- who between them have over 80 years of combined §1983 federal court trial and appellate litigation experience; and--who accordingly--expect to provide practical insights into how §1983 cases are litigated.

Grade Component: Grad LG/SU3 Basis

LAW 5149 - LAW OF ARMED CONFLICT

Minimum Credits: 2

Maximum Credits: 2

The Law of Armed Conflict (LOAC), also known as International Humanitarian Law (IHL), is an area of public international law. It is responsible for regulating the conduct of armed hostilities, and balances the desire of states to prevent unnecessary suffering and destruction on one hand with the need to permit the effective waging of battle on the other. LOAC makes special provision for the protection of civilians, prisoners of war, the wounded, sick, and shipwrecked. LOAC applies to international armed conflicts (conflicts between states) and to non-international armed conflicts (conflicts between states and certain non-state groups). This course will explore: how conflicts are characterized (as IACs/NIACs or purely "domestic" actions); the main rules underlying the conduct of hostilities; and how those rules are enforced. Real-world examples and case studies will be used to elucidate theory.

Academic Career: Law

Course Requirements: PROG: School of Law (LAWSC)

LAW 5150 - LAW OF THE WTO

Minimum Credits: 2

Maximum Credits: 2

Trade has become one of the most important areas of international law and policy - particularly since the adoption of the WTO Agreement in 1994. This course will consider the WTO's structure and institutions, its core rules, the exceptions to those core rules and the powerful dispute settlement mechanisms in place to underpin the regime. The course is designed for those who wish to enter trade policy work or practice WTO law in any of its specialties. It will also be helpful for those who wish to enter domestic commercial practice but are nonetheless interested in understanding the international law and policy framework affecting trade between nations.

Academic Career: Law

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

LAW 5197 - ADVANCED TORTS

Minimum Credits: 2

Maximum Credits: 2

An in-depth study of the practical considerations and specialized rules which lawyers need to employ when handling cases such as auto accidents, product liability, medical malpractice, local and state government torts claims, and premises liability. The course will not only concentrate on various types of tort actions, but also on considerations which may be involved in all of those actions such as insurance coverage, emotional distress, bystander claims, damages, apportionment of fault and special duties. The course also will cover tort reform issues.

Course Requirements: PREQ: LAW 5028; PROG: School of Law (LAWSC)

LAW 5200 - INT TO ACCOUNTING FOR LAWYERS

Minimum Credits: 1

Maximum Credits: 1

Introductory accounting for lawyers will provide students with a fundamental understanding of the principles underlying financial accounting. Additionally, students will gain an understanding of the development and analysis of financial statements including the balance sheet, income statement and statement of cash flow. Other topics will include a discussion of financial analysis and financial theory. The course is intended to equip students with the basic mechanics to review and analyze an entity's financial statements, identify significant issues and to form a general familiarity with financial statements to aid in preparing for litigation or assisting with business transactions.

Academic Career: LAW

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROGRAM: School of Law

LAW 5201 - ADMINISTRATIVE LAW

Minimum Credits: 3

Maximum Credits: 3

It is next to impossible to practice law today without dealing with administrative agencies, federal or state, or the law they create. Indeed, more cases are adjudicated in administrative bodies than in the courts. The substantive law that is created and implemented by agencies is the subject matter of individual courses such as environmental law, securities regulation, taxation, and banking. It is the procedural/structural law that governs the creation and implementation of substantive law by agencies that is the focus of administrative law. We will discuss the different types of functions undertaken by agencies, for example, rulemaking and adjudication in all its forms and how those disparate functions determine the appropriate structure of decision-making. At the federal level, where we will focus our attention, the procedures that apply originate in a variety of sources, including the United States constitution, the administrative procedure act and other statutes, and agency rules. There is often a complex interplay among these sources of law, which will be one of the topics we will explore. Another is the relationship of agencies to the chief executive and the legislature, an area that implicates important constitutional doctrines, statutes, and executive orders. Finally, we will spend considerable time on the availability, timing, and scope of judicial review of agency action, including the doctrines of standing, ripeness, exhaustion of administrative remedies, and judicial deference to agency findings of fact, interpretations of law, and exercises of discretionary power.

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5207 - ANTITRUST

Minimum Credits: 3

Maximum Credits: 3

This course provides an introduction to the law of antitrust. The course examines practices by which firms allegedly eliminate competition among themselves (e.g., Cartels, conspiracies, horizontal mergers), as well as exclude actual or potential competition from their markets (e.g., Boycotts, price discrimination, tying arrangements, vertical integration). The course will cover the Clayton, Sherman, and Robinson-Patman acts. No exposure to corporate/securities law, economics, or finance is necessary or presumed.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5210 - PATENT LAW

Minimum Credits: 2

Maximum Credits: 2

For over two hundred years the United States patent system has stimulated innovation by conveying time-limited exclusionary rights to inventors who adequately disclose their novel and nonobvious inventions to the public. Throughout this time, technological advancements in various industries have repeatedly confronted the patent system with fascinating policy and doctrinal challenges. In a constant effort to keep up with the pace of innovation and ensure that the patent system fulfills its constitutional purpose to promote the progress of useful arts, patent case law has become one of the most rapidly evolving and adapting areas of American law. Through study of judicial decisions and statutory provisions, this course will examine the substantive legal doctrine and policy underlying two primary aspects of United States patent law: (1) the requirements for obtaining a patent; and (2) the means by which an issued patent is enforced (and its validity challenged). Specific topics include patentable subject matter (including computer-implemented inventions and biotechnology), novelty, nonobviousness, utility, loss of right, disclosure requirements, patent claim interpretation, literal infringement, the doctrine of equivalents, prosecution history estoppel, defenses to patent infringement resulting in invalidity and/or unenforceability, injunctive relief, damages, and the unique role of the United States court of appeals for the federal circuit in shaping patent law.

LAW 5212 - BUS PLANNING, ENTREP & TECHN

Minimum Credits: 2

Maximum Credits: 2

This course will address key legal and business issues faced by entrepreneurs when establishing a commercial enterprise. Specifically it will address the protection and development of ideas, the commercialization of technology, and the legal and business aspects involved in forming, funding, operating, and managing the emerging business enterprise. The course will be taught from a business planning perspective. Through participation in the course students will be exposed to advanced business law concepts applicable to emerging companies in the business, technology, and medical fields.

LAW 5213 - CONFLICT OF LAWS

Minimum Credits: 3

Maximum Credits: 3

Disputes between parties from different states or countries and disputes having contacts with multiple jurisdictions raise a host of challenging legal questions, including: (1) which jurisdiction's law will govern the dispute; (2) whether and in what circumstances a judgment rendered in one state or country will be recognized and enforced in other jurisdictions; and (3) how courts should make these determinations. State laws, the federal constitution, and international and foreign law all play a role in deciding these issues, which can have a profound impact on the ultimate resolution of the controversy.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5216 - EMPLOYMENT DISCRIMINATION

Minimum Credits: 3

Maximum Credits: 3

This course will examine federal statutory law as it applies to employment discrimination, with an emphasis on discrimination based on race, sex, color, ethnicity, national origin, religion and age. The most prominent statutes in this area are title vii of the civil rights act of 1964, the age discrimination in employment act, and an older civil rights statute from the reconstruction era, 42 U.S.C. §1981. The course will explore the substantive meanings of "discrimination" under these acts, the models of proof for establishing a claim, the theoretical underpinnings of the statutes,

and some of the procedural and remedial issues relevant to employment discrimination law.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

LAW 5218 - WHITE COLLAR CRIMES

Minimum Credits: 2

Maximum Credits: 2

This course will examine the prosecution and defense of federal white collar crimes, including mail and wire fraud, Rico, criminal tax violations, bank fraud, health care fraud, perjury, obstruction and false statements. Close examination will also be given to the law enforcement techniques used by federal prosecutors in white collar cases, including the grand jury, immunity, search warrants and subpoenas. The fifth amendment self-incrimination privilege and the attorney-client privilege will also be studied. Emphasis will be given to providing students with the background and tools to reason through practical problems faced by white collar practitioners.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5221 - JURISPRUDENCE

Minimum Credits: 3

Maximum Credits: 3

"Jurisprudence -- philosophy of law -- explores the nature of law and its role in society. This course tackles classic jurisprudential questions, focusing around what is known as "theory of adjudication" - the theory of how judges actually do decide cases and how they should decide them. Do legal rules and doctrines really constrain legal decision making (and if so, how)? What makes something a legal rule? Is there some necessary connection between law and morality (perhaps inherent in the concept of rights)? Is judicial decision-making really different from political decision-making (and if so, how)? Most of our readings will be from twentieth- and twenty-first century writers: legal positivists (e.g., H.L.A. Hart), natural law theorists (e.g., Ronald Dworkin), legal realists (e.g., Felix Cohen and Karl Llewellyn), and critical theorists (e.g., Duncan Kennedy and Patricia Williams). But we will also dip into some older classics, e.g., William Blackstone and Jeremy Bentham. Some of the reading will be challenging, but no prior experience with either jurisprudence or philosophy will be assumed. What will be useful is the knowledge of legal doctrine and decision making that you've acquired in law school so far. We will look back at some of the classic cases that you read in con law, civil procedure, and property and see how they reflect different jurisprudential approaches. In fact, at some point in the semester you will probably find yourself thinking something like, "So that's what Professor X was trying to get at when we read that case"! We will also look at how jurisprudence informs current political and social issues in legal decision making. For instance, consider those driverless cars you see all around Oakland. Besides being programmed to avoid collisions, they must be instructed to follow traffic laws. Exactly what should those instructions entail? When you have finished this course you won't be writing briefs that say, "you should rule for me because the legal positivists say so." But in another sense jurisprudence is of immense practical use: Jurisprudence brings to the surface conflicting assumptions lurking within different legal arguments and conclusions. When you learn to recognize those ideas, you understand something about how legal decision making operates on a deep level, and that makes you a better lawyer."

Academic Career: Law

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5223 - ADVANCED TRIAL EVIDENCE

Minimum Credits: 2

Maximum Credits: 2

This course will focus on evidentiary issues that arise frequently in trials. Each week a vignette or series of vignettes, which address common trial evidence situations, will be assigned. The vignettes will be based on case files, in order to provide continuity throughout the course and for students to see the impact of evidentiary rulings on continuing cases. Each student will be responsible for weekly written assignments, which may include motions in limine or outlines of direct and/or cross-examination of the witness(es) for vignettes(s). Each student will also be responsible for preparing to offer timely and well-stated objections to the evidence sought to be introduced. Students will be required to understand the rationale for both the introduction of evidence and the objections thereto.

Academic Career: LAW

Course Component: Lecture

Course Requirements: PREQ: LAW 5103; PROG: School of Law (LAWSC)

LAW 5224 - INSURANCE

Minimum Credits: 3

Maximum Credits: 3

The course will focus on insurance law and theory and the role of the state and federal courts in shaping insurance law based on perceptions of public policy (e.g., Should public policy preclude coverage for punitive damages? For intentional torts? For "criminal" acts that result in unintended consequences?). The course will survey significant categories of insurance, particularly liability and property insurance, as well as life, automobile, reinsurance, and the duties of liability insurers to defend their insureds in lawsuits and to make reasonable settlements of claims against their insureds. Insurance concepts will be examined in the context of recent events, such as the world trade center attack.

LAW 5225 - INTERNATNL BUSINESS TRANSACTIONS

Minimum Credits: 3

Maximum Credits: 3

This course analyzes basic international business transactions and the effects of U.S. Law, specific foreign law, and treaties on the conduct of the parties involved. The course covers issues of commercial law, regulation of cross-border transactions, dispute resolution, tax considerations, and antitrust law. Although a basic understanding of each of the areas of the law in the domestic context is helpful, there are no course prerequisites. Students are expected to develop an understanding of the U.S. Laws applicable to private international transactions and an awareness of the risks inherent in doing business in or with other countries and their nationals.

LAW 5242 - PATENT LAW PRACTICE

Minimum Credits: 2
Maximum Credits: 2
A course designed for students with a special interest in patent law, and for those students preparing to take the patent bar examination. Students are taught claim drafting, rules of practice and procedure followed by the United States patent and trademark office, how to draft patent documents and how to write a patentability search report.
Academic Career: LAW
Course Component: Lecture
Grade Component: Grad LG/SU3 Basis
Course Requirements: PROG: School of Law (LAWSC)

LAW 5245 - SECURED TRANSACTIONS

Minimum Credits: 2
Maximum Credits: 2
This course focuses on security interests in personal property, which are governed by article 9 of the uniform commercial code. Related sections in articles 1 and 2 will also be examined. The course primarily deals with the creation, perfection, priority and enforceability of security interests in

personal property and fixtures, although it also deals with rights of secured creditors generally. The course examines: (1) the rights and remedies of the secured creditor and the debtor; (2) the mechanisms and law underlying obtaining perfected interests in collateral; and (3) the priority of the secured creditor over others such as other article 9 security interests holders, the bankruptcy trustee, sellers, buyers and federal tax liens. The treatment of secured parties in bankruptcy proceedings will also be covered.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5251 - BIOTECHNOLOGY LAW

Minimum Credits: 2

Maximum Credits: 2

Virtually every aspect of our lives is touched by biotechnology, so this class is designed as an introduction to many of the critical issues related to biotech and society. Specific topics include genetically modified organisms (Franken foods), patenting life, vaccination laws, human and animal testing, bioterrorism, biological weapons laws, bio-prospecting, pharmaceutical pricing, FDA laws, as well as scientific (and investor) fraud in biotech. The class also focuses on the policy relationships between law and public health, as well as related underlying economic incentives that can create tension in the life sciences. The class includes a number of guest speakers from industry including biotech licensing professionals and an FDA practice attorney. This class will be useful for anyone planning to practice law related to the life sciences including patent law. The issues are presented in a non-technical manner so the class is accessible to anyone interested in the field. It may be helpful to have exposure to patent law in general but it is not required.

LAW 5252 - INT'L & EURPN LABOR MARKTS LAW

Minimum Credits: 2

Maximum Credits: 2

This course examines international and European labor markets law, including how the "European social model", as opposed to the Anglo-Saxon or American model, which has generated European union wide standards for employment and labor protection. While the course begins with an introduction to the international labor organization, the bulk of the course focuses on the European union as the cradle of pan-European labor and employment law. The course begins with the basic constitutional framework of the EU, and the essential characteristics of EU-law, including the pseudo-federal nature of the EU, supremacy of EU law, the theory of enumerated powers and subsidiarity, and the functioning of the European court of justice as a genuine supreme court. This is followed with a historical overview of the political and legal roots of the famed European social model, with particular emphasis on its international origin. In its institutional section, the course will explain the position of social policy in the founding treaties and the emergence of a European labor movement complete with European-wide collective bargaining agreements. In its substantive part, the course will address relevant and topical issues with a focus on business relevance, such as employee protection in a transfer or restructuring of companies, information and consultation rights, the European company, and the exponential rise of employment discrimination law.

LAW 5253 - TRANAT LITIGATN CRT AROND WRLD

Minimum Credits: 3

Maximum Credits: 3

This course covers the basic concepts a U.S. lawyer needs to understand when practicing law with an international dimension. The coverage will extend from U.S. understandings to that of foreign courts, including issues of discovery abroad, foreign understandings of relevant legal concepts, and international arbitration.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5258 - CAPITAL PUNISHMENT, THRY & PRA

Minimum Credits: 2

Maximum Credits: 2

There are few areas of law whose jurisprudence has been fully developed within a period of the last forty years. Eighth amendment jurisprudence relative to the death penalty in the United States is such an area of law. We will explore how the United States supreme court has approached the development of this jurisprudence, and include within our examination some elements of due process as well, to see how the court, out of whole cloth, has created a practical jurisprudence for analyzing the constitutionality of capital punishment, and why the court was motivated to do so. This jurisprudence provides students with a window to the tug between justices who view the constitution as a 'living' document that adapts to the times and the society, and those who view the constitution as a static outline of the powers of respective governments within a federal system to be understood as the framers of the document would have understood it. Additionally, this jurisprudence provides students with a window to the strengths and weaknesses of a federal system in which the interplay between the power of the federal government and the power of the state governments must be understood and respected, even within the context of a constitutional jurisprudence that recognizes the imperative of the supremacy clause.

Academic Career: LAW

Course Attributes: Global Studies

LAW 5265 - LABOR LAW: PRIVATE SECTOR

Minimum Credits: 2

Maximum Credits: 2

This course, after a short review of American labor history, will focus almost exclusively on the national labor relations act, the nation's premier statute dealing with labor management relations in the private sector, and the model for many public sector state laws covering the field. The course deals with the rights of individual employees, employers, and unions with respect to concerted activity, unionization, the establishment of collective bargaining units, elections conducted by the national labor relations board, and the collective bargaining process. The course will also cover strikes, picketing and hand-billing by unions, the current restrictions or limitations on such conduct, and the administration of collective bargaining agreements, grievance processing, and the arbitration of disputes. We will study and critically examine procedural and substantive case law developed by the national labor relations board, and its impact upon labor-management relations in both unionized and non-union environments. The course concludes with a discussion of the future of labor relations. We will discuss more recent tactics employed by unions and management and engage in a debate as to whether and how the current labor laws should be amended. Classes will be a combination of both lecture and dialogue. We also will discuss critical issues with representatives from Pittsburgh's union and business communities.

LAW 5268 - CONSTITUTIONAL LAW 2: GOVERNMENT POWERS, FEDERALISM AND THE PRESIDENCY IN THE TRUMP ERA

Minimum Credits: 3

Maximum Credits: 3

This upper-level constitutional law course advances issues raised by the structural parts of the United States Constitution, as opposed to individual rights. Attention will be given to the relationships of the three federal branches of government, with emphasis on some of the powers and limitations of the executive, legislative and judicial bodies that arise from principles of separation of powers and national checks and balances. The course will also consider federalism and the respective roles of the national and state governments in some detail. These structural aspects of the Constitution will be discussed against the backdrop of the Trump Presidency, including, but not limited to, questions concerning judicial processes of indictment, Presidential pardons, the Emoluments Clause, the 25th Amendment, plenary powers over foreign affairs, the constitutionality of an international wall, congressional impeachment processes, and the legitimacy of sanctuary cities. Students will be expected to discuss the issues in a dispassionate, civil and academic fashion.

LAW 5272 - BANKRUPTCY

Minimum Credits: 3

Maximum Credits: 3

The study of bankruptcy law is the study of how the prospect and availability of bankruptcy affects legal relationships; therefore, bankruptcy attorneys must understand the full range of law, to determine the impact an insolvency proceeding has on the parties in interest and community at large. This course provides an introduction to federal bankruptcy law under the bankruptcy code of 1978 as amended, title 11 U.S.C.A. the code was substantially changed in 2005 and the course will deal with the revisions. The course focuses on substantive provisions of the bankruptcy code that apply in all varieties of bankruptcy proceedings and some of the associated rules of procedure. Covered topics include eligibility for federal bankruptcy relief; commencement of bankruptcy proceedings; jurisdiction and procedure; defining property of the bankruptcy estate; the automatic stay; adequate protection; discharge and discharge ability of debts; priorities; allowing, valuing and estimating claims; selected issues usually encountered in business, such as executory contracts and leases; the trustee's avoiding powers; set-off and recoupment; professionals. The course proceeds by analysis of problems and cases. Familiarity with the law of secured transactions (especially article 9 of the uniform commercial code) is necessary.

LAW 5282 - NATIONAL SECURITY LAW

Minimum Credits: 2

Maximum Credits: 2

The Preamble to the U.S. Constitution, which famously begins "We the People," makes clear the high value our founders placed on national security and the role of law. The Preamble describes the Constitution's very purpose as including "establish[ing] Justice, insur[ing] domestic Tranquility, provid[ing] for the common defence,... and secur[ing]... Liberty." Today, national security remains a priority responsibility for our federal leaders. Our nation continues to strive for the right balance between security and liberty, mixed with a healthy dose of Justice, all in the name of "form[ing] a more perfect Union." The Constitution has continued to provide a framework for our government's exercise of national security powers. At the same time, the field of national security law has witnessed rapid growth and significant change, particularly over the past fifteen years. The coming years will be no less dynamic. This course examines national security law through a study of essential legal sources, historical precedents, and current and emerging national security issues. Topics include: each branch's role (and limitations) in national security decision-making, war powers and military force, crime and counterterrorism, and the role of information in national security. Together, we will aim to better understand the role of law in keeping our homeland safe, and the relationship (and necessary balance) between security, liberty, and justice.

LAW 5283 - MENTAL HEALTH LAW

Minimum Credits: 2

Maximum Credits: 2

This course provides an introduction to the laws and issues that affect individuals with mental illness, many of whom find themselves in the criminal or civil justice systems. Emphasis will be on the issues surrounding civil commitment and the emerging use of treatment courts on the criminal side. This will require a review of Pennsylvania's mental health procedures act and other state and federal statutes, cases, and regulations. Students will be permitted to attend a session of mental health court.

LAW 5288 - TAX CONTROVERSY PRACTICE

Minimum Credits: 3

Maximum Credits: 3

This course will walk students through the representation of a client during various administrative and judicial proceedings concerning compliance with federal tax law. Students will become familiar with the rules for practicing before the Internal Revenue Service (IRS) as well as the Rules of Practice and Procedure for the United States Tax Court. In addition, students will consider ethical issues that arise while representing clients before the IRS. During the semester, students will advise their clients with respect to an IRS examination, prepare a Tax Court petition, draft other documents and filings associated with a Tax Court proceeding and the collections process, and prepare an administrative ruling request. Each student will be responsible for weekly reading and research assignments as well as periodic written assignments including client communications, communications with the IRS, and Tax Court filings.

LAW 5294 - MINING LAW, HISTORY & PRACTICE

Minimum Credits: 2

Maximum Credits: 2

Mining law may seem a niche area- a "world apart which one can quite easily go through life without ever hearing about," as George Orwell said of mining-however, it is a unique combination of administrative law, employment law, contract law, tort law, and health and safety regulatory law. Federal regulatory agencies are increasingly the site of where the action is, and using mining law as a means of understanding this vast area of law will be of use to all students.

Over the period of this course, students would be introduced to the three primary aspects of mining law: 1) The history of mining, mining disasters, and passage of mining legislation in the United States; 2) Key elements of federal mining legislation; 3) The interpretation and evolution of mining law in the Commission and Courts.

Academic Career: LAW

LAW 5295 - EXPERT WITNESS

Minimum Credits: 2

Maximum Credits: 2

In recent years, the use of expert witnesses has proliferated as both civil and criminal litigation have become more complex and technical. In this course, students will learn when expert testimony is needed; where to find appropriate experts; how to work with the expert to develop a theory of the case; and many more issues leading up to the actual trial of the case. Once the case reaches the courtroom, students will learn how to organize and present their own expert's testimony in a clear and concise fashion, and how to pursue the challenging task of "doing battle" with the opposing expert. In the end, students will achieve a greater appreciation for the subtleties of expert testimony, while at the same time acquiring the tools to deal with witnesses who speak in technical and unfamiliar language.

LAW 5296 - CORPORATE GOVERNANCE

Minimum Credits: 2

Maximum Credits: 2

This course will examine the internal structures, processes and standards of behavior that are required by law in the governance of corporate organizations, utilizing a series of hypothetical problems. Particular attention will be given to the corporate director's duties of oversight, care and loyalty, to the shareholders' ability to enforce those duties, and to the concept of fiduciary "independence." Some features of the Sarbanes-Oxley act of July 2002 and related rules will also be considered.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5297 - WORKERS' COMPENSATION

Minimum Credits: 2

Maximum Credits: 2

This course deals with the law, theory and practice of workers' compensation under state and federal administrative programs, including the Pennsylvania and other state acts; longshore and harbor workers' compensation act (LHWCA); federal employees' compensation act (FECA); and the federal employers' liability act (FELA). The student will study the essential aspects of such laws, including their development and purpose,

coverages, the various levels and varieties of benefits provided and how claims are established and enforced. Special emphasis is placed on how such laws affect the rights of individuals to other remedies such as the ability to sue in tort or assert discrimination claims; how compensation programs are implicated in contemporary efforts to reform healthcare coverage and delivery; and the role workers' compensation plays in occupational safety and health. The student will become familiar with the uniform policy of insurance for compensation coverage and how compensation coverage and other regulatory requirements are policed by governmental authorities. A pervasive theme of the course is the status of workers' compensation as a unique hybrid of administrative law and tort, with the consequent effects of such status on the law, theory and practice of the field.

LAW 5300 - FOOD AND DRUG LAW

Minimum Credits: 1

Maximum Credits: 1

The U.S. Food and drug administration has the regulatory mandate to protect the American food supply, and to ensure that drugs are safe and effective for the purposes for which they are prescribed. This course will survey selected topics in food and drug law, including the new drug approval process, regulation of food additives and carcinogens, food labeling and nutrition, prescription vs. OTC drug status, and restrictions on pharmaceutical marketing. Related legal standards affect all of us as consumers in everyday life, and have even greater impact in circumstances like end-of-life decision making. In examining food and drug law issues, we will focus on the tension between information gathering, risk regulation, and paternalism as themes in FDA policy making.

Course Requirements: PROG: School of Law (LAWSC)

LAW 5311 - LAW AND ETHICS OF LAWYERING

Minimum Credits: 3

Maximum Credits: 3

The usual vantage point of the law student and the lawyer is one outside the system of law. Law is something we study, shape, use, support, attack, change, or act upon in one way or another. But this vantage point is an illusion. This course examines the boundaries of that illusion. It seeks to make manifest what has been implicit all along: we, too, lawyers and law students, live within a world of law that demands our attention and response-a world of law that shapes our identities and relationships, threatens our disobedience with sanctions, and expresses some sense of the collective morality through which we can test our personal morality and commitment. The course examines the content of the law that governs the conduct of lawyers, including for example, agency law, criminal law (what constitutes aiding and abetting a client's fraud?), Tort law (duties to clients and to third parties), civil procedure (the demands of rule 11), and the codes of professional responsibility. It examines the world that law creates, and in which it operates: the criminal justice system, a corporate boardroom, law firms, and the law school.

LAW 5319 - LAWYERS IN AMERICAN CULTURE

Minimum Credits: 3

Maximum Credits: 3

Lawyers like to think of themselves as members of one of the most helpful and important professions in American society. All too often, however, we encounter suspicion, derision or open hostility, not to mention nasty jokes. Public and private criticism of lawyers in the United States has become noticeably more intense in recent decades, but we have rarely attempted to survey its range, explore its roots, assess its legitimacy, or evaluate our own responses to it. This course proposes to do these things by examining characterizations and representations of lawyers in American culture from colonial times to the present day. We will relate changing views of American lawyers and lawyering to shifting social and professional circumstances; we will also explore the impact of those circumstances on fictionalized depictions of lawyers in American plays, novels, films, radio and TV, humor, art and song. We will consider what members of other prominent groups in American society, from 17th Puritan clergy to 20th century businessmen ' have said or alleged about lawyers. We will also discuss how, where and with what effect lawyers have presented, promoted and defended themselves before the American public. We will conclude the course by considering how lawyers might learn from past experience and leverage the opportunities and challenges of 21st century law practice to restore or at least improve their public standing.

LAW 5325 - FEDERAL TAX PRACTICE & PROCEDURE

Minimum Credits: 2

Maximum Credits: 2

This course will be conducted by two experienced practicing tax lawyers. The principal subject matter will be an examination of federal tax practice and procedure with particular emphasis upon issues of current importance and interest to tax counsel. The faculty will also cover material relevant and important to students who participate in the law school's low income tax clinic. In addition to procedural matters, the course will delve into matters of tax policy and issues of particular current interest in tax litigation and tax enforcement.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: LAW 5105; PROG: School of Law (LAWSC)

LAW 5328 - COPYRIGHT

Minimum Credits: 3

Maximum Credits: 3

Copyright law deals with legal protection for certain kinds of expressive work -- literature, music, film, photography, and computer software, among other things -- which is an essential element of modern culture, knowledge, and communication. The copyright law course will teach you about the many roles that copyright law plays in constructing businesses, markets and other institutions for creating, distributing, and consuming that work. For authors and publishers, how does copyright law help them make money based on their creative works, or based on others' creative works? For readers and consumers and society as a whole, how does copyright law preserve the power to access and use knowledge? The course will teach those things in the context of teaching the skills of copyright lawyering. How do practicing lawyers work with clients? How do practicing lawyers develop and exercise professional judgment? How do practicing lawyers solve copyright problems? The course will put students in the role of practicing lawyers and teach them to think, write, and act as lawyer's generally and especially as copyright lawyers.

LAW 5330 - EMPLOYEE BENEFITS

Minimum Credits: 3

Maximum Credits: 3

This course examines the law of employee retirement benefits as well as welfare benefits, chiefly health care benefits. The course will focus on the federal employee retirement income security act of 1974 (Erisa). Close attention will be paid to the statute and the case law that has developed to explain and apply that statute. Classes will feature detailed discussions of the relevant statutory provisions and the resulting case law. Students will be expected to discuss the statute, cases and the problems in the assigned case book. The course is designed to make students understand how federal law governs and protects pensions, retirement benefits such as 401(k) plans, and health care benefits for employees, retirees and their spouses and dependents.

LAW 5336 - LAND USE

Minimum Credits: 3

Maximum Credits: 3

The objective of this course is to provide students with a basic introduction to the mechanics and legal theories underlying land use controls. The course will strive to go beyond the theoretical by presenting a series of guest speakers (ranging from judges and zoning officials to land use planners and civil and transportation engineers) who deal with land use issues on a daily basis. Students will also be provided an opportunity to observe zoning board and court proceedings first hand and prepare class projects and papers based upon these proceedings. The course will emphasize the inter-relationship and conflict with environmental regulations. Class discussions and projects will focus upon recent judicial and legislative developments in land use law.

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5339 - LAW OF DISABILITY DISCRIMINATION

Minimum Credits: 2

Maximum Credits: 2

This course will provide in-depth analysis and discussion of the major federal disability discrimination statutes, including the Americans with

disabilities act, the individuals with disabilities education act, and section 504 of the rehabilitation act. Readings and class discussions will focus on the application of these laws to issues such as employment, public accommodations, education, architectural barriers, transportation and insurance. The course will explore how disability discrimination statutes interact with other statutes, such as the social security act, the family and medical leave act, and the genetic information nondiscrimination act.

Academic Career: LAW

Course Component: Lecture

Grade Component: Grad LG/SU3 Basis

Course Requirements: PROG: School of Law (LAWSC)

LAW 5340 - ENVIRONMENTAL LAW

Minimum Credits: 3

Maximum Credits: 3

This course focuses on domestic environmental law and, in particular, on federal law rather than state law. The diverse and technical nature of modern environmental law is such that, in practice, lawyers often specialize in very narrow areas. Nevertheless, the same or similar moral, scientific, and policy arguments familiar to one area of the law are found in many of the others and similar regulatory approaches have been adopted or proposed for adoption to deal with very different types of environmental hazards. This course will focus its attention on the clean air and water acts, the national environmental policy act, the resource conservation and recovery act, the comprehensive environmental response, compensation, and liability act, and wetland protection, with passing coverage of various federal public land management statutes. We will explore the basic regulatory and non-regulatory approaches currently in place, including market-based systems to achieve better environmental quality, as well as proposals for changes to those approaches. A significant portion of the course will also be devoted to exploring issues presented by government and citizen suit enforcement of environmental laws. While administrative law is obviously relevant to much of environmental law given the fact that it is agencies which make and administer the law involved, the course will offer students an overview of administrative law principles which will be sufficient background for the purposes of this course.

LAW 5350 - EU FROM AN INTERNATIONAL LAW PERSPECTIVE

Minimum Credits: 3

Maximum Credits: 3

As the European Union deals with the withdrawal of existing members and other threats to its continuation in the current form, an understanding of the EU and its impact on the international arena is more important than ever. This course will introduce both undergraduate and law students to the EU and its policy framework from an International law perspective. It will provide a basic but critical understanding of the historical, institutional, constitutional, and substantive law dimensions of the EU and of the sui generis character of the Union legal order. It will also explore fundamentals of EU business law and the legal challenges that non-Member State businesses face when entering the EU market. The course will begin with a general introduction to the history, institutional structure, and competence of the EU. It will cover sources and principles of EU Law and their status within Member States. The course will then examine the relationship between EU law and public international law, including the status of the EU as a sui generis legal order, and the rising role of the EU as a co-creator of the international legal order. The third part of the course will deal with the fundamentals of European business law in an international setting.

LAW 5359 - WORKERS' COMPENSATION PRACTCM

Minimum Credits: 2

Maximum Credits: 2

The student undertakes this practicum concurrently with the workers' compensation course taught by adjunct professor Torrey. The practicum is not a requirement of the workers' compensation course. The workers' compensation course provides the student with an exposure to the history and theory of the law, a survey of the different state and federal systems, and the manner in which employers insure for workers' compensation. The practicum works as a supplement, and provides the student with firsthand exposure to and activity in the field. The student will observe lawyers meeting with clients and evaluating their cases. In addition, the student will learn how lawyers communicate and/or work with physicians, and how employers contesting claims obtain and present rebuttal medical evidence. The student will be introduced to the practice of taking trial depositions of medical and other experts, and have the opportunity to attend a deposition to observe attorneys at work. The student will also have the opportunity to attend hearings and observe the procedures of the opposing attorneys and the judge. In addition, the student will gain an understanding of the specific petitions that are advanced by the worker prosecuting the claim and the employer and/or insurance company that has contested entitlement. The participant in the practicum will be instructed in how to prepare written legal argument to the workers' compensation authorities, and briefs to the appeals courts. The student will also gain exposure to current practices surrounding evaluation of workers' compensation cases for possible lump sum settlement.

LAW 5364 - ADVANCED BANKRUPTCY

Minimum Credits: 3

Maximum Credits: 3

Lectures on chapter 11 issues and procedures will set the stage for what is going to happen in the class. Practicing attorneys or other professionals will be invited when the issues involve direct participation with a client and decisions that must be made from the business or legal side of the case. Lectures will cover the theoretical underpinnings to the bankruptcy code and rules, as applicable, and illustrate the points with appropriate case law. Discussion will cover the nature of chapter 11 reorganization, kinds of relief available in business cases, need for cash, why certain motions are needed early in the case whereas others wait, how the business issues interplay with the bankruptcy case, pre and post filing issues, solicitation of creditors committee, plan negotiation process and more. Students will be required to read and analyze the relevant statutory text and rules and relevant cases. They will be assigned certain drafting work and/or papers to write regarding the issues involved. "Papers" may take the form of legal briefs. Each student will be required to argue on behalf of a "client" an assigned topic. To simulate the practice of law, students will file all assignments on the bankruptcy court's test data base for electronic filing.

Course Requirements: PREQ: LAW 5105; PROG: School of Law (LAWSC)

LAW 5378 - JUVENILE JUSTICE

Minimum Credits: 3

Maximum Credits: 3

For over a century this country has wrestled with how to treat youth in the juvenile justice system. This struggle centers on the tension between recognizing youth as developmentally distinct from adults, thus deserving of second chances and rehabilitative services, and historically and culturally driven notions of accountability, justice, and safety. This course will explore this tension and examine how that internal struggle has shaped the building of the juvenile justice system as a separate legal institution governed by unique criminal law, procedure, and policy. Students will gain an in-depth understanding of juvenile justice from both policy and legal perspectives through analyzing case decisions, social science research, legal theory, and empirical studies. During this course the class will probe questions such as: what does juvenile justice actually look like? How does the social construction of adolescence impact legal definitions? What role do the advances in science on brain development play in the administration of juvenile justice? How has race, gender, and class impacted juvenile courts' jurisprudence? What factors have influenced the court's ever shifting understanding of culpability by age? Where are the overlaps and intersections between the juvenile justice and adult criminal justice systems?

LAW 5391 - ELDER LAW CLINIC

Minimum Credits: 7

Maximum Credits: 7

The civil practice clinics offer students who have completed three semesters of law school an opportunity to represent clients and develop practical lawyering. Students enrolled in the clinics are certified to practice law and take primary responsibility for client representation under the supervision of their faculty/supervising attorneys. Elder law clinic representation focuses on issues of capacity in medical treatment, mental health law, estate planning, contractual relations, and property management. Emphasis will be placed on long term planning, including estate planning and medical assistance (Medicaid) eligibility. Litigation skills focuses on practice in the orphans' court division, for example, guardianship proceedings and settlement of small estates. Students will develop practical skills such as interviewing, counselling, research, drafting, negotiation, and trial practice skills. Students may work in teams to represent their clients. The classroom component is an integral part of the clinic experience, consisting of a series of discussions focusing on substantive law, policy, and practical skills training. The skills component of the course will be taught in tandem with the health law clinic. Experts in the fields of social work, psychology, psychiatry, and medicine will provide insights into interdisciplinary issues.

Maximum Credits: 7

The civil practice clinics offer students who have completed three semesters of law school an opportunity to represent clients and develop practical lawyering skills. Students enrolled in the clinics are certified to practice law and take primary responsibility for client representation under the supervision of their faculty/supervising attorneys. Health law clinic students represent their clients at all stages of seeking disability benefits through the social security administration. Students also represent clients in orphans' court in guardianship cases and in the US District Court on health related matters. They interview clients initially and if the case is accepted, proceed to gather and interpret evidence, develop case theory, prepare hearing memoranda, and represent clients at hearings or in court. The classroom component is an integral part of the clinic experience and consist of a series of lectures and discussions focusing on substantive law, policy, and practical skills training. Classroom simulations are designed to ready students for client work, and include an ADR exercise. The skills component of the course will be taught in tandem with the elder law clinic. Students may work in teams of two.

LAW 5395 - HEALTH LAW AND POLICY

Minimum Credits: 3

Maximum Credits: 3

This is a survey course of fundamental issues, covering a broad range of topics, in health law and policy intended both for students who merely wish to become acquainted with the field, and for those who plan on concentrating in the field. For those planning on concentrating, this course provides a foundation for in-depth courses such as health care business transactions, health care fraud and abuse, health care antitrust, and financing in the healthcare industry. For students not concentrating in health law, it provides an introduction to the multitude of issues with which lawyers working with clients in the health care industry need to be familiar. The course examines the role that law plays in achieving three societal goals: increasing access to health care, controlling health care costs, and assuring quality of health care. Specific topics are the structure of the health care system (including integrated health care delivery systems); regulating quality through licensing, staff privileges, and accreditation; labor and employment issues; the legal obligation to provide treatment, including Emtala; tax exemption and charitable purposes; health care reform; state and federal regulation of health insurance and managed care (including Erisa); federal initiatives to expand private insurance coverage (including HIPAA, COBRA and ADA); Medicare/Medicaid eligibility, benefits, and reform efforts; health care fraud and abuse (false claims act, anti-kickback statute, Stark); and antitrust issues in the health care industry. This course does not examine issues of professional liability, and it does not cover ethical issues in health care (covered in, which is the subject of "bioethics and law").

LAW 5398 - FAMILY LAW CLINIC

Minimum Credits: 4

Maximum Credits: 4

The Family Law Clinic is a two semester clinic. Students will receive a grade at the conclusion of each semester, however, in the event that a student does not complete the second semester the student shall receive a W for the course, thus nullifying the grade for the prior semester. Students will receive 4 credits per semester. Classroom study generally includes instruction in client interviewing, client counseling, custody, paternity and child support substantive Pennsylvania law and custody and child support litigation procedures in Allegheny County. Custody mediation techniques are also examined. In clinic, under faculty supervision: Students will interview clients with regard to Pennsylvania custody and child support law. Students will, as legal interns certified by the Supreme Court of Pennsylvania, interview, counsel and assist clients in certain proceedings in the Family Court of Allegheny County dealing with matters of child custody and support. Students may in the course of their clinic duties prepare and deliver educational lectures concerning the substance of family law to client groups as, if and when the need arises, thus providing the student the opportunity to teach. Students may prepare Briefs, Motions, Complaints, Petitions or other court documents depending upon the legal needs of the clients that the student assist. Students may prepare research memos to be presented to all the students at the Clinic Review Meetings. Second semester students will undertake to mentor incoming students in family law court procedures.

LAW 5402 - CRIMINAL PROCEDURE II

Minimum Credits: 3

Maximum Credits: 3

Course is designed to give students especially interested in the criminal area an opportunity to develop appellate advocacy skills while being exposed to relatively sophisticated concepts of criminal procedure. Students participate in mock-trial exercises and serve as mock appellate judges. Problems used in the course will relate to various topics among which are search and seizure, pre-trial publicity, speedy trial, and double jeopardy.

LAW 5404 - CYBERSPACE AND THE LAW

Minimum Credits: 3

Maximum Credits: 3

This course will examine legal and public policy issues that pertain specifically to the existence, operation, and governance of the network of networks that we call "the internet" and the metaphorical experience that we sometimes refer to as "cyberspace." What legal and policy problems are unique to the internet and cyberspace? When and how should "ordinary" legal problems be treated differently if they concern the internet or cyberspace in some respect? Specific topics are expected to include the construction and definition of the internet; internet governance, including domain name regulation and network neutrality; and network and information security. It is expected that the course will not consider intellectual property topics, freedom of expression topics, or jurisdictional (civil and criminal procedure) questions. The course will focus primarily on public policy questions wrapped up in legal questions, rather than on principles of law as such.

LAW 5405 - LEGAL PROFESSION

Minimum Credits: 2

Maximum Credits: 2

This course will consider the responsibilities and obligations of an attorney to his or her client, the court and the legal system. Emphasis will be placed on the rules of professional conduct which have been adopted by the Pennsylvania Supreme Court as the standard of conduct for all attorneys admitted to practice within the commonwealth. Classroom meetings will focus on the common ethical problems which attorneys face including the scope of the duty to zealously represent your client; responsibilities owed to the courts and to other parties that may conflict with your client's interests; what decisions are made by the client and what decisions are made by counsel; potential conflicting responsibilities of counsel to his or her insurance company and the insured; potential conflicting responsibilities of corporate counsel to the corporation and the corporate officers; disqualification of counsel; the scope of the attorney-client privilege; confidentiality requirements; fee arrangements; withdrawal from representation; competency requirements; and pretrial and trial conduct.

LAW 5417 - LAWYERING PROCESS SUMMER CLINC

Minimum Credits: 2

Maximum Credits: 2

Students will be able to gain live client experience in performing an ensemble of essential lawyering skills, including: interviewing, counseling, negotiation, document/pleading drafting, and representation before the court of common pleas. Modeling, training and supervision will be provided by experienced staff attorneys at the field-based setting in Washington and the professor in a one-hour weekly group review meeting at the law school/online through Lync. Family law ' protection from abuse, custody, divorce, and child dependency ' will be the principal area of practice, with students provided preparatory substantive instruction/materials by staff attorneys and professor. Family law is not a required prerequisite. Scheduling of clinical hours will be adjusted to accommodate each student's other work commitments. Transportation costs associated with travel to/from the office will be reimbursed.

LAW 5422 - ALTERNATIVE DISPUTE RESOLUTION

Minimum Credits: 3

Maximum Credits: 3

Legal and other disputes are increasingly resolved by dispute resolution processes other than litigation. Given this trend, it is important for law students to be familiar with these alternative processes, such as arbitration and mediation, and the benefits and risks they present. At the same time, these alternative processes require creative and interdisciplinary problem-solving perspectives and skills. This course begins with an overview of problem-solving approaches, and is followed by the study of arbitration, mediation, and hybrid processes. The course emphasizes interactive student discussion and activities, including role-plays, exercises, and presentations that simulate professional activities of lawyers, arbitrators, mediators, and clients. The classes build on each other, so that knowledge that we acquire in the earlier classes will be integrated into our materials, discussion, and activities in later classes.

LAW 5424 - INTERVIEWING AND COUNSELING

Minimum Credits: 2

Maximum Credits: 2

Proficiency in interviewing and counseling is essential to both the litigator and transactional lawyer. Lawyering process I will provide the student with theoretical understanding of interviewing/counseling and intensive training designed to develop these essential skills. Through lectures, readings, demonstrative videotapes and class discussions, the "client-centered" model advocated by the instructor as well as the "traditional approach" will be introduced, examined, and collectively critiqued. Practice will involve observing/critiquing weekly in-class simulations (with students as "client," "lawyer"). Periodic quizzes and two videotaped exercises at mid-point and end of course (with students interviewing/counseling 'outside' client) will be scheduled. Consistent attendance is required in order to ensure the effectiveness of in-class simulated exercises and to acquire comprehensive knowledge of/practice in each essential skill.

Course Component: Clinical

Grade Component: Grad LG/SU3 Basis

Course Requirements: PREQ: LAW 5105; PROG: School of Law (LAWSC)

LAW 5428 - LEGAL NEGOTIATION

Minimum Credits: 2

Maximum Credits: 2

Proficiency in negotiating is essential to both the litigator and transactional lawyer. Lawyering process II will provide the student with theoretical understanding and intensive training designed to develop this essential skill. Through lectures, readings, and class discussions the two principal models of legal negotiation 'adversary' and 'problem-solving' will be introduced, examined, compared and critiqued. Students will engage in numerous negotiation exercises, some requiring drafting pre-negotiation plans and post-negotiation critiques. Highly experienced attorneys from the private/public sector will be invited to share their approaches/successes/challenges. Negotiations will be conducted both in-class and out-of-class. Two negotiations will be videotaped 'one at mid-point and the other at end of course' for subsequent viewing/critiquing on box. Consistent attendance is required in order to ensure the effectiveness of in-class simulated exercises and to acquire comprehensive knowledge of/practice in each negotiation model.

LAW 5429 - LAWYERING PROCESS CLINIC

Minimum Credits: 2

Maximum Credits: 2

Students participating in this clinical course will be provided with skills training and the opportunity to engage in a wide variety of lawyering activities (interviewing, counseling, negotiation, drafting of documents and pleadings, representation of clients before court and administrative agencies) in a controlled, supervised, instructional field-based program setting. Following initial orientation at the office, students will observe and thereafter participate in direct delivery of legal services to program clients. Cases assigned will primarily involve family law issues (divorce, protection from abuse, custody, dependency, etc.). Students who take the course for one semester will focus skills development on pre-hearing elements (interviewing, counseling, negotiating, etc.) During the first several weeks; thereafter, emphasis will be placed on in-court and administrative hearing representation. Students will be closely supervised by an experienced staff attorney under the direction of the course instructor. Selected student work may be videotaped for later review and critique by supervisor and instructor. Clinical time at the field-based office will be supplemented with a weekly case review session at the law school. Scheduling of clinical hours will be adjusted to accommodate the student's

schedule. Transportation costs for travel to/from the office will be reimbursed. Students are encouraged to enroll in lawyering process I or II, since the focus of both such courses will provide skills support for the clinical experience. Course also available during the summer, with same supervisory input and course requirements as described above.

LAW 5430 - INFO PRIVACY LAW AND PRACTICE

Minimum Credits: 2

Maximum Credits: 2

This introductory course will provide a comprehensive overview of the primary laws, regulations and guidelines dictating data protection safeguards in the health care industry. It will begin with an introduction to the origins and philosophical perspectives that provide the framework for current privacy laws. Students will then explore the HIPPA privacy/security rules, provisions of Hi-tech breach notification standards, technical, physical and administrative safeguards and their intersection with the various state data protection laws. This course will include an introduction to the legal challenges associated with securing electronic data along the information highway and within the cloud, while attempting to safeguard against cybersecurity threats. Students will be introduced to the implications of privacy to the health care provider, health plans, health care clearinghouses, business associates, and the enforcement activities belonging to the office for civil rights. It will also afford students an opportunity to examine privacy from the financial and international perspectives.

LAW 5478 - HIGHER EDUCATION AND THE LAW

Minimum Credits: 2

Maximum Credits: 2

Colleges and Universities occupy a unique role in American society and culture. Courts in case law vividly describe colleges and universities as "marketplaces of ideas" and consider higher education to play a critical role in our democratic society. As a result, concepts such as academic freedom and free speech shape the legal landscape in unique ways. In addition, many statutes specific to higher education govern the day-to-day actions and obligations. At the same time, many areas of the law apply to colleges and universities in the same manner as they would to any other institution. This course will provide students an overview of the legal principles that shape higher education law. Students will then learn to apply the unique legal concepts to the analysis of the myriad of issues that commonly arise on campus.

LAW 5491 - ADVANCED LEGAL RESEARCH

Minimum Credits: 3

Maximum Credits: 3

This course will build on the material presented in the foundations of legal research course, and will provide students with a broader array of strategies and skills to approach legal research projects. The course is to be broadly divided into three components. The first component focuses on strategic approaches to legal research, how to incorporate the research process into the litigation or transactional problem presented and to more effectively integrate the various legal research tools available into that strategic approach. Cost-effective research strategies, including strategies to effectively manage real-world lexis and Westlaw costs will also be covered. This component will somewhat overlap with, but significantly expand on material from the foundations course, and will give students a broader understanding of the research process. The second component of the course recognizes that not all substantive areas of the law utilize the same research resources, strategies and techniques. During this component of the course, students will self-select into one of three topical research tracks-expected to be intellectual property, environmental law, and health and disability law-and spend several weeks looking at the unique resources and research challenges presented by those areas. The third component of the course returns all students to the same material and focuses on non-legal research areas such as medical and scientific research, business and corporate research, investigative research, and financial and marketplace research.

LAW 5497 - HEALTH LAW PRACTICUM: ADR

Minimum Credits: 4

Maximum Credits: 4

The Health Law Practicum offers third and second year law students an opportunity to work with lawyers in hospitals, health insurance companies, and in a variety of other placements in health law. The primary emphasis of this practicum is legal representation of a non-profit enterprise in the changing health law environment. One of the changes being experienced in all health law environments is the resolution of disputes through the use of negotiation, mediation and other alternatives to adversary adjudication. The practicum comprises both a classroom component and a field

placement. Both focus on work in the health law environment; however, the focus on alternative dispute resolution is primarily in the classroom component of the course. The classroom sessions of two hours per week will be devoted to a consideration of the application of ADR techniques to health law disputes. Besides studying substantive health law issues, students will participate in ADR simulations as part of their classroom experience. In addition to the classroom component of the course, students will work in the field with supervising attorneys for a minimum of 104 hours per semester. Students will be exposed to working in a health law environment in these placements. Whether students will be afforded an opportunity to participate in alternative dispute resolution as part of their site experience will depend on the projects then being undertaken at the placement site.

LAW 5537 - MEDICARE AND MEDICAID PRACTICUM

Minimum Credits: 2

Maximum Credits: 2

This course is an introduction to the Medicare and Medicaid Health Care Systems. The goal of this course is to provide a basic understanding of how these systems function and recognize how eligible individuals can utilize them to access affordable health care services. We will examine the purpose and function of Medicare and Medicaid, their program vocabulary, the eligibility criteria, the enrollment process, and the specific benefits that each program provides. The course is also designed to develop and enhance the practical counseling and advocacy skills necessary for using this information to serve program clients. By the end of the semester, students will be prepared (and should be confident) to successfully tackle the cases that they are assigned (as counselors with Pennsylvania's State Health Assistance Program - SHIP), assisting clients with in-depth counseling, and helping them access and utilize available health care benefit programs and services. The practicum is also designed to provide students with an opportunity to network and interact with local law firms, health care systems (UPMC and Highmark), government agencies (SSA, CMS and DHS) and private non-profit programs. In addition, the SHIP program sponsors several networking events during the spring semester to present the practicum students to these entities and profile their capabilities

By the end of the semester, students will be prepared (and should be confident) to successfully tackle the cases that they are assigned (as counselors with Pennsylvania's State Health Assistance Program - SHIP), assisting clients with in-depth counseling, and helping them access and utilize available health care benefit programs and services. The practicum is also designed to provide students with an opportunity to network and interact with local law firms, health care systems (UPMC and Highmark), government agencies (SSA, CMS and DHS) and private non-profit programs. In addition, the SHIP program sponsors several networking events during the spring semester to present the practicum students to these entities and profile their capabilities

Course Requirements: PREQ: LAW 5537; PROG: School of Law

LAW 5547 - INT'L INTELLECTUAL PROPRTY LAW

Minimum Credits: 3

Maximum Credits: 3

International intellectual property law has expanded substantially over the past few decades, and today seeks broadly to regulate transnational flows of information and culture. This course analyzes the international IP regime, situating it within the dynamics of globalizing flows of information and cultural objects. It provides an overview of the law, theory, and politics of this area of law, and will use case studies to illuminate the interaction between the three. Subjects covered include copyright and related rights (moral rights, traditional cultural expression, performers rights); trademarks and geographical indications; Internet domain names; trade secrets and patents. Case studies may include considerations of access to medicines, moral rights in Europe, and piracy in China as well as copyright formalities and Berne retroactivity.

LAW 5572 - PA INNOCENCE PROJECT PRAC

Minimum Credits: 3

Maximum Credits: 3

The Pennsylvania Innocence Project is a two-semester course offered by Pitt and Duquesne law schools, and meets at Duquesne School of Law. A 2-hour weekly seminar will examine and discuss the substantive law and remedies associated with wrongful convictions. Topics include mistaken eyewitness identification, junk forensic science, forensic DNA testing, and post-conviction remedies. Students are expected to spend 10 additional hours per week on their cases. This practicum will give students exposure to post-conviction collateral litigation, ethics in criminal law, both defense and prosecution, and factual analysis training. Students may work on wrongful conviction cases and clemency cases. Students will develop lawyering skills in the context of factual analysis, and will develop creative legal arguments to aid the convicted innocent. They will explore criminal justice issues related to these fields. Students will apply their substantive knowledge to actual cases by reviewing and investigating claims of actual innocence. Students are assigned their own cases to review for factual innocence claims. They are expected to review the entire case, discovery, transcripts, motions, appeals, court opinions, to determine whether the inmate presents a colorable claim of innocence. They may be involved in factual investigation including identifying potential witnesses locating physical evidence to be subjected to forensic testing, and identifying potential expert witnesses. The Pennsylvania Innocence Project Practicum is a two semester practicum. Students will receive an S grade at the conclusion of each semester, however, in the event that a student does not complete the second semester the student shall receive a W for the course, thus nullifying the S grade for the prior semester. Students will receive 3 credits per semester.

LAW 5585 - EDUCATION AND JUSTICE AND CIVIL RIGHTS SEMINAR

Minimum Credits: 3

Maximum Credits: 3

This course will introduce students to education and civil rights law and policy that are the foundation for civil rights protections in K-12 public

education. Students will explore key education and civil rights issues in the following topic areas: school segregation (past and present), the criminalization of students of color, school privatization, and social movements for education justice. Students will emerge from this class with an understanding of historical and current flashpoints in education and civil rights in the United States and the role of lawyers and the law. In addition to analyzing key cases, articles, and social science research, students will explore how law students and lawyers can play a meaningful role through policy, litigation, and advocacy for social change.

LAW 5609 - PROFESSIONAL RESPONSIBILITY

Minimum Credits: 3

Maximum Credits: 3

This course will cover selected topics on the law governing lawyers. Major topics will include formation and termination of the attorney-client relationship and its attendant obligations, fee issues, conflicts of interest, ethics in advocacy, transactional lawyering, and entity representations, among others. The course will cover these topics from the vantage point of the model rules of professional conduct and the restatement of the law governing lawyers, as well as those aspects of constitutional law, evidence law, agency law, tort law, and procedural rules (both civil and criminal) that bear on an attorney's obligations to clients, courts, opposing parties and their attorneys, and the legal system at large. Class discussions will incorporate in-depth analysis of case law and the rules, as well as analysis of practical hypothetical scenarios in which a lawyer seeks advice about his or her legal and ethical options for moving forward in dealing with his or her clients.

LAW 5611 - ADVANCED FAMILY LAW ADVOCACY

Minimum Credits: 3

Maximum Credits: 3

Much of the modern practice of family law involves litigation. From routine contested motions to complex equitable distribution and custody trials, the field of family law has seen a dramatic increase in the time the practicing family lawyer spends in the courtroom. Very often the family lawyer is faced with complex litigation that involves the direct and cross examination of expert witnesses and trial techniques and strategies molded well in advance of trial with the assistance of a child psychologist expert. In addition, "motions practice," arguing important discovery or interim issues that affect custody and equitable distribution cases, is an important, if not critical aspect of the practice of family law. We will follow hypothetical cases of families whose contentious divorce and custody issues must be tried to conclusion in non-jury mock trials. The students, working in small teams, will interview, counsel and prepare their role playing "client" for trials, develop trial strategy, engage in pretrial preparation, meet with and prepare expert witnesses for direct and cross examination and finally, try various issues to conclusion. The expert witnesses will be actual, highly experienced experts in various areas of valuation and custody. Students will be expected to prepare written trial materials. One class will be specifically devoted to arguing a motion against opposing counsel on a discovery issue. The student will be asked to prepare a motion and a supporting brief on the subject issue to be addressed before the motion's court judge.

LAW 5616 - MOCK TRIAL STRATEGY AND PRA

Minimum Credits: 2

Maximum Credits: 2

This is a performance and presentation-based course that serves as the intensive training component for the law school's mock trial team. The course covers the mechanics of trials with a focus on preparation for interscholastic trial advocacy competitions. Enrollment is by permission from the professor only. Students can qualify based on a tryout. In addition, the previous year's top two finishers in the law school's internal trial competition will qualify automatically for the course, presuming they have not graduated. This program is a two year commitment. If you are accepted as a member of the mock trial team, you will automatically be eligible to participate in the course for the following year upon successful completion of the course in the first year. Topics in the course include development of case theory, effective advocacy skills, appropriate professional conduct, and trial preparation. Students will present direct and cross examinations of lay and expert witnesses, opening statements, and closing arguments, and will introduce evidentiary exhibits with appropriate foundation. A significant portion of the course will be devoted to a review of both the federal and Pennsylvania rules of evidence, with special emphasis on trial evidence. Returning third year students will focus on preparation for both fall and spring competitions. In that respect they will learn advanced trial techniques as applicable to the competitions. This will include working with actual experts, one on one video analysis of performance and specific, case related issues.

LAW 5618 - ARABIC FOR LAWYERS 1

Minimum Credits: 2

Maximum Credits: 2

Arabic for lawyers is a two semester course comprised of both Arabic for lawyers I and Arabic for lawyers II. Arabic for lawyers is a course that helps students to familiarize themselves with Arabic legal terminology and basic Arabic grammar. This is a beginner class that assumes no prior knowledge of or exposure to the language. As such, native speakers and those with formal training over a period of years may not enroll. The course is a two semester (full year) course and students are encouraged to take both semesters in order to benefit from the course. However, students are permitted to take only the first semester if they wish. They may take only the second semester with the professor's permission if they have had some modest experience with the Arabic alphabet. The first semester of the course deals with learning the Arabic alphabet, mastering pronunciation and developing the ability to write in Arabic by hand. In the second semester, we will turn to learning basic rules of grammar and developing vocabulary in a manner that is designed to be of interest and use to lawyers and legal professionals. The class will conclude by reading simple cases, laws and other basic legal materials. To facilitate the learning experience, laptops will not be permitted in class.

LAW 5620 - CYBERSECURITY & PRIVACY REGLN

Minimum Credits: 3

Maximum Credits: 3

This course examines the legal frameworks in place to protect consumer privacy and maintain necessary information security protections for

privately owned and operated infrastructure, with a strong focus on regulatory and compliance issues. Taught collaboratively with the schools of law and information sciences, students will collaborate on projects simulating the types of problems both legal and technical professionals confront in actual practice. Some individual writing will be required, and a written paper option may be available for students in lieu of group projects with the consent of the instructor.

LAW 5622 - COMPARTV PROF RESPONSIBILITY

Minimum Credits: 3

Maximum Credits: 3

The course provides an exploration of the organization and the sources of regulation of the legal profession in the United States, and an overview of select countries in the Americas as well as Europe, briefly highlighting the main differences existing in lawyers' ethical standards in civil law and common law systems. It focuses on the main standards of professional legal ethics in the United States, and compares them with those of Latin American and European countries. The course will be centered on the ABA Model Rules of Professional Responsibility. The Model Rules will be compared with the rules of professional conduct proposed by international associations such as the International Bar Association and the rules proposed by bar associations in the MERCOSUR zone. The course also seeks to engage students in an exploration of the challenges posed by the increase in cross-border, transnational legal practice, and an overview of the ethical regulatory responses attempted so far in this field. This course meets the New York professional responsibility requirement. N.Y. Court Rules for Admission of Attorneys and Counselors at Law Rule 520.3(c)(1)(iii).

LAW 5623 - CYBER LAW AND POLICY

Minimum Credits: 3

Maximum Credits: 3

Cyberspace is the critical infrastructure that runs our world. Yet, much remains ungoverned and the threats are constantly evolving. This course will explore theoretical and practical aspects of nation-state legal issues concerning cyberspace, including computer-related crime, espionage, war, and international governance. The seminar will review key legal cases, policy, and legislation. In tandem with a series of expert guest speakers from the field, the course will reflect on the roles of national and international governments, the legal and ethical dimensions of cybersecurity, the relationship between the public and private sectors, and the increasing tensions between privacy and security. The course will consist of four major components: (1) an assessment of the current cybercrime threat landscape, (2) a review of the relevant legal frameworks, (3) analysis of case studies of significant prosecutions, and (4) assessments of domestic and international policy challenges, including gaps in existing frameworks. Students who complete the course will obtain an enhanced understanding of the legal and policy frameworks at the core of these challenging issues for nation-states.

LAW 5627 - WICKED PROBLEM INNOVATION

Minimum Credits: 3
Maximum Credits: 3

"Wicked Problem Innovation" is a new, innovative, cross-disciplinary course that brings together graduate students from Pitt Law, the Katz School of Business, and other units across the University of Pittsburgh to engage deeply in a selected acute problem that faces Pittsburgh and the broader world. "Wicked" problems are stubborn, complex societal and business challenges, like global climate change, income disparity, inclusive economic growth, and universal healthcare. These problems arise from a variety of causes and affect multiple stakeholder groups, each of which has a different idea of how the problem arises and what can be done to improve it. While it is likely not possible to "solve" these problems in a traditional sense, it is possible to make sustained progress in tackling them. Course participants will research the selected problem from legal, business, historical, and other perspectives, identify and consult with stakeholders, and ultimately design a process to improve progress on the selected problem. During the course, students will learn to work collaboratively with peers and instructors from a variety of disciplines, and will practice a host of practical skills, including interviewing witnesses and clients, negotiating outcomes, and actively problem solving across a range of subject matter areas. Additionally, students will gain substantial and deep contacts in local, state, and potentially national, government, nonprofit, and business communities. Students will come away from the course with critical skills in working collaboratively across subject matter boundaries and experience creating an innovative problem-solving process from the ground up.

LAW 5630 - FEDERAL CIVIL LITIGATION SKILLS

Minimum Credits: 2
Maximum Credits: 2
This course explores practical and procedural pretrial litigation activities encountered in federal civil litigation. The course is designed to develop practical case management, advocacy and negotiation skills while increasing awareness and familiarity with the local rules which govern litigation in the United States district court (W.D. Pa.). The course will consist of both lectures and 'hands on' exercises, both written and role-play, that track the procedural progress of a federal case.

LAW 5631 - LAW AND ENTREPRENEURSHIP

Minimum Credits: 3

Maximum Credits: 3

This hands-on, practical course is intended to expose law students to entrepreneurs, innovation companies and the legal issues they face. The course will take students through the life cycle of a technology start-up company, from concept and formation to exit (IPO or sale), through careful analysis of relevant legal documents and case studies, as well as participation in lectures, workshops and simulations. The course will cover choice of entity and formation (including tax issues at start up and early stage fundraising), employee hiring and compensation, evaluation and protection of intellectual property and the development of a comprehensive IP strategy, valuation and financing (investment opportunities), licensing and sales, multinational operations, and exit strategy. The course will provide students with the legal framework and tools necessary to launch and grow a successful technology start-up, and to advise and assist entrepreneurs interested in launching a new business.

LAW 5638 - RACE AND THE LAW

Minimum Credits: 3

Maximum Credits: 3

This course will explore the legal treatment of race in the United States. Central to this examination will be: (1) the legal and social construction of race and racism; (2) the legal history of racialized groups including African Americans, Latinos/as, native Americans, Asian Americans, Arab and middle eastern Americans, and white Americans; (3) anti-discrimination laws (governing diverse areas such as education, employment, voting, familial relations, public accommodations, and housing); and (4) the relationship between race, language, and citizenship. A pervasive theme throughout the course will be the significance of race in the post-civil rights era. This inquiry will be analyzed under various modern civil rights perspectives including: traditionalism (advocating for colorblindness and 'reverse' racism claims), reformism (supporting affirmative action); and critical race theory (recognizing continued systemic subordination).

LAW 5648 - CIVIL RIGHTS LITIGATION: HIST

Minimum Credits: 3

Maximum Credits: 3

This seminar will be a historical consideration of civil rights litigation in the United States. Our goal will be to understand the long history of segregation as it was created by legislatures and then supported by Courts, and how these precedents were reversed through litigation and other strategies. We will read classic cases on race, from the 19th and early 20th centuries, learning how the Supreme Court developed its segregation doctrines. We will simultaneously look at litigation strategies by abolitionists before the Civil War and civil rights activists in the late nineteenth century. We will then turn to the creation of the NAACP and see how it became the leading engine of civil rights litigation. This will lead to the long struggle for an end to segregation, culminating in Brown v. Board of Education (1954). Part of our focus will be on Thurgood Marshall as a lawyer. We will look at NAACP integration strategies along with more activist civil rights strategies by Martin Luther King and others. This part of the course will also look at federal actions on civil rights after the passage of the 1964 Civil Rights Act and other civil rights laws. Readings will include some cases -- often in full text -- the classic book Simple Justice, a biography of Marshall, and writings by King and others. Our consistent focus will be on (1) what this history teaches us about attorneys litigation strategies and (2) what overarching limits there may be on attaining fundamental change through the litigation process.

LAW 5653 - INTERNATIONAL HUMAN RIGHTS

Minimum Credits: 3

Maximum Credits: 3

This course will examine the history of the development of international human rights laws, the concepts behind the current status of those laws, and the mechanics present for enforcing those laws in international, regional, and domestic legal systems. The course will include a discussion of the theories behind international human rights law and the ability (or lack thereof) to enforce international human rights standards. The course will look at different examples of human rights crises throughout the world, how those crises are being addressed and how we believe they should be addressed in light of established law and morality. In light of the growing importance of the r2p ("responsibility to protect") doctrine and the related doctrine of "human rights intervention," we will examine these doctrines closely, whether they comport with international human rights law and whether they in fact accomplish what they claim to accomplish.
